After the devastation of the Asiatic countries caused by the invasions of the Mongols, there began a new period in the history of literary Arabic. Egypt rose into prominence and became under the Mamlūks (648-923/1250-1517) the centre of Islamic culture and of Arabic literature. The literary language during these centuries was post-classical. Prose-writers like Ibn Abī Uṣaybiʿa (d. 668/1270; see August Müller, *Über Text und Sprachgebrauch in Ibn abī Uṣaibiʿas Geschichte der Ärzte, Sitz.-Ber. Bayr. Ak. d. Wiss.* 1884, 853-977) represent the colloquial as it was then spoken in good society. Later authors such as Ibn Iyās (c. 930/1524; see P. Kahle in the preface to his edition, vol. iv, 1931, 26-8) and Ibn Ṭūlūn (c. 955/1548; see R. Hartmann, *Das Tübinger Fragment der Chronik des Ibn Ṭūlūn*, 1926, 103) are even more influenced by the local dialect, especially in vocabulary. Others, such as the Amīr Bektāsh al-Fākhirī (c. 741/1341; see K. V. Zetterstéen, *Beiträge zur Geschichte der Mamlukensultane*, Leiden 1919, 1-33) show by their style that Turkish was their mother-tongue. In poetry the dialect was sometimes utilised e.g. by Ibn Sūdūn (d. 868/1464) in his humorous and satirical poems.

The great changes which took place in the world from the end of the 9th/15th century deeply affected literary Arabic. After the capture of Granada in 897/1492 and the expulsion of the Moors the Arabic language vanished from the Iberian peninsula. In the Maghrib, where the classical language had always stood in sharp contrast to the local dialects, there sprang from the latter a new poetical language, the so-called *malḥūn*, which since the 10th/16th century has enjoyed an ever-increasing popularity in Morocco. The other Arabic-speaking countries were sooner or later conquered by the Ottoman Sultans who were not primarily concerned with the cultivation of the Arabic language and literature. Even in Egypt, hitherto the mainstay of Arabic culture, literary activity sank to its lowest ebb. Literary Arabic was the prerogative of an élite. The dialect was occasionally utilised for literary purposes (e.g. by al-Shirbīnī, c. 1098/1687, in his *Hazz al-ḳuḥūf*). Already in the 10th/16th century poems were composed in the vernacular (see M. U. Bouriant, *Chansons populaires arabes*, Paris 1893, and Fuad Hasanain Ali, *Ägyptische Volkslieder*, i, 1939). In Syria, the Maronite archbishop of Aleppo, Germanus Farḥāt [*q.v.*] (d. 1145/1732) did much to revive the study of Arabic grammar, lexicology and rhetoric amongst his countrymen. Outside the Arabic countries Arabic continued to be used by scholars, more especially in theology, jurisprudence and kindred subjects; but though its sphere comprised by now parts of North and East Africa, Zanzibar, Malaya, and the Indonesien Archipelago, yet it was less influential than in the preceding period. This period of stagnation and decay lasted till the beginning of the 13th/19th century.

Bibliography: References are already given in the article. Many observations on the classical and postclassical usage are found in the prefaces to editions of Arabic texts, in grammars and dictionaries and especially in H. L. Fleischer, *Kleinere Schriften*, i-iii, Leipzig 1885-8; Th. Nöldeke, *Zur Grammatik des classischen Arabisch*, Wien 1896; see also J. Fück, *Arabiya, Untersuchungen zur arabischen Sprach- und Stilgeschichte*, Berlin 1950 (Arabic translation by ʿAbd al-Ḥalīm al-Nadjdjār, Cairo 1951; French translation by C. Denizeau, 1955). (J. W. FÜCK)

(4) Modern written Arabic

The intrusion of Europe into the range of vision of the Arab world begins with Napoleon's expedition to Egypt in 1798. The adoption of innumerable elements of Western civilisation had far-reaching effects on the written language. This began already with Muhammed ʿAlī's programme of reform which set out deliberately to take over Western achievements and was focussed on France, which everywhere remained the model until after the first World War. As a result of the sending of student missions to study in France, the formation of schools on European lines and the foundation of an Arabic press, and, above all, of the translation of numerous European books, the necessity of finding expressions for a host of foreign ideas was felt first in Egypt and then too in other countries—foreign ideas for which at first only foreign words were available. Even the works of early translators in Egypt, of whom the most notable was al-Ṭahṭāwī (1801-1873; cf. Brockelmann, II 481, S II 731, W. Braune in *MSOS* XXXVI 2, 119-125, J. Heyworth-Dunne in *BSOS* IX 961-7, X 399-415) already contain, side by side with numerous foreign words taken over indiscriminately, pure Arabic neologisms to express Western concepts.

But a real counter-movement against the excessive use of foreign words did not begin until the second half of the 19th century. The question of how to meet the ever-growing need for new expressions in Arabic became one of the major problems of intellectual life. The impact of Europe in itself awoke among the Arabs, after an interval of centuries, reconsideration of their own linguistic and literary tradition. The revival of the old philological learning was facilitated by the printing of many old literary works and especially of native dictionaries and grammars. The dogma that the ʿArabiyya as the oldest literary form of the language was better and more "correct" than any later forms and that it must therefore be the highest authority for linguistic correctness at the present day too became the guiding idea for the whole language movement, even if there were voices in opposition. Thus the old purism was revived again, and with it the tendency artificially to control the development of the language, with recourse wherever possible to the old model language. This movement started in the Syrian-Lebanese area. Outstanding among the earlier language critics was Ibrāhīm al-Yāzid̲j̲ī (1847-1906; Brockelmann, S II 766), who criticised the language of the journalists of his time in *Lug̲h̲at al-D̲j̲arāʾid* (published in book form, Cairo 1319). The inevitable modernisation and expansion of the vocabulary of the ʿArabiyya ought, according to the wishes of the purists, to be carried out by drawing to the greatest possible extent on the wealth of words, roots and forms in the ʿArabiyya. The question of how to proceed in detail and how far European words should be employed has been actively discussed again and again. In innumerable essays in nearly all periodicals and in many separate publications right up to the present moment, immense quantities of neologisms have been proposed, although it must be said that only a small percentage pass into general usage. Extending far beyond the circle of professional philologists, this movement has also affected large circles of the general educated public. The struggle with technical terms (*muṣṭalaḥāt*) is a difficult problem for every specialist in any technical or scientific branch and gives many of them the impetus themselves to become linguistically creative and to publish their own technical terms. The literature on this subject written in Arabic is very vast and scattered, and cannot be treated here more than generally. There are large collections of the terminology for many special fields (Aḥmed ʿĪsā, *Muʿd̲j̲am Asmāʾ al-Nabāt*, Cairo 1930; Amīn al-Maʿlūf, *Muʿd̲j̲am al-Ḥayawān*, Cairo 1932; Muṣṭafā al-S̲h̲ihābī, *Muʿd̲j̲am al-Alfāẓ al-Zirāʿiyya*, Damascus 1943; M. Ashraf, *English-Arabic Dictionary of Medicine, Biology and allied Sciences*, 2nd ed., Cairo 1929—to mention only a few). But such works do not confine themselves to listing expressions which are already in current use; they also introduce suggestions of their own; they cannot therefore be considered as descriptive scientific material but are contributions to the establishment of terminology. The idea of co-ordinating these efforts and of establishing language academies for the standardisation of vocabulary dates from the 80's of the last century (cf. Braune l.c. 133). After several unsuccessful attempts, a scientific academy (*al-Mad̲j̲maʿ al-ʿIlmī al-ʿArabī*) was founded in Damascus in 1919, which also devoted itself to the reform of the language and published many contributions to the language problem in its review, which first appeared in 1921. In 1932 the Egyptian *Royal Academy of the Arabic Language* (now *Mad̲j̲maʿ al-Lug̲h̲a al-ʿArabiyya*) came into existence. Apart from the study of the old language and literature its main concern is the regulation and expansion of the modern vocabulary. In its review (*Mad̲j̲allat Mad̲j̲maʿ al-Lug̲h̲a al-ʿArabiyya*, Vol. I-VII, 1934-1953) and since 1942 in a sequence of special publications, the use of a great many *muṣṭalaḥāt* has been recommended, so far without the anticipated and desired effect being achieved. The official principles on which the Academy works can also be gathered from the minutes of meetings (*Maḥāḍir*, since 1936). Even in Irāḳ, where formerly the review *Lug̲h̲at al-ʿArab* (Vol. I-IX, 1911-1931) of P. Anastase al-Karmalī was the leading organ of the purist trend, an Academy was formed in 1947 (*al-Mad̲j̲maʿ al-ʿIlmī al-ʿIrāḳī*) which, *inter alia*, is also concerned with the problems of terminology. The real difficulty, however, with all these official attempts at creating standard terminologies for technical and scientific fields lies not so much in coining new expressions, as in securing their general use among the specialists concerned. Although the possibility of popularising newly-coined technical terms in specialist circles has often been overestimated, the practical effect of the purist movement on actual language usage cannot be denied. In many individual cases one can observe how artificially created words have quickly entered into the general stock of words of journalists and writers. The efforts of the purists however are concentrated almost entirely on the isolated word, that is, on the extrinsic elements of the language.

Turning to the linguistic facts, the striking feature is the infiltration of English and French phraseology, translated into Arabic (so-called loan translation or "calques") and the change in the inner form. In particular the language of daily communication (press and radio) and of writers with little or no classical education has a distinct European touch. Phraseology and style are far more difficult to check than terminology. This development is therefore inevitable and must be accepted as a fact. In the field of *belles lettres*, on the other hand, we find in many cases a strong attachment to tradition. Authors with a classical education are still today able to keep close to the ideal of the ʿArabiyya in their style; they sometimes make use of uncommon words and phrases of the old literature and especially of the Ḳurʾān as artistic stylistic devices. But no-one can completely escape the influence of European phraseology.

Grammar, on the other hand, which can be defined in rules and which is much more subject to conscious control, gives quite a different picture. The written language has remained untouched by the sound-change, and the morphology has remained constant from the earliest times till the present day; the same is true of the syntax at least in its basic features. Here the conservative attachment to the ʿArabiyya has proved itself astonishingly effective.

In vocabulary a considerable basic stock has remained alive since the earliest times. Post-classical words, including those from the later Middle Ages, form a further element of the modern vocabulary. A host of generally accepted expressions are available to express ideas which come from Europe, most of which are in full accordance with the above-mentioned wishes of the purists. Forgotten words of the ʿArabiyya have been revived and are used without formal alteration but with meanings more or less modified (e.g. *ḳiṭār* = train of camels drawn up one

behind the other > railway train); words of the ʿArabiyya still in use have been given a new additional meaning (e.g. *bark* = lightning > telegraph); sometimes the change of meaning is made by analogy with the foreign word, which served as model (e.g. *ṣundūḳ* = box > cash-box, cash office, after the French "caisse"). Moreover a large number of completely new nouns formed from old roots with the help of the Arabic nominal forms (most frequent: *mafʿal, -a, mifʿal, -a, faʿʿāl, -a*) have passed into general usage (e.g. *matḥaf* = museum, *naffātha* = jet-plane); likewise verbal nouns and participial forms are used for new expressions (e.g. *idhāʿa* = broadcasting, *muḥarrik* = motor). The *nisba*-ending is widely employed in the formation of new words (e.g. *ishtirākī* = socialist, *ishtirākiyya* = socialism); by the expansion of its use many new adjectives have been derived from nouns, and with them European compounds can easily be reproduced (e.g. *al-barīd al-djawwī* = airmail); genuine compound forms are still confined to those with the negation *lā* (e.g. *lā-silkī* = wireless). Until the first World War the majority of foreign words were borrowed from French, others from Italian. English became an influence after the first World War, especially in Egypt and Irāḳ. The decrease of foreign words in Arabic is a considerable achievement of purist efforts. Words of Turkish origin have disappeared almost entirely in the last decades. We may consider as loan-words such as correspond to an Arabic nominal form or can easily be assimilated to it, and for which broken plurals are formed (e.g. *bank-bunūk, film-aflām, duktūr-dakātira*) and such as are assimilated through the addition of the ending *-iyya* which serves as abstract ending (*dīmūḳrāṭiyya* = democracy).

The numerous accepted new words are still not sufficient. Very specialised scientific and technical details to the present day still cannot be expressed in Arabic in a form understood by all concerned. The anarchy in the field of specialised terminology even within one country is far from being at an end. The situation is aggravated by the fact that Greek and Latin technical terms which so often help specialists towards an international understanding even on complicated matters, are translated into Arabic. There are often several terms in circulation for the same thing; on the other hand cases occur where the same term means different things to different authors. Nevertheless the standardisation of technical terminology which is the basic problem of present-day Arabic has undoubtedly made considerable progress and thus we can also expect further favourable developments in the future.

The fact that there exists a basically uniform written language in all Arabic countries from Irāḳ to Morocco is of great value, ideal and practical, to the Arabic peoples. It is the symbol of their old cultural unity and their political union in the present day. Thus we can conclude that there is no reason to anticipate that the written language will anywhere be replaced by a local dialect and forced out of practical use.

(iii) The Vernaculars

(1) General survey

AREA IN WHICH ARABIC IS USED

Arabic is spoken to-day by about 60 million people ranging from Hither Asia to North Africa, from the Persian Gulf to the Atlantic Ocean; these regions are: Arabia with the Fertile Crescent up to the Persian and Turkish frontiers; Egypt and most of the Sudan (from the Nile to the Chad); Tripolitania; Tunisia, Algeria and Morocco; Mauritania, French West Sudan, and the northern Sahara. In addition to this continuous geographical area, there exist isolated pockets; in Africa: Djibuti and Zanzibar; in Europe: Malta (formerly with the Balearic Is., Sicily, Pantellaria up to the 18th century), Spain (up to the 15th century [see AL-ANDALUS]). Finally, attention should be drawn to the Syro-Lebanese diaspora in North and South America and French West Africa.

Within the limits of the geographical area mentioned above, Arabic has found itself in contact with a series of foreign languages which it has tended to supplant, although some have still retained great vitality side by side with Arabic (e.g. Berber), but it is characteristic that Arabic has only succeeded in replacing indigenous languages when the latter have possessed structural features akin to its own; this has been the case in Egypt, where Coptic ceased to be spoken in the Middle Ages, while the Indo-European sphere has successfully resisted it, despite the implantation of Islam.

ORIGIN

The Arabic spoken to-day is derived basically from old dialects of Central and Northern Arabia. To the limited extent to which one can form an idea of them, these dialects, although differentiated, do not seem to have presented any essential points of difference, because the classical philologists, who remain the most important source, only note variations in pronunciation and vocabulary, while the structure of the languages seems to have been homogeneous. The same philologists, using *faṣāḥa* [*q.v.*] as their criterion, divided the old dialects into three main groups: those of the Ḥidjāz, considered the purest, those of the Nadjd, and finally those of the neighbouring tribes, considered to be contaminated to a greater extent by other Semitic or by non-Semitic languages. This distinction, always a fine one, is no longer tenable to-day, because the dialects concerned have developed markedly. Of all the classifications worthy of consideration, the most convenient, although it is based on a geographical division rather than on linguistic criteria (which are: the formation of the 1st person s. and pl. of the imperfect of the verb, and the treatment of short vowels in open syllables), consists of distinguishing two major groups, the

first (see below, section II) comprising the Eastern dialects, east of a line running approximately from Sollum to Chad, the second being formed by the Maghribī dialects, situated geographically west of the above line.

The dialect of the Ḥidjāz, and more particularly that of the Ḳuraysh of Mecca, is known to have been one of the pre-Islamic Arabic dialects; it was elevated to the status of a literary language, not, however, without some interference with the pre-Islamic poetic *koine*. But the old dialects remained none the less alive, not only in their own country, but also outside the Arabian Peninsula, because they were spread abroad by the Arabs in the territories which they conquered. Organised in their traditional groups, the Arab conquerors preserved for some time their own tongue, but dialectal peculiarities tended to become less marked as the result of the blending of tribes within the fighting units. It was this sort of *koine*, rather military in character, which constituted the language of the conquered or newly-founded towns, but a contrary development soon occurred, with the appearance of indigenous elements and elements from the linguistic substratum, which resulted in an ever greater differentiation between the urban dialects, although on the whole the dialects of the large cities of the Arab world still displayed common characteristics. It is therefore possible, in order to rely on a sociological rather than a geographical criterion, to distinguish on the one hand the dialects of the urban and settled populations (because the role of the large cities had aided the rapid spread of the urban dialects in concentric circles), and on the other the Bedouin dialects. The latter were the dialects of more or less homogeneous and nomadic tribes which had emigrated from the Arabian peninsula either before or after the conquests. In general, the boundaries between the two major groups defined above are not fixed absolutely, and it is even possible to discern the existence of an intermediate group of dialects which display both urban and Bedouin characteristics. The criteria which enable one to distinguish between urban and Bedouin dialects are set forth in sections II and III below, but it should be noted here that, in general, the Bedouin dialects exhibit more conservative tendencies, and greater homogeneity within the framework of the tribe. The urban dialects display pronounced evolutive tendencies; they have introduced morphological and syntactical innovations and, further, differentiated dialects quite often appear within the same urban area, not only between the following of different religions (Muslims, Jews and Christians for example), but also between the social classes and even between the sexes and different generations.

If Classical Arabic is compared, in the most general terms, with present-day dialectal Arabic, the main point to be noted is the early abandonment, by spoken Arabic, of case endings and the inflexions of the verb. Perhaps less characteristic, in the phonetic sphere, are the loss of the phoneme represented by ض and the tendency of short vowels in open syllables to disappear; further, short internal vowels, even in stressed syllables, have become weakened in the most developed dialects. Morphologically, in addition to the disappearance of terminations, one notes the almost complete disappearance of the passive with vowel change, the decreased use of the dual and the feminine plural. On the other hand the phonetic system is richer than that of classical Arabic and the vowel range greater; a present indicative *a*, in a number of dialects spoken by settled populations, was derived from the imperfect by means of various preverbs; the syntax, less synthetic, used an analytical construction simultaneously with the relationship of annexation (*iḍāfa*). Finally, as regards vocabulary, the basic vocabulary is also found in classical Arabic, with losses due to the disuse of a large number of special terms (notably those relative to Bedouin life, in the case of the settled populations), but also with gains due to loan words from foreign languages which continued to co-exist with Arabic.

DIALECTAL LITERATURE

The religious prestige of classical Arabic naturally prevented dialectal Arabic from playing the part of a literary language, at least among Muslims; further, with the exception of a certain number of proverbs and poems (see especially ZADJAL) dialectal literature is fundamentally oral; it consists of songs and poems, which treat of the same themes—epic, religious, lyric, satiric, eulogistic, erotic etc.—as classical Arabic, of tales, legends and even epics. When, exceptionally, a dialectal work of importance has been set down in writing, it has never preserved its original form, but has been transformed into more or less correct literary Arabic, which deprives us of documentary evidence which would otherwise be of great interest. The most typical example is that of the Thousand and One Nights (see ALF LAYLA WA-LAYLA). For the attempts made in recent years to create a dialectal literature, and for the use of colloquial Arabic in novels and plays, see *Arabic Literature* below.

Christian Arabic literature should not be overlooked (see G. Graf, *Geschichte der Christlich-Arabischen Literatur* and *Der Sprachgebrauch der ältesten christlich-arabischen Literatur*, Leipzig 1905), nor that, in Roman script, which developed, but without great originality, at Malta, nor the Judaeo-Arabic writings. On these last, which until the present time form a vast branch of literature, see the article TUNISIA, and E. Vassel, *La littérature populaire des Israélites tunisiens*, in *RT*, 1904; G. Vajda, *Un Recueil de textes historiques judéo-marocains*, Paris 1951; M. Steinschneider, *Arabische Litteratur der Juden*, Frankfurt 1902.

No complete work has yet been devoted to dialectal literature, but the reader is referred to the references given in Ch. Pellat, *Langue et littérature arabes*, Paris 1952, 54. For North Africa, H. Basset, *Essai sur la littérature des Berbères*, Paris 1920, deals with a subject which is closely connected with Arabic dialectal literature.

Sources: — The works of modern Orientalists, who often give texts in dialectal Arabic and help to give a fixed form to popular literature, are enumerated in sections II and III below, which are specially devoted to the modern dialects. For a historical study, apart from the references of the Arab philologists and the glossaries quoted in the article AL-ANDALUS, special reference should be made to the transcriptions of Arabic texts in Coptic or Greek script (see especially the ancient psalm fragment given by Violet in *OLZ*, 1901), to the early Egyptian papyri and to the Sicilian documents edited by S. Cusa (*I diplomi greci ed arabi di Sicilia*, I, Palermo 1868). (ED.)

(2) The Eastern dialects

THE ARABIAN AND NORTH ARABIAN DIALECTS

The geographical area covered by these dialects extends from Egypt to Syria in the case of the

former, and in the case of the latter, comprises on the one hand the Arabian Peninsula, and on the other the Syrian desert and ʿIrāḳ.

The non-Arab languages represented are as follows: in Egypt, the Sīwa Berber group. In Syria-Lebanon, the Aramaic dialect of Maʿlūlā, Djubbaʿdīn and Bakhʿa; the language of the Circassians living in villages in various parts of Syria: Ḳunayṭira, ʿAīn Zāt, Tell Améri, Khanāsir, Manbidj, and in Jordan Djarash; the Armenian (or Turkish) of about 200,000 Armenians (principal centres Beirut, Aleppo); the language of about 230,000 Kurds living in the region of Hassetché, Djarablūs, Djabal Akrād and certain cities, notably Beirut and Damascus. In ʿIrāḳ, these Kurds constitute a quarter of the population; in addition, there is the neo-Syriac of the Mawṣil plain. In Arabia, Kumzārī (peninsula of Masandām, in ʿUmān), a Persian dialect; the modern South Arabian languages, between the Ḥaḍramawt and ʿUmān: Mahrī, Ḳarawī, Harsusī, and Botaharī. In Israel, modern Hebrew.

Egyptian Arabic (nomad dialects) has penetrated into the republic of Sudan among the Nilotic and Kushitic languages, and then, with Maghribī influences, among the Negro-African languages in the region of Lake Chad. Yemenite Arabic is used as the second language in Africa among the Somalis. The Arabic of ʿUmān has found its way to Zanzibar. In Turkmenistān, Khazaristān, Tādjikistān traces have been found of Arabic nomadic dialects. Finally, in America, there is the Syro-Lebanese *diaspora*.

The eastern dialects. In Egypt, Cairo usage is well-known, that of Alexandria less well, that of the *fallāḥ*s very little, and that of the nomads and the whole of Upper Egypt hardly at all. In Palestine, a tripartite division must be carefully observed between sedentary urban-dwellers, the sedentary rural population (*fallāḥ*s), and nomads. In Syria-Lebanon, the dialects of the sedentary urban and rural populations are indeed distinguishable, but their differences are less marked; they contrast with the nomad dialects; the dialects of the large towns (Beirut, Damascus, Aleppo, Jerusalem) are curiously similar to one another. The Mountain region of Lebanon, divided into separate districts, introduces local variations, the anti-Lebanon still more. In ʿIrāḳ, the urban and rural dialects have been submerged by the dialects of the North Arabian nomads; this has resulted in blending and compromise in varying degree between the two types of dialect, even in the large towns. Only assiduous linguistic research can show what remains of the dialects of the sedentary populations. In general, nomad dialects are linguistically dominant; thus ʿIrāḳ remains within the sphere of the North Arabian dialects. A study of the dialects of the Jews of Baghdād and Baṣra would be most useful; recent migrations have disorganised these communities. It is interesting to note the use of dialect in a literary context, in Egypt (*al-Ḥāgg Darwish*, plays for the theatre), and in the Lebanon (*Finiānūs*, *Shmūne*); see J. Lecerf, *Littérature dialectale et renaissance arabe moderne*, in *BEOD*, ii, 1932, 179-258; iii, 1933, 43-175.

The eastern dialects have not received equal treatment as regards actual publications. A concise bibliography will be given here, within the limits of this general outline (for convenience, ʿIrāḳ will be included here):

At least six works deal primarily with the Arabic of Cairo; the following will suffice: W. Spitta-Bey, *Grammatik des arabischen Vulgärdialectes von Ägypten*, Leipzig 1880, xv-519 pp. in 8vo. (Texts 441-516; K. Vollers, *Lehrbuch der ägypto-arabischen Umgangssprache, mit Übungen und einem Glossar*, Cairo 1890. xi-231 pp. small 8vo. (English ed. by F. R. Burkitt, Cambridge 1895); C. A. Nallino, *L'arabo parlato in Egitto, grammatica, dialoghi e raccolta di circa 6,000 vocabuli*, Milan 1900, xxviii-386 pp. small 8vo., 2 ed. Milan 1913; D. C. Phillott and A. Powell, *Manual of Egyptian Arabic*, Cairo 1926, xxxiv-911 pp. small 8vo., In addition: Spiro-Bey, *Arabic-English Dictionary of the Modern Arabic of Egypt*, 3rd ed., Cairo 1929, xvi-518 pp. in 8vo. (arranged in purely alphabetical order). For Upper Egypt there are only the *Contes arabes* ...., published by H. Dulac, *JA*, 8th series, v, 5-38 (in Arabic characters with translation but without transcription); the *Chansons populaires*, collected by G. Maspero (*Ann. Serv. Ant. Égypte*, xiv, 97-291) are inadequate for a linguistic inquiry. For the nomads of Lower Egypt a number of the *Lieder der libyschen Wüste of M. Hartmann*, Leipzig 1899; it should be used with caution.

The Sudan is hardly better known, nor is the Lake Chad area. For the former: A. Worsley, *Sudanese Grammar*, London 1925, vi-80 pp. in 8vo.; S. Hillelson, *Sudan Arabic, English-Arabic Vocabulary* (p. 205-19, Cambridge 1935, xxiv-219 pp. in 8vo., see especially pp. xi-xxiv of the Introduction; idem, *Sudan Arabic, English-Arabic Vocabulary* [with transcription] 2nd ed., London 1930, xxviii-351 pp. in 12vo.). For the latter: G. J. Lethem, *Colloquial Arabic, Shuwa Dialect of Bornu, Nigeria and the region of Lake Chad*, London 1920, xv-487 pp. in 8vo. (Part III English-Arabic Vocabulary, 235-487). Lethem gives good conservative Bedouin Arabic; a form of Arabic which already shows changes (disappearance of the emphatics) is found in *Méthode pratique pour l'étude de l'arabe parlé au Ouaday et à l'Est du Tchad* by H. Carbou, Paris 1911, 251 pp. (reprinted, 1954). Narrative texts: C. G. Howard, *Shuwa Arabic Stories*, with an Introduction and Vocabulary (p. 83-115), Oxford 1921, 116 pp. in 12vo.; J. R. Patterson has published the *Stories of Abu Zeid the Hilali in Shuwa Arabic*, London 1930, Arabic text with translation but without transcription.

For linguistic geography, we are indebted to G. Bergsträsser's *Sprachatlas von Syrien und Palästina* (incl. the Lebanon and Jordan), *ZDPV*, xxxviii, 169-222, 42 maps. This *Sprachatlas* is an excellent beginning. J. Cantineau has added his *Remarques sur les parlers de sédentaires Syro-Libano-Palestiniens*, *BSL*, no. 118, 80-8, in which he proposes a classification; his article on *Le Parler des Drûz de la montagne Ḥôranaise*, *AIEO*, Algiers, iv, 157-84, in which he shows that a dialect of the sedentary population of the Lebanon is involved; his profound study of Ḥawrān, *Les parlers arabes du Ḥôrân, Notions générales, Grammaire*, Paris 1946, x-475 pp. in 8vo. (Publ. SL, lii), and an *Atlas* of 60 maps, *ibid.* 1940. Haim Blanc has studied the dialects of the Druzes in northern Galilee and on Mt. Carmel in his *Studies in North Palestinian Arabic*, Jerusalem 1953, 139 pp. in small 8vo. (Or. Notes and St. Isr. Or. Soc., No. 4), phonological and phonetic survey 22-78; texts 79-108.

For Syria-Lebanon, Palestine, the following should be mentioned: (1) General descriptive works: A. Barthélemy, *Dictionnaire Arabe-Français*, 5 fasc., Paris 1935-54 (the last two published by H. Fleisch), 943 pp. in large 8vo. (deals exhaustively with the vocabulary of Aleppo (1900), and gives the elements

of the Lebanon, Damascus and Jerusalem). G. R. Driver, *A Grammar of the Colloquial Arabic of Syria and Palestine*, London 1925, x-257 pp. in 8vo. L. Bauer, *Das palästinische Arabisch, die Dialekte des Städters und des Fellachen, Grammatik, Übungen und Chrestomathie* p. 164-256, 3rd edition, Leipzig 1913, viii-264 pp. in 8vo., 4th edition, Leipzig 1926, and *Wörterbuch des Palästinischen Arabisch, Deutsch-Arabisch*, Leipzig and Jerusalem 1933, xvi-432 pp. in 16vo. Feghali (Mgr. Michel), *Syntaxe des parlers actuels du Liban*, Paris 1928, xxv-635 pp. in small 8vo. (PELOV). The *Grammaire du dialecte Libano-Syrien* of R. Nakhla, Beirut 1937, does not describe a fixed dialect. (2) Monographs: a) on the Lebanon: M. T. Feghali, *Le parler de Kfarʿabîda* (Lebanon-Syria), Paris 1919, xv-304 pp. in 8vo.; this type of dialect only obtains in part of the Lebanon. H. Fleisch, *Notes sur le dialecte arabe de Zaḥlé (Liban)*, MUSJ, xxvii, 75-116, in part a monograph on an important dialect of the Béka. H. El-Ḥajjé, *Le Parler arabe de Tripoli (Liban)*, Paris 1954, 203 pp. in 8vo. (Text in transcription and translation pp. 176-99). b) on Syria: J. Cantineau, *Le dialecte arabe de Palmyre*, i, Grammar, x-287 pp. in 8vo., ii, Vocabulary and Texts, vii-149 pp. in 8vo., Beirut 1934 (Mém. Inst. Fr. Damas, ii), which describes a dialect of the settled population. The only works dealing with Damascus are the phonetic survey of Bergsträsser (see below), the *Manuel élémentaire d'arabe oriental (Damas musulman)* of J. Cantineau and Y. Helbaoui, Paris 1953, 124 pp. in 8vo., and the elements given by J. Oestrup in his *Contes de Damas* (Leiden 1897, 163 pp. in 8 vo.), pp. 122-155. (3) Useful texts: for Palestine, it is sufficient to mention here the *Chrestomathie* of L. Bauer; for the Lebanon, the *Contes, Légendes et Coutumes populaires du Liban et de Syrie* of M. Feghali, Arabic text, transcription, translation and notes, Paris 1935, xiii-195-87 pp. in 8vo.; for Damascus (Christian), *Zum arabischen Dialekt von Damaskus* of G. Bergsträsser, I *Phonetik* (p. 1-50), *Prosatexte*, Hanover 1924, 111 pp. in 8vo. (*Beitr. z. sem. Phil. u. Ling.*, No. 1), Arabic text in transcription with translation); for Ḥamā, the story (in transcription, with translation) *Mḥammad il-ḥalabi*, published by E. Littmann, *ZS*, ii, 20-50.

Little is known about ʿIrāḳ: the *Neuarabische Geschichten aus dem Iraq* of B. Meissner, Leipzig 1903, lviii-148 pp. in 8vo., and the *Beiträge zur Kunde des Irak-Arabischen* of F. H. Weissbach, i, *Prosatexte*, Leipzig 1908, xlvi-208 pp. in 8vo., ii, *Poetische Texte*, Leipzig 1930, 357 pp. in 8vo. (Leip. sem. St., iv, 1 and iv, 2), deal with the same dialect of the rural population of northern ʿIrāḳ; Meissner's work contains a substantial section on grammar, pp. vii-lviii, and a short vocabulary, pp. 112-48. For Mawṣil and Mārdīn, we have only the texts collected by A. Socin, *ZDMG*, xxxvi, *Der Dialekt von Mosul*, 4-12; *Der Dialekt von Mārdin*, 22-53 and 238-77, in transcription with translation, accompanied in part by the Arabic text, without study of the grammar or vocabulary. L. Massignon, in his *Notes sur le dialecte arabe de Bagdad* (reprint from *Bull. IFAO*, xi, 24 pp. in 8vo.) has emphasised the linguistic complexity of Ba<u>gh</u>dad, where he has distinguished "at least seven stable indigenous groups, all of the Arabic language, but differing in dialect" (p. 2). A survey of Ba<u>gh</u>dād, which will be a particularly difficult task, is still awaited. The *Bagdadische Sprichwörter*, published by A. S. Yahuda in *Or. Studien* (collection of studies dedicated to Th. Nöldeke, Giessen 1906), pp. 399-416, deals with Jewish Ba<u>gh</u>dād. The two works: J. van Ess, *The Spoken Arabic of Iraq* (above all Baṣra), 2nd ed. Oxford 1936, and M. Y. van Wagoner, *Spoken Iraqi Arabic* (Baghdād), Ling. Soc. of America, 1949, are a medley of dialects and are not so far of use as linguistic information.

The western dialects bear a certain family likeness, and the same can be said for the eastern dialects. For the purposes of this comparison the more conservative nomad dialects (this does not exclude the facts of their own evolution), which are much less well-known, will be disregarded. We are concerned with the dialects of the settled populations of east and west. We will consider first the elements which link them (and also those which distinguish them): cf. G. S. Colin, *L'arabe vulgaire*, 150th anniversary of ELO (Paris 1948), pp. 100-1.

Phonetically: 1) The disappearance of the velarised latero-interdental phoneme represented by the old ض, replaced in general by *ḍ* (emphatic); *dh* (emphatic) among the fellahs of P. and at T.*). 2) The development of the three interdental fricatives (*dh, th, dh* emphatic) into dental occlusives (*d, t* then *ts* in M. and Alg., *ḍ* emphatic except among the fellahs of P. and at T. 3) The tendency of the short vowels to disappear in open syllables, particularly when they are not stressed (especially *i, u*). 4) The tendency to reduce the diphthongs *ay, aw* to the simple sounds *ē, ō*, (even *ī, ū* in Oc.), except in a large part of the Lebanon.

Morphologically: 1) The disappearance of the old inflexional vowels (*iʿrāb*); as a result the dialect becomes less synthetic, and makes greater use of grammatical instruments. Word order assumes importance in denoting relationship (construct state), the subject and the complement of the direct object. 2) The dual retrogressively becoming a survival without influence as such as regards grammatical concord. 3) The periphrastic expression of relationship (determinative complement of the noun), in place of the construct state, for various reasons: Eg. *betaʿ*; P., S-L. *tabaʿ*; (M. *dyāl*, Tl. *ntsāʿ*, T. *mtāʿ*). 4) The use of an indeclinable simplified relative pronoun: *elli* (similarly *dī, eddi* in M. and in several Arabic dialects (W. Marçais, *Tlemcen*, 175). 5) The formation of a new interrogative pronoun for things: Eg. *ʾe<u>sh</u>*; P., S-L *<u>sh</u>u*, *ʾey<u>sh</u>*, *ʾē<u>sh</u>* (M. *a<u>sh</u>*, *wā<u>sh</u>*; Tl. *wā<u>sh</u>*; T. *ā<u>sh</u>*, *a<u>sh</u>nūa*). 6) The abandonment of a special form for the feminine plural of personal pronouns and verbs. 7) The abandonment of the passive formed by change of vowels: *ḳatala* "he has killed", *ḳutila* "he has been killed" (except in Oman). 8) A form indicating duration: Eg. *ʿammāl*, *ʿamm*; P., S-L. *ʿam* (M. *kā*, verb expressing duration or habitual action). 9) The formation of an indicative by means of various auxiliary words prefixed to the old imperfect. 10) The conjugation of the imperfect of doubled verbs with the intercalation of a phoneme *ay* (*ē*), e.g.: L. *maddāyt* or *maddēt*. 11) The reduction of the number of types of broken plurals and still more of the types of infinitive (*maṣdar*).

The Eastern and Western dialects, over and above these common characteristics, give respectively a certain impression of unity, in so far as evolutionary tendencies have culminated, in each of the two groups, in different results. They can only be contrasted when, on both sides, the different result is identically constant. For example the method of

*) Abbreviations used: Alg. = Algeria; Eg. = Egypt; Ir. = ʿIrāḳ; L. = Lebanon; M. = Morocco; Oc. = Occidental; Or. = Oriental; P. Palestine; S. = Syria; T. = Tunis; Tl. = Tlemcen.

forming the first persons of the imperfect of the verb. The Eastern dialects have formed an indicative: imperfect with *b*- being contrasted in general with the subjunctive-jussive (without *b*-): L. *birīd yiktob* "he wishes to write". This indicative has in the 1st pers. s. a preformative *b*-: L. *bektob* "I write", *mnektob* "we write", whereas the Western dialects have a preformative *n*- and, secondarily, by analogical normalisation, a distinctive plural form in -*u* e.g.: T *niktib* "I write", *niktbu* "we write"; this is an excellent and characteristic example of contrast between the Eastern and the Western dialects; but it is not absolute: a preformative *n*- of the 1st pers. s. impf. is found in the Nadjd (Socin, *Diwan*, Part iii, 133c and 194b) and is confirmed in the Haḍramawt (de Landberg, *Arabica*, iii, 55). The loss of short vowels in open syllables, largely complete in the Western dialects, is a much less reliable indication: in fact in the Lebanon at Kfarʿabîda, all short vowels in open unstressed syllables disappear; at Palmyra, there is a fairly general disappearance of *i* and *u*, even when stressed, if they occur in an open syllable (this is one of the dialects called "differential" by J. Cantineau, *Études*, in *AIEO*, ii, 49).

The dialects also reveal a certain individuality, by comparison with the Western dialects, by virtue of the presence of grammatical characteristics which are lacking in the latter. Note for instance, in Eg., P., S-L.: 1) In the vocalisation of the simple verb, the retention of vowel contrasts reduced to a pattern *ḳatal byiḳtel* or *byiḳtol* and *ḳetel byiḳtal* (in Eg. the pattern is not quite so clear). 2) The formation of the plural of the demonstrative pronouns in a similar manner: the addition to the singular of the old demonstrative form of the pl. *ʾul* (cl. *ʾul-ā*, *ʾul-aʾi*: Eg. *da* + *ʾul* > *dōl*: P., S. *hāda* + *ʾul* > *hadōl*; L. *heyda* + *ʾul* > *heydōl*, Baʿalbek *ha* + *ʾul* > *hōl*; and other forms. These two phenomena, however, also obtain in the case of a number of North Arabian nomad dialects (Cantineau, *Études*, Ann. ii, 79 and 107) and their ʿIrāḳī extension; in addition, a form *hādhūla* occurs at T. (which seems to have been brought in by an ʿIrāḳī dialect, according to Barthélemy, *Dict.*, 876 *fin.*). 3) The frequent use of the present participle in Eg., P., S-L., as a present-perfect: *shāyef*? "do you see?" (= "have you seen and do you still see?). But ʿUmān presents similar features and in the Maghrib certain participles serve as a present-perfect.

As regards vocabulary (here ʿIrāḳ is included), a distinction must be made between: 1) The vocabulary of the dialects at the time of their formation. This consists of the Arabic basis brought by the invaders and words taken from the languages of the conquered and arabicised peoples (substratum): Coptic in Eg., Aramaic-Syriac in P., S.-L.; Syriac in ʿIrāḳ. L. only has been made the subject of study: M. Feghali, *Étude sur les emprunts syriaques dans les parlers arabes du Liban*, Paris 1918. 2) Vocabulary borrowed since the formation of the dialects. Pahlawī, Persian, Aramaic-Syriac, Greek and Latin (by various routes) have given words to literary Arabic, received through it and with it into the dialects at the time of their formation (such words form part of the Arabic basis) or received from it after their formation. The history of these borrowings from within is completely unknown to us. The loan-words proper are distributed as follows: Persian words in ʿIrāḳ; Turkish, Turkish-Persian and Turkish-Italian words, throughout the whole area from ʿIrāḳ to Egypt; Italian words in Eg., P., S.-L.; French words (recent borrowings) in Eg., P., S.-L.; English words (recent borrowings) in Eg.

The co-existence of Arabic and Aramaic-Syria in the Lebanon, and of Arabic and Coptic in Eg. has provided the occasion for a certain amount of borrowing. But how can the loan-words be distinguished from the vocabulary of the substratum?

The Turkish contribution (in its different forms) is very important at Mawṣil, Baghdād, Aleppo, and slightly less so at Damascus, in P. and in Eg. A study has been made, for Damascus, by E. Saussey, *Mélanges Inst. Fr. Damas* (Section des arabisants), i, 77-129, and for Eg., by E. Littmann in *Festschrift Tschudi* (Wiesbaden 1954), 107-27. The *Dict. Ar.-Fr.* of A. Barthélemy, deals with all the loan-words in its etymologies; there is a systematic study for Aleppo in the *Introduction*, (to appear shortly) Part 2, Section 3, B.

Greek can have given certain liturgical terms directly to the dialects; its contribution is primarily indirect through literary Arabic, Syriac and Coptic.

A peculiarity of the substratum: *baḳḳ* "mosquito" at Aleppo, "bug" in L. and Alg. (literary Arabic *baḳḳu*- = "bug"). Aleppo has retained the meaning of the Syriac *baḳḳā* "mosquito". *Daḳn* "chin, beard", in L., perpetuates two different words: the literary Arabic *dhaḳanu*- "chin" and the Syriac *daḳnā* "beard". The etymology, however, is complicated; the Syriac *daḳnā* also has the meaning of "chin".

Certain loan-words pose questions: how did the Persian *keshtebān* "thimble", which is not known in literary Arabic or in Turkish, reach S-L? How did the Pahlawī *randadj* "plane", an early loanword, of which there is no evidence in literary Arabic or Turkish (Persian *randa*), reach Aleppo, and by what route? The comparative study of vocabulary has not yet been pursued sufficiently to enable us to dwell further on this subject here.

The Arabian and North Arabian dialects. The North Arabian dialects have been studied by J. Cantineau: *Études sur quelques parlers de nomades d'Orient*, in *AIEO*, Algiers, ii, 1936, 1-118, iii, 1937, 117-237; these studies in linguistic geography have enabled him to make a classification which he considers allows at least the main points of the subject to be clearly defined. There is not space here to repeat the critical appreciation made by J. Cantineau, at the beginning of his 1st *Étude*, of the publications of G. A. Wallin, I. G. Wetzstein, A. Socin, E. Littmann, C. de Landberg (Anazeh), A. Musil (Rwala), J. J. Hess and A. de Bouchemann (complete references, Cantineau, *AIEO*, iii, 126). In addition, R. Montagne *Contes poétiques, Ghazou* (critical appreciation and references, J. Cantineau, *ibid.*). The following should also be mentioned: R. Montagne, *Sālfet Shāyeʿ Alemsāḥ gᵊedd errmāl*, in *Mél. Gaudefroy-Demombynes*, Cairo 1939, 125-30; H. Charles, *Tribus moutonnières du Moyen-Euphrate ʿAgēdât*, *Inst. Fr. Damas*, *Doc. Et. Or.* viii, 1939, an ethnographical study containing several phrases, vocabulary and 14 lines of narrative. H. Charles, *Quelques travaux de femmes chez les nomades moutonniers de la région de Homs-Hama ʿEmūr and Bani Khâled*, an ethnographical and dialectal study, *BEOD*, vii-viii, 1937-38, 195-213; 3 texts of considerable length and a short passage of 6 lines, transcribed and translated. For the other regions [1]:

1) The nomads of Arabia Petraea are only known through the ethnographical study by A. Musil, *Arabia Petraea*, iii, Vienna 1908; these texts must be used judiciously.

Ḥidjāz: only the *Mekkanische Sprichwörter und Redensarten* of Snouck-Hurgronje, The Hague 1886.

Yemen: S. D. F. Goitein, *Jemenica*, 1432 *Sprichwörter und Redensarten aus Zentral-Jemen* (Jews of Ṣanʿa), Leipzig 1934, xxiii-194 pp. in 8vo., grammatical study pp. vii-xxiii. E. Rossi, *L'arabo parlato a Ṣanʿa, grammatica, testi, lessico* [ital.-ar., 190-246], Rome 1939, vi-250 pp. in 8vo. (Pub. Is. Or.); see particularly by the same author *RSO*, xvii, 230-65 and 460-72 (a classification of the dialects, p. 472). Aden: E. V. Stace, *An English-Arabic Vocabulary for the use of the students of the Colloquial*, vii-218 pp. in 8vo., London 1893, in printed Arabic characters without transcription.

Dathînah: Count C. de Landberg, *Glossaire Dathînois*, i, xi-1038 pp., Leiden 1920; ii, vii-1039 to 1814, *ibid.* 1923; iii (published by K. V. Zetterstéen), xxxiv-1815 to 2976 pp. in 8vo.; idem, *Études sur les dialectes de l'Arabie méridionale*: ii, *Dathînah*, Leiden 1905, ix-774 to 1440; iii *Dathînah*, *ibid.* 1913, xv-1440 to 1892 pp. in 8vo.

Ḥaḍramawt: Count C. de Landberg, *Études sur les dialectes de l'Arabie méridionale*: i, *Ḥadramoût*, *ibid.*, 1901, xvii-774 pp. in 8vo. (Glossary 517-748).

Ẓfār: N. Rhodokanakis, *Der vulgärabische Dialekt im Dofâr (Ẓfâr)* I, *Prosaische und poetische Texte*, Wien 1908, ii, *Einleitung, Glossar, Grammatik*, Wien 1911, xxxvi-219 pp. in 4vo. (*Südarabische Exp.* viii and x).

ʿUman (and Zanzibar): C. Reinhardt, *Ein arabischer Dialekt gesprochen in ʿOman und Zanzibar*, Stuttgart and Berlin, 1894, xxv-428 pp. in 8vo. (Lehrbücher des Seminars f. Or. Spr., Berlin); texts 297-428.

J. Cantineau, *Remarques* (*BSL*, no. 118) has indicated (p. 81-2) the main general characteristics which enable a distinction to be drawn between the dialects of the settled populations of the East and the dialects of the Arab nomads. The sole effective criterion is the unvoiced pronunciation of ق (irrespective of what might otherwise be the articulation-point): all the dialects of the settled populations, and only the dialects of the settled populations have this pronunciation; the voiced pronunciation of ق is the mark of a nomad dialect (as it is in the case of western dialects).

We owe our present knowledge of the classification of the dialects of the Arabian nomads to J. Cantineau in his *Études*, in *AIEO*, iii, 222 f. The brief summary which follows is based on him:

As regards the North-Arabian dialects, he distinguishes: dialects A (ʿAnaza), dialects B (Shammar), dialects C (Syro-Mesopotamian); ʿAnaza dialects: Ḥsäne, Rwala, Sbaʿa, Weld, ʿAli, etc.; Shammar dialects: ʿAbde, Khroṣe, Rmāl, etc.; are linguistically akin to the Shammar dialects, group Bc: in ʿIrāḳ probably the Ṭayyiʾ, in Syria and Jordan: ʿAmūr, Ṣlūt, Sardiyya, Sirḥān, in part the Banū Khālid of Jordan and the Banū Ṣakhar; Syro-Mesopotamian dialects: the population of the town of Regga and the tribes: Ḥadīdīn, Mawālī, Nʿêm of Djolān, Faḍᵉl (these last two forming a sub-group), which fall into the category of lesser nomads called *shwāya* or *rāʿye*. The case of the Djōf dialect is a separate question; the dialect of ar-Rass (Ḳasīm) is to some extent a Ba dialect.

It is difficult to demarcate, even approximately, the southern limit of the North Arabian dialects; their existence is definitely confirmed in Ḳāsīm, al-Ḥasā, and probably in the ʿĀriḍ, the Woshm and the Sdeir. Of the dialects of the Ḥidjāz very little is known, and nothing of those of ʿAsīr. The dialects of the Ḥaḍramawt and the Dathīna, known through Landberg's texts, seem to be related, distantly it is true, to the dialect of the North Arabian nomads, and it is possible that the dialects of the nomads of the Rubʿ al-Khālī are connected with the same group. On the other hand, through the efforts of C. Reinhardt, E. Rossi, H. Burchardt, and S. D. Goitein, we know that the dialects of ʿUmān and the Yemen are of a completely different type.

Bibliography: In the body of the article. Works treating of the dialects as a whole: C. de Landberg, *La langue arabe et ses dialects*, Leiden 1905; C. Brockelmann, *Das Arabische und seine Mundarten* in *Handbuch der Orientalistik*, iii, Semitistik (1954), 207-45; J. Cantineau, *La Dialectologie arabe*, in *Orbis*, iv, 1955, 149-69; this work gives additional bibliography and information on the current position as regards studies in Arabic dialectology. (H. Fleisch)

(3) The Western Dialects

The Arabic language is widely used in North Africa, but is by no means the only language in use. Berber is extensively used [see BERBERS], and the Berber language, though losing ground in some instances, can for the most part be considered to be in an extremely flourishing state and not on the retreat.

The elimination of the old autochthonous language naturally has taken place in those cases and in those countries in which the tide of Arabic spread without meeting any obstacles: first of all, in the towns which the Arab conquerors rebuilt, colonised or founded, and their environs; then in Cyrenaica and above all in Tunisia, which were reached by the first and largest waves; finally in those regions of the Maghrib, probably Zenata, where the old pastoral life prepared the way for Bedouin Arabism: the Sahara, the Saharan fringe, the high plains of Algeria and Constantine, the valleys of the Tell, and practically the whole of Orania. This Arabic tide surrounded but did not submerge the settled centres of the Saharan oases, and similarly the mountainous regions in the interior and on the coast, which were difficult of access. In Morocco, arabicisation followed the Atlantic seaboard, reached the Fez and Taza corridor, flooded the Gharb, and left almost intact the riparian massifs of the Mediterranean and the interior, the Berber mountains.—The area in which Arabic is dominant in the Maghrib is thus immense. Nearly fifteen million people there speak it. They are to be found in widely-differing regions, and following very dissimilar ways of life: all town-dwellers, nearly all the agriculturalists and semi-pastoral peoples of the plains, plateaux and steppes, a large number of villagers, several groups of the settled population of the oases, and hill peoples arabicised by the neighbouring towns. This geographic dispersion (which, unlike that of the Berber dialects, is still in progress) and the diversity of these modes of existence are the result both of the complex configuration of the country and of the historical circumstances of its arabicisation. These two aspects will not be dealt with here. It will be sufficient to emphasise that, given physical and human conditions such as these, it is not surprising to discover great dialectal variations in spoken Arabic; variations so great that it seems difficult to define the Arabic dialects as a whole by common, specific characteristics; and that it is perhaps rash to employ the term ʿMaghribī Arabicʾ. It will never-

theless be employed, if only for the convenience of this *exposé*.

C. Brockelmann, at a time when few documents on the various Arabic idioms spoken in North Africa were in our possession, said in his *Grundriss* that the Maghribī dialects were mainly of the Bedouin type. He doubtless based this on the accentuation of the verb in the 1st form, which he considered as the primitive form in all Semitic languages: *faʿala, faʿila, faʿula* culminating in *fʿal, fʿel*. This syllabic reduction, doubtless attributable to stress, can already be found in Andalusian, but it is not Maltese. And it is far from being the only example which is found in the Maghrib, on the one hand, nor is it on the other hand exclusively Bedouin. This appreciation by Brockelmann, without doubt open to dispute in principle, is clearly completely inaccurate when one compares it with the extraordinarily complex reality of the dialectal facts.

This is a phonetic characteristic which applies to the great majority of the Maghribī dialects, without being common to them all or being confined to them alone (since it is found in certain Middle East dialects): a considerable loss of vocalic content, and consequently a marked tendency towards the neutral tones of the short vowel system. Obviously such a general statement takes no account of dialectal variations. In order to try to justify it, the actual facts must be examined more closely. In all the dialects of northern Morocco, Algeria, Tunisia, and in all the dialects of the western Sahara, the short vowel drops out in an open syllable $v + c + v$. The articulatory effort is directed towards the end of the word and disregards the beginning: the word, from being a disyllable, becomes a monosyllable. Thus *ḍaṛab* becomes *ḍṛab* "he has hit", *faṛaḥ* becomes *fṛaḥ* "joy". Naturally the reduction also operates, and in the same sense, when the root of the word is followed by a suffix or an inflexion, or is preceded by a prefix. Thus *ḍaṛabu* becomes *ḍaṛbu* "they have hit", *taḍribuhu* becomes *teḍṛbu* or *tḍaṛbu* "thou hast hit him", *shadjara* becomes *shedjra* "tree", *maḥkama* becomes *meḥkma* or *mḥekma* "court of a *ḳāḍī*", etc. The concentration of elements is sometimes so strong that the whole vocalic element disappears, the articulation of series of consonants being made possible by a consonant with a vocalic function, with an ultra-short vocalic point. Thus *q.ṣba* "reed", *sh-kh.ṣṣk* "who is taking you?". These are the dialects of Morocco, especially the extremely degenerate dialects of the towns (for example, Fez), where this feature can be readily observed. In this evolution, which leads correctly-spoken idioms to reduce the elements of the language (thus taking the line of least resistance), it has often been noticed that the short vowels of quality *i* and *u* are most in danger. Being of small aperture, they seem to be by nature extremely vulnerable: the slightest relaxation of the organs of speech alters the nature of their original quality, if it does not cause their disappearance pure and simple. One is tempted to think that the loss of the short vowels in open syllables started with the vowels of quality *u* and *i*. This is what emerges from the position of the Syrian dialects, on which J. Cantineau has written some excellent monographs (one, in particular, devoted to Palmyra): the conjugation of sound verbs in the basic form differs according as the radical vowel is *u* or *i*, or *a*; the former have become monosyllabic, the latter have remained disyllabic. This is similarly the case in a considerable number of the dialects of Fezzan-Cyrenaica and in the extreme south of Tunisia, which constitute, from this point of view, the link between the eastern and the Maghribī dialects: some trace of the vowel *a* always remains, whether it is a well-preserved qualitative element, as in *ḍaṛab* "he has hit", *ḥalīb* "milk", or an element with a different form, as in *rubaṭ* "he has joined", *ṭubag* "basket", etc.

Morphologically, there are also traits which can be in differing degrees considered to be typically Maghribī. The most characteristic, it appears, is the presence of the sign *n*—in the first person singular of the imperfect of the verb, replacing the initial *hamza* which is general throughout Middle East dialects. This morpheme *n*—is, to the exclusion of all others, that of all the dialects, without exception, of Morocco, Algeria, Tunisia, Mauritania, the Sahara, Fezzan, Tripolitania, Cyrenaica and Malta. Egypt seems indeed to form the eastern limit of its use. Ch. Kuentz, during recent years, has precisely defined the extreme limits (dialects of Alexandria and of certain settled populations of the Delta). The substitution of *u*- for ʾ-, already reported by Ibn Khaldūn in the Hilālī popular songs which he collected, is recorded by Ibn Ḳuzmān for Almoravid Andalusia, and recurs in mediaeval Norman Sicily. It can be considered as a morphological innovation proper to the Muslim West; it consists in the creation of a personal sign of the singular, clearly on the analogy of the signs of the plural: *nafʿal* from *nafʿalu nafʿalū*. The purely Maghribī creation (all the dialects give evidence of this, including Maltese) of a verbal derived form *fʿāl*, originating perhaps from the old forms IX-XI, must also be accounted an innovation. It expresses a resultative meaning: *kḥāl* "he has become black", *byāḍ* "he has become white", *ʿwār* "he has become one-eyed", *ḥṛāsh* "he has become rough-skinned", *ṭwāl* "he has become tall", *smān* "he has become fat", *shāl* "he has become compliant", *zyān* "he has become handsome", etc. The presence of a long vowel *ā* between the 2nd and 3rd radical, creates a phonetic problem of conjugation which the dialects answer in different ways (L. Brunot, *Sur le thème verbal fʿāl en dialecte marocain*, in *Mélanges W. Marçais*, Paris-Maisonneuve 1950, 55-62).—On the analogy of the derived forms with a reflexive and middle-passive significance, with a prefix *t*- (V *tfaʿʿal* originating from II *faʿʿal*, VI *tfāʿal* from III *fāʿal*), Maghribī has formed, like certain eastern dialects, a *tfʿal* (which recalls the very old *ethpeʿel*) as opposed to the 1st form *fʿal*; it uses it by preference, often to the detriment of *nfʿal*; then, carrying this further still, it arrives at a combination of *tfʿal* and *nfʿal* and produces *ntfʿal* and *tnfʿal*, for instance *entejṛaḥ* "he is wounded", *tenḥṛaḳ* "he is burnt".—The old system, for forming nouns of action corresponding to verbs of the basic form, resorted freely to the subtle interplay of contrasts of vocalic quality: *faʿl, faʿal, fuʿl, fiʿl* etc. It is the decay of the short vowel system, fairly general in the Maghrib (and the syllabic upheavals which accompany it), which has doubtless induced the dialects to display a preference, in the case of verbal nouns, for nominal forms with long vowels. Among them, there is one which recognises an unusual prolongation, which can be held to be specifically Maghribī (Malta also uses it): namely, *fʿīl*. Formerly a *maṣdar* form of limited application (verbs denoting a noise, a cry), to-day it constitutes the most frequently used *maṣdar* of verbs of action, especially those denoting material operations: *shṭīḥ* "act of dancing", *ghsīl* "act of washing", *ṭbīkh* "act of cooking", *slīkh* "act of flaying", etc. This form *fʿīl* perhaps owes its success to the analogical influence of *tefʿīl*, *maṣdar* of the 2nd form, a characteristic of

verbs of action, and of transitive action.—Just as in the case of this *maṣdar fʿil* the case of the analogical extension of the plural *fʿāli* seems to be an entirely Maghribī peculiarity. It is, as elsewhere, a plural form *fʿālil* of nouns with a weak radical, *ḳahwa* "coffee" pl. *khāwi*, *maʿnā* "sense, allusion" pl. *mʿāni*. It is widely extended to nouns with sound, not defective, roots, such as *ebra* "needle" pl. *abāri*, *ḳaṣʿa* "large bowl" pl. *ḳṣāʿi*, *meshṭa* "comb" pl. *mshāṭi*, etc.

The establishment of syntactic connexions has caused the appearance of a certain number of dialectal innovations. The most noteworthy of these in the Maghrib include: (1) the creation of a true indefinite article to express the state of the undefined noun (cl. *radjulun*). The numeral "one" is used for this purpose: *wāḥed*, made indeclinable (sometimes contracted to *waḥi*, *waḥ*, *ḥa*) is then followed by the noun, defined either by the definite article *el-*, *wāḥd-er-rājel* "a man", *wāḥd-el-mra* "a woman", *wāḥd-ed-dār* "a house", or by a determinative complement, *wāḥed-bāb-ed-dār* "a house door", *wāḥed-ṣāḥbi* "a friend of mine". Where it is prevalent, that is to say in the dialects of Morocco, Algeria and the Algero-Tunisian borders, the use of *wāḥed*, the article, does not exclude the use of *wāḥed*, the pronoun, which remains declinable, *wāḥed rājel* "someone, a man", *wāḥda mra* "someone, a woman", the only construction possible in central and northern Tunisia and in Libya. (2) The tendency to eliminate the direct annexation of the determinative complement to the noun (classical *iḍāfa*), of the type *riḥt-el-warḍ* "the perfume of roses", and to substitute for it an indirect annexation, which makes use of a copulative particle, of the type *er-riḥa mtāʿ-el-ward*. This phenomenon is found in the dialects of the Near East (Brockelmann, *Grundriss*, ii, 238, 161), but there are some particles of annexation peculiar to those of the Maghrib: *d*, *di*, *dyāl* in Morocco and Algeria, *mtāʿ* or *ntāʿ* in Algeria and Tunisia, *ta* (derived from *mtāʿ*) in Malta, *jen* in Fezzan. The presence of *mtāʿ*, from the cl. *matāʿ* "goods" is already attested in the dialects of Andalusia and in the Almohad chronicle of Baydhaḳ (6th/13th cent.) and extends from the Atlantic to Egypt, where it assumes the form *betaʿ*. (3) The use of the preverb *ba*, *b*, so common in a number of eastern dialects, is also found in Cyrenaica and as far as Fezzan to mark a sense of completion, result or finality in the imperfect of the verb. In the Moroccan dialect *ta* (or *ka*) appears, preceding verbs in the same tense, in order to mark actual action in the present; the Moroccan *ka* is perhaps the same preverb which occurs in the semi-flexible form *ka-ku* (derived from *kān-ikūn*) with a clearly analogical meaning, in Algeria (eastern Kabylia). In addition to these preverbs, the Maghrib, Morocco and Libya use in their own right a presentative of the verbal idea which combines the imperative of the verb "to see", *rā*, with the personal suffixes, in the sense of "I am here, thou art here", etc., or "here I am, thou art" etc., *rāni*, *rāk*, *rāh*, *rāha* (or *rāhi*) *rāna rākum*, *rāhum*, to express the reality of a state or action, in the present or past, both before a verb (in the perfect or imperfect), *rāni jīt* "here I am, I have come", *rāh yebki*, "there he is, crying", and in a nominal clause, *rāk mriḍ* "it is thou who art ill", *rāhum l-temm* "there they are below". A negative sense is formed in a completely analogous way: *mā-rā-ni-sh* and *māni-sh* "I am not", *māk-sh* "thou art not", *māhū-sh* "he is not" etc., more often used in nominal clauses than in verbal: *māni-sh mriḍ* "I am not ill". (4) The revival of particles: it is a general linguistic fact, that the originality of the Maghribī dialects consists in the creation of a sign *-āsh* (or *-āh*), deriving from the cl. *ʾayy-shayʾ*, which is in use from one end of North Africa to the other (*-esh* in Malta, *iyyesh* in northern Constantine), in order to form, in combination with nouns or prepositions, adverbs and conjunctions: *bāsh* "from what" and "in order that, in such a way that", *lāsh* "towards which, with what object", *kifāsh* "how", *ʿalāsh* "on which" and "why", *ḳaddāsh* "of what size, how much"; the word *kayf*, *kif* is used as a preposition "like, resembling" and as a conjunction "when, granted that". (5) Recourse to the expression *ma-zāl*, *mā-zāl mā-*, conjugated or indeclinable, to render the sense "still, not yet", *ʿād* being used in Malta and elsewhere.

More than phonetic, morphological or syntactic differences, there are points of vocabulary which place the Arabic dialects of the Maghrib in the clearest, if not the deepest, contrast to those of the Middle East. Without making a systematic inquiry to determine the origin, Arabic or non-Arabic, of the Maghribī dialectal terms, the commonest will be mentioned here. The word *lāmīn* (with an agglutinate article) has the sense of "head of a corporation" only in the Maghrib; for "pears" *angāṣ* or *anjās* (*lanjāṣ*, *lanzās*), formerly Andalusian, is spreading everywhere; *berrād* is the usual term for "teapot", and *berrāda* for "water-jug"; "bosom, breast" is always *bezzūl* or *bezzūla* from Senegal to Libya, as well as in Malta, *thedi* making an appearance at Fezzan; *bākūr* is the only term for "fig blossom" in Morocco and Algeria; it was formerly Andalusian; Tunisian and Maltese have *bitḥar*, *baytar* with the same meaning; *bekkūsh* everywhere means "dumb"; the "stork" is commonly *bellārej* (*bellārenj*, *berrārej*), from the Greek πελαργός; the word for "tea" is *tāy*, *atāy*, *lātāy* in Mauretania, Morocco, and Algeria, *et-tey* in Tunisia, *shāhi*, *shāy* only appearing in southern Tunisia and Libya; "individual, person, pedestrian" is very commonly *terrās*, apparently derived from the cl. *tarrās* "*valet d'armes*, shield-bearer"; truffles are called *terfās*; *terma* is the usual word for "rump, buttocks"; "hail" is everywhere called *tabrūri*, a Berber word which is found as far as Libya, where *ḥjar* "stones" is preferred; for "to find", *jbār* is used together with, depending on the region, *lḳā*, *lgā* or *ṣāb*, with different shades of meaning ("to discover" or "to find what one is looking for"); *jarra* (or *jurra*) is the word for "trace"; the Pan-Maghribī word for 'frog" is *jrān*, where the Berber *agro* is not found as well; *jughma* is one of the most characteristic terms of the Maghrib, Mauritania and Tripolitania, in the sense of "draught (of liquid)"; for "orange" *tshīna*, *letshīna* is used in Morocco and Algeria, *burdgān* appearing in Tunisia; *tshellūḳ* (*tshellīḳ*, *shlāleg*) reappears, in varying forms, throughout North Africa, in the sense of "rag" or "piece of cloth"; for "to open" the whole of the Maghrib uses *ḥall* (which also means "to untie"), *ftaḥ* being reserved for a rarer and more literary usage; *ḥarḳūs* is the name of the "black cosmetic", from the Greek χαλκός; for "fish" the word *samak*, which is completely unknown, gives way to *ḥūt*; *khdem*, properly "to serve", is the usual word for "to work" and sometimes "to do (in general)"; *khādem*, without any morphological indication of gender, denotes a "negress"; for "knife" the whole Maghrib uses *khudmi*, formerly Andalusian; "to come upon, to befall" is usually expressed by *khlaṭ*; for "to reflect", *khammem* is used; *deshra* is the name of "rural dwellings" or even of "peasants' huts", and has a rival in *meshtā*, originally "winter dwelling" (*shtā*); *dhib* signifies, not "wolf", but "jackal";

rāshī is the usual adjective for "unstable, rotten"; *arṭab* "soft, tender", opposed to *aḥrash* "coarse, rough", follows the declension of nouns denoting colours and deformities; *zarbiyya* "carpet", which is ḳurʾānic (*Ḳurʾān*, lxxxviii, 16), has continued to exist in this sense throughout the Maghrib; to express "to hurry, to hasten", the verb *zreb* is used; *zūj* (*zūz, jūz, jūj*), properly "pair", serves for the numeral "two", either supplanting *thnīn*, or existing in competition with it—formerly an Andalusian usage, which predominates in the Saharan and eastern Maghrib, as well as at Malta; *zāyla* is the current term for "beast of burden"; *azʿar* signifies "blond"; *zwā* "to scream, to shout"; "cock" is expressed everywhere, including Malta, by *serdūk*, *dīk* being heard only in Orania and Fezzan; from the Greek σπόγγος "sponge" is derived a dialectal *shfenj* (or *sfenj*) which means exclusively "fritter", "sponge" being *neshshāfa* or *jeffāfa*; "hot" is *skhūn* and *sukhn*; *slek* means "to extricate oneself" and *sellek* "to extricate"; the cl. *sullam* always appears in the recast form *sellūm* "ladder"; "to beg" is nearly everywhere *sāsā-isāsī*; *seyyeḳ* has the particular sense of "to swill with water"; *shāreb* is the word for "lip" and *shelgūn* that for moustache"; "axe" is *shāḳūr* and "sack" *shkāra*; *ṣabb* "to pour out" is the commonest verb for "to fall (talking of rain)"; the word for shoes is *ṣebbāṭ* (formerly the Andalusian *sebbāṭ*); everywhere in the Maghrib the "minaret of a mosque" is called *ṣomʿa*; "to be cooked, ripe" is *ṭāb-iṭīb* and "to cook, make ripe", *ṭayyeb*; *ṭarf*, in addition to its universal meaning of "end, extremity", in the Maghrib also means "piece"; *ʿarsh* is fairly general in the sense of "tribe"; the word for "he-goat" is *ʿatrūs*, and that for "lamb" is frequently *ʿallūsh*; to denote "fire" the euphemism *ʿāfya* "tranquillity, peace", is used, from the root *ghshsh*, the sense "to deceive" is well-known; Maghribī derives from it a 2nd form "to cause resentment, irritation" and a 5th form "to be vexed, irritated"; from *ghnā* "chant" derives the Maghribī *ghnāwa* "song", with *y* of the 3rd radical, while the eastern dialects only recognise *ghnāwa*, with *w*; "scurvy" is expressed throughout the Maghrib by *farrās*, which means "bald" in Malta; for "chicken", *fellūs* is used, and for "tortoise", *fekrūn, fekrān*, of Berber origin; from Berber is also borrowed the word for "butterfly" *farṭaṭṭo, farṭaṭṭīn* and its variants; to "urinate (of a horse, donkey)" is *fāg*; *ḳadd* means "to suffice", *ḳdam* (*gdem*) "heel"; the word for "dried meat" is *ḳeddīd* with doubling of the medial radical; *garjuma* is the usual word for "throat"; "to belch" is *tgarraʿ*; one of the most characteristic Maghribī words is that for the "lock of hair which is allowed to grow long", *guṭṭāya*; "to cough" is *kaḥḥ*; side by side with *aswed* there occurs, sometimes with a marked difference of meaning, *akḥel* "black"; "figs" are called *karmūs* and "fig-trees" *kram*; "cliff, escarpment" is *kāf*; *lbān* means "whey", never "milk"; "sheet" is *mlaf* or *malf*; the form *mishmish* "apricots" is recast as *meshmash*; to express "late, last-born", the word in use is *mazoẓi*, taken from Berber; for the Pan-Arab *ḳder* "power" is often substituted *najjem*; *hdar* is a common verb for "to speak"; "widow" is *hajjāla*; *wujh* (*ujah*), known in its proper sense of "face", also has a particular meaning, namely "shot (of a fire-arm)"; *wellā-iwellī* means "to return", but also "to become, happen to be", etc.

Thus marked differences of vocabulary separate the Maghribī dialects from those of the Near East, either as regards the actual words employed, or their form, or in a semantic sense. Equally important and equally numerous variations, if not more so, occur among the Maghribī dialects themselves, from end to end of the vast area in which they are spoken. The terms expressing the adverb of time "now' differ according to region: 1) *dāba*, without doubt an Andalusian contribution, is known in the whole of Morocco (except the South), and, in Algeria, among the Jewish dialects of Tlemcen and Algiers. 2) From the cl. *dhā-l-waḳt* derive numerous forms, *delwoḳ, derwoḳ, delwek, drūg, dlūk, derwekh* etc. (with or without an emphatic *r*), which are in use in Mauretania, Southern Morocco, the whole of Algeria—cities, villages and countryside—(and which are also known in the East). 3) *el-ān* is the term of polished speech; it is also that of the Bedouin dialects of Algeria. 4) *es-sāʿa* (*es-sa*) is the form used in Malta. 5) *taw, tawwa* belong to the eastern zone of the Maghrib, from eastern Algeria as far as Libya. "Much" is *barsha* in Tunisia, *bezzāf* in Algeria and Morocco, *belʿa* in southern Morocco, *yāser* among the Bedouin of Algeria, Tunisia and Libya, where it is a declinable adjective, not an adverb.—"Enough, that is enough", is *kāfī* in Mauretania, *tekfī, yezzī, bārka, bārāka* from Morocco to Tunisia, but *bess* in Malta and Libya.—"There is, there is not", can always be expressed by means of the verb *kān* in a personal form or as a participle; *kān, kāyn, mā-kān-sh*; these are the forms usually spoken in Algeria and Morocco; but in Tunisia the forms *themma, mā-themmā-sh*, prevail, and in the south of Tunisia and in Libya *fī mā-fī-sh*.—"Nothing" can everywhere be rendered as *shey*; it is, in fact, so rendered in Algeria and Tunisia, by freely strengthening the negative adverb by *ḥatta, ḥatt-shey*; but this is often replaced in Tunisia and Libya by *kān-el-barka* "(nothing else) than benediction"; in Morocco and as far as Orania, *wā-lū* is used, properly "and if".—The exclamation "good, very good" is expressed by *mezyān* in Morocco and up to Tlemcen, *mlīḥ* (*amlīḥ*) in Algeria, *ṭayyeb* in Tunisia, *bāhī* in Fezzan.—To express "what, what is it?", *wāsh* is the Pan-Maghribī form, but Maltese recognises more particularly *shī*, Moroccan and Mauritanian *āsh*, Fezzanese *shen* or *esh*, Tlemcenian *asem*.—The equivalent of "how much?" is *kem* in Malta, Mauritania and in the majority of the Bedouin-type dialects; it has lost ground to *sh-ḥāl, āsh-ḥāl* (cl. *ʾayy-shay-ḥāl*), an Andalusian contribution which permeated the urban dialects of western Morocco, and then won the countryside and the rural and pastoral regions; eastern Constantine, Tunisia, and Libya prefer *ḳaddāsh, ḳoddāsh*.—"Eggs", doubtless because they represent an idea which lies under the interdict of language, are designated by various words; *deḥī* in Libya, *ʿḍām* in Tunisia, northern Constantine and the villages of Algeria, *bīḍ* in rural and pastoral Algeria and in Morocco, *awlād-jāj* in Algiers, Tlemcen, Fez, Tangier.—Apart from the word *mṭar*, which is understood nearly everywhere and is used freely in Bedouin regions, there exists *naw* which means "rain" in the majority of pastoral and rural areas, except in the western Sahara, where *shāb* seems to predominate; the word used in the towns and villages, and exclusively in Malta, is *shtā*, properly "winter".—"Grocer" is *aṭṭār* in Tunisia and Libya, *ḥwānti* in Algeria and Constantine, *ḥadrī* among the rural populations of Orania; in Morocco it is *baḳḳāl*, which was formerly Andalusian.—The verbs meaning "to sit down" are *ḳʿad* in Tunisia and the Algerian villages, *gʿad* in Tlemcen, Constantine, *jammaʿ* in the Oranian countryside, *gles* in the towns of Morocco, *gaʿmez*

in Fezzan.—"To send" is *ṣifoṭ* (*ṣāfoṭ*, *zifoṭ*, *sāfed*, etc.) in Morocco and a considerable part of Orania, *bʿaṯh* in Algeria, *seyyeb* in the South, *dezz* in Tunisia and Libya, *rsel* representing a term of educated speech.—For "to lift, remove", *rfed* is the verb of the west, Moroccan, Oranian and Algerian, and of part of Constantine; *hazz* is the word of eastern Constantine and Tunisia, *rfaʿ* that of Sūf, Tripolitania and Fezzan.—"To do" is a vague idea expressed by a variety of verbs: *ʿmal* is the most general; *dār-idīr*, essentially Bedouin, has everywhere infiltrated into the urban dialects; *sāwā* (and its metathesis *wāsā*) as well as *ʿaddel*, *sawwel* prevail in the western Maghrib, *lḳā-yelḳī* extends into the north-west of Orania, *khdem* in northern Constantine.

Whatever the difference between the dialects of the Maghrib, they remain closely akin to one another and are in varying degrees peculiarly Arabic. From the Arabic system proceeds the vast majority of the sounds of the language, the grammatical forms, the lexicographical material and the methods of presenting ideas. The dialectal variations found in the Maghrib seem, in general, scarcely more palpable than those which appear in the dialects of the Middle East. They can, to some extent, be attributed to influences alien to Arabic: 1) that of the Berber substratum which clearly gained new strength in certain regions and in certain fields of expression (those concerning the things of the material life, especially rural); but there are also areas where the memory of Berber has almost entirely disappeared from the language; 2) that of the languages of the coloured races in the northern zones bordering on the Negro lands; 3) that of the Romance language: of Latin, often transmitted through the medium of Andalusian, and also of Spanish and Italian;—4) that of Turkish, particularly in Algeria and Tunisia;—5) finally, that of French, an influence which is still exerted to-day.

The part played by inherited or loan elements, however, does not seem to be the only reason to put forward to explain the original and motley character of Maghribī. There is the diversity of the Arabic dialects, which were already differentiated when they were imported by the conqueror at various periods during the process of establishing himself in the Maghrib. There is also, and perhaps this is the most important differentiating factor, the caprice of innovations, spontaneous or conditioned, which have come into being and have spread in different directions, sometimes propagating themselves throughout vast geographical groups, sometimes confining themselves in districts divided into rigid compartments.

General Bibliography: No complete history of Arabic literature has yet been written. Many important works still exist only in manuscript, critical studies of individual poets and writers are relatively few, and several periods and regions have not yet received monographic treatment. The fullest bio-bibliographical details are to be found in C. Brockelmann, *Gesch. der arab. Literatur* and *Supplementbände*. Outline surveys are given by F. Gabrieli, *Storia della Letteratura araba*, Milan (1952); H. A. R. Gibb, *Arabic Literature*, London 1926; R. A. Nicholson, *Literary History of the Arabs*, 2nd ed., Cambridge 1930; Ch. Pellat, *Langue et Littérature arabes*, Paris 1952; O. Rescher, *Abriss der arab. Literaturgeschichte*, i, ii, Stuttgart 1925; Djirdjī Zaydān, *Ta'rīkh Ādāb al-Lugha al-ʿArabiyya*, 4 vols., Cairo 1911; Aḥmad al-Iskandarī and M. ʿInānī, *al-Wasīṭ fi 'l-Adab al-ʿArabī*, Cairo 1919 etc.; and numerous other textbooks in Arabic. Monographs on separate periods are cited in the sectional bibliographies below; those on particular writers will be found in the relevant articles.

(I) Early Arabian Literature

(a) Pre-Islamic

(i) Poetry. The history of Arabic literature begins with the emergence, towards the end of the 5th century A.D., of a school of Arabic poets in N.E. Arabia and the Euphrates border, of whose productions more or less extensive fragments have survived. The second generation of poets of this school, of whom the most outstanding was Imru' al-Ḳays, brought its technical and artistic methods to a high degree of perfection. Their odes, technically called *ḳaṣīda* (pl. *ḳaṣā'id*, coll. *ḳaṣīd*), served as standards and models for later generations of Arabian poets, whose odes were, almost without exception, cast in the same structural mould, with some variation in content and treatment of the themes. The productions of this school spread with great rapidity in Arabia and the regions of Arab settlement in Syria and Mesopotamia, and found in all parts imitators and practitioners, who in some regions gave rise to local schools. The poets of the third generation (middle of the 6th century A.D.) already represent widely diverse regions; those of the fourth (end of the 6th century), drawn from all tribes and regions, are beginning to show characteristic epigonic features. With the rise of Islam and the consequent shift in tribal interests, this type of poetry was temporarily eclipsed.

The *ḳaṣīda*, the distinctive artistic production of this poetic literature, is essentially an art-form, which has little in common with the forms of artistic poetry in other literatures. Its main theme is boasting or panegyric, led up to by a journey theme. The latter is elaborated: (i) by an elegiac-erotic prelude (*nasīb*), recalling a former attachment to a woman of another tribe, leading to or connected with the journey-theme; (ii) by description and praise of the poet's camel or horse, more especially (iii) by comparing it with a beast of the chase, developed into a finely-executed tableau of animal life in the desert. The main theme is similarly elaborated by the introduction of idealised pictures of beduin hospitality or drinking, thunderstorms, war and battle scenes, and satire of rivals. The whole poem runs from 60 to 100 lines in length, being composed throughout in the same metre ending in the same rhyming syllable [see further ḳaṣīda].

The pre-history of the *ḳaṣīda*, i.e. the origins of Arabic poetry in general, are lost in obscurity and apparently irrecoverable. The Arabic philological tradition (which constitutes almost the only source of information) itself knows nothing earlier than the rise of the *ḳaṣīd*-poets. It can scarcely be doubted that the poets of this school stood on the shoulders of a long chain of predecessors, who perfected its diverse metrical systems [see ʿarūḍ] and who laid the foundations of the special literary idiom (*ʿarabiyya* [see above, arabic language, ii (1)]) and of the artistic devices utilised by them. The hypothesis (put forward by al-Bahbīṭī, v. *Bibl.*) of an earlier production of lengthy homogenous odes, reconstructed fragments of which supplied the model for the *ḳaṣīda*, is purely speculative and improbable. The rise of the new school contemporaneously with the kingdom of Kinda [*q.v.*] in N.E. Arabia, and its relations with the princes of Ḥīra and Ghassān, suggest the possibility of a stimulus from the Fertile Crescent, but nothing has been adduced in evidence for this supposition. In any case, it seems reasonably certain that the *ḳaṣīda* constituted a new departure in Arabic poetic art, consisting of the combination of a number of existing themes of Arabic poetry into a subjectively related pattern, and that (prefiguring a characteristic often to be seen in later Arabic literature) such a pattern, one established, became normative for future generations of poets and by reason of its combination of different

subjects furnished the supreme test by which their poetic powers were judged.

The *ḳaṣīd* poets also illustrated certain linguistic and aesthetic features which were to dominate all later Arabic poetry. The chief of these is verbal concision, in which all the resources of morphology, suggestion and allusion are utilised to present a sharply focussed picture in the smallest compass of words. Metaphors are limited to a few traditional images, mainly relating to war and feasting; similes, on the other hand, are extensively used to give imaginative depth to a descriptive passage; for similar reasons, situations of time or place are often indirectly indicated by pictorial imagery, and a particular situation may be universalised by adding a phrase cast in a proverbial mould. The most fully developed sections are usually those devoted to descriptions of animals, which are vivid and realistic; by contrast, the *nasīb* briefly indicates the site of a former encampment in stereotyped terms and rarely describes the woman whom it recalls, although passages of erotic description occasionally occur as separate themes. Throughout, the poet appeals to the hearer's eye, and the imaginative response is determined by the completeness and precision of the concrete visual image; hence the importance attached by critics to the single line as evidence of poetic skill. This imaginative interplay between artist and hearer had the further effect that the range of visual images so presented was circumscribed by the communal basis and pattern of tribal life and its popular sentiments. Pre-Islamic poetry (or at least almost all of it that has survived) is tied to a limited number of themes treated in conformity with the prevailing aesthetic standards and moral values. Thus the content of the literary product was not only known in advance, but dictated to the extent that anything more than a slight deviation from what was expected was disapproved, and the whole emotional response was determined by the form. Form therefore acquired an absolute value; the content was merely the substrate by which the superior excellence of form was realised. The pursuit of formal perfection was, however, limited by the realism and sobriety of the poet's imagination. Excessive elaboration of any theme is in general avoided, except for a limited range of accepted exaggerations in boasting and panegyric, particularly in the theme of hospitality. Finally, it was a major function of the poets to preserve the collective memory of the past, so giving an element of continuity and meaning to the otherwise fleeting and insubstantial realities of the present; and in the two main themes of eulogy and satire they pressed home the moral antitheses and sanctions by which this collective existence was regulated and sustained. Thus the *ḳaṣīd*-poets, with relatively few exceptions, express, and even prescribe, a high standard of tribal morality, and noticeably avoid any reference to the humbler and ruder features of beduin life and environment. [See further under ʿABĪD B. AL-ABRAṢ, ABŪ D͟HUʿAYB, AMR B. KULT͟HŪM, ʿANTARA, AL-AʿS͟HĀ, AL-ḤĀRIT͟H B. ḤILLIZA, IMRUʾ AL-ḲAYS, LABĪD, MUʿALLAḲĀT, AL-NĀBIG͟HA, ṬARAFA, ZUHAYR.]

In addition to *ḳaṣīdas*, a considerable body of shorter poems and fragments has been transmitted, representing the more ordinary output of occasional verse on single subjects. All of these, however, date from the age of the *ḳaṣīd*-poets and, having presumably been influenced in technique by them, cannot be regarded as representative of the poetry of an earlier period. Partial exceptions are offered by war-poems in the *radjaz* metre, and by the elegy [see MART͟HIYYA], which in a few surviving examples presents some primitive features; but the later elegy approached more closely the general type of art-poetry, while retaining the characteristics required by its special function. Of the other subjects of occasional verse, the commonest is praise or boasting of courage (*ḥamāsa* [*q.v.*]), a special branch of which is formed by the poems of solitary brigands and outlaws (*ṣaʿālīk* [see AL-S͟HANFARĀ and TAʾABBAṬA S͟HARRAN]).

Peculiar significance attached to the satire (*hidjā* [*q.v.*]), in which there still survived the primitive conception of the poet (*s͟hāʿir* [*q.v.*]) as the mouthpiece of supernatural forces (see I. Goldziher, *Abhandlungen zur arab. Philologie*, i, 1896, 1-121). It seems that the concentration of the aesthetic sensibilities of the Arabs on the apt use of words endowed the words themselves with mystical and magical power. Poetry was a source of pride and rivalry; and the poet who, by skilful ordering of vivid imagery in taut, richly-nuanced phrases, could play upon the emotions of his hearers, was not merely lauded as an artist but venerated as the protector and guarantor of the honour of the tribe and a potent weapon against its enemies. Tribal contests were fought out as much, or more, in the taunts of their respective poets (*mufāk͟hara*) as on the field of battle, and so deeply rooted was the custom that even Muḥammad, though in general hostile to the influence of the poets, himself conformed to it at Madina (see *Dīwān* of Ḥassān b. T͟hābit (Hirschfeld), comm. on no. XXII). The sensitiveness of the Arabs to satire (noted by al-Djāḥiẓ, *Ḥayawān*[2], i, 359) did not prevent its almost universal employment against chiefs and men of note, but few of these poems have survived.

A remarkable feature is the total absence of love-poetry (apart from the conventional *nasīb*); wine-songs (*k͟hamriyya* [*q.v.*]) as such are also rare, but their existence is attested by examples contemporary with the rise of Islam [see ABŪ MIḤDJAN]; and there are no independent examples of hunting-poems (*ṭardiyya* [*q.v.*]). In the urban settlements also there were poets, whose productions differed from those of the desert poets both in texture and content, but little of these have survived except some of the drinking-songs and religious poetry of ʿAdī b. Zayd of Ḥīra, and the religious poems doubtfully ascribed to Umayya b. Abi 'l-Ṣalt of Ṭāʾif.

Transmission and authenticity. There is no certain evidence for the fixation and transmission of any pre-Islamic poetry in written form prior to the 1st century A.H. (reference by al-Farazdaḳ to a written text of Labīd: *Dīwān* (Ṣāwī), 721), although the use of Arabic script for literary purposes before the rise of Islam cannot be totally excluded [see KITĀBA]. Arabic tradition represents the transmission and survival of such poems as survived as due to the existence of professional "reciters" (*rāwi*ⁿ, pl. *ruwāt*), either of the production of particular poets or of some general body of poetry, and its fixation in written form as due to the efforts of the philologists of the 2nd/8th century to collect what could be saved of the dwindling repertoire of pre-Islamic poetry. Thus the date of written fixation was by 200 to 300 years later than the date of production. The fact itself lays the poetry so collected open to question, firstly as to the reliability of the text as finally established, and secondly (and more seriously) as to its authentic attribution to the original poet—the more so since

many Arabic philologists freely charged one another with forgery in this field. (See, on the latter point in particular, D. S. Margoliouth in *JRAS*, 1925, 417-449; and on the question in general, Ṭāhā Ḥusayn, *Fi 'l-Adab al-Djāhilī*, Cairo 1927 (a logical argument based on erroneous premises), and R. Blachère, *Litt.*, i). On historico-critical and logical grounds the argument admits of no conclusion, and it will seldom be possible to prove the authenticity of any specified poem with complete certainty. On literary and stylistic grounds, on the other hand, it is no less certain that the commonly accepted nucleus of poems ascribed to the pre-Islamic *ḳaṣīd*-poets (allowing for verbal modifications or rearrangement by successive generations of *rāwīs*) is a faithful reproduction of their poetic output and technique, which lies behind but is yet markedly distinct from the poetic production of the 1st/7th century.

(ii) Prose. The absence of any written Arabic prose literature in pre-Islamic Arabic is even less open to doubt (in spite of occasional arguments to the contrary, e.g. Z. Mubarak, *La Prose arabe*, Paris 1931). Parallel, however, to the cultivation of the art of poetry, there existed several forms of artistic speech which were distinguished from ordinary speech by the conscious application of aesthetic principles to their selection and polishing. One of these was the compression of a complete visual observation or social experience into a brief proverbial phrase [see MATHAL], using the same technique of concision (*īdjāz*) as was applied in poetry. Judicial decisions and maxims also were probably couched in the same style. Casual references occur to the existence of "written sheets" (*ṣuḥuf*, sing. *ṣaḥīfa*) containing proverbial phrases or *ḥikam* (cf. I. Goldziher, *Muh. Stud.*, ii, 204-5), and it is probable that judicial maxims also were occasionally committed to writing.

In oratory, the leading principle, in contrast to *īdjāz*, was elaborate expansion or "adornment" of the theme, by processes resembling in some respects those employed in poetry, together with the balancing of phrase with phrase, often emphasised by parallelism in structure, assonance, and especially end-rhyme (*sadjʿ* [*q.v.*]). The authenticity of the pre-Islamic discourses quoted by later anthologists is almost certainly to be rejected; probably only such fragments as were preserved by al-Djāḥiẓ in *al-Bayān wa 'l-Tabyīn* can be regarded with any confidence and accepted as evidence of style. As regards the language of oratory, there is good reason to assume that distinguished orators employed much the same idiom as that of the poets, but more freely adapted to local usage. The original language of the proverbs (except those which originated from poetic quotation) is more uncertain; although the vast majority, as transmitted by the later philologists, are in the *lughat al-fuṣḥā*, the surviving exceptions suggest that many of them were at first framed in more or less divergent local forms of speech.

A few traces have survived also of elements of folk-literature, namely the riddle and the beast-fable. How far, on the other hand, the pre-Islamic narrative materials handed down by the later collectors, especially those of the battle-days [see AYYĀM AL-ʿARAB], have preserved their original linguistic form, is more doubtful. The narrative content and the literary technique, with complementary prose and verse passages, are certainly authentic (see F. Rosenthal, *Hist. of Muslim Historiography*, Leiden 1952, 17 ff.), but the method of narrative presentation is closely paralleled by similar materials of the 1st/7th century and may have been considerably modified before they were first written down at the end of the 2nd/8th century. Other pre-Islamic narratives, particularly those which relate to South Arabia, are still more suspect.

A third form of artistic speech in pre-Islamic Arabia was the conventional oracular style affected by the diviners [see KĀHIN], consisting of a series of obscure rhyming oaths, generally relating to celestial phenomena, followed by two or three brief rhymed phrases, often as obscure. In the history of Arabic literature, the fragmentary remains of such oracular utterances would be of little importance, had it not been that (if reliance is to be placed on the traditions related, professedly by Muḥammad himself, of the Christian preacher Ḳuṣṣ b. Sāʿida [*q.v.*]: al-Djāḥiẓ, *Bayān*, i, 247) they were adapted by revivalist preachers at the Arab fairs to their own purposes, and through this medium came to literary fruition in the early Meccan suras of the Ḳur'ān. Otherwise, as a literary production, the Ḳur'ān stood apart from the main vehicles of conscious artistic style in Arabia, being linked to them only by adoption of the *ʿarabiyya* idiom as its medium (adapted in points of phonetic detail and vocabulary to the speech of the Ḥidjāz, following what may be assumed to have been regular oratorical practice), and the common feature of *sadjʿ*. As the oracular style was replaced by narrative and argument, the singularity of the Ḳur'ān became still more marked, since its narrative style appears to have little in common with the pre-Islamic *ḳaṣaṣ* [*q.v.*], and the argument arose out of the personal circumstances of the preacher. The prose structure of the Madinian sūras is equally distinctive, except possibly in regard to the form of some legal enactments. For its literary art in general, therefore, the Ḳur'ān discards most of the methods of conscious artistic decoration common to the literary or aesthetic productions of its time. Form is subordinated to content, and in forcing the literary idiom into the expression of new ranges of thought it depends for its effectiveness rather on the suggestive modulation of the syntactical phrase [see further ḲUR'ĀN]. In this highly personal art, the Ḳur'ān found few imitators in later Arabic prose literature, partly by reason of its special content, but also because the growing standardisation of literary usage limited the freedom of prose writers to handle syntactical structure with the same measure of originality. The Ḳur'ān thus stands by itself as a production unique in Arabic, having neither forerunners nor successors in its own style; and its literary heritage is to be found mainly in the pervasive influence of its ideas, language and rhythms in later artistic contexts.

During the 1st/7th century, however, the flexibility imparted to the *ʿarabiyya* idiom by the Ḳur'an made it an instrument ready to hand for the multifarious new tasks about to be imposed on it as a result of the Arab conquests and the new needs of administration. Although the traditions of pre-Islamic oratory still dominated among the tribal and Khāridjī orators, the influence of the Ḳur'ān is to be seen in a new style of oratory developed, probably, out of the formal *khuṭba* pronounced by the caliphs and their governors (cf., e.g., a *khuṭba* of ʿUmar I in al-Djāḥiẓ, *Bayān*, iii, 80), in which more emphasis was laid on the content and less on external adornment, *sadjʿ* in particular being avoided. It was

in all probability this style which furnished the models for the first literary art of Arabic written prose, at the hands of the *kuttāb*, the secretaries of the Umayyad caliphs and governors, of which, however, there are few authentic examples until the papyrus documents of the period of Sulaymān and the chancery records of ʿUmar II at the end of the 1st century (between 715 and 720 A.D.).

(b) First-Century Poetry

The Arabic poetry of the 1st/7th century closely reflects the social and economic changes resulting from the Islamic movement and the Arab conquests, the military settlements of the Arabs outside Arabia, the growth of luxury and a money economy, the rise of an imperial government and the imposition of its authority over the tribesmen, and the emergence of religious and political parties and tribal factions. The results of these changes are most clearly seen in the transformation of the occasional poem, and the cultivation of particular themes or types by individuals or schools. The old satire (*hidjā*) loses its aura of supernatural influence and develops either into a string of indecencies or a theatrical display of mutual taunting by poets of rival groups (see below). The *ḥamāsa* poem becomes the vehicle of religious exaltation and defiance among the Khāridjīs [*q.v.*]. The most remarkable new development is the rise of the independent love-poem (*ghazal* [*q.v.*]) in the wealthy and luxurious cities of the Ḥidjāz, using a simplified linguistic structure influenced by Ḥidjāzī conversational style, and, through its close association with the rise of a new musical profession [see GHINĀʾ], metrically adapted to the needs of singing. This *ghazal* was of two kinds: one, connected more especially with Mecca [see ʿUMAR B. ABĪ RABĪʿA], realistic, urbane, and gay; the other, connected especially with Madina [see DJAMĪL and ʿUDHRA], depicting an idealising and hopeless love, with beduin protagonists. New themes of politico-religious poetry were inspired by the disasters and aspirations of the ʿAlid *shīʿa* [see AL-KUMAYT and KUTHAYYIR], and the *radjaz* poem, a simple iambic piece formerly used especially to rouse the ardour of combatants, was made into an instrument for displays of linguistic virtuosity in lengthy and consciously archaising *ḳaṣīdas* by a school of beduin poets [see AL-ʿADJDJĀDJ].

All these give evidence of the new vigour and plasticity which had been imparted to the literary arts of the Arabs by the Islamic movement and its political and social consequences. Poetry, without losing any of its artistic qualities, becomes less formal and more functional; style and content complement and harmonise with one another. The *ḳaṣīda* also, revived after a short intermission during the conquests, was shaken out of the rigid mould and obligatory canons of style which had circumscribed it in the old tribal society. During the 1st century it was cultivated almost exclusively by a group of beduin extraction in al-ʿIrāḳ and Mesopotamia, represented especially by al-Akhṭal, Djarīr, al-Farazdaḳ, and Dhu ʾl-Rumma. Al-Akhṭal, the authentic representative of the schools of ʿAmr b. Kulthūm and al-Nābigha, stands closest to the spirit of pre-Islamic poetry, both in his tribal odes and his panegyrics of the Umayyad caliphs. For the poets of al-ʿIrāḳ, on the other hand, the *ḳaṣīda*, while preserving the traditional external structure, changes both in inner content and in function. Al-Farazdaḳ in his boasting odes may celebrate the renown of his ancestors, but for him, as for Djarīr, beduin life is poor and brutish, and the *ḳaṣīda* an instrument to gain riches from the powerful and wealthy at the price of often hypocritical adulation, no longer phrased in terms of tribal virtues, but of political and religious controversy. Alternatively inter-tribal *mufākhara* is overlaid by a flood of personal taunts in slanging matches on parallel themes (*naḳāʾiḍ* [*q.v.*]), of considerable ingenuity and virtuosity, for the delectation of the tribesmen of Kūfa and Baṣra. Both of these developments went far towards changing the original art-form of the *ḳaṣīda* into an artificial convention; and in language also the poets sought the suffrages of the rising philological schools in al-ʿIrāḳ by conscious exhibitions of luxuriant and sonorous vocabulary. This is still further developed in the special art of Dhu ʾl-Rumma, devoted mainly to descriptions of desert scenery and life, emotionalised by a *ghazal* theme.

The outstanding difference between the pre-Islamic poetry and that of the Umayyad age in general is, however, psychological. The passions of the pre-Islamic age were strong, but moved within narrow limits; and the poets held them to a high moral plane. Those of the Umayyad age were multiple and conflicting, and the poets shared in the general psychological instability and conflict of principles and parties. The emotional foundation of the *ghazal* is self-evident; but emotion enters also into the traditional themes, bringing them closer to the popular taste and giving them a sharper and coarser tone, which lowers the ethical plane, in spite of a copious sprinkling of Ḳurʾānic phraseology and pious sentiment. The political role also of much of this poetry required the poets to play to the gallery and pander to the debased taste and love of excitement of the masses, especially in their *naḳāʾiḍ*.

As regards the authenticity and transmission of Umayyad poetry, it is evident from the relatively complete state of the *dīwāns*, as compared with those of the pre-Islamic poets, that they were written down either during the poet's lifetime or immediately afterwards. Specific references are found to a written corpus of the poetry of al-Farazdaḳ, kept by a secretary (*Aghānī*, xix, 22), and also to that of Dhu ʾl-Rumma (al-*Djāḥiẓ*, *Ḥawayān*², i, 41), and to a written text of the *naḳāʾiḍ* (ed. Bevan, 430).

Bibliography (in addition to general works and works cited in the text): R. Blachère, *Litt.*, i; C.A. Nallino, *Raccolta di Scritti*, vi, Rome 1948; Aḥmad Amīn, *Fadjr al-Islām*, Cairo 1928; N.M. al-Bahbītī, *Taʾrīkh al-Shiʿr al-ʿArabī ḥattā ākhir al-Ḳarn al-thālith al-hidjrī*, Cairo 1950; Shawḳī Ḍayf, *al-Taṭawwur wa ʾl-Tadjdīd fi ʾl-Shiʿr al-Umawī*, Cairo 1952; M.M. al-Baṣīr, *ʿAṣr al-Ḳurʾān*, Baghdad 1947.

(II) Second-Century Literature

(i) Poetry. The Arabic literature of the 2nd/8th century is sharply distinguished from that of the 1st/7th century by two main features. It was, with few exceptions, the literature of an urban society, concentrated for the most part in al-ʿIrāḳ; and the majority of its producers were half-Arabs or non-Arabs, converts or descendants of converts from the original Aramaean and Persian population. The resulting changes and developments in literary production are more marked in prose than in verse production, but are clearly to be seen also in the poetry of this period.

In contrast to the new prose literature, however, the transition to the early ʿAbbāsid age made no

violent breach in the tradition of Arabic poetry. Metrical systems and technique evolved within the older framework, and structural innovations met with little or no success [see ABU 'L-ʿATĀHIYA]. The permissible metres and deviations were ingeniously systematised by al-Khalīl b. Aḥmad (d. 175/791) and strictly adhered to. In language also the poets are as precise and meticulous in their pursuit of *ʿarabiyya* as their predecessors, but begin to aim at smoothness and simplicity in place of the sonority of the beduin poets. These changes are masked to a certain extent by the continued cultivation of the *ḳaṣīda*, which now, however, even more than in the Umayyad age, acquired a ceremonial function. The poet who presented himself at the court of the caliphs or of lesser authorities was required to demonstrate his qualities by his *ḳaṣīdas* and was rewarded accordingly. Since it was by their patronage that the poet gained his livelihood, he was compelled to conform to their expectations, especially when the reward was not infrequently proportioned to the length of his ode. To these factors must be added the natural conservatism of the Arab, which tended to restrict the poet to conventional forms, and of the poets themselves, for whom (as for their critics in the rising philological schools) poetry was the guarantor of the pure tradition of Arabic linguistic art, and the *ḳaṣīda* the highest proof of the poet's mastery of it. Internally, in spite of the conventionality of its form and matter, the *ḳaṣīda* shows a development away from the old beduin themes, and both panegyric and satire are handled with considerable diversity and originality, while at the same time the newer types of poetic production affect to some extent the traditional modes of expression.

It is, however, in these newer types that the social changes and currents in the new age found their fullest expression. The first impulses came from the *ghazal* poetry of the Ḥidjāz and its musical accompaniment, both directly and through Syria, where they were combined with the (probably native Syrian) tradition of wine-songs by the Umayyad caliph al-Walīd II (d. 126/744), with whom tradition connects the first representatives of the new school in al-ʿIrāḳ [see MUṬĪʿ B. IYĀS]. Their witty, uninhibited, and often scandalous verses met with a delighted reception in the new secular and pleasure seeking society of Baṣra and Baghdād, and were even, set to music, enjoyed in the private entertainments in caliph's palaces. The general intellectual effervescence resulting from the contact of Islamic society with Persian and Aramaean culture stimulated, both by attraction and by repulsion, a wide range of emotional attitudes and reactions, which were freely exposed in verse, and at the same time created a social atmosphere which, in spite of the opposition of the nascent legal and theological schools, encouraged freedom of thought and expression. Together with the new trends of urban poetry, several of the movements of the Umayyad age (notably Shīʿism) still continued to furnish themes for poetic elaboration, and the old ʿIrāḳī tradition of religious and moral verse was revived by the Muʿtazilī Bishr b. al-Muʿtamir, Abu 'l-ʿAtāhiya, and others. Two other lesser poets also were originators of new literary genres: ʿAbbās b. al-Aḥnaf (d. c. 192/807), the inventor of the court-*ghazal*, short poems on themes of chivalrous love; and Abān b. ʿAbd al-Ḥamīd (d.c. 200/815), who first used the rhymed *radjaz* couplet (*muzdawidj*) for verse romances and didactic poems. In sum, therefore, the output of Arabic poetry in this century was enormous, and characterised for the most part by an originality, achieved not so much by breaking out along new lines as by fusing new elements with the traditional themes in such a way that the effect is almost that of a wholly new art.

Yet, for all this, the poetry of the 2nd century prefigures, if it does not itself illustrate, the decline of the true poetic art and the growth of artificiality in Arabic poetry. The freshness and sincerity of the Ḥidjāzī *ghazal* were not compensated for by wit and cynicism; and the pursuit of wit led to a straining after verbal brilliance and originality in metaphor. This was the origin of the so-called *badīʿ* [*q.v.*], the embellishment of verse by tropes and antitheses and ingenious exploitation of Arabic morphology. The earliest exponent of this "new style"—not as yet exaggerated or formalised—was the blind poet Bashshār b. Burd (d. 168/784), of Iranian extraction, and the first major Arabic poet of non-Arab origin. The elaboration of the traditional *ḳaṣīda* with *badīʿ* devices is generally ascribed to one of the poets of the next generation, Muslim b. al-Walīd, who was in consequence highly esteemed by some critics and condemned by others as "the first who corrupted poetry". There is, in contrast, little trace of these artifices in the work of his greater contemporary Abū Nuwās (d.c. 198/803), who in poetic genius, fecundity, manysidedness and command of language has few rivals in Arabic literature. Witty, gay, cynical and foul-mouthed, he was at his best in his incomparable wine-songs, most virulent and coarsest in satire and *ghazal*, versatile in panegyric, and a linguistic virtuoso in the beduin style of hunting-poems (*ṭardiyyāt*), the fashion for which he revived.

On the other hand, Abū Nuwās and the other poets of the latter half of the century exemplify a new development which was soon to affect all Arabic poetry, not generally to its advantage. Hitherto the poets had learned their art exclusively by association with, their predecessors. With the rise of the philological schools, particularly at Baṣra, they began to perfect their training by systematic instruction from and association with the philologists. The common ground of this association has already been noted above, but its effect was to imbue the poets themselves (exclusive of the purely popular poets) with a more or less philological approach to their art and the acceptance of philological criteria of poetic merit. To this, probably, is due, more than to any other cause, the increasing formalisation of Arabic poetry in later centuries, and its degeneration, in the hands of the less gifted, to an almost mechanical recapitulation of well-worn themes with a surface decoration of *badīʿ*.

Transmission. Paradoxically, the situation in regard to the texts of the early ʿAbbāsid poets is often much worse than to those of the Umayyad poets, since the philologists (who did not regard them as reliable authorities for linguistic usage) made no efforts to collect their *dīwāns*. Some have never been collected, and such *dīwāns* as survive in later MSS (including that of Abū Nuwās) are far from reliable. The authorship of single verses and even of whole poems is sometimes in question, and later collectors of *badīʿ* figures have caused much confusion by lack of care in citation and attribution (see I. Kratchkowsky, *Abu 'l-Faraj al-Waʾwā*, Petrograd 1914, Introduction, 68-96).

(ii) Prose. As already mentioned [I (a) (ii) above, ad fin.], the first essays in Arabic prose were made by the *kuttāb*, the chancery secretaries of the

Umayyad caliphs, in a style based on that of the official *khuṭbas*. In the earliest known literary productions, those of ʿAbd al-Ḥamīd b. Yaḥyā (d. 132/750), however, in which the matter called for a logical expansion of general principles in complex detail, the adaptation of Arabic syntax to these unfamiliar demands could be met only by ingenious experiment. As in other literatures, flexibility in prose style was first acquired by the processes of translation, in this instance from the Pahlawī court-literature of Sāsānid Persia, initiated by ʿAbd al-Ḥamīd's disciple Ibn al-Muḳaffaʿ (d. 139/757). In their existing forms, the extant works of Ibn al-Muḳaffaʿ have probably undergone some rehandling in subsequent decades; but it is clear that he posed the problem which was gradually solved by his successors: that of creating a smooth and palatable prose style which was capable of expressing systematic thought, within the limits of the available vocabulary. The function of this literature was didactic and ceremonial; it laid down rules of conduct for princes, court officers, secretaries and administrators of all kinds, and supplied the general knowledge required for the performance of their duties, in the form of manuals, anecdotes and romances, the whole being comprised under the general head of *adab* [*q.v.*]. Their agreeable literary style and diverting contents procured a wide popularity for these works in the new urban society, and for several decades the translations from and imitations of Persian literature held a dominant place in Arabic prose literature.

In the meantime, native forms of Arabic prose were being developed. The primitive narrative arts were organised into conscious literary styles, such as the *ḳaṣaṣ*, the combination of a number of *ḥadīths* into a connected story (exemplified in the *Sīrat al-Nabī* of Ibn Isḥāḳ (d. 151/768), the *ḳiṣṣa* [*q.v.*] or anecdote, and *khabar* [*q.v.*] or narration, particularly in the romances of beduin lovers (*ʿushshāḳ*) and of the "battle-days" (*ayyām al-ʿarab* [see I (a) (ii) above]). In contrast to these narrative genres, which preserved in a greater or less degree their original Arabian structure, the rapid expansion of intellectual energies in Baṣra and Kūfa, especially in the schools of philology and law, was creating, with the help of Greek logic, a new argumentative prose which was far more flexible and close-knit than either the new narrative forms or the translations of the secretaries. At the same time, the philologists, consciously opposing the increasing degeneration and impoverishment of Arabic in the mixed society of the ʿIrāḳī cities, and with the support of Islamic religious circles, set themselves to define the correct modalities of Arabic speech and to preserve both the extensive vocabulary (*lugha*) and the pure idiomatic usage (*faṣāḥa*) of the peninsula. Thus, in opposition both to the jurists and to the secretaries, for whom the Arabic language was primarily an instrument, they reasserted—in a new context—the old Arabian insistence on the importance of form, and thereby contributed to maintain the concept of the *ʿarabiyya* as a standardised and unchanging artistic structure, which remained unaffected by the varieties and evolution of spoken Arabic. Closely related to these activities, and also in conscious opposition to the secretarial school, was their activity in searching for and preserving the memorials of the old Arabic culture, such as poems, proverbs and tribal traditions, to serve (in conjunction with the Ḳurʾān and all the materials relating to the Islamic movement) as the basis of the "Arabic humanities". Except for technical monographs, mainly on philological subjects—the most important of which are the dictionary, *K. al-ʿAyn*, of al-Khalīl b. Aḥmad (d. 175/791), the grammar, *al-Kitāb*, of his pupil Sībawayh (d.c. 180/796), and the monographs of Abū ʿUbayda (d. 210/825) and al-Aṣmaʿī (d.c. 216/831)—few original literary works, in the strict sense, had been produced in philological circles by the end of the century, and it was only in the 3rd/9th century that the Arabic humanities came into full fruition.

Much the same may be said of the associated field of historical studies [see TAʾRĪKH], in which, except for the rather conscious adaptation of the *ayyām*-technique in the *Sīra* of Ibn Isḥāḳ, the activities of historical students were devoted mainly to the compilation of source-materials in the form of monographs on particular episodes of Arab or Islamic history [see ABŪ MIKHNAF, AL-MADĀʾINĪ, AL-WĀḲIDĪ] or on tribal genealogies [see HISHĀM B. MUḤAMMAD AL-KALBĪ].

The legal schools, on the other hand, had already attained the stage of producing major works, both expository and controversial [see FIḲH]. The lead was taken by the Ḥanafī school of al-ʿIrāḳ with Abū Yūsuf (d. 182/798) and Muḥammad al-Shaybānī (d. 189/804), while the school of al-Madīna produced the first important corpus of legal *ḥadīth* in *al-Muwaṭṭaʾ* of Mālik b. Anas (d. 179/795). As early as the next generation, al-Shāfiʿī was able to set out and defend in a series of tractates (*al-Umm*) the principles which were henceforth to govern legal reasoning in Sunnī Islam.

Finally, in regard to Ḳurʾānic studies, the practice of oral transmission still predominated, and the first collected work on exegesis appears to have been made by the above-mentioned Abū ʿUbayda.

(III) Third to Fifth Centuries

(i) Prose

By the opening of the 3rd/9th century, the philological, historical, legal and Ḳurʾānic studies just described had laid the foundations for an Arabic-Islamic prose literature, which could challenge the predominance hitherto enjoyed by the secretarial school in the field of polite letters (*adab*). The problem that remained to be solved was that of mobilisation, or how to bring these studies out of their scholastic or technical isolation into a positive relation with the public interests and social issues of the day. This problem was illuminated, rather than solved, by the genius of al-Djāḥiẓ (d. 255/869), who brought them to bear on all aspects of contemporary life in a series of tractates and epistles, written in a sonorous and witty style, of unequalled linguistic vigour and variety, but too individual to serve as a stylistic model for general literature. The final solution was found by his later contemporaries who blended the clarity of the secretarial style with the traditional art-language and the argumentative prose of the philological and legal schools into a medium capable of expressing all varieties of factual, imaginative and abstract subjects with great refine-

ment and precision, though at some cost to the wealth and vigour of the ancient idiom cultivated by the philologists. One of the first results of this "modernised" prose medium, with its superior flexibility and adaptation to social changes, was to restrict and ultimately to displace poetry from its former social function, and to relegate it more and more to a purely aesthetic role in social and literary life.

The success achieved by the writings of al-Djāḥiẓ and his successors was not due solely, however, to their command of the Arabic sciences and a more flexible linguistic instrument. The schools of Baṣra, with their rationalising tendencies, had already been attracted (especially in the theological groups of the Muʿtazila [*q.v.*]) by the surviving elements of Hellenistic culture in Western Asia. Early in the 3rd/9th century the revival of Hellenistic learning received a strong impulse from the establishment by al-Maʾmūn (198-218/813-33) of the *bayt al-ḥikma* [*q.v.*] for the translation of Greek philosophical and scientific works. During the whole period treated in this section, the dominant feature of Arabic culture is the fruitful interaction of the Arabic and Greek traditions which is already illustrated in the writings of al-Djāḥiẓ, and was subsequently displayed in almost all branches of Arabic literature, both secular and religious. These internal developments were further expanded and accelerated by the vast extension of literary activities, which, hitherto all but confined to al-ʿIrāḳ, began in the 3rd century to be cultivated in a large number of centres, from Samarḳand to Ḳayrawān and al-Andalus. The material foundation of this expansion was the rapid economic development of the Islamic empire, supplemented by the introduction of paper (*waraḳ* [*q.v.*]) manufacture from the Far East in the second half of the 2nd century.

The range and extent of these new literary movements rapidly overwhelmed the Sāsānid tradition of the *kuttāb*, in spite of their rearguard movement of resistance [see SHUʿŪBIYYA] and denigration of the Arabs and their culture. A reconciliation was effected by Ibn Ḳutayba (d. 276/889-90), who in a long series of works furnished the secretaries with compendia and extracts from all branches of Arabic learning, but incorporated in them also such elements of the Persian historical and courtly traditions as had established themselves at the court and could be harmonised with the Arabic-Islamic humanities. Henceforward, *adab*, in the strict sense, was confined to treatises and other literary works based on this widened Arabic-Islamic tradition, including both the Persian and the Hellenistic components.

Simultaneously, the widening of general intellectual interests was displayed in the cultivation of a great variety of specialist disciplines, the cumulative productions of which constitute the climax of the mediaeval Islamic culture, and for this reason cannot be entirely excluded from any general survey of Arabic literature. In the 3rd century the Hellenistic contribution was greatly expanded by the many translations of Greek works made by Ḳusṭā b. Lūḳā (fl. 220/835), Ḥunayn b. Isḥāḳ (d. 260/873), his son Isḥāḳ b. Ḥunayn (d. 298/910), and other translators. Already before the middle of the century, the first independent Arabic works on philosophy were being written by Yaʿḳūb al-Kindī (d.c. 236/850), to be followed in the next century by the Turk Abū Naṣr al-Fārābī (d. 339/950) and the Persian Abū ʿAlī Ibn Sīnā (d. 428/1037), to mention only the most prominent names [see FALSAFA]; on mathematics by Muḥammad b. Mūsā al-Khwārizmī (fl. 230/844) and Thābit b. Ḳurra al-Ṣābiʾ (d. 288/901) [see RIYĀḌA]; on astronomy by al-Farghānī, Abū Maʿshar al-Balkhī (d. 272/885), and al-Battānī (d. 317/929) [see TANDJĪM]; and on medicine by Ibn Māsawayh (d. 243/859) and Muḥammad b. Zakariyyā al-Rāzī (d.c. 311/923) [see ṬIBB]. Although the technical literature of the sciences cannot be dealt with here, yet the importance of these studies, and of other popular works on Hellenistic origin (such as *Sirr al-Asrār*, attributed to Yaḥyā b. al-Biṭrīk, c. 200/815), in determining or at least influencing the intellectual climate of the period must not be underrated. In geography, in particular, they not only directly inspired the "revision" of Prolemy's geography by the above-mentioned al-Khwārizmī, but also indirectly contributed to the first road-book, by the postmaster Ibn Khurradādhbih (fl. 230/844), and in conjunction both with the older philological interest in the place-names of Arabia and with Indian materials [see SINDHIND] and old Persian concepts, stimulated the intellectual curiosity which produced the rich geographical literature of the following century [see DJUGHRĀFIYĀ].

The opposition to these hellenising tendencies was led by those 'orthodox' students of theology and law who rejected the rationalist principles of the Muʿtazila. The search for Prophetic Tradition (*ḥadīth* [*q.v.*]), which had developed in the 2nd century as a weapon against the pragmatic tendencies of the local schools of Law, was vigorously cultivated in the 3rd by the orthodox everywhere, partly (as in the famous "Six Books" of al-Bukhārī, Muslim, al-Tirmidhī, Abū Dāʾūd, Ibn Mādja, and al-Nasāʾī) in order to consolidate the dominant place which it had gained in the juristic sciences, but partly also (as in the more comprehensive *Musnad* of Aḥmad b. Ḥanbal, d. 241/855) against the critical attitudes of the Muʿtazila. So potent a force did the *ḥadīth* prove to be, with its appeal to simple piety and veneration for the Prophet, that in the next century the Shīʿa also, both among the Ismāʿīlīs (*Daʿāʾim al-Islām* of the ḳāḍī al-Nuʿman b. Muḥammad, d. 363/974) and in Imāmī circles (the "Four Books" of al-Kulīnī, d. 328/939, and others [see SHĪʿA]), aimed to rival the achievement of the Sunnīs by the collection and attribution of *ḥadīth*s to the Imāms.

Nevertheless, although the schools of law, thanks to the early standardisation of their methodology, seem to have been little affected by the hellenistic revival and continued to produce an extensive literature of their own, both theology and popular religion could not but be coloured by their environment. Orthodox theologians, in the schools of al-Ashʿarī (d. 324/935) and al-Māturīdī (d. 333/944), reconciled Greek physics with the data of the Ḳurʾān and the *Ḥadīth* by a skilful dialectic [see KALĀM], which by the end of the 5th century had established itself as the universal scholastic theology of Sunnī Islam; while Shīʿī theology, especially in the Ismāʿīlī schools, was still more strongly influenced by the neoplatonism expounded, together with the Greek sciences in general, in the popular encyclopaedia of the 4th/10th century called the *Epistles of the Sincere Brethren* [see IKHWĀN AL-ṢAFĀ]. The literature of theological polemics also, as well as that on "comparative religion" (i.e. on the differences between the Muslim and the non-Muslim religions), is clearly aware of the general positions of

Greek philosophy and prepared on occasion to discuss them in detail. The most celebrated work in these two fields is the incisive *K. al-Faṣl* by the Andalusian Ẓāhirī Ibn Ḥazm (d. 456/1064), equally noted for his delicate anatomy of love under the title of *The Dove's Neckring*.

While popular religion was less affected by theological problems as such, it had from the first been influenced by the older religious movements in Western Asia and North Africa. By the 3rd century most of these accretions had been pruned away, except for gnosticism and Syrian mysticism (itself incorporating many Stoic and Neoplatonic elements), which were exercising an increasingly profound influence upon ascetic and pious circles, and transforming piety and asceticism into mystical ṣūfism [see TAṢAWWUF]. Already in the 3rd and 4th centuries a new ṣūfī literature was fully developed, ranging from systematic treatises (beginning with al-Muḥāsibī, d. 213/857) and *rasāʾil* (al-Djunayd, d. 297/910) to collections of aphorisms, symbolist poetry [see AL-ḤALLĀDJ], and séances by Dhu 'l-Nūn (d. 245/859) and al-Niffarī (d. 354/965).

The total result of these specialist literary activities was immensely to expand the range of mediaeval Arabic as a linguistic instrument. Not only in the technical vocabulary of the various sciences, but also as a medium for expressing fine shades of philosophical and psychological analysis, it had developed capacities far beyond the old classical language. But this must not be taken to imply that the range of literary *adab*, or even its expressiveness, was widened in an equal degree. Much of this technical and analytical vocabulary was probably little understood outside the restricted circles of specialists. No doubt (indeed, it could hardly have been otherwise), some of these wider intellectual horizons were occasionally reflected in works of polite letters. Nevertheless, the *adab* works also demonstrate very clearly the marginal position of the purely Hellenistic elements and of the special sciences dependent on them (as distinguished from the generalized influence of Hellenistic culture) in relation to the main body of Arabic and Islamic elements in the mediaeval Islamic culture. A few *udabāʾ* show in their writings an interest in metaphysical and scientific disciplines, e.g. Aḥmad b. al-Ṭayyib al-Sarakhsī (d. 286/899), Abū Ḥayyān al-Tawḥīdī (d. 414/1023) and Abū ʿAlī Miskawayh (d. 421/1030) [see also AKHLĀḲ]. But such works are on the whole exceptional. The mainstream of Arabic letters after Ibn Ḳutayba runs through miscellaneous topics drawn from Arab poetry and history, politics and rhetoric, anthologies and collections of anecdotes, and popular ethics, illustrated by such writers as Ibn Abi 'l-Dunyā (d. 281/894), Ibn al-Muʿtazz (d. 296/908), the Andalusian Ibn ʿAbd Rabbihi (d. 328/940), Abū Bakr al-Ṣūlī (d. 335/946), Abu 'l-Faradj al-Iṣfahānī (d. 356/967), author of the *K. al-Aghānī*, al-Muḥassin al-Tanūkhī (d. 384/994), collector of "table-talk" and anecdotal literature, and Abū Manṣūr al-Thaʿālibī (d. 429/1038 [see below]). The huge output and popularity of such works show how sharply, on the whole, the social and intellectual interests of literary circles were circumscribed, and the consequent limitation of the concept of *adab*. On a more technical level of *adab*, but essentially of the same kind, were the "sessions" (*madjālis*) and "dictations" (*āmālī*) of the professional philologists (e.g. al-Mubarrad, d. 285/998, Thaʿlab, d. 291/904, Ibn Durayd, d. 321/934, al-Ḳālī, d. 356/967), in distinction from their pedagogical works on philology proper, which included the first major dictionaries of the classical language by Ibn Durayd, al-Djawharī (d. c. 393/1002) and Ibn Fāris (d. 395/1004-5).[1]

This intense absorption in literary and linguistic production was bound to produce in due course a considerable volume of technical literary criticism. Although as late as the *K. al-Aghānī* criticism seems to consist mostly of subjective judgments on the relative merits of given poets or verses, the first steps towards a more systematic criticism had already been taken by al-Djāḥiẓ and, from a different angle, by Ibn al-Muʿtazz, who in his *K. al-Badīʿ* classified the figures of speech employed in the "new" poetry. Ḳudāma b. Djaʿfar (d. 310/922) introduced the practice of classifying poetic "beauties" and "faults", and by the end of the 4th/10th century the *K. al-Ṣināʿatayn* of Abū Hilāl al-ʿAskarī (d. 395/1005) offers a complete critical analysis of poetry and prose in terms of structure, rhetorical devices, and figures of speech. The significant feature of most of this discussion was the insistence upon form rather than matter as the decisive criterion of quality; the declared assumption is that little if anything new can be originated in poetry, and that the only difference between one poet and another lies in his manner of expression. The balance was to some extent redressed by ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078), who supplemented the excessively formal analysis of his predecessors by a system of logical and psychological analysis which demanded an at least equal consideration for the "ideas" expressed. Additional point was given to the argument on literary aesthetics by its bearing on the doctrine of the incomparability (*iʿdjāz*) of the Ḳurʾān; inevitably, in spite of protests in theological circles and by al-Djurdjānī, the prevailing concentration of literary criticism upon form tended to emphasize unduly its supreme verbal qualities in terms of the current stylistic theories.

A further consequence, equally inevitable, was that rhetorical and literary prose began to be affected by the same theories and to display the same pursuit of verbal elaboration. The virtuosity of the *adīb* was displayed in "Paragraphs" (*fuṣūl*) describing scenes, persons, emotions, events, and objects, or in Epistles (*rasāʾil*) addressed to friends or colleagues on a variety of occasions. Ibn al-Muʿtazz seems to have been, if not the inventor, at least the populariser of this art, which in the 4th century swept over the whole field of Arabic letters. The secretarial class fell victim to it almost at once; in the intense competition for office every refinement of literary style was eagerly exploited. The technique of secretarial correspondence was elaborated into an art (*inshāʾ* [*q.v.*]), based upon admired models of elegant, florid, insinuating or pungent writing, and it was not long before rhyming prose (*sadjʿ*), which the best stylists had hitherto used only as occasional ornament, became inseparable from official style. By the middle of the 4th century the vizier Abu 'l-Faḍl b. al-ʿAmīd (d. 359/369-70) was composing his correspondence in *sadjʿ*; with his disciple and successor Ibn ʿAbbād, known as "the Ṣāḥib" (d. 385/995), its use had become a mania. Contemporary littérateurs, the most celebrated of whom are Abū Bakr al-Khʷārizmī (d. 383/993) and al-Hamadhānī, known by the sobriquet of Badīʿ al-Zamān (d. 398/1007), developed the new style more freely and flexibly in their *rasāʾil*, which often resemble a kind of unscanned verse rather than prose. From then onwards every writer with a reputation to make or to maintain had perforce to

follow their example; and industrious compilers like al-Thaʿālibī, in his *Yatīmat al-Dahr*, and Abū Isḥāḳ al-Ḥuṣrī of Ḳayrawān (d. 453/1061), in his *Zahr al-Ādāb*, were quick to compose anthologies and treasuries of the most successful verses and *fuṣūl* and the most approved metaphorical descriptions and imagery. The additional premium which this placed on wit and agility produced, it is true, not a few masterpieces of artistic invention by those who possessed a natural gift for this style, but exacted in return a heavy price. The enforced cult of rhyming prose not only contorted the style of men of natural but more ponderous genius like Abu 'l-ʿAlā al-Maʿarrī (d. 449/1057), but by rewarding artificiality it contributed to turning Arabic writers still further away from the solid ground of real life and living issues and to sap the vitality of Arabic literature.

For the moment, however, the revival of *sadjʿ* coincided with a search for new or original methods of presenting literary themes. Badīʿ al-Zamān found a new setting (or revived a Hellenistic genre) in the popular theme of the witty vagabond, and created the dramatic anecdote or *maḳāma* [*q.v.*]. About 416/1025 the Andalusian Ibn Shuhayd in *al-Tawābiʿ wa 'l-Zawābiʿ* imagined a series of interviews with the *djinnīs* who had inspired the great poets of the past. Eight years later Abu 'l-ʿAlā al-Maʿarrī wrote his *Risālat al-Ghufrān*, in which, more daringly, he imagined a visit to heaven and hell to interview the poets themselves. These extravaganzas, however, were less appreciated by literary taste in their respective regions than the wittily allusive *risāla* of Ibn Zaydūn of Cordova (d. 463/1070), satirising his rival Ibn ʿAbdūn, and the letters in tightly-knit and decorated *sadjʿ* of Ḳābūs b. Washmgīr, prince of Ṭabaristān (d. 403/1012), collected under the title of *Kamāl al-Balāgha*. Even the *maḳāmāt* of al-Hamadhānī seem to have found few imitators until the end of the 5th century, when they were revived by al-Ḥarīrī of Baṣra (d. 516/1122), with the same motif as that of his predecessor, but with a refinement of philological subtlety and wit equalling the most ingenious of the *rasāʾil* and a striking poetical gift in addition. It is something of a paradox that with all their formal perfection and qualities of erudition and virtuosity, al-Ḥarīrī's *maḳāmāt*, like those of al-Hamadhānī, are firmly rooted in the common life of the Islamic city, and portray its manners and its humours so realistically as to constitute one of the most precious social documents of the Islamic Middle Ages.

Historical composition, though properly distinct from *adab*, was to some extent affected by the same influences. At the beginning of the 3rd/9th century, the continued association of history with religious studies is seen in the histories of Mecca by al-Azraḳī (d. after 217/832) and al-Fākihī (d. after 272/885), and in the biographical and genealogical works on the Companions by Muḥammad b. Saʿd (d. 230/845), the secretary of al-Wāḳidī, and on Ḳuraysh by al-Zubayrī (d. 233/848). It is still present in the first (and last) attempt to compile a comprehensive Universal History based on the corpus of Islamic materials (which by now incorporated the Sāsānid tradition) and significantly entitled "The History of the Prophets and Kings", by Muḥammad b. Djarīr al-Ṭabarī (d. 310/923), as a complement to his Commentary on the Ḳurʾān, and also, though with a difference of emphasis, in the History of the Conquests and the "Genealogies of the Arab Nobles" of al-Balādhurī (d. 279/892). In the same century, however, the concept of history as an independent branch of study and of literary activity begins to appear in such diverse forms as the historical encyclopaedia of al-Yaʿḳūbī (d. 284/897) and the history of Baghdād by Ibn Abī Ṭāhir Ṭayfūr (d. 280/893). By the 4th century historical writing not only flourished luxuriantly, but took in a wide range and variety of subjects: universal history (combined by the traveller al-Masʿūdī, d. 345/956, with a hellenistic curiosity about all things terrestrial and celestial), local histories of regions and cities from Central Asia to Spain, antiquarian research, memoirs on current events, histories of viziers and ḳāḍīs, biographies of individuals, biographical dictionaries of different classes and professions, even historical pseudographs and forgeries. History became an essential part of the equipment of an educated man, and as such entered into the general concept of *adab*.

It is possible, generally speaking, to draw a broad line of division between two attitudes to history among the educated classes. On the one side stand the scientific or serious historians, whose writings conform to certain standards of accuracy and veracity. By the 5th century these were mostly, though not exclusively, officials and courtiers, such as Miskawayh (d. 421/1030) and Hilāl al-Ṣābiʾ (d. 448/1056) in al-ʿIrāḳ, al-Musabbiḥī (d. 420/1029) in Egypt, and Ibn Ḥayyān al-Ḳurṭubī (d. 469/1076-7) in Spain, together with a few independent scholars, of whom the mathematician and astronomer Abū Rayḥān al-Bīrūnī (d. 440/1048) is the most outstanding. On the same side of the line stand the compilers of biographical dictionaries of scholars, notably al-Khaṭīb al-Baghdādī (d. 463/1071). On the other side are those for whom history is no more than a branch of *adab*, a quarry for ethical or entertaining anecdotes, or an instrument of propaganda, as in the biographies of saints, the literature of ʿAlid martyrology, and the largely forged collection of ʿAlī's letters and speeches known as *Nahdj al-Balāgha* [see AL-SHARĪF AL-RAḌĪ].

The elaboration of literary prose also, in time, invaded the field of historical writing, but only, it seems, in the composition of eulogistic dynastic annals. The example was set by Ibrāhīm al-Ṣābiʾ (d. 384/994) in his lost work *al-Tādjī* on the history of the Buwayhids, and was followed by al-ʿUtbī (d. 427/1035) in its counterpart *al-Yamīnī* on the history of the early Ghaznawids. It may be more than coincidence that these works are contemporary with the revival of the old Persian historical tradition and the Persian epic. At all events, no other examples of this style seem to be known until the later Saldjūḳ period (see § IV below).

(ii) Poetry

It has been pointed out at the beginning of the preceding section that from the 3rd century onwards poetry was displaced from its former social function by the new prose literature. Partly this was due to the adaptation of the artistic tradition of the *ʿarabiyya* to produce a vigorous prose style, which deprived poetry of its previous aesthetic monopoly. But to a far greater extent it was the result of the wide expansion of intellectual interests, with which the poets were unable to keep pace. As at the end of the pre-Islamic age, they were prisoners of their own conventions, broadened out and diversified as these conventions had been during the 1st and 2nd centuries. To a certain extent also they were the prisoners of their society. In his private verse the poet was no doubt free to amuse

himself as he pleased, but the doctrine which finally prevailed was that his major function was to "immortalise" his patron by his panegyrical *ḳaṣīdas*: a curious and remarkable revival of the tribal function of the pre-Islamic poet.

From the literary-historical angle, one of the most interesting features of 3rd century poetry is the effort made, but without substantial success, to break through these conventions in different ways. Abū Tammām "al-Ṭāʾī" (d. 231/846), a self-taught Syrian, tried to revive the weighty sonority of beduin poetry and to marry it to the *badīʿ* ornamentation of the poets of al-ʿIrāḳ; at the same time he attempted to make his verse the vehicle of a more complex structure of thought. His poetry is in consequence often strained and overloaded, or alternatively relaxed to an excessive degree, although it has found warm admirers in both mediaeval and modern times. His fellow-townsman and disciple, al-Buḥturī (d. 284/897), with a more natural gift, remained closer to the ʿIrāḳī tradition in his smoother and more polished verse. In al-ʿIrāḳ, on the other hand, Ibn al-Rūmī (d. 283/896) attempted to create a new introspective and analytical poetry, in which each poem develops a single theme in an organic unity, and which has sometimes, but doubtfully, been genetically linked with his "Greek" origin. The originality of this poetry (though marred by an excessive sense of grievance) was appreciated, but not imitated; and the more typical and influential representative of ʿIrāḳī modernism was the ʿAbbāsid prince Ibn al-Muʿtazz (d. 296/908), who freely adapted traditional themes and metres to poetical *rasāʾil* and descriptive verse, corresponding to the prose *fuṣūl*. His innovations in technique and ingenuity (including a historical poem in 450 *radjaz* couplets celebrating the reign of his cousin, the caliph al-Muʿtaḍid) rest, however, on the established conventions of Arabic poetry; they revise, rather than reform, its characteristic methods and outlook.

From the 4th/10th century on, such pieces of natural description, epistles, poems on social occasions and the like constitute, together with epigrams and ceremonial *ḳaṣīdas*, the stock-in-trade of all minor poets in every part of the Muslim world, and in varying degrees of excellence. By now the use of *badīʿ* had become so universal in poetry as to be a natural constituent of the finished poetic imagination; in the *ghazal* or wine-song it might be allowed to play only a minor part, but no poem with any pretensions could be composed without it. It required, however, the genius of a greater poet to blend in just proportions the Arabian *ḳaṣīda* of the Syrian school and the smoothness and technical ingenuity of the ʿIrāḳī school. This was accomplished by Abu 'l-Ṭayyib al-Mutanabbī (d. 354/965), of Kūfan origin and an admirer of Ibn al-Rūmī and Ibn al-Muʿtazz, but Syrian in his poetical apprenticeship, and the brightest ornament of the "Circle of Sayf al-Dawla". For skill in construction, felicity of language, and mastery of the lapidary phrase, al-Mutanabbī has no equal among the later *ḳaṣīd*-poets, although his chief rival in Aleppo, the Ḥamdānid prince Abū Firās (d. 357/968) may have surpassed him in the direct emotional appeal of his best poems. A greater rival was his contemporary Ibn Hāniʾ al-Andalusī (d. 362/973), the panegyrist of the Fāṭimid caliph al-Muʿizz, whose *ḳaṣīdas* (sometimes unjustly depreciated on sectarian grounds) are more faithful to the pre-Islamic models.

Little need be said of the later poets in the eastern provinces, whose production remains on the whole within the frame of subjects, conventions and techniques established in the 3rd and 4th centuries. The leading poets in al-ʿIrāk were the Shīʿites al-Sharīf al-Raḍī (d. 406/1015) and Mihyār al-Daylamī (d. 428/1037), who seem, however, to have been less appreciated in their own time than a number of writers of popular poetry (in the literary language), of which only a few fragments have survived. The most notable of 5th century poets was the Syrian Abu 'l-ʿAlā al-Maʿarrī (d. 449/1057); a follower of al-Mutanabbī in his earlier *dīwān* (*Siḳt al-Zand*), he broke with convention in his later collection of short pieces (*Luzūm mā lam Yalzam*), the fame of which, however, probably owes less to their poetical quality and elaboration of technique than to the unorthodox freedom of the ideas which they expressed.

In the Maghrib and al-Andalus also, the mainstream of poetry, like that of Arabic letters in general, still flowed in the channels dug for it in the East, distinguished only by local colouring. As Ibn Hāniʾ took Abū Tammām and the pre-Islamic bards for his models, so Ibn Zaydūn (d. 463/1071) followed al-Buḥturī—but with an elegance and freshness that sometimes surpasses his model—and Ibn Darrādj (d. 421/1030), the panegyrist of al-Manṣūr b. Abī ʿĀmir, followed al-Mutanabbī. With these may be mentioned, though of later date, the Sicilian Ibn Ḥamdīs (d. 527/1132), and among the many minor poets the ʿAbbādid prince al-Muʿtamid (d. 488/1095). During the 5th/11th century, however, a new strophic type of poetry, of local inspiration, began to be cultivated in Spanish-Arab literary circles, but did not reach its full development until the following century (see § IV below).

(IV) Sixth to Twelfth Centuries

The beginning of the 6th/12th century witnessed the triumph of the two forces which were henceforth to dominate the intellectual life of the Arab countries: scholasticism and ṣūfism. Both of these movements were associated in the Sunnī revival under the Saldjūḳs [*q.v.*] which, beginning in Khurāsān in the middle of the 5th century, spread to ʿIrāḳ under the Saldjūḳ sultanate, and to Syria and Egypt under its Zankid and Ayyūbid offshoots. In the West a similar movement, led by the Berber Muḥammad b. Tūmart (d. 524/1130) on his return from Baghdād, was associated with the Muwaḥḥid (Almohad) régime in the 6th century, and their parallel development in the two halves of the Arab world was maintained by multiple contacts and interactions.

The chief material factor in the spread of scholasticism was the gradual concentration of all literary education in the *madrasa* [*q.v.*], the new type of organised college introduced by the vizier Niẓām al-Mulk ([*q.v.*]; d. 485/1092) into Baghdād for the training of *ʿulāma*ʾ and administrators, and thence spread over the entire Muslim world. The formalisation of education involved also the formalisation of the disciplines taught, and contributed powerfully to the substitution of text-book and encyclopaedic compilation for original composition. This tendency is already visible in the first generation of leading scholars at the Niẓāmiyya *madrasa*: in the philologist al-Tibrīzī (d. 502/1109), a pupil of Abu 'l-ʿAlā al-Maʿarrī, whose production was confined to schoolworks and commentaries, as also was that of his successor al-Djawālīḳī (d. 539/1145); and in the Shāfiʿī theologians al-Djuwaynī Imām al-Ḥaramayn (d. 478/1085) and his pupil Abū Ḥāmid al-Ghazālī (d. 505/1111), whose earlier works were devoted to methodology and the scholastic defence of orthodoxy against Hellenistic philosophy and Islamic heresy. In their footsteps followed the immense majority of Sunnī theologians and jurists of the later generations, producing a vast literature of doctrinal summaries (*ʿaḳīda* [*q.v.*], pl. *ʿaḳāʾid*) (the most reputed being those of the Ḥanafī Abū Ḥafṣ al-Nasafī (d. 537/1132), ʿAḍud al-Dīn al-Īdjī (d. 756/1355), and Muḥ. b. Yūsuf al-Sanūsī (d. 892/1486))—works on *ḥadīth* (especially the supplement to the "Six Books" by Ibn al-Haythamī (d. 807/1405) and the comprehensive *Kanz al-ʿUmmāl* of the Indian ʿAlī al-Muttaḳī (d. 975/1567)—school textbooks of law and collections of *fatwās*, as well as handbooks on special branches of it [see FIḲH]—commentaries on the Ḳurʾān or on particular sections of it [see TAFSĪR] or on the *ḳirāʾāt* [*q.v.*]—and on all of these and similar works a ponderous structure of commentary (*sharḥ*) and super-commentary (*ḥāshiya*). The Shīʿa, in turn, on the basis of the 4th and 5th century works, produced similar theological and dogmatic compends (especially by al-Muṭahhar al-Ḥillī, d. 726/1326, and Muḥammad Bāḳir al-Madjlisī, d. 1110/1700), textbooks of law, and Ḳurʾān-commentaries.

The exceptions to this increasing stratification and narrowing down of scholastic thought are few but important. The outstanding original religious thinker and reformer, the Ḥanbalite Ibn Taymiyya (d. 728/1328), and his pupil Ibn Ḳayyim al-Djawziyya (d. 751/1350) engaged in a vigorous polemic against both the inertia of the schools and the ṣūfī cults, but with little success until the revival of his teaching by Muḥammad b. ʿAbd al-Wahhāb (d. 1206/1791) in Central Arabia. In India, an important and little-studied school of religious philosophy, founded at Djawnpur by Maḥmūd al-Djawnpurī (d. 1062/1652), remained active for several generations, and influenced the work of the religious reformer (Shāh) Walī Allāh al-Dihlawī (d. 1176/1762). In law, original contributions were made to the study of legal principles by the Shāfiʿī Tādj al-Dīn al-Subkī (d. 771/1370) and the Ḥanafī Ibn Nudjaym al-Miṣrī (d. 970/1563). In philology also, fresh minds were occasionally brought to the study of the congealed schooltexts, as, for example, by the Andalusian Abū Ḥayyān (who, amongst other works, composed grammars of Turkish, Persian, and Ethiopic; d. 745/1344) and his Egyptian pupil Ibn Hishām (d. 761/1360).

The effects of scholasticism were not, however, confined to the religious and philological sciences. It affected every branch of literary composition, not even excluding poetry, by encouraging an intellectual tendency to standardisation on the part of both writers and readers. Originality of thought, though not stifled, reaped little reward, and was less valued than the ability to refurbish familiar themes in a more pointed or elegant manner. The output was enormous, yet characterised in every field by a sameness of method and treatment which reduces any survey of the literature of this period to little more than lists of names. But there was also another factor which contributed its share to this levelling process. In the vast new territories added to the Islamic world between the 7th/13th and 9th/15th centuries, as indeed already in Persia and Central Asia, although the parallel extension of the *madrasa* system carried with it an extension of the area of Arabic scholastic studies, the medium of *belles lettres* and poetry was no longer Arabic, but Persian or Turkish. These new literatures, while drawing to a greater or less extent on the traditions of Arabic literature, not only contributed nothing to Arabic letters, but siphoned off the talents which might otherwise have rejuvenated Arabic literature or opened it up to new experiences. When it is recalled how much that had given variety and resilience to the literature of the preceding centuries was produced or initiated in the Persian provinces, the effect of their loss to Arabic letters can be readily appreciated.

At the same time, the intellectual energy and literary taste that displayed themselves in this period must not be underrated. Original works of *belles lettres* may be few, but the same vigour and freshness of mind that broke through even in the scholastic disciplines found other fields of exercise, especially in the first four centuries. It was in the continuing impulse of the Hellenistic tradition, in the immense development of historical composition, and under the growing stimulus of ṣūfism that they were most active; yet from time to time certain writers found ways and means to express their interests and personalities in works which bear an individual stamp. Amongst memoirs, there are some which throw a vivid light upon the authors and their times, especially the reminiscences of war and the chase of the Syrian Usāma b. Munḳidh (d. 584/1188), the more literary narrative of ʿUmāra of al-Yaman (d. 569/1175), and the autobiography of the Tunisian historian Ibn Khaldūn (d. 808/1406). Among the books of travel, which were stimulated more especially by the Pilgrimage, there are some which betray a lively interest in the observation of manners and customs of other countries; of the travellers from the West the most remarkable are Abū Ḥāmid al-Gharnāṭī (d. 565/1169-70), Ibn Djubayr (d. 614/1217), and Ibn Baṭṭūṭa of Tangier (d. 779/1377), and of those from the East ʿAlī b. Abī Bakr, "the shaykh of Harāt" (d. 611/1214). Memoirs and travels, it is true, succumbed in most cases to the prevailing scholasticism and ṣūfism, being reduced to little more than lists of teachers and books, or of visitations to religious personnages and shrines. But even to a few later travellers we owe interesting narratives of missions to different parts, such as those of the Moroccans Abu 'l-Ḥasan al-Tamghrūtī (fl. 1000/1591) and Abu 'l-Ḳāsim al-Zayānī (d. 1249/1843), and there is even a journal of a visit of a Chaldean priest, Ilyās b. Yuḥannā, to America (1668-83).

A third and still newer branch of letters which flourished for a time was devoted to the arts of war, stimulated especially by the Crusades. During the following two or three centuries there was a

considerable output of works on military tactics and the handling of weapons, the management of horses, and the *djihād* in general.

Even in al-Andalus prose literature was largely a belated reflection of eastern models, as in the "Fürstenspiegel" *Sirādj al-Mulūk* of Ibn Abī Randaḳa al-Ṭurṭūshī (d. 525/1131), the reworking by Ibn Ṭufayl (d. 581/1185) of Ibn Sīnā's philosophical romance *Ḥayy ibn Yaḳẓān*, and Ibn Hudhayl's treatise on horsemanship *Tuḥfat al-Anfus*. Granada, however, produced in the versatile Lisān al-Dīn Ibn al-Khaṭīb (d. 776/1374) one of the last all-round masters of Arabic literary art.

In the field of *belles lettres* in general, the cult of *sadjʿ* reached its culmination in the 6th/12th century. Rhyming-prose *fuṣūl* were pressed into the service of ethics in the *Aṭwāḳ al-Dhahab* of the philologist al-Zamakhsharī (d. 538/1143). Secretarial prose received a fresh impulse from the rich and flexible *inshāʾ* of al-Ḳāḍī al-Fāḍil (d. 596/1199), secretary of the last Fāṭimid caliphs and of Saladin; and the examples of historical composition in *sadjʿ* set by al-Ṣābiʾ and al-ʿUtbī were followed and even surpassed by the loquacious virtuosity of ʿImād al-Dīn, known as al-Kātib al-Iṣfahānī (d. 597/1201), in his histories of the Saldjūḳs and of Saladin. In the next generation, the arts of rhetoric and euphuism were reduced to text-book form by the Khwārizmian al-Sakkākī (d. 626/1229) in his *Miftāḥ al-ʿUlūm*, probably the most frequently and widely abstracted, glossed and commented on of all secular works in Arabic literature. But the cult of *sadjʿ* itself suffered some decline in the following centuries, except in secretarial *inshāʾ*, in works imitated from or modelled on the *maḳāmāt*, and in the introductions and dedications of books of every kind. It is on the whole sparingly used in the new type of homiletic *adab* popularised by the Ḥanbalite preacher Ibn al-Djawzī (d. 597/1200), and even in the numerous later anthologies, florilegia, and similar works of literary compilation. Its reintroduction into such works seems to date from the *Rayḥānat al-Alibbāʾ* of the Egyptian stylist Shihāb al-Dīn al-Khafādjī (d. 1069/1659) and its continuation by Ibn Maʿṣūm (d. 1104/1692), and it continued thereafter to impose a veneer of literary artistry upon utilitarian works of various kinds.

The Hellenistic element in Arabic-Islamic culture remained active for several centuries, not only in the special fields of medicine, the sciences and philosophy, but also in combination with the branches of *madrasa* learning. Medical works based on independent study continued indeed to be written down to the time of Dāʾud al-Antāḳī (himself the the compiler of one of the most celebrated florilegia of poetry and *adab*, extracted from an earlier work by al-Sarrādj (d. 500/1106); d. 1008/1599). Mathematics, after the Persian encyclopaedist Naṣīr al-Dīn Ṭūsī (d. 672/1273), became increasingly confined to astronomy. Philosophy, also cultivated in the East by Ṭūsī and the more orthodox encyclopaedist Fakhr al-Dīn al-Rāzī (d. 606/1209), but thereafter passing into ṣūfistic metaphysics, flowered brilliantly for a time in Muslim Spain with Ibn Bādjdja (d. 533/1138), Ibn Ṭufayl, and the great Abu 'l-Walīd Ibn Rushd (Averroes, d. 595/1198), before yielding likewise to ṣūfism with Ibn al-ʿArabī [see below] and Ibn Sabʿīn (d. 668/1269). Scientific geography, which attained one of its peaks in the world-map and descriptive text compiled by the sharīf al-Idrīsī for Roger II of Sicily in 548/1154, still survived to the time of Abu 'l-Fidā, sultan of Ḥamāh (d. 732/1331), but was already giving way to the electic literary art of cosmography, exemplified by Zakariyyā al-Ḳazwīnī (d. 682/1283), Shams al-Dīn al-Dimashḳī (d. 727/1327) and Sirādj al-Dīn Ibn al-Wardī (d.c. 850/1446). Natural science was cultivated chiefly in the field of medical botany (notably by al-Ghāfiḳī, d. 560/1165, and Ibn al-Bayṭār, d. 646/1248), and was included, along with a variety of literary materials, in the zoological dictionary of al-Damīrī (d. 808/1405).

On a more restricted scale, the Hellenistic legacy entered into the encyclopaedic tendency, exemplified not only by Ṭūsī and al-Rāzī, but also by many lesser compilers. Encyclopaedism, it might be said, was one outlet for scholarship which found itself, consciously or unconsciously, cramped by the prevailing emphasis on religious studies and philology. It took many forms. The simplest and most compact was the alphabetical arrangement of data in a given field or fields, as in the dictionary of *nisbas* (*Kitāb al-Ansāb*) compiled by Tādj al-Dīn al-Samʿānī (d. after 551/1156), on the basis of which the Greek Yāḳūt compiled his geographical dictionary (*K. al-Buldān*). The field which offered the widest scope for this treatment was that of biography, whether general (beginning with the *Wafayāt al-Aʿyān* of Ibn Khallikān, d. 681/1282, and followed by others, notably the voluminous *Wāfī bi 'l-Wafayāt* of Khalīl b. Aybak al-Ṣafadī, d. 764/1363), or limited to particular classes of savants ~~and men of letters~~: of scientists by Ẓahīr al-Dīn al-Bayhaḳī (d. 565/1169-70) and ʿAlī b. Yūsuf al-Ḳifṭī (d. 646/1248); of physicians by Ibn Abī Uṣaybiʿa (d. 668/1270); of philologists by al-Ḳifṭī also and by Djalāl al-Dīn al-Suyūṭī (d. 911/1505); of men of letters by Yāḳūt; of jurists of the different schools, notably by Tādj al-Dīn al-Subkī (Shāfiʿite, d. 771/1370), Ibn Ḳutlubughā (Ḥanafite, d. 879/1474), and Ibn Farḥūn (Mālikite, d. 799/1397; supplemented by Aḥmad Bābā of Timbuktu, d. 1036/1626); of Ḳurʾān-readers by Ibn al-Djazarī (d. 833/1429-30); of the Companions of the Prophet by ʿIzz al-Dīn Ibn al-Athīr (d. 630/1234) and Ibn Ḥadjar al-ʿAsḳalānī (d. 852/1448); of traditionists by Shams al-Dīn al-Dhahabī (d. 748/1348); and many others. The already established practice of compiling dictionaries of scholars and eminent men and women associated with a particular city or region was continued on an extensive, and sometimes massive, scale, e.g. for Damascus by Ibn ʿAsākir (d. 571/1176), for Aleppo by Kamāl al-Dīn Ibn al-ʿAdīm (d. 660/1262), for Egypt by Taḳī al-Dīn al-Maḳrīzī (d. 845/1442), for al-Andalus by Ibn Bashkuwāl (d. 578/1183) and Ibn al-ʿAbbār (d. 658/1260), for Granada by Ibn al-Khaṭīb, for the Ottoman empire by Ṭāshköprüzāda (d. 968/1560), in addition to many other biographical works less systematically arranged. A novel principle, introduced by Ibn Ḥadjar al-ʿAsḳalānī, was to organise biographical dictionaries by centuries; his dictionary of notabilities of the 8th century (*al-Durar al-Kāmina*) was followed for the 9th by al-Sakhāwī (d. 902/1497), for the 10th by Nadjm al-Dīn al-Ghazzī (d. 1061/1651) (supplemented with special reference to South Arabia and Gudjarāt by Ibn al-Aydarūs, d. 1038/1628), for the 11th by al-Muḥibbī (d. 1111/1699), and for the 12th by al-Murādī (d. 1206/1791). A concise summary for the first millenium, in order of years, was compiled by Ibn al-ʿImād al-Ḥanbali (d. 1089/1678). Here too may be mentioned the bibliographical encyclopaedia (*Kashf al-Ẓunūn*) made by the Turkish scholar Kātib Čelebi Ḥadjdjī Khalīfa (d. 1068/1658), and the

elaborate dictionary of technical terms (*Iṣṭilāḥāt al-Funūn*) written in 1158/1745 by the Indian Muḥammad ʿAlī al-Tahanawī.

A second direction taken by encyclopaedism was to combine several branches of learning in a single work. Al-Nuwayrī (d. 732/1332) dealt in *Nihayāt al-Arab* with geography, natural science, and universal history; and the Egyptian secretary al-Ḳalḳashandī (d. 821/1418) combined and supplemented two works by his predecessor al-ʿUmarī (d. 748/1348) in his *Ṣubḥ al-Aʿshā*, to serve as a manual of history, geography and chancery procedure, and to supply models of *inshāʾ* for the secretaries.

More frequently, however, the encyclopaedists wrote separate works on a variety of subjects. The physician ʿAbd al-Laṭīf al-Baghdādī (d. 629/1231), for example, wrote not only on medicine, but also on *ḥadīth* and literary subjects, as well as a remarkable "Description of Egypt". The historians in particular were fertile in many fields besides history, and the Mamlūk period in Egypt closes appropriately with the greatest polygraph in Islam, Djalāl al-Dīn al-Suyūṭī (d. 911/1505), who in some 400 monographs presented an almost complete conspectus of the entire range of religious sciences and Arabic humanities.

In the secular sciences, the most impressive production was in the field of history. The Sunnī movement encouraged the revival of the "universal history" (often conjoined with, and even overshadowed by, necrology), begun by *al-Muntaẓam* of Ibn al-Djawzī (d. 597/1200), expanded in the magisterial *Kāmil* of Ibn al-Athīr (d. 630/1234), and continued with varying emphases by Sibṭ ibn al-Djawzī (d. 654/1257), al-Nuwayrī, Abu 'l-Fidā, al-Dhahabī, Ibn Kathīr (d. 774/1373), ʿAbd al-Raḥmān Ibn Khaldūn (d. 808/1406) and al-ʿAynī (d. 855/1451). Regional and dynastic chronicles were cultivated in every province from Central Asia to West Africa, and more especially by the sequence of major historians in Mamlūk Egypt (al-Maḳrīzī, d. 845/1442; Ibn Ḥadjar, d. 852/1449; Ibn Taghrībirdī, d. 874/1469; Ibn Iyās, d. 930/1524) and those of the Maghrib down to the 13th/19th century (see E. Lévi-Provençal, *Les Historiens des Chorfa*, Paris 1922). Rashīd al-Dīn (d. 718/1318), the historian of the Mongols, produced an Arabic version of his work; the history of the Berbers was exhaustively treated by Ibn Khaldūn; that of the Muslims in Spain was comprehensively summed up by al-Maḳḳarī (d. 1041/1632) in *Nafḥ al-Ṭīb*; that of the Muslims in India to his own time by al-Āṣafī al-Ulughkhānī (d. after 1020/1611); and the Muslim negrolands likewise produced their historians, notably al-Saʿdī of Timbuktū (d. after 1066/1656). So great a concentration upon history could scarcely fail to produce some reflection upon the principles and methods of historical writing, as in the scholastic defence of history by al-Sakhāwī (d. 902/1497); and it was out of such roots that there sprang the bold and original theories of society put forward by Ibn Khaldūn in the justly celebrated "Prolegomena" (*Muḳaddima*) to his universal history. It is noteworthy that after the brilliant works of ʿImād al-Dīn al-Iṣfahānī the ornate style of rhyming-prose chronicle was largely discarded in favour of plain annalistic, and is represented only by two later works of any importance in Arabic literature: a history of the Mamlūk sultans by Ibn Ḥabīb al-Dimashḳī (d. 779/1377) and the virulent history of Tīmūr by another Damascene, Ibn ʿArabshāh (d. 845/1450). On a smaller scale, but also conceived primarily as a work of *adab*, was the popular *Fürstenspiegel* and anecdotal history of the caliphs and their viziers compiled, under the title of *al-Fakhrī*, by the ʿIrāḳī Ibn al-Tiḳṭaḳā in 701/1301.

The growing fixation of the traditional literary arts bore with especial weight upon the secular poetry of this period. *Dīwāns* abound, but few of the more classical poets gained more than a fleeting reputation except the ʿIrāḳī Ṣafī al-Dīn al-Ḥillī (d. 749/1349), the Syrian Ibn Ḥidjdja al-Ḥamawī (d. 837/1434), and of the lyrical poets Bahā al-Dīn Zuhayr "of Egypt" (d. 656/1258). A panegyric on the Prophet, known as *al-Burda*, composed in elaborate *badīʿ* by the Egyptian al-Būṣīrī (d. 694/1296), became and has remained one of the classics of religious poetry. The poetic art found more congenial expression in newer patterns of strophic poetry, related in the East to the popular *mawāl* and *dubayt*, and already partially exploited by al-Ḥarīrī. In al-Andalus the more complex strophic art of the *muwashshaḥ* [*q.v.*] was given finished form by the blind poet al-Ṭutīlī (d. 523/1129) and Ibn Baḳī (d. 540/1145-6). Although it owed something to popular poetry in its origin, the *muwashshaḥa*, as a developed literary form, retained only in its final line (*khardja*) a trace of its provincial source and was cultivated as a courtly art in Spain, becoming a highly ornate lyric with musical accompaniment. In this function it was transplanted to the East by Ibn Sanāʾ al-Mulk (d. 608/1211), and continued to flourish there for a time, but as a formalised art which lacked the freshness and apparent spontaneity of the earlier Andalusian poets. [For the *muwashshaḥ* in ṣūfī poetry, see below.] Of the more genuinely popular poetry using the vulgar speech very little has survived, except for the *zadjal* [*q.v.*] poems of the Andalusian Ibn Ḳuzmān (d. 555/1160), the satyrical *Hazz al-Ḳuḥūf* of the Egyptian al-Shirbīnī (c. 1098/1687), and the *shiʿr malḥūn* of the Maghrib and of the Yaman. An isolated attempt made by the oculist and wit Ibn Dāniyāl (d. 710/1310) to give a place in literature to the popular shadow-play seems to have met with no success. On the other hand, the popular romances celebrating the epics of the Banū Hilāl in Arabia and Africa and the Banū Kilāb against the Greeks, and the exploits of various heroic or legendary figures (ʿAntar, Sīdī Baṭṭāl, the Yamanite Sayf b. Dhī Yazan, and the Mamlūk sultan Baybars) reached in these centuries the climax of their development, together with the miscellaneous collections of popular tales, drawn from all ages and strata, out of which the *Alf Layla wa-Layla* finally emerged in a more or less established form about the 9th/15th century.

The literary output of the ṣūfī movement in Arabic was at first small in bulk compared to the scholastic literature described above, but of much greater significance in the cultural development of Islam. The 6th century opened with the epoch-making reconciliation of *taṣawwuf* with orthodoxy in *Iḥyāʾ ʿUlūm al-Dīn* of Abū Ḥāmid al-Ghazālī, and the equally orthodox homilies and writings of the Ḥanbalite ʿAbd al-Ḳādir al-Djīlī (or Gīlānī) (d. 561/1166). The ṣūfī *khānḳāh* or *zāwiya* everywhere took its place alongside the *madrasa* in the Sunnī revivalist movement, and received the same patronage from the governing classes. It was not long, however, before the ṣūfī movement began to develop its own systems of theology and metaphysics. The "oriental" platonist and illuminationist (*ishrāḳī*) doctrines were restated by Shihāb al-Dīn Yaḥyā al-Suhrawardī (executed by order of Saladin in 587/1191, and hence

known as *al-maḳtūl*), in opposition to the Aristotelian school; but another Suhrawardī, Shihāb al-Dīn ʿUmar (d. 632/1234) issued a more orthodox exposition of *ishrāḳī* mysticism in *ʿAwārif al-Maʿārif*. Both works had a deep and lasting influence in the East, but much less in the Arab world. Here the new monistic mysticism (*waḥdat al-wudjūd*) was founded, on a basis of neoplatonism and Moroccan ṣūfism, by the Murcian Muḥyī al-Dīn Ibn al-ʿArabī (d. in Damascus 638/1240), carried to Anatolia by this pupil al-Ḳonawī (d. 672/1273), and spread still more widely by the ordered exposition of its metaphysics in *al-Insān al-Kāmil* of Ḳuṭb al-Dīn al-Djīlī (d. 832/1428).

The prose literature of Arabic ṣūfism down to the 10th/16th century offers little that calls for remark. Paraenetic in function, it gradually became affected by the scholasticism of the *madrasa*, especially as in course of time the *ʿulamā* themselves were increasingly drawn into the ranks of the ṣūfī orders. At a more popular level it produced a voluminous body of hagiography, more interested in the miracles of the saints than in their teachings, illustrated at one extreme by al-Shaṭṭanawfī's (d. 713/1314) *manāḳib* of ʿAbd al-Ḳādir al-Djīlānī (*Bahdjat al-Asrār*), at the other by the lives of the saints of the Moroccan *rīf* (*al-Maḳṣad*) by ʿAbd al-Ḥaḳḳ al-Bādisī (d. after 722/1322). More important was its poetical output, which, though never rising to the heights of the great ṣūfī poetry of Persia, played a considerable role in stimulating and conserving the religious enthusiasm of its adepts among both the literate and the illiterate. Its chief characteristic was the adaptation of the themes of love and wine songs, whether in the ornate styles of the traditional art-poetry or in popular verse, to those of Divine Love and ecstasy. The most gifted representative of the former is the Egyptian ʿUmar b. al-Fāriḍ (d. 632/1235), but in bulk of output he is far surpassed by Ibn al-ʿArabī himself, who displayed an astonishing virtuosity in modelling his mystical poems not only on pre-Islamic and ʿAbbāsid odes, but also in the form of *muwashshaḥas*. His most highly esteemed successors in this art were the disciple of his pupil al-Ḳōnawī, ʿAfīf al-Dīn al-Tilimsānī (d. 690/1291), and the latter's son Shams al-Dīn, known as al-Shābb al-Ẓarīf (d. 688/1289).

The rapid desiccation of most other branches of literary activity which followed the Ottoman conquest of Syria and Egypt at the beginning of the 10th/16th century gave an added impulse to ṣūfī activity, which almost alone displayed an element of vigour, though often expressed in extravagant and even fantastic terms, as in the writings of the Egyptian ʿAbd al-Wahhāb al-Shaʿrānī (d. 973/1565). The outstanding figure in the Arabic literature of the Ottoman period was ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731), not only for his theological and ṣūfī treatises, but also as a poet and the originator of a new kind of mystical travel-literature in rhyming prose. Almost all the later 18th-century writers of Egypt and Syria came directly or indirectly under his influence, which reached even to the Maghrib. In the East, the prevailing ṣūfī philosophy continued to follow the *ishrāḳī* school, which through the Persians Ṣadr al-Dīn Shīrāzī (d. 1050/1640) and his pupil Fayḍ al-Kāshī (d. after 1090/1679) influenced both the Indian schools of ṣūfism and the founder of the reformist Shīʿite school of the Shaykhīs, Aḥmad al-Aḥsāʾī (d. 1242/1827). Only at the end of this period there appeared the first indications of a return to earlier orthodox ṣūfism, with the writings of Murtaḍā al-Zabīdī, of Indian birth but domiciled in Egypt (d. 1205/1791), and among the Shādhiliyya in the Maghrib.

(V) Modern Arabic Literature

(a) To 1914

The term "modern Arabic literature" implies a development differing from, and a degree of change greater than, a simple revival of literary activity, whether within the narrower circle of the philological arts or in the wider humanistic range of the 3rd and following centuries. Such minor local revivals had occurred from time to time, as, for example, in Aleppo under the influence of the Maronite archbishop Djarmānūs Farḥāt (1670-1732), and in Baghdād in the first half of the 12th/18th century (see al-Alūsī, *al-Misk al-Adhfar*, Baghdād 1348/1930). In the 13th/19th century also, the rise of a new literature was preluded by a sustained movement for the revival of classical Arabic and an output of literary works directly or indirectly inspired by classical models. The first object of the leaders of this movement was to rescue the Arabic language from its degeneration in the preceding centuries and to restore the heritage of classical literary art; in its purest form it is represented by Nāṣīf al-Yāzidjī (1800-1871) among the Syrians, by Naṣr al-Hūrīnī (d. 1874) and ʿAlī Pasha Mubārak (1823-93) in Egypt, and by Maḥmūd Shukrī al-Alūsī (1857-1923) in ʿIrāḳ. All of these, and many others, were consciously ambitious to revive the classical traditions, both in their pedagogical work, and in their original productions, e.g. al-Yāzidjī's *maḳāmāt* (*Madjmaʿ al-Baḥrayn*) in the manner of al-Ḥarīrī, ʿAlī Pasha's *al-Khiṭaṭ al-Tawfīḳiyya* in continuation of al-Maḳrīzī, and al-Alūsī's *adab* collection *Bulūgh al-Arab*.

Alongside these, but also fundamentally sharing their aims, was another group of writers who were led by circumstances or personal choice into closer contact with the literature and the ideas of the western world. The first major impulse in this direction was given by the needs of the military academies set up by the viceroy of Egypt, Muḥammad ʿAlī, for translations of technical works from the French, together with the establishment of a printing press in Egypt in 1828, and others soon afterwards in Syria. The chief of the Egyptian translators was Rifāʿa Bey Rāfiʿ al-Ṭahṭāwī (d. 1873), whose original works included a vivid narrative of his experiences in France as *imām* of the Egyptian educational mission, and many later educational handbooks. It is questionable how widely the large body of translated technical works of this period circulated, or how far they affected the outlook of men of letters; but it seems clear that for Rifāʿa Bey and others like him the western materials which they used in their literary works were simply adjuncts embedded in the framework of the established Islamic categories or (in the case of their translations from French literature) supplements to them. The literary productions of the contemporary Lebanese scholars who were in contact with the western educational missions in Syria, and in particular Buṭrus al-Bustānī (1819-83), Aḥmad Fāris al-Shidyāḳ (1801-87), and Nāṣīf's son Ibrāhīm al-Yāzidjī (1847-1906), as also of the

Tunisian Muḥammad Bayram (1840-89), were to a large extent similarly motivated; but along with this all these men were also among the creators of the new Arabic periodical press and experimenting in the formation of a modern journalistic medium.

The development of the new periodical press in Egypt, at first largely under Syrian direction but soon followed by a vigorous native Egyptian production, provided the real forcing-bed of modern Arabic literature. During the last decades of the 19th century and the first decade of the 20th, the press was the theatre in which (except for poetry) literary reputations were made and literary Arabic was adapted to modern social themes and currents of ideas. This did not exclude the widest diversity in literary styles: the strict but vigorous classicism of Muḥammad ʿAbduh (1849-1905), the modernised *maḳāmāt* of Muḥammad al-Muwayliḥī (1868-1930), the elegant neoclassicism of Muṣṭafā Luṭfī al-Manfalūṭī (1876-1924), the functional prose of Djirdjī Zaydān (1861-1914), Yaʿḳūb Ṣarrūf (1852-1927) and Ḳāsim Amīn (1865-1908), the fiery rhetoric of Walī al-Dīn Yakun (1873-1921) and Muṣṭafā Kāmil (1874-1908), the satirical colloquialism of Yaʿḳūb Ṣannūʿ "Abū Naḍḍāra" (1839-1912) and ʿAbd Allāh Nadīm (1844-96). At the same time the Syrian press transported to America was producing a type of literary essay and Whitmanesque "prose poems" which entirely discarded the classical traditions and even sought to remodel the linguistic structure in part; its leading figures were Djibrān Khalīl Djibrān (1883-1931) and Amīn al-Rayḥānī (1877-1940).

This stylistic experimentation in the press in the treatment of modern themes was reinforced by a very extensive output of translations of European works of literature, often by the same hands. Of the translations so made few have much claim to literary distinction, except those made by al-Manfalūṭī and perhaps one or two others. But the activity in translation played a vital part in the development of modern Arabic literature. "It may be said that, just as the works of an Ibn al-Muḳaffaʿ or an al-Djāḥiẓ would have been impossible without the translators of the ʿAbbāsid period, so without the translators of the 19th century modern Arabic literature could never have been called into existence" (Kratchkowsky). The translated works served not only as exercises in expanding the range of Arabic literary expression, but also as models. Not a few translators themselves tried their hands at original works of a similar kind, and many others were stimulated to original composition by them. In the former group, the most interesting are the attempts to develop a dramatic literature. The earliest of these were made by the Syrian Mārūn al-Naḳḳāsh (1817-55), inspired by Molière; he was followed by Nadjīb al-Ḥaddād (1867-99), in the style of Corneille, Hugo, A. Dumas and Shakespeare, and more successfully, by the Egyptian Muḥammad ʿUthmān Djalāl (1828-98), who adapted Molière to Egyptian settings and speech, besides producing a remarkable adaptation in literary Arabic of *Paul et Virginie*. In spite of this, however, it cannot be said that the Arabic drama achieved much success in the 19th century. On the other hand, some progress was made with the novel, particularly in the series of historical novels written in the manner of Scott by Djirdjī Zaydān and the psychological novel *Urūshalīm al-Djadīda* by Faraḥ Anṭūn (1874-1922). Many other original compositions also depend largely on European materials, e.g. the politico-social writings of ʿAbd al-Raḥmān al-Kawākibī (1849-1903), while the literature of the nascent Egyptian feminist movement, illustrated by ʿĀʾisha al-Taymūriyya (1840-1902), Malak Ḥifnī Nāṣif (1886-1918), and Ḳāsim Amīn, betrays its original inspiration even though adapted to its own social and literary environment.

In the sphere of poetry, on the other hand, the continuing classical tradition far outweighed any literary influences from the west down to 1914. With the rise of nationalism, its range was widened by patriotic themes, developed first by Maḥmūd Sāmī al-Bārūdī (1839-1904), then with more classical polish by Aḥmad Shawḳī (1868-1932) and more depth of social feeling by Muḥammad Ḥāfiẓ Ibrāhīm (1871-1932). But neither the new themes, whether patriotic or social or individual, nor the techniques of western poetry affected to any marked extent the long-established structure, genres, and modes of expression of Arabic poetry (in the hands, at least, of its most competent artists). The only outstanding exceptions are found in ʿIrāḳ, where the native Arabic poetic tradition had remained more vigorous and less cramped by artifice than in Syria and Egypt in the previous centuries. In more unconventional forms and freer language Djamīl Sidḳī al-Zahāwī (1867-1936), and with more classical restraint Maʿrūf al-Ruṣāfī (1875-1945), both achieved an authentic expression of current ideas and aspiration. An isolated attempt to acclimatise Greek poetry in Arabic was made by Sulaymān al-Bustānī (1856-1925) with his translation of the *Iliad* (1904); in itself not unsuccessful as a translation, it nevertheless failed to make much impression.

(*b*) Since 1914

In contrast to the preceding period, which was on the whole a period of experiment and imitation in modern Arabic prose, the decades since 1914 have seen the beginnings of a new and original Arabic literature which to a much greater extent reflects the social and intellectual interests of the Arab peoples. A leading part in this development was taken by the "liberal" group of Egyptian writers, inspired by Muḥammad ʿAbduh, who were associated with the journal *al-Djarīda* (issued from 1907, edited by Aḥmad Luṭfī al-Sayyid) and its successor *al-Siyāsa* (from 1922, edited by Muḥ. Ḥusayn Haykal); but the movement itself soon extended widely beyond this circle. The principal types of production were at first the short story (followed by the novel) and the literary essay; later on these were followed by the literary drama.

The first major work of the new school was *Zaynab*, a noval of Egyptian village life, published anonymously in 1914 by M. Ḥ. Haykal (b. 1888). In spite of its merits, the technical weaknesses of the work threw a sharp light on the deficiencies of literary Arabic at that time for the adequate presentation of the novel of manners. During the decade 1920-30 these were largely surmounted by a growing output of realistic short stories of contemporary life, beginning with the sketches (*Mā Tarāhu 'l-ʿUyūn*) of the talented Muḥammad Taymūr (1891-1921), and continued with increasing skill and success by his brother Maḥmūd Taymūr (b. 1894) and by several others (ʿĪsā ʿUbayd, Shiḥāta ʿUbayd, Ṭāhir Lāshīn, etc.). The most brilliant stylist in this field was Ibrāhīm ʿAbd al-Ḳādir al-Māzinī (1890-1949), who eventually produced also the first successful novel of manners (*Ibrāhīm al-Kātib*, 1931). From 1930 the output of novels slowly increased, among the more notable of the earlier works being *ʿAwdat*

al-Rūḥ (by Tawfīḳ al-Ḥakīm, 1933), *Sāra* (by ʿAbbās Maḥmūd al-ʿAḳḳād, 1938), and *Nidā al-Madjhūl* (by Maḥmūd Taymūr, 1939). The historical novel had already been recreated by Muḥammad Farīd Abū Ḥadīd with *Ibnat al-Mamlūk* (1926). The psychological novel also was successfully attempted on a smaller scale by Ṭāhā Ḥusayn (b. 1889), who in his autobiographical work *al-Ayyām* (1926) endowed modern Egyptian literature with one of its masterpieces in content and literary style. Innumerable short stories have been produced also in Lebanon, Syria, ʿIrāḳ and America, with the variations in subject, style and technique which one would expect. The output of novels, on the other hand, has been more fluctuating, and is still relatively small in proportion to the total literary production.

The literary essay envisaged a different purpose. It aimed not only at the critical evaluation of both classical Arabic and modern western literature (extending sometimes even to classical Greek and Latin literature) and social criticism in general, but also at the valorisation of the Arabic cultural tradition, in the widest sense, in the circumstances of the modern world. The rapid increase in daily, weekly and monthly journals after 1920 provided endless opportunities for the publication of such essays, and the representation of all points of view. The collected essays of many writers were subsequently reissued as separate works, whose very profusion makes it difficult and invidious to single out individual names. It must suffice to mention, from among the older generation of writers, Ṭāhā Ḥusayn and al-ʿAḳḳād as particularly influential thinkers and critics on the modernist wing; Shaykh Rashīd Riḍā (the editor of the reformist religious journal *al-Manār*, 1865-1935) and Farīd Wadjdī as equally influential in conservative and religious circles; Muṣṭafā Ṣādiḳ al-Rāfiʿī (1880-1937), who carried neo-classicism to the verge of preciosity; in Syria, the classicist Muḥammad Bey Kurd ʿAlī (president of the Arab Academy of Damascus, 1876-1952); and of the Syro-Americans Mikhāʾīl Nuʿayma (b. 1889). Out of this more or less ephemeral production there gradually arose a more developed literature of literary and social criticism, with a dominantly academic bias, but also borrowing in some hands (e.g. Tawfīḳ al-Ḥakīm) the technique of the novel, and even other literary media, as in the scientific travel narrative *al-Sindibād al-ʿAṣrī* by Ḥusayn Fawzī (1938). Another noteworthy later development was the application of these newer literary methods to the early history of Islam, exemplified by M. Ḥ. Haykal, Ṭāhā Ḥusayn, and al-ʿAḳḳād, and in dramatic form, somewhat earlier, by Tawfīḳ al-Ḥakīm.

The technical advance made in the presentation of the realistic narrative and novel was reflected also in dramatic literature. With few exceptions, the lead was taken by Egyptian authors, beginning again with Muḥammad Taymūr, and continued more especially by Tawfīḳ al-Ḥakīm, who, after some experiments in literary drama on themes drawn from Islamic literature (*Ahl al-Kahf*, *Muḥammad*, *Shahrazād*), has shown himself a major dramatist on modern social themes. Together with these may be mentioned the experiments made by the poet Aḥmad Shawḳī to create a literary genre of "classical tragedy", based on traditional Arab themes, followed more recently by Maḥmūd Taymūr.

Among the technical problems confronted by the Arabic drama, and to a lesser degree by the short story and novel, the question of language constitutes a peculiar difficulty. In the purely literary drama and in historical plays generally the use of the written language needs no justification; but in the contemporary realistic drama this involves a degree of artificiality which tends to destroy the theatrical effect. Whereas, however, the popular theatre has always flourished on plays in the colloquial language, the attempts made to produce a more developed drama in colloquial speech have neither been markedly successful on the stage nor met with much approbation in literary circles. Even in the short story the introduction of colloquial speech in dialogue (attempted in their earlier works by Maḥmūd Taymūr and Tawfīḳ al-Ḥakīm) was felt to involve a stylistic dislocation, and has not been commonly practised. Even less consideration has been given to more ambitious attempts to produce literary works in the colloquial throughout, chiefly by Lebanese writers and poets. A definite solution of this problem is not yet in sight, but for the time being a working compromise is provided by the use of a simplified form of the literary language for dialogue both on the stage and in the novel.

At the same time, and in the opposite direction, one consequence of the vogue of the literary essay has been to mobilise more effectively the resources of classical Arabic, and to facilitate the growth of a neo-classical style in the novel and general literature since 1940. With the richer and more flexible range of vocabulary and construction thus made available, together with the more technical concentration of meaning in modern Arabic (in contrast to the conceptual looseness of the older literary language), the contemporary writer has at his disposal an instrument which can express with grace and precision all normal aspects of contemporary Arab life and thought. Beyond this range, however, neo-classical Arabic is still deficient in both the fine nuances and the contextual associations which are the product only of long use and habit. For this reason, the attempt (first made by Bishr Fāris, in his play *Mafraḳ al-Ṭarīḳ*, 1938) to create a symbolist or impressionist style in modern Arabic must be considered premature.

This applies even more especially to the poetical production of recent years. Since 1914, the situation of prose and poetry have been reversed. Whereas in prose-writing Arabic authors, after the period of translation and imitation, moved on to original compositions, Arabic poetry has moved towards the freedom of western poetry and the imitation of its techniques. On the one hand, the intensity of political aspirations and frustrations could not fail to inspire many poets in the Arab countries (particular mention may be made of the Tunisian Abu 'l-Ḳāsim al-Shābbī, 1909-34), who have applied traditional themes and imagery to modern situations with great effect, most of the younger poets have been experimenting with the creation of a psychological poetry in new strophic and rhythmical forms, and wrestling with the traditional linguistic structure and its associations. The Syro-American poets were the first to challenge the traditional formalism, and have been followed particularly by the Lebanese poets in Brazil (Rashīd Salīm al-Khūrī and Fawzī Maʿlūf, 1899-1930), in North America (Ilyā Abū Māḍī), and in Lebanon itself (Ilyās Abū Shabaka, 1903-47, and others). The leader of the "new school" in Egypt was Aḥmad Zakī Abū Shādī (1892-1955), whose magazine *Apollo* for a short time (1932-3) provided a forum for the younger poets, in competition with the older "modernising" school represented by the Lebanese Khalīl Maṭrān

(1871-1949), and with greater freedom by al-ʿAḳḳād, which, though no less contemporary in subject and psychological approach, made a less violent breach with the formal and linguistic traditions of Arabic poetry. Much the same may be said also of the contemporary poetry of ʿIrāḳ, within the framework of its own tradition.

Appendix—Arabic Literature in Spain *).

General bibliography: Apart from the general histories of Arabic literature (see above, B), which devote one or more chapters to Muslim Spain, the work of A. González Palencia, *Historia de la literatura arábigo-española*, Barcelona, Madrid, etc., 1928, 2nd. ed. 1945 (a recast edition, with an extensive bibliography) is the only comprehensive work which exists on Arabic literature in Al-Andalus. A brief general account will be found in: Elías Terés Sadaba, *La Literatura Arábigo-española*, *apud* F. M. Pareja, *Islamología*, ii, Madrid 1954, 979 ff. Apart from a few monographs on authors (see under the names of these authors) and, fewer still, on periods, specialists have been primarily concerned with the production of short studies (such as are to be found in the journal *al-Andalus* in particular); the following, however, should be mentioned; for poetry: E. García Gómez, *Poemas arábigo-andaluces*, Madrid 1930, [2]1940, [3]1943; idem, *Poesía arábigoandaluza, breve síntesis histórica*, Madrid 1952; for history and geography: F. Pons Boigues, *Ensayo biobibliográfico sobre los historiadores y geógrafos arábigo-españoles*, Madrid 1898; in addition: E. Lévi-Provençal, *La Civilisation arabe en Espagne. Vue générale*, Cairo 1938, [2]Paris 1948 (Spanish translation, Buenos-Aires-Mexico 1953); Dozy, *Recherches sur l'histoire et la litt. de l'Espagne pendant le moyen âge*, Leiden 1849, [2]1860, [3]1881.

*) Circumstances beyond our control have obliged us to insert here an article which, in a more expanded form, was originally designed to form part of the article AL-ANDALUS. [Editors' note].

1.—Down to the Almoravids (92-485/711-1092).

2.—From the Almoravids to the end of the period of Arab domination (485-897/1092-1492).

It would certainly be possible, if not desirable, in a more detailed account of the history of Arabic literature in Spain, to distinguish five or six periods corresponding to the political history of the country under Arab domination, but, for the purposes of this article, it seemed simpler to keep to a division into two long periods of four centuries each, in order to take into account two facts: first, up to the time of the Almoravids, Spain was governed by amīrs, caliphs and kings who, although defenders of Islam, did not act in the name of strict religious principles, while the Almoravids and Almohads were prisoners of an ideology; secondly and reciprocally, up to the end of the kingdoms of the *Ṭawāʾif*, profane literature, especially poetry, predominated over religious literature proper, whereas after the Almoravids, the religious sciences—and, through a shift of emphasis, science pure and simple—took precedence over profane literature. In addition, the Arabic literature of Spain seems scarcely to have experienced any sudden setbacks, despite an unusually turbulent political and military history; it appears on the contrary to have pursued a steadily upwards path until the 5th/11th century; it then altered course somewhat, and came to an abrupt end when the last Arabs were driven out of Spain.

(1) *Down to the Almoravids* (92-485/711-1092)

When the conquerors set foot on Spanish soil, at the end of the 1st/beginning of the 8th century, Arabic literature was still only represented, in the East, by the Ḳurʾān and the religious sciences, as yet in their infancy, and by a lively poetic muse. It is therefore probable that the Arab warriors, who were poets to a greater or lesser degree, respected the old tradition, but probably confined their literary activity to the composition of a few poems designed to extol their tribe, celebrate their military exploits, lament their dead, or bewail their exile from their homeland, in the same way as their fellow-Muslims sent to conquer other parts of the world (cf. C. A. Nallino, *Letteratura* = *Scritti*, vi, 51, 110-4; French trans., 81-2, 170-7). None of this has been preserved; a late notation states however that in ancient times, "the inhabitants of al-Andalus sang in the style of Christians or of Arab cameleers" (*apud* E. García Gómez, *Poesía*, 30-1).

Nevertheless, the foundation of the Umayyad amirate brought about the establishment of close contact with the East, which did not fail to send religious notabilities to catechise Spain, and the rapid islamisation of a considerable part of the indigenous population required the development of juridico-religious studies. From 200/816 onwards, the substitution, encouraged by the Umayyads for political motives, of Mālikism for the *madhhab* of al-Awzāʿī [see AL-ANDALUS, vii], soon bore fruit in the formation of a school of jurists who, to a varying

but not inconsiderable degree, contributed to the propagation of the *Muwaṭṭaʾ* of Mālik. In his defence of Muslim Spain, Ibn Ḥazm (see *Al-Andalus* 1954/1) cites in the first place ʿĪsā b. Dīnār (m. 212/827), Ibn Ḥabīb (180-238/796-852), al-ʿUtbī (m. 255/869), Ibrāhīm b. Muzayn (m. 258/872), Mālik b. ʿAlī al-Ḳaṭanī (m. 268/882); these studies were pursued with enthusiasm by the successors of these pioneers, Muḥ. b. ʿUmar b. Lubāba (225-314/840-926), Muḥ. b. ʿAbd al-Malik b. Ayman (252-330/866-941), Ḳāsim b. Aṣbagh (247-340/861-951), Aḥmad b. Saʿīd (284-350/897-961) and especially the great *faḳīh*, traditionist and man of letters Ibn ʿAbd al-Barr (368-463/978-1070). The attempt made by Baḳī b. Makhlad (201-76/817-89), on his return from the East (his meeting there with Ibn Ḥanbal is worth special mention), to introduce into Spain the Shāfiʿī *madhhab*, had little effect, but this traditionist is the author of a collection of *ḥadīths* presented in the combined form of a *muṣannaf* and a *musnad*, of a work on the Companions of the Prophet, and above all of a commentary on the Ḳurʾān which Ibn Ḥazm considers to be superior to that of al-Ṭabarī. Ẓāhirism, on the other hand, was introduced by ʿAbd Allāh b. Ḳāsim (d. 272/885-6) and supported by Mundhir b. Saʿīd al-Ballūṭī (d. 355/962), before being made famous by Ibn Ḥazm (384-456/994-1064) who dominates, in nearly every sphere, the intellectual activity of the first half of the 5th/11th century, and whose *K. al-Fiṣal*, going beyond the strict limits of Islam, set forth the history of religious ideas in terms of Islamic thought. Muʿtazilism itself was not unknown; among its supporters were Khalīl Ghafla (3rd/9th century), Yaḥyā b. al-Samīna (d. 315/927), and Mūsā b. Ḥudayr (d. 320/932). Finally, philosophy appeared on the scene with the mystic Ibn Masarra (d. 319/931) and his school (see Asín Palacios, *Abenmasarra y su escuela*, Madrid 1914).

The disciplines connected with the religious sciences developed on parallel lines. From the end of the 2nd/beginning of the 8th century, the first oriental works on grammar were introduced into Spain and a course of instruction was devoted to them, but it appears that philological and lexicographical studies received their greatest stimulus from the arrival at Cordova, in 330/941, of the ʿIrāḳī philologist Abū ʿAlī al-Ḳālī (288-356/901-67), whose *Amālī* are only a reflection of the knowledge which he disseminated there, because he also composed, *inter alia*, the *K. al-Nawādir* and an important work on lexicography, the *K. al-Bāriʿ*; his contemporary Muḥ. b. Yaḥyā al-Riyāḥī (d. 358/968) and Muḥ. b. ʿĀṣim (d. 382/992) are considered by Ibn Ḥazm to be the equals of the great disciples of al-Mubarrad. Ibn al-Ḳūṭiyya (d. 367/977) also devoted himself to the study of grammar, while a disciple of al-Ḳālī, Ibn al-Sayyid (d. 385/995) produced a lexicon, which was followed by that of Ibn al-Tayyānī (d. 436/1044) and above all by the masterly work of Ibn Sīda (Sīdo) (398-458/1007-66), *al-Mukhaṣṣaṣ*.

As regards history, the Andalusians were not averse to retracing the course of universal history, as for instance Ibn Ḥabīb, already mentioned, who did not make any clear distinction between history and legend, or ʿArīb b. Saʿd (d. 370/980), who took up again and continued the Annals of al-Ṭabarī, but they applied themselves in determined fashion to the history of Spain, in the form either of dynastic chronicles—in particular of the ʿĀmirids, but also of the Zīrids of Granada by the last king of that dynasty, ʿAbd Allāh (447-after 483/1056-after 1090) —or of biographies of jurists and traditionists (Ibn al-Faraḍī, 351-403/962-1013), of ḳāḍīs (al-Khushanī, d. 361/971), of physicians (Ibn Djuldjul, d. after 372/982), of secretaries (Sakan b. Saʿīd, d. 457/1065), or of chronicles covering the period from the conquest to the author's own times. This last genre was the particular concern of Aḥmad b. Muḥ. b. Mūsā al-Rāzī (274-344/888-955) and his son ʿĪsā, whose work is quoted in part in the *Akhbār Madjmūʿa* [*q.v.*], by Ibn al-Ḳūṭiyya—or at all events by the editor of the book published under his name—and above all by the great historian Ibn Ḥayyān (377-469/987-1075), whose important chronicle, *al-Muḳtabis*, has been partially recovered. An apt disciple of Ibn Ḥazm—who himself also took an interest in history, preferring mainly the genealogical genre highly esteemed by the Andalusians—Ṣāʿid of Toledo (419-63/1029-69), wrote his *Ṭabaḳāt al-Umam*, in which both the Greeks and the Romans figured. In the realm of geography, apart from al-Rāzī (Aḥmad b. Muḥ.) whose description of Spain has been partially reconstructed, the principal author is Abū ʿUbayd al-Bakrī (d. 487/1094).

As a result of the beneficent influence of al-Ḥakam II, a school of mathematicians and astronomers arose under the leadership of Maslama al-Madjrīṭī (d. about 398/1007) and continued under Ibn al-Samḥ (370-426/980-1034) of Granada, while in the following century there flourished at Toledo al-Zarkalī and, at Saragossa, the Hūdid kings themselves. Finally, the study of medicine and botany received a powerful stimulus as a result of the arrival at Cordova, in the reign of ʿAbd al-Raḥmān III, of the work of Dioscorides. After Ibn Djuldjul, who has already been mentioned, and Muḥ. b. al-Hasan al-Madhhidji (d. about 420/1029), Abu 'l-Ḳāsim Khalaf b. ʿAbbās al-Zahrāwī (325-404/936-1013), known to Europe in the Middle Ages as Abulcasis, and Ibn Wāfid (388-466/988-1074) were the first of a series of great physicians and botanists who achieved fame during the era which followed.

According to customary practice when dealing with Arabic literature, it has been necessary up to this point to give an account of disciplines and *genres* which the historian of most other literatures would certainly disregard, and an attempt has been made to make a rapid list of works which for the most part bear the characteristic imprint of Islam and which differ little from similar works written in the East. The same consideration obtains when one embarks on a study of the first literary works proper, whether in prose or verse. It is nevertheless astonishing that it was not until the 4th/10th century that there appeared in Spain an *adab* work written by an Andalusian, the famous *ʿIḳd* of Ibn ʿAbd Rabbih (d. 328/940), the contents of which are still specifically oriental; it is equally remarkable that this *genre* had no great success in Spain and that Ibn ʿAbd Rabbih had few imitators during the first period with which we are dealing. Yet for more than a century, the country had been "ʿirāḳicised", from the time of the arrival at Cordova, at the beginning of the amirate of ʿAbd al-Raḥmān II, of the celebrated ʿIrāḳī singer Ziryāb (173-243/789-857), who brought to Spain the fashions of the ʿAbbāsid court (see E. Lévi-Provençal, *Civilisation*, 69 ff.). Baghdād was indeed still a model to be imitated, but an event of the utmost importance had occurred, of a kind which gave to the Arabic literature of Spain an orientation slightly different from that which obtained in the East. In fact, from the 3rd/9th century, the two strongly disparate ethnic elements which populated the Peninsula had,

after a long period of mutual ignorance, been gradually drawn closer together and had finally achieved a sort of fusion eminently favourable to the production of an original literature.

Our information on the Arabic poetry written during the early centuries of Muslim domination is very scanty, and the loss of the oldest collections—especially the *K. al-Ḥadāʾiḳ* of Aḥmad b. Faradj (d. 344/976)—deprives us of essential documentation. Perhaps Yaḥyā al-Ghazāl (d. 251/864), who was sent by ʿAbd al-Raḥmān II on an embassy to Constantinople (see E. Lévi-Provençal, *Islam d'Occident*, 81 ff.), wrote poetry of merit; it is known that he favoured a minor epic form, by his use of the *urdjūza*, and this form was also employed by Tammām b. ʿĀmir (184-283/801-96) and Ibn ʿAbd Rabbih. It is not the epic, however, but the *muwashshaḥ* [*q.v.*] which is the most typical Spanish form. From the end of the 3rd/9th century dates the creation, attributed to a poet of Cabra named Muḳaddam b. Muʿāfā (d. at the beginning of the 4th/10th century) of this new verse-form; its fundamental characteristics were the arrangement in strophes, an arrangement virtually unknown to the Arab lyric, and the addition of an *envoi* (*khardja*) not in Arabic, but in Romance, as has recently been revealed by S. M. Stern (*Les vers finaux en espagnol dans les muwaššaḥs hispano-hébraïques* ...., in *al-And.*, 1948, 299-346): we have here a unique example of the combination of the two languages and the two systems. As long as there are manuscript collections of *muwashshaḥāt* still unpublished (see S. M. Stern, in *Arabica*, 1955/2), it would be premature to draw up a list which, if not exhaustive, would at least be fairly comprehensive, of authors of poems of this type; in any case, some of them are later than the period under review.

The importance attributed in recent years to the *khardja* can be explained on the one hand by the attraction of a novelty and, on the other, by the renewed controversy on the relationship between Spanish poetry and that of the troubadours, but it must be admitted that the *muwashshaḥāt*, however much appreciated by the Andalusians, even by Orientals, constituted no more than a minor literary category which could in no way supersede the other poetic forms esteemed in the Muslim Orient, and the necessary concomitant of the establishment of the western caliphate was an original poetic form which neither showed clearly signs of indigenous influence, nor followed too closely oriental forms. Nevertheless, oriental works were well known in Spain, from the pre-Islamic *ḳaṣīdas*—studied as relics of a bygone age but not imitated—to the *dīwāns* of "modern" and neo-classical poets, in particular al-Mutanabbī—who was the subject of commentaries by al-Iflīlī (352/441/963-1049), al-Aʿlam al-Shantamarī (410-76/1019-83), and Ibn Sīda—and it was these works which inspired Andalusian poets when Cordova, the metropolis of the Muslim West, possessed all the conditions favourable to the production of poetry of a characteristic flavour. As was to be expected, this poetry passed through various phases; somewhat official to begin with, it later became progressively independent and free, and finally blossomed in the 5th/11th century with incomparable richness.

Without going so far as to claim that the Umayyad caliphs were the centre of literary circles, one may legitimately affirm that they regularly played their part as patrons of letters by promoting Arab culture —notably by creating libraries, including the celebrated library of al-Ḥakam II—and by granting pensions to poets commissioned to sing their praises and to give, through their compositions, the customary lustre to the various solemn functions of official life; the *wazīr* of al-Ḥakam II and Hishām II, al-Muṣḥafī, (d. 372/982) is the perfect example of such poets (see E. García Gómez, *La Poésie politique sous le califat de Cordoue*, in *REI*, 1949, 5-11).

Although this type of poet did not hesitate on occasion to embark on other kinds of poetry than the political, it was under al-Manṣūr—who had ordered the burning of those books on philosophy, astronomy and other sciences which were considered to be contrary to the interests of Islam—that truly urban poetry came into being with Ibn Darrādj al-Ḳaṣtallī (347-421/958-1030), Ṣāʿid of Baghdād (d. 418/1026), al-Ramādī (d. 403 or 413/1013 or 1022). Moreover, from the end of the period of the caliphate, a literary group was established which, aristocratic in origin, but revolutionary in its ideas, was hostile to the *muwashshaḥāt genre* which was considered too popular, stoutly defended arabism without however submitting wholly to oriental influence, and proclaimed that the production of good literature depends on the genius of the authors and not on erudition or imitation. The leader of this school was Ibn Shuhayd (382-426/992-1035), who developed his ideas in a prose work of undoubted originality, the *Risālat al-Tawābiʿ wa 'l-Zawābiʿ* (see García Gómez, *Ibn Hazm de Córdoba y El Collar de la Paloma*, Madrid 1952, 6 ff.); his natural heir was Ibn Ḥazm who, although he did not give evidence of superior poetic talent, was none the less the author of a charming analysis of ʿUdhrite love, the *Ṭawk al-Ḥamāma* which, unique of its kind, belonged henceforth to universal literature.

The momentous events which led to the fall of the caliphate and the establishment of the kingdoms of the *taifas* (*Ṭawāʾif* [*q.v.*]) did not appear to have a fatal effect on the future of poetry, and it was precisely in the 5th/11th century that poetry reached its peak—a "false" peak, according to E. García Gómez, *Poesía*, 65 ff. It is no mere chance that we possess, on this period, not only anthologies and *dīwān*s, but also the most important monograph which has been devoted to the literary history of Muslim Spain, *La Poésie andalouse, en arabe classique, au XI^e siècle*, Paris 1937, 2nd ed. 1953, by H. Pérès who, while seeking to bring out its documentary value, has at the same time painted an overall picture of the poetry of this period. Although it is possible to distinguish at each of the courts which came into being a kind of specialisation in some branch of knowledge, poetry dominates all literary activities; everywhere it reigns supreme, it opens all doors and "an extempore poem can be worth a viziership" (García Gómez). For the most part in neo-classical verse, and in the form of *ḳaṣīda*s, which is an indication of a recrudescence of oriental influence, every imaginable theme is dealt with; satires, elegies, ascetic poems, songs of love and war, panegyrics, songs of wine and passion. Every *genre* is found, and the most trivial incidents of daily life are recounted in verse; nevertheless the poets show a certain preference for descriptions, whether of nature, cities, gardens, animals or human beings.

At Cordova flourished Ibn Zaydūn (393-463/1003-70), who sang the praises of the princess Wallāda; at Seville the sovereign himself, al-Muʿtamid (d. 488/1095), whose life was "pure poetry in action" (García Gómez, *Poesía*, 70), gave inspiration to a court which attracted not only

Spanish poets like Ibn ʿAmmār (d. 477/1084) and Ibn al-Labbāna (d. 507/1113) but even the Sicilian poet Ibn Ḥamdīs (447-527/1055-1132) (see S. Khalis, *La Vie littéraire à Séville au XIe siècle*, Sorbonne thesis 1953, unpublished); at Almeria, al-Muʿtaṣim (d. 484/1091) received Ibn Sharaf (444-534/1052-1139), while at Granada flourished the celebrated Abū Isḥāḳ al-Ilbīrī (d. 454/1069), and at Badajoz Ibn ʿAbdūn (d. 529/1134).

(2) *From the Almoravids to the end of the period of Arab domination* (488-897/1092-1492)

The Almoravid conquest, which here and there brought the careers of these poets to an abrupt close, for a time reassembled the fragments of al-Andalus. It was unfavourable to the development of poetry, because the new rulers lacked the refinement and the taste of the *reyes de taifas*, and showed less interest in literature than in religion. While a wholly conventional type of poetry flourished at court, only Valencia maintained the tradition of the preceding century with the "landscape-painters" Ibn Khafādja (450-533/1058-1138) and Ibn al-Zaḳḳāḳ (d. 529/1135), who did not despise, respectively, erotic poems and bacchic songs. Under the Almohads, the only names of any note are those of al-Ruṣāfī (d. 572/1177) and Ibn Sahl (d. 649/1251); later, up to the fall of Granada, Lisān al-Dīn Ibn al-Khaṭīb (713-76/1313-74) and Ibn Zumruḳ (733-96/1333-93) merely maintained the tradition. Their contemporaries did not fail to note the decline of poetry and, thinking that the time had come to gather together the legacy of the past in order to save it from oblivion, they compiled anthologies: Ibn Bassām (d. 542/1147) his *Dhakhīra*, al-Fatḥ b. Khāḳān (d. 529/1134) his *Ḳalāʾid al-ʿIḳyān* and *Maṭmaḥ al-Anfus*, while Ibn Saʿīd al-Maghribī (d. 672/1274), in extracting from his *Mughrib* the *K. Rāyāt al-Mubarrizīn*, seemed to be writing "the last testament of Arabo-Andalusian poetry" (García Gómez, *Poesía*, 86).

If, however, noble or classical poetry shone with but a feeble lustre, the *muwashshaḥāt*, which the most aristocratic poets had continued to produce in the preceding century (see *Arabica*, 1955/2), again flourished with singular brilliance through the efforts of al-Aʿmā al-Tuṭīlī (d. 520/1126), Ibn Bāḳī (d. 540/1145) and many others. In addition, the *zadjal* [*q.v.*], whose origin is attributed, perhaps erroneously to the 3rd/9th century, came truly to life with "one of the highest poetic peaks of the entire Middle Ages" (García Gómez, *Poesía*, 81), Ibn Ḳuzmān (555/1159), and a host of popular poets mastered this form and kept it alive until the end of the period of Arab domination.

Prose literature, which had made such a promising beginning with Ibn Shuhayd and Ibn Ḥazm, again became orientalised with the *Sirādj al-Mulūk* of al-Ṭurṭūshī (451-520/1059-1126), the encyclopaedia of Ibn al-Shaykh al-Balawī (576-604/1132-1207), and the several imitations of the *Maḳāmāt* of al-Ḥarīrī which found their most prolific commentator in Spain in the person of al-Sharīshī (d. 619/1222).

While particularly unfavourable to poetry and literature properly so-called, the Almoravid conquest was, on the other hand, an advantage to the sciences, both religious and profane, which developed to a considerable degree from then on. Space will not be devoted here to the religious disciplines which, though they had innumerable devotees, produced few noteworthy works apart from the *Tuḥfa* of Ibn ʿĀṣim (760-829/1359-1426), or to philology or lexicography, because, apart from Ibn al-Sīd al-Baṭalyawsī (508-80/1114-85), the masters of these sciences, Ibn Mālik (605-72/1208-74) and Abū Ḥayyān (655-744/1257-1344), preferred to go and give the fruits of their knowledge to the peoples of the East.

As regards history, the biographical *genre* achieved great success, with the *ḳāḍī* ʿIyāḍ (478-544/1085-1149), Ibn Bashkuwāl (493-578/1100-83), al-Ḍabbī (d. 599/1202), Ibn al-Abbār (595-658/1198-1260), Ibn al-Zubayr (628-708/1231-1308); to the dynastic chronicles was added a great work by Ibn Saʿīd al-Maghribī, a continuation of the *Mushib* of al-Ḥidjārī (500-49/1106-55), the *Mughrib*, which made extensive use of earlier historians including once again Lisān al-Dīn Ibn al-Khaṭīb. In the sphere of geography, the greatest name is, of course, al-Idrīsī (493-564/1100-69), while the Maghribīs, and especially Andalusians, applied themselves successfully to the *genre* of narratives of travel: Abū Ḥāmid al-Gharnāṭī (473-565/1080-1169), Ibn Djubayr (560-614/1145-1217), al-ʿAbdarī (7th/13th century).

The 6th/12th and the 7th/13th centuries were for Andalusia the golden age of science: mathematics, astronomy, medicine, pharmacology, botany. There is no need to repeat here the names of those who achieved fame in these sciences (see above, B, from the 6th to the 12th century); the names of the principal philosophers and mystics of the period under review will also be found in that section.

For *aljamiada* literature, see ALJAMÍA. On the question of the possible influence of the Arabic poetry of Spain on European works of the Middle Ages, see MUWASHSHAḤ and ZADJAL.

AL-ʿARABIYYA, DJAZĪRAT, island in the Persian Gulf in Lat. 27° 46′ N, Long. 50° 10′ E, about 50 miles from the Saudi Arabian mainland and 60 miles from that of Iran. It is one of a five-island group—the others being Ḥarkūṣ, al-Fārisiyya, Karān, and Kurayn—on the Arabian side of the Gulf. Al-ʿArabiyya is less than a mile square and is normally uninhabited, but it is claimed by three of the Gulf states: Saudi Arabia, Kuwayt, and Iran.

(W. E. Mulligan)

ʿARABKĪR, (taken to mean ʿArabgīr, i.e. "conquest of the Arabs"), in modern Turkish orthography Arapkir, in Armenian Arabkēr, in the Byzantine sources Arabrakes, a town in eastern Anatolia, 19° 3′ north, 38° 30′ east, about 70 km. north of Malaṭya, situated on the Arapkir Su, a tributary of the Karasu, which later becomes the northern Euphrates, 1,200 m. above sea-level. Capital of a *kaḍā* in the *wilāyet* of Malaṭya, with 6,684 inhabitants (1945); the *kaḍā* itself has 23,612 inhabitants.

The town is situated on a hill in a lowland which is surrounded by steeply rising walls of basalt. Because of the altitude, the climate of the town is harsh. Extensive orchards which surround the town are worthy of special mention. The town, as we find it at present, dates back only to the beginning of the 19th century, and is consequently of a modern appearance. Until then, the town had been situated at a place half an hour further to the north, which is still called Eskishehir ("old city") and still shows traces of buildings.

The town is not mentioned by any of the older Arabic geographers; it is, however, mentioned several times in the Saldjūk Chronicle of Ibn Bībī (written 680/1281, ed. Houtsma, Leiden 1902). In the 11th century, the town was occupied by the Saldjūks; in the 15th century, it came under Ottoman rule. As the centre of a *sandjak*, the town belonged to the *eyālet* of Sivas, but it changed its orientation several times; since 1216/1878, it has belonged to the *wilāyet* of Maʿmūrat al-ʿAzīz (Kharput).

During the 19th century, the town began to flourish. Ainsworth gave the number of inhabitants as 8,000 (amongst them 6,000 Armenians) in the year 1839, whilst the British Consul General, J. Brant, who travelled a few years earlier, mentioned 6,000 houses (4,800 inhabited by Turks, 1,200 by Armenians), from which one might assume a higher total of inhabitants. Taylor mentions 35,000 inhabitants in the year 1868 and Cuinet 20,000 towards 1890 (11,000 Muslims, 8,500 Gregorian Armenians). A considerable part of them, particularly Armenian families, made its living by weaving (cotton goods from English yarn). Every year, emigrants come down from the mountains of Arapkir and Kharput to try and make their fortune in Istanbul, Diyārbakr, Damascus, Aleppo and the sea-ports. In former days one used to find a servant from Arapkir in most houses in Aleppo.

In the First World War 1914-18, the town suffered greatly, most of the houses and their famous gardens were destroyed, and trade died down. In post-war years, it recovered and began to flourish again.

(M. Streck-[F. Taeschner])

ʿARAB SHĀHIDS [see KHWĀRIZM].

ʿARAḌ, translation of the Aristotelian term συμβεβηκός, accident is defined as that which cannot subsist by itself but only in a substance (*djawhar* [*q.v.*]) of which it is both the opposite and the complement. Thus, anything that is asserted of a subject is an accident, by which term the Muslim philosophers understand the Aristotelian categories (*maʿkūlāt*, [*q.v.*]) except that of the substance. The theologians (*mutakallimūn*) held different views on the subject (e.g., some believed that there can be substances without qualities and vice versa etc.) which cannot be described here (see e.g. *al-Ashʿarī, Maḳālāt al-Islāmiyyīn*, vol. ii). Some held the doctrine of *aḥwāl* (states) [*q.v.*] which they described as qualities which are neither existent nor non-existent. An important tenet held by the *mutakallimūn* was the thesis that an accident cannot subsist in another accident.

In another sense *ʿaraḍ* is the opposite of *māhiyya* (quiddity) or *dhāt* (essence) [*q.v.*] and denotes an attribute which is not a constituent element of an essence. Two kinds of *ʿaraḍ* are distinguished: (a) that which, though it is not a part of an essence, is its necessary concomitant (*ʿaraḍ lāzim*) e.g., laughing with regard to man συμβεβηκὸς καθ' αὑτό in Aristotle, *Met.*, iv, 1; (b) that which is found in some members of a species but not in others (*ʿaraḍ lāḥiḳ* or *zāʾil*) e.g. writing with regard to man (simply συμβεβηκός, in Aristotle. An essential attribute, on the other hand, is e.g. rationality in relation to man.

Discussions on ʿaraḍ will be found in Muslim works on logic. For the views of the *mutakallimūn* see *maḳālāt al-islāmiyyīn* of al-Ashʿarī, ed. C. Ritter, ii; Dict. of Technical Terms, s.v.; S. Pines, *Beiträge zur islamischen Atomenlehre*, etc. (F. Rahman)

AL-AʿRĀF (A.), plur. of *ʿurf*, "elevated place", "crest". In an eschatological judgement scene in Ḳurʾān, vii, 46 a dividing wall is spoken of which separates the dwellers in Paradise from the dwellers in Hell, and men, "who are on the *aʿrāf* and recognise each by his marks" (v. 48: "those of the *aʿrāf*"). The interpretation of this passage is disputed. Bell makes the doubtful conjecture *iʿrāf* and translates:

"(Presiding) over the recognition are men, who recognise . . .". According to T. Andrae the "Men on the elevated places" are probably the dwellers in the highest degrees of Paradise, "who are able to look down both on Hell and on Paradise". Perhaps the reference is in particular to the messengers of God, who come into action again at the Last Judgement in order to separate the good from the bad.

According to the traditional explanation "those of the elevated places" are to be supplied as subject of the sentence at the end of v. 46 (*lam yadkhulūhā*) and in v. 47. According to this they would be— at any rate provisionally—neither in Paradise nor in Hell, but in an intermediate place or condition. As a result of this explanation *al-aʿrāf* was given the meaning "Limbo" [see BARZAKH].

(R. PARET)

ʿARAFA, or ʿARAFĀT, plain about 21 km. (13 miles) east of Mecca, on the road to Ṭāʾif, bounded on the north by a mountain-ridge of the same name. The plain is the site of the central ceremonies of the annual Pilgrimage to Mecca; these are focussed on a conical granite hill in its N.E. corner, under 200 feet in height, and detached from the main ridge; this hill also is called ʿArafa, but more commonly Djabal al-Raḥma (Hill of Mercy). On its eastern flank, broad stone steps (constructed by order of Djamāl al-Dīn al-Djawād, vizier of the atābek Zankī) lead to the top, which is surmounted by a minaret; on the sixtieth step there is a platform containing the pulpit from which the ritual *khuṭba*, the Pilgrimage address, is delivered on the afternoon of the "Day of ʿArafa" (9 Dhu 'l-Ḥidjdja). On the top there stood formerly a *ḳubba* named after Umm Salama (Ibn Djubayr 173), which was destroyed by the Wahhābīs. The hill is also said to have been called Ilāl, but this name is more probably to be regarded as that of a shrine or perhaps of the deity worshipped on the spot in the pre-Islamic period (Wellhausen, *Reste arab. Heidenthums*², 82-3).

The plain of ʿArafāt (about 4 miles in breadth from E. to W. and 7-8 miles in length) lies outside the *ḥaram* or sacred territory of Mecca; the pilgrim coming from Mecca emerges through a defile called Maʾzamayn and passes the pillars which delimit the *ḥaram*; to the east of these is a depression called ʿUrana, at the further edge of which is a mosque called by the names of Ibrāhīm or Namira or ʿArafa. The *mawḳif* or place of assembly extends immediately to the east of this mosque and southwards from the Djabal al-Raḥma, and is bounded on the east by the mountain-chain of Ṭāʾif. In the early centuries of Islam, a number of wells were dug in the plain and several plantations and dwellinghouses are mentioned. The aqueduct built by order of Zubayda to bring water from the region of Ṭāʾif to Mecca also runs at the base of the ridge of ʿArafa. The plain is now covered with rough herbage and normally unpopulated, and is filled with life only on the "Day of ʿArafa", when the pilgrims pitch their camp for the celebration of the prescribed *wuḳūf* or festival assembly. This begins after the midday *khuṭba* and prayer and lasts until just after sunset. For further details of the ceremonies see the art. ḤADJDJ.

The origin of the name ʿArafa is unknown. The legendary explanation is that Adam and Eve, separated after their expulsion from Paradise, met again at this spot and recognised each other (*taʿārafa*). Arabic writers mention also other etymologies of a similar kind.

ARAGHŪN [see SUPPLEMENT].

AL-**ʿARĀʾISH** ("the trellises of grape vines"), in French and Spanish orthography *Larache*, town on the Moroccan seaboard situated on the Atlantic coast, about 44 m. S.-W. of Tangier and 83 m. N.-W. of Fās. Astronomical position: 35° 13′ lat. N., 8° 28′ 22″ long. W. (of Paris).

Larache covers the slopes of a hill which juts out into the sea in the form of a headland and dominates the left bank of the Wādī Lukkos at the point where this river discharges into the sea. The Muslim town is insignificant, and has no feature of interest except the *sūḳ*, quadrilateral in form, which is lined with arcades and presents a vaguely monumental appearance. As a legacy of the first Spanish occupation (1610-89), there remains a fortress called *Castillo de las Cigüeñas* (of the storks) or *Santa Maria de Europa*. To the S. and S.-W. of the Muslim town, the Spanish, who re-occupied Larache in 1911, built a European town, the centre of which in 1955 was a circular area called *Plaza de España*. The alluvial deposits of the Wādi Lukkos have formed a bar which renders the harbour inaccessible to vessels of large tonnage. The population of Larache in 1955 numbered just under 43,000, of whom (in round figures) 28,000 were Muslims, 1,300 Jews and 13,000 Europeans, almost all Spanish. In the neighbourhood of Larache potatoes and fruit trees are chiefly cultivated. Industry is of little importance, but fishing has increased to some extent (more than 230 small craft in 1953). The patron of Larache is Lallā Mennāna, whose *ḳubba* marks the beginning of the *Madīna* as one approaches it from inland.

Al-ʿArāʾish is not a very old town. Al-Idrīsī does not mention it, and the Arab authors do not mention it before the 7th/13th century. Further, it only occurs infrequently in texts. It was apparently founded by the Banū ʿArūs tribe, who gave it, on account of the abundance of vines in the neighbourhood, the name of al-ʿArīsh mtāʿ Bnī ʿArūs. The Almohad sultan Yaʿḳūb al-Manṣūr built a fort at the mouth of the Wādī Lukkos, and, in 1270, Spanish Christians carried out a successful surprise attack on the place. However, as is often the case with places of secondary importance on the Moroccan coast, the history of Larache is only known with any certainty from the time that the Portuguese set foot in Morocco. In the years immediately following their occupation of Ceuta (1415), the Portuguese launched a successful attack against the town, but the results of this victory were short-lived. The occupation of

Arzila and Tangier by King Alfonso V of Portugal in 1471 led to the evacuation of Larache, which the peace treaty included in the zone of Portuguese influence and which remained depopulated for twenty years. In 1489, King John II of Portugal took advantage of this circumstance to consolidate his position in northern Morocco and to constitute a more direct threat to Fās and al-Ḳaṣr al-Kbīr, by erecting a fort named *la Graciosa* on the right bank of the Lukkos a little below the confluence of that river with the Wādī Mkhāzen. Besieged by the Moroccans, decimated by marsh-fever, ill-supplied and ill-reinforced because the river was barely navigable, the Portuguese garrison, after a long resistance, was obliged to accept an honourable surrender, which enabled it to retire unmolested. Al-ʿArāʾish was restored by Mawlāy al-Nāṣir, son of the Waṭṭāsid Sultan Muḥammad al-Shaykh. Leo Africanus, who gives an account of the town at the beginning of the 16th century, informs us that large numbers of eels were caught there, that a plentiful supply of game was to be found there, and that on the banks of the Lukkos there were woods abounding in wild animals. The inhabitants made charcoal which they sent to Arzila and Tangier. But they lived in fear of the Portuguese, who continually raided the area and who attacked the port itself in 1504 (there was also an unsuccessful attack by the Spanish from Cadiz in 1546). This insecurity did not prevent the development of a certain amount of maritime trade due to the fact that al-ʿArāʾish was then the only port in northern Morocco not occupied by the Christians, and that it was one of the channels through which passed the trade of Fās, to which it was relatively near. The Portuguese maintained a commercial agent there (*feitor*); Genoese merchants visited it regularly, and a castle situated at the entrance to the harbour became known as "Genoese Castle". From then on, Larache became a pirates' lair, and piracy increased after the evacuation of Arzila by the Portuguese in 1550. The havoc wrought by the pirates on the Spanish coast led Philip III to occupy Larache in 1610, following an agreement with the Saʿdid Sultan Mawlāy Muḥammad al-Shaykh. The town was retaken by the Moroccans in 1689 during the reign of the ʿAlawid Sultan Mawlāy Ismāʿīl, and was repopulated by the Djabāla and the tribes of the Rif. From that date until 1911, the operations of the European powers against Larache were confined to bombardments or to more or less successful attacks from the sea. In 1765, the French Admiral Du Chaffault suffered a heavy defeat there. In 1860, during the Spanish-Moroccan war, Larache was bombarded by a Spanish squadron. During the "Moroccan crisis", Spanish troops landed at Larache on 8 June 1911, and the town remained within the Spanish zone of influence until the proclamation of the independence of Morocco in 1956.

Opposite Larache, on the other bank of the Wādī Lukkos, on the Shammish hill, there stand the ruins of the Punic town of Lixos or Lixus, where many excavations have been made.

(G. Yver-[R. Ricard])

AL-**ARAK**, to-day Santa Maria de Alarcos, a small citadel in the district of Calatrava la Vieja, situated about seven miles S.-W. of Ciudad Real, on the summit of a mountain whose spurs descend to the Rio Guadiana. In the undulating plain which lies at its feet, between Poblete and Guadiana, was fought the famous battle between Yaʿḳūb al-Manṣūr and the Castilians, which ended in the rout of Alfonso VIII (see the article ABŪ YŪSUF YAʿḲŪB, for details of events immediately prior to the battle).

We have little information on the details of the actual battle, because we only have at our disposal on the Muslim side accounts which are rather fanciful. The Christian sources are more objective, although briefer. It seems that the Castilians launched a surprise attack on the Almohad advance guard, commanded by the Vizier Abū Yaḥyā, grandson of Abū Ḥafṣ ʿUmar Intī [*q.v.*], but only achieved a partial success. Yaʿḳūb, with his own force, attacked the flank of the Christians who, as the struggle became prolonged, were forced, exhausted by the heat and by thirst, to take refuge in the castle of Alarcos or to flee with their King in the direction of Toledo. Moreover the Castilian Pedro Fernández de Castro, a personal enemy of Alfonso VIII, contributed with his own squadron of cavalry to the success of the Almohad ruler, on whom he lavished advice. Don Diego Lopez de Haro, the great *alférez* of Castile, took refuge with the royal standard in the castle, but was soon forced to surrender.

The Muslim chroniclers, on the subject of this battle, have absurdly exaggerated the numbers of the troops on either side, that of the Christian dead and that of the prisoners taken in the castle. At all events, the army of Alfonso VII suffered heavy losses and experienced such a severe blow that, in the years following, despite the aid of the King of Aragon, it did not dare to risk a further engagement with Yaʿḳūb when the latter penetrated into its territory. The battle of Alarcos took place under the most favourable conditions for the Almohads. Alfonso VIII was at war with Leo and Navarre. Accustomed to easy and fruitful raids into Andalusia, where his troops did not meet with serious resistance, he completely underestimated the strength of the Muslim forces and the strategic ability of Yaʿḳūb al-Manṣūr.

ARAKAN, The most westerly Division of Lower Burma, lying between the Arakan Yoma range and the Bay of Bengal. Until 1199/1784, Arakan was an independent kingdom, and thereafter formed part of Burma, (under British administration from 1241/1826). From the 9th/14th to the 13th/18th century the history of Arakan was closely linked with that of Muslim Bengal.

From the 3rd/10th century Arakan was Buddhist, but in 809/1406 King Narameikhla, defeated by the Burmese, took refuge with the Muslim ruler of Bengal. He was restored to his throne, in 833/1430, by troops of the Bengal sultan, whose tributary he became. (For the identity of this sultan see Phayre, 76-7; Collis, 34-52; *History of Bengal* ii, 120-29).

If Narameikhla's connection with Bengal had been that of a tributary, that of his nephew, Basawpyu, was a conqueror's, for he took the important port of Čittagong. Lost about 918/1512 to the Tippera *rādjā*, recaptured by King Minyaza, and then in the hands of the Ḥusayn Shāhīs from 923/1517 until 946/1539, Čittagong was absorbed into the Arakan kingdom from the time of King Minbin until that of King Sandathudamma.

The naval forces of Arakan based on Čittagong, working with those of Portuguese freebooters settled in the head of the Bay, now dominated the riverine tracts of Bengal. The Noakhali and Backergunge districts were swept for plunder and slaves, (see *Travels of Father Manrique*, ed. C. E. Luard for the large numbers involved), and, indeed, for some years they were virtually Arakanese possessions. In 1034/1625 even Dhākā, the Mughal provincial capital was sacked.

In 1070/1660, Shāh Shudjāʿ, defeated in Bengal by the forces of his brother, the emperor Awrangzīb, sailed with an Arakanese flottilla which had operated in his support, and sought asylum with King Sandathudamma at Mrohaung. The Mughals offered the King large sums for his extradition, while Shudjāʿ, denied shipping in which to leave, intrigued with the many Muslims in Arakan. On 6 Djumādā II 1071/7 Feb 1661 Arakanese troops surrounded his house, and the Prince was probably killed in the struggle which followed. (See G. E. Harvey, *Jour. Burma Research Soc.* 1922/ii, 107-15).

Awrangzīb's viceroy, Shāyista Khān, avenged the death and curbed Arakanese raids by destroying two Arakanese fleets and taking Čittagong in 1076/1666. (The Portuguese had been won over the previous year, and the Mughals were accompanied by Kamāl, son of Prince Mangat Rai, the governor of Čittagong who had fled to Dhākā in 1048/1638).

This ended the Arakanese ascendency in Eastern Bengal, though slave raiding continued far into the 12th/18th century. Moreover, in 1103/1692 Muslim soldiers of fortune, combining with the many captive Bengalis, rose in the capital and for twenty years had the mastery in Arakan. The Bengali Muslim poets Dawlat Ḳāḍī and Sayyid al-Awwal, who wrote at the courts of Kings Thirithudamma and Sandathudamma, were under the patronage of such Muslim officers and officials at the court. Descendants of these Muslim soldiers still live in the Ramri and Akyab areas, and are called Kaman (Pers. *kamān*—a bow). (Bisveswar Bhattacharya, *Bengal Past and Present* No. 65, 1927, 139-44)

The Arakanese connexion with Muslim Bengal found expression in the assumption of Muslim titles by the Buddhist kings and in the issue of coins on which appear those titles, or the *kalima*, in the Persian script.

Arakanese title	Regnal years	Muslim title	Coinage
Narameikhla	833/1430—837-8/1434		Tributary of sultan
Meng Khari	837-8/1434—863-4/1459	ʿAlī Khān	
Basawpyu	863-4/1459—887/1482	Kalima Shāh	*kalima*
Kasabadi	929-30/1523—931-2/1525	Ilyās Shāh Sulṭān	*kalima* & title
Thatasa	931/2/1525—937-8/1531	ʿAlī Shāh	*kalima* & title
Minbin	937-8/1531—960-61/1553	Zabuk Shāh	title
Minpalaung	978-9/1571—1001-02/1593	Sikandar Shāh	title
Minyazagyi	1001-02/1593—1021/1612	Salīm Shāh	title
Minhkamaung	1021/1612—1031-2/1622	Ḥusayn Shāh	title
Thirithudamma	1031-2/1622—1047-8/1638	Salīm Shāh	Persian lettering
Sandathudamma	1062-3/1652—1096-7/1685	No Muslim title or coinage	

It is clear that the Arakanese coins are modelled upon those of Bengal. Thus in Bengal the use of the *kalima* begins about the time when Narameikhla was restored by the sulṭān to the Arakan throne, and in both countries a clumsy Kūfic is used. (See Phayre, *Coins of Arakan, of Pegu, and of Burma*, in *International Numismata Orientalia*, 1882; M. S. Collis, *Jour. Burma Research Soc.* 1925/i, 34-52; J. W. Laidley, *J.A.S.B.* 1846 pl. IV no. 12; H. F. Blochman, *J.A.S.B.* 1873/i, 209-309).

Muslims in Arakan left their traces in the Sandihkan mosque at Mrohaung, and in the Buddermokan at Akyab and Sandoway—shrines of Badr al-Dīn Awliyā, whose most famous shrine is at Čittagong. He is the guardian saint of sailors of Arakan and Bengal. (See E. Forchhammer, *Monograph on Arakan Antiquities*, and Sir R. C. Temple, *Jour. Burma Research Soc.* 1925, 1-31).

(J. B. HARRISON)

ARAL, a large, slightly salty lake in west Turkistān, 46° 45′ to 43° 43′ N and 76° to 79° 27′ E, with a surface area of (1942) 66,458 sq.km.; of this 2345 sq.km. are islands. (The largest islands are the Toḳmaḳ Aṭa in front of the mouth of the Āmū Daryā, Ostrov Vozroždeniya, "Island of the Resurrection", formerly Nicholas Island, discovered in 1848, 216 sq.km.; Barsa Kelmez, "arrival without

return", 133 sq.km.; and finally Kug Aral, in the north, eastward in front of the Ḳara Tüp peninsula, 273 sq.km.) The maximum length from NE to SW is 428 km., the breadth at 45° N 284 sq.km. The average depth of the lake is 16 m., in the middle it is up to 20-25 m., in the west up to 68 m. The lake has today in the N, E and S numerous bays, and, particularly in the SE, rocky islands offshore. Only the western shore, which borders on the Üst Yurt plain partly with cliffs up to 190 m. high, has no bays. The east bank is flat and sandy.

In prehistoric times (diluvium and ice ages) the level of Lake Aral stood some 4 m. above the present waterline; hence the lake had (particularly in the bays in the NE and NW) a considerably larger extension and was besides (through the Özboy [cf. ĀMŪ DARYĀ]) connected with the Caspian Sea and through this, at the time, with the Ocean. Since the production of the present geological conditions it has no longer any outlet. (Cf. Brockhaus-Efron, *Entsiklopedičeskiy Slovar'*[1], ii, 10-12, and *Bol'shaya Sovetskaya Entsiklopediya*[2], xx, 326.) In historical times also the water-level fluctuated by several meters, and the banks altered because of this, especially in the E and NE; but there is no evidence of significant changes at this time. In fact the description of the delta of the Āmū Daryā by al-Maḳdisī, 288: two days from Mizdākhkān to the Kerder, one day and four *farsakhs* to Parategin (B(F)aratigīn) and a further day to the bank of the lake, corresponds as well with modern conditions as Ibn Ḥawkal's account (ed. Kramers, 512). He says that the place Dih-i Naw = Arabic al-Ḳarya al-Hadītha = Turkish Yeñi Kent (al-Masʿūdī: Naw Karda?), identical with the present ruins of Djankent, some 22 km. SW of the modern Kazalinsk (ill. in S. A. Tolstov, *Auf den Spuren der alt-choresmischen Kultur*, Berlin 1953, 254; further details, ibid., 266) is two days distant from the bank of the lake (both 10th century accounts, Barthold, *Turkestan*, 178). In the 19th-20th centuries the level fell and rose alternately: 1860-80 it fell, then the waterline rose till 1915 by 2 m; within the period 1874 to 1931 it fluctuated by 3.1 m. Accordingly its height above sea-level is given variously as 49 m. (as an average: *Bol'shaya Sovetskaya Entsiklopediya*), 52 m. (Leimbach), and as its highest point in 1931: as 54 m. This changes also correspondingly the estimation of its depth. The lake, whose salt content (1.03-1.08%) is considerably lower than that of the Ocean, scarcely ever freezes up completely. Mostly only the bays in the north turn solid, or the whole northern part (as far as the Barsa Kelmez island). To this northern part (some 5500 sq.km.) the Ḳazakhs have given the special name Kičik Teñiz ("small sea"); so the main southern part is called Ulu Teñiz ("great sea").

The Āmū Daryā ([*q.v.*] concerning the possible change of its course) and the Sīr Daryā run into the Aral Sea. Of the Sīr Daryā al-ʿUmarī (1301-48) claims in his *Masālik al-Abṣār* (reproduced by W. von Tiesenhausen, *Materialy otnosyashčiesya k istorii Zolotoy Ordy*, i, 1884, 215, transl., 237), following the account of the merchant Badr al-Dīn al-Rūmī, that it changed its direction three travelling-days below Djand, and Ḥāfiẓ-i Abrū (1424-5), who disputes the existence of the Aral Sea, makes it join the Āmū Daryā. Finally in the *Bābur-nāma* the great conqueror of India (d. 1530) reports that the Sīr Daryā subsides into the sands in the west. One should not attach much weight to these accounts, of which that of Ḥāfiẓ-i Abrū may be regarded as legendary and that of al-ʿUmarī conveys nothing conclusive; Abu 'l-Ghāzī too knows nothing of the Sīr Daryā at one time not reaching the Aral Sea [cf. also SĪR DARYA].

It is uncertain whether the Aral Sea was known to classical antiquity. A. Hermann does not refer the reports about the Ὀξειανὴ λίμνη (palus Oxiana) to the Aral Sea; on the other hand he sees in the palus Oxia of Ammianus Marcellinus, xxiii, 6, 59 the Aral Sea (Pauly-Wissowa, xviii/2, 1942, 2004-5). Also the quite general accounts of the Chinese and the λίμνη of the Byzantine ambassador Zemarchos, 568 A.D. (Menander Protector, *Corp. Script. Hist. Byz.*, xviii, 238 f.; C. Müller, *Fragm. Hist. Graec.*, iv, 229) cannot be interpreted with any certainty.

In Islamic times Ibn Rusta, 92, is the first to describe the lake, without naming it. He gives its circumference as 80 *farsakhs*; al-Iṣṭakhrī, 304, makes it 100, the *Ḥudūd al-ʿĀlam*, 53, 300 *farsakhs*. Whether the earlier report in Ibn Khurradādhbih, 173, about the lake of Kerder (for this form instead of Kurdar cf. A. Zeki Velidî Togan in *Türkiyat Mecmuasî*, ii, 340) can be referred to the Aral Sea, is questionable. At that time the Oghuz (Ghuzz) and the Pečeneg nomadised round the lake, except on the southern bank (Khwārizm).

The Aral Sea was called by al-Iṣṭakhrī, the *Ḥudūd*, and the later geographers, Buḥayrat Khwārizm and rightly described as a closed salty lake, which lay to the right on the journey from Gurgandj (Old Urgandj) to the Pečeneg (so Gardīzī, reproduced in W. Barthold, *Otčet o komandirovkě v Srednyuyu Aziyu*, 1897, 95) and so had no connexion with the Sarī Ḳamīsh [see ĀMŪ DARYĀ]. On the other hand al-Masʿūdī (*Tanbīh*, 65; in more general terms also in *Murūdj*. i, 211) says that the "Lake of Djurdjāniyya" is connected with the Caspian Sea. Djurdjānī (d. 861/1476-7), following the *Djihān-nāma* (from the beginning of the 13th century), calls it also "Lake of Djand" after the city on the lower reaches of the Sīr Daryā. Finally, Ḥāfiẓ-i Abrū claims (in 820/1417) that the lake has vanished (and furnishes thus new proof of the fact that one must by no means blindly trust isolated accounts by Islamic geographers of the Middle Ages).

Between the 13th and 16th century no report about the Aral Sea has been handed down. Abu 'l-Ghāzī Bahādur Khān speaks in the *Shadjarat al-Atrāk* (Desmaisons), 338, for the first time of Aral ("island") as the place where the Āmū Daryā runs into the lake. After this "island" (which in the 18th century formed a separate state with the capital Ḳungrāt [*q.v.*] and was not re-united with Khīwa until the reign of Muḥammad Raḥīm Khān, 1806-26) the lake later received the name of Aral Teñizi, "Aral Sea", among the Ḳazaḳs. Following this the Russians call it Aral'skoe More, "Aral Sea" (first occurrence in 1697). Previously the Russian work *Kniga bol'shogo čerteža* (finished in 1626) called it Sinee More, "Blue Sea"—it does in fact have a deep blue colour. This name appeared in 1697 also on the Dutch map in Witsen, *Noord- en Oost-Tartarye*[1], 1687, while J. N. de l'Isle, in 1723, uses the modern name (Barthold, *Aral*, 77 f.).

The Russians erected first in 1847 a fortress Raīmskoe (the name probably derives from Raḥīm) on the right bank of the lower Sīr Darya, 60-65 km. from its mouth. Already from 1819 several expeditions had more closely explored the lake and furnished descriptions (1819 N. N. Murav'ëv; 1820-1 A. F. Negri and A. K. Baron Meyendorff; 1825-6 F. W. R. Berg; 1833-5 G. von Helmersen; 1839 V. A. Count

Perovskiy; 1840 M. M. Žemčužnikov; 1840-1 Antov; 1841 I. P. Blaramberg and D. I. Romanov; 1842-3 Danilevskiy; 1843 Schulz and Lemm; then in 1848 A. I. Butakov and A. I. Maksheyev). Between 1853 and 1883 the Russians kept a flotilla on the Aral Sea, which was stationed in the beginning in Aral'sk, then in Kazalinsk (on the lower Sīr Daryā). It was disbanded after the Aral Sea had become a Russian inland lake with the conquest of the Khānate of Khīwa in 1873. Since 1906 the lake is reached by the railway line Orenburg-Tashkent at the NE corner near Aral'sk. Otherwise the lake is still to-day situated inconveniently for traffic.—During the civil war of 1918-21 a flotilla was formed again on the Aral Sea. Since the reorganisation of territories in 1924 and 1936 the southern part of the lake belongs to the autonomous republic of Ḳarakalpakia in the framework of the Uzbek SSR, the northern part to Ḳazaḳistān. The lake is of importance for the surrounding population and altogether for the USSR principally because of its fishing industry.

ARAR [see HARAR].

ARARAT [see DJABAL AL-ḤĀRITH].

ARAS [see AL-RASS].

ʿARBĀN, site of ruins in Mesopotamia, on the Western bank of the Khābūr, to the South of the Djabal ʿAbd al-ʿAzīz, situated under 36° 10′ N. Lat. and 40° 50′ E. Long. (Greenw.). The remains of the old town are hidden under several hills, after one of which the site is also called Tell ʿAdjāba. It was here that H. A. Layard found several winged bulls with human heads, products of the genuinely Mesopotamian civilization which is closely related to that of ancient Babylonia. ʿArbān is probably identical with the Gar (Sha)-dikanna of the cuneiform inscriptions. During the later Roman period the town, then called Arabana, possessed considerable military importance as the principal station on the line of frontier against the Parthians. In the Arab period ʿArbān played an important part as the centre of the Khābūr district and as place of storage for the cotton cultivated in the Khābūr valley. Geographers (cf. e.g. Yāḳūt s.v. ʿArabān) and historians refer to it frequently as a flourishing town. The date of its destruction is unknown; possibly it took place during the Mongol invasion under Timur.

Layard, *Niniveh und Babylon* (German transl. by Zenker), 208 ff.; M. von Oppenheim, *Vom Mittelmeer zum persischen Golf* (Berlin 1900) ii, 19-21; id., in *Z G Erdkunde* xxxvi, (1901), 69 ff.; Streck, in the *Zeitschr. f. Assyriologie* xviii, 190; Le Strange, 97. (M. STRECK)

ARBŪNA, the name by which the Arab historians designated the town of Narbonne. Reached by the early Muslim expeditions, it was taken in 96/715 under ʿAbd al-ʿAzīz b. Mūsā b. Nuṣayr, was probably then lost or abandoned, and was retaken in 100/719 by al-Samḥ b. Mālik al-Khawlānī. In 116/734, two years after the battle of Poitiers [see BALĀṬ AL-SHUHADĀʾ], the Duke of Provence concluded a treaty with the governor of Narbonne, Yūsuf b. ʿAbd al-Raḥmān, whereby the latter was allowed to occupy a certain number of places in the valley of the Rhône, in order to protect Provence against the attempts of Charles Martel and to procure a new invasion route to the north; Charles Martel reacted at once, took Avignon in 119/737 and invested Narbonne, but without success. It was not until 142/759 that the town, after a long siege, was finally taken from the Muslims by Pepin the Short. In 177/793, ʿAbd al-Malik b. Mughīth advanced as far as Narbonne, set fire to the outskirts, defeated the Duke of Toulouse not far from the city, and withdrew with considerable booty; another expedition, which was unsuccessful, took place in 226/840. Narbonne and its region still maintained relations with the Umayyad court, Jewish merchants being particularly active in this respect.

Bibliography: E. Lévi-Provençal, *Hist. Esp. Mus.*, i (see index), gives the main facts and enumerates (8, n. 2, 30-1 and 54, n. 1) the sources and studies, amongst which should be noted: Codera, *Narbona, Gerona y Barcelona bajo la dominación musulmana* in *Est. crit. hist. ár. esp.* (viii); M. Reinaud, *Invasions des Sarrazins en France*, Paris 1836 (Eng. tr. by H. K. Sherwani in *Islamic Culture*, iv/1930, 100 ff., 251 ff., 397 ff., 588 ff., v/1931, 71 ff., 472 ff., 651 ff.); A. Molinié and H. Zotenberg, *Invasions des Sarrazins dans le Languedoc d'après les historiens musulmans* in Devic and Vaissette, *Histoire générale du Languedoc*, ii, Toulouse 1875. There is also the *Chronicum Fredegarii*, the *Chronicon Moissiacense*, the *Chronicon Fontanellensis*, and other Latin chronicles (cf. Ch. Pellat, *Les Sarrasins en Avignon*, in *En Terre d'Islam*, 1944/iv, 178-90). (ED.)

ARCHIDONA [see URDJUDHŪNA].

ARCHITECTURE.

I. EARLY MUSLIM ARCHITECTURE

(1) *The Time of the Prophet*

Arabia, at the rise of Islam, does not appear to have possessed anything worthy of the name of architecture. Only a small proportion of the population was settled, and these lived in dwellings which were scarcely more than hovels. Those who lived in mud-brick houses were called *ahl al-madar*, and the Bedawīn, from their tents of camel's-hair cloth, *ahl al-wabar*.

The sanctuary at Mecca, in the time of Muḥammad, merely consisted of a small roofless enclosure, oblong in shape, formed by four walls a little higher than a man, built of rough stones laid dry. Within this enclosure was the sacred well of Zamzam. This little sanctuary, known as the Kaʿba, lay at the bottom of a valley surrounded by the houses of Mecca, *which came close up to it*, and we are expressly told that when ʿUmar wanted to surround it by an open space, large enough to contain the Faithful, he

had to demolish many houses (al-Balādhurī, *Futūḥ*, 46).

The Kaʿba, being in a bad state, was demolished and reconstructed by the Ḳuraysh, when Muḥammad was in his thirty-fifth year, i.e. in A.D. 608. The Ḳuraysh took the wood of a ship which had been wrecked, and employed a carpenter and builder named Bāḳūm, who had been on the ship, to help them in the rebuilding. Azraḳī (Wüstenfeld's ed., *Chroniken der Stadt Mekka*, i, 110, last line—112, l. 12) says that the new Kaʿba was built with a course of stone alternating with a course of wood up to the roof, there being sixteen courses of stone and fifteen of wood. The door, which had previously being at ground level, was now placed with its sill four cubits and a span from the ground. The rooı rested on six pillars (*sawārī*, pl. of *sāriya*) arranged in two rows of three each. Total height of structure-18 cubits. Azraḳī says that on the ceiling, walls and columns were pictures (*ṣuwar*) of the Prophets, trees and angels. (Cf. Creswell, in *Archaeologia*, 94, Oxford 1951, 97-102).

This curious style of architecture, of alternate courses of stone and wood, resembles the style practised in Abyssinia in early times (see Krencker, in the *Deutsche Aksum-Expedition*, ii, 168-94) and Bāḳūm is probably an abbreviation of ʿEnbāḳōm, the Abyssinian form of Habakkuk, that is to say the "carpenter and builder" employed was most probably an Abyssinian (see my *Kaʿba in A.D.* 608, in *Archaeologia*, XCIV (1951), 97-102).

When Muḥammad migrated to Madīna he built a house for himself and his family. It consisted of an enclosure about 100 cubits square of mud brick, with a portico on the south side made of palm trunks used as columns to support a roof of palm leaves and mud. Against the outer side of the east wall were built small huts (*ḥudjra*) for the Prophet's wives. All opened into the courtyard. We have the description (preserved in Ibn Saʿd, *Ṭabaḳāt*, I_2, 180) of these huts, due to a man named ʿAbd Allāh b. Yazīd who saw then just before they were demolished by order of al-Walīd: "There were four houses of mud brick, with apartments partitioned off by palm branches, and five houses made of palm branches plastered with mud and not divided into rooms. Over the doors were curtains of black hair-cloth. Each curtain measured 3 × 3 cubits. One could reach the roof with the hand".

Such was the house of the leader of the community at Madīna. Nor did Muḥammad wish to alter these conditions; he was entirely without architectural ambitions, and Ibn Saʿd records the following saying of his: "The most unprofitable thing that eateth up the wealth of a Believer is building" (*Ṭabaḳāt*, I_2, 181, ll. 7-8; also VIII, 120, l. 1). At this time Ṭāʾif was the only town in the Ḥidjāz that possessed a wall. When Madīna was attacked in 5/627 it had no wall, so Muḥammad had a ditch dug to defend it; the idea is said to have been due to a Persian slave named Salmān, and it created a great sensation for nobody had ever heard of such a thing before. The word *khandaḳ* given to it is Persian. Madīna was first surrounded by a wall in 63/682-3; (Masʿūdī, *Tanbīh*, 305, l. 4).

(2) *The Patriarchal and Umayyad Caliphates*

The men who formed the Arab armies of conquest were mainly Bedouin, but even those who came from permanent settlements, such as Mecca and Madīna, knew nothing of art or architecture. They soon found themselves in two totally different cultural environments, one of which had been under Hellenistic influence for a thousand years, the other under Persian influence for even longer.

And not only were the cultural conditions different, the material conditions were different also. Syria was a country of splendid building materials. Syrian limestone was the best of its kind, resisting weathering and taking a beautiful amber lint on exposure, and cedar wood was plentiful, for the Lebanon had not yet been deforested. So the seventh century invaders found themselves in a country of splendid buildings — churches of cut stone, some of ashlar in courses 90 cm. high, with arcades on marble columns, gable roofs of cedar wood and large surfaces decorated with coloured glass mosaics on a glistening gold background.

In the other cultural sphere they met with buildings of brick, sometimes only of mud brick, sometimes vaulted and sometimes with flat roofs of palm trunks, palm leaves and mud.

In these early days, the Muslims, when they conquered a town in Syria, usually took one of the churches and used it as a mosque, or merely *divided* one of the churches if the town had surrendered without resistance. At Ḥimṣ, for example, they took a fourth part of the Church of St. John. How was a church converted into a mosque? One can easily guess. In Syria the *ḳibla* (direction of Mecca) is due south, whereas churches are turned towards the east. Under these circumstances it was only necessary to close the western entrance (or three entrances), pierce new entrances in the north wall and pray across the aisles. That this is exactly what happened can be verified in the Great Mosque of Ḥamā where the west front of the *Kanīsat al-ʿUẓmā* (Great Church) which was converted into a mosque in 15/636-7, now forms the west end of the sanctuary. Its three western doors have been converted into windows and it is now entered from the north.

At Jerusalem they made use of the remains of the basilical hall of Herod, ruined by the army of Titus, which ran along the south side of the Temple Enclosure. This primitive mosque was seen by Arculf about A.D. 670 (Geyer, *Itinera Hierosolymitana*, i, 145). In Persia, at Persepolis and Ḳazwīn, they appear to have taken *apadānas*, or hypostile audience-halls of the Persian kings, with flat roofs resting on columns with double bull-headed capitals.

But the situation was different in ʿIrāḳ, for here the Arabs founded new towns (which they did not do in Syria) so pre-existing buildings could not be employed, and they had to construct some sort of place for themselves. What manner of buildings were the first mosques of the earliest towns in Islam?

The following is a list of those Umayyad Friday mosques the essential features of which are known from literary or archaeological evidence:

1. — Baṣra, reconstructed in 45/665.
2. — Kūfa, reconstructed in 50/670.
3. — Damascus, construction begun in 87/706.
4. — Medina, reconstructed 88/706-91/710.
5. — al-Masdjid al-Aḳṣā, Jerusalem, built under Walīd I, 86/705-96/715.
6. — Aleppo, built under Walīd I or Sulaymān, 86/705-99/717.
7. — Fusṭāṭ, reconstructed 92/710-93/712.
8. — Ramla, completed 98/717-102/720.
9. — Buṣrā, built in 102/720-1.
10. — Ḳaṣr al-Ḥayr al-Sharḳī (identified by Sauvaget as Ruṣāfa, the residence of Hishām) built in 110/728.

11. — Ḥarrān, built in 126/744-133/750.
12. — Ḥamāt, reconstructed, date uncertain.
13. — Darʿa, date uncertain (?).

At Baṣra, founded about 14/635, the first mosque (according to al-Balādhurī, *Futūḥ*, 341, 342 and 346-7) was simply marked out (*ikhtaṭṭa*) and the people prayed there without any building. According to another version, also given by al-Balādhurī (346 and 350), it was enclosed by a fence of reeds. At Kūfa, founded in 17/638, the first mosque was equally primitive. Its boundaries were fixed by a man who threw an arrow towards the *ḳibla*, then another towards the north, another to the west and a fourth to the east (al-Balādhurī, 275-6; al-Ṭabarī, i, 2481, ll. 12-13). A square with each side two arrow-casts in length was thus obtained. This area was not enclosed by walls but by a ditch only, and the sole architectural feature was a covered colonnade (*ẓulla*), 200 cubits long, which ran the whole length of the south side.

The columns were of marble, taken from some buildings of the Lakhmid Princes at Ḥīra, about 4 miles away. This *ẓulla* was open on all sides so that, in the words of al-Ṭabarī (i, 2494), a man praying in it could see the convent known as Dayr Hind and the gate of the town known as Bāb Djiṣr. On the *ḳibla* side and only separated from the praying place by a narrow street was built a dwelling for Saʿd the Commander-in-Chief.

The first mosque in Egypt, the Mosque of ʿAmr, built at Fusṭāṭ in the winter of 641/2, was equally primitive. It measured 50 × 30 cubits and had two doors on each side except on the *ḳibla* side. (Maḳrīzī, *Khiṭaṭ*, ii, 247). The roof was very low and probably consisted of palm trunks resting of palm-trunk columns as in Muḥammad's house at Madīna.

The first mosques to be worthy of the name of architecture were the second Great Mosques at Baṣra (45/665) and Kūfa (50/670). Regarding the latter al-Ṭabarī (i, 2492) says that Ziyād b. Abīhī summoned "Masons of the Days of Ignorance" (i.e. non-Muslims). Then a man who had been one of the builders of Khusraw, came forward and described how columns of stone from Djabal Aḥwāz should be used to carry a roof 30 cubits high. Ibn Djubayr, who saw this mosque, says (de Goeje's ed., 211) that "the *ḳibla* side has five aisles whereas the rest have two only; the aisles are supported ou on columns like masts, ... extremely high and not surmounted by arches" (Fig. 1). It is obvious that the roofing system resembled that of an *apadāna*, or Hall of Columns of the Achaemenian kings, exactly as was the case in the first Great Mosque at Baghdād.

The Dome of the Rock at Jerusalem, the oldest existing monument of Muslim architecture, was built by the Caliph ʿAbd al-Malik and completed in 72/691. It is an annular building and consists in its simplest analysis of wooden dome 20.44 m. in diameter, set on a high drum, pierced with sixteen windows and resting on four piers and twelve columns, placed in a circle and so arranged that three columns alternate with each pier. This circle of supports is placed in the centre of a large octagon averaging 20.60 m. a side, formed by eight walls $9^1/_2$ m. high (excluding the parapet which adds 2.60 m.) each pierced in their upper half by five windows (Plate III*a* and Fig. 2).

There is a door 2.60 m. wide and 4.30 high in each of the four sides which face the four cardinal points, and on these sides the central window above the door is consequently much reduced. The space between the circle and the octagon being too great to be conveniently spanned by single beams, an intermediate octagon, consisting of arches borne by eight piers and sixteen columns, so arranged that two columns alternate with each pier, has been placed between the two to provide the necessary support for the roof (Plate IV*a*). The two concentric ambulatories thus formed were of course used for the *ṭawwāf* or ceremonial circumambulation of the sacred object, the Rock.

The exterior was always panelled with marble for half its height, as it is to-day, but the upper part was originally covered with glass mosaic (*fusayfisā*) like the inner arcades. This was replaced by the present coating of fayence by Sultan Sulaymān in 959/1552. The vaults of the four entrance porches were also decorated with mosaic, but it has only been preserved in the eastern porch. The lintels of the four doorways are decorated on their under side with sheet metal, either copper or bronze, worked *en repoussé* and exhibiting a variety of designs, chiefly vine leaves, bunches of grapes and acanthus. The raised parts of the design are gilt, the background of the central part is painted black and the outer border bright green. The inner side of the outer wall is panelled with marble from top to bottom, likewise all the piers. The tie beams of the arches of the octagonal arcade are decorated beneath with a bronze sheathing like the door soffits (Plate III*b-c*), but their inner faces are treated like a Corinthian entablature. The arcades above are covered with glass mosaic on both faces and their soffits also (Plate IV*b*, V and VI). The arcades of the central circle are also decorated with glass mosaic on their outer faces, but their soffits and inner faces have been given a coating of marble at some unknown date, but before A.D. 1340. The drum above is also decorated with mosaic. The ceiling of the outer ambulatory is probably the work of Sulṭān al-Nāṣir Muḥammad in 718/1318 like the present lining of the dome. The ceilling of the inner ambulatory dates from the end of the 18th century. The original dome, until it fell in 407/1016-7, was covered with sheets of lead, over which were placed 10,210 plates of brass gilt (Ibn ʿAbd Rabbihī, *al-ʿIḳd*, iii, 367). The harmony of its proportions and the richness of its decoration make the Dome of the Rock one of the most beautiful buildings in the world.

The Great Mosque of Damascus. Al-Walīd began the construction of the Great Mosque of Damascus immediately after his accession in 86/705. A curious situation had prevailed here since the conquest. A great sanctuary of a Syrian god existed here, consisting of a *temenos*, or sacred enclosure, measuring 100 m. from N. to S. and 150 m. from E. to W., set in an outer enclosure over 300 m. square.

At each corner of the inner enclosure, which had pilastered walls nearly 13 m. high resting on a socle of at least 4 m., was a square tower, and all round the interior ran a double colonnade. There were four axial entrances and in the centre, or a little to the west of it, was the temple, its entrance facing east. In the 4th century Christianity became the state religion and Theodosius (A.D. 379-95) converted the temple into a church (Malalas, *Chronographia*, 344-5). After the Arab conquest the *temenos* was divided between Muslims and Christians. Ibn Shākir says that they both "entered by the same doorway, placed on the south side where is now the great *miḥrāb*. Then the Christians turned to the west towards their church (i.e. the converted temple), and the Muslims to the right to reach their mosque".

Where? Opposite the traditional "*miḥrāb* of the Companions of the Prophet", i.e. under that part of the interior colonnade which was to the east of the entrance. As for the corner towers, Ibn al-Faḳīh (p. 108) says: "The minarets (*mi'dhana*) which are in the Damascus Mosque were originally watch-towers in the Greek days ... when al-Walīd turned the whole area into a mosque, he left these in their old condition". Al-Mas'ūdī (*Murūdj*, iv, 90-91) says: "Then came Christianity and it became a Church; then came Islam and it became a mosque. al-Walīd built it solidly and the *sawāmi'* (the four corner towers) were not changed, they serve for the call to prayer at the present day".

This state of affairs lasted until al-Walīd, after bargaining with the Christians, demolished everything except the outer walls and the corner towers and built the present mosque. He first of all reduced the interior of the enclosure into a rectangle by building the long rooms to east and west, leaving a vestibule in front of the east and west entrances. He then built the sanctuary with three aisles running parallel to the south wall and cut through its centre by a transept about 8 m. higher. The arcades are in two tiers, the lower of large arches being 10.35 m. high, the upper, in which two small arches correspond to each one below, is nearly 5 m. high. Similar arcades form porticoes on the three sides of the court. The aisles of the sanctuary have gable roofs covered with sheets of lead, and so has the transept, but the porticoes on the three sides of the court have roofs which slope slightly inwards (Plate VII*a-b*). Over the transept was a wooden dome, very high and conspicuous.
Fig. 1. Plan of Great Mosque of Kūfa.

The decoration consisted of marble panelling (some parts of the original panelling exist next the east entrance) above which ran a golden *karma* or vine-scroll frieze, and above that was glass mosaic (*fusayfisā*) right up to the ceiling. A considerable amount has survived the three fires of 1069, 1401, and 1893, and may still be seen under the west portico, where the famous panorama of the Baradā

(the river of Damascus) is over 34 m. in length and nearly 7 m. high (Plate VIII *a*). When intact the surface of the *fusayfisā* must have been greater than in any other building in existence! There were also six marble window-grilles (Plate VIII *b*) which
Fig. 2. Dome of the Rock.

constitute the earliest geometrical designs in Islam. The Great Mosque of Damascus was rightly regarded by mediaeval Muslims as one of the Seven Wonders of the World.

Another building due to al-Walīd is the audience hall and *ḥammām*, known to-day as Ḳuṣayr ʿAmra, in Transjordan. It consists of an audience hall about 10 m. square, with two slightly pointed transverse arches supporting three tunnel-vaults (Plate IX and Fig. 3). There is a vaulted recess on the side opposite the entrance, with a small vaulted room on either side of it. A door on the east side gives access to the *ḥammām*, which consists of three small rooms covered by a tunnel vault, a cross vault and a dome. The latter was the *calidarium*, and under the floor are hypocausts exactly as in a Roman bath. But most remarkable of all are the paintings which cover the walls (Plate X), mostly scenes from daily life, a hunting scene and figures symbolising History, Poetry and Philosophy with the words in Greek above their heads. The dome of the *calidarium* was painted to represent the vault of heaven, with the Great Bear, the Little Bear, the signs of the Zodiac, etc. But most important of all was the painting of the enemies of Islam defeated by the Umayyads, with their names written above them in Greek and Arabic: Ḳayṣar (the Byzantine Emperor), Rōdorīk (the Visigothic King of Spain), Chosroes, Negus (the King of Abyssinia), and two more the names of which have been obliterated. Painting, contrary to the popular idea, is not forbidden by any passage in the Ḳurʾān, and hostility to it only took proper theological form towards the end of the 8th century A.D. (see my *Lawfulness of Painting in Early Islam*, in *Ars Islamica*, XI-XII, 159-66).

The Umayyad Caliphs were great builders of palaces. Their external fortified appearance, although built in the heart of their Empire, hundreds of miles from the nearest frontier, is to be explained by the route taken by the armies of the conquest. They passed a long series of Roman frontier forts, the *castra* of the Roman *limes*, which ran from the Gulf of ʿAḳaba to Damascus and thence to Palmyra. The most important of these (for which see Brünnow and von Domaszewski, *Die Provincia Arabia*) are:
Fig. 3. Ḳuṣayr ʿAmra, plan.

Udhruḥ	built by Trajan
Daʿdjanīyya	probably Trajanic
Ladjdjun	probably Trajanic
Bshayr	inscription of Diocletian (A.D. 284-304)
Dumayr	A.D. 162.

Some of these frontier forts were lived in by Umayyad princes. For example, Walīd II sometimes lived at Azraḳ, which was rebuilt in 634/1236-7, but which in his day (A.D. 744) was a Roman fort of Diocletian and Maximian. When he was attacked by conspirators he fled north to the Ḳaṣr al-Bakhrāʾ, which is the Arabic name of a Roman fort about 15 miles S.-W. of Palmyra.

Now the result of this was twofold. It not only gave the Umayyad Caliphs the necessary knowledge when they wanted to built fortresses on the Byzantine frontier, e.g. Massīsa in 83-4/702-3, al-Muthaḳḳab, Kaṭarghāsh, Mūra, Būḳā and Baghras, all in 105/724 (see al-Balādhurī, 165-7), but it affected the design of their palaces. Here is a list of them:

1. — al-Walīd's palace at Minyā on Lake Tiberias, A.D. 705/15.
2. — al-Walīd's *ḳaṣr* at Djabal Seis, A.D. 705/15.
3. — Hishām's palace of Ḳaṣr al-Ḥayr al-Gharbī, *c.* 727.
4. — Hishām's palace of Ḳaṣr al-Ḥayr al-Sharḳī, 110/729.
5. — Hishām's palace at Khirbat al-Mafdjar, 4 miles N. of Jericho.
6. — Walīd II's palace of Mshattā, *c.* A.D. 744.
7. — Walīd II's palace of Ḳaṣr al-Ṭūba, *c.* A.D. 744.

All these palaces, although built in the midst of Muslim territory, look externally like forts, for they are stone enclosures with round flanking towers. Nos. 1-5 are approximately 70 m. square externally, No. 7 is twice as large, 70 × 140 m. and No. 6 is four times as large, i.e. 145 m. square. Why this fortified appearance when it was not necessary? It would seem that having been in the habit of occupying forts belonging to the Roman *limes*, they came to look upon a rectangular enclosure flanked by towers as a necessary feature of a princely residence.

When Hishām about 727 A.D. built his palace, known to-day as Ḳaṣr al-Ḥayr al-Gharbī, he chose a site on a small mound about 40 miles to the west of Palmyra, where there was a monastery built by the Ghassānid Arethas (= al-Ḥārith) under Justinian in A.D. 559. He incorporated the tower of this monastery, which had a door protected by a mâchicoulis (of one opening only) high above it, so that it formed a tall watch-tower at the north-west corner of his 70 m. square *ḳaṣr*. This is how the mâchicoulis first passed into Muslim architecture.

Ḳaṣr al-Ḥayr al-Gharbī has been admirably excavated by M. Daniel Schlumberger, (see *Syria*, XX, 195-238 and 324-73). The entrance was found to consist of two great stone door-posts and a lintel decorated with vine ornament, which must have been taken from Palmyra. He has also brought to light masses of stucco ornament, wall panelling, window grilles and frames, and human figures, part of which has been skilfully assembled and put together in the Museum at Damascus. Two large fresco paintings were also discovered, one representing the Caliph on horseback hunting with bow and arrow and using stirrups, which is almost the oldest known record of their use.

Two years later Hishām built another palace, known to-day as Ḳaṣr al-Ḥayr al-Sharḳī, together with a small walled city provided with a mosque of three aisles, cut through the centre by a transept of greater height, exactly as at Damascus (Plate XII*a* and Fig. 4).

As for the Palace Enclosure it averages nearly 67 m. a side internally and 71 m. externally with walls of stone flanked by 12 round towers, of which the total height must have been at least 14 m. There is only one entrance in the centre of the west side; it is defended by a mâchicoulis as are the four gates of the *Madīna* alongside. The walls are decorated with a string-course of brickwork at the level of the rampart walk and each tower was crowned by a room with a brick dome. The tops of the pair which flank the entrance are decorated with arched panels of stucco, acanthus leaves and also apparently vine leaves and grapes (Plate XI). The interior consisted of an open court, which must have measured about 37 × 45 m., surrounded by two tiers of rooms, the lower tunnel vaulted, the upper with flat wooden ceilings. It awaits excavation.

Another palace of Hishām at Khirbat al-Mafdjar, 4 miles north of Jericho, has also been excavated in recent years. It consists of a palace enclosure about 70 m. square with its own mosque, a large forecourt, a tank with a little open octagonal pavilion in the centre, another mosque with aisles (two) on the *ḳibla* side only, and to north a very large *ḥammām*, consisting of nine domed bays arranged three by three, with a small annexe on the north side containing the most beautiful floor mosaic ever discovered in Palestine. It consists of a fine tree executed in three shades of green, with two gazelles grazing on the left and a lion pouncing on another on the right. In Muslim palaces the staircases are generally narrow and inconspicuously tucked away, but here there are fine broad staircases which led to the upper floor. Here again masses of stucco ornament have been recovered and put together in the Palestine Museum at Jerusalem. It consists of panels decorated with geometrical ornament, window grilles, human heads and dancing girls (see the *Quarterly of the Department of Antiquities*, V, VI, VIII and X-XII).

These three palaces each had an enclosure which is Ḳaṣr al-Ḥayr al-Sharḳī is about 1½ km. wide and 7 km. long, with walls of stone to the height of a metre and a half and above that at least 2 m. more of mud brick. There are half-round buttresses at intervals, first on one side of the wall and then on the other alternately. Traces of a similar wall exist at Mafdjar. Such an enclosure was called a *ḥayr*, and here is the proof. Yaʿḳūbī (*Buldān*, p. 263) describing the foundation of Sāmarrā by the Caliph al-Muʿtaṣim in A.D. 836 says: "And wherever these streets of al-Ḥayr touched land granted to other people, he would order the wall [of al-Ḥayr] to be built farther back. Behind the wall were wild animals, gazelles, wild asses, deer, hares and ostriches, kept in by an enclosing wall in a fine broad open tract". And Miskawayhī (Margoliouth's text, i, 159) under the year 315/925-6, says: "This year there was a rising of the disbanded cavalry, who went out to the Oratory, plundered the palace called al-Thurayyā (the palace of the Pleiades at Baghdād), and *slaughtered the game in the Ḥayr*".

Mshattā, about 4 miles from Zīza and about 20 miles south of ʿAmmān, is the largest of all the Umayyad palaces, measuring about 145 m. each way, but it was never finished. The outer walls with their half round towers are of well dressed limestone, but all the walls of the interior are of red bricks resting of three or four courses of cut stone. The bricks are of two sizes, 21 cm. square and 28 cm. sq., and 6½ cm. thick.
Fig. 4. Ḳaṣr al-Ḥayr al-Sharḳī, mosque.

The entrance is in the centre of the south side. Internally it is divided into three tracts running from north to south, the central one being 57 m. in width and the lateral ones about 42 m. The buildings intended to occupy the lateral tracts have never been begun, and even those projected for the central tract have never been finished. Of the latter, however, the group at the north end must have been very nearly finished, and the plan of the group at the south end can be clearly seen, for a great stone grid is visible formed by the stone foundation course (Fig. 5).

The part immediately behind the gateway was obviously intended to be an entrance hall 17.40 m. long, leading into a court 27.14 m. broad and 23 m. deep; these two elements were flanked by other rooms and courts. This group may be called the Gateway Block. Beyond the court just mentioned is an enormous central court, just over 57 m. sq. on the north side of which is a triple-arched entrance (the

arches have fallen) leading into a great basilical hall, 21.60 m. deep, ending in a triple apse (Plate XII *b-c* and Fig. 6). This basilical hall, which presumably was the Throne Room, is flanked by two symmetrical complexes composed as follows: on either side of an oblong court, placed perpendicular to the basilical hall, is another court at right angles to it, flanked on each side by a pair of vaulted chambers. These rooms were intended to have a marble panelling, for great block of a fine green stone (looking like marble, but really a calc-schist), some already sawn into slabs 3 cm. thick, were once to be seen lying in the east side tract.

Fig. 5. Mshattā, plan.

But Mshattā really owes its fame to the marvellous carving on its south façade, or rather on the two half-octagonal towers that flank the entrance and the first length of curtain wall to right (13.20 m.) and left (13.50 m.). It consists of a plain socle 47 cm. high, a richly decorated base 1.25 m. in height, a decorated wall-face 2.95 m. in height and an entablature, 90.4 cm. The base consists of a torus moulding with a hollow moulding above and below. The torus moulding is decorated with a network of interlacing vine tendrils which form loops, each occupied by a vine leaf and a bunch of grapes. The wall-surface is divided into twenty upright and twenty inverted triangles by a cornice-like moulding, which runs up and down zig-zag fashion from the socle to the entablature. The triangles are about 2.85 m. in height and 2.50 in width at the base. Exactly in the centre of each is a rosette, those in the upright triangles being lobed hexagons, those in the inverted triangles straight-sided octagons. The kernels of all the rosettes vary. The surface of the upright triangles is decorated with extraordinary richness in high relief, vine tendrils, bunches of grapes, birds which pluck at the fruit, etc. In the lower part of some of the triangles is a chalice, out of which two animals drink (Plate XIII). On the right hand side of the façade there are neither animals nor birds and the ornament is on a much smaller scale, in fact the differences are sufficient to justify the suggestion that it was executed by a different school of craftsmen.

Summary: The monuments of Umayyad architecture are really splendid structures of cut stone with arcades resting on marble columns and richly decorated internally with marble panelling and

mosaic (*fusayfisā*). The mosques are nearly always covered with a gable roof (*djamalūn*). The minarets were tall square towers, derived from the church towers of pre-Muslim Syria, and the triple-aisled sanctuaries were due to the same influence. Umayyad monuments exhibit a mixture of influences, Syria occupying the first place and Persia the second, and Egyptian influence is definitely demonstrable at the end of this period in Mshattā. Umayyad architecture employed the following devices: the semi-circular, the horse-shoe and the pointed arch, flat arches or lintels with a semi-circular relieving arch above, joggled voussoirs, tunnel-vaults in stone and brick, wooden domes and stone domes on true spherical-triangle pendentives. The squinch does not appear to have been employed. But we know from descriptions of early authors that a type of mosque prevailed in ʿIrāḳ and Persia quite different from the Syrian type. It was square in plan, had walls of brick (sometimes of mud brick) and its flat timber roof rested directly on the columns without the intermediary of arches. Here we have a direct link between the ancient Persian audience-hall (*apadāna*) and the flat-roofed portico (*tālār*) of more recent Persian palaces.

(3) *The ʿAbbāsid Caliphate*

The effect of the foundation of Baghdād was as far reaching as the transfer of the capital cf the Roman Empire from Rome to Constantinople. The whole centre of gravity of the Empire was changed; hitherto its capital had been in territory which since the time of Alexander had been in the sphere of Hellenistic culture. The transfer resulted in the weakening of this influence and its replacement by the cultural influences of Sāsānian Persia, to which sphere ʿIrāḳ belonged. This made itself felt in the design of the new city, for which we possess such detailed accounts in al-Yaʿḳūbī and al-Khaṭīb that its form can be reconstructed, although no trace of the Baghdād of al-Manṣūr has survived. The foundation took place in A.D. 762 and everything was finished in 766.

It was a circular city with an outer and inner wall, and a *faṣīl* or *intervallum*, about 35.40 m. wide between. The outer wall was about 14 m. high and 4 m. thick, the inner about 17 m. high including the crenellations and about 5 m. thick; the towers, of which there were 28 between each gate, rose about $2^1/_2$ m. higher. There were four equidistant gateways. al-Khaṭīb says that "each was composed of two gateways, one in front of the other, separated by a *dihlīz* and a *raḥaba* opening on the *faṣīl* between the two walls. When one entered by the Khurāsān Gate one first turned to the left in an oblong passage (*dihlīz āzādj*) with a vault of brick, 20 cubits wide and 30 long, *the entrance of which was in the width and the exit in the length* and passed out into a *raḥaba* ... 40 cubits wide leading to the second gateway. At the far end of this court was the second gateway which was that of the city ... The four gates were constructed on the same model". It is clear from the words of al-Khaṭīb—"when one entered by the Khurāsān Gate, one first turned to the left, etc." that the outer gateway was a bent entrance. Al-Khaṭīb continues: "The second or inner gate, which was that the city ... gave access to an oblong corridor, vaulted with bricks and gypsum (*djiṣṣ*) 20 cubits long and 12 wide. Above the vault was an audience hall ... covered by a gigantic dome 50 cubits high" (Fig. 7).

Fig. 6. Mshattā, triple-arched entrance.

The Muslim historians insist that the circular form of the city was a feature that had never been known before, but such is far from being the case, for many earlier examples are known, e.g. the Hittite city of Sinjerli, Abra, Agbatana, Parthian Ctesiphon and Takht-i Sulaymān, Dārābdjird in Fārs and also Fīrūzābād.

A mosque was built in the centre of the new city. According to al-Khaṭīb it was 200 cubits (roughly 100 m.) square and had a roof supported by wooden columns. There were 17 ailes from right to left, and the side aisles were two deep, the sanctuary was probably five deep as at Kūfa and Wāsiṭ. It was rebuilt by Hārūn al-Rashīd with burnt bricks and teak-wood, in 193/808-9.

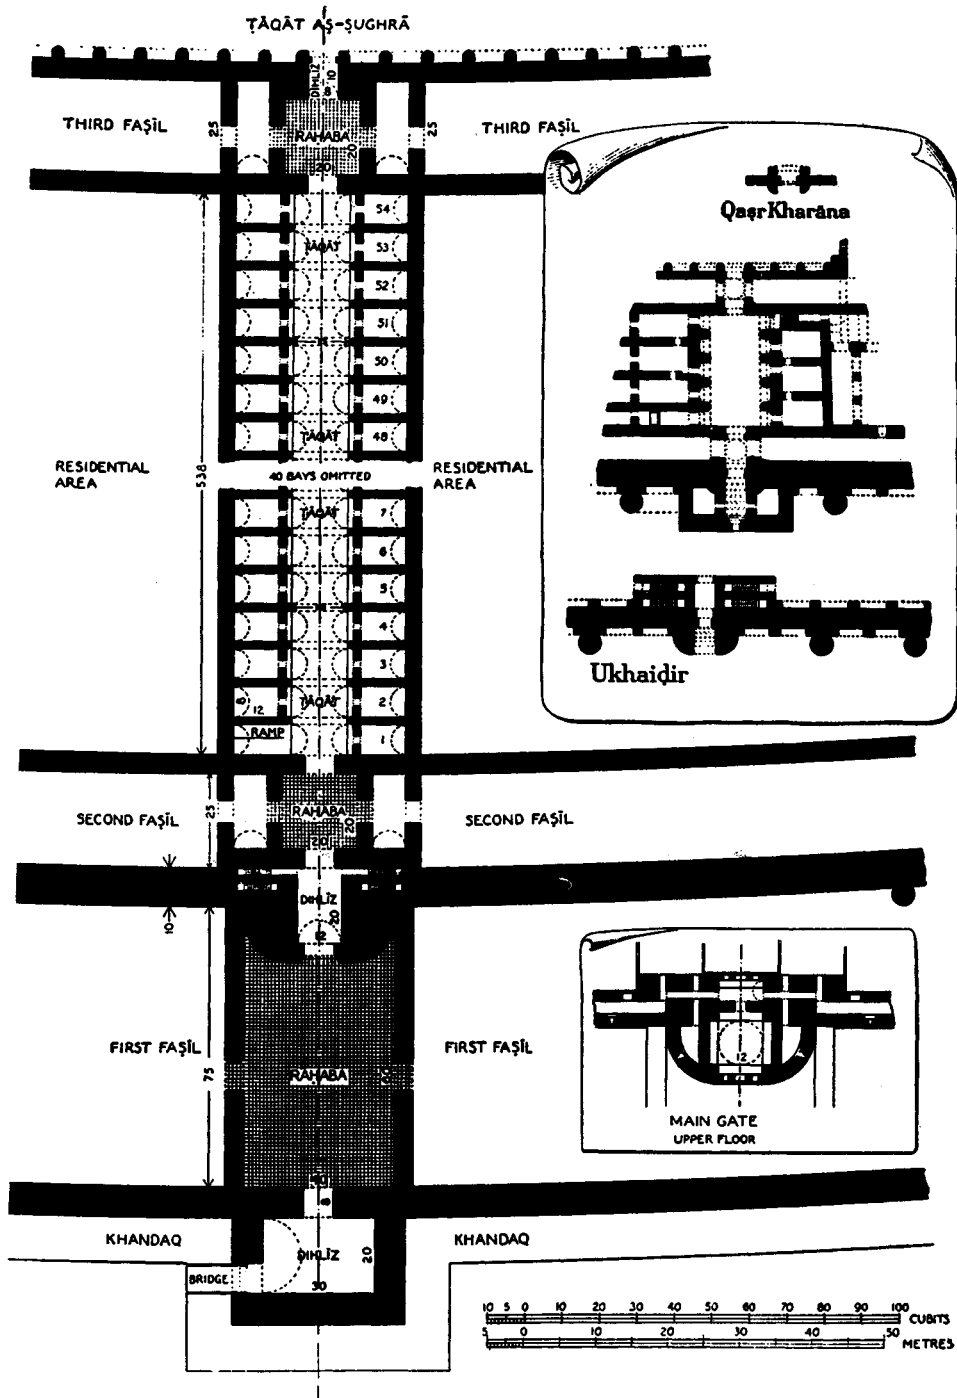
The palace of al-Manṣūr measured 400 cubits each way. It was on the *ḳibla* side of the mosque and in contact (*mulāṣiḳ*) with it, as was the practice in early Islam, e.g. at Damascus about 30 A.H., at Baṣra in 45 A.H., at Ḳayrawān in 50 A.H., at Wāsiṭ in 83 or 84 A.H., at Merv in 132-8 A.H., and (if we count


Fig. 7. Baghdād, ṭāḳāt

the Dār al-Imāra as a palace) in the mosque of Ibn Ṭūlūn at Cairo, in 265 A.H.

Palace and Mosque have long since disappeared but fortunately a fairly well preserved ʿAbbāsid palace of this period has survived, viz: Ukhayḍir, on the Wādī ʿUbayd about 30 miles west of Karbalāʾ.

It consists of a fortified rectangular enclosure measuring 175 × 169 m. with a gateway in the centre of each side. There are four round corner towers and ten intermediate half-round towers, not counting the peculiar gateway towers, on each side (Plate XIV *a-b*). Within the great enclosure and in contact with its northern face, is the Palace proper, measuring 111 m. from north to south and 82 from east to west. It also is provided with half round towers. Its main entrance forms one with the northern entrance of the main enclosure. The masonry is composed of roughly shaped slabs of limestone set in gypsum mortar. The walls with the parapet must have been about 19 m. high. The palace proper consists of a great court of honour, with a *līwān* for the Hall of Public Audience and a square room behind it, presumably a hall of private audience. On either side are other vaulted rooms. A great vaulted corridor about 3½ m. wide runs completely round this group of rooms and the court of honour, and on the east and west sides of it are four isolated and self-contained sets of vaulted chambers, each with its own courtyard, which I regard as four *bayt*s for the four lawful wives of the Muslim prince for whom it was built, as at Mshattā (Fig. 8).

In these *bayt*s the side next the great corridor is bounded by a blind arcade of five arches, the central arch being occupied by the door. On the far side was a portico 2.80 m. deep of five arches resting on four round piers, and covered by a tunnel vault. The north and south sides are occupied by a triple-arched façade. These arches form a portico, behind which are three parallel tunnel-vaulted rooms. A passage leads from the courtyard to a room 17.60 m. long and 3½ wide, placed transversely behind the three tunnel-vaulted rooms. It is covered by two lengths of tunnel-vault with a space open to the sky between. It must have been intended to contain a fire, for the vault next the outer wall is pierced by a pair of terra-cotta pipes, so it must have been a kitchen.

The palace was also provided with a mosque 24.20 m. wide and 15.15 deep, with a portico one aisle deep on the east, south and west sides, but without one on the north.

Ukhayḍir was probably begun by ʿĪsā b. Mūsā, uncle of the Caliph al-Manṣūr, in 161/778.

At about this time the Aḳṣā Mosque at Jerusalem was partly rebuilt by the Caliph al-Mahdī. Recent research enables us to affirm that it then consisted of a central aisle 11.50 wide with seven aisles to right and seven to left about 6.25 m. in width, all covered by gable roofs and all perpendicular to the *ḳibla* wall. There was a great wooden dome at the end of the central aisle. On the north side was a large central door with seven smaller ones to right and left, and ten "unornamented" ones on the east side (Fig. 9).

Fig. 9. The Aḳṣā Mosque in A.D. 780.

There can be no doubt that this mosque had a great influence on the Great Mosque of Cordova built by ʿAbd al-Raḥmān I in 170/786-7. It was added to on three occasions but this earliest part still exists; as at Jerusalem the aisles, of which there are eleven, run perpendicular to the back wall, they are all covered by parallel gable roofs, and the central one is wider than the rest. The influence of Syria in Spain at this time is not surprising for Spain was full of Syrian refugees. The arcades each consist of twelve arches with twelve more above, an ingenious device whereby a height of ceiling of about 9.80 m. was obtained with columns which, with their capitals and bases, only measure 3.80 m. (Plate XIV *c* and XV *a*).

Another building of this period, of great importance for the history of architecture, is the Cistern of Ramla in Palestine, for it consists of a subterranean excavation 8 m. deep divided into six aisles by five arcades of four arches each, all of which are pointed and appear to be struck from two centres, varying from one seventh to one fifth of the span apart (Plate XV *b* and Fig. 10). And there can be

no doubt about the date for on the plaster of the vault is a Kūfic inscription of Dhu 'l-Ḥidjdja 172/May 789. It is therefore centuries earlier than the earliest pointed arches in Europe.

In 212/827 ʿAbd Allāh b. Ṭāhir, the Governor of Egypt, ordered the Mosque of ʿAmr at Fusṭāṭ to be doubled in size by the addition to the west of its exact area in the same shape. Maḳrīzī (*Khiṭaṭ*, ii, 253) says that the part added included the great *miḥrāb* and all that is to the west of it. The number of doors was now thirteen: five on the N.-E., three on the N.-W., four on the S.-W., and one for the *khaṭīb* on the *ḳibla* side. This is the last recorded extention of the mosque, and its significance is of far reaching importance for it follows that no part of the present structure lying to the right of a line drawn through its centre can possibly be older than 212 A.H. The Mosque then measured internally (as it does to-day) 109 m. on the S.-E. side, 105.28 on the N.-W., 120.55 on the N.-E. and 117.28 on the S.W. As a result of a number of trial trenches made

Fig. 10. Ramla, cistern, plan.

between 1926 and 1933, we now know from the foundations that there were 7 arcades running from right to left on the *ḳibla* side and the same number on the side opposite, and four on the S.-W. side. On the N.-E. side the arcades ran perpendicular to the wall. The outer walls were about 10.50 m. high without their cresting, about which we know nothing. There were seventy-eight windows of very interesting construction. The span was about 2.70 m. There were engaged colonnettes at the inner and outer corners and a pair of dwarf marble columns placed on either side in the opening. A transverse beam resting on the latter reduced the span to about 1.90 m. The springing of the arch began about 1.40 m. above the sill, and the rise was about 1.40. Those arches which have survived are considerably stilted and very slightly pointed, and the broken edge of a stucco grille is visible along their intrados. A beam ran across the opening at the springing of the arch, and nailed to its inner side was a strip of carved woodwork which continued along the face of the wall. The decoration consists of a flowing acanthus frieze in which four-leaved whorls alternate with five-lobed leaves (Fig. 11). This is of fundamental importance, for it is derived from the Hellenistic art of Syria and it shows that the ʿAbbāsid art of ʿIrāḳ, which we find fifty years later in the Mosque of Ibn Ṭūlūn, had not yet reached Egypt.

The Great Mosque of Ḳayrawān is another famous mosque, founded in the early days of Islam, of which no part (excepting the minaret only) is earlier than the IXth century A.D. The oldest part of the present mosque dates from the rebuilding carried out by the Aghlabid Ziyādat Allāh in 221/836.

Fig. 11. Mosque of ʿAmr, bay.

The measurements of the mosque are as follows: N. 65.60 m., S. 70.28, E. 121.80, W. 120.50. The sanctuary consisted of sixteen arcades of seven arches each, running perpendicular to the *ḳibla* wall, but without reaching it, for a transverse arcade runs at a distance of about 6 m. from it and it is against this arcade that the sixteen arcades abut. The side aisles are 3.30 m. in width against 5.40 for the central aisle, which must have measured 6.60 m. originally, for its width has been subsequently reduced by two arcades built in contact with the old ones, without any bond or liaison of any sort. The columnsev en have their own impost blocks instead of each pair being tied together by a common impost block, and the arches of the "lining arcade" are pointed horse-shoe arches instead of round horse-shoe arches like all the rest (Plate XVI). There is no doubt that they are the work of Ibrāhīm II b. Aḥmad, 261-89 A.H. (see below). The whole was covered by a flat roof of uniform height, even over the central aisle, for the latter was only raised during the extensive works of Ibrāhīm II. There were no *riwāḳ*s on the three sides of *ṣaḥn* until the time

of Ibrāhīm III. The outer walls were of stone, strengthened at intervals by buttresses.

This same year 221/836 was marked by an event of great importance — the foundation of Sāmarrā. The palace was built on the edge of the plateau, which is about 17 m. above the alluvial valley of the Tigris. In the valley itself is a great basin, 127 m. square, from which a great flight of steps, 60 m. broad, gently ascended to the terrace in front of the Bāb al-ʿĀmma. The latter consists of a great triple-arched façade, about 12 m. high, with three parallel tunnel-vaulted rooms behind it (Plate XVII *a*). This is the best preserved part of the whole palace; nearly everywhere else the walls either only rise a metre or two or have been exposed by excavation. Behind the Bāb al-ʿĀmma were six transverse halls, then a square court. To the north one reached the rooms of the Caliph, on the south was the *Ḥarim*. But going directly forward led to an oblong Court of Honour, with the triple entrance of the Throne Room beyond it. The latter consisted of four T-shaped halls arranged in a cruciform fashion. Each one resembled a three-aisled basilica so as to obtain light from the clerestory. Between the arms of the cross are smaller rooms with marble dados, also a mosque for the Caliph with a *miḥrāb*. Beyond this again is the Great Esplanade, a great court or garden, 180 m. wide and 350 m. deep, intersected by little canals. Beyond again was the polo-ground, and the distance from the great basin to the race-course must have been nearly 1400 m.

The decoration consisted of dados, generally of moulded stucco, except in the Throne-Room group where they are of marble slabs. The upper part of the walls in the *Ḥarim* were decorated with fresco paintings, which included living forms and foliage. All woodwork was of teak, carved and painted.

The Great Mosque of this period has not survived, as it was entirely rebuilt in 234-7 H. Before describing it we must speak of the Great Mosque of Sūsa in Tunisia built in 236/850-1.

The mosque proper, excluding its annexes, is a perfectly regular rectangle built of stone in courses about 1/2 m. high and measuring internally 49.39 m. deep and 57.16 wide. The *ṣaḥn*, which measures 41 × 22¼ m., is surrounded by low arcades of slightly horse-shoe form, resting on squat T-shaped piers. There are eleven arches to north and south and six to east and west, and the height of the façade is about 6½ m. It is perfectly plain except for a splay-face moulding, immediately above which is a fine inscription frieze in simple undecorated Kūfic, the maximum height of the characters being 28 cm. The band on which they are carved curves forward slightly to compensate for foreshortening and thus help the observer at ground level. This is the earliest known example of this treatment, which passed into Egypt with the Fāṭimids and appears in the Mosque of al-Ḥākim, 380-403/990-1013. The three *riwāḳs* vary in depth from 4.08-4.27 m. and each is covered by a tunnel-vault (Plate XVIII *a*).

The sanctuary consists of thirteen aisles formed by twelve arcades of six arches each running towards the *ḳibla* wall. Each aisle is divided into six bays by other arcades running from east to west. All these arches, which rest on squat cruciform piers, are of horse-shoe form. The first three bays going south are covered by tunnel-vaults, with one exception, the third bay in the central aisle, which is covered by a dome on an octagonal drum with slightly incurved faces.

The next three bays going south are covered by cross-vaults at a slightly higher level. Here again the third bay in the central aisle is covered by a dome on squinches. It is obvious that the mosque has been extended towards the south, that the first three bays are the original part and that the first dome marks the bay in front of the original *miḥrāb* (Plate XVIII *b*), which has been removed together with the original back wall. Before that the depth of the mosque must have been 44 m. The date of the original work is given by the great Kūfic inscription as 236/850-1.

The Great Mosque of Sāmarrā was rebuilt by Mutawakkil; the work was begun in 234/848-9 and finished in Ramaḍān 237/Feb.-March, 852. It is the largest mosque ever built, for its outer walls form an immense rectangle of kiln-baked bricks measuring roughly 240 m. deep internally by 156 m. wide (proportion approximately as 3 : 2); its area therefore is nearly 38,000 sq.m. Only the enclosing walls have been preserved; they are 2.65 m. thick, strengthened by half round towers averaging 3.60 m. in diameter with a projection of 2.15 m., and the curtain walls between them average 15 m. in length. There are four corner towers, twelve intermediate towers to east and west and eight to north and south making forty-four in all. There were sixteen rectangular doorways spanned by beams with a relieving arch above.

The towers are perfectly plain, but each curtain wall is decorated with a frieze of six recessed squares with bevelled edges; in each square is a shallow saucer about a metre in diameter and 25 cms. deep. The total height of the walls is now about 10.50. In spite of its simplicity the whole effect is truly monumental (Plate XVII *b*).

The south wall is pierced by twenty-four windows placed on the axis of the twenty-five aisles of the sanctuary, except the central one, for there was no room above the *miḥrāb*. There were two more windows on each side making 28 in all. Externally they are narrow rectangular openings, but internally they are splayed and covered by scalloped arches of five lobes resting on little engaged columns, the whole being set in a sunk rectangular frame.

Herzfeld's excavations showed that the roof rested directly on octagonal piers of brick, with marble colonnettes at the four corners, making a support 2.07 m. square. The clear height within was 10.35. *There were no arches.*

The mosque proper was surrounded by an outer enclosure, or *ziyāda*, on the east, north and west sides, and air photographs show that the great rectangle thus formed stood in a still greater enclosure measuring 376 × 444 m.

The minaret, the famous Malwiyya, stands free at a distance of 27¼ m. from the north wall of the mosque. There is a square socle, 33 m. a side and about 3 m. high, on which rests a spiral tower with a ramp about 2.30 m. wide, which winds round in an anti-clockwise direction until it has made five complete turns. The rise for each turn is 6.10 m., but as the length of each turn is less than the previous one it follows that the slope inevitably becomes steeper and steeper. At the summit of this spiral part is a cylindrical storey, decorated with eight recesses, each set in a shallow frame (Plate XVIII *c*). The southern niche frames a doorway at which the ramp ends; it opens on to a steep staircase, at first straight then spiral, leading to the top platform which is 50 m. above the socle. From eight holes to be seen Herzfeld concluded that there was probably a little pavilion on wooden columns here.

A few years later, between A.D. 860 and 861, another immense mosque was built by the same Caliph at Abū Dulaf to the north of Sāmarrā. It measures internally 213 m. from north to south and 135 from east to west. Here the outer walls are of mud brick about 1.60 m. thick strengthened by half-round buttresses, but the roof rested on arcades of burnt brick running from north to south; it was apparently only about 8 m. high. The sanctuary is divided into seventeen aisles by sixteen arcades of five arches each with an average span of 3.13 m. The two outer arcades are carried right through to the north end of the mosque, forming side *riwāḳs* 14 m. in depth. The northern *riwāḳ* resembles the southern one, except that it is only three arches deep. On the north side and about 9.60 m. from the mosque is a miniature Malwiyya on a socle about 11.20 m. square, above which is the much damaged spiral part which barely makes three turns.

Ten years later important works were carried out in the Great Mosque of Ḳayrawān by Abū Ibrāhīm Aḥmad, who reduced the width of the central aisle by about 1.20 m. by constructing two new arcades in contact with the old ones. The arches of these arcades are pointed horse-shoe arches instead of round horse-shoe arches like those they are in contact with. He also built three free-standing arches and one wall-arch of the same type to carry a fluted dome in front of the *miḥrāb*. They rise to a height of 9.15 m., and the square thus formed is terminated above by a cornice, its top edge being 10.83 m. from the ground. On it rests the octagonal zone of transition, 2.15 m. in height, which is formed by eight semicircular arches springing from colonnettes resting on little corbels inserted in the cornice just mentioned. The drum is composed of eight arched windows and sixteen arched panels arranged in pairs between the windows. The dome, which is 5.80 m. in diameter, has twenty-four ribs, each springing from a little corbel. Between the ribs are concave segments, 30 cm. deep at the base and diminishing to nothing at the apex. The whole composition is charming. Externally the dome resembles a cantaloup melon, with 24 convex ribs (corresponding to the 24 concave segments) which taper to nothing at the apex (Plate XIX *a* and XX). Abū Ibrāhīm's work was carried out in 248/862-3. He also lined the *miḥrāb* with a series of very beautiful carved marble panels assembled in four tiers of seven panels each; total height 2.72 m. He also decorated the face of the *miḥrāb* and the wall surrounding it with lustre titles about 21 cm. square (Plate XIX *b*). The marble panels and the tiles had been imported by him from ʿIrāḳ, and *the latter constitute the oldest examples of lustre pottery of certain date.*

The Mosque of Ibn Ṭūlūn

In 263 A.H. Aḥmad b. Ṭūlūn decided to built a new mosque on an outcrop of rock called Djabal Yashkur. The scheme of the mosque can be seen from the plan (Fig. 12) and the general view (Plate XXI) taken from the minaret of the Madrasa of Ṣarghitmish. It consists of a *ṣaḥn* of about 92 m. square surrounded by *riwāḳs*, five aisles deep on the *ḳibla* side and two aisles only on the other sides. This part—the mosque proper—is enclosed by a wall with a remarkable cresting, and forms a great rectangle measuring 122.26 m. in width and 140.33 in width. It is surrounded by a great outer court or *ziyāda*, except on the south-eastern (*ḳibla*) side which was occupied by a private apartment of the amīr, the Dār al-Imāra. This outer *ziyāda* is roughly 19 m. broad and its outer walls are lower than those of the mosque proper. The whole forms a great rectangle almost exactly square, measuring 162 m. in depth and 162.46 in width, constructed of red bricks, measuring roughly 18 × 8 × 4 cm., coated with a very hard stucco in which the ornament is cut. No wooden ties are used anywhere, except at the tops of the piers.

It results from careful measurements that the unit employed for setting out the mosque was the Nilometric cubit of 54.04 cm., for the principal dimensions are almost exact multiples of it.

The scheme of the façade of the mosque proper is as follows. It would seem that the architect set out his design by bisecting the façade as regards its height and then took this median line for the level of the window sills. Then the plain lower part was pierced by seven rectangular doorways, and the upper part by thirty-one pointed-arched windows, with their sills from 5.70 to 5.86 m. above the floor. The window-arches rest on stumpy engaged colonnettes of brick exactly as in that part of the Mosque of ʿAmr which dates from 212 A.H. The walls are 10.03 m. in height up to the roof level, above which is a row of pierced circles in squares and then a curious open work cresting, making a total height of 13.03 m. above the sills of the doorways (Plate XXII *a*). The latter are perfectly plain except for the carved wooden soffits, of which four original ones remain. In addition to the seventeen large and two small doors leading from the *ziyādas* into the mosque proper there are four in the *ḳibla* wall, one of which leads into the room behind the *miḥrāb*. This must be the door mentioned by Maḳrīzī (ii, 269, l. 22 ff.) which enabled Ibn Ṭūlūn to go directly from the Dār al-Imāra to the *maḳsūra* next the *miḥrāb* and the *minbar*, as was the practice during the first three centuries of Islam.

The *ṣaḥn* is roughly 92 m. square with thirteen pointed arches on each side (Plate XXII *b*). The sanctuary is formed by five arcades of seventeen arches each, and the *riwāḳ* opposite by two arcades. These seven arcades are carried right through to the side walls. The arcades of the lateral *riwāḳs*, however, abut against the outer arcades of the sanctuary and N.-W. *riwāḳ* and consequently consist of thirteen arches only. The arches rest on piers 2.46 m. wide and 1.27 m. deep, with engaged brick columns at the corners. They are placed about 4.60 m. apart. Dove-tailed wooden plates are used round the tops of these piers to strengthen them. The pier-capitals are derived from late Corinthian capitals, the two tiers of acanthus being replaced by conventionalized Sāmarrā vine leaves (Plate XXIII *a*).

The soffits of the arches are decorated with bands of stucco ornament, of which about ten are fairly well preserved (Plate XXIV). All consist of a very broad central strip between narrow double borders. The central strip in every case consists of a geometrical frame-work, the interstices of which are filled with various elements belonging to style B of Sāmarrā (Fig. 13). In addition to this a continuous border of ornament, 46 cm. wide, runs round the arches on both faces, turns at right angles at the springing, runs across the top of the pier, and then turns again at right angles to run round the next arch. A frieze of stucco ornament runs along just above the band of ornament running round the arches. About 20 cm. above this ran the famous Kūfic inscription carved on wood, of which a fair amount still remains, running along about 30 cm. below the beams of the ceiling. Calculation shows that this frieze, which must have been over 2 km. long, may have contained about one seventeenth part of the Ḳurʾān.
Fig. 12. Mosque of Ibn Ṭūlūn, plan.

The windows, in the shadow of the aisles, stand out against the sky like delicate lacework and form one of the most beautiful features of the mosque. There are 128 in all. Each consists of a pointed arch springing from a pair of engaged dwarf columns with stucco capitals, and a border of stucco ornament runs round each, turns at right angles at the springing and runs along horizontally to the next window (Plate XXIII *b-c*). Unfortunately only three, or at most four, of the window-grilles are original. These are mainly composed of compass work, i.e. intersecting circles and segments of circles; two have been set out by a method similar to that employed for one of the marble grilles in the Great Mosque at Damascus (Plate VIII *b*), the third on a network of equilateral triangles (Fig. 14).

The pendentives of the present wooden dome in front of the *miḥrāb*, on stylistic grounds, are undoubtedly the work of Lād̲j̲īn in 696 A.H., and the dome is much later. I very much doubt if there was a dome here originally. The present minaret is likewise the work of Lād̲j̲īn, the original one (seen by Muḳaddasī) was probably fairly similar to the Malwiyya of Sāmarrā.

The statement of al-Ḳuḍāʿī, quoted by Ibn Duḳmāḳ and Maḳrīzī, that the Mosque of Ibn Ṭūlūn was built after the style (*ʿalā bināʾ*) of the Mosque of Sāmarrā (unless it refers to the general impression produced by the minaret) is certainly not correct, for its plan does not in the least resemble either of the two mosques of Sāmarrā, except that all three are surrounded by *ziyādas*. It differs from
Fig. 13. Mosque of Ibn Ṭūlūn, analysis of soffits of arches (see Plate XXIV).
Fig. 14. Mosque of Ibn Ṭūlūn, analysis of window-grille (see Plate XXIII*c*).

the Great Mosque of Sāmarrā in the number of its aisles 5, 2, 2, 2 instead of 9, 4, 4, 3. As for the Mosque of Abū Dulaf, its aisles run perpendicular to the *ḳibla* wall instead of parallel to it. It also differs from the Great Mosque of Sāmarrā in that its roof rests on arcades instead of directly on the piers. Its piers alone recall those of Sāmarrā, but whereas the piers at Sāmarrā are square and have engaged marble columns at the corners, those of Ibn Ṭūlūn are oblong and the columns at the corners are only counterfeited in the brickwork. Neither does the scheme of the façade recall either of the mosques of Sāmarrā for it has no bastions. The sole feature of the façade that recalls Sāmarrā is the row of circles in squares below the cresting. Its windows in no way resemble those of the Great Mosque, which are few in number, have lobed arches internally and are treated externally like arrow-slits, but they do resemble those of the mosque of ʿAmr of 212 A.H., except that they lack the transverse beam and carved wooden frieze. In other words, Ibn Ṭūlūn's façade is derived from that of the Mosque of ʿAmr of 212/827 and, as no such façade is known elsewhere, must be regarded as Egyptian.

As regards the ornament, everybody now agrees that it is derived from Sāmarrā, but whereas at Sāmarrā the three styles, A, B and C, occur separately, in the mosque of Ibn Ṭūlūn they are combined and mixed. By its ornament and in certain other respects the mosque may be regarded as a foreign, ʿIrāḳī building planted down on the soil of Egypt, and large numbers of ʿIrāḳī craftsmen must have been employed for its decoration in wood and stucco. Its ornament and that of the Dayr al-Suryānī in the Wādī Natrūn are the two most westerly examples of the art of the ʿAbbāsid Empire, which prevailed over a large area from Baḥrayn and Nīshāpūr to Samarḳand.

Summary: Under the ʿAbbāsids the Hellenistic influences of Syria were replaced by the surviving influences of Sāsānian Persia, which profoundly modified the art and architecture, and this gave birth to the art of Sāmarrā, the influence of which extended to Egypt under Ibn Ṭūlūn, to Nishāpūr and Baḥrayn. In palace architecture there was a vast difference between that of the Umayyads and ʿAbbāsids, partly due to the adoption of Persian ideas of royalty which almost deified the king. Hence elaborate throne-rooms, generally domed, for private audience, preceded by a vaulted *līwān* (or four radiating *līwāns*) for public audience. The *bayt*s also were different, following the type of Ḳaṣr-i Shīrīn and not the Syrian type of Mshattā and Ḳaṣr al-Ṭūba. The scale was immense and axial planning is a marked feature. But all are built of brick and a great part of that basest of materials — mud brick — hidden by thick coats of stucco. A new type of pointed arch appears, the four-centred arch. The earliest existing squinches in Islam date from this period. An important innovation was the introduction of lustre tiles, the earliest examples being those brought to Ḳayrawān from ʿIrāḳ in 248 A.H. Bands of inscription were usually made to stand out on a blue background. But the widespread influence of ʿAbbāsid art did not extend to Spain, where Umayyad art, brought thither by Syrian refugees, was still full of life.

ARCHIVES [see başvekalet arşivi, daftar, dār al-maḥfūẓāt al-ʿumūmiyya, wathīḳa].

ARČI, (Arshashdib), a small Caucasian nation of Upper Dāghistān, ethnically akin to the Awar [*q.v.*], but distinct from the Ando-Dido group [see andi, dido]. In 1933 it comprised 1,930 people, living in the high valley of the Kara-Koysu (Soviet Autonomous Republic of Dāghistān). The Arči have their own language, which belong to the Dāghistān branch of the Ibero-Caucasian languages, and which represents an intermediate stage between Awar [*q.v.*] and Lak [*q.v.*]; it is not fixed by writing, and the Arči use Awar and, less commonly, Russian and Lak, as the languages of civilisation. Since the 1918 Revolution, they have been merged in the Awar nation. Converted to Islam by the Awar, towards the end of the 15th century, the Arči are, like the former, Sunnīs of the Shāfiʿī rite.

ARCOS [see arkūsh].

ARCOT (Ārkāt), a town in North Arcot district of Madras, on the right bank of the Pālār. From the Tamil *Ārkkaḍ*—'forest of Ar', or *Āru-kaḍu*—'six forests'. A Čōla foundation, the *Arkatos* of Ptolemy, it is much earlier than is suggested by the tradition of its foundation by a son of Kolōttunga Čōla, and the building of its fort and refoundation by Timmi Reddi. (See K. A. Nīlakanta Sastri, *The Cōlas*, 1955; R. Sewell, *Archaeological Survey of Southern India*, i, 165). In the 12th/18th century it became the capital of the Mughal Nawwābs of Ārkāt.

During the previous century, Ārkāt had passed from Vidjayanagar to Bīdjāpūr and Golkonda, to the Marāṭhas, and then to the Mughals. In 1109/1698, Awrangzīb formed a new province, the Carnatic, and Dāʾūd Khān, its governor from 1115/1703, made Ārkāt the capital.

His successor, Muḥammad Sayyid Saʿādat Allāh Khān, was a Nawāyaṭ, who parcelled out the whole province of Ārkāt among his relatives. His nephew succeeded him and extended the province. His son

Ṣafdar ʿAlī attacked Marāṭha Tanjore, while his son-in-law Ḥusayn Dūst Khān, (Čandā Ṣāḥib) took Trichinopoly by a trick.

This aggression brought the Marāṭhas down upon Ārkāt in 1153/1740. The Nawwāb was killed at the Damalcherry pass, Ārkāt sacked, and Chandā Ṣāḥib carried off prisoner to Satara.

Ṣafdar ʿAlī succeeded to power but was murdered in 1155/1742. The *ṣūbadār* of the Dakhan thereupon appointed an outsider, Anwār al-Dīn, a move resented by the many Nawāyaṭs who held subordinate posts in the province.

Their hostility allowed Dupleix, governor of Pondicherry, to intervene. In 1161/1748 Dupleix assisted the release of Čandā Ṣāḥib, the Nawāyaṭ candidate for Ārkāt. Next year French troops under Čandā Ṣāḥib slew Anwār al-Dīn at Ambur, and in 1164/1750 when the *ṣūbadār* of the Dakhan was killed, Čandā Ṣāḥib was proclaimed Nawwāb of Ārkāt.

In the next eleven years Ārkāt was a pawn in the Anglo-French struggle, now taken and held by Clive, now lost to Lally. The war ended with the British protégé, Muḥammad ʿAlī, established as Nawwāb. His troops twice surrendered Ārkāt to Ḥaydar ʿAlī of Maysūr, he became deeply involved in debts, but his line continued till 1272/1855, when the estate escheated to the Company on failure of male heirs. (The administration of the province of Ārkāt had passed to the British in 1216/1801).

The palace and fort, and the fortifications of the town, elaborately constructed on European lines by Muḥammad ʿAlī, are now in ruins. There are numerous mosques, a fine tomb of Saʿādat Allāh Khān, and the shrine of Tipū Mastān Awliyā, after whom Tipū Sulṭān of Maysūr (Mysore) was named. (L. B. Bowring, *Haidar Ali and Tipu Sulṭan*, 117-18 n.).

ARḌ, earth, land. For the terrestrial globe, see kurat al-arḍ. For land law, see iḳṭāʿ, ḳaṭīʿa, khāliṣa, kharādj, khāṣṣ, mahlūl, matrūk, mawāt, misāḥa, muḳāsama, muḳāṭaʿa, mulk, soyurghāl, timar, ʿushr, waḳf, ziʿāmet.

ʿARḌ, [see istiʿrāḍ].

ʿARḌ ḤĀL, petition. In the Ottoman Empire of the 18th century, the writing of petitions was the prerogative of the *ʿArḍ-ḥāldjis* (*Arzuhalci*). Admission to their number was regulated by the *ʿArḍ-ḥāldji-bashi*, the *Čavushlar emīni*, and the *Čavushlar kātibi*, the qualifications required being personal respectability, proficiency in calligraphy, and a knowledge of *sharīʿa* and *ḳānūns*. Petitions were considered by the *Čavushbashi* on behalf of the Grand Vizier, and answers to them were drafted by the two *Tedhkiredjis* (known as *Tedhkire-i ewwel* and *-thānī*).

(G. L. Lewis.)

ARDABB [see kayl].

ARDABĪL (Turkish Erdebīl). A district and a town in eastern Ādharbāydjān. The town is located at 48° 17′ E. long. (Greenw.) and 38° 15′ N. lat. The distance to Tabrīz is 210 km. by road, and it is 40 km. to the Soviet frontier. The altitude of the town is 4,500 ft. above sea level, and it is situated on a circular plateau surrounded by mountains. The district (*shahristān*), of which the town is the capital, comprises four counties (*bakhsh*), capital county, Namīn, Āstārā, and Garmī.

There are few trees around the town and irrigation is necessary for cultivation. Some 20 m. west of the town is Mt. Savalān (Sablān of Arabic geographers) 15,784 ft. at the summit, with perennial snow. The climate of the town and capital county is cold in winter (average monthly temp. below freezing) and the town is assigned to the cold districts (*sardsīr*). The other three counties, however, are reckoned in the warm districts (*garmsīr*). The river Balikhlū or Bāliḳṣū (or chāy), a tributary of the Ḳarāṣū, flows through the southern part of the town. In the vicinity of the town are warm springs which have attracted visitors throughout history.

The etymology of the name is uncertain, but Minorsky in *JA*, 217 (1930), 68, proposes a meaning "willows of the sacred law". The pre-Islamic history of Ardabīl is unknown, for we find the name only in Islamic times. Samʿānī vocalises the name as Ardubīl, while the *Ḥudūd al-ʿĀlam* writes Ardawīl. In Armenian we find Artavēt (Ghevond) and later Artavel. Firdawsī and Yāḳūt say the town was founded by Pērōz the Sāsānian king (457-484 A.D.), hence it was called Bādān Pērōz or Bādhān Fayrūz. Ḳazwīnī in his *Nuzhat al-Ḳulūb* attributes its founding to a much earlier monarch.

It is uncertain whether the mint mark ATRA, on Sāsānian and pre-reform ʿUmayyad coins (Ādharbāydjān?) refers to Ardabīl, but it was the residence of the *marzbān* at the time of the Arab conquest of Ādharbāydjān, according to al-Balādhurī. The city was taken by treaty, and under the caliph ʿAlī his governor al-Ashʿath made Ardabīl his capital. It probably did not remain the capital continuously throughout the ʿUmayyad Caliphate; for example in 112/730 the Khazars captured it. Marāgha may have been a second capital of Ādharbāydjān, for the seat of authority seems to have shifted between it and Ardabīl.

The district of Ardabīl suffered from the uprising of Bābak [*q.v.*]. Ardabīl was in the domain of the independent Sādjid governors at the beginning of the 10th century A.D., and the district suffered from internecine struggles of local rulers, as well as from the invasions of the Rūs in the first half of the 10th century. We find dirhems with the name Ardabīl on them for the first time in 286/899.

The town of Ardabīl was captured and destroyed by the Mongols in 617/1220. It lost its former importance until the rise of the Ṣafawids Shaykh Ṣafī al-Dīn had made Ardabīl the centre of his Ṣūfī order at the end of the 13th century. In 1499 Ismaʿīl, his descendant, returned from exile in Gīlān to Ardabīl where he started the Ṣafawid dynasty, and shortly thereafter he became shāh in Tabrīz.

Ardabīl became a Ṣafawid shrine and Shāh ʿAbbās especially enriched the mausoleum and mosque of Shaykh Ṣafī by gifts, among them Chinese porcelains and rugs. The city was held by the Ottomans for a short time at the end of Ṣafawid rule, but Nādir Shāh retook it and was crowned shāh in the nearby Mughān steppe in 1736. During the Ottoman occupation a survey of population and land was made for the city and province; a copy of this is preserved

in the Başvekalet Arşivi [*q.v.*] in Istanbul. In the time of Napoleon Gen. Gardanne fortified the city and built ramparts, and ʿAbbās Mīrzā established court there.

European visitors who visited the town and briefly described it were Pietro della Valle (1619), Adam Olearius (1637, with a pictoral map of the town), J. B. Tavernier, Corneille Le Brun (1703), and James Morier (1821). Much of the library of the shrine of Shaykh Ṣafī, as well as art objects, were carried to St. Petersburg by the Russians after 1827.

Morier (*Second Journey*) estimated the population of the town at 4,000; now it is ca. 23,000. Historical structures include the shrine of Shaykh Ṣafī, the *masdjid-i djumʿa* (built in 1382) and the mausoleum of Shaykh Djibrāʾīl (father of Shaykh Ṣafī?) 6 km. to the north of Ardabīl.

(R. N. FRYE)

ARDAHĀN, town in the remote north-east of Turkey, 41° 8′ north, 42° 42′ east, on the Kuručay, which becomes the Kura, 1,800 m. above sea-level. At one time capital of a *sandjak* in the *iyālet* of Kars. By the Treaty of San Stefano in 1878, the town, its surrounding district and Kars were ceded to Russia. On Feb. 23rd 1921, it was ceded back by Georgia; it has since remained Turkish, and is the capital of a *kaḍā* in the *wilāyet* of Kars. In 1945, the town had 6,182 inhabitants, and the *kaḍā* 49,699.

Bibliography: Ḥādjdjī Khalīfa (Kātib Čelebi), *Djihān-numā*, 407. (FR. TAESCHNER)

ARDAKĀN (dialect (Erdekūn), town in Persia situated 32° 18′ N. Lat. and 53° 50′ E. Long. (Greenw.) on the present route from Nāʾīn to Yazd. It is located on the edge of the desert. To the north is the district (*bulūk*) of ʿAḳdā, and to the south Maybūd. It is located at a height of 3280 ft. above sea level. The identification with Ptolemy's Ἀρταχάνα (Tomaschek, in *Pauly-Wissowa*, s.v.) is open to doubt, and there are no ancient ruins in the town. Ibn Ḥawḳal (Kramers), 263, mentions a town Adharkān on the edge of the desert near Yazd which may be identical with Ardakān. There is no certain mention of the town until the 7th/13th century when a Ṣūfī *khānaḳāh* was erected there; cf. ʿAbd al-Ḥusayn Ayatī, *Taʾrīkh-i Yazd*, Yazd 1939, 50, who also lists the famous people from this town. The name Ardecan appears on European maps beginning in the early 18th century. Today the town is the centre of a district with 5 villages and 10,430 population (in 1930), according to Masʿūd Kayhān, *Djughrāfiyā*, ii, Tehran 1933, 438. Some of the population are Zoroastrians. The people are known for their metal work and sweets. The former flourishing cloth and carpet industry is now unimportant.

Bibliography: ʿAlī Akbar Dihkhudā, *Lughat-nāma*, Tehran 1950, 1774; General Razmārā, *Djughrāfiyā-yi Niẓāmī-yi Īrān*, Tehran 1945; for references to European travellers cf. A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 58 (von Poser), 188 (Buhse), 304 (Baier); Stahl in *Peterman's Geogr. Mitteil.*, Supplement 118 (1985), 29.

Another Ardakān, in Fārs, 30° 16′ N. Lat. 51° 59′ E. Long. (Greenw.) is a Ḳashḳāʾī tribal centre. (R. N. FRYE)

ARDALĀN. This name was formerly used for the ill-defined province of Persian Kurdistān, the major part of which at present is the district (*shahristān*) of Sanandadj (formerly Senna). For the geography see KURDISTĀN (Persian).

Usually the name refers to the Banū Ardalān who were rulers of much of Kurdistān from the 14th century A.D. The origin of this extended family is unknown, but according to the *Sharaf-nāma*, Bābā Ardalān was a descendant of the Marwānids of Diyār Bakr, who settled among the Gūrān in Kurdistān. Another source (B. Nikitine, *Les Valis*) says Ardalān was a descendant of Ardashīr the first Sāsānian king. Several histories of the rulers of Ardalān were written in Persian in the 19th century which are primarily biographies of the rulers (Storey, 369, 1300). The rulers received the title *wālī* from the Ṣafawid shahs, but sometimes they declared their allegiance to the Ottomans.

One of the most illustrious of the rulers was Amān Allāh Khān who ruled at the beginning of the 19th century, and his son married the daughter of Fatḥ ʿAlī Shāh. Nāṣr al-Dīn Shāh appointed a Ḳādjār prince as governor of Kurdistān and the rule of the Ardalān family came to an end. [See KURDISTĀN, SENNA].

Bibliography: B. Nikitine, *Les Kurdes*, Paris 1956, 34-6, 167-170; idem, *Les Valis d'Ardelan*, in *RMM*, 49 (1922), 70-104; Dihkhudā, *Lughat-nāma*, Tehran 1948, 1775. For the *Sharaf-nāma* and other sources cf. Storey, 366-9. (R. N. FRYE)

ARDASHĪR, old Persian: Artakhshathra, Greek Ἀρταξέρξης, well-known name of Persian kings. Muslim tradition has certain knowledge only of the later Sāsānid kings of that name, viz. Ardashīr I (226-241), Ardashīr II (379-383) and Ardashīr III (628-629). [See SĀSĀNIDS].

ARDASHĪR KHURRA [see FĪRŪZĀBĀD].

ARDIBEHISHT [see TAʾRĪKH].

ARDISTĀN (dialect Arūsūn), a town in Persia located on the edge of the desert east of the present road from Naṭanz to Nāʾīn, at a height of 3575 ft. and 33° 22′ N. Lat., 52° 24′ E. Long. (Greenw.) It was a well known town in the Middle Ages. Arabic and Persian histories say a fire temple was erected by Ardashīr the first Sāsānid (226-42 A.D.) and Khusraw I Anūsharwān (531-79) was born here. On the early (4th/10th century) mosque here cf. A. Godard, in *Athār-é Īrān*, 1936, 285. Zawāra, NE and near Ardistān, has an old mosque and pre-Islamic ruins. The population of the district of 50 villages (1930) was ca. 27,000.

Bibliography: Schwarz, *Iran*, v, 638; Le Strange, 208; ʿAlī Akbar Dihkhudā, *Lughat-nāma*, Tehran 1950, 1692; Masʿūd Kayhān, *Djughrāfiyā*, ii, Tehran 1933, 425; for a town plan and information on the present town, cf. *Rāhnamā-yi Īrān* (Ministry of War map service), Tehran 1952, part. ii, 14. (R. N. FRYE)

AL-ʿARDJĪ ʿAbd Allāh b. ʿUmar, great-grandson of the Caliph ʿUthmān, and a poet regarded as the best of those who belonged to the Umayyad family. Of a generous but violent disposition, he tried to play a part in politics and took part in several

expeditions (especially with Maslama b. ʿAbd al-Malik, against the Byzantines), but, thwarted of power, he retired to the Ḥidjāz, dividing his time between Mecca and one of his estates near al-Ṭāʾif, al-ʿArdj, from which he took his *nisba*. Reduced to a life of idleness, like so many of the aristocracy of the Ḥidjāz, he turned to amusements, frivolous or riotous, and joined the erotic poets who flourished at that time in the two Holy Cities. Doubtless moved by jealousy, he satirised the Governor of Mecca, Muḥammad b. Hishām, the maternal uncle of the Caliph Hishām, and went so far as to compose, in order to discredit him, erotic verse regarding his mother Djaydāʾ. His behaviour led to his being molested, placed in the pillory and thrown into prison, where he died, probably about 120/738.

Bibliography: His *dīwān* was recently printed in Baghdād (1956) with an Introduction. See also Ibn Ḳutayba, *Shiʿr*, 365-6; idem, *Maʿārif*, Cairo 1353/1934, 86; Djāḥiẓ, *Ḥayawān*², index; Aghānī, i, 147-60 and index; Baghdādī, *Khizāna*, i, 99; Yāḳūt, s.v. al-ʿArdj; Brockelmann, i, 49; Ṭāhā Ḥusayn, *Ḥadīth al-arbiʿāʾ*, ii, 72-81; O. Levi Della Vida*, 361-70, with bibl.

(CH. PELLAT)

ARDJĪSH, a small and ancient town situated on the north-eastern bank of Lake Van, which in the Middle Ages was still called the Lake of Ardjīsh. Its existence seems to be vouched for since the Urartaean period, and more expressly by the Graeco-Roman geographers. It was occupied for a time by the Arabs during the time of ʿUthmān, but remained an integral part of the Armenian principalities up to the 8th century A.D.; from 772 onwards, it was incorporated into the Ḳaysite emirate of Akhlāṭ [*q.v.*]. In the 10th century A.D., it belonged to the Marwānids, but about 1025 it was taken by the Byzantines, who proceeded to annex southern Armenia. In 1054, it was retaken by the Saldjūḳid sultan Tughril Beg [*q.v.*], and, when the Saldjūḳid empire was divided up at the end of the 5th/11th century, it was incorporated in the principality of the Shāhs of Armenia of Akhlāṭ and, at the beginning of the 7th/13th century, in that of their Ayyūbid successors. Pillaged repeatedly in the 13th century by the Georgians and the Mongols, it was nevertheless of sufficient importance for the Ilkhānid *wazīr* ʿAlī Shāh to fortify it at the beginning of the 8th/14th century (it does not appear to have been fortified before). Later, it suffered from the devastations of Tīmūr and during the disorders associated with the Perso-Ottoman wars. It was still the chief town of an Ottoman district in the 17th century; but the growth of Van, and the northward movement of the lake waters, acted to its detriment. The last inhabitants left the town about the middle of the 19th century, and to-day the ruins are mainly under water. A small modern township has sprung up half an hour's journey to the north.

Bibliography: See ARMENIA and AKHLĀṬ. To the Arabic sources (al-Balādhurī, Ibn al-Azraḳ al-Fāriḳi studied by Amedroz in *JRAS*, 1902, 785-812, Ibn al-Athīr, etc.), should be added the Armenian sources used in R. Grousset, *Histoire d'Arménie*, Paris 1948, and F. Nève, *Histoire des Guerres de Tamerlan d'après Thomas de Medzoph*, Brussels 1860, in Persian, Ḥamd Allāh Mustawfī, *Nuzha*, and, in Turkish, the *Djihān-nümā* of Ḥādjdjī Khalīfa and the *Travels* of Ewliyā Čelebī, vol. iv, cf. also M. Canard, *Les Hamdânides*, i, 188 and 473 ff.; E. Honigman, *Die Ostgrenze des byzantinischen Reiches*, Brussels 1935; and Besim Darkot, article *Erciş* in *IA*, which gives the references to the earlier modern works (Hübschman, Markwart).

(CL. CAHEN)

ARDJĪSH-DAGH [see ERDJIYĀS DAGHĪ].

ARGAN (Berb.), argan-tree (*argania spinosa* or *argania sideroxylon*), a tree of the family *Sapotaceae* which grows on the southern coast of Morocco. A shrub with hard, tough wood, it produces a stone whose kernel, when ground, yields a much-valued oil; the oil-cakes are given to cattle.

The word is also known to some of the Arabic-speakers of Morocco, but they look upon it as a loan-word.

(ED.)

ARGHANA [see ERGHANI].

ARGHŪN, name of a Mongol dynasty claiming descent from Hulāgū. (Raverty, *Notes on Afghanistan*, 580, refuses to accept this claim). The Arghūns rose to prominence towards the end of the 15th century when Sulṭān Ḥusayn Bāyḳarā of Harāt appointed *Dhū 'l-Nūn Beg Arghūn* governor of Ḳandahār. He soon began to assume an independent attitude and resisted all attempts of the ruler of Harāt to coerce him. As early as 884/1479 he occupied the highlands of Pishīn, Shāl and Mustang which now form part of Balūčistān. In 890/1485 his two sons, Shāh Beg and Muḥammad Muḳīm Khān, descended the Bolān Pass and temporarily wrested Sīwī (Sibi) from Djām Nanda, the Sammā ruler of Sind. In 902/1497 he espoused the cause of Badīʿ al-Zamān, the rebel son of Ḥusayn Bāyḳarā, and gave him his daughter in marriage. He was killed at the battle of Maručak, in 913/1507, during the invasion of Khurāsān by Shaybānī Khān the Uzbeg leader. He was succeeded by his eldest son, Shāh Beg, who was forced to acknowledge the overlordship of Shaybānī Khān in order to maintain his position at Ḳandahār. After the defeat and death of the redoutable Uzbeg leader at Marw, in 1510, he was threatened by Bābur who had established himself at Kābul and by Shāh Ismāʿīl Ṣafawī who had annexed Harāt. He was saved for a time by Shāh Ismāʿīl's wars against the Ottomāns and by Bābur's attempt to recover Samarḳand. Realising that his expulsion from Ḳandahār was merely a matter of time, he sought to establish his power in the Balūč country and Sind. In Sind, Djām Nanda had been succeeded by his son Djām Fīrūz whose hold over the country was weakened by faction fights. In 926/1520 Shāh Beg entered Sind, defeated Djām Fīrūz's army and sacked Thatta, the capital of Southern Sind. A treaty was made by which upper Sind was surrendered to Shāh Beg while lower Sind was to remain under the Sammās. This agreement was almost immediately repudiated by the Sammās as a result of which they were once more defeated. Shāh Beg now dethroned Djām Fīrūz and founded the Arghūn dynasty of Sind. After the complete loss of Ḳandahār to Bābur, in 928/1522, Shāh Beg made Bakhar on the Indus his capital. He died in 930/1524 and was succeeded by his son, Shāh Ḥusayn, who had the *khuṭba* read in Bābur's name, and immediately, probably by arrangement with Bābur, proceeded to attack the Langāh kingdom of

Multān. In 1528, after a long siege, Multān capitulated. Shāh Ḥusayn, after appointing a governor, retired to Thatta. When, shortly afterwards, his governor was expelled, he made no attempt to retake the city. After a brief period of independence those in authority in Multān deemed it expedient to acknowledge the suzerainty of the Mughal emperor. Shāh Ḥusayn was reigning in 947/1540 when Humāyūn, after his defeat and expulsion from northern India by Shīr Shāh Sūr, sought refuge in Sind. Probably because he did not wish to be drawn into a war with Shīr Shāh, the Arghūn ruler refused to help Humāyūn. This was followed by Humāyūn's attempt to seize the strong fortresses of Bakhar and Sihwān for which he lacked the necessary resources, energy and generalship. In 950/1543, Humāyūn was granted an unmolested passage through Sind to Ḳandahār. Towards the end of his days Shāh Ḥusayn's character degenerated. As a result his nobles deserted him and elected as their sovereign Mīrzā Muḥammad ʿĪsā Tarkhān, a member of the elder branch of the Arghūn clan. Shāh Ḥusayn died childless in 1556 and with him ended the Arghūn dynasty.

The Arghūn Tarkhān dynasty lasted from 1556 to 1591. Muḥammad ʿĪsā Tarkhān was forced to come to terms with a rival claimant, Sultan Maḥmūd Gokaldāsh. It was arranged that Muhammad ʿĪsā Tarkhān kept lower Sind with his capital at Thatta, and Sultān Maḥmūd upper Sind with his capital at Bakhar. In 982/1573 upper Sind was annexed by Akbar. ʿĪsā Khān died in 1567 and was succeeded by his son Muḥammad Bāḳī who committed suicide in 1585. During the reign of his successor, Djānī Beg, Akbar, in 1591, sent ʿAbd al-Raḥīm Khān, Khān Khānān, to annex lower Sind. Djānī Beg was defeated and lower Sind incorporated in the Mughal empire. Djānī Beg died of delirium tremens in 1599.

(C. Collin Davies)

ARGHŪN [see IL-KHĀNIDS].

ARGYROCASTRO [see ERGERI].

ʿARĪB B. SAʿD AL-KĀTIB AL-ḲURṬUBĪ, an Andalusian *mawlā* who held various official posts (he was in particular *ʿāmil* of the district of Osuna in 331/943), lived in the entourage of al-Muṣḥafī [*q.v.*] and Ibn Abī ʿĀmir [see AL-MANṢŪR] and was the secretary of the Umayyad caliph al-Ḥakam II (350-66/961-76); the date of his death is not known, but is put by Pons Boigues at about 370/980.

A man of wide learning, ʿArīb distinguished himself as physician and poet, but is primarily known for his work as a historian. He was in fact the author of a résumé of the Annals of al-Ṭabarī, which he continued down to his own times; the section relating to the Orient has been published by M. J. De Goeje (Arīb, *Tabari continuatus*, Leiden 1897), while R. Dozy added to his edition of the *Bayān* of Ibn ʿIdhārī (Leiden 1848-51) the fragments relating to Spain (from 291 to 320), which constitute the principal source for the reign of ʿAbd al-Raḥmān III (cf. E. Lévi-Provençal, *Hist. Esp. Mus.*, iii, 506 and index). ʿArīb probably also wrote a work on obstetrics (*K. Khalḳ al-Djanīn wa Tadbīr al-Ḥabālā wa 'l-Mawlūd*, a MS. of which has been preserved; see H. Derenbourg-H. P. J. Renaud, *Mss. ar. de l'Escurial*, ii/2, Paris 1941, 41-2, No. 833) dedicated to al-Ḥakam II, and a *K. ʿUyūn al-Adwiya*. The *K. al-Anwāʾ*, of which he is certainly the author, has clearly been merged in the liturgical calendar of bishop Rabīʿ b. Zayd (= Recemundo), in a composite text which R. Dozy published under the title of *Le Calendrier de Cordoue de l'année 961*, Leiden 1873 (a new edition by Ch. Pellat will appear shortly).

(Ch. Pellat)

AL-ʿĀRIḌ, the central district of Nadjd. Originally applied to the long mountainous barrier Ṭuwayḳ [*q.v.*], the name al-ʿĀriḍ is still very commonly used in this sense. In a more restricted sense it refers to the central part of the barrier, the district between al-Khardj to the south and al-Maḥmal to the north. On the west al-ʿĀriḍ is bounded by the western escarpment of Ṭuwayḳ and the district of al-Baṭīn below it, in which lie Ḍarmā, al-Ghaṭghaṭ, etc. On the east Wādī 'l-Sulayy, the escarpment of Djāl Hīt, and the land of al-ʿArama separate al-ʿĀriḍ from al-Dahnāʾ.

The district is traversed from northwest to southeast by Wādī Ḥanīfa [*q.v.*], formerly known as al-ʿIrḍ, the head of which lies below ʿAḳabat al-Ḥaysiyya (formerly Thaniyyat al-Aḥīsā), whence it flows for c. 160 km. before emptying into al-Sahbāʾ near the modern town of al-Yamāma in al-Khardj.

The principal towns of al-ʿĀriḍ, all of which lie in or near Wādī Ḥanīfa, are: (1) al-ʿUyayna [*q.v.*], the birthplace of Muḥammad b. ʿAbd al-Wahhāb [*q.v.*]; (2) al-Djubayla, near which the battle of ʿAḳrabāʾ between Musaylima and Khālid b. al-Walīd is supposed to have been fought; (3) al-Dirʿiyya [*q.v.*], the first capital of Āl Suʿūd, the picturesque ruins of which still overlook the modern town in the valley; (4) al-Riyāḍ [*q.v.*], the present capital of Āl Suʿūd; (5) Manfūḥa, which is presumed to lie on or near the site of the poet al-Aʿshā's home; and (6) al-Ḥāʾir (also called Ḥāʾir Subayʿ or Ḥāʾir al-Aʿizza, the latter being the section of the tribe of Subayʿ dominant in the oasis). Ḥāʾir Subayʿ lies at the junction of the valleys Luḥā (not Ha as shown on most modern maps) and Buʿaydjāʾ (the lower stretch of al-Awsaṭ) with Wādī Ḥanīfa.

The Bedouin tribes roaming through al-ʿĀriḍ are Subayʿ, al-Suhūl, and al-Ḳurayniyya. Many other tribesmen are drawn there by the presence of the capital. The townspeople are descended from Tamīm, ʿAnaza, al-Dawāsir, and many other sources.

Since the beginning of the reform movement preached by Muḥammad b. ʿAbd al-Wahhāb [*q.v.*]

al-ʿĀriḍ has been the great stronghold of the faith. In the myriad campaigns conducted by Āl Suʿūd the people of al-ʿĀriḍ, both townsmen and nomads, have almost invariably been in the front rank. One of the main reasons the reformation began in al-ʿĀriḍ in the 12th/18th century was that this district had preserved a tradition of Islamic learning, and since then al-ʿĀriḍ has contributed more than its share of highly honoured religious scholars.

Bibliography: al-Hamdānī, *Ṣifat*; Ibn Bulayhid, *Ṣaḥīḥ al-Akhbār*, Cairo 1370; Ibn Ghannām, *Rawḍat al-Afkār*, Cairo 1368; Ibn Bishr, *ʿUnwān al-Madjd*, Mecca 1349; H. Philby, *The heart of Arabia*, London 1922; idem, *Arabia of the Wahhabis*, London 1928. (G. RENTZ)

ʿARĪF, "one who knows", a term applied to the holders of certain military or civil offices, based on competence in customary matters, *ʿurf*, as opposed to knowledge of the law, which characterises the *ʿālim*. There may have existed in some cases *de facto ʿurafāʾ* in Arabia already prior to and at the time of Muḥammad (al-Shāfiʿī, *Umm*, iv, 81) who is said to have condemned them (Ibn Ḥanbal, iv, 133; Ibn al-Athīr, *Nihāya*, iii, 86; al-Sarakhsī, *Sharḥ al-Siyar al-Kabīr*, i, 98; al-Bukhārī, *al-Taʾrīkh al-Kabīr*, ii, 341). But such traditions are obviously influenced by later conditions.

During the periods of the caliphs of al-Madīna and of the Umayyads, the *ʿarīfs* collected taxes from the tribes and handed them over to the *muṣaddiḳ* who was appointed by the caliph (al-Shāfiʿī, *Umm*, ii, 61, 72, 74; *Aghānī*[3], iii, 62, xi, 248). No details are available concerning their appointment, except that they were chosen among the tribe concerned, though not among its chiefs.

From the time of ʿUmar I onwards there are frequent references to the office of *ʿarīf* in connection with the military organisation of the empire and the *amṣār*. Sayf b. ʿUmar claims that the armies of Kūfa were divided after the battle of Ḳādisiyya into numerous units (*ʿirāfa*), with an *ʿarīf* over each unit (al-Ṭabarī, i, 2496); but most of the details concerning the functions of the *ʿarīfs* apply to the period of Muʿāwiya only. Each *ʿarīf* was assigned to an *ʿirāfa* and was responsible for the distribution of the stipend (*ʿaṭāʾ*) among its members, for which purpose he had to keep a register (*dīwān*) of the payees and their families. He was furthermore responsible for security inside his own *ʿirāfa*, and probably also had other responsibilities, such as collecting blood-money and arbitrating in disputes among the members of the *ʿirāfa*.

The governor of the *miṣr* (or the *ṣāḥib al-shurṭa*) was the sole authority with the power to appoint and dismiss *ʿurafāʾ* and it was not necessary for him to seek the approval of the caliph or of the clan; he was, however, probably obliged to choose influential persons (cf. the authorities quoted in Ṣāliḥ al-ʿAlī, *al-Tanẓīmāt, etc.*, 97-100).

The military office of *ʿarīf* continued throughout the Middle Ages; the rather scanty evidence indicates that its scope varied. At the time of al-Rashīd, for instance, the *ʿarīf* was responsible for ten to fifteen men (al-Balādhurī, *Futūḥ*, 196), while in Spain, at the time of al-Ḥakam, he is mentioned as a commander of a hundered horsemen (*Akhbār Madjmūʿa*, 129-30). (In the ʿIrāḳī and Syrian armies of the present day the *ʿarīf* is in charge of ten men). We also hear of *ʿurafāʾ* of the *ʿayyārūn* [*q.v.*], when it was desired to organise these into official military units (al-Ṭabarī, iii, 179; al-Masʿūdī, *Murūdj*, vi, 452).

Among the civil offices whose incumbents bore the name of *ʿarīf* we hear, in the first two centuries of the Hidjra, of a special official responsible for the interests of orphans and illegitimate children. An *ʿarīf* of *dhimmīs* is also occasionally mentioned. But the most frequent use of the title of *ʿarīf* in the mediaeval Arabic-speaking Orient is to denote the head of a guild, although the term was used concurrently (or in varying hierarchical relationships) with others, such as *naḳīb*, *raʾīs* or simply *shaykh*, fell into disuse during the Ottoman period, and in the west was usually replaced by *amīn* [*q.v.*]. We find instances of *ʿarīf* in this sense, it seems, from Umayyad times, in direct relationship with the *ḳāḍī*, prior to the appearance of the office of *muḥtasib* (according to *Wakīʿ Akhbār al-Ḳuḍāt*, ii, 347, referring to the time of the *ḳāḍī* Shurayḥ, who died about 80/700). But it is mainly from the 6th/12th century onwards that references to *ʿurafāʾ*, now in the rôle of assistants to the *muḥtasibs*, occur frequently in works designed for the use of the latter.

It is impossible to discuss the position of the head of a trade-guild in detail except in the general study of the organisation of the guilds which will appear in the article ṢINF. The basic problem, in assessing the position of the *ʿarīf* or the *amīn*, is to know to what extent this individual, situated midway between the administrator and the guilds, was the representative of an autonomous corporation comparable to those of the mediaeval Christian west at the time of the communes, or the agent of authority supervising a guild governed from above, like the colleges of the late Empire and Byzantium. His actual position must have varied according to the relative strength of the forces concerned. In general, the *ʿarīf* or *amīn* figures mainly as an assistant of the *muḥtasib* as regards the regulation, internal jurisdiction and financial obligations of the guild; he could not however discharge his duties unless he was regarded with a certain minimum of confidence by the leaders of the guild, from amongst whom he himself was chosen and who often, by acclamation, accepted or proposed him. In practice he also to a certain extent represented the guild in its dealings with authority. He organised the participation of his guild in certain festivals. He was often duplicated by a *khalīfa*, and exercised his powers of arbitration and jurisdiction, in the large centres, assisted by a small customary tribunal subordinate to the *muḥtasib*. It sometimes happened that there was also an *amīn al-umanāʾ*. The *amīn* kept a register of the members of the guild, and admitted new members, in accordance with various initiatory rites. His function was of an eminently temporary nature. This organisation has, of course, been undermined to-day by the progress of trade-unionism on the European pattern.

Bibliography: In addition to the references quoted in the article, see Dozy, *Suppl.*, s.v.; I. Goldziher, *Abhandlungen zur Arab. Philologie*, i, 21; Dj. Zaydān, *Taʾrīkh al-Tamaddun al-Islāmī*, i, 148; P. Hitti, *History of the Arabs*, London 1946, 328; *IA*, s.v. (by M. F. Köprülü); Rāshid Barrawī, *Ḥālat Miṣr al-Iḳtiṣādiyya*, Cairo 1948, 190-4; A. A. Duri, *Taʾrīkh al-ʿIrāḳ al-Iḳtiṣādī*, Baghdad 1948, 82; Ṣāliḥ A. al-ʿAlī, *al-Tanẓīmat al-Idjtimāʿiyya wa ʾl-Iḳtiṣādiyya fī ʾl-Baṣra*, Baghdad 1953, 97-100.

For matters relating more particularly to the *ʿarīf* and *amīn* as technical terms of the guilds, the essential sources are the Syro-Egyptian works on *ḥisba* (Shayzarī, ed. ʿArīnī, 1946, analysed by Bernhauer, who calls him Nabrawī, in *JA*, 1860,

61; Ibn al-Ukhuwwa, ed. R. Levy, 1938; Ibn Bassām, extracts by Cheikho in *Mash.*, 1907) or the similar works of Spanish origin (Ibn ʿAbdūn, ed. Lévi-Provençal, in *JA*, 1934, trans. in *Seville musulmane au XII*ᵉ *s*, and especially, from our point of view, Saḳaṭī of Malaga, ed. Colin and Lévi-Provençal, 1931), not to speak of other similar works, as yet unpublished, written in other countries. The material which they provide on the *ʿarīf* has been utilised by E. Tyan, *Organisation judiciaire*, ii, to be completed, as regards the *amīn* of Spain and mediaeval Tunisia, by the remarks of Lévi-Provençal, *Hist. Esp. Mus.*, iii, especially 300-2, and Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, ii, 150, 203, etc. For the modern period, on North Africa, see the study of Massignon on the Moroccan guilds (*RMM*, 1924), to be completed as regards Fez before the Protectorate by the work of Le Tourneau on that town (with bibliography); for Tunisia, Payre, *Les amines en Tunisie*, 1940, should be consulted. No equivalent study exists for the Orient, where we are still dependent on the valuable, but restrained picture of the guilds at Damascus at the end of the 19th century, by Elyas Qudsi (*Travaux de la VI*ᵉ *Session du Congrès international des Orientalistes*, Leiden 1884, 3 ff.), and for Egypt, on the information given in the *Description de l'Egypte*, xvii and xviii, and on certain special monographs such as G. Martin, *Les Bazars du Caire*, 1910. For a comparison with central Asia see M. Gavrilov, *Les corps de métiers en Asie Centrale*, in *REI* 1928, 209 ff.; with Persia, the lecture by Ann K. S. Lambton, *Islamic Society in Persia*, School of Oriental and African Studies, London, 1954; with the Ottoman Empire, the description of the guilds at Constantinople in the 17th century by Ewliyā Čelebi (*Siyāḥat-nāme*, i, 473 ff.; Hammer's English translation I, 2, 90ff.) and H. Thorning, *Beiträge zur Kenntnis des islamischen Vereinswesens auf Grund von Basṭ Madad et-Taufīg*, (Türkische Bibliothek 16) Berlin 1913.

(Salih A. el-Ali and Cl. Cahen)

ʿĀRIF HIKMET BEY (1201-1275/1786-1859) *shaykh al-islām* from 1262 to 1270/1845-54, and one of the last representatives of Turkish classical poetry. Descended from a family of high officials (his father, Ibrāhīm ʿIsmet was *ḳāḍi 'l-ʿaskar* under Selim III), he became *molla* of Jerusalem (1231/1816), then of Cairo (1236/1820) and Medina (1239-1823); later appointed *naḳīb al-ashrāf* (1246/1830) and *ḳāḍi 'l-ʿaskar* of Anatolia (1249/1833), then of Rumelia (1254/1838), he finally became *shaykh al-islām*, a post which he held for seven years. ʿĀrif Ḥikmet Bey maintained relations with the principal poets of his period, notably Esʿad Efendi, Ziwer Pacha and Ṭāhir Selām. He himself wrote poetry, and his *Dīwān*, which contains poems in Turkish, Arabic and Persian, is considered to be one of the last works of note of the old school of Turkish poetry; in it may be perceived the influence of Nefʿī, Nabī and Nedim (see M. F. Köprülü, *Türk divan edebiyatı antolojisi*, 18th and 19th centuries); this *Dīwān* was printed in Istanbul in 1283/1867. His other works are: *Tedhkire-i Shuʿarā'* (biographies of Turkish poets up to the year 1250/1834); *Madjmūʿat al-Tarādjim*: *Dhayl li-Kashf al-Ẓunūn* (see İbnülemin Mahmud Kemal, *Son asır türk şairleri*, iv, 626-628); *al-Aḥkām al-Marʿiyya fi 'l-Arāḍī al-Amīriyya* (quoted in *Osmanlı müellifleri*); *Khulāṣat al-Maḳālāt fi Madjālis al-Mukālamāt* (MS. in İstanbul University Library, no. 3791; cf. İbnülemin Mahmud Kemal, *ibid.*, 626). ʿĀrif Ḥikmet Bey enjoyed great fame during his lifetime, and Namık Kemal wrote that he was, with Ṭāhir Selām, the most notable poet of the era of Maḥmūd II.

Bibliography: On the life of ʿĀrif Ḥikmet, there are numerous references in the historical and biographical works written in the second half of the 19th century; see in addition: Fāṭima ʿAliyye, *Djewdet Pasha we zamani*, Istanbul 1332, *passim*. On his poetry: the Introduction to his *Dīwān*, written by Meḥmed Ziwer (İstanbul 1283); Gibb, *Ottoman Poetry*, iv, 350 ff., Ibnülemin Mahmud Kemal, *Son asır türk şairleri*, Istanbul 1937, iv, 620 ff., *IA*, s.v. (article by Fevziye Abdullah). (R. Mantran)

al-**ʿARĪSH**, or 'the ʿArīsh of Egypt', the Rhinokorura of the ancients, town on the Mediterranean coast situated in a fertile oasis surrounded by sand, on the frontier between Palestine and Egypt. The name is found as early as the first centuries of our era in the form of Laris. According to the ordinary view, which is presupposed also in the well-known anecdote about ʿAmr b. al-ʿĀṣ's expedition to Egypt, the town belonged to Egypt. The inhabitants, according to al-Yaʿḳūbī, belonged to the Djudhām. Ibn Ḥawḳal speaks of two principal mosques in the town and refers to its wealth of fruit. It was at al-ʿArīsh that King Baldwin I died in 1118. Yāḳūt states that the town contained a great market and many inns, and that merchants had their agents there. Al-ʿArīsh was occupied by Napoleon in 1799; in the following year a treaty was concluded in the town, by which the French were forced to evacuate Egypt.

Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte*, 125; Capitaine Bouchard, *La chute d'el-Arich*, ed. and ann. by G. Wiet, Cairo 1945; Maḳrīzī, *Khiṭaṭ*, *IFAO* ed., iv, 24-7. (F. Buhl*)

ARISṬŪṬĀLĪS or **ARISṬŪ**, i.e., Aristotle, the 4th century B.C. Greek philosopher, the study of whose works became permanently established in the Greek philosophical schools from the first century B.C. onwards.

I. The commentators Nicolaus of Damascus (*saec.* I B.C.) Alexander of Aphrodisias (± A.D. 200), Themistius (*saec.* IV), John Philoponus and Simplicius (*saec.* VI) show the way in which Aristotle was understood in such late Greek teaching. With very few exceptions (cf. below), most of the writings of Aristotle eventually became known to the Arabs in translation, and a great number of the commentaries (which are partly familiar to us in the Greek original, partly only preserved in Arabic versions or even in Hebrew versions from the Arabic) were also thoroughly studied by Arabic teachers of Aristotle and by Islamic philosophical writers. The oriental tradition of Aristotle reading follows his late Greek interpreters without a gap, and the medieval Western tradition depends as much on the Islamic study of Aristotle (particularly in the huge sections of Al-Fārābī, Ibn Sīnā and Ibn Rushd made available to the Schoolmen) as on the late Greek and Byzantine expositions of his thought. A. is without reservation considered by most Arabic philosophers as the outstanding and unique representative of philosophy from al-Kindi (cf. *Rasā'il* I, 103, 17 Abū Rīda) to Ibn Rushd's unqualified praise (*Comm. Magnum in Arist. De anima* III, 2, 433 Crawford): Aristotle is 'exemplar quod natura invenit ad demonstrandum

ultimam perfectionem humanam'. A. is often referred to as 'the philosopher'. He is by implication 'the first teacher', al-Fārābī being described as the second (*al-muʿallim al-thānī*).

Since a full survey of Muslim Aristotelianism would virtually constitute a complete history of Islamic philosophical thought, it must be sufficient to point out the main facts and name the instruments of study at present available. In agreement with the Greek commentators Aristotle is understood as a dogmatic philosopher and as the author of a closed system. He is, moreover (again in a way not unknown to the Greek neo-Platonic teachers), supposed to agree with Plato in all the essential tenets of his thought or, at least, to be complementary to him. The Arabs could even go as far as to credit Aristotle himself with neo-Platonic metaphysical ideas, and it is hence not altogether surprising that extracts from a lost Greek paraphrase of Plotinus and a rearrangement of a number of chapters of Proclus's *Elements of Theology* could pass as Aristotle's *Theology* and Aristotle's *Book of the Pure Good* or *Liber De Causis* respectively.

The Arabs eventually became acquainted with almost all the more important lecture-courses of Aristotle, with the exception of the *Politics*, the *Eudemian Ethics* and *Magna Moralia*. They had no translation of the *Dialogues*, which had become less popular in post-Hellenistic times. Their knowledge of Aristotle thus went far beyond the few logical writings known to the early Latin Middle Ages in Boethius's translation, and comprehended the whole late Greek syllabus (cf. also the interesting passage *Comm. in Arist. Graeca* iii/1, xvii f.). Surveys of the treatises and the ancient commentaries known are to be found in Ibn al-Nadīm, *Fihrist*, 248-52, Flügel (347-52 in the Egyptian edition) and Ibn al-Ḳifṭī, *Taʾrīkh al-Ḥukamā*, 34-42 Lippert. It is odd that Ibn al-Ḳifṭī *op. cit.*, 42-8 (cf. Ibn Abī Uṣaybiʿa, *ʿUyūn al-Anbāʾ fī Ṭabaḳāt al-Aṭibbāʾ* I 67 ff.) has preserved an otherwise lost but originally Greek list of Aristotle's writings ascribed to a Ptolemy, cf. A. Baumstark, *Syrisch-Arabische Biographien des Aristoteles*, Leipzig 1900, 61 ff. and P. Moraux, *Les listes anciennes des ouvrages d'Aristote*, Louvain 1951, 289 ff.

Aristotle's lecture courses did not become known to the Arabs in their entirety at once, but in stages. The first texts translated of which we are informed are, in conformity with the syllabus followed in the Syrian monastic schools and by Greek patristic writers, limited to formal logic, i.e. Porphyry's *Isagoge*, *Categories*, *De Interpretatione* and part of the *Prior Analytics*. The first translator of Aristotle whose work is known (although still unedited) is Muḥammad Ibn ʿAbdallāh, the son of the famous Ibn al-Muḳaffaʿ (cf. P. Kraus, *RSO* 1933). The *Topics* and the *Posterior Analytics* and *Rhetoric* and *Poetic* (which belong to the logical writings in late Greek tradition) were soon added but it was not before the foundation of the *bayt al-ḥikma* during the reign of al-Maʾmūn that non-logical writings by Aristotle were made accessible as well. Details about the history of the early translations are still scarce, but 'ancient' versions of the books *On the Heaven*, the *Meteorology*, the main zoological writings, the greater part of the *Metaphysics*, the *Sophistici Elenchi* and (most probably) the *Prior Analytics* have survived until the present day; whilst the so called *Theology of Aristotle* (cf. above) was also translated at this early stage. Al-Kindī's understanding of Aristotle is based on these translations (cf. M. Guidi-R. Walzer, *Studi su al-Kindī I, Uno scritto introduttivo allo studio di Aristotele*, Rome 1940). Ḥunayn b. Isḥāḳ and his son Isḥāḳ and other associates of this renowned centre of translations of philosophical, medical and generally scientific Greek works produced a great number of partially improved and partially first translations of Aristotle. The translators sometimes worked from the Greek original, sometimes from older or recent intermediate Syriac translations. The better ones were eager to establish a Greek text before they started upon their task. We eventually find a well established tradition of Aristotle reading in the 10th century, in Baghdād, upheld by Christian Arabic philosophers such as Abū Bishr Mattā and Yaḥyā b. ʿAdī and others who considered themselves, probably correctly, as late descendants of the Greek philosophical school of Alexandria. The syllabus which they followed was partly based on earlier translations and partly on translations of their own (made from older or recent Syriac translations), since most of the representatives of this school were no longer able to read Greek. Al-Fārābī's acquaintance with Aristotle presupposes the achievement of this circle (his treatise *On Aristotle's Philosophy* will be published by Muhsin Mahdi), and all the subsequent Islamic philosophers equally base themselves on the same corpus of translations which had eventually emerged (after an activity of almost 200 years) in Baghdad and spread from there all over the Islamic world, from Persia to Spain. The work of these translators seems to have surpassed even Ibn Rushd in accuracy and knowledge of textual variants. These Arabic versions of Aristotle are certainly not without importance for the establishment of the original Greek text, and they deserve the same attention as a Greek papyrus or an early Greek MS. or the variants recorded in Greek commentators. They help us moreover to get a more common sense view of the history of texts in general.

The Greek commentators became known to the Arabs together with the text of Aristotle. We meet their influence in different forms: Full texts comprising the lemmata of the Aristotelian groundwork, terse paraphrases by Themistius and his like, shorter surveys of the argument of individual treatises, and marginal notes in manuscripts which quote sentences and views taken from the larger works. Not many of the translations of these Greek commentaries have survived, since they were used by the Arab successors of the Greek Aristotelian scholars who wrote commentaries and monographs in their own name. Of these, again, not very many have come down to us in the original text. Not one of Al-Fārābī's commentaries on Aristotelian treatises has yet been traced in any library. Ibn Badjdjā's elaborate summaries of works of Aristotle are still unedited. A certain number of Ibn Rushd's shorter and more elaborate commentaries are also known, whilst more survive only in Hebrew and Latin translations.

A list of the works of Aristotle (mentioning the more important spurious ones as well) which are at present available for study is following.

I

Categories. Al-Ḥasan b. Suwār's edition of Isḥāḳ b. Ḥunayn's translation was published, with all the marginal comments to be found in Paris Bibl. Nat. Ar. 2346, a French translation of the notes and an index of terms by Khalil Georr, *Les Catégories d'Aristote dans leurs versions Syro-Arabes*, Beirut 1948 (cf. *Oriens* 6, 1953, 101 ff.). Other edition

(without the marginal notes) by A. Badawi, *Manṭiḳ Arisṭū*, 1-55, 307 f., 673 ff. Ibn Rushd's *Middle Commentary* is available (together with a critical text of the groundwork) in an edition by M. Bouyges, *Bibliotheca Arabica Scholasticorum*, tom. IV, Beirut 1932.

De interpretatione: Best edition of Isḥāḳ b. Ḥunayn's translation by I. Pollack, Leipzig 1913. Other edition by A. Badawī, *op. cit.*, 57-99.

Prior Analytics: Al-Ḥasan b. Suwār's edition of Theodorus' (Abū Qurra's?) translation with copious marginal comments was published for the first time by A. Badawī, *op. cit.*, 103-306 (cf. *Oriens* 6, 1953, 108-28).

Posterior Analytics: First edition of Abū Bishr Mattā's translation (based on Ishaḳ b. Ḥunayn's Syriac version) and later scholars' marginal comments published by A. Badawī, *op. cit.*, 309-462 (cf. *Oriens* 6, 1953, 129 ff.

Topics: First editions of Abū ʿUthmān ad-Dimashḳī and Ibrāhim b. ʿAbd Allāh's translations and later scholars, marginal comments published by A. Badawī, *op. cit.*, 467-733.

Sophistici Elenchi: First edition of three translations (Yaḥya b. ʿAdī, ʿIsā b. Zurʿa and Ibn Nāʿima) by A. Badawī, *op. cit.*, 736-1018. C. Haddad, *Trois versions inédites des Refutations Sophistiques*, Thesis, Paris 1952.

Rhetoric: No edition of cod. ar. 2346 Paris exists, cf. S. Margoliouth, *Semitic Studies in memory of A. Kohut* (Berlin 1897), 376 ff. S. M. Stern, *Ibn al-Samḥ*, *JRAS* 1956, 41 ff. F. Lasinio, *Il commento medio di Averroë alla Retorica di Aristotele* (Florence 1877—edition of part of book I). A. M. A. Sallam, *Averroes' commentary on the third book of Aristotle's Rhetoric*, Thesis (Oxford 1952), Typescript.

Poetics: Editions of Abū Bishr's translation by D. S. Margoliouth (1887, Latin translation 1911), J. Tkatsch (*Die arabische Übersetzung der Poetik und die Grundlage der Kritik des griechischen Textes*, 2 vols., Vienna 1928-1932) and A. Badawī (*Arisṭūṭalīs. Fann al-Shiʿr*, Cairo 1953, 85-143). The texts of the *Poetics* by Al-Fārābī (*fī Kawānīn Ṣināʿat al-Shuʿarāʾ*, ed. Arberry, *R.S.O.* 16, 1938), Ibn Sīna (from the *Shifā*, ed. Margoliouth) and Ibn Rushd ('Middle Commentary', ed. Lasinio) are reprinted in the same volume.

Physics: About the Leiden MS (no. 1443) of Isḥāḳ ibn Ḥunayn's translation cf. S. M. Stern, *Ibn al-Samḥ*, in *JRAS*, 1956, 31 ff. A critical edition will be published in the *Bibliotheca Arabica Scholasticorum*. Ibn Rushd's 'Middle Commentary' is available in a Hyderabad edition of 1947: *Rasāʾil I.R.*, fasc. 1.

De caelo: cod. Brit. Mus. Add. 7453 (Yaḥyā b. al-Biṭrīq). A critical edition will be published in the *Bibliotheca Arabica Scholasticorum*. The Hebrew text of Themistius's otherwise lost commentary was edited (with a Latin translation) by S. Landauer, *Commentaria in Aristotelem Graeca* V 4, Berlin 1902. Ibn Rushd's 'Middle Commentary': *Rasāʾil* (cf. above) fasc. 2.

De gen. et corr.: cf. *Rasāʾil Ibn Rushd*, fasc. 3. For a fragment of Alexander of Aphrodisias's lost commentary cf. MS. Chester-Beatty 3702, fol. 168^b.

Meteorology: Translation by Yaḥya b. al-Bitrīḳ in cod. Yeni Cāmi 1179 and Vat. Hebr. 378. *Rasāʾil Ibn Rushd*, fasc. 4.

De naturis animalium (= *On the parts of animals, On the generation of animals, History of Animals*): Translation by Yaḥyā b. al-Bitrīḳ in cod. Brit. Mus. Add. 7511 and cod. Leyd. 166 Gol. G. Furlani, *R.S.O.* 9, 1922, 237.

De plantis (by Nicolaus of Damascus): Isḥāḳ b. Ḥunayn's translation, as revised by Thābit b. Ḳurra, was edited (from cod. Yeni Çāmi 1179) by A. J. Arberry, Cairo 1933-4, and edited a second time by A. Badawī, *Islamica* 16, Cairo 1954, 243 ff. Cf. H. J. Drossaart Lulofs, *Journal of Hellenic Studies* 77, 1957, 75 ff.

De anima: First edition of Isḥāḳ b. Ḥunayn's Arabic version by A. Badawī, *Islamica* 16, Cairo 1954, 1-88 (from cod. Aya Sofya 2450). Anonymous Paraphrase, ed. Aḥmad Fouād al-Ahwānī, Cairo 1950 (cf. *Oriens* 6, 1953, 126 ff. and *JRAS* 1956, 57 ff.). Arabic translation of sections of Themistius's paraphrase (Comm. in Arist. Graeca V 3), cf. M. C. Lyons, *BSOAS* 17, 1955, 426 ff. *Ibn Bādjdja, Paraphrase of Aristotle's De anima*, edition and English translation by M. S. Hasan, Thesis, Oxford 1952 (Typescript). Rasāʾil Ibn Rushd fasc. 5 (other edition Cairo 1950). *Averrois Commentarium Magnum in Aristotelis De anima Libros*, rec. F. S. Crawford, Cambridge Mass. 1953 (critical ed. of the Latin translation). Cf. also Ibn Sīna, *Kitāb al-Inṣāf* 75-116 (ed. Badawī, *Arisṭū ʿinda-l-ʿArab*, Cairo 1947).

De sensu et sensato. De longitudine et brevitate vitae: Ibn Rushd's paraphrases were edited by A. Badawī, *Islamica* 16, Cairo 1954, 191 ff. *Averrois Compendia Librorum qui Parva Naturalia vocantur*, rec. A. L. Shields, Cambridge Mass. 1949 (Latin version).

Metaphysica: First edition of Arabic text (from MSS. Leiden or. 2074 and 2075) of books α, A 5, 987a 5 ff., B-I and Λ by M. Bouyges, in *Bibliotheca Arabica Scholasticorum* V-VII, Beirut 1938-1952 (together with Ibn Rushd's *Great Commentary*). Part of the Arabic version of the commentary on book Λ by Themistius was published by A. Badawī, *Arisṭū ʿindaʾ l-ʿArab*, Cairo 1947, 329 ff.; 12 ff., the full text in Hebrew and Latin by S. Landauer, *Comm. in Aristotelem Graeca* V 4, Berlin 1903 (the Greek original is lost). For Alexander of Aphrodisias cf. J. Freudenthal, *Die durch Averroes erhaltenen Fragmente Alexanders zur Metaphysik des Aristoteles*, Berlin 1885. Cf. also Badawī, *Arisṭū etc.*, 3-11 and Ibn Sīnā, *Kitāb al-inṣāf*, 22-33 (ed. Badawī, *Arisṭū etc.*).

Nicomachean Ethics: The last four books have been traced in Morocco, together with a paraphrase of another section of the work ascribed to Nicolaus of Damascus, cf. A. J. Arberry, *BSOAS* 1955, 1 ff. Books 1, 7 and 8 of the '*Summaria Alexandrinorum*' are available in cod. Taimūr Pāshā, *Akhlāḳ* 290.

De Mundo: Translation from the Syriac (by ʿĪsā b. Ibrāhīm al-Nafīsī) in cod. Princetonianus RELS 308, ff. 293^v-303^v. Cf. W. L. Lorimer, *American Journal of Philology* 53, 1932, 157 ff.

2

Fragments of lost works

Eudemus (?): R. Walzer, *Studi Italiani di Filologia Classica*, N.S. 14, 1937, 125 ff.; Sir David Ross, *The Works of Aristotle translated into English* XII, Oxford 1952, 23 (cf. Al-Kindī, *Rasāʾil* I, 179; 281).

Eroticus (?): R. Walzer, *JRAS* 1939, 407 ff.; Sir David Ross, *op. cit.*, 26.

Protrepticus (?): S. Pines, *Archives d'Histoire doctrinale et litteraire du Moyen Age*, 1957 (from Miskawayh, *Tahdhīb al-Akhlāḳ*, ch. 3).

De philosophia (?): S. van den Bergh, *Averroes' Tahāfut al-Tahāfut*, London 1954, II 90.

3

Books attributed to Aristotle in Arabic tradition.

De pomo (*Kitāb al-Tuffāḥa*): J. Kraemer, *Das arabische Original des 'Liber de pomo'* (Köprülü 1608), *Studi Orientali in onore di G. Levi della Vida*, Rome

1956, i, 484 ff. D. S. Margoliouth, *The Book of the Apple, ascribed to Aristotle*, ed. in Persian and English, *JRAS* 1892, 187 ff.

J. Ruska, *Das Steinbuch des Aristoteles*, Heidelberg 1912.

Secretum Secretorum (*Sirr al-Asrār*): ed. A. Badawī, *Islamica* 15, Cairo 1954, 67-171.

Περὶ βασιλείας, ed. J. Lippert, Dissert. Halle 1891. Cf. I. Goldziher, *Der Islam* 6, 1916, 173 ff.

'Theology of Aristotle', based on a probably Greek paraphrase of sections of Plotinus, ed. F. Dieterici, Leipzig 1882 (German translation, ibid. 1883); new edition by A. Badawī, *Islamica* 20, Cairo 1955. Ibn Sīna's comments are published by A. Badawī, *Aristū ʿinda-l ʿArab*, 37 ff. and translated into French by G. Vajda, *Revue Thomiste* 1951, 346 ff. Cf. also S. Pines, *Revue des Études Islamiques* 1954, 7 ff.

'Liber de causis', based on Proclus' *Elements of Theology*, ed. O. Bardenhewer, Freiburg i. Br. 1882 (with German translation); new edition by A. Badawī, *Islamica* 19, Cairo 1955.

II. The Arabic 'Lives of Aristotle' add almost nothing to the information available in Greek texts. To be mentioned are the accounts of his life in the *Fihrist* of Ibn al-Nadīm (cf. above), in Mubashshir b. Fātik's *Mukhtār al-Ḥikam* (cf. J. Lippert, *Studien auf dem Gebiet der griechisch-arabischen Übersetzungsliteratur I*, Berlin 1894, 4 ff. and F. Rosenthal, *Orientalia* 6, 1937, 21 ff.), Ṣāʿid al-Andalusī, *Tabaḳāt al-Umam*, 24 ff., Ibn al-Ḳifti, *Taʾrīkh al-Ḥukamā*, 27 ff. Lippert, Ibn Juljul, *Tabaḳāt al-Aṭibbāʾ wa-l-Ḥukamā* (ed. Fuʾād Sayyid, 1955), 25 ff., Ibn Abī Uṣaybiʿa, *ʿUyūn al-Anbāʾ* I 54 ff. Müller. Sections from these biographies were translated and compared by A. Baumstark, *op. cit.*, 39 ff., 117 ff., 128 ff. A very comprehensive list of all the works and commentaries translated into Arabic (cf. above), to be found in Ibn al-Nadīm and Ibn al-Ḳifṭī was discussed by A. Müller, *Die griechischen Philosophen in der arabischen Überlieferung*, Halle 1873 and M. Steinschneider, *Die arabischen Übersetzungen aus dem Griechischen, Beihefte zum Centralblatt für Bibliothekswesen* V, 1893. The lost Greek catalogue by a still unidentified Ptolemy (cf. above) was published by A. Müller, *Morgenländische Forschungen, Festschrift Fleischer*, Leipzig 1875, 1 ff., by M. Steinschneider in vol. 5 of the Berlin edition of Aristotle, 1870, 1469 ff. and in Aristotle, *Fragmenta*, ed. V. Rose, 18 ff., by A. Baumstark and P. Moraux (cf. above). A new and comprehensive treatment of the whole Arabic biographical tradition is to be found in I. Düring, *Aristotle in the Ancient Biographical Tradition*, Göteborg 1957. (R. WALZER)

ARITHMETIC [see ḤISĀB].

ʿĀRIYYA (A.) or *ʿāriya*, also *iʿāra*, the loan of non-fungible objects (*prêt à usage, commodatum*). It is distinguished as a separate contract from the *ḳarḍ* or loan of money or other fungible objects (*prêt de consommation, mutuum*). It is defined as putting some one temporarily and gratuitously in possession of the use of a thing, the substance of which is not consumed by its use. The intended use must be lawful. It is a charitable contract and therefore "recommended" (*mandūb*), and the beneficiary or borrower enjoys the privileged position of a trustee (*amīn*); he is not, in principle, responsible for damage or loss arising directly from the authorized use of the object. In working out the details, however, the several schools of law differ greatly, the doctrines of the Ḥanafīs and of the Mālikīs being more favourable to the borrower than those of the Shāfiʿīs and of the Ḥanbalīs.

Bibliography: E. Sachau, *Muhammedanisches Recht nach schafiitischer Lehre*, Stuttgart and Berlin 1897, 457 ff.; D. Santillana, *Sommario del diritto malichita di Ḫalīl ibn Isḥāq*, II, Milan 1919, 417 ff.; id., *Istituzioni*, II, 373 ff.; O. Pesle, *Le crédit dans l'Islam malékite*, Casablanca (n.d.), 31 ff.; *G. Bergsträsser's Grundzüge des islamischen Rechts*, ed. J. Schacht, Berlin and Leipzig 1935, 76 f.; H. Laoust, *Le précis de droit d'Ibn Qudāma*, Beirut 1950, 101; A. Querry, *Droit musulman, recueil de lois concernant les musulmans schyites*, I, Paris 1871, 537 ff.; ʿAbd al-Raḥmān al-Djazīrī, *al-Fiḳh ʿala 'l-madhāhib al-arbaʿa*, III, Cairo 1354/1935, 366 ff. (ED.)

AL-**ARḲAM**, an early companion of Muḥammad's, commonly known as al-Arḳam b. Abi 'l-Arḳam, and having the *kunya* Abū ʿAbd Allāh. His father's name was ʿAbd Manāf, and he belonged to the influential clan of Makhzūm at Mecca. His mother's name is variously given, but she is usually said to be of the tribe of Khuzāʿa. As al-Arḳam's death is placed in 53/673 or 55/675 at the age of over eighty, he must have been born about 594; and he must have become a Muslim when very young, since he was one of the earliest converts, one source alleging that he was seventh, another twelfth. For reasons which are not stated he was in a position, perhaps round about the year 614, to offer to Muḥammad the use of his house on the hill of al-Ṣafā, and this was the centre of the new community until after the conversion of ʿUmar b. al-Khaṭṭāb. Ibn Saʿd frequently says that conversions and other events took place when Muḥammad was in the house of al-Arḳam or before he entered it, but Ibn Hishām is silent on the subject. Al-Arḳam migrated to Medina with Muḥammad and was at Badr and on the other chief expeditions, but was not prominent in any way. The house, which contained a place of worship (*masdjid* or *ḳubba*) remained in the family till the caliph al-Manṣūr purchased it. It passed into the hands of al-Khayzurān, mother of Hārūn al-Rashīd, and came to be known as "the house of al-Khayzurān".

Bibliography: Ibn Saʿd, iii/1, 172-4; Ibn al-Athīr, *Usd al-Ghāba*, i, 59 f.; Ibn Ḥadjar, *Iṣāba*, Calcutta 1856-73, i, 205; Ibn Hishām, 457; al-Wāḳidī (tr. by J. Wellhausen as *Muhammed in Medina*), Berlin 1882, 67; F. Wüstenfeld, *Chroniken der Stadt Mekka*, Leipzig 1858-61, iii, 112, 440; Caetani, *Annali*, i, 261 f., with further references. (W. MONTGOMERY WATT)

ARKĀN [see RUKN].

ARKUSH (Span. Arcos). There are at least twenty places in Spain which bear this name, which is also given to a large number of rivers, streams, ravines and river basins, either in the sing. Arco or the plur. Arcos; there is also a commune, $4^1/_2$ m. (7 km.) from Valencia, which retains the Arab name Alacuas (*al-Aḳwās*, the Arcos). As regards the history of Muslim Spain, the most important of these localities is Arcos de la Frontera, north-west of the province of Cádiz, on the last western spurs of the sub-Betic chain and in the grape-growing region of the *campiña* of Seville. It numbers about 30,000 inhabitants, and its situation is extremely interesting both from the point of view of geography and of strategy, because it occupies the axis of a rock-mass which is lapped by a sharp bend of the Guadalete; throughout the Middle Ages, its important *castillo* and its suburbs were at different times razed and repopulated. Numerous traces of the prehistoric era, concrete evidence and Roman paving-

stones prove its antiquity. Arcos declared for ʿAbd al-Raḥmān I when the latter undertook his campaign against Yūsuf al-Fihrī; it was subsequently sacked by Shaḳyā b. ʿAbd al-Wāḥid al-Miknāsī, leader of the most important and most dangerous Berber revolt against the first Umayyad *amīr*. During the Arab-*muwallad* conflict at the end of the 3rd/9th century in the region of Seville, the rebel *castillos* of Arcos, Jerez and Medina Sidonia were assaulted by the troops of the *amīr* ʿAbd Allāh. Yūsuf b. Tāshufīn stopped at Arcos on his way to Zallāḳa. The Almohad caliph Yaʿḳūb al-Manṣūr, in his campaign of 586/1190 against Portugal, concentrated his troops at Arcos de la Frontera; from there he dispatched his cousin al-Sayyid Yaʿḳūb b. Abī Ḥafṣ against Silves, while he himself proceeded to lay siege to Torres Novas and Tomar. Ferdinand III took possession of Arcos in 648/1250, after having captured Granada; its Muslim inhabitants rose in revolt in 659/1261, and it was reduced to submission by Alfonso the Learned in 662/1264. In 739/1339, when the Marīnid *amīr* Abu 'l-Ḥasan undertook his Andalusian campaign, which resulted in his defeat at the battle of the Salado or Tarifa, the Andalusian Councils routed the troops of prince Abū Mālik a short distance from Arcos, and put him to death on the banks of the Barbate, which marked the frontier between the two countries. Up to 856/1452, the Moors of Granada encroached on the territory of Arcos, which for two centuries was a frontier town, kept constantly on a war footing and thus deserving its name of Arcos de la Frontera.

ARMAN [see ARMĪNIYA].

ARMĪNIYA, Armenia, a country of Hither Asia.

I. Geographical Outline.

Armenia is the central and most elevated part of Hither Asia. Encompassed between two mountain chains, the Pontic chain to the north and the chain of the Taurus to the south, it lies between Asia Minor to the west of the Euphrates, Ādharbāydjān and the region south-west of the Caspian (on a level with the confluence of the Kurr [Kura] and the Araxes) to the east, the Pontic regions to the north-west, the Caucasus (from which the line of the Rion and the Kurr separates it) to the north, and the plain of Mesopotamia to the south (area of the Upper Tigris). To the south of Lake Van, Gordjaïk (the ancient Gordyene, now Bohtan) and the land of the Hakkiari Kurds (the region of Djulamerk and Amadiye) form geographically a part of Armenia, although they have not always been subject to the Armenians. Armenia thus embraces almost the whole of the territory extending between long. 37° and 49° East and lat. 37.5° and 41.5° North. Its area can be estimated at about 300,000 sq. kms.

The geological framework of the land consists of mountains having an archaean core and covered with sedimentary strata and tertiary deposits, but vast volcanic masses and lava flows of more recent date have modified its structure. High plains extend between the mountain ranges and vary in altitude from 800 to 2 000 metres (Erzerūm: 1,880 m.; Kars: 1,800 m.; Mūsh on the Murād Ṣū: 1,400 m.; Erzindjān: 1,300 m.; Erivān: 890 m.). The eruptions have produced a whole series of volcanic cones which are among the highest peaks in the land: Ararat (5,205 m.) to the south of the Araxes; the Sīpān dāgh (4,176 m.), already known to al-Balādhurī (ed. De Goeje, 198. Cf. *Zeitschr. für arm. Philol.*, ii, 67, 162; Le Strange, 183); the Bingöl dāgh (3,680 m.) to the south of Erzerūm; the Khoridāgh (3,550 m.), the Ala-dāgh (3,520 m.), and the Alaghöz (4,180 m.) which forms to the north an almost completely isolated massif.

Armenia is the cradle of great rivers: the Euphrates, the Tigris, the Araxes and the Kurr (Kura). The Euphrates is formed through the confluence of two branches, the northern branch or Ḳara Ṣū (Ar. Furāt) and the southern branch or Murād Ṣū (Ar. Arsanas) which come from the Armenian plateau; the Tigris is born in the border range of the South called the Armenian Taurus. While the system of the Tigris and the Euphrates irrigates the lands inclined towards the Persian Gulf, the Araxes (Ar. al-Rass, [*q.v.*]) which comes from the Bingöl dāgh, waters the lands turned towards the Caspian Sea and, before flowing into it, joins the Kurr which, with its parallel prolongation, the river Rion, a tributary of the Black Sea, separates the Caucasus sharply from Armenia. The Euphrates and the Araxes cut deeply into the Armenian plateau and these breaches facilitate the drainage of water with the result that Armenia has but a small number of lakes, Lake Van (1,590 m.) called in Arabic the lake of Khilāṭ and Ardjīsh [*q.v.*] and the Gök Čay [*q.v.*] or Sevanga (2,000 m.) mentioned already in 1340 by al-Mustawfī, and several smaller lakes.

The orographical and hydrographical systems of Armenia are such that the land is divided into a number of basins separated the one from the other by high mountains, a fact that helps to bring about the feudal disunion in which the Armenians have always lived.

The climate of Armenia is very severe. The winter lasts regularly for eight months on the plateau, the short and very hot summer rarely exceeds two months; it is very dry and crops have need of artificial irrigation. The region of the plains along the Araxes enjoys, however, a more favourable climate. The snow-line in the mountains of the South lies at 3,300 m., but rises to 4,000 m. in eastern Armenia.

II. History.

1. — Armenia before Islam.

Armenia is thought to have been inhabited towards the 17th century B.C. by an Asiatic people, the Hurrites, who were neither of Semitic nor of Indo-European origin; this people was organised in the first half of the second millennium by a conquering Indo-European aristocracy and later became subject to the Hittite empire and thereafter to the Assyrians. In the 9th century B.C. a people closely related to the Hurrites, the Urartians, also called Khaldi, established there the powerful kingdom of Urartu (the biblical Ararat), of which Lake Van formed the centre. This kingdom, which had to fight against the Assyrians, attained its apogee in the 8th century, but was destroyed towards the middle of the 7th century by the Cimmerian and Scythian wave that flowed over Hither Asia. During and after these changes an Indo-European people of the Thraco-Phrygian family, a branch, probably, of the Phrygians whose state had just been destroyed by the Cimmerians, came from the West and conquered Urartu. These new inhabitants were called Armenians by the Achaemenid Persians (Greek: Ἀρμένιοι), a name of

which the meaning and origin are still unexplained, and the region became known in the course of time as Armenia. The Armenians, however, call themselves Haik (from the name of the hero who led the Armenian people to the conquest) and refer to their land as Hayastan.

The Armenians, save in the time of Tigranes II (Tigranes the Great), have never played a dominant rôle in Hither Asia. The reasons for this were, to a large degree, the feudal régime favoured by the geographical nature of the country and itself a source of internal dissensions, and also the proximity of powerful empires. From the time of their settlement in Armenia the Armenians were vassals of the Medes and then of the Achaemenid Persians who placed the land under the control of satraps. These latter, taking advantage of the troubles caused by the death of Alexander the Great, became veritable kings who afterwards recognised the suzerainty of the Seleucids. When Antiochus III was defeated by the Romans at Magnesia (189 B.C.), the two "strategi" who governed Armenia made themselves independent, took the title of king and formed two kingdoms, the one, Artaxias, in Great Armenia or Armenia proper and the other, Zariadris, in Little Armenia (Sophene-Arzanene). Great Armenia fell afterwards under the suzerainty of the Arsacids. In the first century B.C. a descendant of Artaxias, Tigranes the Great, threw off the Parthian yoke, dethroned the king of Sophene and united all Armenia under his sceptre; having achieved Armenian unity, he established at the expense of the Parthians and the Seleucids a vast Armenian empire and played an important political rôle. After him, however, Armenia was reduced more and more to the role of a buffer state between the two empires, the Arsacid Parthian and the Roman, each of which desired to impose a king of its choice, internal troubles furnishing a perpetual pretext for intervention and encroachments. In general, from the year 11 A.D. down to the fall of the Arsacids in 224, it was, for the greater part of the time, cadets of the Arsacid family who ruled in Armenia, now supporting their relatives in their wars against Rome, and now accepting the Roman protectorate. When the Arsacid Parthians were replaced by the Sāsānids, Armenia, continuing under the rule of Arsacid kings and embracing Christianity at the close of the 3rd century, became once more a new apple of discord between the two empires which in the end reached an agreement to share the weak vassal state. By a partition which took place about 390 Persia received the eastern portion, four-fifths of Armenia, over which Khosraw III reigned with Dwīn (Ar. Dabīl) as capital, while Rome kept the western part where Arshak III ruled at Erzindjān. After the death of Arshak the Romans (Byzantines) entrusted to a count (*comes*) the administration of the land. The Persian part of the country or Persarmenia retained its national princes until 428-9 and was thereafter administered by a Persian *marzbān* residing at Dwīn. According to the Armenian historian Sebeos, the most important native source for the period extending from the 5th to the middle of the 7th century, the Persian domination never succeeded in implanting itself solidly in Armenia, all the more since the Sāsānids persecuted Armenian Christianity. The Armenian lords (the *nakharar*) availed themselves of every opportunity to shake off the detested yoke of the fire-worshippers and in their quarrels with the Persian *marzbāns* invoked frequently the aid of their co-religionists in Byzantine Armenia, a procedure that led to frontier skirmishes and at times to real battles. A wide breach in the community of interests between Armenia and Byzantium was made, however, in 451 by the Council of Chalcedon, the decisions of which were condemned by the Armenians at the Council of Dwīn in 506. This schism, which was definitive despite the efforts of the Greeks to restore union, facilitated political relations between the Armenians of Persarmenia and the court of Ctesiphon, now become more tolerant towards Christianity.

Under the emperor Maurice (582-602) the Byzantines, profiting by the troubles of the Persian empire, reconquered a part of Persarmenia. Armenia now enjoyed a period of peace, but Khusraw II Parwīz (590-628) resumed in 604 against the Byzantines a war which was to last until 629 and was marked by the celebrated campaigns of Heraclius (610-41) in Atropatene.

Throughout the Sāsānid period the intervention of the two great powers, the internal discords between the great families which vied with each other for pre-eminence and the incursions of the Khazars on the north-eastern frontier maintained a complete anarchy in the land. Armenia, ravaged and torn, found itself at the moment of the Muslim invasion in a state of weakness that did not allow it to oppose a strong resistance to the Arab assault. Favoured by this anarchy, there now developed in the region of Lake Van the power of the Ṛshtuni family which had for its base the island of Aghtamar in Lake Van and whose chief Theodore played a great rôle at the time of the Arab invasions.

2. — Armenia under Arab domination.

The history of the conquest of Armenia by the Arabs still presents in its details many uncertainties and obscurities, for the information found in the Arab, Armenian, and Greek sources is often contradictory. The Armenian account by Bishop Sebeos, who speaks to us as an eye-witness of these memorable events, is by far the most important source for this period; to this account there must be added, as a valuable complement, the work of the priest Leontius which constitutes indeed for the years 662-770 the only notable testimony. Among the Arab authors the first place belongs to al-Balādhurī who made use to a unique degree of accounts drawn from the inhabitants of Armenia.

After the conquest of Syria and the defeat of Persia by the Arabs, the latter began to make repeated irruptions into Armenia and to contend with the Byzantines for possession of the land. ʿIyāḍ b. Ghānim, the conqueror of Mesopotamia, undertook between the close of the year 19 and the beginning of the year 20/639-40 a first campaign in south-western Armenia, where he penetrated as far as Bitlīs. Al-Balādhurī (176), al-Ṭabarī (i, 2506) and Yāḳūt (i, 206) agree on the date of this campaign, but differ in regard to its details. A second Arab attack took place, according to the accounts of al-Ṭabarī (i, 2666) and Ibn al-Athīr (iii, 20-1), in the year 21/642. In four corps, two of which were under the command of Ḥabīb b. Maslama and of Salmān b. Rabīʿa, the Muslims advanced into the frontier regions of north-eastern Armenia, but, driven back on all sides, soon had to retire from the land. Nor did the brief razzia carried out in the year 24/645 by Salmān b. Rabīʿa from Ādharbāydjān into the Armenian border territory have any more enduring effect: see, on this raid, al-Yaʿḳūbī, 180; al-Balādhurī, 198; al-Ṭabarī, i, 2806.

According to the evidence of the Arab historians and geographers (see especially al-Yaʿḳūbī, 194; al-Balā̲dh̲urī, 197-8; al-Ṭabarī, i, 2674-5, 2806-7; Ibn al-At̲h̲īr, iii, 65-6), the greatest invasion of Armenia, the one which for the first time reduced the country to effective Arab control, occurred during the caliphate of ʿUt̲h̲mān towards the end of 24/645-6. Muʿāwiya, the governor of Syria, charged the same general Ḥabīb b. Maslama, who had already distinguished himself in the battles of Syria and Mesopotamia, with the conquest of Armenia. The general marched first against Theodosiopolis (Armen. Karin, Ar. Ḳālīḳalā, now Erzerūm), the capital of Byzantine Armenia and took the town after a short siege. He inflicted a heavy defeat on a great Byzantine army which, reinforced by K̲h̲azar and Alan auxiliary troops, had moved forward to stop him on the Euphrates. He turned next towards the south-east in the direction of Lake Van and received the submission of the local princes of Ak̲h̲lāṭ [*q.v.*] and Moks. Ard̲j̲īs̲h̲ on the north-eastern shore of Lake Van also yielded to the Arab troops. Ḥabīb then marched to besiege Dwīn, the centre of Persarmenia, which likewise capitulated after a few days. He concluded a treaty of peace and guarantee with the town of Tiflīs in return for the recognition of Arab suzerainty and the payment of a capitation tax (*d̲j̲izya*). At the same time, Salmān b. Rabīʿa with his army of ʿIrāḳī troops, subjugated Arrān (Albania) and conquered its capital Bard̲h̲aʿa.

The Armenian tradition differs from the Arab tradition in the matter of dates as well as in various details. On one point alone, the direction given to the great Arab invasion, is there complete agreement in Sebeos and al-Balād̲h̲urī, as a comparison of the routes indicated in each of these authors reveals.

According to the Armenian historians, an army entered Armenia in 642, penetrated to the region of Airarat, conquered the capital Dwīn and then left the country by the same route, carrying off 35,000 prisoners. In the next year the Muslims made, from Ād̲h̲arbāyd̲j̲ān, a new irruption into Armenia. They ravaged the region of Airarat and penetrated even into Georgia; a sharp defeat which the prince Theodoros Ṛs̲h̲tuni inflicted on them compelled them, however, to retreat. Soon after this event the emperor recognised Theodoros as commander of the Armenian troops. Armenia, spared the Arab incursions for a number of years, then recognised anew the suzerainty of Byzantium. When the truce of three years concluded between the Arabs and Constans II, the successor of Heraclius, who had died in 641, came to an end in 653, a resumption of hostilities had to be expected in Armenia. In order to prevent a threatening invasion by the Arabs, Theodoros surrendered the land voluntarily to them and concluded with Muʿāwiya a treaty very favourable to the Armenians and which imposed on them only the recognition of Muslim suzerainty. In the same year, however, the emperor, with an army 100,000 strong, appeared in Armenia, where most of the local princes ranged themselves on his side. He brought all Armenia and Georgia once more under his authority without much trouble. Yet scarcely had Constans II left the country (654), having wintered at Dwīn, than an Arab army entered the land in its turn and took possession of the districts on the northern shore of Lake Van. With the aid of these Arab forces Theodoros drove the Greeks from the country once more and was thereafter recognised by Muʿāwiya as prince of Armenia, Georgia and Albania. The attempts of the Greeks, with an army under the orders of Maurianos, to reconquer the lost provinces failed completely. In 655 the Arabs extended their domination over the whole of Armenia and the Greco-Armenian capital Karin (Ḳālīḳalā) had also to open its gates to them. Two years later the Muslims saw themselves constrained, however, to renounce for the time being a possession that was ill assured. When, in the year 36/657, the first civil war between Muʿāwiya and ʿAlī broke out, the former had need of his army of occupation established in Armenia and the country, empty of troops, fell back immediately under its old master, Byzantium.

It transpires from the account of Sebeos that all these events, merged by the Arab sources in the great campaign of Ḥabīb in 24-25/644-646, occurred only after the end of the three year truce; it is on this date, too, that the information in the *Chronography* of Theophanes is based. There is, in the Arab historians, no mention at all of the fact that Armenia, after the first Arab invasion which occurred in the reign of ʿUmar, had been subjected anew to Byzantine domination, nor of the events which unfolded themselves in the land during the period before the accession of Muʿāwiya. That Theodoros Ṛs̲h̲tuni submitted voluntarily to Muʿāwiya, a fact attested not only by Sebeos, but also by Theophanes, would be incomprehensible, if, ever since the first invasion of the Arabs, the country had been subjected to their full authority. According to Ghazarian, who, in the *Zeitschr. für arm. Philol.* (ii, 173-4), has made a close analysis of the divergences between the Arab and the Armenian sources, the contemporary account of Sebeos deserves more trust than the tradition of the Arabs; it is on Ghazarian that Müller relies (*Der Islam im Morgen- und Abendland*, i, 259-61); a different opinion is that of Thopdschian (*Zeitschr. für arm. Philol.*, ii, 70-1), according to whom there can be established in the Armenian and Arab historians a concordance of dates and facts relative to the first great Arab invasion. In the view of J. Laurent, *L'Arménie entre Byzance et l'Islam*, 90, 371, there were six Arab invasions between 640 and 651. H. Manadean, *Brèves Études*, Erivan 1932 (trans. by H. Berberian in *Byzantion*, xviii, 1946-8) has submitted the traditional data to a close criticism and has arrived at the conclusion that until 650 there were only three Arab invasions: (i) in 640, a first invasion through the Taron region and the capture of Dwīn on 6 October 640; (ii) in 642-3, a second invasion by way of Ād̲h̲arbāyd̲j̲ān into Persarmenia; (iii) in 650, a third invasion carried out from Ād̲h̲arbāyd̲j̲ān and marked by the taking of Artsapᶜ in the Kogovit district to the north-east of Lake Van on 8 August 650.

The Arabs, who had carried off Theodoros Ṛs̲h̲tuni in 655 to Damascus, where he died in 656, had set in his place at the head of Armenia Hamazasp Mamikonian, a member of a rival family, the fiefs of which extended from the Taron to Dwīn. Mamikonian took, however, the side of Byzantium and was nominated by Constans II to the command of the country in 657-8. The Byzantine domination did not last long. Muʿāwiya, after he had come to power (41/661), wrote to the people of Armenia, inviting them to recognise anew the Arab sovereignty and to pay tribute, and the Armenian princes dared not oppose this demand. According to the Armenian sources, members of the most notable families (the Mamikonians, the Bagratuni or Bagratids) assumed the government of the land under the first Umayyads down to ʿAbd al-Malik. The Arab historians, on the other hand, describe Armenia as being under the

administration of Muslim governors since the conquest of Ḥabīb (see al-Yaʿḳūbī, al-Balādhurī, al-Ṭabarī for the period extending from ʿUthmān to the ʿAbbāsid al-Muntaṣir, and the list of governors in Ghazarian, *op. cit.*, 177-82, Laurent, *op. cit.*, 336-47, R. Vasmer, *Chronology of the governors of Armenia under the first ʿAbbāsids*, in *Memoirs of the College of Orientalists*, Leningrad 1925, i, 381 ff., in Russian).

The first century of Arab domination in Armenia was, despite the destructive wars, an era of national and literary efflorescence for the country. And yet Muslim rule, in the time of the Umayyads and still less in the time of the ʿAbbāsids, under whom the hand of the Arab governors weighed heavily on Armenia, was not able to implant itself solidly in the land. Disturbances and rebellions were therefore frequent. The greatest and most dangerous insurrection against the Arab yoke occurred in the reign of al-Mutawakkil. The Caliph sent his most skilful general, the Turk Bughā the Elder, with a strong army which, after sanguinary and desperate battles in the year 237-8/851-2, succeeded in overcoming the rebellion. The entire nobility was then carried off into captivity. Al-Mutawakkil renounced his hostile policy only when he had need of his troops to fight the Byzantines and in order to prevent a new uprising fomented by the latter. He therefore freed the captive *nakharar* and recognised (247/861-2) as the chief prince of Armenia the Bagratid Ashot (Ar. Ashūṭ) who had already rendered to the Arab cause most important services. During the twenty-five years of his rule as the prince of princes Ashot won the affection of all his subjects as well as that of the local lords to such a degree that, on the request of these latter, the Caliph al-Muʿtamid conferred on him in 273/886-7 the title of king. He received the same distinction from the emperor, who concluded with him at the same time a treaty of alliance. The relations of Ashot with the Caliph were never troubled; he paid his tribute regularly, but administered and governed his possessions in his own fashion; the native princes likewise acquired during his reign an almost independent status.

After the death of Ashot (862-90) there reigned his eldest son, Smbat I (Ar. Sambāṭ), a man indeed of heroic character, but one who was in no wise capable of withstanding his external foes, the Shaybānids of Diyār Bakr and the Sādjids of Ādharbāydjān. He was unsuccessful in his conflict with the Shaybānids. Nevertheless, a little later in 286/899 the intervention of the Caliph al-Muʿtaḍid brought to an end the Shaybānid domination and delivered the Armenian provinces from these invaders. The Sādjid Afshīn, however, in his thrust towards the west and the north menaced Armenia unceasingly. The situation of Smbat became still more difficult in the time of the astute Yūsuf, the brother and successor of Afshīn (d. 288/901). Yūsuf understood that above all else he must draw to his side the Ardzruni family which had become, since the reign of Ashot I, the most powerful princely house next to that of the Bagratids. About 909 he even conferred the royal crown on the head of this family, Gagik, the lord of Vaspurakan, a distinction that the Caliph al-Muḳtadir renewed in 304/916 and 306/919.

Yūsuf, from the year 910, ravaged Armenia in the course of his expeditions and at length, in the fortress of Kapoit, besieged Smbat, now abandoned by all the princes. In 913 (according to Adontz in 911) the king of Armenia surrendered to his adversary, who, after having inflicted on him a year of imprisonment, had him put to death by cruel tortures (914; according to Adontz 912). Anarchy ensued in Armenia after the fall of Smbat I. His vigorous son, Ashot II, the "Iron King" (915-29), succeeded in recovering the throne with the support of Byzantine arms; he was at first thwarted by Yūsuf who raised against him one of his cousins, but Yūsuf, seeing that Ashot was getting the better of his foes, granted him recognition and sent him a royal crown (about 917). After the capture of Yūsuf, who had risen in revolt, by the troops of the Caliph in 919, his successor Sbuk (Subuk) allied himself with Ashot II in order to drive out the Caliph's forces and bestowed on him the title of Shāhānshāh, a title which recognised as belonging to Ashot suzerainty over the principalities of Vaspurakan, Iberia, Georgia and other regions. Ashot II raised the Bagratid power to its apogee and ruled over the greatest part of central and northern Armenia where Smbat had already considerably enlarged the territory of this family. His reign ended in tranquillity after a reconciliation of the Armenian princes and the nominal recognition of his supremacy by his rivals, notably the Ardzruni. Dwīn, however, remained in the hands of Yūsuf's lieutenant.

In southern Armenia the Ardzruni (see above) ruled over a less extensive territory (Vaspurakan, with Van as the capital). Apart from these two great kingdoms there still existed a series of smaller principalities which for the most part recognised only nominally the suzerainty of the Bagratids. Moreover, in the south, in the region of the Apahunik and Lake Van, there were several Arab emirates, independent but isolated from the Caliphate. The history of Armenia is not therefore conterminous with that of the Bagratids.

Throughout the entire reign of Ashot II and for much of the reign of his successor Abas (929-53) the war between Byzantium and the Arabs continued without interruption and was at times fought out in Armenia. The Greeks operated in northern Armenia as well as in southern Armenia against the Armeno-Arab emirates of Lake Van which, according to the Byzantine sources, were compelled to submit to the emperor Romanus Lecapenus (919-44). The last Sādjid amīrs of Ādharbāydjān retained hardly any influence in Armenia. The Ḥamdānids, who were the masters of Diyār Bakr, bordering on Armenia, and were in constant war against the Byzantines, succeeded for a time in exacting from all Armenia (according to the historians Ibn Ẓāfir and Ibn al-Azraḳ) a recognition of their sovereignty and established a more effective dominion over the Armeno-Arab emirates in the region of Lake Van. These emirates later recognized the suzerainty of Bādh, the founder of the Marwānid dynasty [*q.v.*] of Diyār Bakr, and of his successors.

After the Ḥamdānids, it was the Musāfirids [*q.v.*] of Ādharbāydjān who exacted from the princes of Armenia a recognition of their suzerainty, imposed tribute on them (see Ibn Ḥawḳal[2], 354, for the year 955-6) and became the masters of Dwīn.

Ashot III (952-77) transferred the official capital of the Bagratid kingdom to the little fortress of Anī [*q.v.*] which he and his successor Smbat II, by erecting there magnificent buildings, transformed into a pearl of the Orient. It is during his reign that the territory of Kars was raised to the rank of a kingdom for the benefit of a prince of the Bagratid house and that Byzantium, moreover, in 968 annexed the region of Taron, the fief of another Bagratid.

Smbat II (977-89) and his brother Gagik I (990-1020) ruled with vigour and success but, in consequence of a ridiculous family policy, became involved in almost continual strife with the neighbouring Christian principalities; they were also in conflict with the neighbouring Muslim amirs who in turn took possession of Dwīn, imposed tribute on the Armenians and were at times invited by the Armenians themselves to intervene in their quarrels. Thus the Bagratid of Kars called in a Musāfirid amir against Smbat. In 987-8 Smbat had to recognise the authority of the Rawwādid prince of Ādharbāydjān, the successor of the Musāfirids, and to pay him the tribute due in former years.

In the conflict against the Rawwādid Mamlān concerning the other emirates of southern Armenia Gagik allied himself with Davitʿ of Taikʿ who was the master of a great part of Iberia (Georgia) and, about 993, had seized Malāzgerd from the Marwānid prince of Diyār Bakr. Mamlān was twice defeated, the second time decisively, in 998, at Tsumb near Ardjīsh, and to take refuge in that place.

The emperor Basil II (976-1026) aimed, however, at gaining possession of all the Armenian principalities. Having succeeded in obtaining from Davitʿ of Taikʿ, in 990, the promise that he would cede to him his territories after his death, the emperor annexed Taikʿ and also Malāzgerd in 1001 after the death of Davitʿ. Following the death of Gagik I, troubles arose in the Bagratid kingdom owing to the competition for the throne between his sons, Johannes-Smbat and Ashot IV, the younger brother, to the intervention of the king of Georgia and the king of Vaspurakan in this matter, and to the first Saldjūḳid incursions. Basil II took advantage of these events and succeeded, partly through annexation and partly through mediation between the princes, in extending his authority over Armenia. Senekʿerim, the last Ardzruni, abandoned Vaspurakan to Byzantium in 1021 through fear of a threatening Turkish assault and received in exchange the region of Sebasteia (Sivas), to which were added other territories in Cappadocia (Caesarea, Tzamandos). The Muslim amirates of Lake Van (Akhlāṭ, Ardjīsh, Berkri) were annexed between 1023 and 1034. King Johannes of Anī, intimidated and seeing his lands encircled by Byzantium, proclaimed the emperor his heir, retaining temporary possession of Anī until his death. On the death of Ashot IV (1040), which was soon followed by that of Johannes (1041), with whom he shared possession of the Bagratid realm, the emperor Michael IV resolved at last to incorporate Armenia wholly within his empire, but his army was defeated and the son of Ashot IV, Gagik II, then only 17 years old, was proclaimed king by the Armenian nobles (1042). As soon, however, as Constantine Monomachos had ascended the throne, he decided to annex Anī and, in order to weaken Gagik, did not hesitate to launch against him the amīr of Dwīn, Abū 'l-Aswār, of the dynasty of the Shaddādids of Gandja (see SHADDĀD, BANŪ). Taken between two fires, Gagik allowed himself to be drawn to Constantinople and was obliged to cede Anī (1045). He received in recompense lands in Cappadocia in the themes of Charsianon and Lykandos. Thereafter the greater part of Armenia was governed directly by Byzantium and the discontent provoked by the centralising policy of the empire and the favours granted to the Chalcedonian clergy explain in part the success of the Saldjūḳids in Armenia.

The Bagratid kingdom of Kars was only annexed by Byzantium in 1064 after the Saldjūḳid invasion; the last king Gagik-Abas surrendered it to the emperor Constantine X Ducas, who indemnified him with estates in Cappadocia.

Thus, following their kings, an important part of the Armenian people settled down in the territories of the Byzantine empire. Armenians, however, had long been found outside Armenia. It is well known that they furnished Byzantium with soldiers and a number of generals and even emperors. It was Armenians who, under the famous Melias (Arm. Mleh), colonised the regions of Lykandos, Tzamandos, Larissa and Symposion, when, at the beginning of the 10th century, Byzantium decided to reoccupy these territories of Cappadocia which had been devastated by the Arab raids, and who assured the defence of these lands and at the same time won renown in the Arab-Byzantine wars. There were Armenians, too, in the Muslim territories, serving the Caliphs, but converted to Islam, like the celebrated amīr ʿAlī al-Armanī who died in 863, not long after he had been named governor of Armenia and Ādharbāydjān. Armenians were also to be found in Egypt in the army of the Ṭūlūnids. It is above all in Byzantine territory, however, that the immigration was important and contributed, in the second part of the 10th century to the repopulation of the lands in Cilicia and northern Syria reconquered by Byzantium and evacuated by the Muslim inhabitants. The geographer Muḳaddasī (*BGA* iii, 189) states that in his time the Amanus was peopled with Armenians. Asoghik tells us that under the pontificate of Khačik I (972-92) there were Armenian bishops at Antioch and Tarsus. During the course of the 11th century the rôle of the Armenians in these regions (Cappadocia, Commagene, northern Syria and even Mesopotamia, e.g., at Edessa) was considerable; numerous Armenian officers acted as governors of towns for Byzantium and, profiting from the troubles caused by the first Saldjūḳid invasions, founded Armenian principalities (see ARMAN). During the same period Armenians were to be found with the Fāṭimids of Egypt. Following the Armenian Badr al-Djamālī [*q.v.*] who, after being a slave, had become commander of the Egyptian troops in Syria and then rose to the rank of wazīr at Cairo (1073/94), there entered into Egypt, first, the Armenians with whom he had already surrounded himself, and later all those whom he summoned there and who took service in the army and even in the administration. These Armenians furnished to the Fāṭimid Caliphate a number of wazīrs, of whom one, Bahrām [*q.v.*] remained a Christian. The introduction into Egypt of an important Armenian population led to the creation of numerous Armenian monasteries and churches and also of an Armenian catholicosate. The Armenians were regarded with favour by some of the Fāṭimid Caliphs. See on this subject M. Canard, *Un vizir chrétien à l'époque fatimite*, in *AIEO*, Algiers, xii (1954) and *Notes sur les Arméniens en Égypte à l'époque fatimite*. *ibid.*, xiii (1955). Cf. J. Laurent, *Byzance et les Turcs Seldjoucides dans l'Asie Occidentale jusqu'en* 1081, in *Annales de l'Est*, 28th year, fasc. 2, Paris, 1914 (1919).

(M. CANARD).

II(b). *The Armenians under the Turks and the Mongols.*

While these last events were taking place, the Turkomāns, before long led by the Saldjūḳid dynasty, were conquering Muslim Iran as for as the Armeno-Byzantine borders. Although this thrust was probably not, as is sometimes alleged, the cause of

the first losses of Armenian territory to Byzantium (*JA.*, 1954, 275-9 and 1956, 129-34) it nevertheless constituted a tragic threat to the Armenians in the middle of the 5th/11th century. After a period of Turkomān ravages, the battle of Manāzgird (1071) [see MALAZGERD] marked the end of Byzantine supremacy, and the Turkomāns settled in Armenia, Cappadocia and throughout most of Asia Minor. The Armenian territories on the borders of Ādharbāydjān were incorporated in the Saldjūḳid empire, while those in the centre and west took shape as different principalities: that of Akhlāṭ [*q.v.*], founded by a Saldjūḳid officer and vassal, Sukmān al-Ḳutbī, who assumed the ambitious title of *Shāh-i Arman*; that of Ani [*q.v.*], assigned by the Saldjūḳids to a branch of the former Kurdish dynasty of Arrān, the Shaddādids (V. Minorsky, *Studies in Caucasian History*, 1953, 79-106); and finally the autonomous Turkomān states of the Saltuḳids at Erzerum and the Mangudjakids at Erzindjān, while the Dānishmandids of Cappadocia and the Saldjūḳids of Anatolia and the Taurus contended for possession of Malaṭya, and Diyār Bakr was eventually absorbed by the Artuḳids. The position changed at the beginning of the 7th/13th century, when the greater part of Diyār Bakr and the principality of Akhlāṭ were annexed by the Ayyūbids of Egypt and Syria; later, following the temporary invasion of Armenia and Asia Minor by the Khwārizmians, the principalities of Erzindjān and Erzerum, together with that of Akhlāṭ, were incorporated, as the Dānishmandid territories had been earlier, in the united and powerful Saldjūḳid state of Asia Minor. In the regions of Arrān and Ani however, the Armenians again became, if not independent, at least subjects of a Christian state (but of a different Church), as a result of Georgian expansion at the expense of the Atabeks of Ādharbāydjān and the Shaddādids.

Although some Armenians had made agreements with the invaders, and most in any case had tried to come to terms with them, the devastation caused in the early stages had accentuated and increased the emigration which had been set in motion by Byzantine policy, and which now took the direction of the Taurus Mountains and the Cilician plain. For a time, after Manāzgird, all the territories from the Cilician Taurus to Malaṭya, including Edessa and Antioch, were reunited under the control of a former Armeno-Byzantine general, Philaretes, whose descendants still maintained their position in the Taurus at Edessa and Malaṭya, under Turkish suzerainty, at the time of the arrival of the Crusaders. The Armenian populations of the Syro-Euphrates borders were then incorporated in the free states of Antioch and Edessa, but, in Cilicia, a national dynasty, that of the Rupenians, gradually achieved freedom; its rise, sanctioned in 1198 by the recognition of the royal title of Leo the Great, attracted so many Armenians that the area could with justice be referred to as a "Little Armenia". We are not required here to follow its history, but only to draw attention to the fact that the struggle against his neighbours and hostile factions impelled Prince Mleh temporarily (from 1170 to 1174) to become a Muslim in order to obtain the protection of Nūr al-Din [*q.v.*], and that for a longer period, in the 7th/13th century, under the new Hethumian dynasty, the kingdom had to wage hard battles against the Saldjūḳids of Asia Minor, to whom they were obliged at intervals to pay a vague allegiance (cf. a treatise by P. Bedoukian in course of publication for the Amer. Numismatic Society).

Nevertheless, once the initial devastation was over, and stable states had been organised, the lot of the Armenians under Muslim domination was no worse than it had been under earlier Muslim régimes. Quite apart from Malikshāh, whose generosity the Armenian historians are unanimous in praising, it is difficult to see major difficulties occurring in the principalities of Asia Minor, where there remained an ecclesiastical organisation, monasteries, some cultural activity (cf. for example S. Der Nersessian, ***Armenia and the Byzantine Empire***, Harvard 1947, 133), and large Armenian towns, such as Erzindjān and Erzerum. The only dramatic events which occurred were due to special causes. There was first of all, about 1180, the massacre of the Armenians of Djabal Sassūn, as a result of the disorders among the almost autonomous Turkomāns and Kurds of that region, and especially, the massacre of part of the Christian population of Edessa, at the time of the recapture of the city from the Franks by Zangi in 1144 and Nūr al-Dīn in 1146.

Fundamentally, in fact, it was not for religious but political reasons that the Armenians at different times suffered at the hands of their Muslim masters. Despite some friction, the Armenians of the west generally acted as "accomplices" of the Franks. This was the reason, moreover, for the frequent disputes in the Armenian Church, especially between the Armenians of the Muslim States of Great Armenia, who were primarily concerned not to incur the ill-will of their masters, and those of Cilicia, who were drawn more towards the Latin world; and it was similarly the attitude of the Armenians to the Mongol invasion which determined the reactions of the Muslim powers towards them.

The establishment of the Mongol empire heralded profound changes in the conditions of life in the different religious communities of the Near East. In the Muslim states conquered by them, the Mongols usually relied on the support of the religious minorities, Christians in particular. Favourably impressed by the news received from his eastern co-religionists, Hethum I acted as the precursor of the Mongols on the shores of the Mediterranean, against the Muslims of Syria and Asia Minor. But this action of the Armenians in itself provoked the wrath of the Muslims, with the result that, when the Mamlūks of Egypt took the offensive against the Mongols, the Cilician kingdom was one of their principal targets. The break-up of the Mongol empire in the 8th/14th century left the Armenians defenceless, and the capital of the Cilician kingdom, Sis, succumbed in 1375. The seat of the Katholikos was moved back to Etchmiadzin, near the Araxes, in the 9th/15th century.

In Great Armenia, however, the situation was not favourable for long. About 1300, the Mongols became Muslims, and, although their toleration was not affected, all the same there was no longer any question of special protection. Moreover, Mongol rule had increased in Armenia the size of the nomad element, primarily Turkomān, which inflicted great injury on the peasants, for the most part Armenians. Later Great Armenia, in common with all its neighbours, experienced the savage assault of Tīmūr, and the establishment in the 9th/15th century of a stable and well-organised principality under the Turkomān dynasty of the Aḳ-Ḳoyunlu [*q.v.*] was not sufficient to restore the former strength of the Armenian community; again many Armenians emigrated, this time mainly to the regions north of the Black Sea. The wars between the Ottomans and the Ṣafawids

were still to be fought on Armenian soil, and part of the Armenians of Ādharbāydjān were later deported as a military security measure to Iṣfahān and elsewhere. Semi-autonomous seigniories survived, with varying fortunes, in the mountains of Ḳarabagh, to the north of Ādharbāydjān, but came to an end in the 18th century.

Bibliography: (in addition to the general works): the general sources, in all languages, for the history of the Near East from the 11th to the 15th century will not be enumerated here; a study of these will be found, with regard to the period of the Crusades, in *Syrie du Nord* mentioned below, 1-100; special attention will be drawn here to the not inconsiderable number of 12th and 13th century Armenian historians, especially Matthew of Edessa and the anonymous "Royal Historian" used in the works of Alishan mentioned below (an edition of the text has been prepared by Skinner), and to the historians of Great Armenia at the time of the Mongol conquest; in connexion with the latter, the *History of the Nations of the Archers*, for long attributed to Malachi the Monk, has been restored by its editor-translators R. P. Blake and R. N. Frye (*Harvard Journal of Asiatic Studies*, xii, 1949) to its real author Gregory of Akanc). For the last two centuries of the Middle Ages, only one noteworthy Armenian chronicle exists, that of Thomas of Medzoph, part of which has been made accessible in French by F. Nève, *Exposé des guerres de Tamerlan* etc., Brussels 1860; for the Ṣafawid period, Arakel of Tabriz, trans. by M. F. Brosset, *Collection d'Auteurs arméniens*, i.

Modern works: J. Laurent, *Byzance et les Turcs Seldjoucides*, 1920; Cl. Cahen, *La première pénétration turque en Anatolie*, *Byzantion* 1948; idem, *La Syrie du Nord à l'époque des Croisades*, 1940; the histories of the Crusades of de Grousset, Runciman, and the syndicated *History of the Crusades* of Philadelphia; L. Alishan, *Sissouan*, French trans., Venice 1899; the Introduction by Dulaurier to *Recueil des Historiens des Croisades*, *Historiens arméniens* i. Among other special studies of recent date, O. Turan, *Les Seldjoucides et leurs sujets non-musulmans*, in *Studia Islamica*, i, 1953.

(CL. CAHEN)

II(c) *Ottoman Armenia.*

The Ottomans conquered western Armenia in the last decade of the 14th century, under Bāyezīd I, and eastern Armenia in the following two centuries under Meḥemmed II and Selīm I. They eventually became masters of the whole of Armenia, Great and Little (separated *grosso modo* by the upper reaches of the Euphrates), except the Khanate of Erivan (or rather Erevan), in Persian and Turkish Revan, a region containing the patriarchal seat of Ečmiadzin (in Turkish *Üč Kilise*) and relics of the ancient capitals of the Kings of Armenia. This region, situated in Transcaucasia on the middle Araxes, for long disputed by Turks and Persians, was ceded by the treaty of Türkmen-Čay (1 February 1828) to the Russians, who have since created from it the Soviet Federal Republic of Armenia. In the south of this region is situated Mt. Ararat (in Turkish Aghrī Dagh, in Armenian Masis), on which western expeditions periodically seek and claim to discover the wreckage of Noah's Ark. It is the point where the Turkish, Persian and Russian frontiers meet.

The province of Kars on the other hand, ceded to the Russians in 1878, was recovered by Turkey in 1918.

Ottoman administrative terminology—especially with respect to the programmes of reforms promised to the European Powers—adopted the term *wilāyāt-i sitte* "the six provinces (*scil.*, populated by Armenians)": *viz.*, Van, Bitlis (alternating with Mush), Erzerum, Harput, Sivas and Diyārbekir. No account was taken by this convention of the *sandjak* of Marash, forming part of the former *wilāyet* of Aleppo, or of the former *wilāyet* of Adana (Cilicia or Little Armenia in the strict sense of the term).

Turkish domination did not result in the assimilation of the Armenians, who were preserved by the difference of religion. Many Armenians, especially among the men and the Catholics, adopted Turkish as their second, or even as their first language.

After the capture of Constantinople an important change occurred in the life of the Armenian community. Up to 1453 it had at its head three patriarchs or *katoghikos* (katholikos): (1) the patriarch of Ečmiadzin, restored to this monastery since 1441; (2) the patriarch of Sis (now Kozan) in Cilicia, who had resided in this town since 1292 and did not recognise (1); (3) the patriarch of Aghtamar, (a small island in the Lake Van), since 1113. The Armenian bishop of Jerusalem also bore the title and ornaments of a patriarch.

After the conquest of Byzantium, Meḥemmed II, true to his political views, summoned to Istanbul the Armenian bishop of Brusa, Joachim, and made him a patriarch with the same prerogatives the patriarch of the Greek Orthodox Church. In this way the Armenian "nation" (Turkish *millet*) was formed. A council of the clergy and a council of the laity assisted the patriarch who was elected from the "prelates" superior to the ordinary bishops and called *markhassa*, properly "saint priest" (from the Syriac *mārḳassa*; the etymology through the Turko-Arabic *murakhkhaṣa* must be rejected). The residence of the patriarch of Constantinople is in the Kum Kapu quarter.

From then on on a better footing, the Armenians succeeded in occupying an important position in Turkey, notably as bankers (*ṣarrāf*, properly "money-changers"). Ubicini (*Lettres sur la Turquie*, 1854, ii, 311-14) gives interesting details about the position of genuine strength which they had achieved in their dealings with the provincial pashas and the Ottoman government in general. They were also merchants (often cloth merchants) and active caravan leaders who maintained connexions between Istanbul, Moldavia, Poland (Lemberg, Lwów), Nuremburg, Bruges and Antwerp. As artisans they were architects, house-painters, manufacturers of silk stuffs and gunpowder, and printers (Armenian printing-press at Istanbul in 1679). Like the Jews they were exempt from military service until the revolution of the Young Turks.

The most important events in the history of Ottoman Armenia are:

1) The religious schism, which resulted in the formation of a (Uniate) Catholic Community and internal persecution (Protestant propaganda played a less important part);

2) The revolutionary activity;

3) The repression and massacres.

Roman propaganda had been sporadically effective in Armenia since the 12th century. It was resumed by the oecumenical council of Florence (1438-45) and, in 1587, by the famous Pope Sixtus Quintus, among the Armenians of Syria, but found its greatest driving force in Mechitar (born at Sivas in 1675, died Venice 1749). Converted to Catholicism by the Jesuits, he

succeeded in founding a remarkable order which bore his name. The Republic of Venice ceded in 1717 to the Mechitarists the small island of Saint-Lazare, near Lido, where their monastery was installed in an old leper hospital. After the death of Mechitar a schism occurred, and a certain number of clergy retired to Trieste and then to Vienna (1810). There was also a subsidiary branch of the order at Padua which, transferred to Paris, continued to exist there for twenty years. The Mechitarists possessed rich libraries (numerous oriental MSS.), and printing-presses; from these they published historical and philological works which gave a place to Turkish as well as Armenian studies.

Even during the lifetime of Mechitar the over-zealousness of Catholic propaganda, which was gaining ground in the richest and most enlightened section of the Armenian community, provoked a lively reaction among the patriarchs of the Gregorian persuasion. The latter were supported by the Ottoman government, which regarded with disfavour these "Frankish plots".

There were martyrs among the Armenian Catholics who refused to abjure their faith, as in the case of Der Gomidas or Don Cosme and two of his followers (1707). He was the grandfather of Cosme Comidas of Carbognano, an interpreter at the Spanish embassy and author of a Turkish grammar in Italian (Rome, 1794). The Catholics suffered further presecutions in 1759, and even during the reign of the reforming Sultan Maḥmūd II, in 1815 and 1828.

They found allies, on the other hand, in the French ambassadors and the Jesuits. Thus the imprudent M. de Ferriol secured from the Porte the banishment of the patriarch Avedis, who was hostile to the Catholics, after which the latter was abducted and incarcerated in the Bastille. He died in 1711 at Paris in the house of François Pétis de la Croix. The Jesuits at the same period secured the closure of the Armenian printing-press.

In 1830 General Guilleminot, who also was a French ambassador, secured for the Catholics a separate ecclesiastical organisation, and in 1866 Mgr. Hassun, already patriarchal vicar of Constantinople, assumed the title of Catholic-Armenian Patriarch of Cilicia for all the Ottoman empire.

To what cause are the Armenian revolts to be attributed? Certainly not to utilitarian considerations. "The Armenians", wrote the impartial Ubicini (*op. cit.* ii, 347), "are of all the nations subject to the Porte, the one which has most interests in common with the Turks and is the most directly interested in preserving them". See also Victor Bérard, *La Politique du Sultan* (Abdulhamid II), 1897, 149. In the official texts, and when compared with the Greeks and Macedonians, the Armenians were termed *millet-i ṣādiḳa*, "the loyal nation".

The causes of Armenian discontent were as follows:

1) The vexatious and troublesome behaviour of, and the acts of brigandage committed by, the Kurdish and Circassian immigrants.

2) The negligence, exactions and extortions of Ottoman officials.

3) Russian incitement, especially from 1912 onwards.

4) A keen love of independence in a generally courageous people which prides itself on being one of the most ancient known, and which still looks back nostalgically to the short periods during which it succeeded in maintaining its autonomy. Certain districts even succeeded in remaining virtually independent; for example the unconquerable mountaineers of Zeytun (now Süleymanli, in the present *wilāyet* of Maraş), Haçin (now Saimbeyli, in the present *wilāyet* of Seyhan) and Sasun (Kabilcoz, in the present *wilāyet* of Siirt).

5) The activities of the revolutionary committees, sometimes particularly audacious, as in the case of the armed attack in broad daylight by 24 Armenians, and the siege of the Ottoman Bank at Galata (26 August 1896). The extremist or terrorist revolutionaries were called *Ta<u>sh</u>naksutyun*. There existed a more moderate committee, the Hinčak, formed in 1867 at Paris by Avedis Nazarbek, an Armenian from the Caucasus.

All these factors served as reason or excuse for a violent campaign of repression which took the form of mass deportations or massacres. With the connivance or at the instance of the authorities there occurred, among a people who were by nature kindly and even chivalrous, a long and contagious outburst of religious fanaticism and racial hatred. The calvary of the Armenians in Turkey began with the Erzerum affair (25 February 1890), went through numerous crises, notably in 1895-6 and in 1909 (Adana), and reached its culmination during the First World War, in 1915, during the systematic suppression of the Armenians organised by the government of the Young Turks.

Armeno-Turkish war of 1920. — After the collapse in 1917 of the Bolshevised Russian front, which in Turkey passed to the west of Trebizond and Erzincan, it was in the main the Armenian corps formed by the government of Transcaucasia which had to contain the Turkish counter-thrust. It was defeated and driven from Turkish territory (Turkey concluded the treaty of Batum with the Armenian Republic on 4 June 1918). In 1920 Mustafa Kemal Pa<u>sh</u>a, in order to put an end to a state of undeclared war, appointed General Kâzim Karabekir Pa<u>sh</u>a, commanding the 15th army corps, to the command of the north-east front. The troops of the "United Armenian Republic" of Ta<u>sh</u>nakist allegiance, were again defeated, and the treaty of Alexandropolis (in Turkish Gümrü, now Leninakan) of 2 December 1920 confirmed the gains won by the Turks, the most important of which was the recovery of Ḳarṣ.

Bibliography: As far as is known, no works specially devoted to Turkish Armenia exist in any western language (the works in Armenian are not accessible to me). Such information as exists, often bearing the imprint of a strongly partisan bias, is to be gleaned here and there in the general works on Turkey. The following should be mentioned: Amédée Jaubert, *Voy. en Arm. et en Perse*, 1821; Comte de Cholet, *Arm., Kurdistan et Mésopotamie*, 1892; André Mandelstamm, *La Soc. des Nations et les Puissances devant le problème armén.*, 192[illegible]; Aghasi, *Zeïtoun depuis les orig. jusqu'à l'insurrection de 1895*, translation by Archag Tchobanian, preface by Victor Bérard, 1897.—There is a copious bibliography on the massacres. The following only will be mentioned: *Le traitement des Armén. dans l'Emp. Ott.* (1915-1916), extracts from the "Blue Book" with a preface by Viscount Bryce, 1916; René Pinon, *La suppression des Armén.*, 1916, *Les massacres d'Arménie; témoignages des victimes*, preface by G. Clemenceau, 1896; *<u>Kh</u>āṭirāt-i Ṣadr-i esbaḳ Kāmil pa<u>sh</u>a*, Istanbul 1329/1911, 2nd ed, 184 ff.; *Saʿīd pa<u>sh</u>anin Kāmil pa<u>sh</u>a <u>Kh</u>āṭirātina <u>Dj</u>ewāblari*, Istanbul 1327/1909, 78 ff.

(J. Deny)

III. Division, Administration, Population, Commerce, Natural Products and Industry.

Division.

Since the size of Armenia, in its territorial delimitation, has varied much in the course of the centuries, the regions into which the lands designated under this name were divided have not always been the same. In ancient times the Armenians (see the *Geogr. of the Pseudo-Moses Xorenaçi*, 606) separated the land into two unequal sections: Mez-Haik (Armenia major) and Pokr-Haik (Armenia minor). Great Armenia, i.e., Armenia proper, extended from the Euphrates in the west to the neighbourhood of the Kur in the east and was divided into 15 provinces; Little Armenia ran from the Euphrates to the sources of the Halys. The Arabs also were acquainted with this twofold division (see, e.g., Yāḳūt, i, 220, 13). Yet, in contradistinction to the Armenians, the Romans and the Byzantines, they extended the name Armīniya to the whole of the land situated between the Kur and the Caspian, i.e., to Djurzān (Georgia, Iberia), Arrān (Albania) and the mountainous regions of the Caucasus as far as the pass of Darband (Bāb al-Abwāb), the reason being that the history of this country, especially in the struggle against the Muslims, reveals itself as closely linked with that of Armenia. By Armīniya al-Kubrā, "Great Armenia", the Arabs (see Yāḳūt, ibid.) understood particularly the districts which have Khilāt (Akhlāṭ, [*q.v.*]) as their centre, whereas they applied the name Armīniya al-Ṣughrā, "Little Armenia", to the region of Tiflīs (i.e., to Georgia). Ibn Ḥawḳal (ed. De Goeje, 295) was acquainted with yet another division of Armenia proper (excluding Albania and Iberia) into Inner (Armīniya dākhila) and Outer (Armīniya khāridja); to the former belonged the districts of Dabīl (Dwīn), Nashawā (Nakhčawān) and Ḳālīḳalā, later Arzan al-Rūm (Karin) and to the latter the region of Lake Van (Berkri, Akhlāṭ, Ardjīsh, Wasṭān, etc.).

Apart from this division there existed also another of ancient date which was adopted by the Byzantines (partition of Justinian in 536) and which, with the changes introduced by Maurice (591), remained in force until the Arab invasion. This system (Armenia prima, secunda, tertia, quarta) was also taken over by the Arabs; but, in the classification of the various districts among these four groups, the Arabs deviate so markedly from their predecessors that the explanation of this divergence can only be found by supposing a new distribution of districts to have occurred after the conquest. The data given by the Arab historians and geographers differ, moreover, greatly among themselves. Here, in essentials, is a table of the Arab division: (1) Armenia I: Arrān (Albania) with the capital Bardhaʿa and the land between the Kur and the Caspian (Shirwān); (2) Armenia II: Djurzān (Georgia); (3) Armenia III: comprising central Armenia proper with the districts of Dabīl (Dwīn), Basfurradjān (Vaspurakān), Baghravand, and Nashawā (Nakhčawān); (4) Armenia IV: the south-western region with Shimshāṭ (Arsamosata), Ḳālīḳalā, Akhlāṭ and Ardjīsh.

Furthermore, when mention is made in the Arab authors (al-Sharīshī, ii, 156 ff., and Abu 'l-Fidā', *Taḳwīm*, 387 = al-Yaʿḳūbī, *Buldān*, 364, 5, 12) of a threefold partition of Armenia reproducing very exactly the division that existed before Justinian, it transpires, from the enumeration of the districts included therein, that this division is obtained only by the complete exclusion of Armenia II.

See, on the pre-Islamic divisions of Armenia, H. Gelzer, *Die Genesis der byzantinischen Themenverfassung*, Leipzig 1889, 66 and, by the same scholar, the edition of George of Cyprus (Lipsiae 1890), xlvi ff. (ed. E. Honigmann, Brussels 1939, with the *Synecdemos* of Hiéroclès, 49-70); and, for the Arab period, Ghazarian in the *Zeitschr. für arm. Philol.*, ii, 207-8, Thopdschian, *l.c.*, ii, 55 and in the *Mitteil. des Semin. für orient. Sprachen*, 1905, ii, 137, J. Laurent, *L'Arménie entre Byzance et l'Islam*, 299 ff., and R. Grousset, *Histoire de l'Arménie*, 239.

Administration.

In regard to the internal situation in Armenia during the Arab period (see especially Ghazarian, *loc. cit.* ii, 193-206; Thopdschian, *loc. cit.*, ii, 123-7; Laurent, *op. cit.*, *passim*) this land did not always constitute a separate province, but was frequently united with Ādharbaydjān or with the Djazīra under a single government. The governor (*ʿāmil* or *wālī*), usually appointed by the Caliph himself, resided to the south of Erivān, near the Araxes, at Dwīn, which had already been, before the Muslim conquest, the seat of a Persian *marzbān*. The principal task of the governor consisted in protecting the country against its external and internal enemies; he had at his disposal for this purpose an army which was garrisoned, not in Armenia itself, but in Ādharbaydjān (Marāgha and Ardabīl were the general headquarters). The governor had above all to see to the punctual payment of taxes. For the rest, the Arabs did not concern themselves with the internal administration; this was left to a number of local lords (Arm. *ishkhān*, and *nakharar*, Greek *archôn*, Ar., *baṭrīḳ*, patrikios) who, after the Arab invasion, retained all their possessions and enjoyed within their domains a certain independence. Each of these lords, from ʿAbbāsid times onward, was also obliged, in case of war, to furnish a contingent of troops without receiving any indemnity.

Armenia was, among the provinces of the empire of the Caliphs, a land taxed only moderately. In place of the various kinds of taxes (*djizya*, *kharādj*, etc.: capitation tax, land tax, etc.) the system of *muḳāṭaʿa* was applied from the beginning of the 9th century, i.e., the Armenian princes had to pay a fixed sum. The list of contributions given by Ibn Khaldūn, which relates to the period of greatest prosperity for the Caliphate, notes for Armenia (taken in the broad sense of the Arabs) the sum of 13 million dirhems, i.e., more than $15^1/_2$ million gold francs, as the revenue of the years 158-70/775-86; in addition to this there were also the revenues in kind (carpets, mules, etc.). Ḳudāma gives as the average figure for taxes during the years 204-37/819-52 no more than 9 million dirhems only. The treaties, in respect to taxation, were scrupulously observed by the Umayyads and the ʿAbbāsids and were violated only by Yūsuf b. Abi 'l-Sādj. See, in regard to financial matters, A. von Kremer, *Kulturgesch. des Orients*, i, 343, 358, 368, 377; Ghazarian, *op. cit.*, 203 ff.; Thopdschian, *op. cit.* (1904), ii, 132 ff. The Arab monetary system was also introduced into Armenia; under the Umayyads, coins were already being struck there (see Thopdschian, ii, 127 ff.).

According to Yāḳūt (i, 222, 12) there were in Armenia not less than 18,000 localities great and small, of which 1,000 were situated on the Araxes alone (according to Ibn al-Faḳīh). In Arab mediaeval times the most important towns of Armenia proper were: Dabīl (Dwīn) which, as the residence of the

Muslim government, filled the rôle of a capital throughout the period of the Caliphs — while it had a large population at this time, it became, in the modern period, nothing more than an insignificant village; in addition, Ḳālīḳalā, later called Arzan al-Rūm (Erzerūm), Arzindjān (Erzindjān), Malāzdjird (Manazkert, Mantzikert), Badlīs (Bitlīs), Akhlāṭ (Khilāṭ), Ardjīsh, Nashawā (arm. Nakhčawān), Anī and Ḳarṣ (see the separate articles).

The native Armenians formed, in the time of the Caliphs, the main part of the population; but there were strong Arab colonies at Dabīl, Ḳālīḳalā, and likewise at Bardhaʿa in Arrān and Tiflīs in Djurzān, which were the chief bases of Arab power. Outside these great towns there existed also more extensive settlements of Arab tribes, notably to the south-west in the region of Alznik (Arzan in the Arzanene); the old district of Badjunays (Arm. Apahunik) with its capital Malāzdjird was controlled by a branch of the famous tribe, the Ḳays, who also held a number of places on the northern shore of Lake Van. The growth of the Bagratid dominion was "like a thorn in the flesh" to these Muslim colonies, since it hindered the consolidation and extension of their own power (see especially, on these colonies, Thopdschian, *op. cit.*, 1904, ii, 115 ff.; Markwart, *Südarmenien*, 501 ff.; and, on their situation in the 10th century, M. Canard, *Hist. de la dynastie des Ḥamdānides*, 471-87).

After the Russo-Persian and Russo-Turkish wars of the 19th century, Turkey, Russia and Persia shared possession of the Armenian territory and, until the war of 1914-18, there existed a Persian, a Russian and a Turkish Armenia.

(1) Persian Armenia: the smallest of the three sections, with an area of about 15,000 sq. km.; it embraces only a few districts and forms, as it were, an appendix to Russian Armenia; politically, it is joined to the province of Ādharbaydjān. To the west it touches the Turkish *wilāyet* of Van, while to the north, facing Russia, the Araxes serves as the frontier over a distance of about 175 km. from the eastern foot of Ararat as far as Urdābādh (Ordūbādh). The chief town is Khoy. In addition, Maku, Čors and Marand should be mentioned. In general Persian Armenia corresponds to the eastern part of the old Armenian province of Vaspurakān (Ar. Basfurradjān). There exists, moreover, an Armenian population at Iṣfahān, resulting from the deportation of the inhabitants of Djulfa [*q.v.*] by Shāh ʿAbbās I in 1605.

(2) Russian Armenia: before the war of 1914-18 it formed the southern and south-western part of the province of Transcaucasia and covered an area of about 103,000 sq.km. It embraced the regions bordering on Persia and Turkey and, in particular, the whole of the governments of Erivān (27,777 sq. km.), Ḳarṣ (18,749 sq.km.) and Baṭūm (6,976 sq.km.). The governments of Elizavetpol and Tiflīs were Armenian only in their southern and western parts, and that of Kutaīs only on the right bank of the river Rion. The most notable towns of Russian Armenia were: Baṭūm, important strategically and commercially, and capital of the government of the same name; in the government of Tiflīs, the two strongholds of Akhalčikh [*q.v.*] and Akhalkhalaki; in the government of Ḳarṣ, the very strong fortress of the same name, important also as a commercial centre, and the old town of Ardahān set high on its hill, a citadel of the first order; in the government of Erivān, which once belonged in great part to Persia, Erivān itself, and 18 km. to the west the famous monastery of Ečmiadzin, the religious centre of the Armenians, Nakhčawān (Nashawā, [*q.v.*]) which, like Erivān, has played a pre-eminent rôle in Armenian history, and Alexandropol (the ancient Gumri), an important frontier fortress until 1878 and thereafter a town given over to the silk industry; in the government of Elizavetpol, Elizavetpol (the ancient Gandja, [*q.v.*]), Shūsha situated in the region of Ḳara-Bagh and formerly the capital of a separate khānate, and the frontier town of Ordūbādh (Urdābādh) on the Araxes.

(3) Turkish Armenia: the greater part of the Armenian territory, far superior in size to the Russian and Persian sections taken together, had been for 500 years in the hands of the Turks and included the *wilāyets* of Bitlīs, Erzerūm, Maʿmūret al-ʿAzīz (now Elaziğ, i.e., Kharpūt), Van and, although only in part, Diyārbekir, with a total area of about 186,500 sq.km. The most important towns were Sīvās, Erzerūm, Van, Erzindjān, Bitlīs, Kharpūt, Mūsh and Bāyazīd [*qq.v.*].

Save in Persian Armenia, the war of 1914 brought about important changes in this situation. In 1917, after the retreat of the Russian troops from the Caucasian front, the regime which was then created in Armenia and itself formed part of the provisional government of Transcaucasia (Georgia, Armenia and Azerbaidjan), undertook the task of defending the front against the Turks, but could not prevent the latter from regaining Erzindjān and Erzerūm (February-March 1918), and then Ḳarṣ (25 April) after the peace of Brest-Litovsk which granted to the Turks possession of Turkish Armenia, together with Ḳarṣ and Ardahān, previously in Russian hands since 1878. After the dissolution of the Transcaucasian government and the formation of an independent Armenian republic (28 May 1918), the republic itself was reduced, by the treaty of Baṭūm (4 June 1918) to Erivān and the region of Lake Sevān, the Turks and the Azerbaidjanis sharing between themselves the remainder of Russian Armenia. There now ensued the collapse of the Turks on other fronts and the armistice of Mudros (30 October 1918). At the beginning of 1919 Armenian forces reoccupied Alexandropol (Leninakān) and Ḳarṣ and came into conflict with Georgia over the region of Akhalkhalaki and with Azerbaidjan over the Ḳara-Bagh. The Armenian Republic, recognised *de facto* in January 1920 by the Allies, received *de jure* recognition by the treaty of Sèvres (10 August 1920). Nevertheless, the arbitration of President Wilson, which gave to this republic the regions of Trebizond, Erzindjān, Mūsh, Bitlīs and Van, remained a dead letter, the Turkish government of Mustafa Kemāl having resumed the war, while the Soviet government, on its part, reconquered the Caucasus. After the Turks had entered Ḳarṣ and then Alexandropol, the Armenian Republic was compelled, on 2 December 1920, to accept the Turkish peace conditions. Turkey retained Ḳarṣ and Ardahān, annexed the region of Iğdir to the south-west of Erivān and demanded that the district of Nakhčawān (Nakhitchevan) be transformed into an autonomous Ṭatar state. On the same day, the Armenian Republic, within which there had been formed, some time earlier, a pro-Soviet revolutionary committee, changed itself into the Soviet Socialist Republic of Armenia. The Russo-Turkish treaties of 1921 ratified the cession of Ḳarṣ and Ardahān, but Turkey abandoned Baṭūm to Georgia.

The Soviet Socialist Republic of Armenia embraces the territories of Erivān and Lake Sevān, but the Ḳara-Bagh and Nakhitchevan are attached to the

Soviet Socialist Republic of Azerbaidjan under the designation of autonomous Region of Nagorny Karabakh (mountainous Ḳara-Bagh) and autonomous Soviet Socialist Republic of Nakhitchevan, while the districts, formerly included in Russian Armenia, of Akhalkhalaki, Akhalčikh (Akhaltzikè) and Baṭūm, this latter in the form of the autonomous Soviet Socialist Republic of Adjarie, are part of the Soviet Socialist Republic of Georgia. The principal towns in the Republic of Armenia are Erivān, Leninakān (formerly Alexandropol), Kirovakān (the old Elizavetpol) and Alaverdy.

The former Turkish Armenia, which can no longer bear this name, since it is now empty of Armenians as a result of the deportations and massacres of 1915-18, has been increased by the addition of Ḳarṣ, Ardahān and Igdir.

Population.

Owing to the invasion of Turkish and Turcoman tribes on the one hand and, on the other, to the advance of the Kurds (in the south) the composition of the population had undergone, ever since the second half of the mediaeval period, a transformation so profound that the Armenians properly so called constituted, over the whole extent of their ancient homeland, no more than a quarter of the total inhabitants. According to the statistics of L. Selenoy and N. Seidlitz (*Petermann's Georg. Mitt.*, 1896, i ff.), out of the 3,470,000 people to be found in the provinces of Transcaucasia enumerated above 897,000 (27%) were Armenians; in the purely Armenian districts, out of 2,000,000 inhabitants, the Armenians numbered 760,000 (more than a third). The government of Erivān, however, had a population of which 56% was Armenian. In the whole of Transcaucasia the towns were more strongly peopled by Armenians than the countryside (notably Tiflīs: 48%); but, in regard to the total number of inhabitants (4,782,000), the Armenians (960,000) constitued only 20% of the population.

The five *wilāyets* of Turkish Armenia had 2,642,000 inhabitants, of whom 1,828,000 were Muslims, 633,000 were Armenians, and 179,000 were Greeks; in the *sandjaḳ* of Mūsh, however, and also in that of Van the Armenians possessed the numerical superiority (almost twofold).

The total population of Russian and Turkish Armenia, according to the estimates given above, amounted to about 4,642,000, of whom 1,400,000 were Armenians. In Russian Armenia the Caucasian peoples were more numerous, while in Turkish Armenia it was the Kurds, Turks and other racial elements (Greeks, Jews, Gypsies, Circassians, Nestorian Christians to the south-east of Lake Van, nomad Tatar tribes) who had the majority.

In Persian Armenia there were, in 1891, 42,000 Armenians, only half of them to be found in Ādharbaydjān (see above concerning Iṣfahān).

Such was the estimate of the Armenian population given by Streck, for a period anterior to 1914, in the first edition of the *Encyclopaedia of Islam.* He noted that as a result of massacres and of emigration the number of Armenians on Turkish soil was constantly diminishing. The settlement of Armenians in foreign lands and their dissemination throughout the world had continued, although in varying degree (see above for the emigration into Byzantine territory, and then into Syria and Egypt). Cf. on this subject Ritter, *Erdkunde*, x, 594-611; R. Wagner, *Reise nach dem Ararat*, 239-50. The total number of Armenians living in the Old World amounted to between 2 and 2½ millions.

According to the figures given by Pasdermadjian *Histoire de l'Arménie*, Paris 1949, 444, the total number of Armenians in the world in 1914 was approximately 4,100,000, of whom 2,100,000 lived in the Ottoman empire, 1,700,000 in the Russian empire, 100,000 in Persia and 200,000 in the rest of the world. In Russian Armenia proper they numbered 1,300,000 (including Ḳarṣ, Nakhitchevan, the Ḳara-Bagh and Akhalkhalaki) and, in Turkish Armenia (with Cilicia), 1,400,000. They represented in Russian Armenia the majority of the population, 1,300,000 out of 2,100,000.

Here, on the other hand, are the figures of the Armenian population in the world and in the Soviet Union for 1926 and 1939, according to W. Leimbach, *Die Sowjetunion, Natur, Volk und Wirtschaft*, Stuttgart 1950. In 1926 the total number of Armenians in the world amounted to 2,225,000 (the difference from the figure given for 1914 being explained to a certain degree by the losses due to the war, to the massacres and to the sufferings endured during the deportations); of these, two thirds were in the Soviet Union, while one third remained in the Near East (130,000 in Syria, 100,000 in Persia, approximately 100,000 in Turkey, Palestine, Egypt and Greece, with a further 100,000 in America). The Soviet Union held 1,568,000 Armenians, of whom 1,340,000 were in Transcaucasia and 162,000 in Ciscaucasia. Of those to be found in Transcaucasia 744,000 lived in the Soviet Socialist Republic of Armenia (29,900 sq.km.) and constituted there 85% of the total inhabitants (831,290), i.e., the half of the Armenian population of the Soviet Union and one third of the entire Armenian population in the world. 311,000 dwelt in Georgia, 112,000 in the autonomous Region of Nagorny Karabakh (89% of the total population there) and 173,000 in the rest of the Republic of Azerbaidjan.

According to the census of 1939 the Armenians of the Soviet Union numbered 2,152,000; in the Republic of Armenia they were 1,100,000 out of a total population of 1,281,599; they constituted 90% of the total population in the autonomous Region of Nagorny Karabakh, but, in the remainder of the Republic of Azerbaidjan, only 10% of the total population. In Georgia they numbered 450,000. The Armenian population of the Soviet Union, taken as a whole, had increased by 37% between 1926 and 1939.

In Syria and the Lebanon there were in 1914 about 5,000 Armenians; in 1939 they numbered approximately 80,000 in the Lebanon, and more than 100,000 in Syria. In 1939, after the reunion of the *sandjaḳ* of Alexandretta with Turkey, 25,000 Armenians left the country. When, in 1945, the Soviet government issued its appeal to the Armenians, inviting them to return to Soviet Armenia, this invitation concerned, in Syria, about 200,000 Armenians who lived especially at Aleppo and Beirut (Aleppo: 100,000 out of a total of 260,000; Beirut: 50,000 out of 160,000). In Persia, between 1926 and 1939, the Armenian population had risen from 50,000 to 150,000; approximately 93,000 expressed the wish to emigrate to Soviet Armenia and the Armenians of Persia formed a great part of the 60,000 to 100,000 Armenians who, from Syria, the Lebanon, Persia and Egypt, went to Soviet Armenia after this appeal. Of the 27,000 Armenians who dwelt in Greece, 18,000 emigrated to Soviet Armenia in the period down to 1947.

In 1945 (see H. Field, *Contribution to the anthropology of the Caucasus*, Cambridge, Mass. 1953, 5) the population of Soviet Armenia amounted to 1,300,000, with a figure of 200,000 for the capital, Erivān. Today (see P. Rondot, *Les Chrétiens d'Orient*, Paris 1955, 191 and 196) the Republic of Armenia approaches a total of 1,500,000 inhabitants and there are almost as many Armenians in the rest of the Soviet Union. Erivān numbers 300,000 inhabitants and has formulated plans for 450,000. 400,000 to 500,000 Armenians are to be found in the Near East, 100,000 in the countries where 'popular democracy' prevails, 200,000 to 300,000 in North America, 20,000 in France and important nuclei in South America, India, Palestine and Greece.

The Armenian question had been given a definite form. Various Armenian groups in Brazil, the United States, etc. have presented to the U.N.O. demands which seek to bring about the restoration to the Armenians of the former Turkish Armenia with the frontiers fixed by President Wilson and the Armenian question continues to be an obstacle to the improvement of relations between the Soviet Union and Turkey.

Commerce.

As a land of transit between the Pontus and Mesopotamia and as a frontier territory between Byzantium and the Muslim empire, Armenia played an important economic rôle in the mediaeval period. The numerous merchants and the caravans that crossed it contributed to the development of a native industry which was favoured, like the flow of commerce, by the richness of the country in natural products. The commercial importance of Armenia arose also from the existence of numerous transit routes which cut across the land and of which the Arab geographers have described the most important. The Arabs attached to the support which these routes furnished to their military interests a greater weight than to their commercial usefulness. For this reason they linked together the principal routes at Dabīl, the bulwark of the Arab domination. The maintenance and security of the routes was a duty which fell to the Muslim governor. Even today Erzerūm, a point of junction for all the great routes, is a place of high strategic importance and, as it were, the key to Asia Minor.

Armenia communicated with Byzantium through Trebizond (Ṭarābazanda), the main entrepôt for Byzantine merchandise (above all, precious materials). The great fairs held there several times a year were visited by merchants from the entire Muslim world; the traffic ran ordinarily from Trebizond to Dabīl and Ḳālīḳalā (Erzerūm). In Persia, Rayy was the most important market for the Armenian merchants (see Ibn al-Faḳīh, ed. De Goeje, 270); they were also in direct business relations with Baghdād (see al-Yaʿḳūbī, *Buldān*, 237).

Natural Products and Industry.

Armenia was considered to be one of the most fertile provinces of the Caliphate. It produced so great a yield of cereals that some of it was exported abroad, e.g., to Baghdād (see al-Ṭabarī, iii, 272, 275). The lakes and rivers, which were full of fish, also favoured the export trade; Lake Van provided enormous quantities of a certain kind of herring (Ar. *ṭirrīkh*) which, from mediaeval times, was sent out in salted form even to the Indies (according to al-Ḳazwīnī, ed. Wüstenfeld, ii, 352). This salted fish is encountered even today as a food much sought after throughout the whole of Armenia, Ādharbaydjān, the Caucasus and Asia Minor.

Armenia is rich, above all, in minerals; copper, silver, lead, iron, arsenic, alum, mercury and sulphur are especially to be found there; gold, too, is not lacking. Very little is known concerning the exploitation of these products by the Arabs; the only Arab author who has furnished us with information on the natural products of Armenia is Ibn al-Faḳīh. According to the Armenian writer Leontius, silver mines were discovered at the close of the 8th century A.D.; these mines correspond no doubt to the silver (and lead) mines which are exploited at Gümüsh-Khāne (now Gümüşhane) = House of Silver, halfway between Trebizond and Erzerūm (see, on this subject, Ritter, *Erdkunde*, x, 272 and Wagner, *Reise nach Persien*, i, 172 ff. and cf. also the article GÜMÜSH-KHĀNE). There were important mines, too, at Bayburt and Arghana [*qq.v.*]. The great and ancient copper mine of Kedabeg with its offshoot at Kalakent (between Elizavetpol-Gandja and the lake of Gökčay) had been much developed before 1914 (see Lehmann-Haupt, *Armenien einst und jetzt*, i, 122 ff.). Today there are important copper foundries at Alaverdy, Zangezur and Erivān. It was, however, the salt mines which, in the past, were the richest in Armenia, their products being exported to Syria and Egypt. The salt beds mentioned by the mediaeval authors were probably to the north-east of Lake Van; there was also an extensive salt-bearing deposit at Kulp to the south of the Upper Araxes and east of Keghizman (see Ritter, *op. cit.*, x, 270 ff. and Radde, *Vier Vorträge über den Kaukasus*, 47). Erivān today is an industrial town with workshops for the building of machinery and factories for preserves, tobacco, synthetic rubber, etc.

The industries for which Armenia was most renowned during the mediaeval period were weaving, dyeing and embroidery. Dabīl was the centre of this industrial activity; magnificent woollen cloths were made there, carpets and heavy materials of silk decorated with flowers and multi-coloured (Ar. *buzyūn*) which were also sold abroad. The *ḳirmiz*, a kind of purple-bearing worm, was used for dyeing. Armenian carpets were long considered to be of the finest workmanship. Ardashāt (Artaxata), some kilometres from Dabīl, was so famous for its dye-works that al-Balādhurī calls it "the town of the kermes" (*ḳaryat al-ḳirmiz*) (ed. De Goeje, 200; cf. *Zeitschr. für arm. Philol.*, ii, 67 and 217). See in particular, on the commerce and industry of Armenia in the mediaeval period, Thopdschian in the *Mitt. des Sem. für orient. Sprache*, 1904, ii, 142-53. On the carpets, see Armeniag Sakisian, *Les tapis à dragons et leur origine arménienne*, in *Syria*, ix (1928) and, by the same author, *Les tapis arméniens*, in *Revue des Ét. arm.*, i/2 (1920). On Armenian textiles in general, see R. B. Serjeant, *Material for a History of Islamic Textiles up to the Mongol Conquest*, in *Ars Islamica*, x (1943), 91 ff.

See also F. Dölger, *Regesten der Kaiserurkunden des oström. Reiches*, Munich-Berlin 1924-32; S. Der Nersessian, *Armenia and the Byz. Empire: A brief study of Armenian art and civilization*, Harvard University, 1945. In addition, the chapters relating to Armenia in the Syriac chronicles (Ps.-Denys of Tell-Mahre, Elias of Nisibin, Michael the Syrian, Bar Hebraeus) and in works concerning the history of Islam and of the Caliphs, notably the Memoir of Defrémery on the Sādjids (*JA*, 1848, 4th ser., vols. 9 and 10). On persons of Armenian origin who figure in the history and literature of the Arabs, I. Kračkovsky has written for the *Encyclopaedia of Soviet Armenia* (Erivān) the articles Abkāryūs, Abū Ṣāliḥ al-Armanī and Badr al-Djamālī (see above for Bahrām).

The main source for the Saldjūḳid period is the history (989-1071) of Ạristakès of Lastivert (Arisdaguès of Lasdiverd), Armenian ed., Venice, 1845, French trans., 1864. Kirakos (Guiragos) of Gandzak (13th cent.) gives a contemporary account of events for the period 1165-1265: Armenian ed., Moscow 1858 and Venice 1865, French trans. by Brosset, 1870-1. See also J. Laurent, *Byzance et les Turcs seldjoucides dans l'Asie occidentale jusqu'en 1081*, Paris 1913-4 and the bibliography given there; C. Cahen, *La campagne de Mantzikert d'après les sources musulmanes*, in *Byzantion*, ix, 1934, 613 ff.; and, by the same author, *La première pénétration turque en Asie Mineure*, in *Byzantion*, xviii, 1948. For a more ample bibliography, see the art. SALDJŪḲIDS.

The monk Malakʿia composed a history of the Mongol invasion: Armenian ed., St. Petersburg 1870, Russian trans. by Patkanean, ibid. 1871, French trans. by Brosset, 1871. Thomas of Medsoph wrote, in the 15th cent., a history of Timur and his successors: Armenian ed. by Chahnazarian, Paris 1861.

The principal source on the sufferings of the Armenians under Shāh ʿAbbās I is Arakʿel of Tabrīz, whose *Histoire* runs from 1602 to 1661: Armenian ed., Amsterdam, 1669, French trans. by Brosset.

On the history of the kingdom of Little Armenia, in addition to the *Gesch. der Kreuzzüge* by F. Wilken and B. Kugler, the modern histories of the Crusades (Grousset, 3 vols., Paris 1934-6; Runciman, 3 vols., Cambridge 1951-5), the history of the last Crusades by Atiya, London 1938 and the history of Cyprus by Hill, Cambridge 1940, see V. Langlois, *Essai hist. et crit. sur la const. soc. et pol. de l'Arménie sous les rois de la dynastie roupénienne*, in the *Mém. de l'Ac. Impér. des Sc. de St. Pétersbourg*, 7th ser., iii (1860), no. 3; the same author, in the *Bull. de l'Ac. Impér.* ...., iv, 1861 and in the *Mélanges asiatiques*, iv; E. Dulaurier, *Étude sur l'org. pol., relig. et administr. du royaume de Petite Arménie*, in *JA*, 1861, xvii, 377-437 and xviii, 289-357; by the same author, *Le royaume de Petite Arménie*, in *RHC, Doc. arm.*, i, Paris 1869; and K. J. Basmadjian, *Les Lusignan de Poitou au trône de la Petite Arménie*, in *JA*, 10th ser., vii, 520 ff.

In regard to the information provided by the mediaeval geographers, see *BGA*, ed. De Goeje and *BAHG*, ed. v. Mžik; Yāḳūt, I, 219-22 (cf. Heer, *Die Quellen in Yāḳūt's Geogr. Wörterb.*, 1898, 62-3); Abu 'l-Fidāʾ, *Taḳwīm*, 387-8; Le Strange, 129-31, 139-41, 182-4; A. v. Kremer, *Kulturgesch. des Orients unter den Chalifen*, i, 342-3, 358, 368, 377; N. A. Karaulov, *Renseignements fournis par les écrivains arabes sur le Caucase, l'Arménie et*

l'*Adharbaydjān*, in *Sbornik materialov dlya opisaniya mestnostey i plemen kavkaza*, xxix, xxxi, xxxii and xxxviii, Tiflīs 1908; Žūze (Djūze), Trans. into Russian of the passages in Yāķūt relating to the Caucasus (ed. by the Inst. of Hist., Acad. of Sciences of Azerbaidjān); and B. Khalateantz, in the Armenian review, *Handes Amsorya* (Vienna), xvii, 27-8, 53-4, 112-3, 176-7, 252-3 and xviii, 53-4, 367-8.

On the wars of the last century; see: V. Uschakoff, *Gesch. der Feldzüge des Generals Paskewitsch in der asiat. Türkei während der Jahre* 1828-9 (German ed., Leipzig 1838; cf. Ritter, *Erdkunde* x, 414-23); and W. Potto, *Der persische Krieg*, 1826-8 (St. Petersburg, 1887 ff.).

In regard to the Crimean war, see the works of Rüstow (1855 ff.), Bazancourt (German ed., Vienna 1856), Anitschkow (1857-60), Bogdanovitsch (in Russian, 1867), Kinglake (London, 6th ed., 1883), C. Rousset (Paris, 3rd ed., 1894), Geffcken (1891), Hamley (London, 3rd ed., 1891), Rothan (1888), Kurz (1889), A. du Casse (Paris 1892); and C. Rousset, *Hist. de la guerre de Crimée*, Paris 1877 (also to be added: E. Tarle, *Krymskaya vojna*, 2 vols., Moscow 1942-5).

On the war of 1877-8, see Greene, *The Russian army and its campaigns in Turkey*, 1877-1878, London 1880; v. Jagwitz, *Von Plewna bis Adrianopel*, Berlin 1880; and Kuropatkin, *Kritische Rückblicke auf den russich-türkischen Krieg* (in German, by Kramer, Berlin 1885-7).

On the troubles in Armenia during the last decade of the 19th century, see F. D. Greene, *The Armenian crisis and the rule of the Turk*, London 1895; R. de Coursons, *La rébellion arménienne*, Paris 1895; R. Lepsius, *Armenien und Europa*, Berlin 1896; G. Godet, *Les souffrances de l'Arménie*, Neufchâtel 1896. On the massacres, deportations and emigration of the Armenians since 1915, see the modern histories of Armenia cited above (J. de Morgan, Kevork Aslan, Pasdermadjian); Tchobanian, *Le peuple arménien, l'Arménie sous le joug turc*, Paris 1913; F. Nansen, *L'Arménie et le Proche-Orient*, Paris 1928; Basmadjian, *Hist. mod. des Arméniens*, Paris 1922; Pasdermadjian, *Aperçu de l'hist. mod. de l'Arménie* (especially from 1848 to 1920) in *Vostan, Cahiers d'hist. et de civil. arm.*, i, Paris 1948-9; J. Missakian, *A searchlight on the Armenian question*, 1878-1950, Boston 1950; A. Nazarian, *Vérités historiques sur l'Arménie*, Paris 1953; W. Leimbach, *Die Sowjetunion*, Stuttgart 1950 (passages devoted to Russian Armenia); P. Rondot, *Les Chrétiens d'Orient* (*Cahiers de l'Afrique et l'Asie*, iv), Paris 1955, 171-99. Amongst other works, see also: A. J. Toynbee, *Les massacres arméniens*, Paris 1916; *The treatment of Armenians in the Ottoman empire*, British Blue Book, London 1916; H. Barby, *Au pays de l'épouvante, l'Arménie martyre*, Paris 1917; J. Lepsius, *Le rapport secret ... sur les massacres d'Arménie*, Paris 1918; Anonymous, *Témoignages inédits sur les atrocités turques commises en Arménie*, Paris 1920; C. Jäschke, *President Wilson als Schiedsrichter zwischen der Türkei und Armenien*, in *MSOS*, Berlin, xxxviii, 1935, ii, 75-80. See also A. Andonian, *The Memoirs of Naim bey. Turk. off. doc. relative to the deportations and the massacres of Armenians*. London 1920; and J. de Morgan, *Essai sur les nationalités (les Arméniens)*, Paris 1917.

On the history of the Armenian Church, see A. Ter Mikelian, *Die arm. Kirche und ihre Beziehungen zur byzant. vom 4.-13. Jahrh.*, Leipzig 1891; H. Gelzer, *Der gegenwärtige Zustand der arm. Kirche*, in *Z.f. Theol.*, 1893, XXXVI, 163-71; the same author, *Die Anfänge der arm. Kirche*, in *SB. d. sächs. Ges. d. Wiss.*, 1895, 109-74; S. Weber, *Die kathol. Kirche in Armenien*, Freiburg im B., 1903; Ter Minassiantz, *Die arm. Kirche in ihren Beziehungen zu den syrischen Kirchen*, Leipzig 1904; N. Ormanian, *L'Église arménienne, son hist., sa doctr., son régime, sa discipline, sa liturgie, sa littérature, son présent*, Paris 1910; and the art. *Arménie*, by L. Petit, in the *Diction. de théologie catholique*, i, Pt. 2.

(M. CANARD)

ARMS [see SILĀḤ].

ARMY [see DJAYSH, LASHKAR, ORDU etc.].

ARNAWUTLUḲ, the Ottoman Turkish name for ALBANIA.

1.—Language. Allegedly descended from Pelasgian, Albanian is an Indo-European language of "satem" type like Armenian, Indo-Iranian and Slavonic. No literary records occur before 1496 A.D., but ancient Illyrian and ancient Epirote, on the basis of personal and place names, are held to be the prototypes of Geg (northern) and Tosḳ (southern) Albanian respectively. Illyrian *mantua*, *mantia*, "bramble", and *grõssa*, "file", are Albanian *mand*, *manzë* and *grresë* respectively. Macedonian, Thracian and Dacian were languages of Albanian type.

Known as *shqip* in Albania, *arbëresh* in the Albanian colonies, the Albanian language is spoken by some 1,500,000 in Albania, 700,000 in the adjoining Kosovo-Metohija area of Yugoslavia, and some 40,000 in Epirus. An archaic form of the language survives on the Greek islands of Hydra and Spetsa, and in Sicily and Calabria, brought there by Tosḳ exiled from the Turkish invasions. Impoverished by centuries of neglect, Albanian has a small native, but a large borrowed vocabulary. Thus the wheel, the cart and the plough are represented by borrowings and the usual Indo-European terms of kinship are absent. City life, road-building, horticulture, law, religion and family relationship are expressed by Latin loanwords, much disguised by phonological breakdown. Terms used in the Orthodox ritual are Greek; names of prepared dishes, garments, parts of the house, and Islamic terms have come in via Turkish.

The composite alphabet is: *a*, *b*, *c* (like *ts*), *ç* (like *ch*), *d*, *dh* (like *th* in *this*), *e*, *ë* (like French *e* in *le*), *f*, *g*, *gj* (like Turkish *g* before *e*, *i*, *ö*), *h*, *i*, *j* (like *y* in *yoke*), *k*, *l* (as in French), *ll* (as in English *all*), *m*, *n*, *nj* (as in *cañon*), *o*, *p*, *q* (like Turkish *k* before *e*, *i*, *ö*), *r* (weak), *rr* (strong trill), *s*, *sh* (as in *shop*), *t*, *th* (as in *thin*), *u*, *v*, *x* (as in *adze*), *xh* (as in *judge*), *y* (German *ü*), *z*, *zh* (as in *pleasure*). The vowels *â*, *ê*, *î* are Geg nasals.

Geg is the dialect of Tiranë, the capital, and the North, including Kosovo-Metohija. Tosḳ has a considerable literature. Its main deviations are: replacement of the infinitive by subjunctive constructions, absence of nasal vowels, occasional conversion of *n* to *r*, and representation of *ue*, *uem* as *ua*, *uar*. There are small differences of vocabulary.

The noun has three genders and five cases. A noun is linked to a following genitive or adjective by an inflected particle, thus *mali i veriut*, "the mountain of the north", *mali i búkur* "the beautiful mountain", in which *-i* of *mal-i* is the detachable masc. definite article. Similarly *molla*, f. "the apple", but *mollë* "apple". The verb possesses an imperfect, aorist, subjunctive, optative imperative, a mediopassive, and a compound mood called the admirative.

2.—Literature. From the third century A.D. the Roman Church has maintained a bishopric at Scutari in N. Albania. This became the first cultural centre; evidence of this is Bishop John Buzuk's Liturgy of 1555, and the 17th century religious works of Budi, Bardhi and Bogdani. Literary activity, tolerated by the Turks in the Catholic North, was suppressed in the Muslim centre and the Orthodox South, but took root among the exile colonies of Sicily and Calabria. Matranga, descendant of the exiles, began a tradition of hymn-writing using folk-rhythms (1592), which was continued by Brancato (1675-1741) and the Calabrian Variboba (born 1725). The movement became secular with the folksongs and rhapsodies of De Rada (1813-1903), an ardent spokesman of Albanian liberation, and was continued well into the present century by Zef Schirò (1865-1927), Sicilian-born author of two allegorical epics and a collector of folksongs.

The work of de Rada was helpful in inspiring three Tosḳ patriots, the brothers Abdyl, Sami and Naim Frashëri, to form a league at Prizrend in 1878. Under the stimulus of the San Stefano settlement they sought Albanian autonomy and literary freedom. After several years of activity in Istanbul, where they were joined by the lexicographer and Bible translator Kristoforidhi (1827-1895), they were forced into exile. At Bucharest Abdyl the politician, Sami the educationist, and Naim, the Bektashi lyricist of Albanian nostalgia, formed a literary society and printed Albanian books from 1885 onward. Thimi Mitko and Spiro Dine, exiles in Egypt, collected folksongs from the local colony. In Sofia Midhat Frashëri, son of Abdyl, published an almanach, an anthology and a journal, and wrote didactic essays and short stories with a moral. Books printed in exile were smuggled into Albania by caravan.

The absence of a literary centre, and the want of a standard alphabet, hampered the movement, and Sami's difficult phonetic spelling was replaced by a digraphic one resembling that of A. Santori of Calabria and the linguist Dh. Camarda (1821-1882) of Sicily. After independence in November 1912 the various literary currents combined. A. Drenova (born 1872), the Tosk lyricist, Bubani, and L. Poradeci (born 1899) continued the Bucharest tradition, the last in an unorthodox style of his own; the Catholic North was represented by the nostalgic F. Shiroka (1847-1917), the linguist and historian A. Xanoni (1863-1915), N. Mjeda (1866-1937), the satirist Gj. Fishta (1871-1940), the folk-poet and elegist V. Prennushi (1885-1946), and the short-story writer E. Koliqi (born 1903). Foqion Postoli, and M. Grameno (1872-1931), the Tosk novelists, Kristo Floqi (born 1873), the dramatist, and F. Konitza (1875-1943) transferred their activity to Boston, U.S.A., where a literary society Vatra, and a journal Dielli ("The Sun") were founded in 1912.

The brief fascist regime (1939-1943) attracted a few writers with pro-Italian leanings; the present communist regime encourages writing on the partisan movement, the class struggle, work themes and peace. Textbooks are based on Russian models. There are three active theatres and a writers' union. This activity is paralleled in Kosovo-Metohija, where the communist themes are Titoist.

3.—Geography. Albania (Shqipní, Shqipëri) lies on a N-S axis 20° E of Greenwich. With a total area of 11,097 square miles (28,748 sq. km.) it is bounded by Yugoslavia, Greece and the Adriatic. Lying between N Latitudes 39° 38′ and 40° 41′, its total length is 207 miles. It narrows to 50 miles at Peshkopi, and widens to 90 miles at the lake of Little Presba. Its ten prefectures formerly had 39 subprefectures, now redrawn and renamed as 34 districts. Continuing the limestone formation of the Dinaric Alps, the terrain is highest in the E, reaching some 7,000 feet in places. Of the western lowlands, some below sea-

level, the largest is the fertile Myzeqeja plain. The longest river, the Drin, rises in Lake Ohri (Ochrida), and flows N-W and S-W to the Adriatic below Shëngjin. The Mat, Ishém, Arzén, Semén-Devoll-Berat and the Vijosë flow in general N-W, but the Shkumbî, a torrent in winter, flows broadly E to W dividing the country into two roughly equal areas, Gegnija and Toskërija.

The mountain massif consists of three north-to-south barriers in Gegnija, and four N-W to S-E parallel ranges in Toskërija. The highest mountain is Tomorr near Berat (7,861 feet: 2396 metres). Denudation and deforestation have given the country a bare, rugged character. The lakes of Shkodër (Scutari), Ohri and Presba are only partly in Albania; Tërbuf in the central plain is a marsh, and Malik, below Korçë, has been drained.

Durrës (Durazzo) is the main port, with wharves and a shipyard; Valona has a fine natural harbour, and handles refined oil and bitumen; Saranda is a fishing port, and Shëngjin handles ore. Chief towns are Tiranë, the capital (100,000), Shkodër (35,000), Korçë (25,000), Durrës (16,000), Vlorë or Valona (15,000) and Gjinokastër or Gjirokastër (12,000). Railways (80 miles) link Tiranë with Durrës, Peqin and Elbasan, but most towns are reached by road.

Climate ranges from European in the high country to sub-tropical in the S-W, and the vegetation is Mediterranean. Forests, mainly deciduous, include hornbeam, turkey oak, sumach, avellan oak, holm oak, jujube and celtis. The foothill scrub includes arbutus, bush heather, pomegranate and juniper. Densest forests are at Mamuras near Kruja.

4.—Population.

According to the census of 1955 the population of Albania was 1,394,310 (in 1930 it was 1,003,097). Outside Albania there are Albanians in Yugoslavia (750,000 according to the Yugoslav census in 1948), in Greece (estimated between 30-60,000) and in Italy (estimated at 150-250,000). The number of Albanians by birth all over the world is estimated at 3 millions (see *Albania*, ed. S. Skendi, New York 1956, 50). According to the 1930 census there were 45,000 Vlachs, 35,000 Slavs, 20,000 Turks and 15,000 Greeks in Albania. Approximately 20 percent of Albania's total population lived in towns in 1949-50. In the same year the larger towns were Tirana, the capital, with an estimated population of 80,000 (in 1930, 30,806), Shkodër 34,000, Korčë 24,000, Durrës 16,000, Elbasan 15,000, Vlorë 15,000, Berat 12,000, Gjinokastër 12,000.

The Albanians are divided into two principal ethnic groups: The Gegs to the North of the Shkumbi River and the Tosks to the South. The Turks called these two regions Gegalîk and Toskalîk. Not only in their dialects but also in the outlook and social behaviour the Gegs differ from the Tosks. The Gegs are considered as keeping national characteristics purer than the Tosks.

Generally speaking the barren mountains of Albania provided too little for an increasing population to subsist. Especially when an epidemic decimated livestock, the helpless people had no choice but to emigrate or to fall upon neighbouring plains. They usually went out as mercenaries, shepherds or agriculturists.

Toward the middle of the 14th century the Albanians, under the pressure of the Serbs or as mercenaries of feudal seigneurs in Greece, migrated and settled in Epirus, Thessaly, Morea and even in the Aegean Islands. There most of the Albanians were gradually graecised, or migrated to Southern Italy under the pressure of the Ottomans later on. But about 1466 in Thessaly there were still Albanian districts in the towns as well as 24 Albanian *katunes* in Livadia (Lebadea) and 34 in Istifa (see my *Fâtih Devri*, Ankara 1954, 146). Under the Ottomans these *katunes* had a special status and, later, are known as *armatols*.

When Iskender-beg died in 1468 a number of the Albanians involved in his struggle against the Ottomans either retired to the mountains or migrated to the kingdom of Naples. In 1478, 1481 and 1492 more Albanians migrated to Southern Italy and Sicily where they preserved their language and customs down to the present day.

In the 15th century the Ottoman government transferred some Albanian *timar*-holders [see TĪMĀR] of the feudal families (Mazeraki and Heykal) to Trebizond.

No large Turkish settlement is recorded in Albania except a small number of exiles from Konya, locally called Konici. There are also the Yürüks of Kodja-djik on the mountains to the East of Dibra where they were stationed apparently to safeguard the Rumeli-Albania highway. The *sürgüns* (the deported), sent *c.* 1410 from such parts of Anatolia as Sarukhan, Kodja-ili, Djanik were also few in number (see *Sûret-i Defter-i Sandjâk-i Arvanid*, index).

The second significant expansion of Albanians in Rumeli occurred in the 17th and 18th centuries. They came to settle in the plains of Djakovë (Yakova), Prizren, Ipek (Peč), Kalkandelen (Tetovo) and Kossovo, especially after the mass migration of the Serbs from these areas in 1690. It seems that Albanian settlement was mostly the result of the land *mukâṭa'a* system (see my *Tanzimat nedir?*, in *Tarih Araştırmaları*, Ankara 1942) prevailing there in this period. Albanians came to lease small tracts of lands from big *mukâṭa'a* owners in these rich plains and settled there as tenants permanently.

As for the Vlachs in Albania, they had lived a pastoral life on the mountains of North Albania side by side with the Albanians since the Slavic invasion in the 7th century and they took part in the Albanian expansion from the 11th century onwards. In the Ottoman Register of 835/1431 we find the Vlachs and their *katunes* (*Eflak-katune*) in Southern Albania especially in the region east to Kanina.

The Albanian tribes to the North of the Drin River are called by the general term of *Malj-i-sor* (highlanders). Toward 1881 there were 19 tribes belonging to this group with a population of 35,000 Roman Catholics, 15,000 Muslims and 220 Greek Orthodox. The most famous tribes among them were Hotti, Klementi, Shkreli, Kastrati, Koçaj, Pulati, living on the mountains east of Scutari.

It seems that during the Ottoman conquest of Albania from 1385 to the end of the 15th century the rebellious clans had to retire once more to the most rugged parts of the highlands. Their reappearence in the lowlands coincided later with the weakening of Ottoman control in the provinces in the 17th century, and, later on, they became "the terror of Rumeli".

From the beginning the Ottoman government had to respect the tribal organisation and autonomy of these tribes. As they had actual control of the important mountain passes from Rumeli into Albania the government charged them with the guardianship of these passes and in return for these services made them exempt from taxation. A regulation dated 1496 (*Başbakanlîk Archives, Istanbul, Tapu Def.* no. 26) reads as follows: "The *nāḥiye* of *Klemente* (Klementi) consists of five villages. Their inhabitants of Christian faith pay one thousand *aḳča* of *kharādj* and one thousand *aḳča* of *ispendje* to the Sandjaḳbegi and they are exempted from *ʿushr* and *ʿawāriḍ-i dīwānī* and other taxes, but they are made *derbenddji* (guardians of the passes) on the route Scutari-Petrishban's territory-Altun-ili as well as the route Medun-Kuča-Plava". Later in the 17th century the Klementi caused troubles through their depredations in Rumeli and their co-operation with the rebellious tribes of Montenegro (Karadagh).

To the south of Drin lived the Mirditë tribe, 32,000 in number (in 1881) and all Roman Catholics. They were divided into five clans called *bayraḳs*, namely Oroshi, Fândi, Spashi, Kushneni, Dibri. Distinguished by their service to the Ottomans against the Venetians in 1696, the Hotti were promoted to the first place among the clans. Their *bayraḳ* headed all the others. But today the Shalë tribe is the chief.

In tribal tradition the origin of the *bayraḳs* goes back to the Ottomans. In fact it was an Ottoman institution to give a *bayraḳ* or a *sandjaḳ* to military chiefs as a symbol of authority. Each clan was under a *bayraḳdār* i.e. standard-bearer, who was a hereditary chief. The public affairs of the clan were decided in the council of the hereditary elders. In order to discuss general affairs the five clans had their annual meeting at Orosh. A *bölük-bashî*, appointed by the Ottoman governor, arranged all kinds of affairs between the administration and the clans. The "captains" of the five clans of Mirditë claimed to descend from Lekë Dukagjin who played an outstanding rôle in Iskender-beg's struggle against the Ottomans. Lekë Dukagjin is believed to have codified the customary law practiced among the tribes, which is called *Kanuni i Lekë Dukagjinit* (A. Sh. K. Gječov, *Kanuni i Lekë Dukagjinit*, Shkodër 1933).

These tribes used to send to the Ottoman army an auxiliary force composed of one man per household, an Ottoman practice which was also applied to the Yürüks and the Kurds. When from the end of the 16th century onwards the empire came to need more troops for its lengthy wars the Albanian auxiliaries seemed to gain an increasing importance. They were used especially in the local wars against the Montenegrins. The Mirditë were regarded as the bravest soldiers in Rumeli. But at the same time H. Hequard (1855) calls them "the greatest plunderers in the world". In 1855 when the *Tanẓīmāt* administration attempted to disarm them and enrol them in the regular army they rose up and infested the Zadrima (Zadrimë) area with the result that the next year the government gave up these attempts. Later the Mirditan chief Prenk Bib Doda played an important part in the Albanian independence movement (1908). The "Republic of Mirditë", proclaimed under Yugoslav auspices in 1921, collapsed the next year.

5.—Religion.

According to the Italian statistics of 1942 (see, *Albania*, ed. S. Skendi, 58) out of a total population of 1,128,143, 779,417 were Muslims, 232,320 Orthodox and 116,259 Catholics. The only significant Catholic group is located in the Shkodër (Scutari) district, while large Orthodox groups live in the districts of Gjinokastër (Argyrokastro), Korčë (Körice), Berat and Vlorë (Avlona). Muslims are spread all over the country, but mostly in the Central Albania.

Albania which became attached to the Partriarchate of Constantinople in 732 A.D., was split between Rome and Constantinople in 1054, the northern part coming under the jurisdiction of Rome. The Normans and the Angevins strengthened Catholicism in the country; Antivari was the seat of the Archbishop of Albania and Durazzo that of Macedonia.

Orthodox Albania was dependent directly on the Archbishopric of Ohrida. As the protectors of the Orthodox Church the Ottomans, even before their restoration of the Patriarchate of Constantinople in 1454, favoured Orthodoxy against Catholicism. However, for political reasons the Porte tolerated the Catholic church in Albania. The Albanian lords wavered between East and West according to the political conditions. The Orthodox Albanian immigrants to southern Italy had their own Uniate church recognising the Pope's supremacy. According to the Ottoman year-book of 1895 there were, in the province of Yanya (Epirus and Albania south of the Devoll River), 223,885 Muslims, 118,033 Greeks, 129,517 Orthodox Albanians, 3,517 Jews and only 93 Roman Catholics. It must be added that a part of these Greeks were in origin Orthodox Albanians graecised through the Greek religious and educational institutions which were zealously founded beginning with the second half of the 18th century. After the independence of Albania an autocephalous Orthodox church of Albania was finally recognised by the Patriarchate (1937). The first converts to Islam were the Albanian feudal lords holding *tīmārs* from the Ottomans. Contrary to what is generally held conversion was not required as a condition for keeping their lands as *tīmārs*; allegiance to the Ottoman state was sufficient in order to receive *tīmārs*. Throughout the 15th century Christians were granted *tīmārs*. By the end of the 15th century, however, only a few Christian *tīmār*-holders were left because of voluntary conversions. Elbasan, built by Meḥemmed II in 870/1466, became a Muslim centre from the outset, as did Yenishehir in Thessaly. It appears, however, that Islam had then only a few converts among the common people, *raʿāyā*. At the beginning of the 16th century in four *sandjaḳs* of Albania (Elbasan, Ohri, Awlonya and Iskenderiye) there were about three thousand Muslim *raʿāyā* families. In Catholic sources written around 1622 it was estimated that only one thirtieth of the Albanian population was Muslim. During the 17th century the Venetians and Austrians attempted to foment an insurrection of the Catholic Albanians as well as the Orthodox Serbs who were feeling hostile to the government because of an increase in the *djizye*. In 1614 at a meeting of church dignitaries at Kuči it was decided to ask for aid from the Pope. Toward 1622 the first Franciscan missionaries appeared in Albania and Southern Serbia. Albanian Catholics and the Serbs co-operated with the Venetians in 1649 and with the Austrians in 1689-1690, which made the Porte decide to have recourse to retaliatory measures. To escape these, the Christian populations in the plains of Peč, Prizren, Djakovë and Kossovo, who were partly Albanian, migrated in mass or adopted Islam; but many of them became

crypto Christians, locally called *laramanë* (motley). The albanisation and islamisation of these plains went hand in hand in the 17th and 18th centuries.

Conversion to Islam received a new impetus under the Bus̲h̲atlis and ʿAlī Pasha [*q.v.*] of Tepedelen. According to the contemporary witnesses, the latter forced a number of villages to adopt Islam. He is believed to have been a Bektās̲h̲ī himself and in his time Bektās̲h̲ism (see BEKTĀS̲H̲IYYA) made its greatest progress in Albania. Under King Zog its adherents were estimated at about 200,000. With its prosperous *tekkes* in Tiran, Akčahisar (the old centre of the Bektās̲h̲īs), Berat, and on the Tomor mountain, as well as its central organisation in the capital, Bektās̲h̲ism assumed importance in Albania. During the Congress of Korčë in 1919 the Bektās̲h̲īs sought to establish a community of their own, separate from the Sunnīs. This was to be accomplished only under the Communist régime in 1945.

Islam played an essential part in ottomanising the Albanians, and the Christian Albanians often referred to their Muslim compatriots as Turks. On the other hand Islam prevented the Albanians from being assimilated by her Greek or Slavic neighbours. It is asserted that under the veneer of Christianity as well as Islam the primitive religious beliefs survived with the Albanians, especially in the highlands.

6.—History.

The Illyrian origin of the Albanian people is generally admitted, but their ethnic relationships to the Thracians, Epirots and the Pelasgians are still subject to argument. The Illyrian tribes first came into contact with Greek culture, through the Greek colonies founded on the Albanian coastland, in the 7th century B.C. The principal one was Epidamnos near Durazzo (Durrës). The Illyrians formed their first independent political organization in the third century B.C. Conquered by the Romans in 167 B.C., they were subject to strong Roman influence for centuries. The Roman highway to the Orient, Via Egnatia, started at Dyrrachium (Durrës) and followed the Shkumbi valley. Ptolemy mentions, for the first time, the Ἀλβανοι among Illyrian tribes and their capital Ἀλβανόπολις (near Croya). In the 7th century the invasion of Albania by the Slavs put an end to the romanisation of the Albanians who retired to the mountains in north Albania to live a pastoral life for half a millennium. In the 9th and 10th centuries the Bulgarian empire extended its rule over southern Albania, including Dyrrachium (Greek Dyrrachion), and toward the end of the 12th century the Serbs under Nemanja occupied northern Albania. The long coexistence with the agriculturist Slavs left a deep cultural imprint on the Albanian people. Finally, Emperor Basil II restored Byzantine rule in southern Albania, and conquered Dyrrachion (1005) which had been the capital of the Byzantine *thema* of Dyrrachion since the 9th century. When toward the middle of the 11th century the control of Byzantium was weakened in the provinces the Albanians came out from their mountain retreats. From this time on, the Albanians, who were then located between the lines of Skodra (S̲h̲kodër)-Dyrrachion and Ohrida-Prizren, are seen to be mentioned more by the contemporary sources, Ἀλβανοι or Ἀρβανίται in Greek, *Arbanenses* or *Albanenses* in Latin and *Arbanaci* in Slavic sources. The Ottomans first used the Greek form *Arvanid* and then its turcicised versions *Arnavud* and *Arnawut*.

Again from the 11th century on, Albania became a bridge-head for feudal Europe to attack the Byzantine empire. Dyrrachion was temporarily taken by the Normans in 1081 and 1185, and by the Venetians in 1204. Then, it came into the possession of the Despot of Epirus, Theodore Angelus (1215-1230). In 1272 Charles of Anjou occupied Dyrrachion as well as the rest of the Albanian coastland, and called himself the "King of Albania". This started a long struggle between the Byzantines and the Angevins in Albania.

Anatolian Turks, as a result of their alliance with the Byzantine emperor, first came to know Albania in 737/1337. During the Byzantine civil war the Albanian highlanders had increased their depredations in Albania, taken Timoron (Timorind̲j̲e), and threatened the other Byzantine strongholds, Kanina, Belgrade (Berat) Klisura and Skarapar. In order to establish his control in Albania as well as in Epirus, Andronicus III entered that province with an army which included a Turkish auxiliary force. It was sent by his ally Umur Beg, ruler of Aydīn. The army overran the country as far as Durazzo (Dyrrachion). The rebels who retired into the mountains suffered great losses at the hands of the Turks. The Turks returned home through Thessaly and Boeotia (Cantacuzenus).

Before long Stephan Dushan occupied Albania (Croya in 1343, Central Albania 1343-1346). This seems to have accelerated the migration of Albanians into Greece. Native Albanian feudals and soldiers joined Dushan in his conquests further south (L. von Thallóczy—C. Jireček, *Zwei Urkunden* . . ., 85). The *voyniks* whom we later find in Albania under the Ottomans settled there apparently with Dushan at this time. When in 1355 Dushan's empire collapsed, local feudal lords, Slav, Albanian or Byzantine in origin, appeared in all parts of Albania. Soon the Bals̲h̲as (Bals̲h̲ići), in the north and the Thopias in the centre emerged as the most powerful of these lords. The Bals̲h̲as possessed the coastland between Durazzo and Cattaro, and tried to secure control of a large area as far Prizren. They came into conflict with Twrtko, king of Bosnia, as well as with the Serbs who sought to bring this region, Zeta, again under their control. Soon the Bals̲h̲as, who had already settled themselves in Avlona, Belgrade and Kanina, threatened Carlo Thopia in Durazzo. He asked for help from the Ottoman Turks in 787/1385, as their *ud̲j̲* (frontier) units had appeared near Yannina already in 783/1381. Bals̲h̲a II was defeated and killed by an Ottoman army at Savra (on the Vijosë River in Myzeqe) on 12 S̲h̲aʿbān 787/18 September 1385. This is recorded in Ottoman chronicles as the expedition to "Karli-ili", that is "the land of Karli" (Carlo Thopia), and it is dated correctly as 787/1385. The Albanian lords, including Bals̲h̲a's heirs, recognised the Sultan's overlordship. The Dukagjini of Alessio notified the Ragusans of their peace with the Ottomans in 789/1387. Alarmed by the Ottoman advance, Venice sent Daniel Cornaro to Murad I to protect Thopia (Ramaḍān 789/October 1387), but on the other hand started negotiations with Thopia to take over the city. Thus the long Venetian-Ottoman rivalry over Albania had begun. As a vassal of the Sultan, Gjergj Stratsimirović, Bals̲h̲a's heir in Scutari (S̲h̲kodër) and Dulcigno, now wished to profit from the Ottomans in his conflict with the Bosnians. Kefalia S̲h̲āhīn (in Turkish chronicles Kavala S̲h̲ahin, later S̲h̲ihāb al-Dīn S̲h̲āhīn Pas̲h̲a) an *ud̲j̲-begi* and probably *subas̲h̲ī* of Liaskovik, embarked on a series of successful raids into Bosnia; but he was finally defeated by Bosnians near Trebinje 23 S̲h̲aʿbān 790/27 August 1388). According

to Neshrī, this expedition was made at the request of the "Lord of Skutari" (G. Stratsimirovic) who after Shahin's defeat was accused of a secret understanding with the enemy. After their victory at the Kossovo plain (791/1389) the Ottomans made Skoplje (Üsküb) a strong frontier centre by settling there the Turks from Sarukhan under Pasha-Yigit (toward 793/1391). Then Shāhīn came back and drove out G. Stratsimirovic from Scutari, and St. Sergius (1393-1395) who had returned to the Venetians for protection. Venice for its part took Alessio, Durazzo (1393), Drivasto (1396), all given up by the native lords for a yearly pension. The Ottomans too tried to keep the local lords on their side by guaranteeing them their lands as *tīmārs*. Thus Dimitri Yonima (Gionima), Konstantin Balsha, Gjergj Dukagjin as Turkish vassals all co-operated with Shahin against the Venetians.

The establishment of the Ottoman rule in Albania with its *taḥrīr* (see TAPU) and *tīmār* [*q.v.*] system started first in the region of Premedi (Premetë) and Korčë (Körice). The regular Ottoman administration with its *subashīs* and *ķāḍīs* in towns and *sipāhīs* in villages is found there in the records going back to the time of Bayazid I (*Başvekalet Archives, Istanbul, Maliye no.* 231). This must have followed the Ottoman expeditions in Albania in 796/1394 and 799/1397. The Ottoman records also show that Aķčaḥisar (Croya, Krujë) was granted tax exemption in the same period. Albanian forces under Coïa Zaccaria, Dimitri Yonima, Gjergj Dukagjin and Dushmani were present at the battle of Ankara in 804/1402. Upon the collapse of Bayazid's empire in 1402, many of these Albanian lords (Ivan Kastriot, Coïa Zaccaria, Niketa Thopia) recognised Venetian suzerainty. When in 1403 Georg Stratsimirović died, Venice, which had already taken Scutari, seized a part of his heritage—Dulcigno, Antivari and Budua. But his son Balsha, supported by Stephan Lazarević and Vuk Branković of Serbia embarked upon a long struggle against Venice. The latter finally reached an agreement on Albanian affairs with their suzerain, Emīr Süleymān (19 Djumādā I, 812/29 September 1409). Then Pasha-Yigit of Üsküb forced Ivan Kastriot to submit to the Sultan's suzerainty (813/1410). In the South the Ottomans supported Albanian Spatas against the Toccos. Finally war was declared against Venice during which the Ottomans made the real conquest of Albania from Northern Epirus to Croya (Aķčaḥisar) and formed the province of Arvanid-ili or Arnavud-ili (818-20/1415-1417).

The conditions which the Ottoman conquest brought into the country can be fully ascertained with the help of the details contained in the *tīmār* register of 835/1432 (*Sûret-i defter-i Sancâķ-i Arvanid*, ed. H. Inalcik, Ankara 1954). The names of various regions in the register frequently contains references to the chief feudal families who were vassals of the Ottomans about 819/1416: Yuvan-ili (land of Kastrioti), Balsha-ili (east of Kavajë and south of Shkumbi), Gionomaymo-ili (North of Pekin), Pavlo-Kurtik-ili (the Jilema Valley), Kondo-Miho-ili (area west of Elbasan), Zenebish-ili (Zenebissi, Gjinokastër and its surroundings), Bogdan-Ripe-ili (north of Elbasan), Ashtin-ili (Premetë). Besides these great families, many smaller Christian feudals kept some of their lands as *tīmārs*. Among them we may mention Dobrile (in Čartolos), Simos Kondo (in Kokinolisari), Bobza Family (Gion and his sons Ghin and Andre in the Village of Bobza or Bubës), Karli family (Matja). This kind of *tīmārs* constituted 16 per cent of all the *tīmār*-holders in Arvanid-ili. Conversion to Islam was not considered necessary for possession of *tīmār*. One *Metropolid* in Belgrade (Berat) and three *Peskopos* in Kanina, Aķčahisar and Čartolos were given their former villages as *tīmārs*. The Turkish population in the province consisted only of the military and religious personnel. The Turkish *tīmār*-holders with their men did not exceed 800 in number. The whole *sandjaķ* was distributed among about 300 *tīmār*-holders who lived in the villages or castles, namely, Argiriķasrī (Argyrocastro, Gjinokastër), Kanina, Belgrade, Iskarapar, Bratushesh or Yenidje-ķale and Aķčahisar. Argiriķasrī (later on Argiri or Ergiri) became the seat of the *sandjaķ-begi* and in each county (*wilāyet*) centre there was a *subashī* and *ķāḍī*. The revolutionary step taken by the Ottoman state was that it considered almost all the agricultural lands as owned by the state, because only such a system would enable it to apply its *tīmār* system. The peasants, therefore, must have had the feeling that they were under an impersonal central government as compared to their close dependence upon the feudal lords under the old régime.

In the north, the Ottomans supported first, Balsha III, and upon his death (824/1421), Stephan Lazerević of Serbia, against Venice, which finally had to return to Stephan, Drivasto, Antivari and Budua (826/1423). In the south the Despot Carlo Tocco died in 832/1429 and Murad II, taking advantage of the conflict between his heirs, took Yannina (Muḥarram 834/October 1430). After that a new land and population survey of Albania was effected (Shaʿbān 835/spring 1432) which meant the tightening of the Ottoman administrative control there. This survey may be regarded as the real starting-point of the long Albanian resistence during the subsequent decades. Moreover it demonstrates the real character of the rebellion. Firstly some of the villages in the mountainous Kurvelesh and Bzorshek areas refused to be registered. In a few places they even killed their Ottoman *tīmār*-holders. Great feudal lords such as Ivan (Yuvan) Kastriot in the north, Arianites (Araniti, Arnit) Comnenus in the Argirikasrī region, had to give up considerable parts of their lands for distribution to the Ottoman *sipāhīs* as *tīmārs*. First Araniti took up arms, killed many *sipāhīs* in the autumn of 836/1432, and Thopia Zenebissi besieged Argiriķasrī. Alfonso V. of Naples, Venice and Hungary encouraged the rebels, who defeated ʿAlī, son of Evrenuz, governor of Albania, at the Bzorshek pass. Encouraged by these developments Christian lords in central and northern Albania joined the rebellion. Finally in 837/1434 all the forces of Rumeli under Sinān Beg, governor-general of Rumeli, combined to put an end to this dangerous rebellion which was giving hope to Hungary of a new Crusade. But Araniti managed to escape to the mountains. The additional records made after 836/1432 in the *defter* of Arvanid-ili indicate that the rebellion did not affect the Ottoman control of the country to any considerable extent. A great majority of the Ottoman and Christian *tīmār*-holders remained in possession of their *tīmārs*. It appears that mostly the highlanders co-operated with the feudal families who had matrimonial connexions with their chieftains.

From 847/1443 onwards Iskender-beg [*q.v.*], the son-in-law of Araniti, assumed the leadership of the rebellion; his unusual energy and boldness, and the international situation which obtained at the time, gave the movement a character of international

significance. Setting aside the legend that has grown up around his person, it must be emphasised that the origin and the motives of his rebellion were not different from those of the other Albanian lords. Appointed *subas͟hī* of Aḳčaḥisar (Croya) about 842/1438, he was dismissed in 1440. He wished to recover Croya and his father's lands in their entirety and to possess them as a feudal lord, not as a *tīmār*-holder. It is true that he made an alliance with other feudal families, Thopias, Bals͟has, Dukagjini, Dus͟hmani, Lecca Zaccarīa and Araniti (The Alessio Meeting, 1st March 1444), but the idea of an Albania unified by a national leader is far from reality. He controlled only northern Albania while central and southern Albania always remained under Ottoman control. *Subas͟hī*s and *sand͟jaḳ-beg*s, based on Argiriḳasrī (Gjinokastër), Ohrida or Belgrade (Berat) tried to suppress him with local forces. He waged guerilla warfare all the time. Many of the battles described by Marino Barlezio with such fantastic figures were nothing but local clashes. Iskender-beg's own forces seem never to exceed 3,000. By the treaty of 26th March 1451 he became vassal of Alfonso V of Naples and surrendered Croya to the king's men. Araniti, who had claims on southern Albania (Vagenetia, Valona, Kanina) followed his example. Araniti was authorised by the king to accept in his name oaths of allegiance by other Albanian lords. So Zenebissi and others also became Alfonso's vassals. In return, the King agreed to grant a yearly pension varying between 300 and 1400 ducats to each of these vassals and to provide them a place to take refuge in case of danger. This simple change of masters was obviously determined by the fact that the Aragonese system appeared much more favourable than the Ottoman regime to the Albanian feudals. But as witnessed by a contemporary Aragonese document, "the common people had hardly any complaints against the Ottoman administration". (see C. Marinesco, *Alphonse VIII., Mél. de l'école Roum. en France*, Paris 1923, 104). A *tīmār* register made in 871/1466-67 included Dibra, Dlgöbrdo, Rjeka, Mat and Čermeniḳa (*Başbakanlık Archives, Istanbul, Maliye no.* 508). It is therefore seen that after Meḥemmed II's [*q.v.*] expedition in 870/1466, the *tīmār* system was extended into these areas. Whatever his real motives may have been, Iskender-beg, who defied, in his mountains, Murād II (in 852/1448 and 854/1450) and Meḥemmed II (in 870/1466 and 871/1467), was also glorified in his time as "Champion of Christ", by the Pope, and as the Albanian National hero, by the nationalists in the 19th century.

During the Ottoman-Venetian war of 1463-1479 Albania became one of the main scenes of operation. Finally the Ottomans were able to take Croya, Drivasto, Alessio and Jabljak (Jabyak) in 1478, Scutari in 1479, and Durazzo in 1501. Alessio (Lesh), which the Ottomans lost during the war of 1499-1503, was retaken in 1509. After having failed in their attempts in 1538, the Ottomans finally took Antivari (Bar) and Dulcigno (Ulćinj, Ölgün) in 1571, and thus completed their conquest of Albania.

It appears that up to the end of the 16th century Ottoman rule in Albania created a peaceful and prosperous era. Most of the old feudal families then adjusted themselves to the Ottoman régime, and even one of the Aranitis named ʿAlī beg had a large *tīmār* around Kanina, Argiriḳasrī and Belgrade toward 1506.

Until about 870/1466 Ottoman Albania was organised as a *sand͟jaḳ* under the name of Arvanid (or Arnavud)-ili. Its subdivisions were the *wilāyet*s of Argiriḳasrī, Klisura, Kanina, Belgrade, Timorind͟je, Iskarapar, Pavlo-Ḳurtik, Čartalos and Akčaḥisar. When in 1466 Meḥemmed II erected the fort of Elbasan, this region was set up as a new *sand͟jaḳ*.

*Sand͟jaḳ*s	Communities			Population			Officials and soldiers**						Tax revenues
	Towns	Forts	Villages	Christian households	Muslim households	Jewish households	*Sand͟jaḳ-begi*	*Ḳāḍī*	*Zaʿīm*	*Tīmār sipāhīs*	*D͟jebelus*	*Mustaḥfiẓ* in fortresses	in *aḳča* (one Venetian ducat was worth 52-6 *aḳča* in this period)
Iskenderiye; Its *ḳaḍā'* divisions: Iskenderiye, Podgoridja, Bihor, Ipek, Prizrin, Karadagh.	5	6	895	23,355	371	—	1	4	8	137	?	297	4,392,910

* These figures are for the *ḳaḍā*s of Belgrade, Argiriḳasrī and Awlonya only.

** We have not included in this list *dizdār*s, *ketk͟hudā*s, *k͟haṭīb*s, *imām*s, or *s͟hayk͟h*s, who were present almost in every town.

Moreover in the south the *sandjak* of Awlonya (Avlona) and in the east that of Ohri were created and in 1479 the *sandjak* of Iskenderiye (Scutari) was formed in the north. The following is a list established on the basis of the surveys of 912/1506 and 926/1520. (*Başv. Archives, Tapu* no. 34 and 94), showing the administrative and military situation in the 16th century.

A comparison of the survey of 835/1431 with those of the 16th century reveal the fact that everywhere, in towns and villages, the population more than doubled during the intervening period, and in consequence the tax revenues increased similarly. The following illustrates this for the principal towns.

Towns	1431		The beginning of the 16th century	
	Christian households	Muslim households	Christian households	Muslim households
Argirikasrî	121	—	143	—
Belgrade	175	—	561	11
Kanina	216	—	514	—
Premedi	42	—	260	—
Klisura	100	—	514	—
Akčaḥisar	125	—	89	65

(These figures do not include the military or the civil officials).

The Albanian towns, which numbered 19 in the four Albanian *sandjaks*, were small local market-towns with populations varying between 1,000 and 4,000. Only Awlonya (Avlona) became a commercial centre of some importance (population 4 to 5 thousand). In order to further commerce, the government settled there a sizeable Jewish colony of the refugees from Spain (end of the 15th century). According to the *Ḳānūn-nāme* of Awlonya (see *Arvanid Defteri*, 123) the port handled goods imported from Europe, and velvets, brocades, mohairs, cotton goods, carpets, spices and leather goods came from Bursa and Istanbul. Some of the citizens of Awlonya even had business associates in Europe. Quite a large amount of tar and salt, produced near the city, was bought by state agencies at fixed prices. The tax income from Awlonya for the sultan's treasury alone amounted to about 32 thousand gold ducats a year. A garrison and a small fleet were stationed there permanently (for vols. 7 and 8). It must be noted that the Ottomans Albanian towns *circa* 1081/1670 see Ewliyā Čelebi, continued the tax privileges of Akčaḥisar and Iskarapar which went back to Byzantine times (see L. von Thallóczy-C. Jireček, *Zwei Urkunden aus Nordalbanien, Archiv für slavische Phil.* xxi, 1899, 83). The *defter* of 835/1431 reads as follows: "Let the inhabitants of Akčaḥisar guard the castle and be exempt from all kinds of taxation with the exception of *kharādj*". These tax exemptions were abolished toward the end of the 16th century.

The Ottomans did not radically change the taxation system which had existed in Albania under the Byzantines and the Serbs. *Ispendje*, most probably a Serbian tax, was paid by every adult Christian male at the rate of 25 *akča*. The basic Ottoman taxes were the *ʿushr*, which was actually one eighth of agricultural products, and the *djizya*. The Byzantine tax of two bushels of wheat and two of rye a year survived in some parts of Albania under the Ottomans. So did fines called *bād-i hawā* [*q.v.*], apparently an adaptation of Byzantine *aerikon. Tavuk ve boghača* (Byzantine *kaviskia*) also survived in Albania as an *ʿādet*. All these taxes except the *djizya*, which was collected for the sultan's treasury, were assigned to *tīmār*-holders. Under the Ottomans the rate of taxation seems not to have been lighter than before. But they abolished forced labour and determined, in advance, for each peasant, the amount of taxes due. Unlawful practices did exist, and the *Ḳānūn-nāme* of 1583 would seem to give a good idea concerning such abuses. It states that no *tīmār*-holder should subject his peasants to forced labour, make them carry hay for themselves, take their lands away without lawful reason, or force them to pay in cash the *ʿushr*, which was to be paid in goods. The commonest complaint of a semi-nomadic people was that they were liable to the sheep-tax more than once a year during their move from one pasture to another.

At the beginning of the 16th century the public revenue in the *sandjak* of Iskenderiye (Scutari) amounted to 4,392,910 *akča*, half of which was assigned to the sultan and the other half to the *sandjak-begi* (449,913) and the *tīmār*-holders (1,776,118).

The Albanians occupied an outstanding place in the ruling class of the empire. At least thirty Grand-Viziers can be identified as of Albanian origin—among them Gedik Aḥmed, Kodja Dāwud, Dukagin-zāde Aḥmed, Lutfî, Kara Aḥmed, Kodja Sinān Pasha, Nasūḥ, Kara Murād, and Tarhoncu Aḥmed. In the Kapî-kulu army, too, the Albanians were always present in great numbers. One obvious reason for it was that the *dewshirme* [*q.v.*] system was practised extensively in Alhania, as in Bosnia.

Two fundamental changes in the structure of the empire, namely the disruption of the *tīmār* system on the one hand, and the deterioration of the fiscal system on the other, had their impact on the situation in Alhania as elsewhere. The first change, which coincided with the weakening of the central authority at the end of the 16th century made possible the formation of large estates in the provinces, while the second made it necessary for the state to assess new taxes and to reform the *djizya*, which due to its increased rate, affected particularly the Christian population. The discontent is manifested especially in the rebellious attitude of the Catholic highlanders in Albania in the 17th and 18th centuries and in their co-operation with hostile powers. For example, the original tax of 1000 *akča* a year paid by the Klementi clan had become a trivial amount by the end of the 16th century due to the depreciation of the *akča*, and the government therefore wanted instead to assess the *djizya* at 1,000 gold coins. This caused the rebellion of the trihes of northern Albania. They started to attack and plunder the plains of Rumeli as far as Filibe. In order to stop these depredations the Porte sent several armies against them and built a new castle near Gusinje. Their new uprising in 1638 was quelled by Duče Meḥmed Pasha (see Naʿīma, iii, 399-409). The Klementi, Kuči (Kcčaj), Piperi in the North, and the Himariots on the coastal range of Himara, co-operated also with the Austrian and Venetian armies during the wars of 1683-99, 1714-8, 1736-9.

On the other hand, as the central control weakened, the highlanders began to penetrate into Rumeli and even in Anatolia from the beginning of the 17th century. In the 18th century, pashas, begs and

*a*ʿ*yān* everywhere took into their service these highlanders who were reputed to be the best mercenaries. They were organised in *bölüks* of about 100 men under a *bölük-bas̲h̲ī*, who, as a perfect condottiere, arranged everything for his men with the hirer. The part played by such *bölüks* is well illustrated by the example of Meḥmed Ali in Egypt. Many Albanians also joined the mountain bands in Rumeli, called *Dag̲h̲lī es̲h̲kiyāsī* or *Kïrčaali*.

In the same period the lease system of the state-owned lands (*mīrī arāḍī muḳāṭaʿasī*) on the lowlands, coastal plains or inland basins, in Albania gave birth to the big land-owning class of *a*ʿ*yān* [*q.v.*]. These absentee land-lords used every means to obtain more and more *muḳāṭaʿāt*. Among them, the Bus̲h̲atlī family in the North, in the land of Gegs, and Tepedelenli ʿAlī Pas̲h̲a (see ʿAlī Pas̲h̲a tepedelenli) (1744-1822) in the south, in the area of Tosks, emerged as semi-independent despots. The first Bus̲h̲atlī (in Turkish chroniclers Bud̲j̲atlī or Bučatlī), Meḥmed Pas̲h̲a, built up his power by acquiring large *muḳāṭaʿāt* and by making an alliance with the Malisors, the highlanders, and thus forced the Porte to confer him the governorship of Scutari (Is̲h̲ḳodra, S̲h̲ḳodër) (1779). After his death (1796), the Porte's attempt to get back these *muḳāṭaʿāt* caused his son Kara Maḥmūd Pas̲h̲a [*q.v.*] to rebel. ʿAlī Pas̲h̲a, too, possessed about 200 estates (*čiftliks*). The Porte at first did not challenge the increasing power and authority of the Bus̲h̲atlīs and ʿAlī Pas̲h̲a, as they were rightly considered to check the domination of the local *a*ʿ*yān*, and the rivalry between these two *pas̲h̲as* seemed to counterbalance each other. ʿAli Pas̲h̲a once tried to extend his control into the zone of the Bus̲h̲atlīs and fought them. Through his sons whom he managed to have appointed governors of Thessaly, Morea, Karli-ili he actually formed a semi-independent state in Albania and Greece. In 1820, when the central government finally took action against him, he rebelled, and instigated the Greeks to revolt. The power of the last Bus̲h̲atlī, named Muṣṭafā Pas̲h̲a, was destroyed only in 1832 by the reformed army of Maḥmūd II. The centralist policy of the *Tanẓīmāt* caused troubles with the autonomous tribes in North Albania.

The "Albanian League for the Defence of the Rights of the Albanian Nation" had been set up at Prizren on June 13, 1878, only to influence the decisions of the Congress of Berlin; but it proved to have great significance for the birth of an Albanian state later on. Encouraged by the Ottoman government at the beginning, the League set up resistance to the Montenegrins and Greeks in order to keep the Albanian provinces united (the four Ottoman *wilāyets* of Yanya, Is̲h̲kodra, Manastïr and Kosova). But when the league tended to further the idea of an autonomous Albania, the Porte sent an army and dispersed the League (1881). The great powers, especially Austria-Hungary and Italy, encouraged this autonomy movement with the purpose of extending their influence over Albania while Russia was supporting Montenegro's territorial claims over Albania. On the other hand, by enlisting Albanians in his bodyguard and conferring special favours on them, ʿAbd al-Ḥamīd II was trying to win Albanian support. But the Albanian intellectuals, in co-operation with the Young Turks in Paris and elsewhere, were anticipating an autonomous Albania. In 1908 the stand taken by the Albanians against ʿAbd al-Ḥamīd at the Frizovik Meeting did actually help the Revolution to succeed. In the Ottoman Parliament the influential Albanian deputies, such as Ismāʿīl Kemal, Esʿad Toptanī, Ḥasan Pris̲h̲tina, joined in the *Ḥürriyyet we Iʾtilāf* Party which sought decentralisation as against the centralist ottomanisation policy of the *Ittiḥād we Teraḳḳī* Party. While the heated discussions on an Albanian educational system was going on (the Congress of Manastïr, November 1908) an uprising broke out among the Albanian highlanders who resisted the Ottoman government attempt to collect their arms. Finally, on 4th September 1912, the new Ottoman government accepted the Albanian demands for an autonomous administration. But the Balkan War completely changed the situation in the Balkans. A short time after the declaration of war, in November 1912, Ismāʿīl Kemāl declared the independence of Albania at Awlonya (Vlorë). The London Conference proclaimed Albania an autonomous principality under the guaranty of the six powers (29th July 1923); but the newly elected prince, Wilhelm von Wied, had soon to leave the country (3rd September 1914). After the first world war Serbia laid claims to S̲h̲ḳodër and Durrës. Seeing their country dismembered, the Albanian leaders hastily convoked a congress at Lushnjë (21st January 1920) and demanded the independence of Albania. A national government was formed in Tirana, and an Albanian partisan army drove out the Italians from Vlorë. Italy finally recognised the independence of Albania with the treaty of Tirana (3rd August 1920). The small Albanian state experienced a tumultuous parliamentary life during the first years of its existence (1921-4). The Muslim land-owning beys of the western and central plains came into conflict with the Popular Party (under its leader Fan S. Noli). A revolution forced Aḥmed Zog, the Prime Minister, to flee to Yugoslavia. With Yugoslav support he came back into power (24th December 1924). A constituent Assembly proclaimed Albania a Republic and named Aḥmed Zog (Zogu) President. He then signed a series of treaties with Italy (12th May 1925; 27th November 1926; 22nd November 1927 and March 1936) putting the country practically under Italian protection. In September 1928 Zog was proclaimed the King of Albanians. He fled from Albania one day before the Italians invaded the country on April 6, 1939.

(Halil İnalcik)

ARNĪṬ, Span. Arnedo, a small town in the province of Logroño, chief town of a *partido judicial*; it numbers about 10,000 inhabitants and is situated on the left bank of the Cicados, a tributary of the Ebro, about 22 m. (35 km.) from the capital. Arnedo is a toponym of Iberian origin which is found in the provinces of Burgos, Albacete and Logroño, and which also occurs, in the last-named, in the diminutive form Arnedillo. In the middle of the 6th/12th century, Muslim Spain consisted, according to al-Idrīsī, of twenty-six climes (*iḳlīm*) or regions, among which figured that of Arnedo, with the towns of Calatayud, Daroca, Saragossa, Huesca and Tudela. The only Arabic work which describes it is the *al-Rawḍ al-Miʿṭār*; according to this, it is "an ancient town of al-Andalus, 30 m. from Tudela, surrounded by rich cultivated plains. It is a place of great strength, and ranks among the most important. From this fortress one looks down on to Christian territory". Arnedo, Tudela and Oñate were the principal towns of the seigniory of the Banū Ḳaṣī. In 308/920, ʿAbd al-Raḥmān III, in the famous campaign, called the Muez campaign, against Navarre, occupied Calahorra, which had been conquered two years previously by Sancho Garcés, and forced the latter to take refuge in Arnedo; Sancho Garcés left Arnedo when ʿAbd al-Raḥmān moved off in the direction of Pampeluna to inflict a bloody defeat on the united forces of Navarre and Leon at Valdejunquera.

AROR [see arūr].

ARPA. 'Barley' in Turkish. The term *arpa tanesi* —'a barley grain'—was used under the Ottoman régime to denote both a weight and a measure: a weight of approximately 35.3 milligrams (half a *ḥabba*), and a measure of rather less than a quarter of an inch, 6 equalling one *parmaḳ* (itself equivalent to 1¹/₄ inches). (H. Bowen)

ARPALĪḲ, (literally, "barley money"), a term used in the Ottoman empire up to the beginning of the 19th century to denote an allowance made to the principal civil, military and religious officers of state, either in addition to their salary when in office, or as a pension on retirement, or as an indemnity for unemployment. This term does not appear in the historical sources before the 16th century, and corresponds, to begin with, to an indemnity for fodder of animals, paid to those who maintained forces of cavalry or had to look after the horses: the first beneficiaries were the Agha of the Janissaries, the Aghas of the imperial stable and the Aghas of the *bölük*, that is to say the principal army and palace officers; this benefit was later extended to religious officials: the *shaykh al-islām*, the *ḳāḍī 'l-ʿasker*, the tutor of the sovereign, and later (17th century) to the viziers and *ʿulamāʾ* who were already titular holders of *ziʿāmet*, and also to officials of the central or provincial administration, or to military officers who had specially distinguished themselves; the Khāns of the Crimea were also numbered among the beneficiaries. The maximum amount of the *arpalīḳ* was fixed at 70,000 aspers for religious officials, 58,000 aspers for the Agha of the Janissaries, and 19,999 aspers for palace officials. These endowments took the form of the grant of fiefs of varying degrees of importance; it is said that some holders of *arpalīḳ* farmed its revenues. The haphazard distribution of these grants caused serious disturbances in the military, economic and social organisation of the state, and from the 18th century onwards only the principal religious authorities could benefit by the grant of an *arpalīḳ*. The *arpalīḳ* disappeared at the time of the *Tanẓīmāt*: a fund for retirement pensions was then created and, after the proclamation of the Constitution, an indemnity for unemployment was instituted.

(R. Mantran)

ʿARRĀDA, a mediaeval artillery engine. In general, from Europe to China, there were everywhere in existence two main types of engines of projection which were operated by more than one man. In the case of the one, the heavy type of engine, the projectile was hurled from a great distance by virtue of the centrifugal force produced by the rocking of a great arm: these were the *mandjanīḳ* or mangonels; in the case of the other, a lighter engine, the projectile was discharged by the impact of a shaft forcibly impelled by the release of a rope: these were the *ʿarrāda*. The principle of the *ʿarrāda* only differs from the large arbalest mounted on a fixed chassis in the comparative lightness of the latter, and in the fact that the arbalest discharges its arrow itself instead of using it to propel a projectile. *ʿArrāda*, like *mandjanīḳ*, were naturally siege and not field weapons. The word itself comes from an almost identical Syriac form, and corresponds to the Classical Greek *onagros*; but, strangely enough, it seems that in mediaeval Greek *manganikon* denoted a light weapon: this is a source of possible confusion.—To-day, *ʿarrāda* is applied to cannon. [See also ʿaraba].

ARRADJĀN, town in Fārs. According to the Arabic authors it was founded by the Sāsānid king, Ḳawādh I (488, 496-531), who settled there the prisoners of war from Āmid (Diyārbakr) and Mayyāfāriḳīn, and gave to the new settlement the official name Weh Āmid-i Ḳawādh = "Good (or Better)-Āmid of Ḳawādh", run together and arabicised into Wāmḳubādh or usually simply Āmid-Ḳubādh (Marquart proposed to read so in al-Ṭabarī, i, 887, 888)! Some Arabic writers have erroneously given to Arradjān the name Abar(z)ḳubādh, which was borne by a district and a town on the western frontier of Ahwāz (Khūzistān); see also ABARḲUBĀDH In any case, the name which is in common use, Arradjān, comes from an older town which existed before the new one founded by Ḳawādh.

In the Arabic mediaeval age Arradjān was a very frequently mentioned frontier-town of Fārs against Ahwāz, and down to the end of the 7th/13th century was the capital of the most westerly of the five provinces of Fārs; a part of the province of Arradjān belonged earlier not to Fārs but to Khūzistān (cf. Ibn Faḳīh, 199; al-Maḳdisī, 421). Arab geographers describe Arradjān as a large place with excellent bazaars, which manufactured much soap, grew great quantities of corn, possessed numerous date and olive plantations, and was considered to have one of the healthiest situations of the "hot land" (Garmsīr). The rise of the Assassins portended its decline; for they seized possession of several strongholds on the neighbouring hills and from there made frequent plundering raids on the town and its adjacent district, and finally took it in the 7th/13th cent. Arradjān never recovered from the horrors of this conquest. The inhabitants emigrated mostly to the neighbouring town, Bihbahān, which succeeded Arradjān as capital of the province.

According to the Arab geographers Arradjān lay on the road leading from Shīrāz to ʿIrāḳ, 37 miles distant from Shīrāz and al-Ahwāz, and a day's journey from the Persian Gulf; it was situated on the river Ṭāb, which here formed the boundary between Fārs and al-Ahwāz.

The ruins of Arradjān were discovered by C. de Bode on the river Ṭāb (modern Āb-i Kurdistān or Mārūn) at 31 40′ N. Lat. and 50 20′ E. Long. (Greenw.). Mustawfī shows that the form Arghān or Arkhān for the town, was in popular use at the beginning of the 8th/14th century. The site of the ruins, according to Herzfeld, is a ride of two hours by horse east of the town of Bihbahān on a canal leading out of the Mārūn River, and it forms an almost rectangular plain of ruin ca. 3930 × 2620 ft. near the Kūh-i Bihbahān. Cultivation has now effaced all structural remains, according to Stein. About two miles farther up the river remains of a bridge from the Middle Ages, and of a barrage below the bridge, still exist. The bridge was mentioned by Arab geographers.

AL-**ARRADJĀNI,** Nāṣiḥ al-Dīn Abū Bakr Aḥmad b. Muḥammad al-Anṣārī, Arab poet born at Arradjān in 460/1067, died in 544/1149-50 at Tustar or ʿAskar Mukram. Religious studies, pursued mainly at the Niẓāmiyya at Iṣfahān, enabled him to be nominated *ḳāḍī* of Tustar, but he early devoted himself to poetry, which he considered as a means of livelihood, and wrote panegyrics, addressed in particular to the ʿAbbāsid Caliph al-Mustaẓhir, in *ḳaṣīda* form, with the traditional *nasīb*. Although some critics praise his work, al-Arradjānī must be considered as a versifier of limited stature. His *dīwān*, compiled by his son, was printed at Beirut in 1307/1889; several Mss. exist in London and Cairo.

(Ed.)

ʿARRĀF. (A.; the abstract is, *ʿirāfa*) one of the names for a diviner. Literally "eminent in knowledge" or "a professional knower"; the European equivalent would be "wise woman" with a change of sex. There are several synonyms. *Ṭabīb* (physician); "I said to the *ʿarrāf* of Yamāma, "Treat me, for if you cure me you are indeed a physician"; and "I will give the *ʿarrāf* of Yamāma his due and the *ʿarrāf* of Nadjd, if they cure me." The two were respectively Rabāḥ b. ʿAdjala and al-Ablaḳ al-Asadī. *Kāhin* (diviner) [*q.v.*] is especially one who deduces his answer from the words, behaviour or circumstances of the enquirer or finds things which have been stolen or lost. It is said that the *ʿarrāf* is somewhat less than the *kāhin*. Of course, opinions differ on the precise meaning of these words; a proverb says that the *ʿarrāf* takes what escaped the thief. *Ḳunāḳin* or *ḳinḳin*, dowser. *Ḥāzī* one who divines from the shape of the limbs or moles on the face. A tradition says that he who consults the *ʿarrāf* or *kāhin* is an unbeliever. Nevertheless the examples of their activity are Islamic. ʿAmr b. al-ʿĀṣ was not a professional *ʿarrāf* but was famous for his practical wisdom; from the names of two travellers, Ḥaṣīra and Ḳaṭṭāl, he deduced that ʿUthmān had been first besieged and then killed (al-Ṭabarī, i, 3250). The Ikhwān al-Ṣafā say that the *kāhin* uses no tools, books or calculations but relies on his motherwit and interprets what he sees or hears. *Zadjr* is employed to describe this method of divination though it first meant drawing omens from birds or animals. Ibn Khaldūn sets out a theory of divination. "It is a property peculiar to the human soul. The soul is so constituted that it can divest itself of its fleshly integument and rise to a higher spiritual state. Men who belong to the rank of prophets through their natural disposition receive as it were a flash (of intuition), and this comes to them without effort on their part, without the aid of sensual means of perception, and without forcing the imagination; nor need they bring their bodies into play by uttered word or hurried movement. They need employ no artificial means. By divesting themselves of the flesh they put on the angelic state which is natural to them in less than the twinkling of an eye."

ARRĀN. The name is usually applied in Islamic times to the district in Transcaucasia between the Kur (Kura) and Aras (Araks) Rivers. In pre-Islamic times, however, the term was used for all of eastern Transcaucasia (present Soviet Azerbaijan), i.e. Classical Albania (cf. article "Albania" in Pauly-Wissowa). By the 15th century A.D. the name Arrān was not in common parlance, for the territory was absorbed into Ādharbāydjān.

The origin of the name Arrān, Georgian *Rani*, Greek Ἀλβανοί, and Armenian Ałwankʿ (people), is unknown. (In some Classical authors one finds the form Arian/Aryan, and in Arabic sources one can find al-Rān). Before 387 A.D. the land between the two rivers was considered part of Armenia, comprising the provinces of Ardzakh, Uti, and Pʿaitakaran. After the division of Armenia between the Greeks and Sassanians in 387 A.D., the first two provinces went to Albania/Arrān and the last to Persia. This is one reason for much confusion in the designation of Arrān, since the Armenians considered only the land north of the Kur River as Arrān.

By the 7th century A.D. the population of "greater" Arrān was thoroughly mixed, and one can hardly speak of a distinctive people. Iṣṭakhrī, 192, and Ibn Ḥawḳal, 349, however, mention *al-rāniyya* as a language still spoken in the city of Bardhaʿa in the 10th cent. A.D.

The Arabs, adopting the Roman system of designation of Armenia, extended the terminology, including all of eastern Transcaucasia under Armenia I (Ibn Khurradādhbih, 122; al-Balādhurī, 194). When the Arabs appeared in the country they found it divided among many small lords, some of whom held allegiance to the Khazars, especially after the fall of the Sassanians. Arrān had been Christianised from Armenia and during the Umayyad Caliphate was nominally under the rule of the princes of Armenia, who in turn were subject to the Arabs. Since it was on the Islamic frontier, subject to Khazar raids and rule, Arrān in fact enjoyed a great measure of independence.

The early Arab raids under Salmān b. Rabīʿa and Ḥabīb b. Maslama at the end of the caliphate of ʿUmar and the early years of ʿUthmān brought the nominal submission of Baylaḳān, Bardhaʿa, Ḳabala, and Shamkūr, the principle towns of Arrān. Afterwards the Arabs warred constantly with the Khazars and local princes (cf. Balādhurī, 203; Ṭabarī, i, 2889-91).

After the first civil war, and in the caliphate of Muʿāwiya Arab rule in Arrān was established, but the Khazars continued to raid south of the Caucasus Mountains. In the caliphate of ʿAbd al-Malik the Christian church of Arrān, which had been joined to the Greek Orthodox church, was united with the Armenian church by the Armenian clergy with Arab aid and approval (cf. J. Muyldermans, *La domination arabe en Arménie*, Louvain 1927, 99). On the Umayyad governors of Armenia (including Arrān) cf. Balādhurī, 205-9. During the governorship of Maslama b. ʿAbd al-Malik, appointed by the Caliph Hishām in 107/725-6, large Arab garrisons were brought into Arrān, and Bardhaʿa served as headquarters in operations against the Khazars. On the campaigns against the Khazars cf. D. M. Dunlop, *The History of the Jewish Khazars*, Princeton 1954, 60-87, and F. Gabrieli, *Il Califfato di Hisham*, Alexandria 1935, 74-84. Under the governorship of Marwān b. Muḥammad, last of the Umayyad caliphs, from 113-26/731-44, the Khazars were decisively defeated and Arab rule firmly established.

During Umayyad and ʿAbbāsid rule in Arrān local Armenian and Arrānian dynasties continued a semi-independent existence subject to the Arabs. Taxes were paid in Islamic coins, and we find a mint with the appelation Arrān on ʿAbbāsid dirhams as early as 145/762. This mint was either in Bardhaʿa or Baylaḳān. By 207/822 we find coins bearing *madīnat Arrān*, and after 226/840 the mint seems to have been abandoned.

The local ruler from the ancient house of Mihrān was called the *baṭrīḳ* of Arrān by the Arabs, and the last of the family, Varaz Trdat, was assassinated in 821 or 822. Shortly after this the lord of Shakkī, north of the Kur River, a certain Sahl b. Sunbāṭ, extended his sway over all of Arrān declaring his independence of the caliphate. He became reconciled with the Arabs by delivering the rebel Bābak to them after Bābak had taken refuge with him. Later he, or his son and successor, was taken to Samarra about 854 when the new governor of Armenia Bughā deported many of the local princes. At this period the lords of Sharwān and Derbend interfered in Arrān, but the Sādjids were the most powerful rulers in Arrān.

The Sādjid governors of Armenia at the end of the 9th and early 10th centuries A.D. were especially harsh to the Christian population of Transcaucasia, but local dynasties continued to rule, especially north of the Kur River (cf. Ibn Ḥawḳal, 348). Marzubān b. Muḥammad b. Musāfir ruled over Arrān, as well as Ādharbāydjān from 941-57 A.D., and most of the lords of Arrān were his vassals. It was under his rule, in 943, that the environs of Bardhaʿa were ravaged by the Russians. After this Arrān fell under the sway of the Shaddādids of Gandja. The strongest member of the Shaddādid dynasty was Abu 'l-Aswār Shāwur b. Faḍl b. Muḥ. b. Shaddād, who ruled from 441-459/1049-1067. In 468/1075 Alp Arslan sent one of his generals, Sawtegin, to rule Arrān displacing the Shaddādid dynasty. Turkish tribes, primarily Ghuzz, settled in Arrān and gradually Turkish replaced all other languages in common use.

In the Turkish period Baylaḳān seems to have replaced Bardhaʿa as the most important city of Arrān, but the former was destroyed by the Mongols in 1221. After this Gandja became the leading city of Arrān. Under the Mongols Arrān was joined to Ādharbāydjān and single governors ruled both provinces. The process of islamicisation and turkicisation was hastened after the Mongol invasion. The land between the rivers came to be called Ḳarabāgh. After the conquests of Tīmūr, who did much building and repair of canals, Arrān only appears as a memory, and its affairs are part of the history of Ādharbāydjān.

ARSENAL [see DĀR AL-ṢINĀʿA].

ARSH [see DIYA].

ʿARSH [see KURSĪ].

ʿARSH, the name given in Algerian legislation, during about the last hundred years, to some of the lands under collective ownership. This meaning of the word, which has various senses in the Maghribī dialects: "tribe" (for example, on the high plains of Constantine), "agnatic group" (for example, in the Tunisian Sahel), "federation" (for example, in Kabylia), only seems to be vouched for from the time of the preparatory enquiries for the Law of 16 June 1851.

A dispute has long existed in Algeria between those who support recognition of the collective ownership, or only usufruct, of these lands, and those who support recognition of their private character. This dispute overlies the conflict between the administrative theory, which tends to safeguard the patrimony of the tribes, and the expansion of private interests, which want the rapid conversion of these lands into movable property. Arguments have been borrowed, somewhat superficially, from *fiḳh*, which offered the theory of tenure subject to payment of the *kharādj*, and of the Islamic community as the paramount landowner. A secular dispute, which is not yet resolved, has raged over the title to the lands of the Maghrib. It is certainly more in conformity with the facts to say that the system of exploitation, itself a function of the climatic conditions, of divorce from the central power, and of vitality of the local seignories, is the factor fundamentally responsible for the forms of land tenure in the ancient Maghrib: (1) *milk* or "private property"; (2) *ʿazīb*, or *ʿazl*, or *hanshīr*, depending on the district, "latifundium"; (3) *mushāʿ*, or *mushūʿ*, or *blād djamāʿa*, "collective, communal holding"; (4) *waḳf* or *ḥubūs*, "domain constituted into a pious endowment". According as one or other factor predominated, it seems that there was a certain alternation, characteristic of the social history of North Africa, between these different concepts and the realities that they correspond to.

At all events, the decree of the Senate of 22 April 1863 lays down, (article 1), that the tribes of Algeria "are the owners of the territories of which they enjoy the permanent or traditional usufruct, under what title soever". This patrimony, under the tutelage of the administration, is, however, liable to come under the privative statute through the medium of "partial inquiry". This legislation aroused lively opposition. With less clarity than the Moroccan law, but with greater resolution than the Tunisian law, it seems to have found a compromise solution to this long-standing and difficult problem of real estate and society.

Bibliography: Dr. Worms, *Recherches sur la constitution de la propriété territoriale*, 1846; M. Pouyanne, *La propriété foncière en Algérie*, 1895, 130 ff.; Mercier, *La propriété foncière en Algérie*; and especially F. Dulout, *Des droits et actions sur la terre arch ou sabga en Algérie*, 1929. On the word, see Ph. Marçais, *Textes arabes de Djidjelli*, 1955, 27, n. 3. (J. Berque)

ARSHGŪL, a town, not now in existence, on the Algerian coast, which was situated between Oran and the Moroccan frontier, at the mouth of the Tafna, facing the island of Rachgoun, which perpetuates its name.

The Muslim city, which took the place of Portus Sigensis, the port of Siga, the capital of King Syphax, is first heard of at the beginning of the 4th/10th century as being assigned by Idrīs I to his brother ʿĪsā b. Muḥammad b. Sulaymān. It is mentioned in the second half of the 4th/10th century by Ibn Ḥawḳal, who informs us that it had then just been rebuilt by an amīr of the Miknāsa Berbers, a vassal of the caliph at Cordova al-Nāsir. Some years later, al-Bakrī describes Arshgūl, a town on the "coast of Tilimsān", as possessing a harbour accessible to small vessels, and surrounded by a rampart which had four gateways. Within the city were a seven-aisled mosque and two baths, one of which was pre-Islamic, a fact which indicates that the Muslim city occupied the ancient site. In the middle of the 6th/12th century, it was regarded by al-Idrīsī only as a populous place, recently a stronghold, where ships could replenish their water supplies.

Political vicissitudes account for its decline. During the struggles between the Fātimids of al-Ḳayrawān and the Umayyads of Cordova (4th/10th century), its Idrīsid rulers were driven out and its inhabitants were deported to Spain. Partially repopulated by Andalusians, it was again laid waste at the beginning of the 5th/11th century. Again, in the first half of the 7th/13th century, it fell prey to the B. Ghāniya Almoravids, and was finally abandoned at the end of the 10th/16th century, at the time of the Spanish expeditions against the coast of Oran.

ARSHĪN [see DHIRĀʿ].

ARSLAN (T.), lion; also frequently appears as a Turkish proper-name.

ARSLAN B. SALDJŪḲ, the son, probably the elder son, of the ancestor and eponym of the Saldjūḳid dynasties, Saldjūḳ. His history is merged in that of the first contacts between the Oghuz led by his family and the Muslim states of Central Asia. His personal name was Isrāʾīl (cf. his brothers Mīkhāʾīl and Mūsā, fore-names in which it is possible to see Jewish Khazar or Nestorian Central-Asian influence), with Arslan as a totemic name (cf. his famous nephews Ṭughril Muḥammad and Čaghrī Dāʾūd). The beginnings of his history are confused. During his lifetime the Saldjūḳid family, which had settled at Djand, was converted to Islam and freed itself from the Kingdom of the Yabghū of the Oghuz; it is not disputed that his father, Saldjūḳ, then sent him to the aid of one of the last Sāmānids who was engaged in a struggle with the Ḳarakhānids, as is affirmed by the tradition of the *Maliknāma*, a history of the family written under Alp Arslan about 1060; and it is generally thought that it is he who is mentioned, under the title of Yabghū, by the Ghaznawid historian Gardīzī, as assisting in 1003 the last Sāmānid attempt at resistance to the Ḳarakhānids; but latterly this version has been contested by O. Pritsak, according to whom the title of Yabghū can only be understood to refer to the last Yabghū of the Oghuz Kingdom north of the

Aral Sea. It is true that manuscripts of the Arab and Persian chronicles frequently attach to individual Saldjūḳids an appellation which can be read *yabghū*, but O. Pritsak has shown that side by side with the title of *yabghū*, which alone has been taken into consideration hitherto, there existed a totemic name *payghū*, and it is probable that the word must be read thus in some cases; I think however that as far as Arslān Isrāʾīl is concerned, he could not have had two totemic names, and did in fact bear the title of yabghū, indicative of the revolt of his family against the pagan kingdom of the north, and it seems to me probable, although not certain, that he is, in agreement with the traditional account, the person mentioned by Gardīzī.

The main features of his later history are less open to dispute. After the final collapse of the Sāmānids. he is found associated with the Ḳarakhānid rebel at Bukhārā, ʿAlī Tegīn, in whose service he was eventually joined by his nephews Ṭughril and Čaghrī. In 416/1025 he was involved, to a greater extent than they, in the defeat of ʿAlī Tegīn by the combined forces of the supreme Ḳarakhānid Ḳadr-Khān (supported mainly by the Ḳarluḳs) and Maḥmūd of Ghazna, and his Oghūz were transferred to Khurāsān, separated from those of Tughrīl and Čaghrī who soon emigrated to Khwārizm. Legend or adulation has obscured the account of this move which, according to some, was voluntary, but more probably was carried out on the orders of Maḥmūd, as is asserted by others, in order to weaken ʿAlī Tegīn. At all events it is not open to dispute that Maḥmūd kept Arslan-Isrāʾīl prisoner, and that he died in captivity, about 427/1034, in a fortress on the borders of Hind. It is impossible to say what the connexion was between this fate and the persistent tendency to rebellion on the part of the Oghuz of Khurāsān from 418/1027 onward. Those historians, like Rāwandī, who wished to flatter the Saldjūḳid dynasty of Asia Minor, descended from Arslan's son Ḳutlumush (Ḳutalmīsh?), ascribed to the latter the role of secret liaison agent between the prisoner and his Oghuz, but it is impossible to verify this.

Bibliography: Cl. Cahen, *Le Maliknāmeh et l'histoire des origines seldjukides*, in *Oriens* ii, 1949, which contains a survey of the sources, but which is to be revised in the light of the studies of Omelyan Pritsak, in particular *Der Untergang des Reiches des Oghuzischen Yabghu*, in *Köprülü Armağani*, Istanbul 1953, or in *Annals of the Ukranian Academy of Arts in the USA*, ii, 2, 1952, together with my discussion in *JA*, 1954, 271-275; cf. also Pritsak's *Die Karachaniden*, in *Isl.* 1953. For the relations between Arslan and the Ghaznawids, a comprehensive account will be found in Muḥammad Nāẓim, *The Life and Time of Sultan Mahmud of Ghazna*, Cambridge 1931.

(CL. CAHEN)

ARSLAN B. **ṬOGHRUL** [see SALDJŪḲIDS].

ARSLAN-ARGHŪN, brother of Malikshāh who, on the death of the lätter, seized possession of Khurāsān and the province of Balkh, defeated and put to death another brother, Buribars, who had been sent against him (488/1095), but incurred odium as a result of his punitive measures against the supporters of his defeated brother and his destruction, as a preventative measure, of the ramparts of Marw, Nīshāpūr, Sarakhs, Sabzawār etc.; he was finally killed in 490 by one of his slaves. His young son, aged seven, was easily swept aside by Sandjar, the brother and lieutenant of the Sulṭān Barkyāruḳ. Ibn al-Athīr, x, 34, speaks of an Arslan-Arghūn, a brother of Alp Arslan, who received from him the government of Khwārizm at the time when Malikshāh was proclaimed heir-presumptive; the author of the *Akhbār al-Dawlat al-Saldjūḳiyya*, 40, gives the same information, but calls this Arslan Arghūn the son of Alp Arslan, and therefore identical with the brother of Malikshah; but according to ʿImād al-Dīn Bundārī, 257, followed by Ibn al-ʿAthīr, 178-80, the brother of Malikshāh was twenty-six years old at the time of his death, and only possessed at the death of the former a small *iḳṭāʿ* in Western Persia; although nothing else is known of a brother of Alp-Arslan of this name, it seems as though we must conclude that two individuals of this name existed. Descendants of the brother of Malikshāh were still living at Marw in the middle of the 6th/12th century.

Bibliography: ʿImād al-Dīn/Bundarī, ed. Houtsma, *Receuil de Textes relatifs à l'histoire des Seljoucides*, ii, 84, 255-8, whence Ibn al-Athīr, x, 178-80; *Akhbār al-Dawla al-Saldjūḳiyya*, ed. Moh. Iqbāl, Lahore 1933, 33, 34 (relations between Arslan-Arghūn and the ʿAmīd-i Khurāsān known as Muḥammad b. Manṣūr al-Nasawī), 40 (cf. Ibn al-Athīr 34), 54; ʿAlī b. Zayd al-Bayhaḳī called Ibn Funduḳ, *Tarīkh-i Bayhaḳ*, ed. Aḥmad Bahmanyār, Teheran 1337/1938, 72, 270. (CL. CAHEN)

ARSLANLI [see GHURŪSH].

ARSŪF, small fishing port on the coast of Palestine, 10 miles north of Jaffa. The Arabic name probably preserves its original dedication to the Semitic god Reseph. Under the Seleucids it was renamed Apollonia. In the early centuries of the Caliphate it was one of the principal fortified cities of the province of Filasṭīn. It was occupied by the Crusaders under Baldwin I in 494/1101 and called by them Azotus; recaptured by Saladin in 583/1187; scene of an engagement between Saladin and Richard I, 14 Shaʿbān 587/7 Sept. 1191; restored to the Crusaders under the truce with Richard 588/1192; refortified by John of Arsūf 640/1242; captured by sultan Baybars Bunduḳdārī after a forty-days' siege, 11 Radjab 663/29 April 1265, and left in ruins.

ARTUḲIDS, (not URṬUKIDS), a Turkish dynasty which reigned over the whole or part of Diyār Bakr, either independently or under Mongol protectorate, from the end of the 5th/11th to the beginning of the 9th/15th century.

Artuḳ, son of Ekseb, belonged to the Turkoman tribe Döger [*q.v.*]. In 1073 he was in Asia Minor, operating for and against the Byzantine Emperor

Michael VII, but he later appears principally as an officer in the service of the Great Salḏjūḳ Malikshāh. In 1077 he brought the Carmathians of Baḥrayn under the rule of Malikshāh; in 1079 Malikshāh placed him under the command of his brother Tutush in the Syrian campaign, and in 1084 under Ibn Djahīr in the Diyār Bakr campaign; in 1085 he was sent to Khurāsān against the sultan's brother, Tökūsh. He received as an *iḳṭāʿ* Ḥalwān, a strategic point in southern Kurdistān. From 1085 onwards, however, he intrigued in Diyār Bakr with Muslim, the Arab prince of Mawṣil and Aleppo, who was at variance with Malikshāh. The death of Muslim obliged him to re-enter the service of Tutush, who gave him Palestine (1086). The date of his death is not known; he left several sons, among whom were Sukmān and Ilghāzī.

After the death of Malikshāh, the Artuḳids, led by Tutush into Djazīra, helped him to dispute the throne with his nephews (1092-5); on the death of Tutush, they supported his son Ruḍwān of Aleppo against another son, Duḳāḳ of Damascus; they later lost Palestine, and its reconquest by Egypt (1098) and subsequent occupation by the Crusaders finally prevented their return there. One of the two Artuḳid leaders, Ilghāzī, then entered for a time the service of Muḥammad, one of the sons of Malikshāh, whom he had supported against his brother Barkyāruḳ, and who made him governor of ʿIrāḳ, but the Turkomans from whom the family derived its strength remained in Diyār Bakr. In 1097, the nephew of Suḳmān succeeded in occupying Mārdīn. Suḳmān himself, who had taken possession of Sarūdj, was expelled from there by the Crusaders (1097), but, as a result of quarrels between the chiefs of Djazīra, obtained possession of Ḥiṣn Kayfā (1102), controlled numerous districts further north, and then inherited Mārdīn. He took part in the wars against the Franks, and in 1104 before Ḥarrān captured Count Baldwin of Edessa. He died soon afterwards.

Muḥammad, who became sole sultan by the death of Barkyāruḳ, sent Ilghāzī back to Diyār Bakr, where in 1107 he had a hand in the defeat of Kilidj Arslān of Rūm, who had been summoned by Muḥammad's enemies, and in 1108 he took the place at Mārdīn of one of the sons of Suḳmān (another son, Dāʾūd, retained Ḥiṣn Kayfā). Other chiefs, at Āmid, Akhlāṭ, Arzan etc., carved out seignories for themselves. Muḥammad tried to unite them for the Holy War against the Franks; he could not prevent the rupture, in the middle of the campaign, between Ilghāzī and Suḳmān of Akhlāṭ, who, however, died (1110). From then on, relations between Ilghāzī and Muḥammad became strained; the former more and more avoided participation in the expeditions sent against the Franks by the Sultan, from which, having regard to the risks run, only Saldjūḳ authority stood to gain. In 1114, Ilghāzī formed a Turkoman coalition against the governor of Mawṣil, Aḳsunḳur al-Barsuḳī. He was victorious, but, apprehensive of retaliation by Muḥammad, fled to Syria, and reached an understanding not only with Tughtegin, the *atabeg* of Damascus, who was also disturbed at the Sultan's Syrian ventures, but even with the Franks of Antioch; the latter, by crushing the Saldjūḳ army (1115), saved Ilghāzī. In 1118, Muḥammad died, and Ilghāzī seized possession of the last Saldjūḳid post in Diyār Bakr, Mayyāfāriḳīn. He was now a power to be reckoned with. Aleppo, threatened by the Franks and rent by anarchy, appealed to him, despite its leading men's dislike of handing over power to him. Ilghāzī, secure as regards the Saldjūḳids, did not wish to see the power of the Franks increase. In agreement with Tukhtegin, he answered the appeal (1118), and, in 1119, his Turkomans inflicted on the Franks of Antioch a resounding defeat. Their base, however, remained in Diyār Bakr, and, in face of the reaction of other Franks, Ilghāzī was disposed to make peace. He was also called into action against the Georgians; this time he was defeated (1121). Nevertheless his prestige was unimpaired at the time of his death in 1122.

From 1113 onwards, his nephew Balak had been progressively building up, north-east of Diyār Bakr, astride the eastern Euphrates, a stable principality whose chief town, from about 1115, had been Khartpert. Moreover, as tutor of the Saldjūḳid of Malaṭya, who was a minor, he achieved fame by crushing, with the aid of an alliance with the Dānishmandid Gümüshtegin, Ibn Mangudjak of Erzindjān and the Byzantine governor of Trebizond, Gavras (1120), and later, while in the service of Ilghāzī, by capturing Joscelin of Edessa (1122), and, after the death of Ilghāzī, Baldwin of Jerusalem, who had come to protect the Franco-Armenians of the border regions of the Euphrates (1123). He was then able to take the place of another nephew of Ilghāzī at Aleppo but was killed while besieging Manbidj in 1124. Aleppo then passed out of Artuḳid hands.

In Diyār Bakr, where they remained firmly entrenched, Shams al-Dawla Sulaymān, son of Ilghāzī, who had succeeded at Mayyāfāriḳīn, also died at the end of 524/1129-30. Another son of Ilghāzī, Timurtash, already master of Mārdīn, succeeded him. Balak's principality had passed to Dāʾūd, the son and successor, since 1104, of Suḳmān at Ḥiṣn Kayfā. From then on, the two branches maintained a separate existence for two centuries.

The period of expansion, however, was at an end. From 1127 Zenkī ruled at Mawṣil, and from 1128 at Aleppo also; he built up a strong kingdom there. Timurtash acted as Zenkī's vassal, by hostile action against Dāʾūd, then (1144) against his son Ḳara-Arslan, as well as against the prince of Āmid whom Zenkī and he besieged in 1133. Dāʾūd had been active in the north, where he had also conducted an anti-Georgian expedition; he had absorbed the small seignories bordering on his own, especially to the east of Ḥiṣn Kayfā. But he was subjected to relentless pressure from Zenkī, who conquered Buhtān, east of Diyār Bakr, and, on the accession of Ḳara Arslan, the districts lying between Ḥiṣn Kayfā and Khartpert. Ḳara Arslan was forced to effect a rapprochement with the Franco-Armenians of Edessa against whom, like Timurtash, he had waged war from time to time; the capture of Edessa by Zenkī (1144) was a disaster for him too, but he was saved by his enemy's death (1146). Not without difficulty Timurtash and Ḳara Arslan divided Diyār Bakr between them.

Zenkī's dominions were divided between Nūr al-Dīn at Aleppo, and at Mawṣil a line of other princes, brothers and nephews of Nūr al-Dīn, who increasingly brought them under his tutelage. His struggle against the Franks and his efforts in the Mawṣil direction led him again to seek an alliance with the Artuḳids; he did not contend with them for Diyār Bakr and allowed them north of the Euphrates to take their share of the spoils of the Count of Edessa, but dragged them along in his wake in holy wars against the Franks or Byzantines. Nevertheless his relations with them were excellent, especially with Ḳara Arslan, and Alpī, the son and successor of

Timurtas̲h̲, sought to secure his position by obtaining the protection of the S̲h̲āh-i Armin of Ak̲h̲lāṭ, whom he was obliged in return to aid against the Georgians. Ḳara Arslan himself, in 1163, attempted to take Āmid from the Inālids and the Nīsānids, but was prevented from doing so by a Dānis̲h̲mandid attack; but soon his son Muḥammad, with Nūr al-Dīn, went to the aid of the Dānis̲h̲mandids who were threatened by the expansionist policy of the Sald̲j̲ūḳids of Ḳonya. The growing power of Nūr al-Dīn had imperceptibly caused the Artuḳids to assume the rôle of vassals, when Nūr al-Dīn died in 1174.

The history of the following years is mainly concerned with the resistance offered by the princes of Upper Mesopotamia to the ambitions of Ṣalāḥ al-Dīn who, master of Egypt, gradually took possession of the Syro-D̲j̲azīran heritage of Nūr al-Dīn. The Artuḳids to begin with gave their united support to the Zenkids of Mawṣil. Then Muḥammad considered it more prudent to come to terms with Ṣalāh al-Dīn, who captured Āmid, for long the object of his envious regard, and gave it to Muḥammad as fief; from then on it became the family seat (1183). Muḥammad's death shortly afterwards, which left only young princes on the throne of Āmid, Mārdīn, Ak̲h̲lāt and Mawṣil, together with the division of Muḥammad's dominions into two branches, Ḥiṣn Kayfā with Āmid, and K̲h̲artpert, increased their subjection to Ṣalāḥ al-Dīn; the latter directly established his authority in Diyār Bakr in 1185 by the occupation of Mayyāfāriḳīn.

The Artuḳids were from then on only remnants gradually whittled away by the successors of Ṣalāḥ al-Dīn of the Ayyūbid dynasty, his brother al-ʿĀdil and the latter's descendants, who became masters of Ak̲h̲lāṭ in 1207 but were sometimes divided among themselves. Against the most powerful of them, al-Kāmil of Egypt, the Artuḳids became for a time vassals of the Sald̲j̲ūḳids of Rūm, then expanding rapidly to the east, and then of the K̲h̲ʷārizms̲h̲āh D̲j̲alāl al-Dīn Mangubertī, who had become master of Ad̲h̲arbāyd̲j̲ān and Ak̲h̲lāṭ; Sald̲j̲ūḳid vengeance caused them to lose the towns north of the Euphrates (1226), and the vengeance of al-Kāmil deprived them of Āmid and Ḥiṣn Kayfā (1232-3). Al-Kāmil quarrelled with the Sald̲j̲ūḳid Kayḳubād̲h̲ and was defeated, and as a result the Artuḳid of K̲h̲artpert, who had supported him, was dispossessed in his turn (1234). From then on only the Mārdīn branch remained; this continued to exist for nearly another two centuries. In 1260 its representative, al-Malik al-Saʿīd, endured a lengthy siege by the Mongols; but his death saved the dynasty, for his son, al-Muẓaffar, submitted to Hūlāgū and thus, as a humble vassal, preserved the heritage of his ancestors.

The internal organisation and the civilisation of the Artuḳid principalities are too little known and, on the whole, too lacking in originality, for them to merit a general study on their own. Forming, with the exception of K̲h̲artpert, part of the Muslim world since the Arab conquests, the territories over which the Artuḳids reigned continued to be governed by the same people (for example the illustrious family of the Banū Nubāta at Mayyafāriḳīn) and according to the same principles (summarised in the *ʿIḳd al-Farīd* of Muḥammad b. Ṭalḥa al-Ḳars̲h̲ī al-Adwī, *wazir* of Mārdīn in the 7th/13th century) which had existed formerly or still existed in the neighbouring principalities. The taxes recorded in one or two inscriptions are those obtaining everywhere, and it would be unwise to attach more than a passing significance to the anecdote which emphasises the lightness of the burdens borne by the rural elements subject to Timurtas̲h̲ compared with those subject to Zenkī. The introduction of the Turcoman element had no effect on the traditional economic activity of the country, which was based on agriculture and stock-breeding, the iron and copper mines, and trade with ʿIrāḳ and Georgia. Culturally, although we do not know of any writer of note who lived in the entourage of the Artuḳids, the Arabic literary tradition was sufficiently alive among them for a Usāma b. Munḳid̲h̲, for example, an exile from Syria, to have lived for several years at the court of Ḳara Arslan at Ḥiṣn Kayfā.

When all this has been said, we still have to see whether, by virtue of its origin or otherwise, the Artuḳid régime had any particular characteristics. The first problem is that of Turcoman influence. The Turcomans remained until the end an important element in the life of Diyār Bakr, in the south perhaps more than in the north, where the Kurds were always dominant; and Diyâr Bakr was one of the starting points for the vast Turcoman migration of Rustem, which embraced about 1185-90 the whole of eastern and central Asia Minor. It is known, on the other hand, that the few verses which constitute the earliest specimen of popular literature in the Turkish language in western Asia, emanated from Artuḳid territory. There is no doubt that the Artuḳid dynasty did not remain purely Turcoman. The use of the symbolic arrow, however, continued for some time, and the princes (but not more than the Zenkids, who were not of direct Turcoman origin) preserved in their style, alongside Arab and Persian names, specifically Turkish titles. There has been much discussion on the significance of the animal motifs on certain coins or in decorative work on buildings, which perhaps belong to a general group of Turkish traditional symbolic signs. None of this has much bearing on the actual organisation of the Artuḳid principalities. What perhaps has a greater bearing on this, if it must be attributed to an original tribal practice deriving from authority which was more family than individual, is the impossibility which faced the dynasty of avoiding apportionment, and the numerous and detrimental grants of apanages to "princes of the blood". All the same, it is hardly open to dispute that the continued existence of the dynasty at Mārdīn, and its replacement by the Ayyūbid Kurds north of the Tigris, should be related to the redistribution of the population and consequently to the support given to the Artuḳids by the Turcomans despite the existence of numerous Turks in the Ayyūbid army. This does not mean to say that the Artuḳids had had much quarrel with their Kurdish subjects, despite memories of the Marwānids; nevertheless one sees them pursuing on their eastern frontiers the same policy of reabsorbing the autonomous Kurdish states which Zenkī was following a little further south, and at the end of the century a massacre of Kurds, with whom they were indeed formerly half intermixed, marked the beginning of the migration of the Turcomans of Rustem.

As regards religious belief, the attitude of the Artuḳids seems in general to have been fairly tolerant. It is true that they took part in the general trends towards orthodoxy which characterises the Sald̲j̲ūḳid and post-Sald̲j̲ūḳid period, and were among the most active builders of *madrasas* and mosques and executors of public works (bridges, *k̲h̲āns*, etc.) and military defence works. Ilg̲h̲āzī, who was of necessity a diplomat, had avoided a complete breaḳ with

the Assassins; none of his successors had the appearance of a champion of orthodoxy comparable to that of Nūr al-Dīn, and one of them, at Khartpert, favoured the Persian mystic Suhrawardī who, it is true, had at that time not yet been denounced as heterodox. The same tolerance, on the whole, characterised the relations of the Artuḳids with their Christian subjects. The latter complained, in the second half of the 6th/12th century in particular, of various tribulations; but popular disturbances sometimes among the Kurds, rather than any action by the government, seem to have been at the root of the matter. About 1180, Turkomans and Kurds massacred, on the borders north of Diyār Bakr, the Armenians of Djabal Sassūn, but the latter constituted a quasi-autonomous group, intriguing frequently with the Shāh-i Armīn, and the action of which they were the victims was therefore of a political rather than religious nature. Towards their ordinary Christian subjects, it has to be admitted that the Artuḳids acted with correctitude. There is no other explanation for the fact that the Armenian Catholicus resided for a period during the 12th century at Dzovk, in the province of Khartpert, and that the patriarch of the Monophysites constantly alternated his periods of residence at the Convent of Mār Barṣawma (itself momentarily subject to the Artuḳids, but normally a dependency of Edessa, and then of the princes of Malaṭya) with periods of residence at Āmid or at Mārdīn, where their election frequently took place with Artuḳid permission. Several bishoprics, especially Monophysite, always existed in Diyār Bakr, the Christian population remained numerous and, on the south-eastern frontiers of the province, the district of Ṭūr-ʿAbdīn remained a great centre of monastic life until the 8th/14th century.

The strange character of Artuḳid coins, which, like those of the Dānishmandids, for long resembled ancient Byzantine coins, is sometimes explained as a Christian influence. This does not seem to me to be a sufficient explanation. To speak of the impossibility of finding an artisan capable of striking Muslim coins in an ancient Muslim country does not make sense; nor does the importance of trade with Byzantium carry greater weight, because it is impossible to believe that it had suddenly assumed greater importance than trade with neighbouring Muslim states, or that the copper pieces with which we are exclusively concerned could be used for any other purpose than local consumption. These arguments are admissible for the Dānishmandids, but not for the Artuḳids, and the problem deserves to be reconsidered as a whole.

The history of the Artuḳids after the Mongol conquest, despite their disappearance from the larger political stage, should not cease to attract our interest as an example of how an autonomous principality adapted itself to new circumstances; unfortunately very little is known about it. The Artuḳids played the role of loyal servants of the Ilkhāns; they gained, apart from the title of sultan, the advantage of being considered for a time as auxiliaries or delegates of Mongol authority, and of recovering more or less permanently a considerable part of Diyār Bakr (Āmid, in a state of decay, Mayyāfāriḳīn, perhaps Isʿird) and in addition Khābūr, only Ḥiṣn Kayfā (Ayyūbid) and Arzan (Saldjūḳid) remaining autonomous. Moreover, like all the vassals of the Ilkhāns, the Artuḳids, in the second quarter of the 8th/15th century, as a result of the break-up of the Mongol state, found themselves once more free, and subsequently free to bow momentarily before one or other of the new powers created by this break-up. The little which is known of their "foreign policy" shows them trying to preserve their pre-eminence in the face of, on the one hand, the Ayyūbids of Ḥiṣn Kayfā, against whom they waged in 735/1334 an unsuccessful war which cost them their possessions on the left bank of the Tigris, and on the other hand the Mongols, Turcomans and Mamlūks who contested Upper Mesopotamia with them. On the one hand they appear to have joined forces with the Turcomans against the Kurds of the north, supporters of the Ayyūbids; there is, however, no further mention of any special link with their parent tribe, the Döger, now settled further to the west, on the borders of the Mamlūk state; on the other hand, with the formation of the two great rival Turcoman federations of the Aḳ Ḳoyūnlū and the Ḳara Ḳoyūnlū in Armenia and Upper Mesopotamia in the middle of the 8th/14th century, the Artuḳids seem at first to have supported the enemies of the latter (although it is not possible to affirm that they belonged strictly to the Aḳ Ḳoyūnlū group); but, some time before the invasion of Tīmūr, a general rapprochement seems to have taken place between the Mongols (Djalāʾirids) of Baghdād, the Ḳara Ḳoyūnlū, the Artuḳids and the Mamlūks.

Whatever the position regarding these disputed questions, on another plane, that of economic and social life, the increase, by comparison with pre-Mongol times, of the nomad element compared with the settled element, and the consequent decline of agricultural life, are not open to dispute. Nevertheless some towns, among them Ḥiṣn Kayfā and Mārdīn, perhaps derived profit from the surrounding decadence, which made them valuable places of refuge. Building was definitely still going on at Mārdīn in the 8th/14th century, and Arab culture, represented, for example, by the poet Ṣayf al-Dīn al-Ḥillī, still held an honoured position there. Christianity, favoured by the Mongols, but sometimes ill-treated by their descendants, retained for its part a certain vitality in Artuḳid territory: the Monophysite patriarch often resided at Mārdīn, and Daniel bār al-Khaṭṭāb is a theologian still held in respect there.

The invasion of Tīmūr caused fresh upheavals. Ṣulṭān al-Ẓāhir ʿĪsā, suspected of maintaining a connexion with Egypt, could not save his principality from the ravages of the conqueror. He contended with the Ayyūbids, zealous vassals of Tīmūr, and especially with the Aḳ Ḳoyūnlū who, to begin with on behalf of Tīmūr, then, after his death, on their own account, sought to conquer the Artuḳid principality; in 809, al-Ẓāhir was killed making a vain attempt to save Āmid, and in 811/1409 his successor al-Ṣāliḥ decided to abandon Mārdīn to Ḳara Yūsuf, the leader of the Ḳara Ḳoyūnlū. This represented the end of the dynasty and of the period of comparative autonomy of southern Diyār Bakr.

Bibliography: The sources are those for the general history of the Near East from the end of the 5th/11th to the beginning of the 9th/15th century. For the 12th-13th centuries see the introduction to my *Syrie du Nord à l'époque des Croisades*, Paris 1940. Special note should be made of the following: for the 11th century, the History of Aleppo of Kamāl al-Dīn Ibn al-ʿAdīm (ed. Sāmī Dahhān, Damascus vol. 1, 1951, vol. 2, 1954, vol. 3 in preparation), the *Mirʾāt al-Zamān* of Sibṭ Ibn al-Djawzī (the portion relevant to this period has not been published), and, for the Baḥrayn eposide,

the annotator of Ibn al-Mukarrab (De Goeje, *La fin des Karmates*, in *JA* 1895); for the 12th century, the Syriac chronicle of Michael the Syrian, ed. and trans. by Chabot, iii, and above all, a unique extant chronicle originating from Artuḳid Diyār Bakr, the History of Mayyāfāriḳīn of Ibn al-Azraḳ al-Fāriḳī (unpublished; analysis of the political events in my *Diyār Bakr au temps des premiers Urtukides*, in *JA* 1935); for the 13th century, before the Mongol intervention, the great histories of Ibn al-ʿAdīm (mentioned above), Ibn al-Athīr, Ibn Wāṣil (edition in course of preparation by Djamāl al-Dīn al-Shayyāl, Alexandria; vol. 1, appeared in 1953), al-Djazārī (*Oriens* 1951, 151), and especially the section relating to Djazīra in the *Aʿlāḳ* of ʿIzz al-Dīn Ibn Shaddād (unpublished; analysis in my *Djazira au XIIIe s.*, in *REI* 1934), which constitute the Arab sources, and, in addition, in Persian, the History of the Saldjūḳids of Asia Minor of Ibn Bībī (facsimile edition by A. S. Erzi, Ankara 1956, critical edition by N. Lugal and A. S. Erzi, i, Ankara 1957; a Turkish version was edited by T. Houtsma, *Recueil*, iii, A. German translation by H. W. Duda is in the press.) and, in Syriac, the *Chronography* of Gregory Abu 'l-Faradj Bar Hebraeus (ed. and trans. by Budge); for the Mongol, post-Mongol and Tīmūrid period, one must glean the fragments of information scattered among the standard chronicles of the Mamlūks, the Ilkhānids and Tīmūr, and more especially in the *History of the Ayyubids* (of Ḥiṣn Kayfā, unpublished, analysis by the author in *JA* 1955), and augment this by the *inshāʾ* works of the period, the continuation of the Syriac Eccleciastical Chronicle of Bar-Hebraeus (ed. Abbeloos and Lamy) and (for the period since Tīmūr) the anonymous Syriac work edited and translated by Behnsch (Bratislava 1838) and the Armenian history of Tamerlane by Thomas de Medzroph (ed. and trans. by Nève); see also the *dīwān* of Sayf al-Dīn al-Ḥillī, and, perhaps, the *Kitāb-i Diyārbakriyya* of Abū Bakr Tihrānī (end of the 15th century), which is not accessible to me (see *IA*, articles Diyarbekir and Akkoyunlu, and Faruk Sumer, article mentioned below).

The inscriptions, collected up to the beginning of the 14th century in *RCEA*, have nearly all been studied by Sauvaget in the appendix to A. Gabriel, *Voyage archéologique en Turquie Orientale*, 1940; see also Sauvaget, *La tombe de l'Ortokide Balak* (*Ars Islamica* 1938) and Sül. Savci, *Silvan Tarihi*, Diyarbekir 1949. — For buildings, see Gabriel, *op. cit.* — For *objets d'art*, see J. T. Reinaud, *Monuments Blacas*, ii, 40, and P. Casanova, *Inventaire de la collection Princesse Ismail*, 1896. For coins (not a few unpublished coins exist in private collections), the Istanbul and British Museum catalogues, and S. Lane Poole, *The Coins of the Urtuḳis*, in *Marsden Numismatic Chronicle*, 1875; B. Butak, *Resimli turk paralari*, Istanbul 1947-50.

The only comprehensive modern studies are those, necessarily brief, by Mukr. Halil Yinanç (*Diyarbekir*) and Köprülü (*Artuk-oğullarī*) in *IA*. My *Diyar Bakr* etc. mentioned above, one of my early works, is only of value for political events; see also my *Première Pénétration turque en Asie-Mineure* (*Byzantion* 1948) and my *Syrie du Nord* mentioned above: the histories of the Crusades of Grousset and Runciman; the valuable commentaries on inscriptions by Van Berchem in *Abh. G. W. Göttingen* 1897, and in Strzygowsky, *Amida* 1910; H. Derenbourg, *Ousama b. Mounkidh*, i, 1886; Faruk Sümer, *Dögerlere Dair*, in *Türkiyat Mecmuasī* 1953. For the 14th century, see my *Contribution à l'histoire du Diyār Bakr au XIVe s.*, in *JA*, 1955; on Daniel bar al-Khaṭṭāb, Nau, in *Rev. Or. Chrét.* 1950. (Cl. Cahen)

ARTVIN, town in the far north-east of Turkey, 41° 10′ north, 41° 50′ east, situated on the Çoruh. It was ceded to Russia by the Treaty of San Stefano in 1878 together with Kars and Ardahan, and ceded back by Georgia on Feb. 23rd, 1921. Since then, it has been the centre of the *ḳaḍā* and the capital of the *wilāyet* of Çoruh. In 1945, there were 3,980 inhabitants in the town itself and 16,966 in the *ḳaḍā*. (Fr. Taeschner)

ʿARŪBA [see ta'rīkh].

ʿARŪḌ. I. *ʿIlm al-ʿArūḍ* is the technical term for ancient Arabic metrics. *ʿIlm al-ʿArūḍ* and *ʿIlm al-shiʿr* are occasionally used synonymously in the sense of "science of versification", and in this extended sense *ʿIlm al-ʿArūḍ* embraces not only the Science of Metre, but also the Science of Rhyme. Usually, however, the rules governing rhyme (*ʿIlm al-Ḳawāfī*, sg. *Ḳāfiya*) are treated separately, and *ʿIlm al-ʿArūḍ* is confined to metrics in the stricter sense. As such, Arabic philologists define it in the following manner: *Al-ʿarūḍ ʿilm bi-uṣūl yuʿraf bihā ṣaḥīḥ awzān al-shiʿr wa-fāsiduhā* (*ʿArūḍ* is the science of the rules by means of which one distinguishes correct metres from faulty ones in ancient poetry).

There is no generally accepted etymology for this sense of the term *ʿArūḍ*. Some Arabic grammarians maintain that it acquired the meaning of metrics because the verse is constructed on its analogy (*yuʿraḍ ʿalayhi*); others say that the term was used because al-Khalīl developed it in Mecca, and this city is also called al-ʿArūḍ. Georg Jacob (*Studien in arabischen Dichtern*, 180) has suggested a curious explanation by pointing to the passage in the *Dīwān* of the Hudhaylites (95, 16), where the poem is compared to an obstinate female camel (*ʿarūḍ*) which the poet tames. The most plausible explanation still remains the one based on the concrete meaning which *ʿArūḍ* has as part of a tent, and the transferred sense which it acquired in metrics, as the last foot of the first hemistich: originally it describes "the transverse pole or piece of wood which is in the middle of a tent, and which is its main support and hence the middle portion (or foot) of a verse" (Lane). Since the last foot of the first hemistich in the centre of the line (*bayt al-shiʿr*) is as important for its structure as the centre pole is for that of the tent (*bayt al-shaʿr*), one may readily assume that *ʿArūḍ* then came to be the general term for the science of metric structure.

There are few works on metrics by Arab philologists, and their contents are of little value. This fact is all the more surprising if one bears in mind how many works of lasting value have been written by prominent Muslim scholars on grammar and lexicography. The *Kitāb al-ʿArūḍ*, which al-Khalīl, the founder of the science of metrics, is said to have written, has not survived, nor have any of the works on the subject written by the older grammarians. The earliest monographs which we have concerning *ʿIlm al-ʿArūḍ*, in the wider sense, date from the turn of the 3rd century A. H. There are sections on metrics in some of the larger *Adab* works; the oldest and best known of these can be found in the *ʿIḳd al-Farīd* (Ed. Cairo, 1305, III, 146 ff.) of Ibn ʿAbd Rabbihi (died 328/940). The following list gives the names o

4th century		
Ibn Ḳaysān	1, 110	*talḳib al-ḳawāfī wa-talḳib ḥarakātihā*; ed. W. Wright in *Opuscula arabica* (1859) 47-74.

Al-Ḳināʾī	2, 27; S. 2, 22	*al-kāfī fī ʿilmay al-ʿarūḍ wa 'l-ḳawāfī*. First printed Cairo 1273; copied in the *Madjmūʿ*; much commented upon.
Al-Shirwānī	2, 194	
11th century		
Al-Isfarāʾinī	2, 380; S. 2,513	
12th century		
Al-Ṣabbān	2, 288; S. 2, 399	*manẓūma* [*al-shāfiya al-kāfiya*] *fī ʿilm al-ʿarūḍ*; printed several times in Cairo; also copied in all editions of the *Madjmūʿ*.

those Arab philologists whose works on metrics are preserved in manuscripts (—mere commentators are omitted). They are arranged in centuries, reckoning from the Hidjra, and details are given only in the case of the better known works; references to Brockelmann are, however, given in every case.

Just as the ancient Indians and Greeks developed their own form of metric poetry, so did the ancient Arabs. Ancient Arabic poems were already written and recited in the known metres a hundred years before Islam, and they retained their form more or less unchanged in the succeeding centuries. The usual ancient Arabic poem, the so-called *Ḳaṣīda*, [*q.v.*] is comparatively short and simple in its structure. It consists of 50 to 100 monorhyming lines (rarely of more), and there is no strophic division in ancient Arabic poetry. Each line (*bayt*, pl. *abyāt*) consists of two clearly distinct halves (*miṣrāʿ*, pl. *maṣārīʿ*); the name for the first hemistich being *al-ṣadr*, that for the second *al-ʿadjuz*. Only these more obvious attributes of the line were recognised and named during the 1st century A.H. Al-Khalīl Ibn Aḥmad al-Farāhīdī (died ca. 175 A.H. in Baṣra) was the first to investigate the inner, rhythmical structure of Arabic verse; he distinguished between different metres, gave them the names by which we still know them, and divided them up into their subordinate metric elements. The written description and analysis of observations made by ear presented, however, very serious difficulties.

In all languages the choice and position of words in prose is solely governed by generally accepted syntactic rules and by the desire of the speaker to express his thoughts as clearly as possible. In poetry, however, when it is based on rhythm, the choice of words and their sequence within the line is not so uncontrolled. The rhythm of the verse and the metres in which it finds its external expression are

created by the following factors: 1) the observance of a definite order in the sequence of syllables within the line, and 2) the regular recurrence of accent, indicated either by stress or some other means. The rhythm of a line in poetry is as completely tied to the phonetic properties of the language in which it is written as are the syllables of the words in the prose of the language concerned. This is, above all, a matter of the *duration* of the syllables and the *stress* with which they are pronounced. Syllables have a measurable length in all languages, but whereas in some (e.g. in the Germanic languages) there is no fixed and definite proportion of length of syllables (for, although there are admittedly some syllables in these languages which are always long and others which are always short, there are many which have no fixed quantity), there are, on the other hand, other languages (such as ancient Greek) where the quantity of every syllable in every word is absolutely fixed. In these, there is a strict distinction between long and short syllables in prose, too; the ratio of their length is roughly 2 : 1. The position is similar with regard to the element of stress: whilst in every language there is one syllable in a word which is somehow raised above the others, the strength of this accent is, however, something which differs widely in the individual languages. Thus, for example, ancient Greek uses musical pitch, whereby individual syllables are distinguished only by a higher tone, whilst in the Germanic languages they are distinguished by an expiratory stress which renders them more emphatic in comparison with the other syllables. The rhythmic structure of the verse has in all languages to adapt itself to these qualities of the syllables. If the quantity of the syllables is definitely fixed, then the rhythm of the verse is attained largely by regularly recurring sequences of short and long syllables, forming metrical 'feet', which last the same length of time. One then speaks of 'quantitative' verse. If, on the other hand, stress, rather than any fixed quantity, is the characteristic by means of which definite syllables are distinguished from their neighbours, then the rhythm of the verse and the structure of its metre, will both be largely produced by the alternation of accented and unaccented syllables. In this case we speak of 'accentual' verse.

From the prose of the Ḳorʾān, and the poetry of the ancient poets, as it has come down to us, we know that in the ancient Arabic language the quantity of the syllables was definitely fixed. From certain grammatical facts one may assume that an expiratory accent was also present, though only slightly developed. *A priori* one can therefore assume that the rhythm in ancient Arabic verse (as in ancient Greek verse) found its expression in 'quantitative' metrics. The theoretical treatment of this problem, however, was at that time a far more difficult one for the Arabic philologist than for the Greek prosodist. The latter used the term 'syllable', made a clear distinction between short and long syllables, and chose the short syllable, the χρόνος πρῶτος, as the basic unit for measuring the duration of the verse. They also had a term and a graphic sign for the pitch by which one syllable in every word was distinguished. Arabic philologists, by contrast, did not possess the *concept* of syllable, let alone the refinement of the 'short syllable'. Al-Khalīl, too, did not know the words 'syllable' and 'stress', yet his ear surely perceived what we call syllables and stresses, for his graphic paraphrase —which we can understand if we try hard—does give us a clear picture of the rhythm in ancient Arabic verse.

Primarily, Al-Khalīl made good use of the peculiarities of Arabic script, in which the face of each word is a guide to the quantity of its syllables: one individual 'moving' consonant (*ḥarf mutaḥarrik*), i.e. a consonant with a vowel sign (e.g. بِ، قَ), corresponds to what we call a short syllable, and two consonants, of which the first is 'moving' and the second 'quiescent' (*sākin*) (e.g. فِي، لَوْ، قَدْ), correspond to what we call a long syllable. There are only a few fixed spellings which fail to comply with this rule (e.g. بِنْ بِنْ = بِ، وَلْ = وَاْلْ، أَاخَرُ = آخَرُ، قَتْتَلَ = قَتَّلَ، ذَالِكَ = ذٰلِكَ). Thanks to this peculiarity of the Arabic script, Al-Khalīl was able to take the face of the verse as a basis for his treatment of Arabic metres. In order to be independent of the changing shape of the letters, graphic symbols were introduced, namely the symbol | o for the 'quiescent' and the symbol o for the 'moving' consonant (e.g. قِفَا نَبْكِ = o | o | o o).

Both al-Ḥarīrī and Ibn Khallikān report that Al-Khalīl had noticed the different rhythms produced by the hammering in different copper-workshops in the bazaar in Baṣra, and that this gave him the idea of developing a science of metre, in other words, of determining the rhythm in the structure of the ancient poems. This late report agrees with the earlier one by Al-Djāḥiẓ, who states that Al-Khalīl was the first to distinguish between different metres, that is to say, that he was the first who in listening had distinguished different rhythmic structures in the ancient verses, and that he was the first to analyse this rhythm, by dissecting it into its metric elements. His theory was supplemented in its details by later Arabic prosodists, but these additions made no difference to the basic conception. Even today, the 16 Arabic metres are still given in the very order in which Al-Khalīl gives them, because it is only in this order that they can be united in the graphic presentation of the five metric circles (*dawāʾir*, sg. *dāʾira*).

According to him, every metre comes into being by the repetition of 8 rhythmic feet which recur in definite distribution and sequence in all metres. The term applied to these feet is *djuzʾ*, pl. *adjzāʾ* ("part"). In accordance with the common practice of Arabic grammarians, he represents each of these 8 "parts" by a mnemonic word, derived from the root *fʿl*. Of these eight mnemonics, 2 consist of five consonants each, namely: faʿūlun فَعُولُنْ and fāʿilun فَاعِلُنْ, 6 of seven consonants each, namely mafāʿīlun مَفَاعِيلُنْ, mustafʿilun مُسْتَفْعِلُنْ, fāʿilātun فَاعِلَاتُنْ, mufāʿalatun مُفَاعَلَتُنْ, mutafāʿilun مُتَفَاعِلُنْ, mafʿūlātu مَفْعُولَاتُ. The following table of the 5 metric circles will clarify how the 16 metres are made up of these 8 feet. For the sake of clarity, the circles are opened out and given as straight lines, and only one hemistich is given in the rhythmical mnemonic words for each metre (see Circle 1-5, p. 670).

Circle 1

Ṭawīl | FAʿŪ́ -lun MAFĀ́ -ʿī- lun FAʿŪ́ -lun MAFĀ́ -ʿī -lun |
Basīṭ -ʿILUN fā -ʿILUN | mus -taf -ʿILUN fā -ʿILUN mus -taf- . . . . . |
Madīd -ʿILUN | fā -ʿILĀ -tun fā -ʿILUN fā -ʿILĀ́ -tun fā . . |

Circle 2

Wāfir | MUFĀ́ -ʿala -tun MUFĀ́ -ʿala -tun MUFĀ́ -ʿala -tun |
Kāmil -ʿILUN | muta -fā -ʿILUN muta -fā -ʿILUN muta -fā- . . |

Circle 3

Hazadj | MAFĀ́ -ʿī -lun MAFĀ́ -ʿī -lun MAFĀ́ -ʿī -lun |
Radjaz -ʿILUN | mus -taf -ʿILUN mus -taf -ʿILUN mus -taf- . . |
Ramal -ʿILĀ -tun | fā -ʿILĀ -tun fā -ʿILĀ -tun fā- . . . |

Circle 4

Sarīʿ | mus-taf-*ʿilún* mus -taf -*ʿilún* māf -ʿu -LĀ́TU mus -taf -*ʿilun* mus -taf -*ʿilún* maf -ʿū-LĀ́TU |
Munsariḥ | mus -taf -*ʿilun* maf -ʿū -LĀTU mus -taf -*ʿilun* |
Khafīf | fā -*ʿilā* -tun mus -TAFʿI -lun fā -*ʿilā* -tun |
Muḍāriʿ | *mafā* -ʿī -lun FĀʿI -lā -tun *mafā* -ʿī -lun |
Muḳtaḍab | maf -ʿū -LĀTU mus -taf -*ʿilun* mus -taf -*ʿilun* |
Mudjtaththth | mus -TAFʿI -lun fā -*ʿilā* -tun fā -*ʿilā* -tun |

Circle 5

Mutaḳārib | FAʿŪ́ -lun FAʿŪ́ -lun FAʿŪ́ -lun FAʿŪ́ -lun |
Mutadārik -ʿILUN | fā -ʿILUN fā -ʿILUN fā -ʿILUN fā- . . |

The order of the 5 circles is based on an arithmetical principle. They are arranged according to the number of consonants in the mnemonic words of the metres which compose them. The three metres *Ṭawīl, Basīṭ* and *Madīd*, whose hemistiches consist of 24 consonants each, form the first circle; the two metres *Mutaḳārib* and *Mutadārik*, whose hemistiches consist of only 20 consonants each, form the last circle. The remaining metres, whose hemistiches consist of 21 consonants each, are divided among the three circles in the middle. The order of the metres within the circles is also a formal one: the *Adjzāʾ* of a metre are first written around the periphery of a circle, thus the three *mafāʿīlun mafāʿīlun mafāʿīlun* of the *Hazadj* are inscribed around the periphery of circle 3. If one reads the same circle again, but starting at a different point, one automatically gets the mnemonic words of another metre: thus if, for instance, in circle 3 one does not begin with *mafā-* (as in *Hazadj*), but only with the *-ʿī-* of *mafāʿīlun*, one obtains the metric scheme of *Radjaz*, and if one advances still further and does not begin reading till the *-lun*, one obtains the scheme of *Ramal*. The possibility of dividing the *Adjzāʾ* of a circle in various ways, and of reaching different metric schemes by doing so, is only due to Al-Khalīl having purposely constructed his circles so that the mnemonic words united in each circle not only produce the same total number of consonants, but coincide completely in their 'moving' and 'quiescent' consonants as well, if they are written in a certain relationship to one another. This can be clearly seen in the above table of the 5 circles if one transcribes the Latin letters into Arabic ones. The agreement emerges even more obviously if we substitute the signs which are used by the Arabic prosodists for the 'moving' and 'quiescent' consonants themselves. The following picture will then emerge for circle 3:

Hazadj | o | o | oo | o | o | oo | o | o | oo
Radjaz | oo | o | o | oo | o | o | oo | o | o
Ramal | o | oo | o | o | oo | o | o | oo | o

The same relative coincidence is also found between the metres contained in the remaining 4 circles. Al-Khalīl's object in arranging the metres in this purely formal system of the 5 circles has not been handed down to us either by himself, or by any of the later prosodists. It is quite certain, however, that this merely external superimposition of 'moving' and 'quiescent' consonants in the mnemonics is not meant to imply a rhythmic development of one metre out of another.

The 8 *Adjzāʾ*, which, as we have seen, recur again and again in different distributions in the 16 metres, can be further split into their metric components. For Al-Khalīl, however, the metric component means something different than for the occidental prosodist. It is not the smallest indivisible unit of sound, but the smallest independent word occurring in the language. Accordingly, he distinguished two pairs of metric components which he apparently regarded as such because none of the 4 words concerned (each with its particular sequence of 'moving' and 'quiescent' consonants), could be derived from any of the other 3, whilst all 8 feet could be formed by combinations from these 4 words. He took the terms for these two pairs of components from two important parts of the tent, and he distinguished between:

A: The two *Asbāb* (sg. *sabab* "cord") which consist of two consonants each, namely

1) *sabab khafīf* = 2 consonants, the first 'moving', the second 'quiescent', as in words like قَدْ
2) *sabab thaḳīl* = 2 consonants, both 'moving', e.g. words like لَكَ

B: The two *Awtād* (sg. *watid* "peg") which consist of three consonants each, namely

1) *watid madjmūʿ* = 3 consonants, the first two 'moving', the last 'quiescent', as in words like لَقَدْ

2) *watid mafrūḳ* = 3 consonants, the first and third moving, the middle one 'quiescent', e.g. words like وَقْتَ

In this manner, each of the 8 feet can be reduced to its metric components as follows; thus مَفَا|عِيـ|ـلُنْ *mafā-ʿī-lun* = B1 + A1 + A1 or مُتَ|فَا|عِلُنْ *mutafā-ʿilun* = A2 + A1 + B1. Each of the 16 metres given in the circles can therefore be scanned on this basis, e.g. *Wāfir* = *mufāʿalatun mufāʿalatun mufāʿalatun* = B1 + A2 + A1, B1 + A2 + A1, B1 + A2 + A1 or *Sarīʿ* = *mustafʿilun mustafʿilun mafʿūlātu* = A1 + A1 + B1, A1 + A1 + B1, A1 + A1 + B2.

Since it is thus possible to reduce all the metres to their basic components, one might assume this metric system to be complete. The fact remains, however, that the 16 metres never actually appear in the form in which they are given in the 5 circles, but nearly always deviate from this ideal form—at times to a considerable extent. In other words, the sequence of 'moving' and 'quiescent' consonants in ancient Arabic poems does not correspond to the sequence determined by the circles. Therefore one can no longer split the metric forms used by the poets into the 8 ideal feet, nor yet divide these into their two metric elements, because that method of scanning is based completely on the sequence of 'moving' and 'quiescent' consonants in the ideal metres of the circles. This fact was, of course, known to Al-Khalīl just as well as it is to us, and in fact his circles are just a kind of rhythmic *Uṣūl*, from which the actual metric forms used by the poets deviate in a certain manner as *Furūʿ*. Consequently, there are also two different terms designating the metres. The ideal forms in the circles are called *buḥūr* (sg. *baḥr* "river, ῥυθμος"); those deviating from them, and actually occurring in ancient poetry are called *awzān al-shiʿr* (= metres).

The smallest of the deviations is the shortening of the metre. This is immediately visible, because then the metre no longer has its full (*tām*) number of *adjzāʾ*. According to the degree of shortening, there are three possibilities. The line is either

a) *madjzūʾ*, if there is one *djuzʾ* missing in each of the two hemistiches (if, for instance, in *Hazadj*, *Kāmil* or *Radjaz* the foot is repeated only twice and not three times); or

b) *mashṭūr*, when a complete half (*shaṭr*) is absent (as, for instance, when the *Radjaz* is reduced to *one* hemistich); or

c) *manhūk*, when the line, on rare occasions, is "weakened to exhaustion" i.e. (as for instance in *Munsariḥ*) when it is reduced to a third of its size.

All these deviations only concern the external shape of a metre and not its rhythmical structure, which does find its expression in the sequence of 'moving' and 'quiescent' consonants.

The very numerous cases in which this particular sequence in the ancient poems differs from that prescribed by the circles have been covered by a special set of rules. This forms a necessary supplement to the circles, because the deviations would be arbitrary—and thus the circles would lose their authoritative character as *Uṣūl*—if there were no such rules. Just as one is amazed at the regularity of the first part of the system—the five circles and their normal metres—so one is confused by the second part with its casuistry and its complications. This, however, is inherent in its very nature. Neither Al-Khalīl nor the later prosodists use the term 'syllable', and we can therefore not expect any *general* rules (e.g. concerning the reduction of long syllables to short, the omission of short syllables etc). In effect, they were obliged to mention in each individual case whether and to what extent the 'moving' and 'quiescent' consonants in ancient poetry showed a plus or a minus as compared with the ideal scheme of the circles. This had to be done in every metre and every one of its feet in both halves of the line, and in order to denote them clearly, individual terms had to be created to cover each one of these numerous differences. A certain order and clarity emerges from this baffling list thanks to the fact that all deviations fall into two classes, which perform different functions and appear in different parts of the line.

The last foot of the first hemistich (*al-ʿarūḍ*, pl. *aʿārīḍ*) and the last foot of the second hemistich (*al-ḍarb*, pl. *ḍurūb*), that is to say, the ends of the two halves of the line, suffer most from deviations. The terms for these two vulnerable parts of the verse are definite, the terms for the other feet vary and are usually given the collective name *al-ḥashw* ('stuffing'). By analogy, one also distinguishes two groups of deviations, the *Ziḥāfāt* and the *ʿIlal*. The *Ziḥāfāt* ('relaxations') are, as the name suggests, smaller deviations which occur only in the *Ḥashw* parts of the line in which the characteristic rhythm runs strongly, and their effect is a small quantitative change in the weak *Asbāb*-syllables. As accidental deviations, the *Ziḥāfāt* have no regular or definite place, they just appear occasionally in the feet. By contrast, there are the *ʿIlal* ('diseases', 'defects') which appear only in the last feet of the two halves of the lines, and there, as their name suggests, they cause considerable change as compared to the normal feet. They alter the rhythmic end of the line considerably, and are thus clearly distinct from the *Ḥashw* feet. As rhythmically determined deviations, the *ʿIlal* do not just appear occasionally but have to appear regularly, always in the same form, and in the same position in all the lines of the poem. A further difference between the two groups of deviations is the fact that the *Ziḥāfāt* fall only on the *Sabab* (and there on its second consonant), whilst the *ʿIlal* alter the *Watid* in each of the last feet of the two hemistiches as well as in their *Sababs*.

By applying the definite *Ziḥāfāt* and *ʿIlal* rules, and taking the normal form of the feet of each metre as a point of departure, one arrives at the forms actually occurring in the *Ḳaṣīdas*. Just as the normal feet are denoted by their 8 mnemonic words, (*faʿūlun*, *mafāʿīlun*, etc.), which express the normal sequence of their 'moving' and 'quiescent' consonants, there are also mnemonics denoting the forms which have undergone alteration because of *Ziḥāfāt* and *ʿIlal*, and these indicate the changed sequence of consonants. Thus, for instance, *mu[s]tafʿilun*, when its *Sīn* is lost, should become *mutafʿilun*. If, however, as in this case, the resulting form is not one linguistically possible in Arabic, then the same sequence of consonants (i.e, the same sequence of 'longs' and 'shorts') is expressed by an equivalent word which is linguistically acceptable, in this case, for instance, by *mafāʿilun*. By contrast with the *Uṣūl* forms of the feet, these modifications are known as the *Furūʿ* forms of the feet. In the following, the *Furūʿ* will be added in brackets, if their form

differs from that of the *Uṣūl*. Space here does not permit a detailed list of all *Ziḥāfāt* and *ʿIlal* (cf. for the details the arabic compendia of the *ʿIlm al-ʿarūḍ*). A few examples will be given, however, in order to illustrate the theoretical exposition, and to show how peculiar and complicated this particular part of the system is.

As already stated, the *Ziḥāfāt* appear when the *Sabab* in a line does not possess its full normal form, but shows a change in the second consonant. Then, however, one does not simply speak of a *Ziḥāf*, because this would be ambiguous. In order to describe the *Ziḥāf* accurately, one must state which consonant of a foot is affected, and whether that is a 'moving' or a 'quiescent' consonant. For example, one can divide the so-called 8 'simple *Ziḥāfāt*' into two groups, according to whether a *sabab khafīf* or a *sabab thaḳīl* is affected. Even then, one must denote the eight cases by individual terms. 1) We have a *khabn*, if the second consonant of a foot is missing, e.g., the *sīn* in مُ[سْ]تَفْعِلُنْ [= مَفَاعِلُنْ], or the *alif* in فَـ[ـا]عِلُنْ; we have a *ṭayy*, if the 4th consonant is missing, e.g., the *fā* of مُسْتَـ[فْ]عِلُنْ [= مُفْتَعِلُنْ]; a *ḳabḍ*, if the 5th consonant is concerned, e.g., the *nūn* in فَعُولُـ[نْ] or the *yā* in مَفَاعِـ[يـ]ـلُنْ; and a *kaff*, when the 7th consonant is missing, e.g., the *nūn* of فَاعِلَاتُـ[نْ]. 2) In the *sabab thaḳīl*, there can either be only the vowel of the second consonant missing (then one speaks of an *iḍmār*, in the case of the *fatḥa* of *mut[a]fāʿilun* [= *mustafʿilun*], and of an *ʿaṣb* in the case of the *fatḥa* of *mufāʿal[a]tun* [= *mafāʿīlun*]) or both this consonant and its vowel (then one speaks of a *waḳṣ*, if the *ta* of *mu[ta]fāʿilun* [= *mafāʿilun*] is missing, and of an *ʿaḳl* in the case of the *la* of *mufāʿa[la]tun* [= *mafāʿilun*]).

Whilst the *Ziḥāfāt* always lead to a minus, when compared with the normal *Sabab*, the *ʿIlal* (which change the last feet of the two hemistichs) fall into two groups, according to whether they arise out of an addition (*ziyāda*) or an omission (*naḳṣ*). 1) the *tadhyīl*, for example, adds a 'quiescent' consonant to the *watid madjmūʿ* (thus مُسْتَفْعِلُنْ becomes مُسْتَفْعِلَانْ), the *tarfīl* a *sabab khafīf* (thus مُتَفَاعِلُنْ becomes مُتَفَاعِلَاتُنْ). 2) On the other hand, the *ḥadhf* means the loss of a *sabab khafīf* (as for *mafāʿī[lun]* [= *faʿūlun*] or for *faʿū[lun]* [= *faʿal*]), the *ḳaṭf* means the loss of a *sabab khafīf* and the preceding vowel (as, for instance in *mufāʿal[atun]* [= *faʿūlun*]) and the *ḥadhadh* means the loss of a whole *watid madjmūʿ* (as in *mutafā[ʿilun]* [= *faʿilun*]).

These examples give only a rough impression of the complexity of the classical system. Even more complicated changes take place when two deviations obtain within one foot and in certain other special cases. In this manner one can derive from the 8 basic feet no less than 37 *Furūʿ* feet, all of which actually appear in old poetry. Feet undergoing a change through *ʿIlal* play the greater part for two reasons. Firstly because they produce a greater plus or minus in the normal feet than the weaker *Ziḥāfāt*, and secondly because they cause rhythmic variants, which recur throughout the whole poem. Because of the large range of varying line endings, a great number of sub-divisions appear in all metres; and because the *Ḍarb*, the last foot of the second hemistich, is (being the end of the whole line) more concerned with these changes than the *ʿArūḍ* (the last foot of the first hemistich), the possible metres are named after their different *Ḍurūb*. The *Ṭawīl*, for example, has only *one ʿArūḍ*, i.e., the last foot of its first hemistich always has the same form (shortened by *ḳabḍ*) of *mafāʿilun*; but it has three *Ḍurūb*, i.e., apart from the normal form of the last foot of its second hemistich there are two further forms of its *Ḍarb*. Accordingly, one speaks of the first, second, or third *Ṭawīl*, depending on whether the *Ḍarb* has the form *mafāʿīlun*, *mafāʿilun* or *faʿūlun*. The same goes for all other metres. The *Kāmil*, which has 9, has the greatest number of *Ḍurūb*. The sum of all possible *Aʿāriḍ* of all 16 metres is 36, and that of all *Ḍurūb* is 67; in other words, the 16 ancient Arabic metres are used by the poets in a total of 67 rhythmic variations, merely counting the changes caused by *ʿIlal* in the line-endings and ignoring the sporadic *Ziḥāfāt* in the *Ḥashw* of the line.

We are now—if we trust the Arabic prosodists and follow them on their circuitous ways—in a position to scan all the metres which appear in ancient Arabic poetry, and this would appear to bring to an end the exposition of *ʿIlm al-ʿArūḍ* in its general structure. Nevertheless, European Orientalists have never relied unreservedly on the Arabic prosodists, because the inner reason for the complicated structure of their system has not been understood. What was the reason for constructing the circles? And why formulate statements about ideal metres when one cannot arrive at the actual forms of the metres except by a complicated system of permissible deviations? To these objections we must add that the underlying concepts of Arabic prosodists, and the way in which they expound the patterns of sound and rhythm, are completely alien to us. They describe prosodic phenomena externally, according to the changes which the consonants of the words in the line undergo, whereas we are accustomed—as already mentioned—to explaining the changing metrical shape of a line in different languages by giving the characteristics of the syllables of the language concerned. In the system of the Arabic prosodists we do not, however, find any direct statement concerning the length and stress of syllables in ancient Arabic poetry. Therefore it seems that we have nothing to learn from them concerning the real essence of Arabic metrics, that is to say, nothing about the way in which the characteristic rhythm of ancient Arabic poetry originated, whether—as in ancient Greek—it came into being exclusively through the harmony of periodically recurring sequences of 'shorts' and 'longs', i.e., purely quantitatively, or whether the element of accentual stress was also a factor in deciding the shape of the rhythm of their poetry. Hence one has generally tended not to accept their system, making use of its terminology with reluctance and only to the extent required in order to understand the commentaries on the ancient poems.

It has already been pointed out that the quantity of the syllables is absolutely fixed in the ancient

literary Arabic language, so that one can assume that the rhythm in their verse has found its expression in some form of quantitative metrics. This basic assumption is shared by almost all the experts who have dealt with Arabic metrics. There is no agreement, however, on the question as to whether (and to what extent) factors other than the quantity of syllables shaped the rhythm of ancient Arabic verse. There are various views as to the composition and sequence in which 'shorts' and 'longs' are arranged into feet, and these, in turn, into metres; and there is furthermore the particularly vexed question of whether the rhythm of the lines found its expression exclusively in a quantitative pattern of 'shorts' and 'longs' in the individual feet (as in ancient Greek), or whether there was also a rhythmic stress (ictus), which recurred regularly and emphasised certain syllables in the line.

Heinrich Ewald, disregarding the theories of the Arabs, produced an entirely fresh theory regarding the organic growth of ancient Arabic metrics. He began with the thesis that its rhythm originated not only from the quantity of the syllables but also from the presence of marked stress on some of them (*rhythmum constat aequabili arseos et theseos vicissitudine contineri*). To begin with (in 1825), he found only iambic metres (marked by a recurrance of short and long syllables); but in his second presentation (1833) he distinguished 5 rhythmic kinds: *genus iambicum, genus antispasticum, genus amphibrachicum, genus anapaesticum, genus ionicum*. This classification has gained currency because W. Wright accepted it and printed it at the end of his *Grammar of the Arabic Language* (3rd ed. 1898, vol. II, 361 ff.). Whereas Ewald could start on secure basis concerning the quantity of syllables, his conclusions, as far as the second rhythmical factor (stress) was concerned, could only be based on assumptions at which he had arrived by comparing the structure of Arabic verse with the structure of Greek metres and the sequence of 'longs' and 'shorts' within them. His conclusions not only cannot be proved, but are not, in fact, tenable because they start with the assumption that the same rhythm obtains in both Arabic and Greek metres, without adducing any proof to this effect and without taking into account that the very presence of rhythmic stress in ancient Greek poetry is itself a matter of controversy. This is the reason why all the later experts who started from the same or similar assumptions as Ewald disagree both with Ewald and with each other on the important question of how to divide up the feet and whether any syllables are to be stressed (and, if so, which).

Stanislas Guyard advanced an entirely different explanation of the essence of Arabic metrics: he decided to adopt a musical beat, measuring the exact time of each syllable and fixing it by a musical note, instead of merely distinguishing metric 'longs' and 'shorts' at the ratio of 2 : 1. Accepting the division of feet and metres, handed down in the Arabic mnemonics, he concluded from his musical measurements that a *temps fort* and a *temps faible* had to alternate every time. Apparent contradictions were explained either by describing a *temps fort* as weak or by inserting a pausal note (*silence*)—which was not, however, graphically expressed—to play the rôle of a *temps faible*. Other deviations were explained by the assumption of a double ictus in every Arabic foot, and he discarded the *mafʿūlātu* foot as imaginary because it would not fit in with his theories. He was then in a position to assert that the 16 metres with all their variations did correspond to the musical rhythm which he had assumed; but far from explaining the essence of the metric line-structure in Arabic poetry he had simply transposed it into a sequence of musical terms.

Martin Hartmann is concerned with the development of the various metres and with their derivations from each other, rather than with the actual essence of Arabic metrics. He therefore does not argue with Ewald, though one may assume that he disagrees with him because he goes so far as to say that there was nothing to indicate that the Arabs ever thought of quantitative distinctions in their poetry. Although Hartmann never explicitly says this, it has been asserted that ancient Arabic poetry was in his opinion accentual in character. On the other hand, he rightly asserts that the syllable with the main stress must always be of a constant length and that its preceding short syllable must equally be of a constant duration. Concerning the origin of the metres, he assumed that these were in the last resort instinctive rhythmical imitations of the regularly recurring sounds made by camels' feet. As a camel advances its feet in pairs, he assumes the basic metre to be the one which consists of the alternation of an accented and an unaccented syllable. Depending on whether one starts with the animal's first step, as it starts off from the static position, or from one of the intermediate paces, one gets the *Hazadj* (⏑–́⏑–) or *Radjaz* (⏑–⏑–́); the difference between them being that the stress is on the first element in the first case and on the second in the other. According to him, *Mutaḳārib* and *Mutadārik* developed from these two basic metres by inserting not one, but in each case two, unstressed syllables between the two steps, i.e. between the two stressed syllables; and *Wāfir* and *Kāmil* respectively by the alternate insertion of two unstressed syllables and one unstressed syllable between the two stressed ones. Similarly, he takes *Basīṭ* (––⏑–[–]–⏑–) and *Ṭawīl* (⏑–[–]–⏑–––) to be defective forms of *Radjaz* and *Hazadj*. He, too, has difficulties with the derivation of other metres from the diiamb, because in that case there is no alternation of stressed and unstressed syllables, but two stressed ones have to come together. Hartmann's expositions are subjective assumptions concerning the origin of Arabic poetry in general, and the derivation of metres from one original metre in particular. His arguments do not convince as he offers no conclusive proof, and also because he appears to believe that rhythmic occurrances can be adequately explained by the arbitrary inclusion or exclusion of syllables or by the simple assumption of an anacrusis or a pause. Hartmann himself admits that he has been unable to show what made the Arabs choose the particular combinations which appear in the 16 metres.

Gustav Hoelscher, too, has advanced a theory concerning the origin of Arabic metrics and the derivation of its metres from each other. The simplest, and according to tradition the oldest, metre, the *Radjaz*, developed from rhymed prose, *Sadjʿ*, by regulating the number and quantity of syllables; it has a rising rhythm and is dipodically bound. In his opinion, all other metres developed from *Radjaz*: first *Sarīʿ*, *Kāmil* and *Hazadj*; and then, with varying forms of syncope, *Wāfir, Basīṭ, Ṭawīl* and *Mutaḳārib*. The same objections must be raised here as were raised in the case of Hartmann's theory of derivation: Hoelscher himself admits that *Khafīf* and *Munsariḥ* cannot be derived from *Radjaz*, and apart from diiambic metres he also lists ditrochaic metres of a falling rhythm. In addition,

Hoelscher deals extensively with the basic rhythmic factors which determine the essence of all metres. He says that the simplest rhythmical group, the beat or foot, has a "division of time into fixed proportions" and consists of a "regular change from light to heavy"; but he does not define these two factors any further. The rhythmical time-value of the syllable, according to him, is always one single "counting-unit", irrespective of its quantity, and the law according to which a long syllable has twice the length of a short one is not to be applied to Arabic poetry. Similarly, he admits the presence of an ictus, and states that a "bar" consists of two dynamically related parts (of which the second is always the heavier); at the same time he asserts that the stronger ictus, being free, is not tied to either of the two stresses.

Alfred Bloch, in contrast to Hoelscher, stresses the existing clear difference between longs' and 'shorts'. His detailed study of the patterns in ancient Arabic prose and the facility with which it can be fitted into all metres lead him to the conclusion that—compared with other languages—ancient Arabic possessed truly ideal phonetic conditions which rendered it suitable to quantitative metrics. Furthermore, he regards quantity as the only factor shaping the rhythm of the verse, and (following Rudolf Geyer) decides against the assumption of an ictus.

The reason why such varying and contradictory theories concerning the essence of Arabic metrics have been advanced lies in the fact that we have no record of the recitation of ancient poems, and that the casuistic expositions of the Arabic metricians have such a repellent character that it seemed justifiable to disregard them completely. Thus, different experts approached the subject from personal points of view (the musical analogy, analogies with the poetry of other peoples, etc.). Neither attitude towards the teaching of the Arabic metricians (uncritical acceptance or outright rejection) is in fact justifiable. Surely as renowned a philologist as Al-Khalīl, whose fundamental achievements as a phonetician, grammarian and lexicographer are recognised even today, did not construct the five circles and the complicated metric system connected with them just for fun. One may assume with certainty that thereby he meant to express certain observations which he had made when he heard the ancient poems. Starting from this assumption, the author of this article has analysed all the parts of Al-Khalīl's system in order to arrive at the actual core of the theory of the circles. The following gives the most important results of these investigations, which bring out clearly the particular peculiarity of ancient Arabic metrics.

a) Al-Khalīl purposely arranged the feet of the metres within the circles in such a relation to one another that all 'moving' and 'quiescent' consonants (i.e. all their long and short syllables) should coincide. In this way, the length of the syllables was graphically shown, and he did not have to use a term for it. Since the Arabic language *in itself* already mirrors the quantity of syllables, there would have been no need for Al-Khalīl to construct the circles if he had only wanted to make statements concerning the length of the syllables in the feet. One must therefore assume from the start that he meant to express something else in addition, concerning the rhythm of Arabic poetry, by this arrangement of the metres in the circles.

b) Whilst the Greek metricians used terms for the metric feet which state nothing other than a certain sequence of 'longs' and 'shorts', Al-Khalīl chooses mnemonic words to represent the 8 basic feet which correspond to words actually occurring in the Arabic language. But it is the stress which is the bond that integrates the syllables into the unity of a word. One is therefore tempted to assume that the mnemonics for the feet are meant to indicate that in them, too, one syllable was always to be stressed in each case.

c) This assumption is strengthened by the way in which Al-Khalīl further divides the feet up into their components. Whilst the Greeks accept the short and long syllables as basic metric units, Al-Khalīl again used actual words—the shortest words pronounceable in themselves (i.e. monosyllabic and disyllabic words)—to denote these smallest parts. These words too, state something concerning the stress obtaining in them. The two *Asbāb*, i.e. (sequences of syllables like قَدْ (ḳad = –) and لَكَ (laka = ⏑⏑), do not have a stress of their own in prose either, but (proclitically or enclitically) adapt themselves to the preceding or subsequent words, whilst the two *Watid* words لَقَدْ (*laḳád* = ⏑–́) and وَقْتَ (*wáḳta* = –́⏑) have a marked stress of their own in opposite directions. When these sequences of syllables form a line, as metric components of a foot, then they have definite rhythmical functions. The two *Asbāb*, being unstressed parts of the foot, have no influence over the shaping of the rhythm, and are thus exposed to quantitative changes, the *Ziḥāfāt*, but the *Watid*, as the bearer of the stress, constitutes the rhythmical core of the metre, and as such within the line it is (as has been shown) proof against any change whether in sequence of syllables or in its quantity. Depending on which of the two opposing *Awtād* forms the core of the foot, we have a rising or a falling rhythm.

d) This substantiated assumption that *those* syllables in the line which form the *Watid* element carry the rhythmic stress becomes a certainty as a result of the following argument, which brings out the obvious purpose for the construction of the 5 circles. Only 4 of the 8 basic feet can be absolutely and unambiguously scanned. These are the following: *FAʿŪ́-lun, MAFĀ́-ʿī-lun, MUFĀ́-ʿala-tun, maf-ʿū-LĀ́TU*. Since every foot must have a *Watid*, one cannot divide those 4 feet into their components except as shown in print, the *Watid* being represented by capital letters. In other words, the syllables which carry rhythmic stress in these 4 feet are clearly established; consequently it is equally clear which syllables carry the stress in the 4 metres *Ṭawīl, Wāfir, Hazadj* and *Mutaḳārib*, because these metres consist exclusively of unambiguous feet. But, according to the teaching of Al-Khalīl, there are two ways of analysing the other 4 basic feet. Either: *fā-ʿILŪ́N, mus-taf-ʿILŪ́N, fā-ʿILĀ́-tun, muta-fā-ʿILŪ́N*, or: *FĀ́ʿI-lun, mus-TÁFʿI-lun, FĀ́ʿI-lā tun, muta-FĀ́ʿI-lun*. In other words, the rhythmic stress in these 4 feet could actually lie on a different syllable in every case, and, accordingly, all metres which consist of these 4 feet could also have either a rising or a falling rhythm. In the case of these ambiguous metres—which form the greater part of those in existence—there is only one possible method of showing clearly in which of the two possible ways it is to be read, namely by placing it

in one of the 5 circles. The following well thought-out inner mechanism emerges as the actual reason for the construction of the circles: the *first* metre of every circle—with the exception of circle 4—is the leading metre, and consists only of unambiguous feet, for which the position of their *Awtād* is absolutely fixed; the second and third metres, however, consist of the 4 ambiguous feet. If one writes down the mnemonic words of these metres in relation to the first metre (as reproduced in the table), it will be found not only that the short and the long syllables coincide, but also that in every circle from the second metre onwards, *one* of two possible *Awtād* falls in its entirety (i.e. in its indivisible syllable-sequence) under the unambiguous *Watid* of the first metre. This, in turn, means that the second possibility of scanning is out of the question. Thus the circles are graphic figures whose purpose is to show which syllables bear the rhythmic stress as *Watid* elements by means of the arrangement of all metres in relation to one another. Thus, for example, the two feet ***mustafʿilun fāʿilun***, which form the ***Basīṭ***, cannot be unambiguously scanned. However, the fact that their *TAFʿI* and *FĀʿI* do not fall under the *Watid* of the *Ṭawīl*, but that in both cases their *ʿILŪN* falls under the unambiguous *Awtād* *FAʿŪ* and *MAFĀ* of the *Ṭawīl*, shows (as clearly as if it were written in a table) which syllables of the *Basīṭ* actually bear the rhythmic stress. In this way it has been proved that the metres brought together in the circles 1, 2, 3 and 5 have, without exception, a rising rhythm, and we also know, on what syllables the stresses were laid.

e) Circle 4 differs from this rule. This is already clearly visible externally, because its first metre, the *Sarīʿ*, does not consist exclusively of unambiguous feet. This deviation was surely intended by Al-Khalīl, because (1) in contrast with the other circles, which are homogeneous and only incorporate metres of rising rhythm, circle 4 is not uniform; in it—and only in it—one finds the foot ***maf-ʿū-LĀTU***, the only one of the 8 basic feet which has a falling rhythm, but that, too, never alone, but always together with one of the other 7 feet. The metres of this circle thus have a mixed rhythm of rise and fall. (2) The ***Watid madjmūʿ***, the representative of rising rhythm, (⏑ –́) has a particularly rigid structure in Arabic verse; it never undergoes any change within the hemistich and therefore clearly and distinctly dictates the rhythm of *those* metres in which it is to be found. In contrast with it, the ***Watid mafrūḳ***, the core of the falling rhythm (–́ ⏑) is less clearly fixed in composition, hence variable and weaker in shaping rhythm. This explains why the syllables carrying the stress in the metres *Sarīʿ*, *Khafīf* and *Munsariḥ* do not stand out with the same clarity as in the other metres. It is certain that Al-Khalīl realised this because he gave this circle the name "***al-mushtabik***" ("the dubious one, the one of several meanings").

It becomes evident that analysis of the circles produces an answer to the questions which have been in dispute, and on which arabists have hitherto held such different views. (1) The rhythm of ancient Arabic metres was not only produced by the quantity of the syllables, but also by the element of rhythmic stress; we even know on which syllables this stress lay in all the metres. (2) Nearly all the metres have a clear, rising rhythm; in no metre was there exclusively a falling rhythm; only a few metres—namely those in circle 4—which occur more rarely, have a rhythm which changes from rise to fall and which, because of this mixture, has less of a clear character. (3) The rhythmical core of all feet and metres (excluding the few in circle 4) is formed by the sequence of a short and a long syllable (⏑ –́) which is inseparable in its sequence and unchangeable in its quantity, and where the long syllable always carries the stress.

Al-Khalīl listened to recitals of ancient poetry and embodied his observations graphically in the construction of the circles, hence the results of their analysis can be taken to be contemporary evidence; and, indeed, they lead us to a complete understanding of the peculiarities of ancient Arabic metres. As we shall see, a metric system, theoretically constructed from the inseparable core of the rising rhythm (⏑ –́), is completely identical with the system of metres used by the ancient Arabic poets.

If neutral syllables are grouped around the core, we get feet of a rising rhythm; these cannot have less than 3 or more than 5 syllables. Thus we arrive at the following 7 feet: (1) ⏑ –́ ×, × ⏑ –́ (2) ⏑ –́ × ×, × × ⏑ –́, × ⏑ –́ ⏑ (3) ⏑ –́ ⏑ ⏑ –, ⏑ ⏑ – ⏑ –́. No further or different forms of feet can be derived from the core ⏑ –́. If one does not represent these feet by symbols, but in the manner of the Arabic grammarians by *voces memoriabiles*, then one gets exactly those mnemonic words which Al-Khalīl fashioned for the 7 feet of the rising rhythm: (1) ***FAʿŪ-lun, fā-ʿILŪN***, (2) ***MAFĀ-ʿī-lun, mus-taf-ʿILŪN, fā-ʿILĀ-tun***, (3) ***MUFĀ-ʿala-tun, muta-fā-ʿILŪN***.

Whilst the actual rhythmical core of these feet always appears in the same indivisible and unalterable form, with the stress on the 'long', the neutral syllables (which have no part in the shaping of the actual rhythm) are neither bearers of stress nor stable in their quantity; they can be either a 'long' or a 'short', and their only function is to bring some variation into the rhythm. Such variations do appear, and the difference between them depends on whether (a) the foot begins immediately with the core, which makes a rising rhythm especially strong: ⏑ –́ ×, ⏑ –́ × ×, ⏑ –́ ⏑ ⏑ –; (b) whether the core is at the end of the foot, which gives the rhythm a somewhat hurrying and skipping character: × ⏑ –́, × × ⏑ –́, ⏑ ⏑ – ⏑ –́; (c) or whether the core is enclosed within the foot, which somehow hampers the forcefulness of the rising rhythm: × ⏑ –́ ×. Just because the grouping of neutral syllables around the core determines the rhythmical variations, it is absolutely necessary to keep to this fixed shape of the feet when scanning the metres.

By combining these 7 feet, one gets metres of rising rhythm of the following 3 groups: (1) The 7 "simple" metres are arrived at by the repetition of the 7 feet in identical form. These 7 theoretically constructed metres are completely identical with the metres *Wāfir, Kāmil*; *Hazadj, Radjaz, Ramal*; *Mutaḳārib, Mutadārik* used by the ancient poets. (2) If the 7 feet are combined not with themselves (as sub 1) but with each other, there result according to the calculation of variables many possibilities of "combined" metres. Most these potential metres, however, are incapable of realisation chiefly because they would offend against the general metric law according to which two cores can never succeed each other directly, but must always be separated by not more than two neutral syllables. It will then be seen that the three groups of feet, distinguished above, can be combined into compound metres only with

themselves, but never with each other. Consequently of the list of possible combined metres only three pairs are left, namely those which correspond exactly to the metres *Ṭawīl*, *Basīṭ*, *Madīd* used by the ancient poets and to their reverses.

(3) The gap which is caused by the absence of metres combined by feet of diverse variations of rising rhythm (as shown sub 2) is filled in by "mixed" metres which commence with one of the 7 feet of rising rhythm and are then varied by the foot of falling rhythm maf-ʿū-LÁTU. In this case too the theoretical construction again leads to the mixed metres used by the ancient poets, and which Al-Khalīl has united in circle 4.

The fact that the metrical system constructed theoretically from the core of the rising rhythm ◡– is identical with the metres actually used by the ancient poets affords us full insight into the ground-plan and the system of the ancient Arabic metres.

If the rising rhythm was "the" poetic form, by means of which Arabic poets fashioned their poems, one can, *a priori*, assume, that those metres which displayed the core of the rising rhythm most strongly were preferred and used most readily. Such are, primarily, the two metres *Ṭawīl* and *Basīṭ*, which combine unequal feet, and of the simple metres *Wāfir* and *Kāmil* (in which the rhythm is more variable because of the sequence of the two 'shorts'), rather than the other simple metres. In fact, this accords with the results obtained by various arabists (cf. Bräunlich, in *Islam*, XXIV, 249) in their statistical investigations into the frequency of metres: three-quarters of all *Ḳaṣīda*s were composed in these 4 metres, and amongst these *Ṭawīl* (as the strongest) heads the list.

Thus the peculiarity of ancient Arabic metres lies in the fact that they unlike the ancient Greek ones are not formed by the joining of *single* syllables, but are developed from an inseparable *pair* of syllables, the core of the rising rhythm. Only this one rhythmical idea has taken shape in Arabic metrics, but the principle is carried out in all its possible variations and effects. The reason why poets unconsciously developed this one principle to perfection can only be explained by the fact that the ancient Arabic literary language, in its structure of sound and syllable, conforms to the shape of the rising rhythm and invites such development. It is this monorhythm which basically distinguishes ancient Arabic metrics from the polyrhythm of ancient Greek metrics (which expressed various rhythmic figures without developing any one, as it were, systematically to its ultimate possibilities, as the Arabic does). Because Arabic metrics are sometimes wrongly simply equated with Greek ones, a further basic difference between the two systems of versification must be pointed out: the only factor which governs the rhythm of Greek verse is the quantity of the basic metric units which recur at regular intervals, and it is therefore a case of a quantitative metric (measuring the time); the ictus (the element of energy of rhythmic stress), if indeed it was present, merely had the task of regulating the quantity when this was disturbed by an anceps-syllable. Ancient Arabic metrics are also of a quantitative nature (every syllable in the language has an absolutely fixed duration), but in poetry the number of neutral syllables which can be either a 'long' or a 'short' is so great that the quantity alone cannot have been decisive for the rhythm. Therefore, with it we have—not only in a regulating but in a shaping capacity—stress; these two together, in an indivisible and unchangeable unit, form the rhythmic core of the feet and metres. In most lines, the ictus and the word-accent will coincide on the same 'long', but even when a word-accent falls on a syllable without an ictus there could be no discord. Within a line, the ictus—being the factor which shapes the rhythm—acts more strongly than the word-accent; but in ancient Arabic, with its contrast of 'long' and 'short', both are dependent on the quantity of the syllables, and hence are not as strong as in accentual languages.

The special peculiarity of the rhythmical structure in ancient Arabic poetry is in itself proof enough that Arabic metrics are an autochthonous growth which has not been transplanted from somewhere else to Arabic soil. Merely for the sake of completeness, let it be mentioned here that Tkatsch (*Die arabischen Uebersetzungen der Poetik des Aristoteles*, vol. I, Vienna 1928, 99 ff.) supposes that "the illiterate sons of the desert" had received knowledge of Greek metrics through Aramaic-Christian intervention, and that they had then developed it further. This assumption, however, has been accorded little attention and no acceptance because of its lack of substantiation.

The form of the *Ḳaṣīda* and the ancient metres used in it, have survived—though in a limited range—until today. There is considerable material on this in Socin's *Diwan aus Centralarabien* (Leipzig, 1901, T. 1-3), where the older literature is also mentioned (vol. III, 1 f.). The *Ḳaṣīda* and its ancient metres are still used today by the Bedouin; but they are rarely used by other poets, and then only when they want to appear consciously archaic. The metre of the modern Bedouin *Ḳaṣīda* is usually a *Ṭawīl* with the first syllable missing; *Ramal*, *Basīṭ*, *Radjaz* and *Wāfir* are also used. As this form of modern verses is a direct continuation of ancient Arabic poetry in content, form, and language, the rules of the *ʿIlm al-ʿarūḍ* are applicable to it. They can, however, *not* be applied to the actual Arabic folk-poetry, of which there are traces even in pre-Islamic times, and which was greatly cultivated in later centuries. This '*muse populaire*' is different from the ancient *Ḳaṣīda* because it no longer has the monotonous rhyme which recurs throughout the poem but a rich strophic structure, and because it is freer in its choice of themes, but most particularly because the language of folk-poetry is the language of every-day life. The sound-structure of this, however, is fundamentally different from that of ancient literary Arabic. The emphatic stress which is evident in the colloquial language caused a shortening of the vowels and omission of the endings. Consequently one can no longer find the regular alternation of 'long' and 'short' and the absolutely fixed relation in the quantity of the syllables which were the most characteristic feature of the old literary language, and as such determined the rhythm of the poetry. Therefore we cannot expect to find in popular poetry the metres which the ancient poets created and adapted to the phonetic structure of the Arabic literary language. In it, as well as in the colloquial language, stress prevails; it even gains in force when the songs are recited, because the stressed syllables are then emphasised by beating on instruments or by hand-clapping. The different forms of Arabic popular poetry are therefore outside the framework of the article *ʿArūḍ*, which is concerned only with the metrics of the ancient poetry.

(GOTTHOLD WEIL)

II. The most outstanding feature of the *ʿArūḍ* system as adopted by the Persians is the emphasis laid on quantity, which gives to Persian verse a lilt and swing which can be more readily appreciated by ears to which the more subtle rhythms of Arabic verse are unfamiliar. To words ending in two consonants (*nūn* excepted) preceded by a short vowel, or one consonant preceded by a long vowel, an extra short vowel was added. This *nīm-fatḥa*, as it is called, is now not pronounced by the Persians. By poetic licence, certain monosyllabic long syllables may become short according to scansion. Of the types of poem in use the *Mathnavī* and the *Rubāʿī* are most characteristic of Persian poetry. The former is a many-rhymed poem in couplets of which each hemistich rhymes with the other. The freedom thus allowed in rhyming renders this form eminently suitable for epic and didactic verse. The *Rubāʿī* (Quatrain), also called *Tarāna*, is said (Browne, i, 472-3) to have been the earliest of the verse-forms invented by the Persians. It is derived from no less than twenty-four varieties of the *Hazadj* metre, and it is perhaps the form best known to the West. The *Ḳaṣīda* lost much of its importance at an early period in Persian literature and became more and more artificial under such poets as Khāḳānī (d. 582/1185). In scope and subject matter, it much resembled its Arabic prototype except that in Persian hands it became more of a eulogy of the poet's patron. Of the same single-rhymed type but shorter (five to fifteen verses), the *Ghazal* achieved more fame at the hands of Persian poets and lent itself to a graceful sonnet-like form. Only in the opening lines do the hemistichs of these poems rhyme. The two types of refrain poem—the *Tardjīʿ-band* and *Tarkīb-band* were a Persian innovation. The former consists of about five to ten lines which differ in rhyme with a refrain (*wāsiṭa*) in the same metre. If the refrain differs in each instance where it occurs, the poem is then called *Tarkīb-band*. Of the various types of multiple poem which have internal rhymes and are grouped under the general term of *Musammaṭ*, the *Mustazād* deserves special mention. It is a poem of which each second hemistich is followed by a short metrical line which has some bearing on the sense of the first hemistich without altering the meaning. All these lines rhyme together throughout the poem. The Persians have been credited with the invention of three new metres—the *Djadīd*, *Ḳarīb* and the *Mushākil*, but these are of rare occurrence.

The adoption by the Turks of the Perso-Arabic metrical system was facilitated, not only by a genuine admiration for Persian *belles-lettres*, but also by the resemblance which the ancient Turkish method of versification (*parmaḳ ḥisābī*) bore to the *ʿArūḍ* metres. For example, the *Ḳutadghu Bilik*, composed in 462/1069, was written in a metre which was not unlike the *Mutaḳārib*, and the Turkoman *tuyuğ* was similar to the *rubāʿī*. Both the original and the *ʿArūḍ* systems enjoyed a parallel existence until the former was ousted by the latter during the XVth century. The main difference between the two forms is that in the *parmaḳ ḥisābī* the verses were based not on quantity but on the number and beat of the syllables. The old system survived only in the folk-poetry of Anatolia of which the most representative types are the *türkü*, *sharḳī* and the *mani* (*maʿnī*). In the XVIIth century, a revival of the old prosody began under such poets as Ḳaradjaoghlan, and, in the course of last century, the growth of national feeling led to the victory of the Turkish system. The *ʿArūḍ* system is now obsolete and is cultivated only by a few conservative or neo-classicist poets. The most important innovation produced by the Turks in the ʿArūḍ was somewhat artificial, although it was very necessary. In purely Turkish words there are, of course, no long syllables, but the Perso-Arabic letters of prolongation were used as vowel-letters. By a poetic licence, these were regarded as long where the metre demanded it.

The metres in use in Persian and Turkish are rather less numerous than those used in Arabic. Some of the more popular metres such as the *Ṭawīl*, *Basīṭ*, *Wāfir*, *Kāmil* and *Madīd* are scarce. For details of the metres most used the reader is referred to the bibliography.

(G. MEREDITH-OWENS)

ARŪḌĪ [see NIẒĀMĪ ʿARŪḌĪ].

ʿARŪDJ, Turkish corsair who seized possession of Algiers at the beginning of the 10th/16th century. He is sometimes designated by the name of Barbarossa (a term which is sometimes interpreted as a corruption of Bābā ʿArūdj), but it appears this surname more often refers to his brother Khayr al-Dīn [*q.v.*].

ʿArūdj came from the island of Midilli (Mytilene-

ancient Lesbos); his father was a Turk, a Muslim soldier of the garrison of occupation (*Ghazawāt*), or a Greek potter (Haëdo). He had at least two brothers, who were with him in the Maghrib; Khayr al-Dīn and Isḥāḳ. A sailor and a Muslim from an early age (*Ghazawāt*), or only from his twentieth year (Haëdo), he began to act as a privateer in the eastern Mediterranean. He later decided (the exact reasons for this decision are not known) to operate off the coast of the Maghrib.

It is fairly certain that from 1504 onwards, or soon afterwards, ʿArūdj and his brothers made their base at Goletta; they started in a small way with two ships, but soon took some remarkable prizes; as a result of these they increased both the numbers of their fleets, which comprised eight galliots in 1510, and their capital, which enabled them to honour their obligations to the ruler of Tunis. The latter, Abū ʿAbd Muḥammad b. al-Ḥasan (1494-1526), in fact only authorised them to establish a base on his territory on condition that he received a share of the prizes. The *Ghazawāt* describes on one occasion the magnificent cortège organised by the corsairs in Tunis to carry to the Ḥafṣid ruler his share of the booty (text, 15-16; tr., 28-30). They were authorised to establish a secondary base on the island of Djerba, and ʿArūdj was even appointed *ḳāʾid* of the island in 1510 (Haëdo). Until 1512, they cruised in the western Mediterranean and off the Spanish coast.

The Spanish, however, occupied various points on the coast of North Africa, notably Oran (1509), the Peñon of Algiers, Bidjāya (Bougie) and Tripoli (1510). Despairing of being able to retake Bidjāya (Bougie) by his own efforts, the Ḥafṣid governor of that town appealed to ʿArūdj who had then at his disposal twelve ships armed with cannon, and a thousand Turkish soldiers. ʿArūdj established a naval blockade of the port, while the "king" of Bidjāya (Bougie), supported by the Turkish troops, laid seige to it by land with three thousand "Moors". After eight days' bombardment, ʿArūdj lost his left arm. His brother Khayr al-Dīn took him back at full speed to Tunis where he spent his time recovering his health. In August 1514, he attacked Bidjāya (Bougie) for the second time, with twelve ships and 1100 Turkish troops. Again ʿArūdj was forced to raise the siege, this time because of bad weather, the appearance of a Spanish relief squadron, and perhaps the desertion of local contingents; it is even possible that he was forced to burn some of his vessels in the gulf of Bidjāya to prevent them falling into the hands of the Spanish.

He may perhaps have been already established at Djidjelli [*q.v.*], as the *Ghazawāt* lead one to believe. At all events, he took refuge there after his second reverse before Bidjāya, because his relations with the Ḥafṣid ruler had undergone a change—we do not know for what reason.

At this juncture, apparently, ʿArūdj conceived political ambitions. Haëdo describes him as supplying corn to tribes in the vicinity which had been smitten by famine, thereby acquiring great popularity, and intervening in the quarrels of the Kabyle chiefs.

When King Ferdinand the Catholic died on 22 January 1516, the inhabitants of Algiers sought to rid themselves of the threat from the Peñon, and appealed to ʿArūdj, who had both ships and cannon. He answered their appeal, and bombarded the Peñon without success. The leader of the Arabs of Algiers, Sālim al-Tūmī, then sought to get rid of ʿArūdj and his Turks, who behaved as though they were in conquered territory. But ʿArūdj forestalled him, put him to death and seized power with the help of his Turks. Despite the intrigues of the son of Sālim al-Tūmī, who had taken refuge with the Spanish, he succeeded in maintaining his position at Algiers by exercising the greatest severity. He also succeeded in repulsing a Spanish landing carried out by Diego de Vera (30 September 1516).

The Spanish then sent the Sultan of Ténès against him, but ʿArūdj went out to meet him and inflicted on him a severe defeat, as a result of which ʿArūdj made himself master of Miliana and Ténès. According to the *Ghazawāt* he then organised the territory he had conquered; Khayr al-Dīn had the territories to the East, with Dellys as his seat, while ʿArūdj took Algiers and the western territories.

ʿArūdj then received an appeal from the inhabitants of Tlemcen, whose king had accepted a sort of Spanish protectorate. He at once organised an expedition with the greatest thoroughness, and entrusted the government of Algiers to his brother Khayr al-Dīn. He occupied in passing the strongpoint of the Ḳalʿa of the Banū Rashīd, now the site of Oued-Fodda, and left his brother Isḥāḳ there with a small garrison. He then proceeded to Tlemcen, which he took possession of without great difficulty, after having defeated the troops of King Abū Ḥammū in the field (September 1517). Instead of raising to power the pretender Abū Zayyān who had no link with the Spanish, ʿArūdj assumed power and despatched expeditions as far as Oudja and the Beni Snassen; he seems to have had the intention of negotiating with the ruler of Fez against the Spanish.

The latter did not give him time for this: in January 1518, a Spanish column under the command of Don Martin of Argote captured the Ḳalʿa of the Banū Rashīd, thus cutting communications between Tlemcen and Algiers. In May, the Marquis of Comarès, governor of Oran, marched on Tlemcen. There he laid siege to ʿArūdj, who hoped, it appears, to be relieved by the troops from Fez. The inhabitants of Tlemcen rebelled against the Turks, and forced ʿArūdj to shut himself up in the fortress of Mishawār [see TLEMCEN]. As supplies were running low, ʿArūdj attempted a sortie and managed to escape with a few men, but he was overtaken, probably in the vicinity of the present Rio Salado (department of Oran) and put to death; he was 44 or 45 years of age (Autumn 1518).

It will be seen that on the whole very little is known about the history of ʿArūdj. It seems likely that political aspirations awoke within him, when he realised the political anarchy existing in the central Maghrib and the possibilities it offered to a bold man backed by a body of men equipped with fire-arms and artillery. But the possibilities were so great that ʿArūdj allowed himself to be carried away by ambition, and he failed because he was too far from his base, and had not prepared the ground politically to a sufficient extent.

Bibliography: *Kitāb Ghazawāt ʿArūdj wa Khayr al-Dīn*, ed. by A. Noureddine, Algiers 1934, 6-34; rough translation in Sander Rang and F. Denis, *Fondation de la Régence d'Alger*, i, Paris 1837, 1-103; Diego de Haëdo, *Epitome de los reyes de Argel*, tr. by H. de Grammont under the title *Histoire des rois d'Alger* in *R.Afr.* xxiv, 1880, 39-69 and 116-7; Lopez Gomara, *Cronica de los Barbarojas*, Madrid 1854, in vol. vi of *Memorial historico español*; H. de Grammont, *Histoire d'Alger sous la domination turque*, Paris 1887, 20-8; Ch. A. Julien, *Histoire de l'Afrique du Nord*, ii,

250-6. The best known Turkish account is that given by Ḥādjdjī Khalīfa in his *Tuḥfat al-Biḥār* (Istanbul 1141/1728 and 1329/1914, Eng. tr. of chaps. 1-4 by J. Mitchell, *History of the Maritime Wars of the Turks*, London 1831). This narrative, which was used by Hammer in his account of the naval wars, rests on earlier sources, some of which are still extant. A list of Ottoman *ghazawātnāmes* dealing with the campaigns of ʿArūdj and Khayr al-Dīn is given in Agâh Sırrı Levend, *Ġazavat-nameler*, Ankara 1956, 70 ff. (R. LE TOURNEAU)

ARŪR (AROR) also written AL-RŪḲ, town in Sind; it is surmised to have been the capital of king Musicanus, defeated by Alexander the Great, and to be mentioned in the 7th century A.D. by Hiung-tsang. The town was conquered by Muḥammad b. al-Ḳāsim before 95/714 (al-Balādhurī, *Futūḥ*, 439, 440, 445) and it is mentioned by al-Istakhrī, 172, 175, and al-Bīrūnī, *Hind* (Sachau), 100, 130, according to whom it lay thirty *farsakhs* S-W of Multān and twenty *farsakhs* upstream from al-Manṣūra. The Indus used to flow near the town, but later it changed its course, destroying the prosperity of the town. The date of the change is uncertain; the local historians of the 17th-18th centuries (cf. Elliot-Dowson, *History of India*, i, 256-8) give a legendary account. Five miles west from the old site there exists a small town, Rohri, chief place of the *taluka* of the same name (*Imperial Gazetteer of India*, Oxford 1908, vi, 4, xx, 308). One of the names of the Gypsies, Lūlī < *Rūrī, may be connected with Arūr [see LŪLĪ].

ʿARŪS [see ʿURS].

ʿARŪS RESMI, also resm-i ʿarūs, resm-i ʿarūsāne, ʿādet-i ʿarūsī, etc., in earlier times gerdek degheri and gerdek resmi; an Ottoman tax on brides. The standard rates were sixty aspers on girls and forty or thirty on widows and divorcees. There are sometimes lower rates for persons of medium and small means. In some areas the tax is assessed in kind. Non-Muslims are usually registered as paying half-rates, but occasionally double rates. On timar lands the tax was normally payable to the timar-holder, though part or all of it might be reserved for the Sandjaḳ-beyi or the Imperial Treasury. The destination of the payment was determined by the status of the bride's father or, in the case of widows, of the place where she resided or where the marriage occurred. Tax was also payable on the daughters of sipāhīs, garrison janissaries, etc. These were paid to the Sandjak-beyi, the Beylerbeyi, the Su-bashī, or the representative of the Treasury, according to the rules inscribed in the *ḳānūns* and registers of the province. These also contain rules for the bride-tax paid on the daughters of Tatars, yürüks, müsellems, miners, and other special categories. No tax was payable by an owner who married two of his slaves to one another.

The tax, which seems to be of feudal origin, is already established in *ḳānūns* of the 15th century in Anatolia and Rumelia, and was introduced into Egypt, Syria and ʿIraḳ after the Ottoman conquest. It was abolished in the 19th century and replaced by a fee for permission to marry (*idhnnāme*) given by a ḳāḍī. This was at the rate of 10 piastres for girls and 5 for widows.

Çağatay, *Osmanlı Imparatorluğunda reayadan alınan vergi ve resimler*, *AUDTC Fak. Dergisi* V 1947, 506-7. (B. LEWIS)

ʿARŪSIYYA, Dervish-order, according to Rinn a branch of the Shādhilīya which takes its name from Abu 'l-ʿAbbās Aḥmad (b. Muḥammad b. ʿAbd al-Salām b. Abī Bakr) b. al-ʿArūs, who died c. 1460 in Tunis.

Bibliography: Rinn, *Marabouts et Khouan*, 268; Depont et Coppolani, *Les confréries musulmanes*, 340.

ARZACHEL [see AL-ZARḲĀLĪ].

ARZAN (Syriac Arzōn, Armenian Arzn, Ałzn). The name of several towns in eastern Anatolia. The most important was the chief city of the Roman province of Arzanene, Armenian Ałdznikh, located on the east bank of the Arzanṣū River (modern Garzansu) a tributary of the Tigris, at about 41° 41′ E. long. (Greenw.) and 38° N. lat. By Islamic authors Arzan is linked with the larger city to the west, Mayyāfāriḳīn.

The origin of the name is uncertain but of undoubted antiquity; see the discussion in H. Hübschmann, *Die altarmenischen Ortsnamen*, in *Indogermanische Forschungen*, 16 (1904), 248, 311. On the pre-Islamic history of the town, a Syrian bishopric, see Marquart, *Ērānšahr*, 25.

Arzan surrendered to ʿIyāḍ b. Ghanm in 20/640, and the district was included in the territory of Djazīra (Balādhurī, 176), later in Diyār Bakr. The town was in a rich agricultural district, and the average combined revenue from Arzan and Mayyāfāriḳīn in ʿAbbāsid times was 4,100,000 dirhems, according to Ḳudāma (BGA vi, 246). Until the rise of the Ḥamdānids Arzan was ruled by Armenian amīrs allied by marriage, as well as allegiance, to the Arabs. Cf. Canard (below), 472.

At the beginning of the 4th/10th century the Ḥamdānid Sayf al-Dawla resided in Arzan when preparing expeditions against the Armenians or the Byzantine Empire. In 330/942 the Byzantines captured and sacked Arzan (Canard, 748). The Ḥamdānids recovered the town but had to fight many times with the Byzantines in the Diyār Bakr district. Afterwards the town lost its importance and in the 12th cent. A. D. Yāḳūt (ed. Wüstenfeld, i, 205) wrote that it was in ruins.

Few travellers have visited the site, but it was identified by J. G. Taylor in *JRGS*, 35 (1865), 26, where a plan of the ruins is given.

One should not confuse Arzan with a smaller nearby site also on a river, the Bohtansu, called Arzan al-Zarm; see J. Markwart, *Südarmenien und die Tigrisquellen* (Vienna 1930), 41*, and 341. Also to be distinguished from Arzan is Arzan al-Rūm (Erzerum), and nearby Byzantine Ἄρτζε.

Bibliography: In addition to references in the text cf. Marquart, *Die Entstehung und Wiederherstellung der armenischen Nation*, Potsdam 1919, 33; M. Canard, *Histoire de la Dynastie des Ham-*

danides, Algiers 1951, 84, with a bibliography of references to Arzan in the Arabic geographers in footnote 17. The map on 240 is of special interest.

(R. N. Frye)

ARZAN al-RŪM [see erzurum].

ĀRZĀW (Berb. Arzyu; modern orthography Arzew or Arzeu), town on the Algerian coast situated between Oran and Mostaganem, 7 km. E. of the present small town of Arzeu. The Muslim town of the Middle Ages doubtless occupied "on the littoral of the plain of Sīrāt" the site of the ancient Portus Magnus (modern Saint Leu, still called Vieil Arzeu). In the 5th/11th century, al-Bakrī speaks with admiration of the Roman town and its ruins, but declares that it was completely uninhabited. He notes however, on the nearby mountain (the one which dominates the present Arzeu), three castles which were used as *ribāṭ*. This is the more remarkable because fortified monasteries were very rare on the northern coast of Barbary. The Ārzāw region thus appears to have played a military and religious role. One assumes that maritime activity was, here as in other towns on the same coast, carried on not by the Berbers of the region but by Andalusian immigrants. In the 6th/12th century, Ārzāw furnished the Almohad ʿAbd al-Muʾmin with ships for the conquest of Ifrīḳiya. About the same time al-Idrīsī mentions its economic activity. "It is", he says, "large village to which is brought the wheat produced in the surrounding countryside, which is sought after by merchants who export it to numerous countries". In the 10th/16th century Leo Africanus, in his list of the large and small towns on this coast, does not mention Ārzāw.

At an unspecified period, probably in fairly recent times (18th century?) there arrived in the region an important Berber tribe which came from the Moroccan Rif, the Boṭṭīwa, among whom the original dialect was still spoken forty years ago.

Afr.* 1910-11, 101 ff.; R. Basset, *Loqmân berbère*, Paris 1890, 9, 13; idem, *Dial. berb. du Rif*, 1897, 168-71.

(G. Marçais)

ĀRZŪ KHĀN (Sirādj al-Dīn ʿAlī Khān Ārzū) 1099/1687-8 or 1101/1689-90—1169/1756, Indo-Muslim scholar and poet in Persian and Urdū. Son of Shaykh Ḥusām al-Dīn Ḥusām, Ārzū Khān was, according to Shams al-ʿUlamā Mawlāna Muḥammad Ḥusayn Āzād, descended from the family of the saint Naṣīr al-Dīn Maḥmūd Čirāgh-i Dihlī on his father's side and from the saint Muḥammad Ghawth Guwāliyārī on his mother's.

A native of either Gwalior or Akbarābād (Āgra), in 1132/1719 he went to Dihlī and obtained a *manṣab* and a *djāgīr* also receiving patronage from Muʿtaman al-Dawla Isḥaḳ Khān, Khān-sāmān to Muḥammad Shāh. The former's sons Nadjm al-Dawla and Nawwāb Sālār Djang continued their father's favours to Ārzū Khān and when Sālār Djang went to Awadh in 1168/1754-5 Ārzū Khān accompanied him there and secured a stipend from Shudjāʿ al-Dawla, the Nawwāb-Wazīr of Awadh. Ārzū died at Lucknow but his body was brought back to Dihlī for burial.

In Persian literature Ārzū Khān was an important commentator on the *Gulistān* of Saʿdī, on the *Sikandarnāma* of Niẓāmī and upon the *Ḳaṣāʾid* of Khāḳānī and ʿUrfī. His other Persian writings include a lexicon, *Sirādj al-Lughāt*, the *ʿAṭiyya-i Kubrā* on simile, metaphor and metonymy, the *Zāʾid al-Fawāʾid*, a dictionary of Persian verbs and the nouns derived from them, the *Tanbīh al-Ghāfilīn*, a criticism of the poems of Ḥazīn, and the *Madjmaʿ al-Nafāʾis*, a biography of ancient and modern poets with extracts from their works.

In Urdū literature Ārzū Khān was more of an influence than a figure. Although he composed a few verses in Urdū he is more important as a teacher of such luminaries of the Dihlī school of Urdū poets as Mirzā Djān Djānān Maẓhar, Muḥammad Rafīʿ Sawda, Muḥammad Taḳī Mīr and Mīr Dard. He also composed an Urdu dictionary of mystic words, the *Gharāʾib al-Lughāt* and a Hindūstāni dictionary, the *Nawādir al-Farz*.

Bibliography: Extensively given in Storey, Vol. I, Part 2, 834-840.

(P. Hardy)

ʿAṢĀ: rod, stick, staff. From *LA*, xix, 293 ff. it is clear that the word was in common use among the ancient Arabs for the camel herdsman's staff.

In the Ḳurʾān it is used of Moses' stick with which he beat down leaves for his flock (xx, 18 (19)). Later it is the rod that at the Bush became a snake (xxvii, 10; xxviii, 31), and in Egypt the rod that devoured those of the magicians (vii, 107 (104), 117 (114); xxvi, 32 (31), 45 (44). Since the same word is used for the rods of the Egyptian magicians (xx, 66 (69); xxvi, 44 (43) it is clear that it has become his magic wand, so that with it he smites the sea to make a crossing (xxvi, 63), and smites the rock in the wilderness to procure water (ii, 60 (57); vii, 160). All this follows closely the Biblical narrative in Exodus, iv to xvii though in the Ḳurʾān no distinction is made between Moses' rod and that of Aaron.

In later tradition we are told that it was a rod cut from a celestial myrtle bush which Adam brought from Paradise. It was inherited by Seth and passed to Idrīs, Noah, Ṣāliḥ, Abraham and his family, and finally to Shuʿayb, who is identified with Jethro, the father-in-law of Moses. Through his daughter it came to Moses, for whom it was not only a shepherd's staff but a magic rod whereby he could light his way at night, find nourishment in the ground, split rocks and mountains, and defend himself from animal and human enemies. This material also is mostly derived from Rabbinic sources such as those we have in *Yalḳūṭ Shimʿoni*, *Midrash Wayyosha*, *Pesiḳta de-Rab Kahana*, and *Midrash Rabba*. That certain Muslim circles were embarrassed by these stories is clear from al-Maḳdisī's, *al-Badʾ wa 'l-Taʾrīkh*, iii, 42, 55, 112. In popular eschatology this rod is one of the things that will reappear in the Last Days, for when the Beast (cf. al-dābba) appears as one of the greater signs of the approaching Hour, it will bring with it the Rod of Moses and the Seal of Solomon (al-Tirmidhī in *Bāb at-Tafsīr* on Sūra xxvii; *Musnad Aḥmad*, ii, 295).

Al-Djāḥiẓ in his *al-Bayān wa 'l-Tabyīn*, ii, 49 ff. has a chapter on the use of the *ʿaṣā* among the Arabs, and Ibn Sīda, *Mukhaṣṣaṣ*, xi, 18 devotes a section to its various names. Certain men of letters, e.g. Usāma b. Munkidh, have written a *Kitāb al-ʿAṣā*. For the *ʿaṣā* as used in public worship see ʿanaza.

Bibliography: Ṭabarī, i, 460, 461; Thaʿlabī, *Ḳiṣaṣ al-Anbiyāʾ*, Cairo 1339, 122, 123; al-Kisāʾī (Eisenberg), 208; the Ḳurʾān Commentaries, ad loc.; L. Ginzberg, *Legends of the Jews*, ii, 291, 292; v, 411; vi, 165; Grünbaum, *Neue Beiträge*, 161 ff.; Sidersky, *Origines des légendes musulmanes*, 78-80.

(A. Jeffery)

ʿAṢABA [see mīrāth].

ʿAṢABIYYA, Arabic word meaning originally "spirit of kinship" (the *ʿaṣaba* are male relations in the male line) in the family or tribe. Already used in the *ḥadīth* in which the Prophet condemns *ʿaṣabiyya* as contrary to the spirit of Islam, the term became famous as a result of the use to which it was put by Ibn Khaldūn, who made this concept the basis of his interpretation of history and his doctrine of the state. *ʿAṣabiyya* is, for Ibn Khaldūn, the fundamental bond of human society and the basic motive force of history; as such, the term has been translated as "esprit de corps" (de Slane), by "Gemeinsinn" and even by "Nationalitätsidee" (Kremer), which is an unjustified modernism. The first basis of the concept is undoubtedly of a natural character, in the sense that *ʿaṣabiyya* in its most normal form is derived from tribal consanguinity (*nasab, iltiḥām*), but the inconvenience of this racial conception was already overcome in Arab antiquity itself by the institution of affiliation (*walāʾ*), to which Ibn Khaldūn accords great importance in the formation of an effective *ʿaṣabiyya*. Whether it is based on blood ties or on some other social grouping, it is for Ibn Khaldūn the force which impels groups of human beings to assert themselves, to struggle for primacy, to establish hegemonies, dynasties and empires; the validity of this principle is tested firstly in Arab history, pre-Islamic and Muslim, and secondly in the history of the Berbers and other islamicised peoples: the Arab empire is the product of the *ʿaṣabiyya* of Ḳuraysh, especially of the Banū ʿAbd Manāf group, but once power (*mulk*) has been seized, the dominant group tends to detach itself from the natural *ʿasabiyya* on which it is based, and to substitute for it other forces which become the instrument of its absolutism. This extraordinary appreciation of a non-religious force as the motive power of history (the religious element only superimposes itself as a secondary element) involved Ibn Khaldūn in delicate problems of reconciliation with the traditional view of Muslim history and civilisation, a view, moreover, which he supported with whole-hearted conviction; this effort of harmonisation, apparent in more than one page of the *Muḳaddima*, prevented him from making a deeper examination and rendering fully coherent his ingenious theory.

Bibliography: F. Gabrieli, *Il concetto della ʿaṣabiyyah nel pensiero storico di Ibn Ḫaldūn, Atti della R. Accad. delle scienze di Torino*, lxv, 1930, 473-512; H. A. R. Gibb, *The Islamic Background of Ibn Khaldūn's political Theory, BSOS*, vii, 1933, 23-31. (F. Gabrieli)

al-**ASAD** (a.), plural usually *al-usūd, al-usud, al-usd*, the most usual word for lion. It is also frequently found as a personal or tribal name (see following article; concerning the presumable etymology and connexions with other roots, see dicussion by C. de Landberg, *l.c.*, II/ii, 1237-40). The old poetic word, which has been more and more replaced by *al-asad*, is *al-layth*; this is found not only in Semitic languages (Akk. *nēšu*, this, however, generally only in prose: Landsberger, l.c., 76), but also, according to Koehler (*Lex. in VT Libros*, 481b), in Greek λῖς, λεῖς, where it is also used by poets—though rarely—from Homer onwards. The same author, 472a, also gives, alongside the kindred Akk. *labbu* etc., the Arabic fem.: *labuʾa* (with numerous kindred forms for lioness), and gives λέων, λέαινα, *leo* as an "Asianic" word, referring to *ZDPV*, LXII (1939), 121-4 (with a geographical distribution of the words). H. Oštir, in *Symb. Rozwadowski*, I (Cracow 1927), 295-313, derives the name of the lion in the Semitic languages (including the Arabic forms *labuʾa* and *layth*), Egyptian Coptic, Greek, Latin, German and Slavonic from an original Alarodic form and its variants. Recently, Indo-Germanic scholars once more refused to admit any connexion between the Semitic languages and the words for "lion", but they are unable to give any Indo-Germanic alternative (Paul Thieme, *Die Heimat der idg. Gemeinsprache*, Wiesbaden 1954, p. 32-9; also Walde-Hofmann, *Lat. etym. Wb.*[3], Heidelberg 1938, I, 785; and Pauly-Wissowa, *RE*, XIII, col. 968). The phonetic difficulties involved in the undoubted relationship between the words for "lion", "elephant" etc., in the different languages, remain a problem. It is noteworthy that all the cases concern animals which appear as characters in fables, playing a great part both in literature and ornamentation (see below, and *Indogerm. Jahrbuch*, XIII [1929], 94, No. 85).

It is a matter of common knowledge that various hypotheses have been advanced concerning the distribution of the lion in Arabia. M. Grünert, *l.c.*, 3-4, 11, states that more than two-thirds of the great number of words for the lion (3 Arab philologists vie with one another in mentioning 600 and more) can be found in the ancient poets. In his opinion, the "epitheta ornantia" which he has collected are proof of "such a perceptive way of observing nature" that "some ancient Arabic poets really observed the lion". Here, however, it is not the great quantity, but the significance of these epithets which must be the decisive factor: they do not so much give a clear picture of the animal itself, but—and this is typical in Arabic lexicography—they give a great number of synonyms for the general conception, such as "tearer-to-pieces, crusher, smasher" etc. (cf. *ibid.*, 15 f.). B. Moritz (*l.c.*, 40 f.) is likewise led to accept Grünert's view, in the main, because of this wealth of synonyms (following Ibn Sīda, *Kitāb al-Mukhaṣṣaṣ*, viii, 59-64). On the other hand we have the objections by G. Jacob *l.c.*, 17; Th. Nöldeke, in *ZDMG*, XLIX (1895), 713; H. Lammens, *Le Berceau de l'Islam*, Rome 1914, I, 128 f. In addition to these objections, there is, above all, the fact that the figure of the lion as the king of animals—and hence as a personification of kingly power—appears very early in places where the living animal never existed (for example in Ceylon, Indonesia, and in parts of Europe; cf. M. Ebert, *l.c.*, vii, 318a). It was in such places that it could most easily turn into a semi-mythical animal, engaging an imagination which had already endowed it with those ideals which its appearance evokes. This may perhaps also serve as an explanation for attributing other qualities to it, such as courage, bravery, magnanimity and the like, which some experts definitely deny to the real animal (cf. R. Lydekker, *The Royal Natural History*, London-New York 1893/4, i, 357 f., as opposed to Brehm, *l.c.*, i, 144, 150). — Arabia, which has a predominantly desert character is, furthermore, hardly a country for an animal like the lion, which prefers a certain amount of vegetation (Jacob, *l.c.*, 16). As far as Arabia proper is concerned, geographers can only find mention of a few lions' dens (*maʾsada*) in the Yemen, in the ancient poets; but the lion is no longer found there today. Some others, difficult to localise, were on the northern border, especially in the Babylonian marshes [cf. al-Baṭīḥa], where it is also extinct today (cf. M. Streck, *l.c.*, 416 f.; O. Rešer, *Sachindex zu Jâqût's "Muʿǧam"*, 42 f.; Hommel, *l.c.*, 287 f.; Grünert, *l.c.*, 13; Landsberger, *l.c.*, 67; Jacob, Lammens, Moritz, *ibid.*). There are different types of lion according to

the colour of the animal and the growth of its mane. Facts for a more detailed description of these (cf. e.g. Jacob, *ibid.* and Moritz, *l.c.*, 41, n. 3) are, however, scanty. In Islamic countries today, one finds, according to Brehm, *l.c.*, i, 144 ff., the Berber lion, the Senegalese lion, the Persian lion and the Gudjarāt lion.

The Arabs caught lions in pits, a primitive method which is still found in some parts today (Grünert, *l.c.*, 14; Ebert, *l.c.*, vi, 146; Brehm, *l.c.*, i, 151f.; according to Pliny, this was the method employed to catch animals for the circus: *RE*, XIII, col. 980). Following the example of the rulers of the ancient Orient, as well as that of the Achaemenids, Sāsānids and the Caesars, the Caliphs later went on lion-hunts themselves and in Islam, too, it became a prerogative of the rulers. They kept the lions in zoological gardens, trained them as companions, and organised shows with them in the Roman manner (cf. *RE*, XIII, col. 980 f.; Ebert, *l.c.*, vi, 144-6; G. Contenau, *La vie quotid. à Bab. et en Assyrie*, Paris 1950, 140-3; W. von Soden, *Herrscher im AO*, Berlin 1954, 37, 75, 82, 134; C. de Wit, *l.c.*, 10-4; Streck, *ibid.*; Mez, *Renaissance*, 385 f.; M. F. Köprülü, *l.c.*, i, 599 f.).

"In Islamic art, the lion is probably the most frequently and diversely represented animal. It rarely has an apotropaic meaning, it sometimes has an astrological or symbolic one, but it is generally merely decorative and without any deeper significance. The main forms are:

1) In the round, as in the Fountain of the Lions in the Alhambra, hewn in stone in Konya, in Fāṭimid and Saldjūḳ metal work, and in Persian ceramics of the 12th to 14th century (particularly as pouring vessels and censers).

2) In bas-relief, and also flat, in the various spheres of art, and in almost any material, either:

a) passant, statant, sejant, rampant, either alone or paired, in the so-called 'heraldic style';

b) either in battle with other animals—such as bulls, gazelles or camels—or attacking them (thereby going back to ancient Iranian tradition);

c) explicitly heraldic: as in the Persian coat of arms (where it appears with the sun); as the animal in the coat of arms of the Mamlūk Baybars and perhaps also in that of the Rūm Saldjūḳs of the name of Ḳîlîdj Arslan; also in numismatic representations;

d) as a lion mask (the head only) on later carpets and textiles.

3) Partial representations are rare; the most frequent are: lions' paws, used as ornamental legs; lions' heads (modelled fully in the round) as door-knockers, as handles and in similar functions, usually in bronze.

There seems to be little direct debt to the ancient Orient or Hellenic art; the stylisation of the figure of the lion, at least, is nearly always typically Islamic, both in details and ornamentation. — There is as yet no iconographic study of the lion in Islamic art." [Information given in a letter from Professor E. Kühnel].

Fr. P. Bargebuhr in the *Journal of the Warburg and Courtauld Institutes*, 1957, mentions occasions where plastic representations of lions are alluded to in Arabic literature. According to the results of his research, the Alhambra lions are of the 5th/11th century.

In heraldry, the best known example of the lion is in the Iranian Imperial coat of arms [see below], which has its predecessor in numismatics. As M. F. Köprülü shows, *l.c.*, i, 609, it dates from the reign of Fatḥ ʿAlī Shāh (1797-1834). — For *Asadī* or *Arslanlî* coins see *ibid.*, i, 615.

The use made of the lion in all these spheres is based largely on astronomical and astrological configurations. The constellation of *Leo* "with 27 stars and 8 shapeless ones" is, according to L. Ideler, *Untersuchungen über den Ursprung u. die Bedeutung der Sternnamen*, Berlin, 1809, 154: "a fiction of grammarians ignorant of the skies, which owes its existence to false interpretations and arbitrary changes of the older star-names. It is impossible to say in all cases exactly how they arrived at such corruptions" (see *ibid.*, 152-5, 159-68, 20-31, 52 f., 252 f., 272, 279, 317 f., 409 f., 422). The Babylonians already saw a heavenly hierarchy of kings in the zodiacal sign of *Leo* (α leonis = *šarru*, later: Regulus = *malakī*, the "royal", also: *ḳalb al-asad* "lion-heart": *ibid.*, 164 f. and A. Jeremias, *Handb. d. ao. Geisteskult.*[2], 1929, 203, 218 f., 347), and they put the king of their animal kingdom into the place in the zodiac in which the summer solstice occurs. Hence it became the symbol of the victory of the sun (cf. *RE*, XIII, col. 983; Keller, *l.c.*, I, 52). Just as Jesus is called the Lion of Judah (comp. the title of the Negus) because he triumphed over death (*Apoc.* V, 5), the Shīʿites call ʿAlī b. Ṭālib the "Lion of God" (cf. Cassel, *l.c.*, 72, 87-93; Ḥamza was also called *Asad Allāh*: Grünert, *l.c.*, 4). In the Persian coat of arms he draws his sword Dhū 'l-Faḳār [*q.v.*], and the rising sun appears in the background. — When the sun is in *Leo*, on July 20th, the flooding of the Nile begins, hence the lions' heads as water spouts and fountain heads (cf. Keller, *l.c.*, i, 47 f.; C. de Wit, *l.c.*, 84-90, 396 ff.). — The apotropaic nature of the lion is of considerable significance. With his fierce look, warding off all hostile attack, he becomes the guardian of the throne (also of the throne of Allāh: Grünert, *l.c.*, 5), the gate, halls and graves (cf. Keller, *l.c.*, i, 58; Bonnet, *l.c.*, 429; like the Sphinx: cf. C. de Wit, *l.c.*, 66 f.). — Some representations of lions may, of course, have resulted from mere playful joy in modelling. However, W. Andrae, *Dargestelltes u. Verschlüsseltes in der ao. Kunst*, in *Welt d. Or.*, II/3 (1956), 250-3, shows that there was often a deeper reason behind it, especially when the lion, bull, and eagle occur together. Here, Islam took a great deal from older cultures without enquiring into its significance. Frequently, ancient Egyptian art provides the answer in its added explanation of what is portrayed (cf. C. de Wit, *l.c.*, especially 78, 84-90, 159 f., 398 f., 461-8).

It is impossible here to go further into the part played by the lion in the literature of mythology (some of this may be found in M. F. Köprülü, *l.c.*, i, 601-3), the fable (e.g. of Luḳmān; in animal-fables he is often called *(al-)Usāma*, similar to our "noble beast"), and the proverb (examples from al-Maydānī in Grünert, *l.c.*, 17).

The description of his biological attributes, too, his daring, strength and wildness (especially his roar), on the other hand, are repeatedly stressed. Mixed up with this, are superstitious ideas concerning him, such as the tale that he flees from the (white) cock —or from its crowing—that is to say, that he was originally shy of the light of day before he himself became the symbol for it (see above), according to the views held in antiquity (cf. *RE*, XIII, col. 975 f.; Cassel, *l.c.*, 59; Grünert, *l.c.*, 18). The same is true of the use—sometimes medicinal—made of parts of

his body: brain, teeth, gall, flesh, fat, etc.; these are held to be infallible in their magic effects. The court apothecary in Stuttgart sold lions' excrement as late as 1561 as a remedy (cf. Keller, *l.c.*, i, 44; *RE*, XIII, col. 982; Grünert, *l.c.*, 19 f.).

Names show most clearly how much the lion entered into the cultural history of man. *Usd al-Ghāba* "the lions of the thicket" is what Ibn al-Athīr (died 632/1234) calls his biography of the companions of the Prophet. The names formed with *Asad(ī)*, *Layth(ī)* are numerous (sometimes theophorous: J. Wellhausen, *RAH*², 2, 64); in Turkish those formed with *Arslan* (particularly the Saldjūķs; M. F. Köprülü, *l.c.*, 600-4 deals with personal names, place names and titles); in Persian, *shīr*, either alone or in compounds, such as *shīrdil* "lionhearted", *shīrmard* "hero" (like *asad*: Landberg, *l.c.*, II/ii, 1239f.; Fr. Wolff, *Glossar zu Firdōsī's Shāhnāma*, 1935, 584-7). In the Turkish of today, the word is usually *aslan*, which also means "brave, upright, good"; *arslanciğim* "my little lion", is practically a term of endearment for boys. — Thus the likable traits of the animal, its traditional virtues, the dignity of its appearance, have triumphed everywhere.

Bibliography: Owing to lack of space, the subject can only be roughly sketched.

Max Grünert, *Der Löwe in der Literatur der Araber*, Prague 1899, is little more than a study from a lexicographic standpoint. — M. Fuad Köprülü's article ARSLAN in *IA*, i, 598a-609a is hitherto the best exposition, not only for Turkish. There is no general survey of the Islamic field, nor are there any monographs on particular areas. — For comparison with antiquity, the following will be found useful: the article "Löwe" (by Steier) in Pauly-Wissowa, *RE*, xiii, 1927, col. 968-990; Otto Keller, *Die antike Tierwelt*, i (Leipzig 1909), 24-61; further: Max Ebert, *Reallex. d. Vorgesch.*, vi, 114a-6b, VII, 318a-9b and especially Paulus Cassel, *Löwenkämpfe von Nemea bis Golgatha*, Berlin 1875, this also for oriental conditions. — For relationship with the ancient Orient: B. Landsberger, *Die Fauna des alten Mesopotamien*, Leipzig 1934; M. Streck, in *Vorderas. Bibliothek*, vii/2 (1916), 416 f.; H. Bonnet, *Reallex. d. ägypt. Religionsgesch.*, Berlin 1952, articles "Löwe", "Sphinx", and others; especially C. de Wit, *Le rôle et le sens du lion dans l'Egypte anc.*, Leiden 1951, *passim*. — Concerning Arabic and Semitic matters in general, cf. F. Hommel, *Die Namen der Säugetiere bei den südsemit. Völkern*, Leipzig 1879, 287-94; C. de Landberg, *Études sur les dialectes de l'Arabie méridionale*, II/ii, Leiden 1909, 1237-40; G. Jacob, *Altarab. Beduinenleben*², Berlin 1897, 16-18; B. Moritz, *Arabien*, Hanover 1923, 40-41. — For zoology in general: Brehm's *Tierleben*³, I (1893), 144-152.

(H. KINDERMANN)

ASAD, BANŪ (later, dialect: Benī Sed), Arab tribe. They are a tribe related to the Kināna [*q.v.*]; the awareness of this interconnexion remained remarkably alive, though it had little practical effect owing to the great distance separating them.

The homelands of the Asad are in North Arabia, at the foot of the mountains formerly inhabited by the Ṭayy [*q.v.*]. In contrast to the latter, the Asad led a mainly nomadic life. Their grazing lands extended to the south and south-east of the Nefūd, from the Shammar mountains [*q.v.*] to the Wādi 'l-Rumma in the south, and beyond it in the neighbourhood of the two Abān in the direction of Rass and further eastwards up to Sirr. Here their territory overlapped with that of the ʿAbs [*q.v.*], in the north with that of the Yarbūʿ [*q.v.*] of the Tamīm [*q.v.*], for there the Asad owned the spring of Līne beyond the Dahnā' [*q.v.*], as well as the adjacent tract of Ḥazn (Ḥedjera) to the north.

An important event in the pre-Islamic history of the Asad is their revolt in which Ḥudjr fell, the son of the last great ruler of the Kinda and the father of the poet Imru' al-Ķays [*q.v.*], and in which they struck the disintegrating kingdom of Kinda [*q.v.*] a mortal blow. — The Asad's relationship both with their immediate and their more distant neighbours, the Tamīm and the tribes beyond the Wādī, varied. In contrast, at the end of the sixties and the beginning of the seventies of the 4th century A.D., a permanent alliance with the Ṭayy and the Ghaṭafān [*q.v.*] was developped, in which the Dhubyān [*q.v.*] and finally the ʿAbs joined. A few decades later, however, a rift among the allies occurred, as a result of which clashes ensued, particularily between the Asad and the Ṭayy, until Islam established peace among the tribes.

An Asad family, the Ghanm, who had long been settled in Mecca, belonged to the inner circle of Muḥammad's disciples. But these connexions in no way affected the great Asad tribe. At the beginning of the year 4 /625, Muḥammad sent a raiding expedition to the Asad wells at Ķaṭan, where were encamped the sub-tribe Faķʿas, with their chief Ṭulayḥa (Ṭalḥa) and who, according to tradition, were contemplating an attack on Medina, already weakened by the battle of Uḥud. It is conceivable that Ṭulayḥa took part in the siege of Medina, the so-called Battle of the Trench (6/627). When, after further unsuccessful struggles against Muḥammad, famine broke out among the Asad, Ṭulayḥa appeared with other chiefs in Medina at the beginning of 9/630 to embrace Islam. Though it is uncertain that Sura XLIX, 14-17 refers to their emissaries, as is maintained by tradition, nevertheless these verses undoubtedly reflect their attitude towards Islām. However that may be, their leader Ṭulayḥa is said to have proclaimed himself a prophet even before Muḥammad's death. During the ensuing widespread troubles of the *Ridda* wars, he succeeded in re-establishing the alliance with the Ghaṭafān and the Ṭayy, which was joined by sections of the ʿAbs and Fazāra (Dhubyān). After being abandoned by the leader of the Fazāra [*q.v.*] at the battle of Buzākha against Khālid b. al-Walīd [*q.v.*], he took to flight (11/632). This victory of the Muslims broke the resistance of the insurgents in North Arabia, who then for the first time were converted to Islām, the Asad among them.

In the ensuing wars of conquest, we find the Asad predominantly on the ʿIrāķ front; Ṭulayḥa also, having in the meantime returned to Islām, fought both there and in Persia. — Most of the Asad were absorbed by al-Kūfa; here in the course of time, they evolved from warriors to men of learning; as a result many of those who handed down the Shīʿa tradition, were men of the Asad from al-Kūfa. Smaller groups of the Asad were incorporated in the Syrian army and subsequently settled near Aleppo and beyond the Euphrates.

When the withdrawal of the Bakr [*q.v.*] and Tamīm left the way to the north open to them, in the second half of the 3rd/9th century, they extended their grazing lands along the Kūfa pilgrim road from al-Biṭān (Bṭāne) in the Dahnā' as far as Wāķiṣa. Later it was extended still further northwards: up to al-Ķādisiyya [*q.v.*] on the frontier of the Sawād. In the East the Asad extended right up to Baṣra and in the West to ʿAyn al-Tamr [*q.v.*].

In the second half of the 4th/10th century, the Asad penetrated into the settled lands. Shaykh Mazyad of the sub-tribe Nāshira settled on the Nīl canal at al-Ḥilla [*q.v.*], whilst another chief, Dubays, crossed the Tigris and set up his camp in the neighbourhood of the later Ḥuwēze (Ḥuwayza; see Ḥawīza) (Khūzistān).

The internal troubles under the Būyids [*q.v.*] favoured the rise of the Banū Mazyad [*q.v.*]. ʿAlī b. Mazyad was confirmed in his office as a vassal of the Būyids in 403/1012-3. His son Dubays (408-474/1018-1082) and the latter's son Manṣūr (474-479/1082-1086) were considered to be the ideal type of Arab aristocracy. Both were surpassed by Ṣadaḳa b. Manṣūr [*q.v.*] (479-501/1086-1108), in personal nobility and political significance. In the struggle between Sulṭān Barkiyārūḳ [*q.v.*] and his brother Muḥammad b. Malikshāh [*q.v.*], he sided with the latter and occupied al-Kūfa (494/1101), Hīt, Wāsiṭ, Baṣra and Takrīt and brought several Beduin tribes of ʿIrāḳ under his influence; thus he was well justified in calling himself Malik al-ʿArab (Prince of the Beduin). Later however, he quarrelled with his overlord Sulṭān Muḥammad, who defeated him at al-Madāʾin in 501/1108, in which battle he fell. Ṣadaḳa united in his person the virtues of an old-time Arab warrior and those of an Islamic prince. He stands on the threshold of the transition from the Beduin way of life to that of urban civilisation. Though at the outset he still lived in tents, in 495 (1101/2) he set up his residence al-Ḥilla. The sons of his son and successor Dubays II [*q.v.*], who led a restless and adventurous life and was murdered at the court at Marāgha of the Saldjūḳ Sulṭān Masʿūd b. Muḥammad [*q.v.*] in 529/1135, ruled at al-Ḥilla until 545/1150.

The Asad had followed the Banū Mazyad to al-Ḥilla and remained there after their princely family had become extinct. Because they had supported Sulṭān Muḥammad II b. Maḥmūd [*q.v.*] in the last Saldjūḳ feat of arms in Irāḳ, the unsuccessful siege of Baghdād (551/1157), the Khalīfa al-Mustandjid [*q.v.*] determined to expel them from al-Ḥalla (558/1163). They entrenched themselves in the neighbourhood and were, with the help of the Muntafiḳ [*q.v.*], finally compelled to submit. Four thousand of them were slaughtered and the remainder banished for ever from al-Ḥilla. The victors were perhaps induced to adopt this merciless procedure, because the Asad belonged to the Shīʿa (see above).

The Asad then dispersed, but must have reassembled again later. In any case, in the 14th and 15th centuries they lived to the south east of Wāsiṭ.

In the course of time they finally found a new home in al-Djazāʾir. The Banū Asad or Benī Sed as they are called in dialect, are apparently to be found here as early as the 10th/16th century.

In the 19th century they found their territory round el-Čebāʾish too constricted. In the forties they are said to have advanced under Shēkh Djenāḥ as far as the region east of ʿAmāra and later, under the latter's son Kheyūn, to Little Medjer. 1894-5 they were punished by Turkish troops for having set fire to Medina (below el-Čebāʾish on the Euphrates) under Ḥasan el-Kheyūn. Ḥasan was driven out of el-Čebāʾish and perished miserably in Hōr al-Djazāʾir (ca. 1903). His son Sālim, thanks to the influence of the family of Sēyid Ṭālib, was appointed to the office of Shaykh over the Benī Asad in 1906. After the first world war, he remained faithful to Sēyid Ṭālib and declared himself opposed to the choice of Fayṣal as King of ʿIrāḳ. In 1924/5 he revolted against the Government, was taken prisoner and then exiled from his home. He now lives on his estates in Beledrūz (North East of Baghdād).

H. Schraeder, Heidelberg[2] 1955, 261, 271, 277, 321, etc., 352; also L. Caetani, *Annali*, see Index, *s.v.* (H. Kindermann)

ASAD, ancient Arab tribe. The Ασατηνοι mentioned by Ptolemy VI, 7, § 22 (Sprenger, 206), and stated by him to have lived in central Arabia, to the west of the Θανουιται = Tanūkh [*q.v.*]. Like them, and perhaps with them, the Asad had emigrated to the Euphrates line before the middle of the 3rd century. They appear in the inscription on the grave of the second Lakhmid of Ḥīra (in al-Numāra, 328 A.D.), together with the Tanūkh, as al-Asadayn, "the two Asads". Here the dual *a potiori* may well have been chosen in order to erase, together with the name, the memory of the Tanūkh rule, whose kings had preceded the Lakhm in Ḥīra. It is not obvious what this term is based on—possibly on some relationship. This is also accepted by the Arab genealogists, who say that the core of the Tanūkh arose from the Asad. The inscription in Numāra mentions that "he reigned over both the Asad ...... and their kings". It is not known for how long the Asad were under the Lakhm. Some of their descendants, the B(anu) ʾl-Ḳayn [*q.v.*], lived until Islamic times to the south and south-east of the Ḥawrān on the eastern border of the Balḳāʾ and down to Arabia; other branches had joined the Tanūkh.

ASAD [see nudjūm].

ASAD b. ʿABD ALLĀH b. Asad al-Ḳasrī (of the Ḳasr sept of Badjīla; not al-Ḳushayrī, as sometimes printed in error), governor of Khurāsān, 106-9/724-7 and 117-20/735-8, under his brother Khālid b. ʿAbd Allāh [*q.v.*], governor of al-ʿIrāq and the East, in the reign of Hishām b. ʿAbd al-Malik. His first period of governorship coincided with increasing pressure by Turkish forces against the Arabs in Transoxiana, which he was unable to counter effectively, although he conducted successful raids into the fringes of the Parapomisus. In 107/726 he rebuilt the city of Balkh (destroyed by Ḳutayba b. Muslim after the rising of Nēzak) and transferred the Arab garrison troops to it from Barūḳān. The Caliph was forced to remove him from office, however, owing to his violence against the local Muḍarites. But when the disorders in Transoxiana and Eastern Khurāsān came to a climax with the revolt in 116/734 of al-Ḥārith b. Suraydj [*q.v.*], supported by the native princes, Asad was reappointed to the province. He drove the rebel forces across the Oxus but in spite of a raid towards Samarḳand failed to restore the Arab position in Ṣughd. In order to control the disturbed sector of Ṭukhāristān he established a garrison of 2500 Syrian troops in Balkh in 118/736. In the following year he led an expedition into Khuttal, but the local princes called for support from the powerful khāḳān of the Türgesh, Su Lu, who drove Asad back to Balkh with severe losses (1 Shawwāl 719/

1 October 737). The joint forces of the Türgesh and the princes of Ṣughd, supported by al-Ḥārith b. Suraydj, now crossed the Oxus in their turn, to make a raid on Khurāsān. Asad, with the Syrians from Balkh and some local forces, surprised the main body at Kharistān, and the remainder were all but cut off in their retreat (Dhu 'l-Ḥidjdja 119/December 737). By this fortunate victory Asad restored the Arab power in Eastern Khurāsān but himself died a few months later (120/738). In his second government, as in his first, he had had to take severe measures against the emissaries and local agents of the ʿAbbāsids [*q.v.*, p. 15 above], but he also endeavoured to reform the local administration, and gained the friendship of many *dihḳāns*, who applauded him as a prudent "steward" (*katkhudā*) of his province. Among other nobles, Sāmānkhudāt, the ancestor of the Sāmānid [*q.v.*] dynasty, was converted by him to Islam, and named his eldest son Asad in his honour. The village of Asadābād near Naysābūr is said to have been built by him, and remained in the possession of his descendants until the government of ʿAbd Allāh b. Ṭāhir. In Kūfa also, the suburb of Sūḳ Asad was established by and named after him.

ASAD B. AL-**FURĀT** B. SINĀN, Abū ʿAbd Allāh, scholar and jurist of the 2nd-3rd/8th-9th century, born at Ḥarrān (Mesopotamia) in 142/759. At the age of two he went with his father to live in Ifrīḳiya. He completed his early studies there, and in 172/788 went to Medina, where he received an initiation in Mālikism from Mālik b. Anas himself. From there he went to ʿIrāḳ, where he profited by the teaching of several disciples of Abū Ḥanīfa. The lessons he received from Mālik provided him with the material for his great work, the *Asadiyya*. On his return to Ifrīḳiya, be established himself as a master in the science of *ḥadīth* and as an eminent jurist; he was appointed by the Aghlabid *amīr* Ziyādat Allāh *ḳāḍī* of al-Ḳayrawān, jointly with Abū Muḥriz (203/818), an unusual division of this office between two holders. Of a violent nature, he sometimes quarrelled with his colleague and disagreed with the famous Saḥnūn, a Mālikite doctor whose *Mudawwana* outlived the success of the *Asadiyya*.

His passionate convictions and perhaps his belligerent energy led to the appointment of this man of learning as *amīr*, leader of the expedition which left Sūs in 212/827 to attack Byzantine Sicily. He marched at the head of the Muslim troops and took the first step towards the conquest of the island by the capture of Mazzara. He died of wounds or of the plague before Syracuse in 213/828.

MARÇAIS)

ASAD ALLĀH IṢFAHĀNĪ, celebrated Persian sword-maker (*shamshīrsāz*) of the time of Shāh ʿAbbās I. It is said that the Ottoman sultan presented a helmet to Shāh ʿAbbās, and offered a sum of money to anyone who could cleave the helmet in two with a sword. Asad made a sword with which he achieved this feat, and, as a reward, Shāh ʿAbbās remitted the tax of the sword-makers, who continued to obtain exemption until Ḳādjār times (see A. K. S. Lambton, *Islamic Society in Persia*, London 1954, 25). For a description of Asad Allāh's work, see *Survey of Persian Art*, iii, 2575. (R. M. SAVORY)

ASAD AL-**DAWLA**, a title held by several princes, of whom the most important was ṢĀLIḤ B. MIRDĀS [*q.v.*].

ASʿAD EFENDĪ [see ESʿAD EFENDĪ].

ASADĀBĀDH, town in al-Djibāl, 7 *farsakhs* or 54 kms. southwest of Hamadhān, on the western slope of the Alwand Kūh at the entrance to a fruitful well-tilled plain (5659 ft. high). As a permanent caravan-station on the famous, ancient highway Hamadhān (Ekbatana)-Baghdād (or Babylon), it is a settlement reaching back into antiquity, and (according to Tomaschek) is probably the Ἀδραπάνα of Isidor of Charax and the Beltra of the *Tabula Peutingeriana* (cf. Weissbach, in Pauly-Wissowa's iii, 264). In the Arab Middle ages, and even into the Mongol period, Asadābādh was a flourishing, thickly populated place with excellent markets, and its inhabitants were considered well-to-do because of the rich yield of their domains, to which canals gave a plentiful supply of water. In 1872, according to Bellew, it was a fine village with some 200 houses, some of which were occupied by Jewish families. The Persians call it, according to the accounts of European travellers, Absadābādh (Petermann, Bellew), also Saʿīdābādh (Duprée, Petermann) or Sahadābādh (Ker Porter). In 514/1120 there was fought at Asadābādh a battle between the two Saldjūḳ sultans Masʿūd of Mawṣil (Mosul) and Maḥmūd of Iṣpahān, which resulted in favour of the latter. 3 *farsakhs* from Asadābādh there stood imposing buildings of Sāsānid times which the Arabs called Maṭbakh or Maṭābikh Kisrā, i. e. the Kitchen(s) of Chosroes; for the explanation of this name cf. the legend deriving from the *Risāla* of Misʿar b. Muhalhil in Yāḳūt, iv, 593 s.v. Maṭbakh Kisrā.

ASADĪ. This poetical name (*takhalluṣ*) is probably that of two poets born at Ṭūs (Khurāsān): ABŪ NAṢR AḤMAD B. MANṢŪR AL-ṬŪSĪ and his son ʿALĪ B. AḤMAD. According to the extremely doubtful statement of Dawlatshāh, the father was the pupil of Firdūsī (born ca. 320-2/932-4), while the epic composed by ʿAlī b. Aḥmad is precisely dated 458/1066; H. Ethé concludes from this that it is impossible to attribute to the same author the works placed under the name of Asadī. Thus Abū Naṣr, about whom it is only known that he died during the rule of Masʿūd al-Ghaznawī, becomes the author of the *Munāẓarāt* ("Debates"), which show analogies with the Provençal *tensones*, and are consequently important from the point of view of literary history,

apart from their originality of matter and form. On the other hand ʿAlī b. Aḥmad, situated at the court of a prince of Arrān, Abū Dulaf composed on the advice of a minister, his *Gershāsp-nāma*, the oldest of the epics complementary to the *Shāh-nāma* of Firdūsī: this work is remarkable not only for its spirited narrative and for its style, but also for its supernatural episodes and philosophical discourses which foreshadow the later development of the Persian epic. The valuable *Lughat-i Furs*, a dictionary of rare words with quotations from Persian poetry, was probably written after the epic. A copy of the pharmacopoeial treatise of Abū Manṣūr Muwaffaḳ b. ʿAlī of Harāt dated 447/1055-6 one of the oldest Persian manuscripts, is in the handwriting of ʿAlī b. Aḥmad, and is dated and signed by him. K. I. Tchaikin has tried to show that all these works are by one and the same author, Abū Manṣūr ʿAlī b. Aḥmad (*Iztadelsvo Akademii Nauk SSSR*, Leningrad 1934, 119-59; resumé by H. Massé in introd. *Gershāsp-nāma*).

ĀṢĀF B. BARAKHYĀ (Hebrew Āsāf b. Berekhyā), name of the alleged *wazīr* of King Solomon. According to the legend he was Solomon's confidant, and always had access to him. When the royal consort Djarāda was worshipping idols Āṣāf delivered a public address in which he praised the apostles of God, Solomon among them, but only for the excellent qualities he had manifested in his youth. Solomon in anger at this took him to task, but was reproved for the introduction of idol-worship at the court. This was then done away with and the consort punished; the king became repentant.

ĀṢĀF-DJĀH, title of the Niẓām of Ḥaydarābād [*q.v.*].

ĀṢAF KHĀN Abu 'l-Ḥasan, second son of Djahāngīr's *wakīl-i-kul* Iʿtimād al-Dawla Ghiyāth Bēg and elder brother of Nūr Djahān.

After Nūr Djahān's marriage to Djahāngīr in 1020/1611 Abu 'l-Ḥasan became *Khān-sāmān* with the title of Iʿtiḳād Khān. In 1021/1612 his daughter Ardjmand Bānū Begam Mumtāz Maḥall married Prince Khurram, the future Shāh Djahān. He himself received the title of Āṣaf Khān in 1023/1614 and attained in 1031/1622 the rank of 6,000 *dhāt* and *suwār* and was appointed *sūbadār* of Bengal in 1033/1623. In 1025/1616 the imprisoned Prince Khusraw, eldest son of Djahāngīr, was delivered over to the charge of Āṣaf Khān, now sharing the real power in the empire with Nūr Djahān, Iʿtimād al-Dawla and Prince Khurram. Despite his negligence in allowing Mahābat Khān, the enemy of the Nūr Djahān faction, to capture Djahāngīr on the banks of the Jhelum in 1035/1626, his own flight to Atak and eventual seizure there by Mahābat Khān's forces, Āṣaf Khān survived to become governor of the Pandjāb and *wakīl*.

Āṣaf Khān quickly despatched the news of the death of Djahāngīr in 1037/1627 to Prince Khurram in the Dekkan. Always a supporter of the latter's succession, Āṣaf Khān diplomatically proclaimed Dāwar Bakhsh as *pādshāh* at Bhimbar, pending the arrival of Prince Khurram. He also placed Nūr Djahān, who supported Prince Shahriyār, under restraint. His services in securing the succession of Shāh Djahān were rewarded by the title of *Yamīn al-dawla*, the rank of 9,000 *dhāt* and *suwār*, *do-aspa sih-aspa* and the office of *wakīl*. In 1041/1631-2 Āṣaf Khān was employed as commander of the Mughal armies fighting against Muḥammad ʿĀdil Shāh of Bidjapūr.

Āṣaf Khān died in 1051/1641 and was buried in Lahore not far from Djahāngīr's tomb. A patron of Mughal miniature painting and a great builder, he left a fortune estimated, in European sources, at more than twenty five million rūpīs apart from his residences and gardens.

AL-AṢAMM, "the deaf", a soubriquet applied to several people, notably: 1. Sufyān b. al-Abrad al-Kalbī, called al-Aṣamm, an Umayyad general famous for his eloquence, who led several campaigns against the Khāridjites, the most notable of which, about 78/677 or 79/678, led to the crushing defeat and death of the Azraḳī Khāridjite Ḳaṭari b. al-Fudja'a [*q.v*].

Bibliography: al-Ṭabari, *Annales*, ed. by de Goeje, ii, 1018 (Cairo ed. v, 126); Djāḥiẓ, *Bayān*, ed. by Hārūn, i, 61, 407 and iii, 264.

2. Abu 'l-ʿAbbās Muḥammad b. Yaʿḳūb al-Nīsābūrī, called al-Aṣamm, a celebrated doctor and traditionist of the Shāfiʿī school, born in 247/861, died in 346/957-8. A disciple of al-Rabīʿ al-Murādī (d. 270/883) and al-Muzanī (d. 264/876) [*q.v.*], he helped to make the latter's *Mukhtaṣar* more widely known through the medium of a recension which attained great popularity; see *Fihrist*, 212. The Shāfiʿī Sahl b. Muḥammad al-Ṣuʿlukī (d. 387/997), who was a pupil of his at Nīsābūr, also won great renown.

Bibliography: *Fihrist*, 211, 212; Ibn Khallikān, *Wafayāt*, Cairo 1310, i, 219 and ed. ʿAbd al-Ḥamīd, Cairo, n.d., iii, 154; Dhahabī, *Tabaḳāt al-Ḥuffāẓ* (*Liber Classium*, etc.), ed. Wüstenfeld, Göttingen 1833 fol., ii 94, no. 61. Our edition of the *Ṭabaḳāt* of Subkī does not contain any notice on him. (R. Blachère)

ASĀS [see ISMĀʿĪLIYYA].

ʿASAS, the night patrol or watch in Muslim cities. According to Maḳrīzī the first to carry out this duty was ʿAbdallah b. Masʿūd, who was ordered by Abu Bakr to patrol the streets of Medina by night. ʿUmar is said to have gone on patrol in person, accompanied by his *mawlā* Aslam and by ʿAbd al-Raḥmān b. ʿAwf. (*Khiṭaṭ*, ii, 223, cf. Ṭabarī, i, 5, 2742; R. Levy, (ed.) *Maʿālim al-Ḳurba*, 216; al-Ghazzālī, *Naṣīḥat al-Mulūk* (ed. Humāʾī, 13, 58). Later the *ʿasas* was commanded by a police officer, known as the *ṣāḥib al-ʿasas* (Maḳrīzī, loc. cit.; Ibn Taghrībirdī, ii, 73; Nuwayrī, iii, 151). Maḳrīzī says that in his day the *ṣāḥib al-ʿasas* was popularly known as the *wāli 'l-ṭawf* (*Khiṭaṭ*, ii, 103); a *ṣāḥib al-ṭawf* is reported in Baṣra in the time of al-Ḥadjdjādj (Balādhurī, *Futūḥ* 364. On the *Ṭawf*, apparently a synonym of the *ʿAsas*, see also Badīʿ al-Zamān, *Maḳāmāt*, *al-Maḳāma al-Ruṣāfiyya*; Ḳalḳashandī, *Ṣubḥ*, xiii, 93, citing the instructions given to them in 697/1297 by the Sultan). In Mamlūk times there were also night patrols known as *aṣḥāb al-arbāʿ*, coming under the authority of the *Wāli*, or chief of police; in Spain they were called *darrābūn* (Maḳrīzī, *Sulūk*, Cairo, ii, 54; Maḳḳarī, *Analectes*, i, 135).

In the East, a diploma issued by the *dīwān* of the Saldjūḳid Sandjar (d. 552/1157) orders the *nāʾib* of Rayy to appoint *ʿasas* in the town wherever there may be the suspicion of vice and corruption (*ʿAtabat al-Katabat*, ed. Muḥammad Ḳazwīnī and ʿAbbās Iḳbāl, Tehran 1950, 44).

In Ottoman times the commandant of the *ʿAsas* (*ʿAsesbashī*) was a Janissary officer (according to ʿOthmān Nūrī the čorbadjī of the 28th *bölük*, according to Hammer from an unspecified regiment). He was in charge of the public prisons and exercised a kind of supervision over public executions. He attended meetings of the Dīwān of the Agha of the Janissaries and at the Saray and the Porte, in case anyone was to be handed to him for execution. He also played an important role in public processions. He received one tenth of the fines imposed by the Su Bashī for drunkenness and similar offences by night, though not by day; in addition the *ʿAsas* levied a due (*Resm-i ʿAsesiyye*) from every shop. (Ewliyā Čelebi, i, 517 = Hammer's translation, i, 2, 108-9, attributing their foundation to Meḥemmed II; ʿOthmān Nūrī, *Medjelle-i Umūr-i Belediyye*, i, 901-2, 954; Ömer Lutfi Barkan, *Osmanlı İmparatorluğunda Ziraî Ekonominin Hukukî ve Malî Esaslarî I Kanunlar*, Istanbul 1943, 69, 70, 134, 139, 147, 160, 162, 163, 164, 178, 400).

In Ṣafawid Persia the night patrols were under the command of the dārūghā, and were called *aḥdāth* [*q.v.*] and *gezme* as well as *ʿasas*. (Minorsky, *Tadhkirat al-Mulūk*, 149). In 19th century Shīrāz the head of the night watchmen was known as *mir ʿasas* (Ann K. S. Lambton, *Islamic Society in Persia*, London, 1954, 14-15).

In Ghardaïa and in the other cities of the Mzāb, the organisation of night watchmen not only assures public security and morals, but possesses a secret and almost absolute authority, superior even to that of the *Ḥalḳa* of the *ʿAzzāba* and the *Djamāʿa* of the laymen, in the important affairs of the community. (M. Vigourous, *La garde de nuit à Ghardaïa*, in *Bulletin de Liaison Saharienne*, no. 9, Algiers 1952, 9-16). The minaret of the Abāḍī mosques in the Mzāb is called *ʿassās*, «watchman». (M. Mercier, *La civilisation urbaine du Mzab*, Algiers 1922, 60 f.).

(ED.)

The term *ʿassās* is used in North Africa in the sense of "night-watchman". R. Brunschvig (*La Berbérie Orientale sous les Ḥafṣides*, ii, 203) uses it in connexion with the night-watchmen in the *sūḳs* at Tunis. It is also found in Budget Meakin (*The Moors*, London 1902, 174) to denote the watchman who keeps guard at night over the caravans which have halted in the villages; the same custom, but without the word being used, is mentioned by M. Rey (*Souvenir d'un voyage au Maroc*, Paris 1844, 124). At Fez, the word was used at the beginning of the 20th century to denote not only night-watchmen, but policemen in general.

Whether the word *ʿassās* is indicated or not, the use of guards at night, particularly in the central market, at warehouses and on the ramparts, was the general practice in North African towns up to the advent of the French. There is evidence of its use in Algiers (R. P. Dan, *Histoire de Barbare et de ses corsaires*, Paris 1637, 102), where the *mizwār* [*q.v.*] and his agents patrolled the main streets at night, and in Fez (Leo Africanus, *Description de l'Afrique*, ed. Épaulard, Paris 1956, i, 206), where "four police officers, not more", went the rounds from midnight until 2 a.m., and where the central market and warehouses were guarded by Berber porters or *zarzāya* (R. Le Tourneau, *Fès avant le Protectorat*, Casablanca-Paris 1949, 196), while the police of the ward commanders (*ʿassāsa*) kept watch on the ramparts (*ibid.*, 253). At Wazzān, the head of the family of the *Shorfa* of the town paid each night 58 guards who kept watch over the city (Budget Meakin, *The land of the Moors*, London 1901, 325), while at Safi, the Moroccan army took part in guarding the city by night (*ibid.*, 200).

In Spain, the term *ʿassās* does not appear to have been used. E. Lévi-Provençal (*Xe siècle*, 253), mentions the use of the word *darrāb* to denote night-watchmen; the person responsible for nocturnal security was sometimes known as *ṣāḥib al-layl*, which is apparently the equivalent of the term: *ṣāḥib al-shurṭa* (E. Lévi-Provençal, *Hist. Esp. Mus.*, iii, 155, following al-Maḳḳarī, *Analectes*, i, 134).

(R. LE TOURNEAU)

AṢFAR (A), yellow: also, in distinction from black, simply light-coloured. Some Arab philologists and exegetes indeed claim for *aṣfar* also the meaning "black"; see the discussions thereon in the *Khizānat al-Adab*, ii, 465. The Arabs called the Greeks *Banu 'l-Aṣfar* (fem. *Banāt al-A.*: *Usd al-Ghāba*, i, 274, ab

infra) according to Ṭabarī (ed. de Goeje, i, 357, $_{11}$; 354, $_{15}$) signifying "Sons of the Red One" (Esau). In the Ḥadīth mention is made of the contest of the Arabs with the Banu 'l-Aṣfar and of the conquest of their capital Constantinople (*Musnad Aḥmad*, ii, 174). *Mulūk Bani 'l-Aṣfar* (*Aghānī*, 1st ed., vi, 95, $_{18}$) = the Christian princes, especially those of the Rūm (ib. 98, $_{7}$ ab infra; cf. Abū Tammām, Dīwān, ed. Beirut. 18 ult. in a poem to al-Muʿtaṣim after the battle at ʿAmmurīya). Later this designation was applied to Europeans in general, especially in Spain. *Ta'rikh al-Ṣufr* (Spanish Era) can thus be best explained; other views in *ZDMG*, xxxiii, 626, 637. Many genealogists have explained Aṣfar as the name of the grandson of Esau (Σωφάρ in the Septuagint, Gen. 36, $_{10}$) and father of Rūmīl (Re'ū'ēl, Gen. 36, $_{11}$), ancestor of the Rūm. According to the explanation of De Sacy (*Not. et Extr.*, ix, 437; *Journ. As.*, 3. Serie, Pt. i, 94), which Franz Erdmann accepts (*ZDMG*, ii, 237-241), the designation Banu 'l-Aṣfar was a literal translation originally referring to the Flavian dynasty, then became extended beyond it to the western nations. From his travels among the Nuṣayrīs [*q.v.*] H. Lammens relates that they designate the Emperor of Russia *Malik al-Aṣfar* (*Au pays des Nosairis* in *Rev. de l'Or. chrétien*, Paris, 1900, 42 of the separate edition).

ASFĀR B. SHĪRAWAYHĪ, (Aspar the son of Shēroē), a Daylamite *condottiere*, to be more exact a Gīlite, who played an important rôle in the civil wars which followed the death in 304/917 of the ʿAlid Ḥasan al-Uṭrush [*q.v.*], the master of Ṭabaristān, and put an end to the domination of the ʿAlids in this region. He made his appearance with another Daylamite *condottiere*, Mākān b. Kākūy (Ar. another Daylamite brigand, Mākān b. Kākūy (Ar. Kākī), in 311/923, in the struggles which brought al-Uṭrush's son-in-law and successor, Ḥasan b. al-Ḳāsim, surnamed *al-dāʿī al-ṣaghīr*, "the little missionary", into conflict with some of al-Uṭrush's sons, Abu 'l-Ḥusayn and Abu 'l-Ḳāsim. He revolted against Mākān or was dismissed from his army by the latter for his execrable conduct, and entered the service of the Sāmānid prefect of Naysābūr. After the death of Abu 'l-Ḳāsim in 312/925, Mākān proclaimed one of the latter's sons, Ismāʿīl, in opposition to one of his nephews Abū ʿAlī, whom he had imprisoned in Djurdjān; Abū ʿAlī succeeded in escaping, killing his custodian, Mākān's brother, and appealed to Asfār (315/927-8). Asfār came to Djurdjān and with ʿAlī b. Khurshīd, another Daylamite, the leader of Abū ʿAlī's army, defeated Mākān and expelled him from Ṭabaristān. After Abū ʿAlī's death in the same year, Mākān recovered Ṭabaristān and Asfār returned to Djurdjān, where he was appointed governor by the Sāmānid amīr Nasr. Then with the help of the Gīlite Mardāwīdj b. Ziyār, he again took possession of Ṭabaristān. Mākān had brought the *Dāʿī* Ḥasan back to power and they then tried to take Ṭabaristān from Asfār, but were routed and the *Dāʿī* was killed in the battle by Mardāwīdj. In this way the ʿAlid dominion in Ṭabaristān came to an end, for Asfār seized the other ʿAlids and sent them to the Sāmānid at Bukhārā (316/928-9).

Asfār, now master of Ṭabaristān, extended his power over Djurdjān, over Rayy (from which he expelled Mākān), over Ḳazwīn and the other towns of the Djabal. However he lefts Āmul to Mākān on condition that he did not seek to dominate the rest of Ṭabaristān. He proclaimed the sovereignty of the Sāmānid. He removed his family and treasures to Alamūt (Ibn al-Athīr: Ḳalʿat al-Mawt), the famous future fortress of the Ismāʿīlīs to the North of Ḳazwīn, which he took by a ruse. Within a short time, he conducted himself as an independent prince, adopted the external marks of sovereignty at Rayy (golden throne and crown) and defied the Sāmānid and the Caliph. At this point the Caliph al-Muḳtadir sent an army against him, under the command of his maternal uncle Hārūn b. Gharīb, which Asfār completely routed near Ḳazwīn. However, Asfār found himself the object of the hostility of both Mākān, who had not renounced his claims to Ṭabaristān and Djurdjān, and the Sāmānid, who marched against him and reached Naysābūr. Asfār's minister persuaded his master to make peace with the Sāmānid, paying him tribute, and recognising his suzerainty. In this manner Asfār avoided war and took advantage of the situation to further extend his authority by deceit and fraud. He became increasingly tyrannical, took the most fearful revenge on the people of Ḳazwīn for having helped Hārūn b. Gharīb, and, in order to pay the tribute to the Sāmānid, collected a poll-tax of one dīnār per head on all the inhabitants of his possessions and even on foreign merchants in the country, in fact the *djizya* (the word occurs in al-Masʿūdī).

His tyranny caused his lieutenant Mardāwīdj to rebel against him; the latter made an alliance with the prince of Shamīrān in Ṭārum, Sallār, and with Mākān, and wons over a large part of Asfār's troops. After fleeing to Ray, where he was only able to collect a small amount of money, Asfār wanted to set out for Khurāsān and reached Bayhaḳ; then he turned back towards Ray, his purpose being to reach Alamūt so as to regain possession of his treasures there, raise new troops and take up the struggle again. But on the way, he was overtaken by Mardāwīdj, who cut his throat (there are several versions of this occurrence). The chronology of events between 316 and 319 is not well established: Ibn al-Athīr gives them under 316 and Ibn Isfandiyār under 319. The latter is the most likely date for Asfār's death. It is with Asfār that the domination of the Daylamites in North-West Iran really begins, continuing with Mākān and Mardāwīdj, and then the Buwayhids. According to al-Masʿūdī, who stresses Asfār's behaviour at Ḳazwīn (the *mu'adhdhin* thrown from the top of the minaret, the suspension of the prayers, the ruined mosques), he was not a Muslim.

(M. Canard)

AṢFĪ, Asafī, (Fr. Safi, Sp. Safí, Port. Çafim or preferably Safim), town and port on the Atlantic coast of Morocco, a few kilometers to the south of Cap Cantin; about 25,000 inhabitants in 1936, and about 70,000 in 1953, of whom, in round figures, 62,000 were Muslims, 3,500 Jews and 4,000 Europeans.

Safi does not appear to date from any very considerable antiquity. Al-Bakrī (5th/11th century) mentions it, without treating it as a place of any great importance. Al-Idrīsī in the following century considers it to be a relatively busy port, though its roadstead was not very safe. According to the same geographer, this was the point where the flotilla of the "Adventurers", who set out to explore the Atlantic Ocean, made landfall on its return (with a popular etymology of the toponymic; cf. E. Lévi-Provençal, *Pén. ibér.*, 24). In the 7th/13th century there was a *ribāṭ* there. The history of the town is chiefly known since the intervention of the Portuguese, who accepted its submission just prior to the death of King Alfonso V (1438-1481) and who occupied it in the first months of 1508. They built a great enclosure, which contained a castle called "Castle of the Sea" by the sea-shore, and adapted the old *ḳaṣba* which they turned into their citadel (now Kechla). Almost the whole of these fortifications still survive. Safi was the main Portuguese stronghold in Southern Morocco. The Portuguese made it the centre of the manufacture of the rugs called *hambels* (Ar. *ḥanbil*), which were one of the basic articles of their trade with the rest of the Barbary States, with the Western Sahara (through their trading post at Arguin) and with Negro Africa (through their trading post at Mina on the Gulf of Guinea). Enterprising and bold captains (governors), the most famous of whom was Nuno Fernandes de Ataide, working through native notables, especially through one man who seems to have been a great chief, Yaḥyā b. Taʿfūft, gave Safi a vast military and political sphere of influence which was expressed by at least two expeditions against the town of Marrakesh. But this brillant period was of short duration: the death of Nuno Fernandes de Ataide, killed in a fight in 1516, then that of Yaḥyā, ambushed and killed in 1518, weakened the Portuguese and forced them to curtail their activity. In 1534 the Saʿdī Sharīf of Marrakesh subjected the town to a close and dangerous siege. After the fall of Santa Cruz do Cabo de Gué in March 1541 (see AGADIR), which jeopardised the whole Portuguese position in Southern Morocco, King John III (1521-1557) decided to concentrate his forces at Mazagan and to evacuate Safi and Azemmūr: this operation took place towards the end of October 1541 (the famous João de Castro's participation in this operation is a legend).

Safi became the main port of the Saʿdī Sharīfs, owing to its nearness to Marrakesh, the residence of the Sulṭāns, and played a considerable rôle until the accession of the ʿAlawis; it was one of the centres of Christian trading. When the ʿAlawī Sultans transferred their residence to the North (Fez and Meknes), the activity of Safi declined to the advantage of Rabat; yet European merchants were still numerous there at the end of the 18th century. In the 19th century the town's decline became increasingly evident. The establishment of the French Protectorate gave Safi a new lease of life; it is today a busy port, exporting the agricultural produce of the ʿAbda region and the Louis-Gentil phosphates. Recently the number of factories for producing salted goods has been increased. The name of one of the two quarters of the old *ribāṭ* has been preserved, whilst the other is absorbed in the old Portuguese walls.

From 1487 (?) to 1542, Safi was the seat of a bishopric, held by Portuguese prelates, the best known of whom was D. João Sutil (1512-36); the remains of a Christian church, which was probably the Cathedral, are still to be seen.

ASFIZĀR [see SABZAWĀR].

AL-AʿSHĀ, "the night-blind", is the surname of a number of early Arab poets (17 in all; see al-Āmidī, *al-Muʾtalif*, 12 ff.; *Aghānī*, index; *L.A.*, s.v.); each of them is connected with a tribe (Aʿshā Banī Fulān) and, apart from the most celebrated of their number, al-Aʿshā of the Bakr (or the Ḳays) [*q.v.*] and al-Aʿshā of the Hamdān [*q.v.*], the following are worthy of note: al-Aʿshā of the Bāhila (ʿĀmir b. al-Ḥārith b. Riyāḥ) who is included among the *aṣḥāb al-marāthī* by Ibn Sallām, *Ṭabaḳāt*, ed. Shākir, 169, 175 (with refs.); see also al-Buḥturī, *Ḥamāsa*, index; Abu Zayd al-Ḳurashī, *Djamhara*, 135; al-Djāḥiz, *Ḥayawān*, i, 387; Ibn al-Shadjarī, *Mukhtārāt*, Cairo 1306, 9-12; al-Aʿshā of the Banū Māzin (ʿAbd Allāh b. al-Aʿwar), who is reckoned among the Companions of the Prophet; see Ibn Ḥadjar, *Iṣāba*, no. 220. Al-Aʿsha of the Banū Nahshal = al-Aswad b. Yaʿfur [*q.v.*].—al-Aʿsha of the Banū Rabīʿa (ʿAbd Allāh b. Khāridja), a poet of Ḳūfa of the 1st/7th century; see *Aghānī*, xvi, 155-7; C.A. Nallino, *Letteratura*, index; Brockelmann, S I, 95.—al-Aʿshā of the Banū Shaybān, see al-Buḥturi, *Ḥamāsa*, 156; Ibn Sallām, 377 and refs.—al-Aʿshā of the Banū Taghlib (d. 92/710), see *Aghānī*, x, 98-100; Ibn Ḳutayba, *ʿUyūn* iii, 263; Brockelmann S I, 95.—al-Aʿshā of the Banū Sulaym, a 2nd/8th century poet, see al-Djāḥiẓ, *Ḥayawān*, index.—al-Aʿshā of the Ṭarūd (Ṭirwad), Iyās b. ʿĀmir, see al-Baghdādī, *Khizāna*, i, 311-2.

(ED.)

AL-AʿSHĀ, MAYMŪN B. ḲAYS. Prominent ancient Arab poet of the tribe of Ḳays b. Thaʿlaba of the Bakr b. Wāʾil [*q.v.*]. Born before 570 in Durnā, a place in the Manfūḥa oasis (south of Riyāḍ), died in the same place after 625. As his cognomen indicates, he suffered from an eye disease, and went completely blind whilst still in the prime of life. He set out in search of wealth in his youth. For years he travelled, probably as a merchant, and visited Upper and Lower Mesopotamia, Syria, southern Arabia, and Abyssinia in this way. After he became blind, he lived by his art, i.e. by writing panegyrics; yet he still travelled: to the governor of Ḥīra, Iyās b. Ḳabīsa (+ 611), to Ḥaḍramawt to see Ḳays b. Maʿdīkariba (the father of Ashʿath), to Hawdha b. ʿAlī, prince of Djauw a village in Yamāma. He had already tried his luck as a panegyrist in earlier days. But poem No. 1, celebrating the triple victory of Prince Aswad of Ḥīra (the brother of King Nuʿmān), does not appear to have been a success. The poet was

deeply involved in politics. After the fall of King Nuʿmān (in 501 or 502), the Bakr had begun their raids into the cultivated land of ʿIrāḳ, along the Euphrates border where Aʿshā resided—presumably with the powerful Shaybān b. Thaʿlaba, who shared the area in which they migrated in summer with the nomad Ḳays b. Thaʿlaba. He threatened to bring death and destruction upon the valley of the Euphrates in an insolent reply to Khusraw II, who had demanded hostages. With equal boldness he confronted Ḳays b. Masʿūd, the head of the Shaybān, when the latter—under the impression of the great losses he had suffered—went to the court (No. 34; 26). Thus the poet may be said to have helped to bring about the battle of Dhū Ḳār (605). If the stray and corrupted verses 5, 32-50 do indeed refer to Iyās b. Ḳabīṣa, then he was also active in that change which soon brought the victors of Dhū Ḳār under Persian influence again. In his home country, he interceded in favour of the rightful prince, Hawdha, to whom he was indebted, and ridiculed the usurper al-Ḥārith b. Waʿla (7, 4-6; 30). Meanwhile he had left the Shaybān in favour of the Ḳays b. Thaʿlaba, because he considered that the Shaybān had violated the honour of his tribe (6; 9). He was therefore deeply hurt, when (a few years later) he was accused in his own homeland and lost the case. Actually, he had been quite ready to reach an amicable solution until his opponent opposed him with a poetaster by name of Djihinnām. The two met at a fair near Mecca. A mob—stirred up by Djihinnām—closed in on him with whips and spear-staffs, but was then dumbfounded by his verses, in which Aʿshā allowed Misḥal—his demonic *alter ego*—to appear for the first time (14; 38; 15). He had once previously had occasion to save himself from great danger by means of a hastily improvised poem (on Samawʾal [*q.v.*]). He subsequently, with or without their consent, interfered in the quarrel between ʿĀmir b. al-Ṭufayl [*q.v.*] and ʿAlḳama b. ʿUlātha (18; 19). He also defended ʿUyayna and Khāridja of the Fazāra (Ghaṭafān [*q.v.*]) against Zabbān b. Sayyār, a well known chief of the same tribe (20, 27-37): *Oriens* 7, 302. This probably took place in the beginning of the twenties. As can be seen from 1, 67; 3, 32. 54; 5, 62-64; 13, 69; 34, 13 al-Aʿshā was a Christian.

The poet was educated at Ḥīra, where the tradition of legend and poetry was broader than that of any other individual tribe. His style is rhetorical and at times (especially in 1), artificial. Connected with this is his preference for sound-effects and for sonorous (Persian) foreign words, as well as for effective endings. He occasionally treats the traditional themes of the *ḳaṣīda* with a high-handed indifference. He likes many types of allusion. Thus, for instance, *Ḥurayrata waddiʿ*, 9, 1, prepares one for the recurrence of the theme, only with the motto inverted, in No. 6. The praise of Mecca and his panegyric on the leaders of the Ghaṭafān (20, 27-37), both of which are otherwise apparently meaningless, indicate the whereabouts of Aʿshā, who had good reason on both occasions to avoid his homeland. The first passage discloses furthermore the place where he clashed with Djihinnām, and the second shows Aʿshā's intention to proceed against Zabbān, who is left out of the panegyric on leaders of the Ghaṭafān.

The immediate impact of the poet seems to have been confined to his anonymous (Christian?) pupils and forgers, who counted on gaining the patronage of Ashʿath. Their works fill almost the whole of the second part of his *Diwān* (No. 52-82), although the first part, too, contains many a verse which is not authentic.

Bibliography: *The Diwan of al-Aʿshā*, ed. R. Geyer (Gibb Mem. N. S. VI), London 1928; GAL, G 37; S I, 65-67; Muḥ. b. Sallām, *Ṭabaḳāt*, 18 f.; Caskel, *Oriens* 7, 302. (W. Caskel)

AʿSHĀ HAMDĀN, properly ʿAbd al-Raḥmān b. ʿAbd Allāh, Arab poet, who lived in Kūfa in the second half of the 1th/7th century. In his early career a traditionist and Ḳurʾān reader he was married to a sister of the theologian al-Shaʿbī, who in turn had married a sister of al-Aʿshā. Later he concentrated on poetry, acting on occasion as the spokesman of the Yamanite faction. He was active in the wars that marked the governorship of al-Ḥadjdjādj and his health appears to have suffered during an expedition into Mukrān. The role which he played under ʿAbd al-Raḥmān b. al-Ashʿath is best known. He took part in his campaign against the Turks and was taken captive but escaped with the aid of a Turkish woman whose passions were enflamed for him. When Ibn al-Ashʿath turned against al-Ḥadjdjādj the poet's sharp tongue aided him with satires. The decisive battle at Dayr al-Djamādjim resulted unfortunately; Ibn al-Ashʿath took to flight, and al-Aʿshā was led prisoner before al-Ḥadjdjādj, who immediately recalled to him some of his malicious songs. His extemporaneous flatteries availed him no longer: al-Ḥadjdjādj's sentence of death was carried out on the spot (83/702). The poems of Aʿshā Hamdān which have been preserved to us are reflexes of his adventures and political sentiments. The level of his poetry which remained curiously unaffected by the modernism of the Medinese school is considerable, both as regards his partisan verse and his treatment of the traditional motifs of erotic description. The vigour of his diction lends a certain attraction even to his handling of conventional topics.

Bibliography: *Aghānī*[1], V, 146 ff., 162 ff.; Masʿūdī, *Murūdj*, V, 355 ff.; Ṭabarī, index; *The Diwān of al-Aʿshà*, ed. R. Geyer, London: 1928, 311-345 (50 pieces); Brockelmann, I, 62, S. I, 95; Rescher, *Abriss*, i, 149-50; Guido Edler von Goutta, *Der Aġaniartikel über ʿAʾšà von Hamdān*, Diss. Freiburg i. B., 1912, contains translations of practically all Aʿshā's preserved verse.

(A. J. Wensinck-[G. E. von Grunebaum])

ASHʿAB, nicknamed "the Greedy", a Medinese comedian who moved in the circles of the grandchildren of the first four caliphs and flourished in his profession in the early years of the 8th century. He is said to have survived until 154/771. The historical information about him is rather plentiful; though contaminated by much legendary material, it permits us to get a glimpse at the life of a professional entertainer in the Umayyad period. The jokes and stories connected with his name concern politics, religion, and middle-class life. The middle-class jokes come last in the chronological development of the Ashʿab legend; but then, ever since early ʿAbbāsid times, they have enjoyed the greatest popularity in Islam. Among the famous jokes under Ashʿab's name, there is a brilliant parody of the foibles of *ḥadīth* transmitters: Ashʿab says that he heard ʿIkrima (or some other well-known transmitter) report that the Prophet had said that two qualities characterised the true believer. Asked which they were, Ashʿab replied: "ʿIkrima had forgotten one, and I have forgotten the other." Even more famous is the story of greedy Ashʿab who tries to get rid of annoying children by telling them that free gifts

are being distributed in some place, and then runs after them because he thinks his story might be true.

(F. ROSENTHAL)

AṢḤĀB [see ṢAḤĀBA].

AṢḤĀB AL-ḤADĪTH [see AHL AL-ḤADĪTH].

AṢḤĀB AL-KAHF, "those of the cave". This is the name given in the Ḳur'ān, and further in Arabic literature, to the youths who in the Christian Occident are usually called the "Seven Sleepers of Ephesus". According to a legend, in the time of the Christian persecution under the Emperor Decius (249-51), seven Christian youths fled into a cave near Ephesus and there sank into a miraculous sleep for centuries, awoke under the Christian Emperor Theodosius, were discovered and then went to sleep for ever. Their resting place and grave was considered, at any rate since the beginning of the 6th century A.D., as a place of worship. The story of the Seven Sleepers of Ephesus is found in various Oriental and Occidental literatures, particularly in Greek and Syriac; the Greek version would appear to be the earliest one (texts edited by Land, I. Guidi, Bedjan, Allgeier). Since Muḥammad the legend is handed down in Arabic as well.

Muḥammad has got to know the legend, like so many other stories of Jewish and Christian origin, has assimilated it and put it to edifying use in the Ḳur'ān (xviii, 9-26; hence the whole *sūra* is called *sūrat al-kahf*). The main outlines are clearly recognisable: The youths and their flight into the cave, so as to be able to remain true to the belief in the one God; their miraculous sleep, which lasts 309 years (v. 25), but which appears to them as at the most one day (v. 19); the circumstances of their discovery (by means of the ancient coinage, with which one of them attempts to buy provisions in the city). But some details remain doubtful. Muḥammad himself points out that the number of the youths is variously given as three, five or seven, and that only God really has knowledge of the length of their sleep. It is strange that the dog who "stretches out his paws on the threshold" (v. 18), is taken into consideration when the number of the youths is given (v. 22); thus he also appears to be considered as holy. Not quite clear is the hint at the building of a place of worship over the resting place of the youths (v. 21). Particularly disputed is the expression *al-raḳīm* (v. 9: "those of the cave and (of) *al-raḳīm*"; N.B. the definite article).

The Arabic commentators and historians have attempted to overcome the difficulties in the interpretation of the Ḳur'ānic text and to fill in gaps, making use of much material from the Christian-Oriental tradition about the Seven Sleepers. Consequently their accounts are also of significance for the history of the transmission of the legend in pre-Islamic times. J. Koch and M. Huber have been at great pains to make use of the various reports for the history of legend and literature. Here a certain amount remains to be done. Huber's monograph *Die Wanderlegende von den Siebenschläfern* (1910), and his translation of Arabic texts in *Romanische Forschungen*, xxvi (1909) are however still to-day useful as collections of material.

The expression *al-raḳīm* is variously interpreted by the commentators. As the name of the dog (to whom the name *Ḳiṭmīr* is otherwise given); as a place name; and as the name for an inscription, which is supposed to have been put up in that place (cf. Horovitz, *Koranische Untersuchungen*, 95). Torrey suspected here a misreading for Decius, such an interpretation can however not be maintained (cf. Horovitz, loc. cit.).

Once the legend had taken root with the Muslims it was connected with various places within the Islamic world, so with a cave in Transjordan, in Cappadocia, in East Turkistan and in Spain. This does not however alter the fact that originally it belongs to Ephesus.

In the course of time the story of "the people of the cave" has drifted into the realm of the magical. In this way can be explained the custom of hanging up leaves on which the names of the sleepers are inscribed, for the sake of *baraka* or for averting evil. The name of the dog, *Ḳiṭmīr*, plays a special part. Among the Turks of East Turkistan, as in Indonesia it was still customary in recent times to inscribe letters which it was desired to protect from loss, with the word *ḳiṭmīr* instead of "registered".

In a treatise somewhat overloaded with symbolistic details, L. Massignon has attempted recently to do justice to the story of the Aṣḥāb al-Kahf, as it were from the inside, that is, in the sense in which it has become meaningful for Muslim believers.

(R. PARET)

AṢḤĀB AL-RASS, "the people of the ditch" or "of the well", are twice mentioned in the Ḳur'ān (xxv, 38; L, 12), along with ʿĀd, T͟hamūd and other unbelievers. The commentators know nothing for certain about them, and so give widely divergent explanations and all manner of fantastic accounts. Some take al-Rass to be a geographical name (cf. Yāḳūt, s.v.); some hold that these people, a remnant of T͟hamūd, cast (rassa) their prophet Ḥanẓala into a well (*rass*) and were consequently exterminated. It is also related that the mountain of the bird ʿAnḳā' [*q.v.*] was situated in their region. Al-Ṭabarī mentions the possibility of their being identical with the Aṣḥāb al-Uk͟hdūd [*q.v.*]; otherwise he does not know anything about them; just as little do we.

Bibliography: The Commentaries on the verses of the Ḳur'ān in question, esp. Ṭabarī, *Tafsīr*, Cairo 1321, xix, 9 f.; Damīrī, *Ḥayāt al-Ḥayawān*, s.v. ʿAnḳā'; T͟haʿlabī, *Ḳiṣaṣ al-Anbiyā'*, Cairo 1292, 129-33; J. Horovitz, *Koranische Untersuchungen*, 1926, 94 f. (A. J. WENSINCK)

AṢḤĀB AL-RA'Y, also AHL AL-RA'Y, the partisans of personal opinion, a term of deprecation applied by the *ahl al-ḥadīt͟h* [*q.v.*] to their opponents among the specialists in religious law. *Ra'y* [*q.v.*] originally meant "sound opinion", and was used of the element of human reasoning, whether strictly systematic [see ḲIYĀS] or more personal and arbitrary [see ISTIḤSĀN], which the early specialists used in order to arrive at decisions on points of religious law. The *ahl al-ḥadīt͟h*, however, who rose in opposition to the ancient schools of religious law, regarded this as illegitimate; in particular they thought it wrong to reject, as the followers of the ancient schools used to do, traditions which were reported as coming from the Prophet, on account of *ra'y*. As a consequence of the success of this point of view in the theory of religious law [see UṢŪL], each group was apt to qualify those who on any particular question gave to personal opinion a wider scope than they themselves did, as *aṣḥāb al-ra'y*, and it became impossible for those who did, in fact, use *ra'y*, to recognise this and to justify it from Islamic premises. There never was a school of thought in religious law that called itself, or consented to be called, *aṣḥāb al-ra'y*, and the distinction between *ahl al-ḥadīt͟h* and *aṣḥāb al-ra'y* is to a great extent artificial. From the point of view of the *ahl al-ḥadīt͟h*, both Abū Ḥanīfa and his school and Mālik and his school belong to the *aṣḥāb al-ra'y*, and they were indeed so called by al-S͟hāfiʿī, Ibn Ḳutayba, and others. For adventitious reasons, Abū Ḥanīfa and his school became the principal objects of the attacks of the *ahl al-ḥadīt͟h*, and this gave rise to the erroneous opinion that they were the *aṣḥāb al-ra'y* par excellence. Warnings against *ra'y* and its partisans, sometimes with explicit mention of Abū Ḥanīfa and his followers, were even put into the mouth of the Prophet, his Companions and their Successors, and thereby became themselves traditions.

AṢḤĀB AL-UK͟HDŪD, "those of the trench", an expression at the beginning of Ḳur'ān, LXXXV, which is difficult to understand. The verses 4-7 run: "Slain be those of the trench, of the fire fed with fuel, (lo) when they are sitting by it (i.e. the fire), while they are witnesses of what they do (were doing) with the believers!" The ancient Ḳur'ān commentators and historians refer the passage inter alia to the persecution of the Christians in Nad͟jrān under the Jewish king of South Arabia D͟hū Nuwās [*q.v.*] which—as far as is historically established—is to be placed in the year 523. It is alleged that the Christian martyrs were burnt alive in a trench (*uk͟hdūd*) which had been specially dug for the purpose. Occasionally the passage in the Ḳur'ān is connected with a story which goes back ultimately to Daniel iii ("The men in the firing-oven").

In fact however the passage is to be understood in an eschatological sense, as Grimme has recognised and Horovitz more closely explained. We are dealing with a scene of judgement typical of the Ḳu'rān. The *aṣḥāb al-uk͟hdūd* are unbelievers, who will go into the hell fire, as a punishment for what they did to the believers (verse 7). The objections, which K. Ahrens (*ZDMG*, 1930, 149) and R. Blachère (*Le Coran*, i, 120) have raised against this interpretation, are not decisive.

There remains the difficulty of explaining the expression *al-uk͟hdūd*. A. Moberg thinks—though with strong reservations—of an influence of the Hebrew Gē Hinnōm (of Hinnom) in the sense of Hell (*Legenden*, 21; cf. Speyer, 424). According to R. Bell, "it may be that in 'the fellows of the pit' there is a sub-reference to the Quraysh slain at Badr, whose bodies were thrown into a well" (*The Qur'ān*, ii, 646). Both interpretations are questionable.

ASHĀM (Turkish ESHĀM), plural of Arabic SAHM (Turkish SEHIM), share. In Turkey the word was used to designate certain treasury issues, variously described as bonds, assignats, and annuities. The *eshām* are called annuities by Hammer (*Leibrenten*) and also in the Ottoman budget of 1862-3, where they are mentioned as *rentes viagères*. The description is not strictly accurate, as although the *eshām* reverted to the state on the death of the holder, they could be sold, the state claiming a duty

of one year's income on each such transfer. According to Muṣṭafā Nūrī Pasha, the *eshām* were introduced in the early years of the reign of Muṣṭafā III, when assignats on the proceeds of the customs of Istanbul and other revenues were issued to creditors of the state and other applicants, with an annual income of 5%. ʿAbd al-Raḥmān Wefīḳ remarks that most of the proceeds were spent in the war with Russia beginning 1182/1768. The handling of the *eshām*, he says, was at first entrusted to a *muḳāṭaʿadji*, and later transferred to a *muḥāsebe*. The records of the *Eshām Muḥāsebesi ḳalemi* in the Istanbul archives begin in the year 1189/1775, and end in 1281/1864. According to Djewdet the *eshām* were introduced by the finance official Peykī Ḥasan Efendi, who first became bashdefterdār in 1192/1778, after having previously been defter-emīni. The issue of *eshām* on provincial revenues is reported in 1198-1200/1783-5. The practice of issuing *eshām* was continued by later Sultans, and Maḥmūd II used them to compensate the *tīmār*-holders dispossessed by the land reform of 1831.

The first regular bond issue in the European style dates from 1256/1840, when bearer treasury bonds were floated, carrying a high rate of interest. These bonds, which circulated like banknotes, were called *Ḳāʾime-i Eshām* and *Ḳāʾime-i Muʿtebere-i Naḳdiyye* (see ḲĀʾIMA).

In 1864, in the course of the *Tanẓīmāt* [*q.v.*] reforms, the old *Eshām Muḥāsebesi Ḳalemi* was abolished. Meanwhile, however, in 1274/1857, a new internal loan was floated under the name of *Eshām-i Mümtāze*, and was followed by a series of others—*Eshām-i Djedīde*, *Eshām-i ʿAzīziyye*, *Eshām-i ʿĀdiyye* etc. These mid-19th century loans are sometimes referred to collectively as *Eshām-i ʿOthmāniyye*.

(B. LEWIS)

AʿSHĀR [see ʿUSHR].

AL-ʿASHARA AL-MUBASHSHARA, the ten, to whom Paradise was promised. The term does not occur in canonical *ḥadīth*, to which however the conception goes back. The traditions in question usually have the form: "Ten will be in Paradise", whereupon the names are enumerated. There are differences in the lists. Those who appear in the various forms extant are: Abū Bakr, ʿUmar, ʿUthmān, ʿAlī, Ṭalḥa, Zubayr, ʿAbd al-Raḥmān b. ʿAwf, Saʿd b. Abī Waḳḳāṣ, Saʿīd b. Zayd. In some traditions Muḥammad himself is put before these nine (Abū Dāwūd, *Sunna*, bāb 8; Aḥmad b. Ḥanbal, i, 187, 188 *bis*). In others Muḥammad is absent and the tenth place is taken by Abū ʿUbayda b. al-Djarrāḥ (Tirmidhī, *Manāḳib*, bāb 25; Ibn Saʿd, iii/1, 279; Aḥmad b. Ḥanbal, i, 193). Conceptions of this kind owe their origin to the hierarchic tendencies that were prominent in the Muslim community, and that found expression even in the earliest creeds.

Bibliography: Wensinck, *Handbook*; Muḥibb al-Dīn al-Ṭabarī al-Makkī, *al-Riyāḍ al-Naḍira fī Manāḳib al-Aṣḥāb al-ʿAshara*, Cairo 1327. (A. J. WENSINCK)

AL-ASHʿARĪ, ABŪ BURDA, ʿĀMIR B. ABĪ MŪSĀ, according to the accepted opinion one of the first ḳāḍīs of Kūfa. Apart from the fact that he was a son of Abū Mūsā al-Ashʿarī [*q.v.*], little that can be considered authentic is known of his life and work. As a member of the Islamic aristocracy, it was only natural for him to be appointed as an official of the treasury (Ibn Saʿd); he also appears as one of the notables of Kūfa in 51/671, when he gave evidence against the followers of Ḥudjr b. ʿAdī [*q.v.*] (Ṭabarī, II, 131 f.; *Aghānī*, xvi, 7), and again in 76/695-6, when he did homage to the Khāridjī insurgent Shabīb b. Yazīd [*q.v.*] (Ṭabarī, II, 928). It is generally taken for granted that he was ḳāḍī of Kūfa, but even early sources give contradictory reports of the circumstances of his alleged appointment by al-Ḥadjdjādj (Mubarrad, *Kāmil*, 285, l. 20 f.; Wakīʿ, ii, 391 f.), of the persons of his predecessor (Shurayḥ, according to Ibn Saʿd, to the *K. al-Muḥabbar*, and to Wakīʿ, *loc. cit.*; ʿAbd al-Raḥmān b. Abī Laylā, according to Wakīʿ, ii, 407) and his successor (Saʿīd b. Djubayr, according to the *K. al-Muḥabbar*; Shaʿbī, according to Wakīʿ, ii, 392, 413; his brother Abū Bakr, according to Wakīʿ, ii, 412 f.), and of the length of his tenure of office (a very short time, according to Wakīʿ, ii, 392; three years, according to Wakīʿ, ii, 413; an unspecified time, between three and eight years, from 79/698-9 onwards, according to Ṭabarī, ii, 1039, 1191). The accounts that Shurayḥ should have recommended Abū Burda and Saʿīd b. Djubayr as his joint successors to al-Ḥadjdjādj (Wakīʿ, ii, 392), or that Muʿāwiya on his deathbed in 60/680 should have advised his son Yazīd to avail himself of Abū Burda's good counsels (Ibn Saʿd, iv/1, 83; Ṭabarī, ii, 209), are certainly apocryphal (cf. Lammens, *Moʿāwia Ier*, 139). Another anecdote (Wakīʿ, ii, 409 f.; Ibn ʿAbd Rabbih, *al-ʿIḳd al-Farīd*, Būlāḳ 1293, iii, 140) makes Abū Burda peevishly complain to Muʿāwiya of an attack by a poet. From Ibn Khallikān onwards, however, the person of Abū Burda is idealised. Abū Burda died in 103/721-2 or 104/722-3, at the age, it is stated, of more than 80 lunar years.

The traditional biography of Abū Burda reflects an absence of positive information, combined with the desire of fitting his name into the fictitious picture of the development of Islamic law and the administration of Islamic justice in the first century of the *hidjra* which came to prevail. He played no part in the formation of the doctrine of the school of Kūfa, and he does not belong to its authorities. The one report on a judgement of his, on the ownership of household chattels, that occurs in an early source (Wakīʿ, ii, 211), represents him as undecided among the secondary opinions held in the second century (cf. J. Schacht, *Origins*, 278 f.), and is therefore not authentic. In his time, the implications of the prohibition of *ribā* were only in the course of being worked out in ʿIrāḳ rather than in Medina; the anecdotes which report that Abū Burda, having been sent by his father to Medina for study, was warned by his teacher there against the laxness of the ʿIrāḳians in matters of *ribā*, must therefore be later, although they bear Baṣrian *isnād*s (on this phenomenon, see

Schacht, *Origins*, 130 f.). Abū Burda appeared as a transmitter of traditions because his name was used in "family *isnāds*", which were meant to authenticate sayings which his father was claimed to have related on the authority of the Prophet. The fact is attested already by Ibn Saʿd, but traditions themselves are quoted for the first time only by Wakīʿ; some express repugnance for accepting government office (Wakīʿ, i, 65 ff.; ii, 22), an attitude which became fashionable only under the ʿAbbāsids (cf. E. Tyan, *Organisation judiciaire*, i, 387, n. 2; N. J. Coulson, in *BSOAS*, xviii/2, 1956, 211 ff.); another (Wakīʿ, i, 100) aims at enhancing the reputation of Abū Burda's father, Abū Mūsā, to the detriment of that of Muʿādh b. Djabal (it seems to presuppose the well-known tradition about the instructions of the Prophet to Muʿādh, and could then be hardly earlier than the last third of the second century of the *hidjra*); there are, finally, the alleged instructions of the caliph ʿUmar to Abū Mūsā on the administration of justice, which appear for the first time in Wakīʿ (i, 70 ff.); these are certainly not earlier than the third century of the *hidjra* (cf. Tyan, i, 106 ff.). Abū Burda's reputation as a traditionist in his own right, with a respectable number of authorities from whom he was supposed to have heard traditions, had been established by the time of Abū Ḥātim al-Rāzī, and it continued to grow, together with the number of authorities from whom he was alleged to have transmitted, until Ibn Ḥajar could ascribe to Ibn Saʿd the statement that Abū Burda "was reliable and transmitted many traditions", although Ibn Saʿd said nothing of the sort.

A son of Abū Burda, Bilāl, became *ḳāḍī* in Baṣra, and authentic, contemporary information on him is ample (cf., e.g., Wakīʿ, ii, 21 ff.; Pellat, *Le milieu baṣrien*, 288 f.).

AL-ASHʿARĪ, ABU ʾL-ḤASAN, ʿAlī b. Ismāʿīl, theologian, and founder of the school of orthodox theology which bears his name. He is said to have been born in 260/873-4 at Baṣra, and was ninth in descent from the Companion Abū Mūsā al-Ashʿarī. Little is known of his life. He was one of the best pupils of al-Djubbāʾī, head of the Muʿtazila in Baṣra, and might have succeeded him, had he not left the Muʿtazila for the party of the orthodox traditionists (*ahl al-sunna*). This change or conversion is placed in 300/912-3. In later life he moved to Baghdād, and died there in 324/935-6.

The story of al-Ashʿarī's conversion is told with many variations of detail. Three times during the month of Ramaḍān he is said to have seen Muḥammad in a vision, and to have been commanded to adhere to true Tradition. He regarded this vision as authoritative, and, since the traditionists disapproved of rational argument (*kalām*), he gave up this also. In the third vision, however, he was told to adhere to true Tradition but not to abandon *kalām*. Whatever be the truth of this story, it is a succinct account of al-Ashʿarī's position. He abandoned the dogmatic theses of the Muʿtazila for those of opponents like Aḥmad b. Ḥanbal, whom he professed to follow; but he defended his new beliefs by the type of rational argument which the Muʿtazila employed.

The chief points on which he opposed the doctrines of the Muʿtazila were:

(1) He held that God had eternal attributes such as knowledge, sight, speech, and that it was by these that He was knowing, seeing, speaking, whereas the Muʿtazila said that God had no attributes distinct from His essence.

(2) The Muʿtazila said that Ḳurʾānic expressions, such as God's hand and face, must be interpreted to mean "grace", "essence" and so on. Al-Ashʿarī, whilst agreeing that nothing corporeal was meant, held that they were real attributes whose precise nature was unknown. He took God's sitting on the throne in a similar way.

(3) Against the view of the Muʿtazila that the Ḳurʾān was created, al-Ashʿarī maintained that it was God's speech, an eternal attribute, and therefore uncreated.

(4) In opposition to the view of the Muʿtazila that God could not literally be seen, since that would imply that He is corporeal and limited, al-Ashʿarī held that the vision of God in the world to come is a reality, though we cannot understand the manner of it.

(5) In contrast to the emphasis of the Muʿtazila on the reality of choice in human activity, al-Ashʿarī insisted on God's omnipotence; everything, good and evil, is willed by God, and He creates the acts of men by creating in men the power to do each act. (The doctrine of 'acquisition' or *kasb* [*q.v.*], which was in later times characteristic of the Ashʿariyya, is commonly attributed to al-Ashʿarī himself, but, though he was familiar with the concept, he does not appear to have held the doctrine himself; cf. *JRAS*, 1943, 246 f.).

(6) While the Muʿtazila with their doctrine of *al-manzila bayn al-manzilatayn* held that any Muslim guilty of a serious sin was neither believer nor unbeliever, al-Ashʿarī insisted that he remained a believer, but was liable to punishment in the Fire.

(7) Al-Ashʿarī maintained the reality of various eschatological features, the Basin, the Bridge, the Balance and intercession by Muḥammad, which were denied or rationally interpreted by the Muʿtazila.

Al-Ashʿarī was not the first to try to apply *kalām* or rational argument to the defence of orthodox doctrine; among those who had made similar attempts earlier was al-Ḥārith b. Asad al-Muḥāsibī. Al-Ashʿarī, however, seems to have been the first to do this in a way acceptable a large body of orthodox opinion. He had the advantage, too, of having an intimate and detailed knowledge of the views of the Muʿtazila (as is shown by his descriptive work, *Maḳālāt al-Islāmiyyīn*, Istanbul, 1929; cf. R. Strothmann, in *Islam*, xix, 193-242). His many followers came to be known as the Ashʿariyya [*q.v.*] or Ashāʿira, though they mostly deviated from him on some points.

To a European reader his argumentation differs little at first sight from that of the ultra-conservative followers of Aḥmad b. Ḥanbal, since many of his proofs depend on the interpretation of Ḳurʾān and Tradition (cf. A. J. Wensinck, *Muslim Creed*, Cambridge, 1932, 91). This, however, was because his opponents also, including even the Muʿtazila,

used proofs of this sort, and he was always arguing ***ad hominem***. Yet when opponents would admit a purely rational premiss, al-As͟hʿarī had no hesitation in using it to refute them. Once the permissibility of such arguments was established, at least for many theologians, it was possible for the As͟hʿariyya to develop this side of his method until in later centuries theology became thoroughly intellectualistic. This, however, was far removed from the temper of al-As͟hʿarī himself.

(W. MONTGOMERY WATT)

AL-AS͟HʿARĪ, ABŪ MŪSĀ, IBN ḲAYS, Companion of the Prophet and military leader. Bornp about 614 A.D., Abū Mūsā, a native of the Yemen, left South Arabia by sea with several of his brothers and members of his tribe (the As͟hʿar) and joined Muḥammad at K͟haybar at the time of the famous expedition against the Jews of that oasis (7/628) to swear allegiance to him (the information given in some sources [for example Ibn Ḥad͟jar, *Tahd͟hīb*, ii, 1265] according to which he was one of the emigrants who went to Abyssinia, is therefore most unlikely to be authentic; Ibn ʿAbd al-Barr, *Istiʿāb*, Ḥaydarābād 1318, 392, no. 1622; 678-79, no. 678). In 8/630 he took part in the battle of Ḥunayn (al-Ṭabarī, i, 1667); in 10/631-2 he was sent to the Yemen with Muʿād͟h b. D͟jabal to spread Islam there and was one of the lieutenants of Muḥammad and then of Abū Bakr in that region. ʿUmar appointed him governor of Baṣra when he recalled al-Mug͟hīra b. S͟huʿba [*q.v.*] from that post in 17/638 (al-Ṭabarī, i, 2529; see also 2388). At the request of the inhabitants of Kūfa, ʿUmar appointed him governor of that town in 22/642-3, but after retaining him in the office for a few months, until the reappointment of al-Mug͟hīra (al-Ṭabarī, i, 2678 f.), he sent him back to Baṣra.

As governor of Baṣra, Abū Mūsā organised and carried out the occupation of K͟hūzistān (17-21/638-42), of which he must be considered the conqueror (Caetani, *Annali*, 16 A.H., para. 261). The capital Sūḳ al-Ahwāz (or simply al-Ahwāz) fell into his hands as early as 17/638, but the campaign continued and offered many difficulties, for the numerous well fortified towns of the region had to be subdued one after the other, some of them having to be retaken after 21/642, the date of the fall of the second capital of K͟hūzistān, Tustar (= S͟hustar or S͟hus͟htar). Abū Mūsā also took part in the conquest of Mesopotamia (end of 18-20/639-41), uniting his forces with those of ʿIyāḍ b. G͟hanm, and in the campaign on the Iranian plateau, where he is mentioned as being present at the battle of Nihāwand; the occupation of several towns is ascribed to him (al-Dīnawar, Ḳumm, Ḳās͟hān, etc.).

In 23/643-4, in a bloody but indecisive battle, he defeated numerous Kurdish tribes which had gathered with hostile intentions at Bayrūd͟h (in the province of al-Ahwāz) and had attracted many of the inhabitants of the territory to their ranks; he laid siege to the town, where the survivors of the insurgents had found shelter, and took it after having subdued the rest of the country. It was on account of the distribution of the booty taken on this occasion that an accusation was made to the Caliph against him, to whom he had to justify his conduct (al-Ṭabarī, i, 2708-13). After this success, he advanced into Fārs (end of 23/644) and, in several expeditions, gave support to ʿUt͟hmān b. Abiʾ l-ʿĀṣ, who had begun the conquest of this province from Baḥrayn and ʿUmān (al-Balād͟hurī, *Futūḥ*, 387).

There is an episode showing that discontent against Abū Mūsā was already threatening in 26/646-7 (al-Ṭabarī, i, 2829, where a movement of insubordination amongst his troops is reported under the year 29, which in fact took place in 26: Caetani, *Annali*, 26 A.H. para. 38). But the most serious protest against the abuses committed by him was brought to Medina by a delegation of Baṣrans in 29/649-50 (al-Ṭabarī, i, 2830), whereupon the Caliph ʿUt͟hmān decided to replace him at Baṣra by ʿAbd Allāh b. ʿĀmir. However Abū Mūsā had won the respect of the inhabitants of Kūfa to such an extent, that they demanded his reappointment, when they drove out the governor Saʿīd b. al-ʿĀṣ in 34/654-5, (al-Ṭabarī, i, 2930; *al-Ag͟hānī*[1], xi, 31), and he was governor of the town at the time of ʿUt͟hmān's assassination. Upon the election of ʿAlī, Abū Mūsā took the oath of allegiance to him in the name of the Kūfans (al-Ṭabarī, i, 3089; al-Masʿūdī, *Murūd͟j*, 296 etc.), retaining his office, when the other governors of ʿUt͟hmān were dismissed (al-Yaʿḳūbī, ii, 208); but when war broke out between ʿAlī and ʿĀʾis͟ha, Ṭalḥa and al-Zubayr, he called on his subjects to remain neutral (al-Ṭabarī, i, 3139; al-Dīnawarī, 153 ff., etc.), and, inspite of pressure, did not relinquish this attitude; as a result the partisans of ʿAlī expelled him from the town at the first opportunity (al-Ṭabarī, i, 3145-9, 3152-4) and the Caliph wrote him a letter of dismissal couched in the severest terms (al-Ṭabarī, i, 3173; al-Masʿūdī, *Murūd͟j*, iv, 308; cf. al-Yaʿḳūbī, ii, 220); yet a few months later he granted him *amān* (Naṣr b. Muzāḥim al-Minḳarī, *Waḳʿat Ṣiffīn*, ed. ʿAbd al-Salām Muḥammad Hārūn, Cairo 1365, 572; al-Ṭabarī, i, 3333).

Abū Mūsā was one of the two arbitrators appointed at Ṣiffīn in 37/657 to settle the dispute between ʿAlī and Muʿāwiya and more exactly the arbitrator nominated to represent ʿAlī, whose supporters had obliged him to choose someone neutral, so certain were they that the decision would be in their favour (for the details of the arbitration, see ʿALĪ B. ABĪ ṬĀLIB). After the meeting at Ad͟hruḥ, Abū Mūsā withdrew to Mecca, but when Muʿāwiya sent Busr b. Abī Arṭāt to occupy the holy cities (40/660), he was afraid of his vengeance, for at Ad͟hruḥ he had opposed his election to the Caliphate, and according to some sources, he took to flight; Busr reassured him (see Caetani, *Annali*, 40 A.H., para. 8, note 3 for the different versions of this episode). After that Abū Mūsā took no further part in politics, as is shown by the uncertainty of the date of his death (41, 42, 50, 52, 53; 42 is the most probable date).

Abū Mūsā was very highly thought of for his recitation of the Ḳurʾān and the prayers, for he had a pleasant voice (Ibn Saʿd, *Ṭabaḳāt*, ii/2, 106), but above all his name continues to be connected with ḳurʾānic studies, for he established a *muṣḥaf* which locally outlived the composition of the vulgate of ʿUt͟hmān (see Ch. Pellat, *Milieu baṣrien*, 73 ff.).

Bibliography: All the chroniclers and historians of early Islam, and all the collections of biographies of early personalities speak of Abū Mūsā (the main ones have been indicated in the body of this article). Numerous quotations are to be found in Caetani, *Chronographia islamica*, 42 A.H., 479; idem: *Annali*, Indices and vols. vii-x, *passim*; Ibn Abi 'l-Ḥadīd, *S͟harḥ Nahd͟j al-Balāg͟ha*, Cairo 1329, iii, 287-9, 291, 293 f., iv, 199 f., 237 f. On the conquest of K͟hūzistān: *Wellhausen, J., Skizzen und Vorarbeiten*, vi, Berlin 1899, 94-113.

(L. VECCIA VAGLIERI)

AS͟HʿARIYYA, a theological school, the followers of Abu 'l-Ḥasan al-As͟hʿarī [*q.v.*], sometimes also called As͟hāʿira. (The history of the school has been little studied, and some of the statements in this article must be regarded as provisional).

External history. During the last two decades of his life al-As͟hʿarī attracted a number of disciples, and thus a school was founded. The doctrinal position of the new school was open to attack from several quarters. Apart from members of the Muʿtazila, certain groups of orthodox theologians attacked them. To the Ḥanbalīs [*q.v.*] their use of rational arguments was an objectionable innovation. On the other hand, to the Māturīdiyya [*q.v.*], who also were defending orthodoxy by rational methods, some of their positions seemed too conservative (cf. the criticisms made by an early member of that school in *S͟harḥ al-Fiḳh al-Akbar* ascribed to al-Māturīdī). Despite such opposition the As͟hʿariyya apparently became the dominant school in the Arabic-speaking parts of the ʿAbbāsid caliphate (and perhaps also in K͟hurāsān). In general they were in alliance with the legal school of al-S͟hāfiʿī (though al-As͟hʿarī's own school of religious law is not clear), while their rivals, the Māturīdiyya, were almost invariably Ḥanafīs. Towards the middle of the 5th/11th century, the As͟hʿariyya were persecuted by the Buwayhid sultans, who favoured a combination of the views of the Muʿtazila and S͟hīʿa. But with the coming of the Sald͟jūḳs the tables were turned, and the As͟hʿariyya received official support, especially from the great *wazīr* Niẓām al-Mulk. In return they gave intellectual support to the caliphate against the Fāṭimids of Cairo. From this time on, until perhaps the beginning of the 8th/14th century, the teaching of the As͟hʿariyya was almost identical with orthodoxy, and in a sense it has remained so until the present time. The Ḥanbalī reaction centring in Ibn Taymiyya (d. 728/1327) was of limited influence. From about the time of the s͟hayk͟h al-Sanūsī (d. 895/1490), however, though al-As͟hʿarī and the great names of his school were honoured and accepted, the leading theologians no longer regarded themselves as belonging to the As͟hʿariyya, and were in fact eclectic.

Important members of the Ashʿariyya (see the individual articles): al-Bāḳillānī (d. 403/1013), Ibn Fūrak (Abū Bakr Muḥammad b. al-Ḥasan) (d. 406/1015-6), al-Isfarāʾīnī (d. 418/1027-8), al-Bag͟hdādī (ʿAbd al-Ḳāhir b. Ṭāhir) (d. 429/1037-8), al-Sumnānī (d. 444/1052), al-D͟juwaynī Imām al-Ḥaramayn (d. 478/1085-6), al-G͟hazālī (Abū Ḥāmid Muḥammad) (d. 505/1111), Muḥammad b. Tūmart (d.c. 525/1030), al-S͟hahrastānī (d. 548/1153), Fak͟hr al-Dīn al-Rāzī (d. 606/1210), al-Īd͟jī (d. 756/1355), al-D͟jurd͟jānī (d. 816/1413).

Internal evolution. Little is known about the views of the As͟hʿariyya in the half-century after the founder's death. Al-Bāḳillānī is the first person whose work is extant and accessible, and by his time it is noteworthy that the As͟hʿariyya are making use of certain conceptions of the Muʿtazila (notably Abū Hās͟him's doctrine of the *ḥāl*), and have perhaps been influenced by the criticisms of the Māturīdiyya. One point on which the school was beginning to differ from al-As͟hʿarī himself was in the interpretation of the corporeal terms applied to God, such as hands, face and sitting on the throne. Al-As͟hʿarī had said these were to be taken neither literally nor metaphorically but *bi-lā kayf*, "without asking how"; but al-Bag͟hdādī and al-D͟juwaynī interpreted "hand" metaphorically as "power", and "face" as "essence" or "existence"; and the attitude of most of the later As͟hʿariyya was similar (cf. Montgomery Watt, *Some Muslim Discussions of Anthropomorphism*, in *Transactions of the Glasgow University Oriental Society*, xiii, 1-10). Again, while al-As͟hʿarī had insisted that man's acquiring (*kasb*) of acts was created, thus emphasizing God's omnipotence at the expense of man's responsibility, al-D͟juwaynī was able to put forward the view that the doctrine of the As͟hʿariyya was a *via media*.

Towards the middle of the 5th/11th century there was a change in method. Ibn K͟haldūn (tr. de Slane, iii, 61) speaks of al-G͟hazālī as the first of the "moderns", doubtless because of his enthusiasm for the Aristotelian syllogism, but there are already in al-D͟juwaynī traces of methodological advance (cf. Gardet and Anawati, op. cit. infra, 73). It was al-G͟hazālī, however, who steeped himself in the doctrines of Ibn Sīnā and others of the *philosophers* until he could attack them on their own ground with devastating success. Little more was heard of the *philosophers*, but from this time onward their Aristotelian logic and much of their Neoplatonic metaphysics was incorporated in the teaching of the As͟hʿariyya. This teaching rapidly became intellectualised in a bad sense. sometimes even views of doubtful orthodoxy were taken over, and the philosophical prolegomena occupied more space and attention than the strictly theological doctrines (notably in al-Īd͟jī and his commentator al-D͟jurd͟jānī). In the end the school may be said to disappear in a blaze of philosophy.

Bibliography: (see also bibliographies for al-As͟hʿarī and individual members of the school): Ibn ʿAsākir, *Tabyīn Kad͟hib al-Muftarī*, Damascus 1347, (for trs. by McCarthy and Mehren v. art. al-As͟hʿarī); M. Schreiner, *Zur Geschichte des Asʿaritentums*, in *Actes du 8e Congr. des Orient.*, i A, 79 ff.; Carra de Vaux, *Les Penseurs de l'Islam*, Paris 1923, iv, 133-94; L. Gardet and M. M. Anawati, *Introduction à la Théologie Musulmane*, Paris 1948, esp. 52-76.

(W. MONTGOMERY WATT)

AL-AS͟HʿAT͟H, ABŪ MUḤAMMAD MAʿDĪKARIB B. ḲAYS B. MAʿDĪKARIB, of the clan of al-Ḥārit͟h b. Muʿāwiya, a chief of Kinda in Ḥaḍramawt. The nickname, by which he is most commonly known, means "with unkempt or dishevelled hair"; he is also called, but less frequently, *al-As͟had͟jd͟j*, "the scar-faced", and *ʿUrf al-Nār*, said to be a South-Arabian term for "traitor". In earlier life he led an expedition against the tribe of Murād, who had murdered his father, but was taken prisoner and

had to pay 3000 camels for his ransom. In 10/631 he was leader of the delegation (*wafd*) which offered the submission of a section of Kinda to the Prophet at al-Madīna. It was arranged that his sister Ḳayla should be married to Muḥammad, but he died before she arrived in al-Madīna. After Muḥammad's death (11/632) al-As̲h̲ʿat̲h̲ rose in revolt with his clan and was besieged by Muslim troops in the castle of al-Nud̲j̲ayr; according to the legend he surrendered the castle on condition of immunity for himself and nine others, but omitted to include his own name in the document of surrender, and barely escaped execution. He was, however, sent to al-Madīna, where Abū Bakr not only pardoned him but married him to his own sister Umm Farwa or Ḳurayba (according to other reports this marriage had taken place already at the time of the delegation to Muḥammad). He took part in the wars in Syria and lost the sight of an eye at the battle of the Yarmūk; he and his tribesmen were sent thereafter by Abū ʿUbayda to join Saʿd b. Abī Waḳḳāṣ at Ḳādisiyya, and he commanded one of the Arab forces which occupied northern ʿIrāḳ. He settled in Kūfa as chief of the Kindite sector, and appears to have taken part in the expedition to Ād̲h̲arbāyd̲j̲ān in 26/646-7. At the battle of Ṣiffīn he played a leading part both in the fighting and in the negotiations, and is represented as having forced ʿAlī to accept the principle of arbitration and to agree to the selection of Abū Mūsā on the ʿIrāḳī side (see ʿALĪ B. ABĪ ṬALIB). Pro-S̲h̲īʿite tradition accordingly represents him and his whole house as inveterate traitors. He died in Kūfa during the government of al-Ḥasan b. ʿAlī (40/661), to whom one of his daughters was married. For his descendants see IBN AL-AS̲H̲ʿAT̲H̲.

AL-**AS̲H̲DAḲ** [see ʿAMR B. SAʿĪD].

(AL)-**AS̲H̲D̲J̲Aʿ** B. **ʿAMR** AL-**SULAMĪ**, Abu 'l-Walīd, Arab poet of the end of the 2nd/8th century. An orphan, he settled at an early age at Baṣra with his mother, and, when he showed signs of talent, the Ḳaysites of the town who, since the death of Bas̲h̲s̲h̲ār b. Burd (a *mawlā* of the Banū ʿUḳayl) had not possessed any poet of eminence, adopted him and fabricated for him a Ḳaysite genealogy. His formative period at an end, he went to al-Raḳḳa to D̲j̲aʿfar b. Yaḥyā al-Barmakī, who presented him to al-Ras̲h̲īd, and, from then on, he became the panegyrist of the caliph and his entourage (Barmakids, al-Ḳāsim b. al-Ras̲h̲īd, al-Amīn, al-Faḍl. b. al-Rabīʿ, Muḥammad b. Manṣūr b. Ziyād and others). The greater part of his surviving work consists of panegyrics which were assured of the widest possible circulation through the agency of the Ḳaysites of Baṣra; there are also a few funeral orations, notably for al-Ras̲h̲īd and al-As̲h̲d̲j̲aʿs own brother Aḥmad, who was also a poet, but confined himself to erotic poetry (on him, see Ṣūlī, *Awrāḳ*, 137-43).

Bibliography: Ṣūlī, *K. al-Awrāḳ*, ed. by J. H. Dunne, Cairo 1934, i, 74-137, which reproduces an important part of the poet's work; D̲j̲āḥiẓ, *Bayān*, ed. by Sandūbī, iii, 194-5; Ibn al-Muʿtazz, *Ṭabaḳāt*, GMS, N.S. xiii, 117-9; Abū Tammām, *Ḥamāsa*, index; Ibn Ḳutayba, *S̲h̲iʿr*, 562-5; *Ag̲h̲ānī*, xvii, 30-51; Marzubānī, *Muwas̲h̲s̲h̲aḥ*, 295; *Taʾrīk̲h̲ Bag̲h̲dād*, vii, 45; Ibn ʿAsākir, iii, 59-63; Rifāʿī, *ʿAṣr al-Maʾmūn*, ii, 419-22; Brockelmann, S I, 119. (CH. PELLAT)

ʿĀS̲H̲IḲ, an Arabic word meaning lover, frequently in the mystical sense. Among the Anatolian and Ād̲h̲arbāyd̲j̲ānī Turks, from the late 9th/15th or 10th/16th century, it is used of a class of wandering poet-minstrels, who sang and recited at public gatherings. Their repertoire included religious and erotic songs, elegies and heroic narratives. At first they followed the syllabic prosody of the popular poets, but later were subjected to Persian influence, both directly and through the Persian-influenced Turkish Ṣūfī poets. Köprülü has argued that they represent a social element distinct alike from the popular poets, the court poets, and the *madrasa* or convent-educated religious poets, and are the successors of the earlier Turkish bards known as ozan [*q.v.*]. They are especially numerous in the 17th century, when we find them among the dervish orders, the Janissaries, and other branches of the armed forces. The most famous among them are Gewherī and ʿĀs̲h̲iḳ ʿÖmer.

Bibliography: Köprülüzade Mehmed Fuʾad [= M. F. Köprülü], *Türk Sazşairlerine ait metinler ve tetkikler*, i-v, Istanbul 1929-30; idem, *Türk Edebiyatinda ilk Mutaṣawwiflar*, Istanbul 1918, 390-2; M. K. Köprülü, *Türk Sazşairleri antolojisi*, i-ii, Istanbul 1939-40; numerous other writings by M. F. Köprülü on this subject will be found listed in *Fuad Köprülü Armağani*, Istanbul 1953, xxvii-l. For an account of the impression made on a young Turk in the 19th century by the ʿās̲h̲iḳ poets, see the autobiography of Ziyā Pas̲h̲a, translated in Gibb, *Ottoman Poetry*, v, 46, 51-2. A contest between ʿās̲h̲iḳs in Mug̲h̲la is described by H. J. van Lennep, *Travels in little-known parts of Asia Minor*, 1, New York 1870, 253-4. See further H. Ritter, *Orientalia*, i, *Istanbuler Mitteilungen*, i, Istanbul 1933, 3 ff. (*Der Sängerwettstreit*). (B. LEWIS)

ʿĀS̲H̲ÎḲ, MUḤAMMAD B. ʿUT̲H̲MĀN B. BĀYEZĪD, Turkish cosmographer, born about 964/1555 in Trebizond, the son of a teacher at the Koran elementary school of the K̲h̲ātūniyya mosque. At the age of 20, he left his native town to see the world. The geographical part of his writings (mentioned below), contains references to his travels covering Anatolia and Rumelia. He did, for instance, take part in ʿUt̲h̲mān Pasha's (died 993/1585) campaign in the Caucasus and southern Russia in the years 989-992/1581-1584. After 994/1585, the spent several years in Salonica, whence he participated—in 1002-1003/1593-1594—in Ḳod̲j̲a Sinān Pasha's (died 1004/1596) Hungarian campaign. In 1005/1596, he settled in Damascus, where he completed the writing of his cosmographic work in Ramaḍān 1006/April-May 1598. The date of his death is not known.

Muḥammad ʿAs̲h̲īḳ's work, *Manāẓir al-ʿawālim* is composed of two parts. Part I begins with the creation of the world and describes the 'upper' world, and something of the 'lower', i.e. the stars, paradise and its inhabitants, and hell and its inhabitants. Part II treats the 'lower' world in 18 chapters. Chapters 1 to 12 are strictly geographical, and 13 to 18 are of a more general nature. In a final chapter, he speaks of the duration and the end of the world. The work is a vast compilation of the reports of the older Arabic and Persian cosmographers, geographers and natural scientists. It is clearly arranged under headings and written in Turkish, giving precise references to the source in every case. In the geographical part, he mentions in addition—again with references—what the personal view of each author on individual objects was. There are consi-

-derable additions to the purely traditional geographical material where Rumelia and Hungary are concerned. Chapter 12, which treats the towns, is the most important one. The material is arranged according to the Ptolemean climates (*aḳālīm-i ḥaḳīḳiyya*), and within these, according to the districts (*aḳālīm-i ʿurfiyya*) of Abu 'l-Fidāʾ. Later writers on geography, such as Kâtib Čelebi (Ḥādjdjī Khalīfa) and Abū Bakr b. Bahrām frequently based their writings on Muḥammad ʿAshïk, sometimes copying parts of his *Manāẓir al-ʿawālim* verbatim, without, however, his clear references.

Bibliography: Franz Babinger, *Die Geschichtsschreiber der Osmanen und ihre Werke*, Leipzig 1927, p. 138 f.; Franz Taeschner, *Ankara nach Mehmed Ashik* in *Zeki-Velidi Togan Armağanî*, Istanbul, 1957, 147-156. An edition, with translation, of that part of the *Manāẓir* dealing with Rumelia is being prepared by R. F. Kreutel.

(FR. TAESCHNER)

ʿĀSHIḲ ČELEBI, Pīr Muḥammad b. ʿAlī b. Zayn al-ʿĀbidīn b. Muḥammad Naṭṭāʿ (ʿĀshïḳ is his *takhalluṣ*), Ottoman man of letters, born at Prizren in 926/1520, his father then being ḳāḍī of Üsküb, died at Üsküb in Shaʿbān 979/Jan. 1572. He came of a family of *sayyids*, originally from Baghdad, his great-grandfather having come to Bursa in the time of Bāyezīd I. His childhood was spent in Rumeli, but after studying in Istanbul (where his teachers included Abu 'l-Suʿūd) he settled at Bursa and became *mutawalli* of the waḳfs of Emir Sultan, a post hereditary in his family. Dismissed in 953/1546, he returned to Istanbul and spent four years there as a *kātib*. He then became a ḳāḍī, and spent the rest of his life, except for a brief period in ʿAlāʾiyya, in a succession of towns in Rumeli. In 976/1568-9, tired of repeated changes, he applied in vain for the post of *naḳīb al-ashrāf* which his great-grandfather and grandfather had held. However, through the favour of the Grand Vezir Sokollu, to whom he had presented his *dhayl* to the *Shaḳāʾiḳ*, he was appointed ḳāḍī of Üsküb for life, but died there shortly afterwards. His tomb was seen by Ewliya (*Seyāḥatnāme* v, 560).

His most important work is his book of Biographies of the Poets, entitled *Mashāʿir al-Shuʿarāʾ*, presented to Selīm II in 976. In order of time it is the fourth Ottoman *tadhkira* and contains over 400 entries. Whereas for the early period ʿĀshïḳ adds nothing to the information given by his predecessors (Sehī, Laṭīfī, ʿAhdī), his work is of the first importance for the poets of the XVIth century, many of whom were personally known to him. MSS are fairly numerous, but the British Museum's exemplar Or. 6434, dated 977, deserves mention.

His other works are a *Diwān* (Ḥadjdjī Khalīfa ed. Flügel No. 5536) a *Shehrengiz* for Bursa (*ibid.* No. 7697), a *Sigetvār-nāme* in verse (Babinger p. 68f.), a translation of Ṭāshköprüzāde's *al-Shaḳāʾiḳ al-Nuʿmāniyya*, and a *dhayl* in Arabic to the same work. ʿAṭāʾī attributes to him a *Madjmūʿa-i Ṣuḳūk*. He also translated a number of works into Turkish (cf. Ḥ. Kh. Nos. 2366, 6558 and 7303 [but not 4772 as stated in *EI*¹]); his translation of Kemāl Pashazāde's *Sharḥ-i ḥadīth-i arbaʿin* has been printed (Istanbul 1316; cf. A. Karahan *Islam-Türk Edebiyatında Kırk Hadis*, Istanbul 1954, pp. 175-8).

Bibliography: For his exhaustive article in *IA* (*s.v.*), on which the above is based, M. Fuad Köprülü has used the primary sources, ʿĀshïḳ's *Mashāʿir al-Shuʿarāʾ* and ʿAṭāʾī's *dhayl* to the *Shaḳaʾiḳ* (*Ḥadāʾiḳ al-Ḥaḳāʾiḳ*, Istanbul 1268, pp. 161-5). This article gives a detailed biography, a complete list of ʿĀ.'s works, and references to the secondary sources which it supersedes. A list of the poets recorded in ʿĀ.'s *tadhkira* and specimens of his poems are given by S. Nüzhet in *Türk Şairleri* I, pp. 117-121. A satirical poem by ʿĀ. is quoted by ʿAṭāʾī (p. 153). There is a copy of his *diwān* in Istanbul (*Ist. Kit. Türkçe Yazma Divanlar Kataloğu* [1947] I p. 157 f.).

(V. L. MÉNAGE)

ʿĀSHIḲ PASHA, ʿALĀʾ AL-DĪN ʿALĪ (670/1272-733/1333). Turkish poet and mystic. The little which is known about his life is half legendary. Ḥusāyn Ḥusām al-Dīn, the only author who gives detailed information about his life and his family, does not mention his sources (*Amasya Taʾrīkhi* I, 1327, II, 1332, III, 1927, IV, 1928). ʿĀshïḳ Pasha was the son of Bābā Mukhliṣ, whose father the shaykh Bābā Ilyās migrated from Khurāsān to Anatolia and founded the Bābāʾī sect. A disciple of his, Bābā Isḥāḳ, was the organiser of the famous 13th century religious revolt in Anatolia. ʿĀshïḳ Pasha, educated at Ḳïrshehir [*q.v.*], then an important cultural centre, had a chequered political career, was sent as an envoy to Egypt and died at Ḳïrshehir in 733/1333, where his tomb sanctuary, of remarkable architectural interest, has been a place of pilgrimage for centuries. A devout shaykh, he seems to have been a rich and influential man. One of his sons, Elwān Čelebi, was a poet of some distinction and his great-grandson is the famous 15th century chronicler ʿĀshïḳ Pasha-Zāde [*q.v.*]. ʿĀshïḳ Pasha's main work is the *Gharībnāme* (630/1330) sometimes wrongly called *Dīwān-i ʿĀshïḳ Pasha* or *Maʿārifnāme*. This is a mystic-didactic *mathnawi* of more than 11.000 couplets in *ramal*. The work begins with a preface in Persian and a long panegyrical introduction, and is systematically divided into ten chapters (*bāb*) and each chapter into ten discourses (*dāstān*). Each chapter treats of a subject in relation to its number (i.e. Chapter Four—The Four Elements, Chapter Five—The Five Senses, Chapter Seven—The Seven Planets, etc.). The whole can be described as a collection of moral precepts and exhortations illustrated by quotations from the Ḳurʾān and the Ḥadīth and followed by relevant anecdotes. The influence of Mawlānā Djalāl al-Dīn's great *Mathnawi* is apparent in the *Gharībnāme* as in most contemporary mystic works. But ʿĀshïḳ Pasha's poetry is plain and merely didactic and lacks the lyrical élan of both Mawlānā and Yūnus Emre. The *Gharībnāme* represents on the whole Sunnī Islam and the question how far the heterodox tendencies which were very active at the time in Central Anatolia find an echo in it has not yet been sufficiently studied. The language of the *Gharībnāme* offers interesting philological material for the study of old Ottoman, since it was written at a period when Turkish was struggling with Arabic and Persian to secure its place as a written language in Anatolia, and ʿĀshïḳ Pasha's conscious contribution towards this is not unimportant. But his handling of the *ʿarūḍ* is less secure and skilful than that of his contemporaries Gülshehrī and Dehhānī. The numerous copies of the *Gharībnāme* witness its great popularity as one of the main mystic-religious works in Turkish. It has not yet been edited. Among dated copies the oldest are: Berlin No 259 (840 h), Paris No 313 A.F. (848 h.), Vatican Turkish 148 (854 h.), Casanatense No 2054 (861 h.), Bāyezīd No 3633 (861 h.), Lâleli No 1752 (882 h.). Apart from the *Gharībnāme* we have from ʿĀshïḳ Pasha a number of poems,

mostly hymns (*ilāhis*), preserved in certain *Gharīb-nāme* MSS, or other codices. In recent years some minor works by ʿĀshiḳ Pasha or attributed to him have come to light. The most important is the *Faḳrnāme*. This is a short mathnawī (160 couplets) in praise of mystic poverty, and is developed, like the *Gharībnāme* but on a smaller scale, upon quotations from the Ḳurʾān and the Ḥadīth. The commentary on the well-known ḥadīth "Poverty is my pride» introduces the subject. It has been published in facsimile and edited in transcription (v. Bibliography).

ʿĀSHIḲ-PASHA-ZĀDE, great-grandson of the poet ʿĀshiḳ Pasha, his actual name was Dervīsh Aḥmad b. Shaykh Yaḥyā b. Shaykh Salmān b. ʿĀshiḳ Pasha (makhlaṣ ʿĀshiḳī), one of the oldest Ottoman historians. He was born in 803/1400, probably in Elvan Čelebi near Amasya, and died some time after 889/1484. His historical work (*Tawārīkh-i āl-i ʿUthmān*) has been edited three times; by ʿĀlī Bey, Istanbul 1332, by Friedrich Giese (*Die altosmanische Chronik des ʿĀšiḳpašazāde*), Leipzig 1929 and by Çiftşioglu N. Atsız in *Osmanlı Tarihleri*, i, Istanbul 1949. In addition to these, and to the manuscripts enumerated by Babinger (see below), mention must be made of the manuscript in the *Riwāḳ al-Atrāk* of al-Azhar in Cairo, Taʾrīkh No. 3732 (completed in 1021/1612), a copy of which is in my possession (No. 140 of my collection).

Giese, *Zum ʿAšikpašazāde-Problem*, in *OLZ*, 1932, 7-18 (a reply to Wittek's criticism), ibid., *Die verschiedenen Textrezensionen des ʿAšikpašazāde bei seinen Nachfolgern und Ausschreibern* (Abh. d. Pr. AW 1936, Phil.-hist. Kl., No. 4, 1-50); Joachim Kissling, *Die Sprache des ʿĀšiḳpašazāde*; M. Fuad Köprülü, *Ašīḳ Paša-zāde*, in *IA*, i, 706-709. (Fr. Taeschner)

ASHĪR, an old fortified town in North Africa situated 100 km. SSW of Algiers in the Tīṭerī mountains, makes its appearance in history during the first half of the 4th/10th century. It belonged to the country occupied by the Ṣanhādja on the western borders of their territory. The founding of the town by Zīrī b. Manād, chief of the main tribe of the Ṣanhādja, is an episode in the struggle which brought these Berber highlanders, the supporters of the Fāṭimids of Ifrīḳiya, into conflict with the Zanāta of the plains of Oran, adherents of the party of the Umayyads of Cordova.

As a reward for services rendered to the Fāṭimids, especially during the terrible revolt of Abū Yazīd, "The Man with the donkey" [*q.v.*], in 324/935 Zīrī obtained permission from the Fāṭimid Caliph al-Ḳāʾim to found a town, which to a certain extent gave this tribal chief the prestige and autonomy of a sovereign. However it should be noted that it is to Zīrī's son Buluḳḳīn that al-Bakrī and Ibn al-Athīr attribute the founding of the fortified town of Ashīr, which the former dates from 364/974 and the latter from 367/977.

The new city was artificially populated by elements brought from Tobna, Msila and Hamza (now Bouira), and later from Tlemcen, which had served as a gathering place for the Zanāta. Palaces, caravanserais and baths were erected there. Buluḳḳīn, after being invested by the Fāṭimid al-Muʿizz, who quitted the government of Ifrīḳiya for Cairo (363/973), left Ashīr and repaired to al-Ḳayrawān; this exodus, however, took place in stages, the chief's family remaining at Ashīr.

The protection of this frontier region of the Zīrid kingdom was entrusted to the Banū Ḥammād (b Buluḳḳīn), and Ashīr was incorporated into their territory, when their secession was recognised by the arrangement of 408/1017. Possession of Ashīr, the town of the Banū Ḥammād, was moreover, disputed by members of the family. It was taken by Yūsuf the son of Ḥammād just after 440/1048 and completely pillaged by his troops. In 468/1076 it was besieged and occupied by the Zanāta, being subsequently retaken by the Banū Ḥammād. In 495/1101 the Almoravid governor of Tlemcen, Tāshfīn b. Tināmer, took and destroyed it. Resurrected once more from its ruins by its Ḥammādī masters, it fell into the power of Ghāzī the Ṣanhādjī, ally of the Banū Ghāniya, (about 580/1184). After this date the name of Ashīr disappears from history.

The uncertainty which surrounds the founding of Ashīr and its attribution to either Zīrī or Buluḳḳīn is to some extent illustrated on the actual site, for anybody wishing to study what has survived.

The same region of the Tīṭerī, which dominates from afar the high plains of Southern Algeria, retains traces of three inhabited places, rather different in appearance, but all three showing the characteristics of Muslim origin.

1. One of them, called Manzah Bint al-Sulṭān, is a fortified enclosure crowning a rocky eminence 276 metres in length, surrounded by deep ravines, jutting out in a northerly direction from the Kāf Lakhdar range. A building—a guard-house or storehouse—stood near the centre. A large cistern was intended to assure the temporary food supply of the small garrison holding the position.

2. On the slopes falling away from the same range towards the South, there stretches a rectangular enclosure, part of the perimeter of which was encircled by a rampart two metres thick. Inside it, walls appear to mark off terraces at different levels; but no other building is visible there. A spring called ʿAyn Yashīr flows along a ravine which borders on the enclosure. According to Rodet, the name Yashīr is used to denote the enclosure itself.

Outside this enclosure, recent excavations by M. L. Golvin have revealed the existence of a castle built of stone, the plan of which is remarkably symmetrical. A projecting porch in the middle of the south façade gives access to an entrance-hall

closed at the far end by a wall. Two side passages connect this entrance-hall with the rest of the building. This entrance shows a clear similarity to that of the Fāṭimid palace of al-Ķāʾim recently excavated at Mahdiyya (see M. S. Zbiss, in *JA*, 1956, 79-93).

3. The site of another fortified town faces Ya<u>sh</u>īr and the castle, from which it is separated by a distance of two and a half km. and a valley. This is Benia (Banya), which covers an area sloping down towards the north of Kāf Tsemsāl. Near the bottom of the slope, the rampart crowns the escarpment which borders the valley and a continuation of it extends towards the Kāf, against which the town rested. At the foot of this rocky eminence there used to be a dungeon. Three gates are set in the rampart. The ground is covered by numerous ruins. Of these the most easily identifiable is the mosque. The prayer chamber, which is preceeded by the courtyard, had seven naves and four bays. Several copious springs discharge themselves in the town.

It is possible to regard these three sites in the same region as marking three phases in the history of the Zīrid Ṣanhā<u>dj</u>a, and to see in them three successive foundations. Manzah Bint al-Sulṭān is not a town, but a refuge and an observation post of the Ṣanhā<u>dj</u>a, and probably preceeded the founding of a real city.

The affinity between the neighbouring castle of Ya<u>sh</u>īr and the palace of Mahdiyya permits the identification of the castle and the town with the foundation of Zīrī (324/934), authorised by al-Ķāʾim and carried out with the collaboration of an Ifrīķiyan architect.

Benia, on the other hand, probably represents the city of Bulukkīn (364/974), of which al-Bakrī gives such a remarkably exact description.

Bibliography: Nuwayri, *apud* Ibn <u>Kh</u>aldūn, trans. de Slane, ii, 487-93; Ibn <u>Kh</u>aldūn, text i, 197 ff., 326, trans. ii, 6 ff., 209; Ibn ʿI<u>dh</u>ārī, *Bayān*, ed. Marçais, *Achir* (*Recherches d'archéologie musulmane*) in RAfr. 1922, 21-38. (G. Marçais)

ʿA<u>SH</u>ĪRA, usually a synonym of *ķabīla* [*q.v.*] "tribe", can also denote a subdivision of the latter. Thus ʿAbd al-<u>Dj</u>alīl Ṭāhir, after using the word in the former sense in the title of his lectures on "The Bedouin and the Tribes in the Arab Countries" (*al-Badw wa 'l-ʿA<u>sh</u>āʾir fi 'l-Bilād al-ʿArabiyya*, Inst. des Hautes Études arabes, Cairo 1955), gives it a more technical definition (20, l. 2-7): "The social unit or nucleus of tribal society is the family *ʿāʾila* [*q.v.*]); several families descended from a common ancestor, most commonly of the fifth degree, form a *fa<u>kh</u>dh* [*q.v.*]. The *ʿa<u>sh</u>īra* comprises several *af<u>kh</u>ā<u>dh</u>*, and the *ķabīla* several *a<u>sh</u>āʾir*". The difficulties encountered by the author in chapter vii, in an effort to give precise definition to "the actual designations of these fluid social ideas", are explained by the instability of the groups, and are a reminder that "Arab authors have experimented with them over a period of centuries; from this fact derive the contradictory versions of dictionaries .... and, as anyone can verify for himself, in al-Māwardī, *al-Aḥkām al-Sulṭāniyya*, and in Bishr Fares, *L'honneur chez les Arabes*", (77-8). Josef Henninger, *Die Familie bei den heutigen Beduinen Arabiens und seiner Randgebiete* (Leiden 1943, 134-5), by means of the extremely inconsistent extension of the units which marks his theory, supported by numerous references, gives the same explanation of tribal structure in four stages: 1) family, *ʿayle*; 2) offspring up to the fifth degree, *āl* or *ahl*; 3) clan; 4) tribe, *ʿa<u>sh</u>īre*, *ķabīle*, *badīde*, *firķa*. These last expressions are synonymous, but "sometimes *ʿa<u>sh</u>īre* or *badīde* are regarded as subdivisions of *ķabīle* (134) ... *ʿa<u>sh</u>īre* and *ḥamūle* are often used interchangeably, and *ahl* for a whole people" (135). On the other hand the definition of *LA* (vi, 250, l. 9) suggests that some of these fluctuations may be accounted for by the normal conflict between the proper meaning and the ordinary, less precise, usage: "The *ʿa<u>sh</u>īra* of a man is constituted by the nearest male offspring of his father" (proper meaning) "who are also called the *ķabīla*" (meaning altered by synecdoche). Comparison with other Semitic languages gives no clue, because Arabic is alone in affording, from the 10th root, a small group of apparently isolated derived forms with the dominant idea of "direct, intimate, relationship", and this etymological problem has only been touched on, as far as is known, by Marcel Cohen (*Essai comparatif ... chamito-sémitique*, Paris 1947, 86). The roots of nouns of number do not seem to give, apart from a few obscure names of animals or plants, derived forms without semantic connexion with their number, and it is perhaps not impossible that the original idea was one of a group of about ten persons. This would still be an extremely flimsy basis of evaluation, because the additional remark of *LA* (*ibid.*, 19): "The *ʿa<u>sh</u>īra* consists exclusively of men" (also valid for *maʿ<u>sh</u>ar*, *nafar*, *ķawm*, *rahṭ* and *ʿālam*) can equally well support *a contrario* a current use of the term which is considered corrupt, as give an indication of its social and juridical value, as a group consisting only of warriors.

Bibliography: The work first mentioned, edited by the Arab League, gives much information. The work of J. Henniger, which is absolutely fundamental for all these problems, ought also to have appeared in the bibliography of the article ʿĀʾila. (J. Lecerf)

ʿA<u>SH</u>ĶĀBĀD (properly ʿI<u>sh</u>ķābād; according to the Turkish pronounciation of the Arab word ʿi<u>sh</u>ķ, "love", called by the Russians since 1924 A<u>sh</u>k<u>h</u>abad, previously till 1921 Askhabad, 1921-4 Poltorack), a town, since 1924 the capital of the SSR of Türkmenistān. It lies in an oasis south of the desert Ķara Ķum and developed out of a Turcoman *awl* with (1881, time of the Russ. conquest) 500 tents. Already in the year 1897 it had, as capital of the district Transcaspia (Zakaspiyskaya Oblast'), 19,428 inhabitants, chiefly merchants and officials. The city developed rapidly, and possessed already before 1914 a museum (which contained inter alia objects of interest for the ethnology of the Türkmen) and a library (with some Persian manuscripts). After 1917 in spite of the difficulty of maintaining a sufficient water supply the city became an important industrial centre in this district (woven wares, silk factories, foodstuffs, building materials), possessing also cultural significance (since 1950 Gor'kiy-University and four other higher schools, a branch

of the Academy of Sciences of the USSR and other research institutes). The number of inhabitants rose (1926) to 51,593 and (1939) 127,000; no information in particular concerning their nationality has been given. Doubtless however numerous Russians live there.

The place has been very frequently (17-xi-1893, 17-i-1895, 1929) struck by earthquakes and possesses since 1947 a Soviet seismic observatory. A particularly destructive earthquake took place on 6 October 1948. Numerous buildings were destroyed and many people lost their lives. (The centre of the earthquakes is mostly fifty miles south in the Kopet Dagh.)

The district of ʿAs͟hḳābād is notable for its cotton and corn cultivation; vines, melons and vetegables are cultivated here. It contains the foothills of the Kopet Dagh, the oasis Tedjen and the central parts of the desert Ḳara Ḳum [*q.v.*]. Minerals: zinc, lead, sulphur, barytus.

Four-five miles west of ʿAs͟hḳābād lie the ruins of the city of Nasā [*q.v.*]; six-seven miles east the ruins of the city of Anaw with the remains of a beautiful mosque with an inscription by its builder, Abu 'l-Ḳāsim Bābur (d. 861/1456-7) where during excavations (1904) a rich neolithic culture of the time 3000-500 (?) B.C. came to light.

AL-**AS͟HMŪNAYN** [see USHMŪNAYN].

AS͟HRĀF [see SHARĪF].

AL-**AS͟HRAF**, AL-**MALIK** [see AYYŪBIDS].

AS͟HRAF, town in the Persian province of Māzandarān, and chief town of a district (*bulūk*) of the same name, situated 36° 41′ 55″ N, 53° 32′ 30″ E, five miles from the shore of the Caspian Sea, 35 miles E. of Sārī and 43 miles W. of Astarābād on the road between these two towns. The town lies at the foot of wooded spurs of the lofty Alburz range, and commands a fine view northwards over the bay of Astarābād. Although the approaches to As͟hraf are fertile and produce excellent cotton and wheat, the plain of As͟hraf itself tends to be marshy. The cypress, the wild vine, the citron and the orange grow in profusion.

Formerly an unimportant town named K͟harkūrān, the new town of As͟hraf dates from its foundation by S͟hāh ʿAbbās I in 1021/1612-3. Intended by ʿAbbās to be a rural retreat, As͟hraf at first consisted of a group of large farmhouses surrounding the royal palace and scattered along the Sārī road, but eventually the royal residences extended over a considerable area, and comprised six separate establishments, each with its gardens. According to Fraser five of these, the Bāg͟h-i S͟hāhī, the ʿImārat-i Ṣāḥib-i Zamān (used as a banqueting hall), the Ḥaram, the K͟halwat, and the Bāg͟h-i Tappa, were enclosed by one wall, while the sixth, the ʿImārat-i Čas͟hma, lay outside. Spacious accommodation was provided for guests and travellers. Great skill was employed in the construction of the palaces and of the famous causeway, large blocks of stone and marble being brought from Bākū, and joined by iron clamps cemented with lead.

The gardens were laid out with walks bordered by pines, and by orange and other fruit trees, and were watered by an elaborate system of reservoirs, cisterns and channels, fed by a spring which also supplied numerous fountains and cascades. On the hills above were situated the observatory known as Ṣafīābād, and a dam which controlled the water supply to the rice fields round As͟hraf.

At the beginning of the 18th century, the power of the Ṣafawī dynasty declined, and As͟hraf suffered heavily in the ensuing civil wars, and from Turcoman invasions from the N-E. It was plundered by the Afg͟hāns and again by the Zand armies. The great *aywān* called Čihil Sutūn was burnt down in the time of Nādir S͟hāh, and Nādir's replacement was a much meaner edifice. Muḥammad Ḥasan K͟hān Ḳādjār carried out certain repairs, but what remained of the imperial residences was destroyed by Muḥammad K͟hān of Sawādkūh, Governor of Māzandarān, and As͟hraf remained virtually uninhabited until Āḳā Muḥammad K͟hān Ḳādjār escaped from Zand captivity at S͟hīrāz and, making Māzandarān his base, rebuilt the town in 1193/1779-80. Though making a slow recovery—in 1826 it numbered 500 houses, in 1859 845, and in 1874 over 1200—As͟hraf has never regained its former prosperity, nor can its ruined palaces do more than hint at their former magnificence.

AS͟HRAF ʿALĪ B. ʿABD AL-ḤAḲḲ AL-FĀRŪḲĪ, was born at T'hāna Bhawan (Muẓaffarnagar district, India) on 12 Rabīʿ I, 1280/19 March 1863 and died on 6 Radjab 1362/9 July 1943. He received his education at his home-town and at Deoband [*q.v.*]. Leaving Deoband in 1301/1883-4 he started life as a teacher at Cawnpore. The same year he performed the pilgrimage to Mecca where he met Ḥādjdjī Imdād Allāh al-Hindī al-Muhādjir al-Makkī with whom he was already in correspondence. He renewed his *bayʿa*, contracted *in absentia*, and formally became his disciple. In 1307/1889-90 he again left for Mecca and stayed there for a number of months with Imdād Allāh. He left Cawnpore in 1315/1897-8 and settled down at T'hāna Bhawan for the rest of his life.

An eminent scholar, theologian and *ṣūfī*, he led a very busy life, teaching, preaching, writing and lecturing, and making occasional journeys. A prolific writer, his works exceed one thousand in number. These are mostly on *tafsīr*, *ḥadīth*, logic, *kalām*, *ʿaḳāʾid* and *taṣawwuf*. His first work, a Persian *mat͟hnawī* entitled "*Zīr o-Bam*", was written while he was still a student; his last is *al-Bawādir al-Nawādir*, published in 1365/1945-6, being a selection of his innumerable writings. His most famous works are: i) *Bayān al-Ḳurʾān*, a commentary of the Ḳurʾān, in 12 vols. in Urdu, completed in 2½ years and first published at Delhi in 1334/1916-7. A revised and enlarged edition was published at T'hāna Bhawan, in 1353/1934-5 and at Delhi in 1349-2. Since then several editions have appeared; (ii) *Bihis͟htī Zēwar*, in 10 vols., also in

Urdu, a compendium of Islamic teachings meant for women. The 11th vol. "*Bis̲h̲tī Gawhar*" for men, was added much later. It has been frequently printed in India and Pākistān and is still in great demand. A collection of his *fatāwā* in 8 vols., compiled posthumously, is in process of publication.

Bibliography: ʿAzīz al-Ḥasan, *As̲h̲raf al-Sawāniḥ*, 4 vols. i-iii, Lucknow 1357/1938, iv called *K̲h̲ātimat al-Sawāniḥ*, (which also contains a full list of his works written up to the year 1354/1935-6), appeared in 1362/1943, also from Lucknow; ʿAbd al-Mād̲j̲id Daryābādī, *Ḥakīm al-Ummat*, Aʿẓamgarh, 1371/1951; ʿAbd al-Raḥmān K̲h̲ān, *Sīrat-i-As̲h̲raf*, Multan 1375/1956; *Al-Islām*, (Karachi) July 1953, 56; ʿAbd al-Bārī Nadwī, *D̲j̲āmiʿ al-Mud̲j̲addidīn*, Lucknow 1950; idem, *Tad̲j̲dīd-i Taṣawwuf o-Sulūk*, Lucknow 1949; idem, *Tad̲j̲dīd-i Taʿlīm o-Tablīg̲h̲*, Lucknow (n.d.); idem, *Tad̲j̲dīd-i Maʿās̲h̲iyyāt*, Lucknow 1956; Sulaymān Nadwī, *Yād-i Raftagān*, Karachi 1955, 283-301; G̲h̲ulām Muḥammad, *Ḥayāt-i As̲h̲raf*, Karachi 1951. (A. S. Bazmee Ansari)

AS̲H̲RAF ʿALĪ K̲H̲ĀN, foster-brother of Aḥmad S̲h̲āh, King of Delhi (1161/1748-1167/1754) was born in Delhi c. 1140/1727. His father Mīrzā ʿAlī K̲h̲ān "Nukta" was a courtier of Muḥammad S̲h̲āh [*q.v.*]. His uncle Īrad̲j̲ K̲h̲ān was the *nāẓim* of Murs̲h̲idābād during the reign of Aḥmad S̲h̲āh. A composer of poetry in both Urdu and Persian, he wrote under the pen-name of "Fug̲h̲ān" (Fig̲h̲ān) and enjoyed the title of "Ẓarīf al-Mulk Kokaltās̲h̲ K̲h̲ān Bahādur", conferred on him by Aḥmad S̲h̲āh.

He lived in Delhi till the dethronement of Aḥmad S̲h̲āh in 1167/1754, when he left for Murs̲h̲idābād. He seems to have been unfavourably received by his uncle and after a brief stay with him returned to Delhi. In 1174/1761 when the Durranis again attacked India he left Delhi for good and went to Fayḍābād. He, however, soon fell out with his patron S̲h̲ud̲j̲āʿ al-Dawla [*q.v.*] and left for ʿAẓīmābād (Patna) where he was well received by Rād̲j̲a S̲h̲itāb Rāyʾ, Governor or Bengal and Bihar and a great patron of learning. Offended by an unkind remark of S̲h̲itāb Rāyʾ he decided to leave him. But soon after he somehow came into contact with officials of the East India Company and appears to have entered their service. Thereafter he led a comfortable life and died at ʿAẓīmābād in 1186/1772-3.

A good poet, his compositions are, however, marred by biting satire and lampoon. His Urdu and Persian *dīwān* was published at Karachi in 1950.

(A. S. Bazmee Ansari)

AS̲H̲RAF D̲J̲AHĀNGĪR b. S. Muḥammad Ibrāhīm was born in 688/1289 at al-Simnān (K̲h̲urāsān), the principality of his father. His mother, K̲h̲adīd̲j̲a, was a grand-daughter of Aḥmad Yasawī [*q.v.*]. A *ḥāfiẓ* of the Ḳurʾān, with its seven readings, he completed his education at the age of 14. His love for mysticism took him to ʿAlāʾ al-Dawla al-Simnānī [*q.v.*], a leading *ṣūfī* of his days, whose company he frequented. Succeeding his father, on the latter's death in 705/1305-6, to the principality he soon abdicated in favour of his brother Muḥammad and set out for India having been told to do so in a dream. Passing through Mā warāʾ al-Nahr, he visited Buk̲h̲ārā and Samarḳand and then left for Uččh [*q.v.*] where he met D̲j̲alāl al-Dīn al-Buk̲h̲ārī, surnamed D̲j̲ahāniyān D̲j̲ahān Gas̲h̲t [*q.v.*]. After a long series of travels covering Delhi, several places in the Indo-Gangetic plain, Bihār and Bengāl, including Sunārgāʾōn, near Dacca, he finally settled at Rūḥābād (an old name for Kačhawčha, a village 53 miles from Fayḍābād), where he died on 27 Muḥarram 808/July 6, 1405 and was buried in his own *K̲h̲ānaḳāh*.

A short time after having settled at Kačhawčha he again left on his global travels, this time visiting Mecca (twice), al-Madīna, Karbalāʾ, al-Nad̲j̲af, Turkey, Damascus, Bag̲h̲dād, Kās̲h̲ān, al-Simnān, Meshed, G̲h̲azna and Kābul, returning to Rūḥābād *via* Multān, Pākpattan and Delhi. On his first voyage to Mecca he was accompanied by Badīʿ al-Dīn S̲h̲āh Madār [*q.v.*].

The statement in the *Laṭāʾif-i As̲h̲rafī* (ii, 105-6) that Sulṭān Ibrāhīm S̲h̲arḳī (804/1401-848/1444) was introduced to him by Ḳāḍī S̲h̲ihāb al-Dīn Dawlatābādī early on his arrival in India is apparently wrong as the Sulṭān succeeded to the throne in 804/1402 while the saint died four years later in 808/1405. The meeting, therefore, must have taken place during the closing years of the life of As̲h̲raf D̲j̲ahāngīr.

He is the author of *Bas̲h̲ārat al-Murīdīn* and *Maktūbāt-i As̲h̲rafī*, the latter is highly spoken of by ʿAbd al-Ḥaḳḳ Dihlawī [*q.v.*]. His shrine is visited, in thousands, by persons possessed and patients suffering from mental derangement in the hope of obtaining a cure.

Bibliography: Niẓām al-Yamanī, *Laṭāʾif-i As̲h̲rafī*, 2 vols. Delhi 1298/1880-1; G̲h̲ulām Sarwar Lāhorī, *K̲h̲azīnat al-Aṣfiyāʾ*, Cawnpore 1914, i 371-77; ʿAbd Allāh K̲h̲ʷeshgī, *Maʿārid̲j̲ al-Wilāyat* (Punjab University MS.); ʿAbd al-Raḥmān Čis̲h̲tī, *Mirʾāt al-Asrār*, Dār al-Muṣannifīn, Aʿẓamgarh MS. fol. 529; Ṣalāḥ al-Dīn ʿAbd al-Raḥmān, *Bazm-i Ṣūfiyya* (in Urdu), Aʿẓamgarh 1369/1948, 441-82; ʿAbd al-Ḥaḳḳ Muḥaddit̲h̲ Dihlawī, *Ak̲h̲bār al-Ak̲h̲yār*, Delhi 1332/1914, 156; ʿAbd al-Ḥayy Nadwī, *Nuzhat al-K̲h̲awāṭir* (where a large number of his works is enumerated), Ḥaydarābād (Dn.) 1371/1951, iii, 32-4; Muḥammad Ak̲h̲tar, *Tad̲h̲kirat-i Awliyāʾ-i Hind*, Delhi 1950, ii, 177-9. (A. S. Bazmee Ansari)

AS̲H̲RAF OG̲H̲ULLARĬ, march-wardens of the Sald̲j̲ūḳs in Anatolia during the second half of the 13th century. Members of a Turkoman tribe which had been settled by the Anatolian Sald̲j̲ūḳ state on its western frontiers, they embellished the town of

Gorgurum, and subsequently Beys͟hehri, and established a principality in that region.

The first of the family who is known to us is the Sald͟jūḳ amīr As͟hraf-og͟hlu Sayf al-Dīn Sulaymān Bey, who played an important part during the reigns of G͟hiyāt͟h al-Dīn Kayk͟husraw III and Ghiyāt͟h al-Dīn Masʿūd II. After the Mongols of the west, the Ilk͟hānids, had put Kayk͟husraw III to death, they ordered Masʿūd II to rule in his stead (Rabīʿ I 682/June 1283), but Kayk͟husraw's mother, who was at Ḳonya, proclaimed his sons as his successors, with the approval of the Ilk͟hānids, thus declaring herself against Masʿūd. She invited the As͟hrafid Sulaymān Bey to Ḳonya and appointed him regent to these infant sovereigns (8 Rabīʾ I 684/14 May 1285). With assistance from the Mongols, Masʿūd II, who was at Ḳayseri, disposed of the two children and seized power, whereupon Sulaymān Bey withdrew to Beys͟hehri. Subsequently (687/1288) he made submission to Masʿūd and came to Ḳonya.

Masʿūd II wished to have his brother Siyāwus͟h, whom he regarded as a rival, placed under restraint. He therefore sent him to Beys͟hehri, ostensibly for the purpose of bringing back the As͟hrafid's daughter as a bride for himself. By prior arrangement the As͟hrafid arrested and imprisoned Siyāvus͟h, but was compelled to release him and send him to Ḳonya by the threats of the Ḳaramānid Güneri Bey, who was favourably disposed towards Siyāvus͟h (*Seld͟jūḳnāme*, Paris, Bibliothèque Nationale, Persian MS no. 1553).

By this time the Sald͟jūḳ state had lost its authority, and Sulaymān Bey was in perpetual conflict, sometimes with his neighbours and sometimes with the Sald͟jūḳ governors: at one point he was even in danger of falling into the hands of the Ḳaramānid, who was attacking Beys͟hehri, but he later gained the victory. He also suffered considerably at this period from assaults on this territory by the Ilk͟hānid Gayk͟hātū.

Sayf al-Dīn Sulaymān Bey died on Monday 2 Muḥarram 702/27 August 1302, and was buried in the mausoleum he had had constructed a year before beside his mosque in Beys͟hehri. Sulaymān had embellished Beys͟hehri, which he called Sulaymāns͟hehri, with a number of foundations, and had repaired the fortress, placing his inscription over the fortress gate in 689/1290. He built his mosque, a distinguished work of art, in 696/1296, and his mausoleum in 1302. In his *waḳfiyya* he appointed his sons Muḥammad and As͟hraf as *mutawallīs* of these foundations (K͟halīl Edhem, *Anadoluda islâmî kitâbeler, TOEM* year 5, 139-44; Yusuf Akyurt, *Beyşehri kitabeleri ve Eşref oğlu camii ve türbesi*).

He was succeeded by his elder son Mubāriz al-Dīn Muḥammad Bey, who added the towns of Aḳs͟hehir and Bolvadin to his domains. The As͟hrafid amīr Ḍiyāʾ al-Dīn S͟hikārī built the market mosque in Aḳs͟hehir in 720/1320 (I. H. Uzunçarsılı, *Kitabeler*, ii, 26). When the amīr Čōbān, the Ilk͟hānid governor-general, visited Anatolia in 1314 there was an As͟hrafid among the Anatolian beys who came to offer him their obedience (*Musāmarat al-Ak͟hbār*, 311); this must have been Mubāriz al-Dīn Muḥammad.

Muḥammad Bey died after 1320 and was succeeded by his son Sulaymān II, whose reign however was of short duration. The influence of the Ilk͟hānids in Anatolia having begun to wane, Demirtas͟h, son of the amīr Čōbān, was appointed governor of Anatolia. In his efforts to subdue the Anatolian beys, who had grown accustomed to acting independently and rebelliously, he first took Ḳonya (1320), which had come under Ḳaramānid control. A few years later he marched on Beys͟hehri, seized Sulaymān Bey, killed him, and threw his corpse into the Beys͟hehri lake (the *Masālik al-Abṣār* records that he was tortured to death: his eyes were put out, his nose and ears cut off, and his severed testicles were hung about his neck) on 11 D͟hu 'l-Ḳaʿda 726/9 October 1326 (this is the date shown in the Paris MS of the *Seld͟jūḳnāme*; the *Taḳwīm-i Nud͟jūmī* gives the year of his death as 722/1322-3.

With the murder of Sulaymān II the principality of the As͟hrafids came to an end. After Demirtas͟h's time, their territories fell into the hands partly of the Ḥamīdids, partly of the Ḳaramānids. No coins of the As͟hrafids have yet come to light, but is possible that coins of Muḥammad Bey exist.

In his *Masālik al-Abṣār*, S͟hihāb al-Dīn ʿUmarī says that the As͟hrafids possessed almost 70,000 cavalry, 60 towns, and 150 villages.

It is evident from the titles used by Sayf al-Dīn Sulaymān Bey in his inscription which he placed over the gate of the fortress of Beys͟hehri (which he called Sulaymāns͟hehri) in D͟jumādā I 689/May 1290 (*Amīr-i Muʿaẓẓam*), and on his other inscriptions (*al-Amīr al-ʿĀdil*: see Halil Ethem and Yusuf Akyurt) that he was an amīr of the Seld͟jūḳs.

The mosque of Sulaymān Bey, its *minbar* and *miḥrāb*, are choice works of art. The ornate ceiling of the mosque, which is rectangular in shape, is supported on 48 wooden pillars, decorated with stalactites. The *miḥrāb* is adorned with porcelain mosaics, Ḳurʿānic verses and *ḥadīt͟hs*. The *minbar* is a masterpiece of the woodcarver's art, made of jointed sections of ebony. Around the front of the door to the *minbar* is inscribed the Throne-verse, in Sald͟jūḳ *nask͟hī* script, while above the doorway are seen the names of the first four caliphs, in Kūfic lettering. The mausoleum of Sulaymān Bey, though most artistic, has become dilapidated with age.

There exists a philosophical work in Arabic, in 9 sections, entitled *al-Fuṣul al-As͟hrafiyya fī Uṣūl al-Burhāniyya wa 'l-Kas͟hfiyya*, written for the As͟hrafid Mubāriz al-Dīn Muḥammad Bey by S͟hams al-Dīn Muḥammad Tus͟htarī. The author's autograph copy, written at Ḳonya in 710/1311, is in the library of St. Sophia (no. 2445).

The As͟hrafid family:

(ISMAIL HAKKI UZUNÇARŞILI)

ASHRAFĪ [see SIKKA].

ASHRAFIYYA, Dervish-order (according to d'Ohsson), which takes its name from ʿAbd Allāh Ashraf (Eshref) Rumī, died 899/1493 in Čīn Iznīk.

AL-ʿ**ASHSHĀB** (A.), the gatherer or vendor of herbs, from the Arabic *ʿushb*, a word which means a fresh annual herb which is afterwards dried. In medical literature, the word is chiefly used to denote simples, and consequently *al-ʿashshāb* means a vendor of or authority on medicinal herbs. Thus for example the celebrated physician Ibn al-Suwaydī (d. 690/1291), in a note preserved in his own hand on the title-page of Ms. No. 3711 of the Aya Sofya, calls his teacher, the famous pharmacologist Ibn al-Bayṭār [*q.v.*], *al-ʿashshāb al-mālaḳī*, "the herbalist of Malaga". In this connexion it should be noted that the word *al-shadjdjār*, which is lacking in most dictionaries, means an authority on plants or a botanist; it is derived from *shadjar*, which is used for tree, bush, shrub or any plant with a strong woody stem, and also for plants in general.

(M. MEYERHOF)

AL-**ASHTAR**, Mālik b. al-Ḥārith al-Nakhaʿī, warrior and political agitator of the time of the Caliph ʿUthmān and supporter of ʿAlī. He was surnamed al-Ashtar, "the man with inverted eyelids", as the result of a wound received at the battle of the Yarmūk (15/636). He distinguished himself by his boldness in the campaign against the Byzantines and even dared to venture beyond Darb in enemy territory (see Caetani, *Annali*, index). He was one of the most persistent agitators against the Caliph ʿUthmān and the ruling class of the period and defended the rights—or the claims—of the warriors to the *fayʾ* (booty consisting of landed property). After a violent scene in the presence of ʿUthmān's governor at Kūfa, Saʿīd b. al-ʿĀṣ (33/653-4), he was banished from Kūfa to Syria together with ten other agitators; Muʿāwiya subsequently sent him back to ʿIrāḳ, but Saʿīd sent him on to the governor of Ḥimṣ. As the agitation persisted in Kūfa, he lost no time in returning and stirring up the masses (al-Ṭabarī, i, 2907-17, 2921, 2927-31). He is to be found at the head of the band of seditious elements who prevented the return of the governor Saʿīd b. al-ʿĀṣ and who took upon themselves to obtain the appointment by the Caliph (34/654-5) of Abū Mūsā al-Ashʿarī [*q.v.*] (al-Ṭabarī, i, 2927-30; al-Masʿūdī, *Murūdj*, iv, 262-5). At the time of the insurrection in Medina, which ended with the assassination of the Caliph ʿUthmān (35/656), he brought two hundred men from Kūfa (Ibn Saʿd, iii/1, 49) and was one of those who besieged "the House" (*al-nuffār*) (al-Ṭabarī, i, 2989 f., etc.); his name is even cited among the murderers of the Caliph (Ibn ʿAsākir, in Caetani, *Annali*, 35 A.H., paras. 137 and 169; Ibn ʿAbd Rabbih, *ʿIḳd*, (Būlāḳ 1293), ii, 278 etc.).

His violence came to the fore also during the election of ʿAlī, for he threatened several recalcitrants, forcing them to swear the oath of allegiance to him (al-Ṭabarī, i, 3068-9, 3075-77: al-Dīnawarī, 152). He then attached himself to ʿAlī, but was often among those of his supporters who presumed to impose their own will on him.

During ʿAlī's campaign against ʿĀʾisha, Ṭalḥa and al-Zubayr, he was sent to Kūfa with other men of importance to persuade the inhabitants to take ʿAlī's side, and after succeeding in this objective, he brought reinforcement to his master. He took part in the battle of the Camel (36/656); the sources mention a duel which he fought with ʿAbd Allāh b. al-Zubayr, and other brave deeds. At the head of the vanguard of ʿAlī's army in the campaign against Muʿāwiya, he obliged the inhabitants of Raḳḳa to build a bridge of boats over the Euphrates to enable the troops to cross (al-Ṭabarī, i, 3259-60). At the battle of Ṣiffīn in which he commanded the right wing of the army, he displayed zeal and bravery (al-Ṭabarī, i, 3283, 3284, 3294-300, 3327, 3328; al-Dīnawarī 194-8; al-Masʿūdī, IV, 343-9).

ʿAlī wanted to have him as an arbitrator at the time when the famous arbitration between himself and Muʿāwiya was proposed (see ʿALĪ B. ABĪ ṬĀLIB), but his supporters refused, well aware that such a choice would mean the continuation of the war; when al-Ashtar was informed that a truce had been decided upon, he wanted to go on fighting, for he thought that victory was near and the speech which he delivered on this occasion has come down to us (Naṣr b. Muzāḥim al-Minḳarī, *Waḳʿat Ṣiffīn*, 562 f.; al-Ṭabarī, i, 3331 f.; cf. al-Dīnawarī, 204); he then tried to avoid signing the agreement. It was probably because of his uncompromising attitude towards the truce with Muʿāwiya, that ʿAlī got rid of him, by appointing him firstly governor of Mawṣil (as well as of other towns of ʿIrāḳ and Syria which were in his possession, but al-Ashtar encountered opposition from al-Ḍaḥḥāk b. Ḳays al-Fihrī, appointed governor by Muʿāwiya, and had to withdraw to Mawṣil) and then governor of Egypt; it is not known precise y whether this took place immediately after the recall of Ḳays b. Saʿd or after the dismissal of Muḥammad b. Abī Bakr who had proved himself a bad politician (al-Kindī, *Governors* 22-4; al-Maḳrīzī, ii, 336; al-Ṭabarī, i, 3242; al-Yaʿḳūbī, ii, 227; al-Masʿūdī, *Murūdj*, iv, 492; Caetani, *Annali*, 37 A.H. paras. 221-3). However that may be, al-Ashtar never reached the seat of his appointment, for when he arrived at al-Ḳulzum (37/658 or 38?) he was poisoned by the local *djāyastār* (not the *quaestor* but the *logistarius*, see J. Maspero, in *BIFAO*, xi, 155-61), (al-Ṭabarī, i, 3392-5). On hearing of his death, ʿAlī and Muʿāwiya are said to have spoken the words which have subsequently become famous: — the former: *li 'l-yadayn wa li 'l-fam* "[fallen] hands and mouth [to the ground]" an expression indicating the pleasure felt on seeing someone fall (Maydānī, *Amthāl*, ii, 475; cf. Caetani, *Annali*, 37 A.H. para. 224, n. 1); the latter: "God even has troops in the honey". Muʿāwiya has been suspected of being the instigator of al-Ashtar's assassination; more certain is the fact that Muʿāwiya considered al-Ashtar one of the "arms" of ʿAlī, the other, according to him, being ʿAmmār b. Yāsir.

From the physical point of view, al-Ashtar was a giant; his sword bore the name *al-ludjdj* "the sheen of running water" (*TA*, ii, 93).

Bibliography: Information on al-Ashtar is to be found in all the chronicles and histories dealing with the early period of Islam as well as in the collections of biographies of early personalities; Caetani, *Annali*, Index and vols. vii-x *passim*; several quotations of sources, *ibid.* 37 A.H. paras. 332-9; Naṣr b. Muzāḥim al-Minḳarī, *Waḳʿat Ṣiffīn*, ed. ʿAbd al-Salām M. Hārūn, Cairo 1365, Index; Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-Balāgha*, Cairo 1329, i, 158-60, ii, 28-30, 80, iii, 416, 417.

(L. VECCIA VAGLIERI)

ASHTURKA [see SUPPLEMENT].

ʿĀSHŪRĀʾ, name of a voluntary fast-day which is observed on the 10th Muḥarram.

I.—When Muḥammad came to Madīna he adopted from the Jews amongst other days the ʿĀshūrāʾ. The name is obviously the Hebrew *ʿāsōr* with the Aramaic determinative ending; in Lev. xvi, 29 it is used of the great Day of Atonement. Muḥammad retained the Jewish custom in the rite, that is, the fast was observed on this day from sunset to sunset, and not as in other fasts only during the day. When in the year 2 Muḥammad's relations with the Jews became strained, Ramaḍān was chosen as the fast month, and the ʿĀshūraʾ-fast was no longer a religious duty but was left to the option of the individual. —On which day of the Arabian year the fast was originally observed cannot now be ascertained owing to our defective knowledge of the calendar of the period; naturally its observance coincided with the Jewish on the 10th Tishri, and so fell in the autumn. The 10th Muḥarram finds early mention as the ʿĀshūrāʾ; probably the tenth day of the first Muslim month was selected to harmonise with the tenth day of the first Jewish month. From the calculations which have already been made, it does not seem possible that it could have been originally celebrated on the 10th Muḥarram (see Caetani, *Annali*, i, 431 f.).

Presumably for the sake of distinguishing themselves from the Jews some fixed the 9th Muḥarram either along with or in place of the tenth as a fast day with the name *Tāsūʿāʾ*.

The Jewish origin of the day is obvious; the well-known tendency of tradition to trace all Islamic customs back to the ancient Arabs, and particularly to Abraham, states that the Meccans of olden time fasted on the ʿĀshūrāʾ. It is not impossible that the tenth, as also the first nine days of Muḥarram, did possess a certain holiness among the ancient Arabs; but this has nothing to do with the ʿĀshūrāʾ.

The fast of the ʿĀshūrāʾ was later and is still regarded by Muslims as commendable; the day is kept by the devout of the entire Sunnī world; it is holy also on "historical" grounds: on it Noah left the ark, etc. In Mecca the door of the Kaʿba is opened on the day of the ʿĀshūrāʾ for visitors (see Snouck Hurgronje, *Mekka*, ii, 51). In lands which are Shīʿite or come under Shīʿite influence quite different usages have become associated with the 10th Muḥarram; in this connexion see MUḤARRAM.

Juynboll, *Handbuch des islamischen Gesetzes*, 115 f.; Nöldeke-Schwally, *Geschichte des Qorāns*, i, 179, note; Sprenger, *Das Leben und die Lehre des Moḥammad*, iii, 53, note; Buhl, *Das Leben Muhammeds*, 214, 226; Lane, *Modern Egyptians*, Ch. xxiv. (A. J. WENSINCK)

II.—ʿĀSHŪRĀʾ (ĀSHŪRA) in the Maghrib. In practice a distinction is usually made between *ʿĀshūr*, the name given to the month of *Muḥarram*, and *ʿĀshūra*, the name of the feast celebrated on the tenth of that month. The supererogatory fast enjoined on that day seems to be unevenly kept, whilst alms-giving is a ore usual practice. Perhaps this is why children from the ḳurʾānic schools, at *ʿĀshūra*, go from door to door, singing and making collections for their masters. The dead are also honoured by visits to their tombs, which are copiously watered, and branches of myrtle are placed on them. The feast is celebrated by eating special dishes (fritters, flat cakes and gruel), and especially, eggs and poultry. Popular manifestations of *ʿĀshūra* vary according to the region and are at times on an extraordinary scale.

Three essential elements can be distinguished in the practices in use: 1) *Fire and water rites*. A bonfire of branches, leaves and grasses is built; this is very frequently lit by a person of repute, who is possessed of *baraka* [*q.v.*]. Whilst the bonfire burns, those present jump over it (*ʿammi ʿōf* of Takroûna). Also very common practices are throwing burning faggots from the bonfire into the river, mixing water with the ashes, bathing and sprinkling oneself with water. 2) *Marriage rites* (when a sacrificial animal is sometimes slaughtered). These are especially observed in Morocco: Douzrou ceremony (Tafilalet); the making of dolls and puppets representing *ʿĀshūr* and his fiancée *ʿĀshūra*, in the Region of Agadir, in the Sūs and the Middle Atlas, etc., 3) *Carnival rites*, mainly in Morocco, in Western Oran, all along the edge of the Sahara, in the Sahara, Tunisia and Libya. The Maghribī carnival (*fara*), with numerous variations, almost always includes a trial, an execution and a funeral; the victim is usually an old man or an old woman, dressed up in a burlesque costume, at times wearing animal skins or pelts or a tunic made of plaited plants (*shāyb ʿāshūra* at Ouargla, *bū-lifa* at Biskra, *bū-jlūd* in Morocco and at Tlemcen, *bū-heremma* in Southern Morocco and Oran, *bu 'l-fdām, bābā ʿēshōr* elsewhere, etc. ...). One of the figures in the *fara* is usually that of an enormous beast, a lion, a mule or a camel, which both delights and terrifies the spectators.

It is generally agreed that the complex customs of *Āshūra* in the Maghrib reflect the survival of very ancient agrarian rites, in fact the celebration of the death of the year coming to its end and the birth of their popular aspects, which are both sad and joyful. The traditional Muslim Shīʿite mourning has, in all likelihood, become grafted on to this magico-religious substratum, whilst the lunar calendar has taken over a solar year cult, subjecting it to a temporal displacement. Through these superimpositions, remains of this ancient disrupted ceremonial have, here and there, become haphazardly attached to Muslim feasts (the two *ʿīds* and *mawlid* [*qq.v.*]) and to the various periods and holidays of the agricultural year (*rās el-ʿām, ennāyr, rbīʿ, ʿanṣāra* [*qq.v.*].)

(PH. MARÇAIS)

AL-ʿĀṢĪ is the name in use among the Arabs for the Orontes. The classical name of this river, the most important in northern Syria, is preserved in Arabic literature as al-Urunṭ, al-Urund. Presumably the origin of the word ʿĀṣī, like that of the Greek Axios, must be sought in an ancient native name. The common explanation of al-ʿĀṣī = "the rebel" is a popular etymology with no actual foundation, and the name *al-nahr al-maḳlūb* = *fluvius inversus* is probably a scholarly invention.

The river-system of the ʿĀṣī begins to the north of the watershed formed by the highland-valley of al-Biḳāʿ not far from Baʿalbakk, but really only obtains its volume of water farther north near al-Hirmil from a spring, generally called simply the Orontes Spring, which wells forth in a strong stream from the rock. Following the line of the Syrian canal to its northern end, the river flows through several lakes or marshes (those of Ḳadas and of Fāmiya = Ḳalʿat al-Muḍīḳ); on its banks are situated the most important towns of central Syria, Ḥimṣ and Hamāt. At the point where the Syrian buttresses rejoin the faults of Armenia and Asia Minor the river turns away from the north and flows towards the south-west, receives the streams which, rising in the most northerly regions of Syria, discharge into the marshes of al-ʿAmḳ, and reaches the sea below Anṭākiya, to the south of the Amanus, at a point where the coast is flat and devoid of natural harbours (Seleucia and al-Suwaydiyya were artificial harbours).

The geographical peculiarities of the course of the Orontes, and its comparatively abundant flow, have long permitted the traditional use of its waters for irrigation. But the favourable conditions which it presents for large-scale modern development have as yet only given rise to partially realised projects.

AṢĪLA (now Arzila in Fr. and Port., Arcila in Span.), town and port on the Atlantic coast of Morocco, situated about 50 kms. S.S.W. of Tangiers and not far from the mouth of al-Wādī al-Ḥulw (Oued el-Helou). According to Spanish statistics, the population rose from slightly over 6,000 inhabitants in 1935 to just under 16,000 in 1949, with a majority of Muslims, a negligible Jewish minority and a small number of Europeans, mainly Spaniards.

The name Aṣīla seems to derive from the forms Ζῆλις (Strabo), Zilis (Itinerary of Antoninus and the Anonymus of Ravenna) or Zilia (Ptolemy and Pomponius Mela); but the ancient authors tell us hardly anything about the town, which may have originally been a Phoenician trading-post. In contrast, it is frequently mentioned and described by the Arab historians and geographers, among others by Ibn Ḥawḳal and al-Bakrī. According to the latter, Aṣīla was twice visited by the Normans in the 3rd/9th century. In the 6th/12th century, al-Idrīsī describes it as a small town in complete decay. But trade must have enjoyed a certain prosperity there in the 9th/15th century, because at the time of the disaster suffered by the Portuguese before Tangiers (1437), Jewish merchants and Genoese and Castilian business men were to be found there; the Waṭṭāsid sultans of Fez seem also to have made Aṣīla one of their principal bases. However, the history of the town is only really well known in the period during which it was occupied by the Portuguese (1471-1550). They took it, partly with a view to taking Tangier in the rear, on 24th August 1471, under the command of King Alfonso V, called "the African" (1438-81), with the aid of his son, the future John II. The almost immediate result of the fall of Aṣīla was the fall of Tangier, which the Portuguese entered without striking a blow. The new masters built a strong citadel at Aṣīla with a dungeon and a vast walled enclosure, which contained the whole town; the whole of these fortifications still survive today. The Portuguese garrison, in conjunction with the garrisons of Ceuta, al-Ḳaṣr al-Ṣaghīr and especially of Tangier, had constantly to contend with the hostility of the marabouts, of local chiefs (Djabal Harub), of the Ḳāʾids of al-Ḳaṣr al-Kabīr, Larache, Tetuan and Chechaouen (Mawlāy Ibrāhīm) and of the Waṭṭāsid sultans of Fez, especially Muḥammad al-Burtuḳālī: they endured several sieges; the most serious was that of 1508; the Portuguese lost the town and only retained the citadel; they were saved by the intervention of a squadron which arrived from Portugal, which was soon after reinforced by the Spanish fleet of Pedro Navarro. Furthermore, the fortress was handicapped by the insecurity of its port, which was blocked by a reef. In August 1550, King John III of Portugal (1521-57) had it evacuated —a few weeks after al-Ḳaṣr al-Ṣaghīr—with a view to concentrating all his forces in Northern Morocco at Tangier and Ceuta. In 1577, Aṣīla was reoccupied by King Sebastian (1557-78), as the price of his alliance with the Saʿdid prince Muḥammad al-Maslūkh and with a view to the expedition in which he lost his life, at the battle of the Three Kings, or the battle of al-Ḳaṣr al-Ṣaghīr (4th August 1578): it was at Aṣīla that the Christian army landed and it was from Aṣīla that it set out on 29th July 1578 to meet the Moroccan army. Philip II, King of Portugal since 1580 following the death of Cardinal Henry, gave the town back to the Saʿdid sultan al-Manṣūr in 1589. From this date onwards, Aṣīla has led a quiet and obscure existence. It formed part of the region subject to the authority of the Sharīf Raysūnī, when it was occupied in 1912 by the Spaniards, who incorporated it in their zone.

Bibliography: All the requisite information on Aṣīla prior to 1589 is collected together in David Lopes, *História de Arzila durante o domínio português*, Coimbra 1924-5 (based strictly on the sources, especially *Bernardo Rodrigues*, *Anais de Arzila*, ed. David Lopes, 2 vols., Lisbon 1915-9); see also Adolfo L. Guevara, *Arcila durante la ocupación portuguesa*, Tangier 1940, and Pierre de Cenival, David Lopes and Robert Ricard, *Les Sources inédites de l'histoire du Maroc*, Portugal, 5 vols., Paris 1934-53, and the bibliography of the article *Aṣfi* concerning the Portuguese period. For recent events: Tomás García Figueras, *Miscelánea de estudios históricos sobre Marruecos*, Larache 1949, 421 ff. (R. RICARD)

ʿĀṢIM, ABŪ BAKR ʿĀṢIM B. BAHDALA ABI 'L-NADJDJŪD AL-ASADĪ, a *mawlā* of the Banī Djudhayma of the Asad. Some say Bahdala was his mother's name and his father's name ʿAbd Allāh, though he was known Abu 'l-Nadjdjūd. He is said to have been a dealer in wheat (*ḥannāṭ*) who succeeded as-Sulamī as head of the Kūfan School of Ḳurʾān Readers, where his preeminence in Ḳurʾānic studies secured him a place as one of the Seven Readers whose systems became canonical. Indeed

through his pupil Ḥafṣ [*q.v.*] his system of pointing and vowelling the Ḳurʾānic text has become the *textus receptus* in Islam. He is classed as a Follower and had a small part in transmitting *ḥadīth*. His fame, however, was as a *ḳāriʾ* and a teacher of *ḳirāʾāt*, in which he had the reputation of being a *ḥudjdja*. In this branch of learning he is said to have been the pupil of Abū ʿAbd al-Raḥmān al-Sulamī (d. 74/693-4), Zirr b. Ḥubaysh (d. 82/701-2) and Abū ʿAmr Saʿd b. Iyās al-Shaybānī (d. 96/714-5), through one or other of whom his readings may be traced back to all the most famous names in Ḳurʾānic learning among the Companions. He had a large number of pupils who transmitted his system, but his two *rāwīs* in the canonical list are Abū Bakr b. ʿAyyāsh (d. 194) and Ḥafṣ b. Sulaymān (d. 190). He died late in 127 or early in 128/745.

(A. JEFFERY)

ʿĀṢIM, AḤMAD, imperial historiographer of the Ottoman empire, born in ʿAyntāb (the modern Gaziantep) in south-eastern Anatolia about the year 1755. He was the son of Seyyid Meḥmed, a clerk of the court, who became famous as a poet under the name of Djenānī. His family was one of the old-established ones in the place. In his early youth he acquired an equally fluent knowledge of Arabic and Persian, and this helped him in later years to achieve his fame as a translator (*müterdjim*) of well-known dictionaries. To begin with, Seyyid Aḥmed was the secretary of the law-court of his home town, and later in nearby Kilis. In 1790 he went to Istanbul, where he gained the sultan's favour with a translation of the *Burhān-i Ḳāṭiʿ* which was dedicated to Selīm III. He subsequently became a professor. In 1802 he was sent to the Ḥidjāz, and on his return he brought his whole family from ʿAyntāb to Istanbul. In 1807 he became imperial historiographer (*wakʿa-nüvis*); as such he compiled a history of the Ottoman empire (later printed in two volumes) from the peace treaty of Sistova (4 August 1791) to the accession of Maḥmūd II (28 July 1808). Later, he translated the *Ḳamūs al-Muḥīṭ* (which was reprinted several times) into Turkish. In later years he returned to his calling as a teacher, then as judge (Mulla of Selānīk, Feb. 1814), and died on 28 Sept. 1819 in Skutari, where he owned a house near the well of Nuḥ (*Nūḥ ḳuyu*). He lies buried in the Ḳaradja Aḥmed cemetery, and the inscription on his tomb is in *ʿOthmānlī Müellifleri* i, 375.

In his capacity as imperial historioriographer, he surpasses his predecessors in a presentation which is at the same time a fluent day-to-day chronicle, yet also critical in its treatment of events. Finally, he translated the Cairo chronicle of the French occupation, by al-Djabartī—which became known in Europe too (French ed. by A. Cardin, Paris 1838)—from Arabic into his mother-tongue. This version is preserved in manuscript form in Paris (Bibl. Nationale s.t. 1283; cf. E. Blochet, *Catal.*, ii, 221) and in Cairo. It was never printed because the Cairo chronicle was soon afterwards translated again by the court-physician Muṣṭafā Behdjet Efendi, and then printed (as *Taʾrīkh-i Miṣr*, 260 Ss. 12°, Istanbul 1282) after having previously appeared as a feuilleton in *Djerīde-i ḥawādith* (cf. *JAS*, 1868, i, 477 f.).

Bibliography: *Sidjill-i ʿOthmānī*, iii, 283; A. D. Mordtmann, in *Augsburger Allgem. Zeitung* of 29 June 1875, supplement no. 180; Faṭīn, *tedhkire*, 226; *GOW*, 339 f. with further bibliographical details; ʿOthmānlī Müellifleri, i, 375 f.; *Türk Meşhurlarī* (Istanbul, n.d., ca. 1946) 47 f. (with a picture which pretends to be a portrait). (FR. BABINGER)

ʿĀṢIM EFENDĪ ISMĀʿĪL [see ČELEBI-ZĀDE].

ASĪR, the *takhalluṣ* of Mīrzā Djalāl al-Dīn Muḥammad b. Mīrzā Muʾmin, Persian poet and pupil of Faṣīḥī Harawī. Born at Iṣfahān: probable date of death 1049/1639-40, though some sources give later dates. Unlike many of his contemporaries, he did not migrate to the Mughal court, but became a boon companion and close relative (according to one account the son-in-law) of Shāh ʿAbbās I. He composed most of his poetry under the influence of alcohol, from an excess of which he died. His *dīwān*, comprising *ḳaṣīdas*, *mathnawīs*, *tardjīʿ-bands* and *ghazals*, was lithographed at Lucknow in 1880.

Bibliography: The MSS. Catalogues of Rieu (British Museum), ii, 681, and Pertsch (Berlin), no. 938. *Ḳiṣaṣ al-Khāḳānī*, 163*v*.; Ethé, in *Gr. I. Ph.*, ii, 311. (R. M. SAVORY)

ʿASĪR, a region in Western Arabia named after a confederation of tribes in al-Sarāt [*q.v.*]. The concept of a separate region intervening between al-Ḥidjāz and the Yaman developed in the 19th century and is now sanctioned by official Saudi Arabian practice, which uses the name ʿAsīr for the highlands southwards from al-Nimāṣ to Nadjrān, and Tihāmat ʿAsīr for the lowlands bordering the Red Sea between al-Ḳaḥma and the Yaman frontier.

From al-Ṭāʾif to the Yaman there is no gap in the bold range of al-Sarāt. The core is crystalline rock, but in certain fault zones volcanic activity has produced lava fields, one of which, reaching the Red Sea just south of Ḥaly, used to form the natural boundary between al-Ḥidjāz and the Yaman. The main drainage divide, some 50 to 75 m. (80 to 120 km.) inland, rises abruptly to heights of over 6000 ft. (2,000 m.), with peaks over 9000 ft. (3,000 m.). Streams fed by rain from the fringe of the monsoons have carved great gorges in the steep seaward flanks. Drainage on the gentler eastern slope follows fracture zones northwards, creating the major wadi systems of Bīsha and Tathlīth, which eventually turn eastwards to empty their flood waters into Wādī al-Dawāsir. Along these wadi systems Philby traces the Road of the Elephant (*Darb al-Fīl*).

The highland capital is Abhā [*q.v.*], the centre of the confederation of ʿAsīr, which consists of Banī Mughayd, Banī Mālik, ʿAlkam, and Rabīʿa wa-Rufayda. Other important tribes are Ridjāl Almaʿ on the western slopes, Ridjāl al-Ḥidjr and Shahrān north of Abhā, and elements of Ḳaḥṭān, including ʿAbīda, from Abhā south to Ẓahrān.

Along the reef-lined coast of Tihāmat ʿAsīr are the little ports of al-Ḳaḥma, al-Shuḳayḳ, and Djayzān (classical Djāzān), the last being the capital of the district, which also embraces the Farasān Archipelago. Inland from Djayzān is an extensively cultivated area surrounding Umm al-Khashab (Baysh), Ṣabyā, and Abū ʿArīsh. Among the larger wadis debouching on the plain of Tihāmat ʿAsīr are those of ʿItwad, Baysh, and Ḍamad.

Terracing is widely practiced in the highlands, where rainfall of c. 12 ins. (30 cm.) a year provides for the cultivation of grains and fruits. Coffee is grown near the Yaman border, and *ḳāt* on the slopes of Djabal Fayfā. Grains and vegetables are raised

in Tihāma, and some indigo around Ṣabyā and Abū ʿArīsh. The *dawm* palm is cultivated for its fruit and leaves, which are woven into baskets and mats, but almost all dates come from Bīsha or by sea.

The ways of the mountaineers tend towards those of Nadjd, while the ways of the lowlanders indicate the closeness of their contact with Africa. Dwellings vary from mud-brick buildings with projecting stone tiles in the mountains to thatch huts on the coast. There are virtually no tent-dwellers in the mountains or on the coast plain, the nomads using a mat shelter. The isolation of mountain towns and ranges has contributed to the complexity and fragmentation of the tribal system. The Arabic speech of some of the tribes is held to be remarkable for its purity and freedom from outside influence, but *kashkasha* and other dialectal deviations are not uncommon.

The name ʿAsīr was originally borne by several Ḳaḥṭānite tribes centred on Abhā who had attached themselves to the ʿAdnānites of ʿAnz b. Wāʾil. Among the early divisions of ʿAnz were Rabīʿa, Rufayda, and Mālik. Other old tribes in the region were Khathʿam (including Shahrān and Aklub) and al-Azd (including al-Ḥidjr, Almaʿ, and Azd Shanūʾa, among whose branches were Ghāmid and Ẓahrān). Sections of Kināna were established along the coast.

In the time of the Ziyādids [*q.v.*] in the Yaman (204-409/819-1018), the lord of ʿAththar, Sulaymān b. Ṭarf al-Ḥakamī, held Tihāma from al-Shardjā to Ḥaly (Mikhlāf Ibn Ṭarf or al-Mikhlāf al-Sulaymānī, a name still used on occasion by the inhabitants). In 460/1067-8 the Ṣulayḥid ʿAlī b. Muḥammad defeated a Ṭarfid and his Abyssinian allies at al-Zarāʾib, ʿUmāra al-Ḥakamī's birthplace.

The Ṭarfids gave way as rulers of the Mikhlāf in the 5th/11th century to the Sulaymānid Sharīfs, who after a passing hegemony in Mecca had been supplanted there by the Hāshimids (see MAKKA). The principal Sulaymānid capital was Djayzān while lesser Sulaymānid dynasties arose in Ṣabyā, Ḍamad, etc. One of the Sulaymānids, ʿUlayy b. ʿĪsā Āl Wahhās, taught al-Zamakhsharī in Mecca; many others turned to nomadic life in the Mikhlāf. A victory of the Mahdids of the Yaman over the Sulaymānids in 560/1164-5 was instrumental in bringing about the occupation of the Yaman by Saladin's brother Tūrān Shāh. Sulaymānid authority, impaired by the advent of the Ottomans, yielded to a more vigorous local dynasty. The Khayrātids, *sharīfs* descended from the House of Ḳatāda in Mecca, in time installed themselves in the position once held by the Sulaymānids as independent rulers in the Mikhlāf; the foremost figure among them in the early 19th century was Ḥamūd b. Muḥammad Abū Mismār of Abū ʿArīsh (d. 1233/1818).

For centuries intertribal feuds had kept the highlands disunited. The missionary zeal of Wahhābism, advancing westwards from Central Arabia late in the 19th century, provided a basis for unification under Muḥammad b. ʿĀmir Abū Nuḳṭa al-Rufaydī, the first Amir of ʿAsīr al-Sarāt under Āl Saʿūd (1215-18/c. 1801-3). Under the chiefs of Rufayda, who held power until 1233/1818, the year of the fall of the Saudi capital al-Dirʿiyya, the Wahhābī tribesmen of ʿAsīr came into conflict with Sharīf Ḥamūd in the lowlands, who, though he recognised the authority of Āl Saʿūd at times, was never a sincere convert.

Muḥammad ʿAlī Pāshā's forces from Egypt, which had occupied al-Ḥidjāz as a base for the war against Āl Saʿūd, carried on campaigns to the south in al-Sarāt and Tihāma on various occasions until 1256/1840, the year of their withdrawal from Arabia under pressure from the Western powers. In 1239/1823-4 a chief of Banī Mughayd, Saʿīd b. Muslaṭ, became the dominant figure in ʿAsīr al-Sarāt, a position held by himself and his successors, with one main interruption, for the next century. In 1248/1833 ʿAlī b. Mudjaththil al-Mughaydī cooperated with Türkče Bilmez and other Albanians who had mutinied against the Egyptian authorities; later the men of ʿAsīr broke with the mutineers and defeated them. Upon ʿAlī's death in 1249/1833-4, the succession fell to ʿĀʾiḍ b. Marʿī al-Mughaydī, the first to found a dynasty in the highlands. A new advance southwards by Muḥammad ʿAlī's commanders, who took control of the Mocha coffee trade, coupled with a forward movement in Central and Eastern Arabia, prompted the occupation of Aden by the British in 1254/1839. The departure of Muḥammad ʿAlī's troops from Arabia shortly thereafter left ʿĀʾiḍ master of ʿAsīr al-Sarāt and the Khayrātids masters of al-Mikhlāf al-Sulaymānī as well as much of Tihāmat al-Yaman.

Following the death of ʿĀʾiḍ in 1273/1856-7, his son Muḥammad drove al-Ḥasan b. Muḥammad, the last of the Khayrātids, out of Abū ʿArīsh in 1280/1863. The expanding power of Āl ʿĀʾiḍ in Tihāma provoked Ottoman intervention, facilitated by the opening of the Suez Canal. In 1289/1872 Muḥammad Radīf Pāshā defeated Muḥammad b. ʿĀʾiḍ at Rayda and put him to death. ʿAsīr, established as a *mutaṣarrifiyya* attached to the *wilāyet* of the Yaman, remained under Turkish rule for more than forty years, but this rule often extended no farther than the towers of the garrison town of Abhā.

Early in the 20th century the place of the Sulaymānids was taken by Sayyid Muḥammad b. ʿAlī al-Idrīsī. He was the great-grandson of Aḥmad b. Idrīs, the founder of the Aḥmadiyya (Idrīsiyya) *ṭarīḳa* who had migrated from Morocco to Ṣabyā, which was to become the Idrīsī capital. Relying on his great prestige as a man of religion, al-Idrīsī brought the lowlands under his sway, negotiated with the Italians on the other side of the Red Sea, and laid siege to the Turks in Abhā. The Sharīf of Mecca, al-Ḥusayn b. ʿAlī, led an expedition southwards to relieve the beleaguered garrison of Sulaymān Shafīḳ Kamālī Pāshā in 1329/1911.

During the First World War, al-Idrīsī was the first independent prince in Arabia to join the British against the Turks by virtue of a treaty signed in 1333/1915. After the defeat of the Turks the British awarded the port of al-Ḥudayda to him rather than Imam Yaḥyā of the Yaman. An attempt to annex the highlands having failed, al-Idrīsī solicited the mediation of ʿAbd al-ʿAzīz Āl Saʿūd, but this was rejected by al-Ḥasan b. Muḥammad Āl ʿĀʾiḍ, the lord of Abhā since the evacuation of the Turks in 1337/1918. An expedition sent by ʿAbd al-ʿAzīz occupied Abhā in 1388/1920. Āl ʿĀʾiḍ later revolted and continued the struggle briefly, but in 1342/1923 the resistance of the dynasty ebbed away and the highlands were incorporated in the Saudi state. Muḥammad al-Idrīsī concluded a treaty with Ibn Saʿūd in 1339/1920, but the dissensions within the Idrīsid realm subsequent to his death resulted in the establishment of a Saudi protectorate. The Imam of the Yaman maintained a claim to the Idrīsid territories until the Treaty of al-Ṭāʾif finally determined their appurtenance to Saudi Arabia in 1353/1934.

(R. HEADLEY, W. MULLIGAN, G. RENTZ)

ASĪRGARH, a fortress situated 21° 28′ N., 76° 18′ E in the Burhānpūr *taḥṣīl* of the Nimār district of Madhya Pradesh, about 2,200 feet above sea level and 850 feet high from its base, dominating the only route through the Satpūra range between the Narbada and the Taptī from north west India to the Dekkan.

Probably of great antiquity (see H. Cousens, *Lists of Antiquarian Remains in the Central Provinces and Berar*, Arch. Sur. India, 1897, P. 39, A. Cunningham, *Report on a Tour in the Central Provinces*, Calcutta 1879, 120-1, *Gazetteer*, (Khāndesh) Bombay 1880, 557-58), Asīrgarh was certainly a stronghold of the Tak branch of the Čouhan Radjputs from the 3rd/9th century. It was stormed by ʿAlāʾ al-Dīn Khaldjī, then *muḳtaʿ* of Karra, in the winter of 695/1295-6 on the way back from his Dekkan raid (see Tod, *Annals and Antiquities of Rajasthan*, ed. Crooke, 1920, iii, 1463 and 1467 where the date Samvat 1351 is given), but not permanently occupied by Muslim forces until about 802/1400 when it was seized by Malik Nāṣir Khān Fārūḳī to become the supposedly impregnable stronghold of the Fārūḳī sulṭāns of Khāndesh. (See Firishta, text, ed. Briggs, ii, 544, *Āʾīn-i Akbarī*, text, ed. Blochmann, i, 475 and *Bombay Gazetteer*, loc. cit.).

Asīrgarh was captured by Akbar in 1009/1600-1, becoming the headquarters of the *marzubān* of the frontier *ṣūba* of Dāndīsh. (On Akbar's conquest see Vincent Smith, *Akbar the Great Mogul*, Sec. ed. 1902, 272-286).

In 1032/1623 Shāh Djahān, then in rebellion against Djahāngīr, took refuge at Asīrgarh and later c. 1061/1650-1 built a mosque there. In 1132/1720 it passed into the hands of Niẓām al-Mulk, *ṣūbadār* of Malwā, and was lost entirely to the Mughals in 1173/1760 when the Mahratta Badjirāo Peshwā occupied it. Asīrgarh was first captured by the British in 1218/1803 and finally occupied by them in 1234/1819.

ĀSITĀNA [see ISTANBUL].

ĀSIYA. This is the name given by the commentators to Pharaoh's wife, who is twice (xxviii, 9 and lxvi, 11) mentioned in the Ḳurʾān. She plays the same part as Pharaoh's daughter in the Bible, so that there is obviously confusion. In the second passage these words are put into her mouth: "My Lord, build me a house with thee in Paradise, and deliver me from Pharaoh and his doings and deliver me from the wicked". In connexion with this passage it is related that Āsiya endured many cruelties at the hands of Pharaoh because of her faith (she was an Israelite); and finally he even caused her to be cast down upon a rock; at her prayer God took her soul to himself, so that only the body fell on the stone.—It is also related that Pharaoh scourged her to death, but on Moses' praying to God she did not feel any pain. J. Horovitz explains the name as a corruption of Āsenath, the name of Joseph's wife in Gen. xli, 45.

(A. J. WENSINCK)

ʿĀSḲALĀN, a town on the coast of southern Palestine, one (Hebrew: ʾAshḳelōn) of the five Philistine towns known to us from the Old Testament; in the Roman period, as *oppidum Ascalo liberum*, it was (according to Schrürer, *Geschichte des Jüdischen Volkes im Zeitalter Jesu*⁴, ii, 65-7) "a flourishing Hellenistic town famous for its cults and festal games" (Dercetis-Aphrodite-shrine); in the Christian period a bishop's see (tomb of the *tres fratres martyres Aegyptii*).

ʿAsḳalān was one of the last towns of Palestine to fall into the hands of the Muslims. It was taken *ṣulḥan* by Muʿāwiya shortly after the capture of Ḳayṣariyya in 19/640, but may have been briefly occupied by ʿAmr b. al-ʿĀṣ before that. It was reoccupied for a short time by the Byzantines during the time of Ibn al-Zubayr and was subsequently restored and refortified by ʿAbd al-Malik b. Marwān (Balādhurī, *Futūḥ*, 142-4). According to an inscription from a building which was discovered by Clermont-Ganneau, the Caliph al-Mahdī in 155/772 caused a mosque and minaret to be erected there (*RCEA*, i, 32-3). After varied fortunes the town passed into the hands of the Fāṭimids, under whose rule, according to Muḳaddasī and Nāṣir-i Khusraw, it attained some prosperity. It housed a mint, and served at times as a secondary naval base. Together with some other coastal towns, it was retained by the Fāṭimids, even after the loss of the rest of Syria and Palestine to the Saldjūḳs, though sometimes this retention amounted to no more than a nominal suzerainty over the local rulers. In 492/1099 the Egyptian army retreating from Jerusalem entered the town, and for a while it seemed that ʿAsḳalān itself was about to pass under Frankish rule. It was however saved by the internal dissensions of the Crusaders, and was retained by the Egyptians. For the next century and a half it was a frontier city and a key military objective in the struggle between the Crusaders and the Muslim rulers of Egypt. For the first 53 years after the coming of the Crusaders, it

was held by the Egyptians, and used by them as a bridgehead and as a base for raids into Frankish territory. With its population swollen by refugees from the Frankish occupied areas, and its garrison reinforced from Egypt, it became a major military centre. Despite the partial resumption of trade with Jerusalem, life in this outpost was difficult, and the Egyptians found it necessary to send new supplies and relief troops several times a year (William of Tyre, XVII, 22; Ibn Muyassar, *Annales*, 92). According to William of Tyre, the whole civil population, including children, was on the army payroll. After the fall of Tyre to the Crusaders in 1134, the position of ʿAsḳalān was much weakened. To neutralise the threat which it offered to Jerusalem, the Crusaders surrounded it with a ring of fortresses, and in 548/1153, after a siege of seven months, Baldwin III got possession of the town by a combined land and sea attack. It now became the base for Frankish military and political adventure in Egypt. After the battle of Ḥiṭṭīn it had, like most of the Crusader strongholds in Palestine, to surrender to Ṣalāḥ al-Dīn (583/1187). In 587/1191, after the defeat at Arsūf, the latter found himself unable to hold ʿAsḳalān against Richard of England and therefore destroyed the town. The Muslim population migrated to Syria and Egypt, the Christians and Jews moved to Jerusalem. A vivid description of the destruction of the town and the evacuation of its inhabitants is given in the anonymous Mamlūk chronicle published by K. V. Zetterstéen (*Beiträge*, 233-5). Richard reached ʿAsḳalān in Dhuʾl-Ḥidjdja 587/January 1192 and rebuilt the fortress, but according to the peace terms of August-September of the same year, it had again to be demolished. The rivalries between al-Ṣāliḥ Ayyūb of Egypt and al-Ṣāliḥ Ismāʿīl of Damascus once more let it slip into the hands of the Franks. It was garrisoned and refortified by the Hospitallers, who successfully defended it against an Egyptian attack in 642/1244. After the decisive battle of Ghazza (17 Oct. 1244), ʿAsḳalān could, however, no longer expect help, and it fell in 645/1247 to Fakhr al-Dīn Yūsuf b. al-Shaykh. In order to make it impossible for the Christians to effect a landing, the Mamlūk Sultan Baybars [*q.v.*] demolished a number of places on the Palestine coast, and in 668/1270 levelled the last vestiges of ʿAsḳalān, filling the harbour with trees and rubble (Maḳrīzī, *Sulūk*, 1, 590). The town, which had never recovered from its demolition by Saladin, remained desolate until modern times. Abu 'l-Fidā (239), Ibn Baṭṭūṭa (i, 126), Mudjīr al-Dīn (432), Pīrī Re'is (*Baḥriyye* 724, English trans. by U. Heyd, ***A Turkish Description of the Coast of Palestine, Israel Exploration Journal***, vi, 1956, 205-7) and Volney (*Syrie*, ch. 10) all describe it as ruined.

In antiquity and the Middle Ages the environs of the town were famous for their wine, sycamores and henna (Kypros). It has given its name to a species of onion (shallot = ***allium ascalonicum***). Mediaeval authors, using an expression attributed to the Prophet, often call ʿAsḳalān the "Bride" of Syria, *Sponsa Syriae*, "*ʿArūs al-Shaʾm*".

In the period of the Shīʿite supremacy of the Fāṭimids falls the construction by al-Afḍal b. Badr al-Djamālī (491/1098) of the Mashhad for the reception of the head of the Prophet's grandson, Ḥusayn. This highly venerated relic was in 548/1153-54 saved from the Franks and carried off to Cairo (cf. Maḳrīzī, *Khiṭaṭ*, I, 427; Mehren, *Câhirah og Kerâfat*, Copenhagen 1870, ii, 61-2; *RCEA* vii 261-3; Ibn Taymiyya (ed. Schreiner, *ZDMG*, 53, 81-2) dismisses the whole story as a fable). Besides Ḥusayn's chapel, later Muslim pilgrims visited, in particular, Abraham's Well.

(R. Hartmann-[B. Lewis])

AL-ʿASḲALĀNĪ [see IBN ḤADJAR].

AL-ʿASKAR [see DJAYSH].

AL-ʿASKAR [see SĀMARRĀ].

ʿASKAR MUKRAM ("Mukram's Camp"), formerly a town built on the site of a camp pitched by an Arab leader named Mukram whom al-Ḥadjdjādj had sent to Khūzistān to suppress a revolt near al-Ahwāz. This camp or cantonment adjoined the ruins of Rustam Ḳawādh (corrupted by the Arabs into Rustaḳubādh), a Sāsānian town which the Muslim Arabs had destroyed. ʿAskar Mukram was situated on both sides of the Masruḳān canal (the modern Āb-i Gargar) just above the point where it now flows into the Shaṭayṭ (= Shuṭayṭ, "the small river"), the main arm of the Kārūn (at the time of which we write, the Masruḳān canal joined the Shaṭayṭ much further to the south, near al-Ahwāz); furthermore, the Dizfūl Rūd (modern Āb-i Diz) flowed into the Shaṭayṭ just west of the town. Owing to its favourable situation and its relatively good climate (see Ḥamd Allāh Mustawfī, *Nuzha*, 112), ʿAskar Mukram developed into a flourishing town and became the chief place on the Masruḳān canal; two bridges of boats linked the two parts of the town. It was a mint-town during the 4th/10th century, under the Būyid ruler Muʿizz al-Dawla; cf. *ZDMG*, xi, 452. The ruins now known as the Band-i Ḳīr ("Bitumen Dam") are those of ʿAskar Mukram; the remains of that town and of earlier cities cover an area of nearly 9 sq. m. (see Layard, ***A Description of the Province of Khuzistan***, in *JR Geog. S* xvi, 52, 63, 64, 95 and 96). The inhabitants of Shushtar (Arab. Tustar) wrongly identify with ʿAskar Mukram some ruins near their city, which they therefore call Lashkar (Persian = Arab. al-ʿAskar; according to Ḥamd Allāh Mustawfī, ʿAskar Mukram was formerly known as Lashkar).

(M. Streck-[L. Lockhart])

ʿASKARĪ; from *ʿaskar*, soldier; in Ottoman technical usage a member of the ruling military caste, as distinct from the *reʿāyā*—the subject population of peasants and townspeople (*reʿāyā* sometimes means the subjects generally, sometimes only the peasants). The term ʿaskarī denoted caste rather than function; it included retired or unemployed ʿaskarīs, the wives and children of ʿaskarīs, manumitted slaves of the Sultan and of the ʿaskarīs, and also the families of the holders of religious public offices in attendance (*mulāzemet*) on the Sultan.

The Ottoman ʿaskarī class comprised both the slave military establishment (see KUL) and the feudal levies (see SIPĀHĪ). The latter seem to have originated with the g͟hāzīs who established themselves in the conquered lands. They were further recruited from the military landed gentry of the newly acquired territories, some of whom retained their Christian faith for a generation or two before becoming assimilated to Ottoman Islam.

In matters of personal status the Muslim ʿaskarīs, like the Muslim reʿāyā, were generally subject to the provisions of the S͟harīʿa but were under the special jurisdiction of the Ḳāḍī-ʿasker [*q.v.*]; in administrative, fiscal, and disciplinary matters they were ruled by special codes of regulations issued by by the Sultan—the *ḳānūn-i sipāhiyān*. This assured them important privileges and exemptions, as against the *reʿāyā*, who were, for example, forbidden to bear arms, ride horses, or hold fiefs. The ʿaskarīs were in theory not a privileged feudal aristocracy; they had no prescriptive or hereditary right to fief, office, or status, all of which could be conferred or withdrawn at the will of the Sultan. In fact the Sultan normally confined these fiefs and offices to members of the ʿaskarī class, who were still considered as such even when deprived of office or fief. On the other hand it was regarded as contrary to the basic laws of the Empire to appoint men of peasant stock (apart of course from the *dews͟hirme* of boys) to ʿaskarī positions; Koču Bey and later memorialists adduce the violation of this rule as one of the causes of Ottoman decline. An ʿaskarī could, by decree, be demoted to the *reʿāyā* class or a *raʿiyya* promoted as a reward for exceptional services to be an ʿaskari. Both were infrequent in the early period. By the early sixteenth century, however, Sultan Suleymān found it necessary to issue a decree confirming sipāhīs of peasant descent in their fiefs, and protecting them from dispossessment on these grounds. In the period of decline the dilution of the military caste by the intrusion of peasants and townspeople becomes a common complaint. By the 18th century the extension of the fiefs to the peasantry and of Janissary affiliation to the merchants and artisans had distributed the status of ʿaskarī so widely as to deprive it of any real meaning.

(B. LEWIS)

AL-ʿ**ASKARĪ**. Two Arabic philologists of the 4th/10th century, both bearing the same name al-Ḥasan b. ʿAbd Allāh, but of a different *kunya*, are known by this name, a relative noun derived from ʿAskar Mukram in K͟hūzistān.

(i) ABŪ AḤMAD AL-ḤASAN B. ʿABD ALLĀH B. SAʿĪD was born in ʿAskar Mukram, on 16 S͟hawwāl 293/11 August 906 and died there on 7 D͟hu ʾl-Ḥid͟d͟ja 382/3 Febr. 993. The date 387/940 is less probable. He began his studies under his father and the traditionist ʿAbdān, d. 306/919, and continued them at Bag͟hdād, Baṣra, and Iṣbahān under Ibn Durayd, d. 321/933, and the traditionists al-Bag͟hawī, d. 317/929, and Ibn Abī Dāwūd al-Sid͟jistānī, d. 316/929. He also met al-Ṣūlī and other men of letters. Then he returned to ʿAskar Mukram. He declined an invitation of the vizier al-Ṣāḥib Ibn ʿAbbād, but paid him a visit when the latter came to ʿAskar Mukram. He went several times to Iṣbahān where his brother, the traditionist Abū ʿAlī Muḥammad had settled, e.g. in 349/960 and again in 354/965. He was a scholar of vast erudition and wrote a number of books (see Brockelmann S I, 193) but he was little known outside of K͟hūzistān; Yāḳūt had great difficulties in obtaining information about him. His chief work, the *Kitāb al-Taṣḥīf*, contains useful information about rare and difficult words and proper names occurring in traditions and poems and misunderstood by their transmitters. It was utilised by Yāḳūt (*Muʿd͟jam*, vi, 384) and by ʿAbd al-Ḳādir al-Bag͟hdādī (see *Iḳlīd al-K͟hizāna*, 31 f.). Much of his learning has been preserved through the writings of his pupil Abū Hilāl al-ʿAskarī.

Bibliography: Abū Nuʿaym, *Geschichte Iṣbahāns*, i, 272, ii, 291; Samʿānī, *Ansāb* fol. 390 b; Yāḳūt, *Irs͟hād*, iii, 126-135; Ibn K͟hallikān, Cairo 1299, i, 234 f.

(ii) ABŪ HILĀL AL-ḤASAN B. ʿABD ALLĀH B. SAHL. Of his life very little is known. He was a pupil (but not a sister's son, for he never calls him *k͟hālī*) of the aforesaid Abū Aḥmad al-ʿAskarī and owed to him the bulk of his learning, as is proved by the numerous references in his writings. He wrote amongst other works (see Brockelmann, I, 126 and S I, 193 f.) for the benefit of budding writers (1) *Kitāb al-Ṣināʿatayn al-Kitāba wa ʾl-S͟hiʿr* (Istanbul 1320, Cairo 1952; cf. P. Schwarz, in *MSOS* ix, 206-230), a systematic handbook of rhetoric. (2) *Dīwān al-Maʿānī* (Cairo 1352), an anthology of the most elegant and original expressions of ideas met with in poetry and prose. (3) *Kitāb al-Furūḳ al-Lug͟hawiyya* (Cairo 1353) dealing with synonymous words. (4) *al-Muʿd͟jam fī Baḳiyyat al-As͟hyāʾ* (Cairo 1353; abridged ed. by O. Rescher, in *MSOS*, xviii, 103-130), a list of words meaning "remainder". (5) *D͟jamharat al-Amt͟hāl* (Bombay 1306-7 and on the margin of al-Maydānī, Cairo 1310), a collection of proverbs. Not yet published is his *tafsīr* whose title *Maḥāsin al-Maʿānī* suggests that he dealt mainly with the stylistic beauties of the Ḳurʾān. The latest known date of his life is the year 395/1005 in which he finished dictating his *Kitāb al-Awāʾil* on the so-called inventors of arts etc. (Yāḳūt, *Irs͟hād*, iii, 138). He is said to have died after 400/1010.

(J. W. FÜCK)

AL-ʿ**ASKARĪ**, Abu ʾl-Ḥasan ʿAlī b. Muḥammad. the tenth Imām of the Twelver S͟hīʿa. He is commonly known as al-Naḳī and al-Hādī. He was the son of the ninth Imām Muḥammad b. ʿAlī al-Riḍā [*q.v.*], and was born in Medīna. Most S͟hīʿite authorities give the date of his birth as Rad͟jab 214/Sept. 829, though others say that he was born in D͟hu ʾl-Ḥid͟jd͟ja 212 or 213/Feb.-March 828 or 829. His mother, according to some sources, was Umm al-Faḍl, the daughter of al-Maʾmūn; according to others she was a Mag͟hribī *Umm Walad* called Sumāna or Sūsan. The latter story seems more likely in view of the statement in some chronicles that the marriage between Muḥammad b. ʿAlī al-Riḍā and Umm al-Faḍl, though contracted in 202/817-8, was not consummated until 215/830. (al-Ṭabarī, iii, 1029, 1102-3; al-Masʿūdī, *Murūd͟j*, vii, 61-2; al-Yaʿḳūbī, ii, 552-3. Some S͟hīʿite traditions say that Umm al-Faḍl poisoned her husband and died childless—al-Mad͟jlisī, *Biḥār*, xii 99 ff.). His father died in 220/835, and like him he became Imām while still a small child. (Echoes of the doctrinal problems which this raised may be found in S͟hīʿite theological works). He lived peacefully in Medina until the accession of al-Mutawakkil, whose anti-ʿAlid policy soon brought him into difficulties. In 233/847-8 or 234/848-9, on the bsais of reports reaching the Caliph that Abu ʾl-Ḥasan was engaged in seditious activities, Yaḥyā b. Hart͟hama b. Aʿyan was sent to Medina to escort him to Sāmarrā (al-Ṭabarī, iii, 1379; al-Nawbak͟htī, 77; *Nud͟jūm* ii, 271). He seems to have won the Caliph's respect and, though kept under surveillance, was not molested. He was greatly esteemed for his piety and modesty. He remained in Sāmarrā until his death, which took place in D͟jumādā II or Rad͟jab 254/June-July 868. His *nisba* al-ʿAskarī derives from ʿAskar Sāmarrā. He was buried in his home in that town. According to S͟hīʿite tradition he was poisoned by the Caliph (cf. al-Masʿūdī, *Murūd͟j* viii, 383, who already appears to know this story). The *Maḳātil al-Ṭālibiyyīn*, however, does not include him among the ʿAlid martyrs. His *bāb* was Muḥammad b. ʿUt͟hman al-ʿAmrī (d. 304 or 305/916-8), whose father ʿUt͟hmān b. Saʿīd had been *bāb* and *wakīl* of the eighth and ninth Imāms (al-Mad͟jlisī, 150, where his *t͟hiḳāt* and *wukalā* are also listed; al-Astarābādī, *Minhād͟j al-Maḳāl*, Tehran 1306, 305). The Twelver S͟hīʿa recognised his son al-Ḥasan, also called al-ʿAskarī, as eleventh Imām. Another group, however, believed that his son Muḥammad, who predeceased him, was the hidden Imām (al-Nawbak͟htī, 78-9, 83). Possibly connected with this group was Muḥammad b. Nuṣayr al-Namīrī, who attributed divine status to ʿAlī al-Naḳī and claimed to be his *bāb* and his prophet; he is regarded as founder of the Nuṣayriyya [*q.v.*] (al-Nawbak͟htī 78; al-As͟hʿarī, *Maḳālāt*, i, 15; al-Kas͟hs͟hī, *Rid͟jāl*, 323; cf. the Nuṣayrī, *Mad͟jmūʿ al-Aʿyād*, ed. R. Strothmann in *Isl.*, 1946, index s.v. Abu ʾl-Ḥasan Alī al-Askarī).

Bibliography: a full account, with citation of sources, of the life, works, miracles, companions, and dealings with the Caliphs of the 10th Imām is given in Muḥammad Bāḳir al-Mad͟jlisī, *Biḥār al-Anwār*, xii, Tehran 1302, 126-153. Earlier notices are contained in al-Masʿūdī, *Murūd͟j*, vii, 206-9, 379-383; al-Yaʿḳūbī (Houtsma), ii, 614; Ibn K͟hallikān, i, 445-6 (De Slane's translation, ii, 214-6); al-Nawbak͟htī, *Firaḳ al-S͟hīʿa*, ed. Ritter, 77; Mufīd, *al-Irs͟hād*, Tehran 1308, s.v.; In addition to the texts cited in the article, reference may also be made to al-S͟hahrastānī, ed. Cureton, i, 128 ff., ed. Badrān 347-8; Abu ʾl-Maʿālī, *Bayān*, ed. Schefer, 164 ff., ed. Ikbāl 42; D. M. Donaldson, *The Shiʿite Religion*, London 1933, 209 ff.; J. N. Hollister, *The Shiʿa of India*, London 1953, 87-89.

(B. LEWIS)

AL-ʿ**ASKARĪ**, AL-**ḤASAN** [see AL-ḤASAN AL-ʿASKARĪ].

AṢL [see UṢŪL].

AL-**AṢLAḤ**, the most suitable or fitting, a term used by theologians in a technical sense. The "upholders of the *aṣlaḥ*" were a group of the Muʿtazila who held that God did what was best for mankind. It is nowhere stated who composed the group. Abu ʾl-Hud͟hayl held that God did what was best for men. Al-Naẓẓām introduced the refinement that there were an infinite number of equally good alternatives, any of which God might adopt instead of acting as He does; in this way he avoided the implication that God's power is finite. Others, because of the difficulty of maintaining that the actual world is the best possible, said that it was only in religion that God did what is best for men, viz. sent prophets to guide them. There was much diversity of opinion on this point among the Muʿtazila. The orthodox later used the story of the three brothers to show the absurdity of the view. One brother died young and went to Paradise; one grew up and was good and went to a higher place in Paradise; and one became wicked and went to Hell. If one tries to justify the lack of opportunity of the first to gain the highest position by saying that God knew he would become wicked if he grew up, then, on the suppositions of the "upholders of the *aṣlaḥ*", it is impossible to explain why God did not cause the third to die young (cf. al-Bag͟hdādī, *Uṣūl al-Dīn*, Istanbul 1346/1928, 150 f.). The later Muʿtazila of Baṣra seem to have made similar criticisms of the Muʿtazila of Bag͟hdād.

Divested, however, of the suggestion that a certain course of action was obligatory for God, the concept of *aṣlaḥ*, identified with God's wisdom (*ḥikma*), has survived in orthodox Islam and found literary expression, for instance, in the *al-Risāla al-kāmiliyya* of Ibn al-Nafīs [*q.v.*] (cf. J. Schacht, in *Homenaje a Millás-Vallicrosa*, ii, Barcelona 1956, 325 ff.).

Bibliography: As͟hʿarī, *Maḳālāt*, Istanbul 1929, i, 246-51, ii, 573-8; K͟hayyāṭ, *Intiṣār*, Cairo 1344/1925, 8 ff., 24 f., 64 f., Bag͟hdādī, *Farḳ*, 116, 167; D͟juwaynī, *Irs͟hād*, Paris 1938, 165 ff. (= tr. 255 ff.); Goldziher, *Vorlesungen*[2], 99; A. J. Wensinck, *Muslim Creed*, Cambridge 1932, 79-82; on the origin and background of the term, J. Schacht, in *St. I.*, i, 29.

(W. MONTGOMERY WATT)

ASMĀʾ, daughter of the caliph Abū Bakr by his wife Ḳutayla bint ʿAbd al-ʿUzzā of ʿĀmir b. Luʾayy. She was the elder half-sister of ʿĀʾis͟ha, and one of the early converts to Islam in Mecca. At the time of Muḥammad's flight from Mecca with Abū Bakr, she tore her girdle in two to serve for the Prophet's provision-bag and the strap of his water-skin; this is the traditional explanation of her nickname *D͟hāt al-Niṭāḳayn*, "She of the Two Girdles". After the Hid͟jra she was married to al-Zubayr b. al-ʿAwwām [*q.v.*], and their son ʿAbd Allāh was reputedly the first child born in the Muslim community at al-Madīna. She is said to have had four other sons and three daughters. Apart from several anecdotes illustrating her piety and self-denial, little more is reported of her except her courageous behaviour before and after the death of her son ʿAbd Allāh b al-Zubayr [*q.v.*]; in connexion with this she is credited with circulating a Tradition

from the Prophet denouncing the "two liars" (*al-kadhdhābāni*) who should issue from Thaḳīf (i.e. al-Mughīra b. Shuʿba and al-Ḥadjdjādj b. Yūsuf). She died in Mecca shortly afterwards, in 73/693.

Bibliography: L. Caetani, *Chronographia Islamica*, A.H. 73, § 36; Ibn Saʿd, viii, 182-6; Ibn Ḥanbal, *Musnad*, Cairo 1313, vi, 344-55.

(H. A. R. GIBB)

AL-ASMĀʾ AL-ḤUSNĀ.—"The most Beautiful Names", these being the divine Names. "To God belong the most Beautiful Names—pray to Him, using (these Names)", Ḳurʾān, vii, 179. Cf. xvii, 110; xx, 8; lix, 24 etc. Pious Muslims have always revered the mystery of the Name, which at one and the same time both designates and veils the Named (cf. *ḥidjāb al-ism*).

The Theological question. A chapter of "Muslim theology" (*ʿilm al-tawḥīd*) is devoted to the divine Names. Problem stated: can one name God, and what, with regard to God, do the Names attributed to Him mean? *Preliminaries*: What is the name (*ism*)? Is it identical with the named (*musammā*) and with the denomination or definition (*tasmiya*)? On this problem in general see ISM. *Application of the divine Names.* The reply of the narrators of Tradition, reiterated by the strict Ashʿarites, is: the divine Names can only be given to God by *tawḳīf*, i.e. by preconcerted "determination"; by which we understand: as God Himself has "determined" it in the Ḳurʾān and secondarily in the *Sunna*. The employment of the latter in this connexion must be limited to "authentic" (*ṣaḥīḥ*) and "good" (*ḥasan*) *ḥadīth*. Some people admit a possible determination derived through *idjmāʿ*. According to the Muʿtazilites and the Karrāmiyya: when *ʿaḳl* (Reason) proves that an attribute (either of existence, or negative or of action) is suitable to God, it is permissible to employ the corresponding Name, whether or not it is mentioned by the texts. This is a case of attribution of the Name by human reason. Al-Ghazzālī admits this solution for those attributes (*ṣifāt*) which, he says, designate a significate added to the essence; he does not admit it for the employment of the Name designating the divine essence itself. "Middle" solution of the Ashʿarite al-Bāḳillānī, followed by many later Ashʿarites: if the text or the tradition gives an attribute to God or speaks to us of an act of God (but in these cases only), "according to the rules of the language", one may designate Him by the corresponding Name, even though the texts do not "determine" it. And one should in particular exclude non-scriptural names, which would evoke a notion incompatible with the absolute divine perfection. (God should not be called *ʿārif*, as *maʿrifa* "presupposes that some inattention has been overcome"; likewise He should not be called *faḳīh*, *ʿāḳil*, etc.). According to this thesis, which has become current, the Names must, therefore, either be scriptural or at least have a scriptural derivation. *Two related problems*: a) the Names are eternal, Ashʿarite thesis, in opposition to the Muʿtazilite thesis, which holds them to be contingent; b) Ḥanafite-Māturīdite line: they are equal in importance and excellence (cf. *Fiḳh Akbar*, ii, 26); Ashʿarite line: a hierarchy exists among them with the Name *Allāh* taking precedence (or, as the Ṣūfīs are prone to say, with some other Name known to the initiated, or even the ineffable Name, only attained through initiate experience, taking precedence).

The 99 Names. A *ḥadīth*, transmitted by Abū Hurayra, states: "To God belong 99 Names, a hundred less one; for He, the Odd Number (= the Unique) likes (to be designated by these enumerated Names) one by one; whosoever knowns the 99 Names, will enter paradise". The meditated recitation of these Names became one of the most diligent devotions in Islām. The pious Muslim repeats them and meditates on them, usually with the help of the 99 beads of the *subḥa* ("rosary") [*q.v.*], except for the Wahhābīs, who object to this custom as being a reprehensible *bidʿa* ("innovation"). It appears that a Syriac (Christian) custom already made use of the *subḥa* to count off an enumeration of divine Names, which was much shorter than the Muslim enumeration.

In fact, on the one hand, the traditional 99 "most Beautiful Names" do not exhaust the list of all the Ḳurʾānic Names; on the other hand, some of them do not occur *ad litteram* in the Ḳurʾān. As a result, the list was not always absolutely fixed and was liable to contain variants. It does not suffice, therefore, to settle the entire question of the divine Names. But the place held by this recitation in Muslim piety gives it an outstanding importance. It expresses clearly enough the pious Muslim's faith in God, and what the supreme Name *Allāh*, which, in itself, recapitulates all the others, means for him. We shall reproduce the most usually accepted list, in accordance with the *ḥadīth*, with a translation and a brief commentary. As space does not permit us to trace its usage historically, we shall take it in its finished form, as given by most of the *tafsīr* to Ḳurʾān, xvii, 110. Fairly frequently the Name *Allāh* is as though set apart, the hundredth Name if one so desires (thus the *tafsīr* of the Djalālayn). But it is also at times considered as the first of the enumeration; in which case the 67th Name *al-wāḥid* is suppressed and joined to the 68th *al-aḥad*. Main references: *al-Maḳṣad al-Asnā* of Ghazzālī (Cairo ed. n.d.), especially 23-72; *Mawāḳif* of ʿAḍud al-Dīn al-Īdjī, commentary by al-Djurdjānī (*Sharḥ al-Mawāḳif* Cairo ed. 1325/1907 vol. 8 211-17) who himself refers to al-Ghazzālī and to Sayf al-Dīn al-Āmidī.

The usual order may be established as follows: the first 13 Names (or Names 2 to 14 when the list starts with *Allāh*) refer to the Ḳurʾānic enumeration of verses lix, 22-24. The subsequent order seems to be mainly mnemotechnic, governed by assonances, associations of verbal forms, doublets having both a correlative and paradoxical sense, etc. Connexion with the attributes (*ṣifāt*), where indicated by us, is that put forward by al-Ghazzālī or al-Djurdjānī. Also to be noted: the Arabic root of several of these Names expresses different, sometimes opposite meanings, which are, therefore, present together in the mind of the Muslim reciting and meditating on the *subḥa*. It is therefore impossible at times to translate a Name into a European language by one single word.

List of the "99 most Beautiful Names". 1) *Allāh*, name belonging to God, "designates God Himself and may not be applied to any other thing"; 2) and 3) *al-raḥmān al-raḥīm*, the Benefactor (or the Merciful), the Compassionate: depend on the attribute of will, both connoting the same sense; however according to al-Ghazzālī, *raḥmān*, unlike *raḥīm*, may only be applied to God (reminder of Raḥmān, divine proper Name?); 4) *al-malik*, the King, indicates independence (negative attribute) towards all things, the dependence of everything as regards God (active attribute), and the perfection of the divine power (attribute of power); 5) *al-ḳuddūs*, the

Holy, in the sense of Separated (negative attribute), indicates: a) the absence of all blemish; b) that neither imagination nor sight can penetrate the mystery of God; 6) *al-salām*, Peace: a) possessor of a flawless peace (negative attribute); b) giver of peace and salvation at the beginning of the creation and at the time of the resurrection (active attribute); c) will pronounce the benediction of peace over his creature (attribute of speech); 7) *al-muʾmin*, the Believer: a) with regard to this Name, the doctors of *kalām* speak of God's "increate faith" in Himself; Īdjī comments: God is *muʾmin* in as much as He puts faith in Himself and in His Messenger, meaning that He authenticates Himself and authenticates His Messenger by His supreme Veracity; this He accomplishes either by affirming Himself and His Messenger (attribute of speech), or by working, by "creating" the miraculous proof; b) God may also be called *muʾmin* towards his disciples as a source of security and protection (*amān*); 8) *al-muhaymin* the Vigilant: a) ever present witness, whose cognisance is on guard over everything (attribute of knowledge); b) to be associated with *amīn*, taken as sincere, truthful in His speech (attribute of speech); 9) *al-ʿazīz*, both the Powerful and the Precious; a) negative attribute: means according to al-Ghazzālī, rare, very precious and difficult to obtain,—God is so rare that He is absolutely Unique, so necessary that nothing would exist without Him, so inaccessible that He alone can know Himself; according to al-Īdjī: without father or mother, whom no place can contain, and nothing resembles Him; b) attribute of action: He punishes whomsoever He wishes, is the Master of the retribution for actions; 10) *al-djabbār*, the Very Strong, the "Oppressor", which no thing or will may resist; according to another sense of the root *djbr*: who sets to right, who restores, according to His Desire, what concerns His creatures. Depending on the circumstances: attribute of action, or negative and positive together. Synonym: *ʿaẓīm*, with the sense "all deficiency is diverted therefrom"; 11) *al-mutakabbir*, the Haughty;—according to al-Ghazzālī: everything seems base to Him in the sight of His Essence; al-Īdjī—al-Djurdjānī: meaning also very close to *ʿaẓīm*; 12) *al-khāliḳ* and 13) *al-bāriʾ*, according to al-Īdjī—al-Djurdjānī have a single sense: the Producer, the Creator of things; 14) *al-muṣawwir*, the Organiser, who ordains and composes the forms (*ṣuwar*) of things. These last three Names depend on attributes of action. Al-Ghazzālī analyses them more closely: all three connote the passage from non-being to existence, the first towards determination, in accordance with the divine decree (*ḳadar*); the second towards existentialisation properly so called (*wudjūd*); the third towards the co-ordination of forms, according to the best of ordinances.

The Names 2 to 14 are given in the same order ap. *Ḳurʾān*, lix, 22-24. Now follow Names grouped in preference according to euphony.

15) *al-ghaffār*, the Indulgent, pre-eminently the Pardoner, who knows how to remit the sentence of punishment even for one who deserves it (al-Ghazzālī makes it, by participation, the human qualificative of Jesus, just as he made *al-djabbār* the qualificative of Muḥammad): attribute of will; 16) *al-ḳahhār*, the Dominator, He who always subdues, dominating and never dominated (negative attribute of action); 17) *al-wahhāb*, the constant Giver, who gives abundantly, receiving nothing in return (active attribute); 18) *al-razzāḳ*, the Dispenser of all good, who dispenses what pleases Him; primarily concerns the physical needs of every human being (al-Djurdjānī), but also the spiritual needs of rational creatures (al-Ghazzālī), —attribute of action; 19) *al-fattāḥ*, (three shades of meaning according to the various connotations of the root), a) the Victorious, who vanquishes difficulties and brings about victory (active attribute); b) the Judge, whether pronouncing sentence (attribute of speech), or making known the decision (attribute of will); c) the Revealer, who discloses to men that which remained concealed from them (al-Ghazzālī); 20) *al-ʿalīm*, Knowing in a perfect manner everything which is knowable: Name directly bound to the attribute of knowledge (*ʿilm*) which is an attribute of essence (*dhātī*); a "natural" (*ḥaḳīḳī*) attribute is involved, says al-Djurdjānī.

The six following Names, whilst referring to Ḳurʾānic roots, are not to be found *ad litteram* in the Ḳurʾān: they are therefore regarded as "traditional". They go in pairs, opposites and correlatives at the same time, and express the absolute gratuitousness of God's gift. 21) *al-ḳābiḍ*, he who restrains, and 22) *al-bāsiṭ*, he who expands (the lives, the hearts of his servants); 23) *al-khāfiḍ*, who humbles and humiliates, and 24) *al-rāfiʿ*, who raises in dignity; 25) *al-muʿizz*, who gives honour and strength, and 26) *al-mudhill*, who abases and degrades;

27) *al-samīʿ*, the Hearer, and 28) *al-baṣīr*, the Seer: God hears and sees all things, according to two "attributes of the essence", which the Ḳurʾān affirms, and which reason, this time, cannot prove; *al-ḥakam*, the Judge in his act of sovereign decision; idea of wisdom and providence (al-Ghazzālī), attached to the attributes of knowledge, speech, action; 30) *al-ʿadl*, the Just, who is supreme Justice,—nothing bad can come from Him (negative attribute); 31) *al-laṭīf*, the Benevolent, who creates in His servants a grace of benevolence (*luṭf*), to come to their help (attribute of action); 32) *al-khabīr*, a) the Sagacious, very close to *ʿalīm*, in the sense of knowing the intimate secrets of creatures (attribute of knowledge); b) who choses, who decides freely (attribute of speech); 33) *al-ḥalīm*, endowed with gentleness, who is slow to punish (negative attribute); 34) *al-ʿaẓīm*, the Inaccessible (cf. the sense given with regard to *al-djabbār*); according to al-Ghazzālī: is beyond the limits of human understanding, just as the earth and sky cannot be taken in at a single glance;

35) *al-ghafūr*, the Very Indulgent, who pardons much; a) according to al-Īdjī—al-Djurdjānī: identical in meaning to *al-ghaffār*, just as *al-raḥmān* and *al-raḥīm* are identical in meaning; b) according to Ghazzālī: *al-ghaffār* stresses that God pardons even repeated sins, whereas *al-ghafūr* conveys in an absolute manner and without precision the infinite pardon of God; 36) *al-shakūr*, the "Very Grateful", in a metaphorical sense, coming from *shukr* (gratefulness), i.e.: a) who gives much as reward for little (attribute of action), b) and proclaims the eulogy of whomsoever obeys him (attribute of speech);

37) *al-ʿalī*, the High; for al-Īdjī: synonym of *al-mutakabbir*; for al-Ghazzālī: God, primary Cause, is on the highest step of the scale of beings; 38) *al-kabīr*, the Great; for al-Īdjī: synonym of *al-mutakabbir* and of *al-ʿalī*; for al-Ghazzālī: synonym of *al-ʿaẓīm*, stresses the absolute perfection of the being of God, whose eternal existence is the source of the being of all creatures; 39) *al-ḥafīẓ*, the vigilant Guardian! sense close to *ʿalīm* according to al-Īdjī, for vigilance (*ḥafẓ*) is the opposite of negligence and forgetfulness, and therefore has its origin in *ʿilm*; a) God is Vigilant, continually

in action, by this action watching over the whole universe, without having to give His attention to things one after the other (negative attribute); b) He assures the permanence of created forms, by a vigilance which resists depredations (attribute of action); 40) *al-muḳīt* (four shades of meaning), a) the Nourisher, source of strength, for He creates nourishment (physical and spiritual): synonym of *al-razzāḳ* (al-Ghazzālī), b) the Determiner, who decrees and fixes destiny, attribute of power (*ḳudra*); c) the Witness (*shahīd*), who knows the Mystery (*al-ghayb*), attribute of knowledge; d) the Present; 41) *al-ḥasīb*, the Calculator, He who settles accounts: a) who gives sufficiency, for He creates for His servants what is sufficient for them (active attribute); b) who, by His words, asks of whomsoever is submissive to the Law, account of what he does of good and of evil (attribute of speech); 42) *al-djalīl*, the Majestic, worthy of veneration: a) according to al-Ghazzālī, it is the stress placed on the Beauty of the divine Being which distinguishes this Name from *al-mutakabbir* and *al-ʿaẓīm*, with their adjacent meanings; b) according to al-Īdjī, synonym of *al-mutakabbir*; c) according to al-Djurdjānī, qualified by the attributes of majesty (*djalāl*) and of beauty (*djamāl*): 43) *al-karīm*, the Generous; four shades of meaning: a) endowed with liberality (attribute of action); b) who fixes the measure of generosity (attribute of power); c) from whom comes all nobility (attribute of relation); d) who pardons faults; 44) *al-raḳīb*, the jealous Guardian, sense close to *ḥafīẓ* (and thus derived from the sense of *ʿalīm*); according to al-Ghazzālī, with a stress placed on an absolute and jealous vigilance; 45) *al-mudjīb*, the Assenter, who grants prayers; al-Ghazzālī: who hastens to satisfy the needs of creatures, who anticipates them; 46) *al-wāsiʿ*, the Omnipresent, who embraces and contains all things: He extends His generosity to everything which exists, His knowledge to everything which is knowable, His power to everything which may be determined by it, absolutely and without His having to pay attention successively to things (al-Djurdjānī); 47) *al-ḥakīm*, the Wise; a) synonym of *al-ʿalīm* (al-Īdjī), endowed with wisdom, i.e. with knowledge of things as they come from Him and with the production of actions according to what is expedient; b) the Prudent in His decisions: which corresponds to the perfect soundness of His providence in the guidance of the world and to the benefit from the accomplishment of His decrees; 48) *al-wadūd*, the Very Loving; a) who loves the well-being of His creatures and procures it for them gratuitously; b) refers to the attribute from which proceeds the praise He bestows on the believer and the reward which He gives him; 49) *al-madjīd*, the Glorious, a) whose actions are resplendent, whose favours abound; b) the praise due to him belongs to Him alone; 50) *al-bāʿith*, the Revivifier, who will revivify every creature on the day of the Resurrection (this name has only a traditional origin); 51) *al-shahīd*, the Witness, a) who knows the Mystery, b) and who is Present (cf. 3rd. sense of *al-muḳīt*); 52) *al-ḥaḳḳ*, the Real, supreme Truth, connotes *al-ʿadl* (same kind of attribute): a) necessary by essence (ontological truth); b) perfectly truthful in His speech; c) who makes the Truth); manifest; 53) *al-wakīl*, the Trustee, He to whom everything is entrusted, who takes care of all the needs of creatures; 54) *al-ḳawī*, the Strong, who has power over all things; 55) *al-matīn*, the Unshakable, whose power is without limit; 56) *al-walī*, the Friend, the Protector, in the sense of helper, defender; and also: the Holder of authority; 57) *al-ḥamīd*, Worthy of praise (attribute of relation); 58) *al-muḥṣī*, the Numberer, who comprehends and knows comprehensively all numbered things (*al-ʿālim*) and has power over them (*al-ḳādir*); 59) *al-mubdiʾ*, the Innovator; a) absolute creator of beings; b) whose favours are purely benevolent; 60) *al-muʿīd*, He who resuscitates, who causes the creature to "return" after its destruction; 61) *al-muḥyī*, the Creator of life, and 62) *al-mumīt*, the Creator of death,—He who causes to live and to die; 63) *al-ḥayy*, the Living, one of the "essential attributes", "in the obvious sense" (al-Īdjī): God is always acting and watching, whereas none can act upon Him in any way and none can perceive Him without dying; He is Living in the highest and most perfect degree of life, by reason of the absolute perfection of His Activity and His Knowledge (al-Ghazzālī); 64) *al-ḳayyūm*, the Self-Subsisting: a) who subsists in Himself and by Himself, without any reason for being other than Himself (negative attribute); b) who rules and co-ordinates creatures, and none can subsist without Him; 65) *al-wādjid*, the Opulent (the Perfect), to whom nothing can be lacking or be needed (negative attribute); 66) *al-mādjid*, the Noble, the High (*al-ʿālī*), attribute of relation; to whom sovereignty and power belong (attribute of action). (N.B.-Here the majority of the enumerations insert the Name *al-wāḥid*, the Unique; al-Ghazzālī and al-Īdjī, who omit it, recall the sense in connexion with the commentary on the following Name:) 67) *al-aḥad*, the One, pre-eminently essential attribute, the very attribute of divine perfection,—differs from *al-wāḥid* as follows: *al-aḥad* the One by Essence, absolute simplicity of the Essence, insuperability and inimitability of the divine attributes; *al-wāḥid*, the One God, there is no other God; 68) *al-ṣamad*, the Impenetrable; a) the Master, He who reigns (attribute of relation); b) sense close to *al-ḥalīm*: whom the acts of His adversaries neither trouble nor move (negative attribute); c) the Very High in dignity; d) He to whom one prays and supplicates (attribute of relation); e) in whom there is no "hollow": negation of all mixture and of all possible division into parts; 69) *al-ḳādir*, the Powerful, and 70) *al-muḳtadir*, the All-powerful; 71) *al-muḳaddim* and 72) *al-muʾakhkhir*, He who brings near and sends away: He brings near to Himself whomsoever He wishes and shows him his preference; He sends away and sets aside whomsoever He wishes; 73) *al-awwal* and 74) *al-ākhir*, the First and the Last (Alpha and Omega): He is before everything and nothing is before Him; He is after everything and nothing is after Him (Primary Cause, efficient and final, according to al-Ghazzālī),—negative attributes; 75) *al-ẓāhir* and 76) *al-bāṭin*, the Patent and the Latent;—Patent: a) known by decisive proof (attribute of relation), b) which manifestly dominates all things (attribute of action);—Latent: a) screened from the senses (negative attribute), b) who knows the hidden things (attribute of knowledge); 77) *al-wālī*, the Reigning (al-Īdjī); 78) *al-mutaʿālī*, the Very High, the Exalted, synonym of *al-ʿālī*, the High, but with a supplementary idea of triumph; 79) *al-barr*, who causes piety (*birr*) to function in the heart and is the source of benefits; 80) *al-tawwāb*, the "Repentant": God, by pure and gratuitous favour, returns to His servants if they return to Him, repenting of their faults; 81) *al-muntaḳim*, the Avenger, chastising whomsoever disobeys him; 82) *al-ʿafū*, who rubs out the traces of faults on the leaves where actions are inscribed; 83) *al-raʾūf*, the Merciful, the Compassionate, who

wishes to lighten the burdens (sense close to *raḥmān*, according to Ghazzālī); 84) *mālik al-mulk*, the Master (King) of the Kingdom, who possesses in complete sovereign independence the world and each creature; 85) *dhu 'l-djalāl wa 'l-ikrām*, the Lord of Majesty and Generosity, sense close to *al-djalīl*, observe al-Īdjī and al-Āmidī; 86) *al-muḳsiṭ*, the Just, —al-Ghazzālī specifies "on the Day of Judgement", (al-Djurdjānī recalls that the root, according to the verbal forms, has both the meaning of "just" and "unjust"); 87) *al-djāmiʿ*, the Assembler: a) who assembles beings according to their similitudes, their differences, their oppositions (al-Ghazzālī); b) who reunites adversaries on the Day of Judgement (al-Īdjī—al-Djurdjānī); 88) *al-ghanī*, the Rich, the Independent, who lacks nothing; 89) *al-mughnī*, the Enricher, who embellishes every creature, from whom creatures derive their perfection; 90) *al-māniʿ*, (traditional Name only), the tutelary Defender: correlative of *al-ḥafīẓ*, the vigilant Guardian; *al-ḥafīẓ* stresses the idea of guarding, protecting,—and *al-māniʿ* the idea of prohibiting and suppressing obstacles; 91) *al-ḍārr*, He who afflicts, and 92) *al-nāfiʿ*, He who favours: two traditional Names only; they teach that evil and good, affliction and favour, harm and benefit derive only from God; 93) *al-nūr*, the Light,—God is Light: a) of a perfect and manifest evidence in Himself, b) and He it is who makes all things manifest and evident, by causing them to pass from non-being to being; 94) *al-hādī*, the Guide, who creates the "right direction" (*al-hudā*) in the hearts of believers; and leads every being, rational and irrational, towards its end; 95) *al-badīʿ*, the Creator-Inventor, who is at the beginning of everything: a) who creates and invents without a model; b) who is Himself First absolutely, and nothing is similar to Him; 96) *al-bāḳī*, the Eternal, who permanes,—without end; 97) *al-wārith*, the Inheritor,—who continues to exist after the annihilation (*fanāʾ*) of His creatures;—to whom returns everything which His creatures possess; 98) *al-rashīd*, the Leader: who directs with justice; who leads on the way of the Good; 99) *al-ṣabūr*, the Very Patient, slow to punish, and who always acts in due time: sense close to *al-ḥalīm* (traditional Name only).

Such is the list of the 99 "most Beautiful Names". Other lists exist, which sometimes exceed this number: one then encounters *al-rabb*, the Lord, *al-munʿim*, the Benefactor, *al-muʿṭī*, He who gives, who grants (his gifts), *al-ṣādiḳ*, the Sincere, the Truthful, *al-sattār*, who protects and who veils, etc.

To conclude, there are numerous studies on the divine Names which seek to group them according to the attributes(thus, al-Ghazzālī, *Maḳṣad*, 72 ff.), with a predilection for imparting an appearance of spiritual meditation to this presentation. There are many examples of this in *taṣawwuf*. It is then no longer so much a question of providing a commentary on the 99 "most Beautiful Names", as of applying all the rules of *tawḳīf* and of language to magnify the divine Mystery. For the use of the divine Names in *ṣūfī* prayers, see the article DHIKR.

Bibliography: I) in addition to the Arab authors cited in the body of the article, reference should be made to the main Ḳurʾānic *tafsīrs*, and the very numerous manuals of *kalām*, chapter on *al-asmāʾ al-ḥusnā*; 2) an example among many others of a *ṣūfī* "meditation": Ibn ʿAṭāʾ Allāh of Alexandria, *al-Ḳaṣd al-Mudjarrad fī Maʿrifat al-Ism al-Mufarrad* (Cairo, al-Azhar ed., 1348/1930); 3) references in European languages: A. (L. GARDET)

AL-AṢMAʿĪ, ABŪ SAʿĪD ʿABD AL-MALIK B. ḲURAYB, Arabic philologist, d. 213/828 (also other dates in Yāḳūt, *Irshād*, and later writers). The date of his birth, often stated as 123/828, is said not to have been known to himself; (see *Irshād*, vi, 86). The *nisba* al-Aṣmaʿī is derived from one of his ancestors, Aṣmaʿ, that of al-Bāhilī from the ill-reputed Ḳaysite tribe al-Bāhila, a relationship which is alluded at in a satirical poem of a contemporary poet; (see Ibn al-Muʿtazz, *Ṭabaḳāt al-Shuʿarāʾ*, 130, and *al-Sīrāfī*, 58 f.). In an anecdote he presents himself as an offspring of Banū Aʿṣur b. Saʿd b. Ḳays ʿAylān; (see al-Ḳālī, *al-Amālī*, i, 117).

This scholar and his contemporaries Abū ʿUbayda [*q.v.*] and Abū Zayd al-Anṣārī [*q.v.*] constitute a triumvirate to which later philologists owe most of their knowledge about Arabic lexicography and poetry. They were all of them disciples of the leading philologist of Baṣra, Abū ʿAmr b. al-ʿAlāʾ [*q.v.*]. Among their numerous disciples the littérateur al-Djāḥiẓ has left in his works a monument of their learning. An astonishing memory and an unusually critical mind distinguished al-Aṣmaʿī. From his teacher he had taken over also an accurate consciousness of the limits fixed to philological knowledge; (see an utterance of Abū ʿAmr quoted by Suyūṭī, *al-Muzhir*, i, 323). The method of seeking information from the bedouins in matters concerning grammar and lexicography which seems to have been developed in Baṣra under the stimulus of Abū ʿAmr was taken over by his dicsiples. A list of the bedouin teachers of the Baṣrans is given in *Fihrist*, 43 f.; (cf. *al-Muzhir*, ii, 401 f.). In Baṣra common people were familiar with his scholarly interests and could suggest to him where he could find a *shaykh* possessing a perfect knowledge of the *lugha*; (see *al-Muzhir*, ii, 307). Anecdotes tell also of his rides into the desert to visit bedouins and collect pieces of poetry from their lips. Already as a young man he was sought by students who were anxious to learn from him, and his *madjlis* was widely known. Of the different branches of philological work which had already developed, lexicography particularly corresponded to his talent, whereas Abū Zayd is said to have been his superior in grammar and al-Khalīl to have been in despair about him in metrical matters; (see Ibn Djinnī, *al-Khaṣāʾiṣ*, 367).

There are several traditions about the circumstances which brought al-Aṣmaʿī to Baghdād and the court of Hārūn al-Rashīd. According to a story told by al-Marzubānī and quoted by al-Yāfiʿī, ii, 66, he had met the caliph already in Baṣra. As a crown-prince Muḥammad al-Amīn summoned him and he was introduced to the caliph by the vizier al-Faḍl b. al-Rabīʿ; (see *Taʾrīkh Baghdād*, x, 411). According to al-Djahshiyārī, *al-Wuzarāʾ*, 189, he was introduced to Hārūn al-Rashīd by Djaʿfar b. Yaḥyā al-Barmakī. The Barmakids bestowed substantial benefits on him; (see Ibn al-Muʿtazz, *op. cit*, 98). This did not restrain him however from satirising

them after they had fallen into disgrace; (see al-Djahshiyārī, 206). As an intimate of Djaʿfar he was himself in fear of his life when he got to know about the fall of Djaʿfar in 187/803; (see al-Djahshiyārī, 206). In al-Aṣmaʿī's opinion, the poet Isḥāḳ b. Ibrāhīm al-Mawṣilī, his rival at the court, was more successful in obtaining from the caliph a ready-money consideration for his wit; (see *Aghānī*[1], v, 77, al-Ḥuṣrī, *Zahr al-Ādāb*[2], 1014, and *Irshād*, ii, 205). The *ʿIḳd* of Ibn ʿAbd Rabbih contains a number of the "extraordinary tales" (*nawādir*) and the "amusing stories" (*mulaḥ*) with which al-Aṣmaʿī entertained the caliph. After the death of Hārūn, al-Aṣmaʿī seems to have returned to Baṣra. According to an isolated piece of evidence he died in Marw; (see Ibn Khallikān, nr. 389).

Among the disciples of al-Aṣmaʿī and related circles of Baṣra and Baghdād there circulated numerous stories told by him or about him which found their way into Arabic literature. Some of them certainly catch authentic features of his character. Thus we are told that, at the summit of his career, though possessing at that time considerable property, he persisted in living as a poor man. As against the luxuriousness of the Persians, the plain living ascribed in tradition to ʿUmar b. al-Khaṭṭāb and al-Ḥasan al-Baṣrī represented to him the pure Arab way of living; (see al-Djāḥiẓ, *al-Bukhalāʾ* (al-Ḥādjirī), 186). The numerous sayings of unlearned men and women of the desert told by him are certainly meant also to illustrate, not only the *balāgha* but also the sincere piety of plain-living people. His predilection for the sentimental and pathetic elegy—he is said never to have transmitted satirical poetry—is in accordance with his idealisation of the Arab race according to his own religious feelings. In authentic traditions he relates the sayings of al-Ḥasan al-Baṣrī. Numerous traditions beginning with the formula "I heard a bedouin saying in his prayer" are in the same spirit. In the works of later writers these sentimental features dominate the character of al-Aṣmaʿī. We find them in the romantic story put into the mouth of al-Aṣmaʿī in one of the fictitious 'traditions' (*aḥādīth*) of Ibn Durayd; (see al-Ḳālī, *al-Amālī*[1], ii, 7). In the *Muḥāḍarat al-Abrār* of Ibn al-ʿArabī, the learned philogist of Baṣra tells, as did his contemporary the Egyptian mystic Dhuʾl-Nūn, about his meetings with poor bedouins and young girls who revealed to him an unexpected and extraordinary insight into the mysteries of the divine love; (see *op. cit.*, i, 81 and 133).

His orthodox contemporaries and later writers agree that al-Aṣmaʿī was an orthodox Sunnī. According to Ibrāhīm al-Ḥarbī (d. 285/889), there were among the philologists of Baṣra only four definite adherents of the *sunna*, one of them being al-Aṣmaʿī, (see *Taʾrīkh Baghdād*, x, 418; cf. Ibn al-Anbārī, 170). As an instance of his piety tradition adduces that in order to "avoid sin" he answered with strict silence to any philological question which evidently had or could have a bearing upon the reading of the Ḳurʾān or the wording of tradition. (A list of examples is given in *al-Muzhir*, ii, 325 f.). Whereas for Abū ʿAmr and Abū ʿUbayda the study of the *lugha* was dependent on that of the Ḳurʾān, al-Aṣmaʿī thus separated in himself the "reader" from the grammarian and the transmitter of poetry. In accordance with the attitude held by his teacher Nāfiʿ and the readers of Medina (see about this subject *Two Muqaddimas to the Quranic sciences*, ed. A. Jeffery, Cairo 1954, 183) al-Aṣmaʿī consequently abstained also from *tafsīr*; (see *al-Muzhir*, ii, 416, and *Irshād*, i, 26 f.). In this respect he was opposed to people of Muʿtazilite and Ḳadarite outlook who, in his view, commented upon the Ḳurʾān according to their "opinion" (*raʾy*), as did Abū ʿUbayda in his *al-Madjāz*; (see *Irshād*, ii, 389 and vii, 167).

As a transmitter of poetry al-Aṣmaʿī and his generation were essentially influenced by "the great transmitters", Ḥammād al-Rāwiya and Khalaf al-Aḥmar [*qq.v.*]. The inconveniances connected with the unreliable character of these persons were clearly seen by him; (see *Irshād*, iv, 140 and *al-Muzhir*, ii, 406; cf. Blachère, 99 f.) In order to collect in a complete and definite form the odes of the great pre-Islamic poets he sought persons known to have a reliable knowledge of the tradition. In his work he developed a critical method remarkable for his time, a deep knowledge of the topography of the Arabian peninsula, of the genealogies of the tribes and, above all, of *lugha* and of grammar. Handed down by his disciples, these critical remarks found their way into the works of later commentators. On the basis laid by al-Aṣmaʿī, his disciples Ibn Ḥabīb, ʿAlī b. ʿAbd Allāh al-Ṭūsī and, finally, al-Sukkarī, prepared the definitive editions of the *dīwāns*.

From the 72 pieces or fragments of pre-Islamic or early Islamic poets which he collected in an anthology called *al-Aṣmaʿiyyāt* (ed. Ahlwardt, *Sammlungen alter arabischer Dichter*, i, Berlin 1902), we can get an idea of al-Asmāʿī's literary taste. On the subject of criticism (*naḳd al-shiʿr*) numerous sayings of al-Aṣmaʿī are quoted in later writers. In a note-book called *Fuḥūlat al-Shuʿarāʾ* (ed. Torrey, *ZDMG*, 1911, 487-516), his disciple Abū Ḥātim al-Sidjistānī collected answers given by his teacher to the question which poets are to be regarded as *faḥl*. Whereas Abū ʿAmr, according to al-Aṣmaʿī, was never heard to quote an Islamic poet (Ibn Rashīḳ, *al-ʿUmda*, i, 73), his disciple valued the new poets who mastered the *lugha*; (see for instance Ibn al-Djarrāḥ, *al-Waraḳa*, 60. For his criticism of the *muwalladūn*, see J. Fück *Arabiya*, 22 f.).

Applying to the rich lexicographical materials collected by him the systematic methods employed by philologists from the very beginning of these studies in ʿIrāḳ, i.e. of grouping together items of similar materials, al-Aṣmaʿī composed a series of monographs the titles of which are listed in the *Fihrist*, 55. In his *Djazīrat al-ʿArab*, which is lost but is copiously quoted by Yāḳūt in his *Muʿdjam*, he often seems to adduce a first-hand knowledge of topography; (see for instance *Muʿdjam*, i, 705). About the size of these treatises we know from *Fihrist* only that the *Gharīb al-Ḥadīth* was written in 200 folios. A number of them, however, have been preserved; (see Brockelmann, I, 104 and S I, 164). That these specimens of al-Aṣmaʿī's lexical work do not represent the final state of his collections seems obvious, if one compares for instance the rather meagre text of his *al-Nabāt waʾl-Shadjar* (ed. Haffner, Beirut 1898) with the rich material on the subject quoted from al-Aṣmaʿī by Abū Ḥanīfa al-Dīnawarī in his *Kitāb al-Nabāt*.

Among the disciples of al-Aṣmaʿī, Abū Naṣr Aḥmad b. Ḥātim al-Bāhilī was known to be his *rāwiya*. He is said to have transmitted the books of his teacher to Thaʿlab; (see *Irshād*, ii, 140). As a transmitter of them there is mentioned also Abū ʿUbayd al-Ḳāsim [*q.v.*], who divided the books of al-Aṣmaʿī into chapters and added some pieces of information to them on the authority of Abū Zayd al-Anṣārī and the philologists of Kūfa; (see *Irshād*, vi, 162 f.).

For later lexicographers the main source of information about materials collected by al-Aṣmaʿī was the *Tahdhīb al-Lugha* of al-Azharī. In the introduction (ed. Zetterstéen, *MO*, 1920, 1 f.), al-Azharī mentions the direct and indirect sources from which he drew these materials.

ASPER [see AḲČE].

ʿAṢR (A), time, age; particularly the early part of the afternoon, until the sun becomes red; hence *ṣalāt al-ʿaṣr*, the ritual prayer in the afternoon, cf. ṢALĀT. (ED.)

ASRĀFĪL [see ISRĀFĪL].

ĀṢṢ [see ALĀN].

ASSAB, town and port at the N.W. end of the Bay of Assab on the coast of Eritrea. The surrounding country is arid and is inhabited by Afar (Danākil). Assab is generally identified with the ancient Sabae, described by Strabo (xvi, 771) as πόλις εὐμεγέθης. Its importance is due to its position opposite Mukhā and at the end of a caravan route leading to the Ethiopian plateau, both the Red Sea and the coastal desert being comparatively narrow at this point. In 1936-39 the Italians built a motor road from Assab connecting with the main Addis Ababa-Asmara road near Dessye. Assab was known to the Jesuit missionaries of the early seventeenth century; they describe it as Ethiopian territory. It was occasionally visited by European voyagers who found it a useful place in which to careen their ships. In 1611 it was called "a very good road ... where you may have wood and water freely, and refreshing for your money or coarse calicoes". (Sir W. Foster, *Letters received by the East India Company from its servants in the East*, i, 131). It is mentioned from time to time in the Company's records and is said to have been ruled by a Muslim "King". In 1869 it was acquired from the Sultan of Rahayta by the Italian traveller, ex-missionary and propagandist for colonial expansion, Giuseppe Sapeto, acting for the Rubattino shipping company, by which it was used as a coaling station. It became an Italian colony in 1882 and with the extension of Italian rule was made the capital of a *commissariato*. In 1928 Ethiopia was granted freedom of trade at Assab which became increasingly important commercially.

ASSAM, name of the easternmost province in the Republic of India, situated between East Pakistan and Burma, within 22° 19′ and 28° 16′ N. Lat., and 89° 42′ and 97° 12′ E. Long. It comprises the Brahmaputra valley and the hill ranges enclosing small plateaux, the shelter of numerous hill tribes and refuge of the Mongol hordes. The province covers 85,012 English square miles, and its population in 1951 was 9,043,707, of whom 1,996,456 were Muslims, three-fourths of these being concentrated in the westerly districts of Goalpārā and Kāmrūp, contiguous to North Bengal, and Cachar, adjacent to Pakistani Sylhet. Since 1920 their percentage has considerably increased in other neighbouring districts owing to immigration from Bengal, the eastern portion of the valley remaining unaffected.

In Sanskṛit records the valley is called "Lawhitya", Prāg-jyotisha", or "Kāmarūpa". The word, Assam (correctly Āsāma, locally pronounced Āhōm), is connected with the *Shans* or *Tais*, a group of Tibeto-Burmans, who settled about 8th century A.D. in Siam, Upper Burma, and finally in this province. Its derivation from Sanskṛit A+sama (= "peerless") is unwarranted. The Ahom migrants had a sense of history, and produced works called *Burañjis*. The first king known is Sukaphā, who, in 1228, occupied a portion of the Upper Valley. His successors gradually conquered the neighbouring tribes and established the Ahom kingdom. The western valley, with the city of Gawhātī, which lay outside their domains, retained the name of Kāmrūp, and was ruled by petty landlords, collectively called Bārā-bhuiṅyas. Twice they were integrated into the kingdom of Kāmrūp-Kāmtā, first by the Khens, and next by the Kochas, northern rival neighbours of the Muslim Sulṭāns of Bengal.

The Muslim advance into Kāmrūp falls into three stages. The first, which began in A.D. 1206 with Bakhtiyār Khaldjī, is a period of raid, occasional occupation and imposition of tribute. It culminated in 1357, when Sikandar Shāh founded the mint of Čawlistānʿurf Kāmrū (possibly Gawhātī). It is in one of the neighbouring caves that Ibn Baṭṭūṭa possibly met the famous saint Shāh Djalāl Tabrīzī. The second period began with the defeat of Kāmeśvara, the king of Kāmtā, by Bārbak Shāh, and the final occupation of Kāmrūp by ʿAlāʾ al-Dīn Ḥusayn Shāh after overthrowing the Khen king, Nīlambar, in 1498. So far the Muslims had not contacted the Ahoms, Kāmrūp being alone mentioned in contemporary Muslim records. The *Burañjis* speak of a first Muslim invasion in 1532 by Turbak (possibly Baḥr-bak = "naval officer"), obviously an official posted in Kāmrūp, but the invading forces were utterly routed. With the downfall of the Ḥusayn Shāhī dynasty in 1538, the Kochas emerged and established their kingdom. Oç this period the tomb of Sulṭān Ghiyāth al-Dīn Awliyā at Hājo is an important memorial. The third period began in 1612, when Islām Khān, the Mughal Governor of Bengal, subjugated the Kochas and occupied Kāmrūp once again. Hereafter wars with the Ahoms became frequent, and Assam loomed large in Persian chronicles. In 1662 Mīr Djumlā finally reduced the Ahom king and imposed an annual tribute on him. The subsequent weakness of the Mughals encouraged the Ahoms, who by 1682 occupied the whole Brahmaputra valley and continued to rule till 1824, when the British intervened to check the threat of the Burmese and integrated Assam into their territory. The Ahoms retained the services of the Muslims for their skill in arts and crafts. The *Marias* (braziers) and the *Garias* (tailors by profession) are even now common in some districts. In the middle of the 19th century a large percentage of the Muslims were affected by the "Farāʾiḍī" movement. The humbler peasants have developed a peculiar local culture, combining with their faith in Islam the local rites and customs and national festivals of this region.

ʿAṢṢĀR, SHAMS AL-DĪN MUḤAMMAD, Persian poet, born in Tabrīz, died in 779 or in 784/1382-3; he was one of the panegyrists of the prince Uways [*q.v.*] and is chiefly known for his poem *Mihr u Mushtarī*, at the end of which he gives the date of its completion (10 Shawwāl 778/1377); this poem consists of 5,120 distichs and was later translated into Turkish. In the words of Ethé (*Gr. I. Phil.*), it is "the story of a love, free from every frailty and pure from every sensual lust, between Mihr, the son of Shābūrshāh, and the comely stripling Mushtarī".

Bibliography: Von Hammer. *Gesch. d. schönen Redekünste Persiens*, 254 (analysis and translation of selected passages; the name of the poet is erroneously given as ʿAṭṭār); Peiper, *Comment. de libro persico Mihr o Mushtari*, Berlin 1839; Fleischer, in *ZDMG*, xv, 389 ff.; Rieu, *Cat. Persian MSS. Brit. Mus.*, ii, 626; Pertsch, *Katal. Berlin*, 843 ff. (H. MASSÉ)

ASSASSINS [see NIZĀRĪS].

ASSUAN [see USWĀN].

ASTARĀBĀDH, Astarābād, (Istirābād in Samʿānī, *Ansāb*).

1. A town in Iran situated ca. 23 m. east of the S-E corner of the Caspian Sea at 36° 49′ N. lat. and 54° 26′ E. long. (Greenw.) on a tributary of the Ḳarāṣū. It is 377 ft. above sea level and 3 m. from the foothills of a mountain chain, a spur of the Elburz. The town lies on a plain which ends in the Turkoman steppes to the north. Astarābādh is now called Gurgān (not to be confused with medieval Gurgān, Arabic Djurdjān, to the N-E).

The pre-Islamic history of the town is unknown, and it is uncertain whether it existed before Islam, although Mordtmann in *SB Bayr. AK.* 1869, 536, identifies it with ancient Zadrakarta. The etymology of the name is also obscure. Folk etymology connects the name with the Persian word for "star", or for "mule", and appropriate stories are told of the origin of the town.

Astarābādh was the second city of the province of Gurgān in Islamic times and underwent the same fortunes as the capital city Gurgān. The province was raided by the Arabs in the time of the caliph ʿUthmān (al-Balādhurī, *Futūḥ*, 334), and again by Saʿīd b. ʿUthmān under Muʿāwiya, but it was not conquered until Yazīd b. Muhallab defeated the ruling Turks of the area in 98/716. There is a tradition that Yazīd founded Astarābādh on the site of a village called Astarak.

There were frequent rebellions in Gurgān during both the Umayyad and the ʿAbbāsid caliphates. Astarābādh is rarely mentioned by historians, and the geographers also give little information. It was a silk centre according to al-Iṣṭakhrī, 213. The port of Astarābādh (and Gurgān) on the Caspian, Abaskūn, was an important trading centre. The *Ḥudūd al-ʿĀlam*, 134, says the people of Astarābādh spoke two languages, one of which is probably preserved in the dialect used by the Ḥurūfī sect.

After the Mongol conquest of Iran we find Astarābādh replacing Gurgān as the most important town of the area. The province was the scene of strife between the last Īl-Khāns, the Tīmūrids, and local Turkish tribal leaders. Sometime during this period the Ḳādjār tribe of Turkomāns became the leading power in Astarābādh. Aghā Muḥammad, first of the Ḳādjār Shāhs, was born in Astarābādh. Shāh ʿAbbās I, Nādir Shāh, and Aghā Muḥammad all erected buildings in Astarābādh. The town, located on the steppes, continually suffered the depredations of Turkomāns.

Astarābādh had many mosques and shrines (see Rabino, below), and was called *dār al-muʾminīn* probably because of the many *sayyids* living there.

The name of the town was changed to Gurgān under Riḍā Shāh, and in 1950 it had ca. 25,000 inhabitants. There are few old remains in the town, and only two are noteworthy, the Imāmzāda Nūr and the mosque of Gulshān. Rabino (below, 73-5) lists the shrines of the town as well as the inscriptions.

2. The province of Astarābādh, as it existed under the Ḳādjārs, was bounded on the north by the Gurgān River, on the south by the Elburz Mts., on the west by the Caspian Sea and Māzandarān, and on the east by the district of Djādjarm. The district (*shahristān*) of Gurgān under Riḍā Shāh was smaller. The province could be divided into two parts, the mountain area and the plains. The former is well-watered with many trees, while the latter is fertile, even marshy but becomes desert to the north. Wheat and tobacco are grown extensively here. The population is mixed, with Persian speakers predominant in the mountain area and the towns, and Turkomāns on the plains.

Bibliography: A history of Astarābādh was written by a certain al-Idrīsī (d. 405/1014) which has not survived, (see Brockelmann, S I, 210); H. L. Rabino, *Māzandarān and Astarābād*, London 1928, 71-5; Yāḳūt, i, 242; G. Melgunov, *Das südl. Ufer des Kaspischen Meeres*, Leipzig 1868, 101-24; J. de Morgan, *Mission scientifique en Perse*, i, Paris 1894, 82-112; Le Strange, 378-9. For recent information on the town and province of Gurgān, see *Farhang-i Djughrāfiyā-yi Īrān*, ed. Razmārā, 3, Tehran 1951, 254-5. A plan of the town appears in *Rāhnumā-yi Īrān*, Tehran 1952, 205. See also art. on Astarābād in Dihkhudā, *Lughat-nāma*, Tehran 1952, 2143-6.

(R. N. FRYE)

AL-ASTARĀBĀDHĪ. The *nisba* of several Muslim scholars of whom Raḍī al Dīn al-Astarābādhī and Rukn al-Dīn al-Astarābādhī (see below) are the best known. Yāḳūt describes Astarābādh as a city producing scholars proficient in all sciences and mentions the *ḳāḍī* Abū Naṣr Saʿd b. Muḥammad b. Ismāʿīl al-Muṭrafī al-Astarābādhī (d. circa 550/1155-6), the *imām* Abū Nuʿaym ʿAbd al-Malik b. Muḥammad b. ʿAdī al-Astarābādhī, author of a treatise on the verification of traditions (d. 320/932) and the *ḳāḍī* al-Ḥusayn b. al-Ḥusayn b. Muḥammad b. al-Ḥusayn b. Rāmīn al-Astarābādhī, a much-

travelled scholar who consorted with Ṣūfīs (d. in Baghdād in 412/1021-2). There were several well-known Astarābādhī *ʿulamā* in Ṣafawid times, including Aḥmad b. Tādj al-Dīn Ḥasan b. Sayf al-Dīn al-Astarābādhī, author of a biography of the Prophet, ʿImād al-Dīn ʿAlī al-Sharīf al-Ḳārī al-Astarābādhī, author of a treatise on the recitation of the recitation of the Ḳurʾān, and Muḥammad b. ʿAbd al-Karīm al-Anṣārī al-Astarābādhī, who translated an Arabic work on ethics. The *nisba* al-Astarābādhī is given also to several lesser known scholars, such as al-Ḥasan b. Aḥmad al-Astarābādhī, a grammarian and lexicographer, and the traditionist Muḥammad b. ʿAlī.

Bibliography: Yāḳūt, i, 242; Storey, 42, 177, 192; Suyūṭī, *Bughyat al-Wuʿāt*, Cairo 1326/1908, 218; Ethé, *Catalogue of Persian MSS. in the Library of the India Office*, Oxford 1903-37, 724-826 (1162); Loth, *Catalogue of Arabic MSS in the Library of the India Office*, London 1877 i, 258; Muḥammad b. Ismāʿīl Abū ʿAlī al-Ḥāʾirī, *Muntahā al-Maḳāl* (lithographed Tehran 1302/1885; the *Manhadj al-Maḳāl* of Muhammad b. ʿAlī al-Astarābādhī is published as a supplement to this); ʿAlī Akbar Dihkhudā, *Lughat-nāma*, Tehran 1332/1953, s.v. *Astarābādhī*. (A. J. Mango)

AL-ASTARĀBĀDHĪ, Raḍī al-Dīn Muḥammad b. al-Ḥasan, author of a celebrated commentary on the *Kāfiya*, a well-known grammatical work of Ibn al-Ḥādjib. Al-Suyūṭī, who praises the commentary as unique, admits to knowing nothing of Raḍī al-Dīn's life, except that the work was completed in 683/1284-5, and that Raḍī al-Dīn was reported to have died in 684 or 686/1285-8. He also wrote a lesser known commentary on the *Shāfiya* of Ibn al-Ḥādjib. The *ḳāḍī* Nūr Allāh Shūshtarī interprets a reference in the introductory prayer as meaning that the commentary on the *Kāfiya* was written in Nadjaf, but the term *ḥaram* which occurs in the Arabic edition could refer just as well to Mecca, where Suyūṭī obtained his information on the date of Raḍī al-Dīn's death. There seems no doubt, however, that Raḍī al-Dīn was a Shīʿī.

Bibliography: Suyūṭī, *Bughyat al-Wuʿāt*, Cairo 1326/1908, 248; Muḥammad b. al-Ḥasan al-Ḥurr al-ʿĀmilī, *Amal al-Āmil*, lithographed, Tehran 1302/1885, 61; Ḳāḍī Nūr Allāh Shūshtarī, *Madjālis al-Muʾminīn*, fifth *Madjlis*; Brockelmann I, 21, 303, 305; S. I. 532, 535, 713; M. S. Howell, *A Grammar of the Classical Arabic Language*, Allāhābād 1894, Introduction, xi. Raḍī al-Dīn's commentary on the *Kāfiyya* was published in Cairo in 1358/1939. (A. J. Mango)

AL-ASTARĀBĀDHĪ, Rukn al-Dīn al-Ḥasan b. Muḥammad b. Sharafshāh al-ʿAlawī, known as Abu 'l-Faḍāʾil al-Sayyid Rukn al-Dīn, a Shāfiʿī scholar best known for his commentary on the *Kāfiya*, a grammatical work of Ibn al-Ḥādjib. This commentary, the *Wāfiya*, is known also as the *Mutawassiṭ*, or "intermediate", as it was the second of three commentaries. Al-Suyuṭī, quoting Muḥammad b. Rāfi's appendix to the *Taʾrīkh Baghdād* (the passage is not included in the abridged Baghdād edition of 1938) says that he enjoyed the patronage of Naṣīr al-Dīn Ṭūsī [*q.v.*] in Marāgha where he taught philosophy and composed commentaries on Ṭūsī's *Tadjrīd al-ʿAḳāʾid* and *Ḳawāʿid al-ʿAḳāʾid*. He accompanied Ṭūsī to Baghdād in 672/1274 and, after the death of his patron in the same year, settled in Mawṣil, where he taught in the Nūriyya *madrasa* and composed his commentary on Ibn al-Ḥādjib. From Mawṣil he went on to Sulṭāniyya, where he taught Shāfiʿī jurisprudence. He died in 715/1315-6 or 718/1318-9 (two MSS. in the Bibliothèque Nationale give the date of his death as 717/1317-8 and 719/1319-20). Rukn al-Dīn was reputed for his modesty as well as for the honour in which he was held in the Mongol Court.

Bibliography: Suyūṭī, *Bughyat al-Wuʿāt*, 228; Subkī, *Ṭabaḳāt al-Shāfiʿiyya al-Kubrā*, Cairo 1906, vi, 86; Ethé, *Catalogue of Persian MSS. in the Library of the India Office*, Oxford 1903-37, 724-826 (1162); idem, *Arabic MSS. in the British Museum*, London 1894, 946; de Slane, *Bibliothèque Nationale Catalogue des Manuscrits Arabes*, Paris 1883-95, 2369, 4037; Brockelmann I, 305, SI, 536; M. S. Howell, *A Grammar of the Classical Arabic Language*, Introduction, v. (A. J. Mango)

ASṬARLĀB [see asṭurlāb].

ASTORGA [see ashturḳa, in the Suppl.].

ASTRAKHĀN, city and district. The city lies on the left bank of the Volga, some sixty miles from the point where it runs into the Caspian Sea, 46° 21′ N, 48° 2′ E, 20.7 m. below normal sea level, 7.6 m. above the level of the Caspian Sea. Ibn Baṭṭūṭa, ii, 410-2, who passed through here in 1333, mentions for the first time a settlement supposed to have been founded by a Mecca pilgrim, whose religious reputation brought the district exemption from taxes; this was supposed to explain its name, viz. Ḥādjdjī Tarkhān (*tarkhān* means among the Mongols in later times a man exempt from taxes, a nobleman). Other forms of the name are Cytrykań or Zytrykhań, in Ambr. Contarini's account (1487) Citricano, in Turkish-Tatar sources also Aždarkhān and Ashtarakān. The settlement lay on the right bank of the Volga on the Shareniy (or Žareniy) hill; the first coins discovered are from 776/1374-5 and 782/1380-1. (777/1375-6: Chr. Frähn, *Münzen d. Chane etc.*, St. Petersburg 1832, 22, no. 102; idem, *Recensio etc.*, St. Petersburg 1826, 300, no. 1; A. K. Markov, *Inv. Katalog*, St. Petersburg 1896, 860; 1380-1; ibidem, 476; P. S. Savel'ev, *Monety Džučidov*, ii, St. Petersburg 1858, 18, no. 416; also the Kaiser-Friedrich Museum, Berlin, possessed a specimen.) In the winter of 798/1395-6 Tīmūr destroyed the city, as well as Sarāy [*q.v.*] (Shāmī, *Ẓafar-nāma*, ed. Tauer, i, 158-62). In contrast to the latter Astrakhān rose again and took over eventually its importance as a centre of trade; in the course of this it became, as earlier the neighbouring Khazar city of Itil (Atil) [*q.v.*]. eventually the centre of the traffic on the Caspian Sea and the lands bordering on it.

In 871/1466 there was established in Astrakhān, during the decline of the Golden Horde [cf. bātūids] a Tatar dynasty of the Noghay princes stemming from the Tatar Khān Küčük Meḥmed. The territory ruled by the Khāns Ḳāsim (871-896/1466-90) and his brother ʿAbd al-Karīm (in Russian and Polish Ablumgirym; 896-910/1490-1504) encompassed the country as far as the modern Stavropol', Orenburg (Čkalov), Samara (Kuybīshev) and Saratov, and was divided into various *uluses*. The population supported themselves mainly by cattle raising, hunting and fishing. Conflicts with the *begs*, the rapid changes of Khāns after 910/1504 and the interference of the Crimean Tatars and the Noghays brought the Khānate into difficulties; the Khān ʿAbd al-Raḥmān 941-5/1534-8) sought help against these and the Ottomans from the Russian Czar. (For a list of the Khans see Zambaur, 247, and for a genealogical table ibid., 24¹.)

In 962/1554 the Khānate (since 951/1544 under Yamghūrčāy or Yaghmūrčī) was conquered by the Russians; since the Khān Darwīsh ʿAlī (in Russian Derbīsh), who was nominated by them, allied himself with the Crimean Tatars and the Noghays, he was deposed in 964/1556-7 and the Khānate incorporated into the Russian state. Apart from the Russian there immigrated into the country Kalmucks [*q.v.*], since 1632; those of them who lived east of the Volga returned in 1770-1 to the East, while those who settled west of the Volga were driven out in 1944-5. They were followed with Russian permission by Ḳazaḳs [*q.v.*] since 1801. As a counterbalance 25,000 so called Astrakhān Cossacks were settled here in 1750 (new organisation in 1817; their corporation dissolved in 1919). In 1717 the *Gouvernement* of Astrakhān was established by the Russians; 1785-1832 the territory belonged to Caucasia. The re-established *Gouvernement* of Astrakhān received in 1860 new boundaries (208, 159, according to other calculations 236, 532 sq.km.). In 1918-20 the territory became part of the Russian SSR and forms since 27 Dec. 1943 (after the dissolution of the Kalmuck territory) an *oblast'* of 96,300 sq.km.

Astrakhān was rebuilt by the Russians in 1558 seven miles downstream on the left bank and has since then always contained an overwhelmingly Russian population; there was a Tatar and an Armenian suburb. Indian settlers of the 16th century mixed with the Tatars ("Agryžans"). The city was threatened in 1569 by an Ottoman-Crimean Tatar army (cf. Aḥmed Refīḳ, *Baḥr-i Khazer—Ḳara Deñiz Ḳanalī we-Ežderkhān Seferi*, *TOEM*, viii, 1-14; Halil İnalcık, *Osmanlı-rus rekabetinin menşei we Don-Volga kanalı teşebbüsü*, *Bell.*, 1948, 349-402; cf. also ḲAZĀN). Consequently in 1582 the Russians built a stone wall and in 1589 a fortress. In spite of this the city was repeatedly plundered by Tatars and Cossacks (especially Steńka Razin, 1667-8); it suffered too from repeated earthquakes and epidemics. In 1722-1867 it was the naval port for the Caspian Sea (since then Bākū); in 1918-21 also, during the civil war, a flotilla operated from here. Astrakhān had in 1897: 113,001 inhabitants (among them 12,000 Muslims: Persians, Tatars, etc., and 6,200 Armenians), six Shīʿī mosques and one Sunnī, 73 *madrasas* and three *maktabs*. In 1939 the city had 253,655 inhabitants and possessed over ten Tatar schools and several Tatar newspapers. For the Soviet Union it is important mainly as a starting-place for Caspian ships and because of its fisheries (with caviar and blubber factories) and its fishing industry.

ASTROLOGY [see NUDJŪM, AḤKĀM AL-].

ASTRONOMY [see HAYʾA, ʿILM AL-].

ASṬURLĀB or AṢṬURLĀB (Ar.; on the vocalisation see also Ibn Khallikān, no. 779; idem, Būlāḳ, no. 746), Astrolabe. The word was derived from the Greek ἀστρολάβος or ἀστρολάβον (ὄργανον), name of several astronomical instruments serving various theoretical and practical purposes, such as the demonstration and graphical solution of many problems of spherical astronomy, the measuring of altitudes, the determination of the hour of the day and the night, and the casting of horoscopes. In Arabic the word *Asṭurlāb* when used alone always means the flat or planispheric astrolabe based on the principle of stereographic projection; it is the most important instrument of mediaeval, Islamic and Western, astronomy. The linear astrolabe, depending on the same principle, is an ingenious simplification of the planispheric astrolabe, though of little practical interest. The spherical astrolabe represents the terrestrial and the celestial spheres without any projection. No specimens of linear or spherical astrolabes seem to have been preserved. *N.B.* The Ptolemaic astrolabe as described in *Alm.* 5,1 is an improved armillary sphere, having only the name in common with the instruments treated here; the astrolabe mentioned in *Tetrab.* 3,3 probably refers to the planispheric astrolabe (see below).

I. The flat (*saṭḥī* or *musaṭṭaḥ*) astrolabe, being the astrolabe in its stricter sense, Latin (*astrolabium*) *planisphaerium*, in Arabic called also *dhāt al-ṣafāʾiḥ* (from *ṣafīḥa* = Lat. *saphaea, alzafea*, etc., "disc"), "the instrument having, or consisting of, discs (tablets)". Another alleged Ar. synonym: *waztalcora* (also *wazzalcora, walzagora*, etc.), corresponding with Ar. *basṭ al-kura* (not *waḍʿ al-kura*, see Millás [1], 169 f.), "the spreading out of the sphere", is known only from Lat. MSS. originating from Spain. The word appears to refer rather to the principle of projection than to the instrument itself, and discloses a striking similarity with the original title of Ptolemy's Planisphaerium as recorded by Suidas (ed. A. Adler, Leipzig 1928-38, iv, 254, 7): ἅπλωσις ἐπιφανείας σφαίρας.

1. History. While the theory of stereographic projection (by which circles of the sphere are represented again as circles, and angles formed by intersecting circles of the sphere remain unchanged in the plane of projection) can be traced back to Hipparchus (150 B.C.), Ptolemy's *Planisphaerium* (preserved only in a Latin translation made by Hermannus Dalmata from Maslama al-Madjrīṭī's Ar. version; crit. ed. by J. L. Heiberg, *Cl. Ptolemaei opera quae exstant omnia*, Vol. ii, Leipzig 1907, 225-59; German transl. by J. Drecker: *Das Planisphaerium des Cl. Ptolemaeus*, in *Isis* ix, 1927, 255-78) is the earliest special treatise on the subject. The references made there (ch. 14) to the *aranea* ("spider") of the *horoscopium instrumentum*, and (*Tetrab.* 3, 3) to the ἀστρολάβον ὡροσκοπεῖον as the only useful instrument for determining the hour of birth, can leave no doubt that Ptolemy really knew the planispherical astrolabe (Neugebauer [1], 242; Hartner [1], 2532, n. 1). For a critical analysis of subsequent references to the astrolabe prior to the Arabic conquest (Theon of Alexandria, Synesius of Cyrene, Johannes Philoponus, Severus Sebokht) see Neugebauer [1]. The earliest Ar. treatises mentioned in the *Fihrist* are by Mā shāʾa 'llāh (Messahalla, d.c. 200/815, Suter no. 8), ʿAlī b. ʿĪsā (flor. c. 215/830, Suter, no. 23), and Muḥ. b. Mūsā al-Khwārizmī (d.c. 220/835). Ever since, the construction and the use of the astrolabe remained one of the favourite subjects of Islamic astronomers. The earliest Islamic

instruments preserved date from the second half of the 4th/10th century. In learned European circles the astrolabe and its theory became first known through the writings (spurious?, see Millás [1], ch. vi) of Gerbert d'Aurillac, the later Pope Sylvester II (ca. 930-1003) and Hermann the Lame of Reichenau (1013-54); they, as all posterior European compositions, strictly depend on Islamic models, above all Messahalla, whose influence proves particularly strong in Geoffrey Chaucer's *Conclusions of the astrolabe* (*"Bread and milk for children"*); see Gunther [2]. The earliest European instruments that have survived date from c. 1200. After the invention of the telescope, the astrolabe fell into disuse in the West, whereas, in the East, the tradition was carried on till late in the 18th and even the 19th century. As is attested by the laḳab *al-asṭurlābī* encountered since the beginning of Islamic science, the making of astrolabes was a handicraft of its own cultivated by specially trained craftsmen, but many astrolabes prove to have been wrought by other artisans, too, as is shown by the sobriquets *al-ibarī*, "the needle-maker", *al-nadjdjār*, "the carpenter", etc., frequently found in colophons. According to Chardin (*Voyages du chevalier Chardin en Perse*, ed. Langlès, iv, Paris 1811, 332) the most highly valued instruments were manufactured, not by artisans, but by astronomers. For illustrations of astrolabes (Eastern and Western), see Gunther [1]; for the names of astrolabe-makers see Mayer [1] and Price [1].

2. Description of the instrument. The planispherical astrolabe is a portable metal (brass, bronze) instrument in the form of a circular disc with a diameter varying from 4″ to 8″ (10-20 cm.). The simplest type of this astrolabe, taken over with respect to its essential features from Greek and Syrian models, consists of the following pieces:

(A) The suspensory apparatus, which comprises three parts: a triangular piece of metal called *kursī*, "throne" (large and richly decorated in the *Mashriḳ*, esp. Persia, smaller and simpler in the *Maghrib*), which is firmly attached to the body of the instrument; a handle, *ʿurwa*, *ḥabs*, L. *armilla suspensoria*, affixed to the point of the *kursī* so that it can be turned to either side in the plane of the latter; a ring, *ḥalḳa*, L. *armilla rotunda*, passing through the handle and moving freely. When in use, the astrolabe is suspended with a cord, *ʿilāḳa*.

(B) The body of the astrolabe, which has a "front", *wadjh*, L. *facies*, and a "back", *ẓahr*, L. *dorsum*.

(a) The front of the astrolabe consists of an outer rim, *ḥadjra*, *ṭawḳ*, *kuffa*, L. *limbus* or *margo*, which encloses the inner surface, usually depressed, called "mother", *umm*, L. *mater*. A number of thin discs, *ṣafāʾiḥ*, L. *tympana* or *tabulae regionum*, are fitted into the *ḥadjra* over the *umm*; a bit of metal, *mumsika*, projecting from the *ḥadjra* and fitting into an exactly corresponding indentation on the edge of each disc, prevents the discs from turning. A hole is bored through the centre of the *umm* and the *ṣafāʾiḥ*; a broadheaded pin, *ḳuṭb*, *watad*, or *miḥwar*, L. *clavus*, *axis*, passing through it holds the parts together and serves as an axis around which turn the two movable parts of the instrument, viz., on the front, the "sp der", *ʿankabūt* (also called "net", *shabaka*), L. *aranea* or *rete*, and, on the back, the "alidad" (from the Ar. *al-ʿiḍāda*), L. *radius* or *regula*. A wedge called the "horse", *faras*, L. *equus*, *caballus*, or *cuneus*, which is fitted into a slit in the narrow end of the *ḳuṭb*, prevents the latter from coming out. A small ring, *fals*, placed under the horse, protects the spider and ensures a smooth turning. *N. B.* A ruler in the shape of the hand of a watch turning on the face of the astrolabe (L. *index*, *ostensor*) is often found on European, but never on Islamic, astrolabes.

The mathematical divisions of the parts mentioned are as follows:

The *ḥadjra* carries a circle graduated from 0 to 360°, beginning at the middle point of the *kursī*, i.e., at the top of the astrolabe.

The *umm* may either function as one *ṣafīḥa* (see next section), or carry a list of the geographical latitudes of a number of cities.

The *ṣafīḥa* carries on each of its two sides the stereographic projection of the equator, the tropics, and the horizon for one particular geographical latitude, with its parallel circles called "almacantars" (from Ar. *al-dāʾira al-muḳanṭara*) and vertical circles, *dawāʾir al-sumūt*. For a northern astrolabe, the centre of projection is the South Pole of the heavens, and the plane of projection, the equator; then the southern tropic constitutes the edge of the *ṣafīḥa*. For a southern astrolabe, the centre of projection is the North Pole, the plane of projection, again, the equator; then the northern tropic coincides with the edge of the *ṣafīḥa*. Most, if not all of the astrolabes preserved are northern; only for the spider northern and southern projections may be used simultaneously (see below, section on the *ʿankabūt*). Fig. 1a illustrates the face of an astrolabe with a *ṣafīḥa* constructed for the geographical latitude 36° 0′. There NS represents the meridian, *khaṭṭ wasaṭ al-samāʾ*, L. *linea medii coeli*; its section CS is called the "line of midday", *khaṭṭ niṣf al-nahār*, L. *linea meridionalis*, and section CN, "line of midnight", *khaṭṭ niṣf al-layl*, L. *linea mediae noctis*. The diameter EW represents the "straight horizon", *ufḳ al-istiwāʾ*, also called east-west line, *khaṭṭ wasaṭ al-mashriḳ wa 'l-maghrib*; its sections CE and CW bear, respectively, the names "east line", *khaṭṭ al-mashriḳ*, and west line, *khaṭṭ al-maghrib*. On the meridian NS, the following points are marked (for their construction, see Fig. 1b): C = projection of the North Pole, being the centre of the three concentric circles represented, viz., counting from within, the northern tropic, *madār raʾs al-saraṭān*, the equator, *dāʾirat al-iʿtidāl*, and the southern tropic, *madār raʾs al-djady* (outer rim). The points R_0, R_{10} . . . R_{80} mark the centres of the horizon, *ufḳ*, L. *horizon obliquus* (meeting NS at α_0) and of the almacantars from 10° to 10° (intersecting with NS at $\alpha_{10} \ldots \ldots \alpha_{80}$). $R_{90} = \zeta$ marks the "zenith" (from Ar. *samt al-raʾs*). The points η_0, η_{10} . . . . η_{90} ($= \zeta$) represent the second intersections of the almacantars with NS, south of the zenith.

The horizon, the equator, and the east-west line meet in the east and the west points, from which Islamic astronomy counts the azimuths (from 0-90° towards N and S). The vertical circles, *dawāʾir al-sumūt* pass through the zenith and the points 0, 10°, etc. on the horizon. M_0 marks the centre of the "first vertical", *awwal al-sumūt*, through the east and west points. For the construction of the other vertical circles, see Hartner [1], 2529 and Fig. 846.

The lines under the horizon indicate the equal or unequal hours (*sāʿāt al-iʿtidāl*, *horae aequales*, and *al-sāʿāt al-zamāniyya*, *horae inaequales seu temporales*), to be counted from sunset and sunrise; for their construction, see Hartner [1], 2540. The European way of counting equal hours from midday and midnight was known to Islamic astronomers, but never used in civil life. Therefore the second division

of the *ḥadjra* into 2 × 12 hours, starting from 0° and 180°, as shown in Fig. 1a (outer rim), is often found on European, but never on oriental astrolabes. The latitude for which a *ṣafīḥa* is designed is usually engraved near the middle of the disc; it may be expressed in various ways: by degrees and minutes (e.g. "valid for the lat. of 38° 54′"), by the name of a particular city ("valid for the lat. of Mecca"), or by the duration of the longest day ("valid for 14ʰ 45 ᵐ"). *N.B.* Astounding errors are sometimes found in the descriptions of astrolabes in European collections, where *abdjad* numbers are misread for names of (non-existing) places. The number of the *ṣafāʾiḥ* varies; a good instrument may contain nine and even more. Certain astrolabes have also a *ṣafīḥa* which gives for a particular geographical latitude the projection of the circles of position, as required for the calculation of the astrological *directiones* (*tasyīr*); others have a *ṣafīḥa* "for all latitudes" (*li-djāmiʿ al-ʿurūḍ*) also called the "tablet of the horizons" (*ṣafīḥa āfāḳiyya*) or "general tablet" (*djāmiʿa*), which carries only the projection of the
Fig. 1a. Face of an astrolabe showing the division of the *Ṣafīḥa*.

meridian and that of the horizon for a number of latitudes; the projection of the latter is often reduced to one-half of each arc of horizon. This disc serves to solve, for any latitude, the problems concerning the hour and the azimuths of the rising and setting of stars (cf. Michel [1], 91-2). The "perfect" (*kāmil*) astrolabe, moreover, bore the circle of the sun's equation. Finally, by interchanging the four quadrants of a *ṣafīḥa*, such fanciful figures as the "ogival tablet" are obtained (see Michel [1], 61 and Fig. 44); although being only a geometrical play, they allow the same measurements to be carried out as does an ordinary *ṣafīḥa*. An astrolabe on which all of the 90 almacantars are marked, is called "complete" *tāmm*, L. *solipartitum*. If only every second, third, fifth, sixth, ninth, or tenth, almacantar is marked, it is called *niṣfī* (*bipartitum*), *thulthī* (*tripartitum*), *khumsī*, *sudsī*, *tusʿī*, *ʿushrī*.

The *ʿankabūt* represents the vault of the fixed stars turning around the earth at rest represented by the *ṣafīḥa*. In order to allow the diagram of the *ṣafīḥa* to be seen as clearly as possible it is wrought in the shape of an openwork plate, having of course due regard to its solidity and the space required for attaching the protuberances or pointers (in the sing. *shaṭba*, *shaẓiyya*) indicating the fixed stars. It is because of this reticulated form that it has been called a "spider", referring of course to the spider's web (Gr. ἀράχνη and L. *aranea* may both mean the spider and its web). In designing this "spider", no limits are imposed on imagination, and almost every conceivable type is found, from the simplest geometrical pattern to the most beautiful leaf and scroll designs. As shown in Fig. 2, its most important part is the circle of the zodiac, (*minṭaḳat al-burūdj*), which is constructed in exactly the same way as all other circles represented on the *ṣafīḥa*. It is divided into the 12 *burūdj* comprising 30° each, but it is well to note that this division, radiating *not* from the pole of the ecliptic, but from that of the equator, does not indicate ecliptical longitudes, but the points of the zodiac having the *right ascensions* 0°, 30°, etc., and their subdivision into degrees (*mediationes coeli*, see Michel [1], 67 f., and Hartner [1], 2543). At the point of contact with the southern tropic, the zodiac carries a little point or hand, A, which serves to read the graduation on the *ḥadjra*. The spider is rotated by means of one or several handles, M, called *mudīr* or *muḥrik*. By combining parts (halves, fourths, sixths, even twelfths, i.e., single signs) of the zodiac represented in northern with others represented in southern projection, the zodiacal belt assumes more or less fantastic shapes for which equally fantastic names were invented: al-Bīrūnī and others tell us about *ṭablī*, "drum", *āsī*, "myrtle", *saraṭānī* or *musarṭan*, "crab", *ṣadafī* "shell", *thawrī*, "bull", *shaḳāʾiḳī*, "anemone" astrolabes, etc. Probably the *asṭurlāb zawraḳī*, "boat astrolabe" of *Aḥmad al-Sidjzī* (c. 400/1009) belongs to this category. For more detailed information, see Frank [1], 9 ff. and Michel [1], 69 f.

Other planispherical astrolabes based on other projections than the stereographic are to be regarded as theoretical constructions without practical significance, e.g. the astrolabe devised by al-Bīrūnī and called *usṭuwānī* "cylindrical", because of its projection (Ptolemy's "Analemma"), which al-Bīrūnī called cylindrical, and which we now call orthographic; the circles of the sphere are projected there in the form of straight lines, circles and ellipses. The *mubaṭṭaḥ* ("flattened") astrolabe, described by al-Bīrūnī (*Chronology*, 358-9), appears to have been only a stellar chart in equidistant polar projection, i.e., the pole of the ecliptic was the centre of the projection, the parallels with the ecliptic or circles of latitude (*dawāʾir al-ʿarḍ*) were represented by equidistant concentric circles and the circles of longitude (*dawāʾir al-ṭūl*; *N.B.*: in European
Fig. 1b. Stereographic projection on the equator.

astronomy, illogically, these great circles through the poles of the ecliptic are called "circles of *latitude*") by equidistant radii. The other projection mentioned on 359 f. is a peculiar variant of the one devised by al-Zarḳālī (see below).

(b) The back of the astrolabe is nearly always divided into four quadrants. The outer rim of the two upper are graduated from 0-90°, starting

from the horizontal line; the altitude of the sun or a star, taken with the aid of the alidad, is directly read on this graduation. Although the rules for the arrangement of the designs on the back are less strict, it can be said that the distribution of the diagrams in most cases is as follows: The upper left quadrant carries horizontal and/or vertical lines representing sines and cosines; the upper right, several sets of curves, one of which indicates the altitude of the sun when standing in the azimuth of the *ḳibla*, valid for a number of cities and for any position of the sun in the zodiac,—while another set indicates the altitude of the sun at midday for various geographical latitudes at all seasons of the year; the lower two quadrants contain the shadow squares, one devised for a gnomon of seven "feet" (*ḳadam*), the other, for a gnomon of twelve "fingers" (*aṣbaʿ*). As these divisions, which were first introduced by al-Zarḳālī (hence lacking only on the very oldest instruments, such as the one made by Aḥmad and Muḥammad, the sons of Ibrāhīm of Iṣfahān, in 374/984-5, Oxf. Lew. Evans Coll.), may be interpreted
Fig. 2. Spider of an astrolabe.

as the tangents and cotangents of the altitudes measured, it can be said that the back of the astrolabe offers a graphical demonstration of the main four trigonometrical functions.—Apart from these divisions, all kinds of calendaric, astrological, and religious information can be found. Characteristic differences must be noted here: Spanish-Moorish astrolabes always have a Julian calendar, Egyptian, a Julian or Coptic, while Persian never have any solar calendar. Similarly, the lines indicating the times of prayer are apparently found only on Mag̲h̲ribī (including Spanish-Moorish) astrolabes (according to a personal communication from M. Henri Michel).

The alidad is a flat ruler turning around the *ḳuṭb* on the back of the astrolabe. Figs. 3 a and c show the two principal types employed, Fig. 3b being a drawing in perspective of 3a. The straight line A B passing through the centre is called *ḳuṭr*, L. *linea fiduciae* or *fidei*. The two arms of the alidad are sharpened to a point (*s̲h̲aṭba*, *s̲h̲aẓiyya*) and each has a rectangular plate (*libna*, *daffa*, *hadaf*) standing at right angles to the plane of the alidad itself, through which a hole (*t̲h̲uḳba*) is bored above the *linea fiduciae*.

The inconvenience that a special *ṣafīḥa* is required for each latitude was remedied by the Spanish Arab al-Zarḳālī (Azarquiel, Arzachel) who made the vernal or the autumnal point the centre, and the solstitial colure (i.e. the meridian passing through the solstitial points) the plane, of projection. In its final form, which al-Zarḳālī called *al-ʿabbādiyya* in honour of al-Muʿtamid b. ʿAbbād, king of Sevilla (461-84/1068-91), the entire instrument consists of a single tablet with two small subsidiary pieces. On the face of the tablet in stereographical "horizontal" (as opposed to the ordinary, "vertical") projection the equator is represented with its parallels (*madārāt*) and its circles of declination (*mamarrāt*), and the ecliptic with its circles of latitude and longitude; the projections of the equator and the ecliptic, then, are straight lines through the centre. Then evidently the tablet is valid for any geographical latitude; moreover, since the projections of the two hemispheres exactly coincide, it suffices to add the principal stars, to make it replace the "spider" of an ordinary astrolabe. A rod (*ufḳ māʾil*) "oblique horizon", with an attached perpendicular ruler, both turning about the centre of the graduated face, fulfils the functions of the *ṣafāʾiḥ* of the common astrolabe; by inclining it at an appropriate angle to the line of the equator
Fig. 3. Types of alidads.

we obtain the horizon of the place of observation, and can then deduce from its divisions the eastern and western amplitudes or else solve any other problem of spherical astronomy. On the back of the tablet are the alidad and the markings found on the back of the common astrolabes; but al-Zarḳālī further added the "circle of the moon", which enabled him to follow also the course of our satellite. —This simple and perfected astrolabe was called by the other Arabs *al-ṣafīḥa al-zarḳāliyya*, "the tablet of al-Zarḳālī". As mentioned above, the idea of making the solstitial colure the plane of projection appears to have been first conceived by al-Bīrūnī, whose *Chronology* was composed 30 years before al-Zarḳālī was born. But curiously enough, he there (359 f.) acquiesces in devising a purely schematical, not projective, diagram, with the circles of longitude and latitude drawn through *equidistant* parts of the radii. It is, therefore, really al-Zarḳālī who must be credited with the invention of this new type of an astrolabe. Through the *Libros del Saber* (Vol. 3, Madrid 1864, 135-237: *Libro de le açafeha*) the instrument became known and famous under the name *Saphaea*. It is practically identical with Gemma Frisius's *Astrolabum* (sic) *Catholicum* of 1556; the astrolabe of Gemma's pupil, D. Juan de Roias Sarmiento (published 1550) is a variety of it, where the stereographic is replaced by orthogonal projection (cf. above, al-Bīrūnī's "cylindrical" pro-

jection). Another early variety of al-Zarkālī's astrolabe is the *ṣafīḥa shakāziyya* (or *shakāriyya*), about which we do not yet possess any accurate information.

For the difficult problem of deriving the date of manufacture of an astrolabe from the astronomical data on which it was based (position of the vernal point, longitudes of stars and, in some cases, the longitude of the perihelion), see Michel [1], 133 ff. and Poulle [1]; for a demonstration that the application of modern astronomical methods necessarily leads to false conclusions, see also Hartner [2] 104, 135-8. No conclusions whatever can be drawn from the (extremely slow) variation of the obliquity of the ecliptic; astrolabists nearly always assume it to be 23½° sharp.

II. The linear (*khaṭṭī*) astrolabe, also called *ʿaṣa 'l-Ṭūsī*, "the staff of al-Ṭūsī", after its inventor al-Muẓaffar b. Muẓaffar al-Ṭūsī (d.c. 610/1213-4) consists of one single piece, viz., a rod, with a plumb-line attached to its mid-point (i.e. the projection of the North Pole) a second thread fastened at its lower end, and a third thread, which is freely movable. The rod represents the NS line of an ordinary *ṣafīḥa*; its main divisions are those points in which the horizon, the almacantars, etc. meet the NS line. In the upper part are marked, moreover, the centres of the horizon and the almacantars, in the lower, the points in which each of the 12 *burūdj* and its subdivisions, as represented on the "spider", intersect with the NS line, in the course of one complete revolution of the latter. Another graduation, serving for measuring angles, indicates the cords of the angles 0-180°, where the cord of 180° equals the length of the whole rod. For further information, see Michel [1], 115-22, and Michel [2]; a first description was given by Carra de Vaux, *L'astrolabe linéaire ou bâton d'Et-Tousi*, in *JA*, 9th series, v, 464-516.

III. The spherical (*kurī, ukarī*) astrolabe, called *astrolabio redondo* in the *Libros del Saber* (Vol. 2, Madrid 1863, 113-222, text compiled by Isaac b. Sid (Isaac ha-Ḥazzan, called Rabbi Zag), exhibits without projection the diurnal movement of the sphere relatively to the horizon of the place of observation. Its history is at least as long as that of the flat astrolabe. P. Tannery, *Recherches sur l'hist. de l'astronomie ancienne*, Paris 1893, 53 ff., in dealing with the principle of the latter, demonstrates how easily the idea of a globe carrying the main constellations, surrounded by a hemispherical "spider" carrying the horizon and the hour lines, could have been derived from the hemispherical sundial, σκάφη (called ἀράχνη by Eudoxus). The *Fihrist* (trans. by Suter in *Abh. z. Gesch. d. math. Wiss.*, Vol. 6, 19, 1892) mentions Ptolemy as the first manufacturer of a spherical astrolabe, but this is evidently due to a confusion with the ἀστρολάβον ὄργανον described in *Alm.* 5, 1 (see introduction to the present article). Neither can the instrument devised by al-Battānī (*Op. astr.*, ed. Nallino, Vol. i, 319 ff.) be called a spherical astrolabe, as it is a combination of a celestial globe with an armillary sphere which lacks the essential characteristics of the astrolabe, above all the "spider". The main steps in the development of the spherical astrolabe before Alphonse X are marked by the treatises of Ḳusṭā b. Lūḳā (d.c. 300/912), Abu 'l-ʿAbbās al-Nayrīzī (d.c. 310/922), al-Bīrūnī (*K. fī Istīʿāb al-Wudjūh al-Mumkina fī Ṣanʿat al-Asṭurlāb*), and al-Ḥasan b. ʿAlī ʿUmar al-Marrākushī (d.c. 660/1262, see L. A. Sédillot's trans. of the section on the spherical astrolabe in *Mém. sur les instruments astron. des arabes*, Vol. i, Paris 1834).

The spherical astrolabe serves the same purposes as the planispherical astrolabe. Its main disadvantage is, that it is considerably less handy than the latter and yet does not yield better results. The instrument as described in the *Libros del Saber* consists of the following pieces: (a) a metal globe on which are engraved three complete great circles representing the horizon, the meridian, and the first vertical; furthermore, in the upper hemisphere, the almacantars and the halves of the vertical circles that lie between the horizon and the zenith. The lower hemisphere, as on the flat astrolabe, carries the lines of the unequal hours (the equal hours can be read directly on the equator). On the meridian a number of pairs of diametrically opposite holes are bored so as to make the instrument adjustable to any geographical latitude; (b) the openwork "spider" containing the ecliptic, the equator, a number of fixed stars, a quadrant of altitude, and (only on the Alphonsine astrolabe) a shadow quadrant and a calendar; (c) a narrow semicircular strip of metal fitting closely to the surface of the "spider" and fastened with its centre to the pole of the ecliptic, about which it can be turned freely; together with the two diopters (tangent to the globe and parallel to one another) fastened at either end of it, it forms the alidad of the spherical astrolabe; (d) an axis passing through the appropriate pair of holes on the globe and through the equatorial pole of the "spider".—On the Alphonsine astrolabe, the equator, otherwise always represented as a half great circle, is given the shape of a small (!) circle parallel to the equator proper. The astrolabe of al-Marrākushī, instead of the alidad, has a metal strip (*ṣafīḥa*) turning about the pole of the *equator*, with a small gnomon fixed at right angles to it, which can thus be set on any point of the equator. For detailed information, see Seemann [1].

(W. Hartner)

al-ASWAD b. Kaʿb al-ʿAnsī, of the tribe of Mad̲h̲ḥidj̲, leader of the first *ridda* in al-Yaman. His proper name is said to have been ʿAyhala or ʿAbhala, and he was also known as D̲h̲u 'l-K̲h̲imār, "the veiled one" (or D̲h̲u 'l-Ḥimār, "the man with the donkey"). After the murder of K̲h̲usraw II Parwīz (Ar. Abarwīz) in 628, but possibly not before the capture of Mecca in 630, the Persians in al-Yaman, under Bād̲h̲ām (or Bād̲h̲ān), made an alliance with Muḥammad, since they realised that they could obtain no further aid from Persia. The Arabic sources say they also became Muslims, but some European scholars place their conversion to Islam after the *ridda* (or "apostasy"). Whatever the date of conversion, the alliance meant that the part of al-Yaman controlled by the Persians had become part of the Islamic political system. After the death of Bād̲h̲ām Muḥammad seems to have recognised a number of local leaders as his agents in different parts of the region, besides sending some agents from Medina. The neighbourhood of Ṣanʿāʾ remained under Bād̲h̲ām's son, S̲h̲ahr. About the end of 10 (March, 632) men of the tribe of Mad̲h̲ḥidj̲ under al-Aswad al-ʿAnsī expelled two of Muḥammad's agents (K̲h̲ālid b. Saʿīd and ʿAmr b. Ḥazm) from Nad̲j̲rān and the surrounding district, defeated and killed S̲h̲ahr, occupied Ṣanʿāʾ, and brought much of al-Yaman under the authority of al-Aswad. Ḳays b. al-Maks̲h̲ūḥ al-Murādī acted in concert with al-Aswad against his rival for the leadership of Murād, Farwah b. Musayk, who had been recognised by Muḥammad. Al-Aswad's movement was thus directed against the political system established by Muḥammad, not against the Persians as such, since some of them retained important positions in Ṣanʿāʾ. The religious aspect is not as evident as in the *ridda* elsewhere, but al-Aswad increased his influence by claims to be a soothsayer (*kāhin*), speaking in the name of Allāh or al-Raḥmān, and by practising sleight-of-hand. His monotheism is probably derived from the Christianity or Judaism of al-Yaman, not from Islam, since there is no record of his having become a Muslim. Al-Aswad's rule lasted only a month or two, for his death is said to have been before that of Muḥammad (in Rabīʿ I 11/June 632). He was killed by some of those who cooperated with him, namely, Ḳays b. al-Maks̲h̲ūḥ and the Persians Fayrūz (or Fīrūz) al-Daylamī and Dād̲h̲awayh, assisted by the widow of S̲h̲ahr whom al-Aswad had married. Muḥammad is said to have instigated this movement against al-Aswad, but this report is perhaps only a later reconstruction of the events.

Bibliography: al-Ṭabarī, i, 1795-99, 1853-68; al-Balād̲h̲urī, *Futūḥ*, 105-7; J. Wellhausen, *Skizzen und Vorarbeiten*, vi, Berlin 1899, 26-34; Caetani, *Annali*, ii/1, 672-85; W. al-ASWAD b. YAʿFUR (also called Yuʿfur and Yaʿfir) b. ʿAbd al-Aswad al-Tamīmī, Abu 'l-D̲j̲arrāḥ, pre-Islamic Arab poet who lived probably at the end of the 6th century A.D. He is said to have travelled about among the tribes, composing eulogies or satires in verse, and was for some time the companion of al-Nuʿmān b. al-Mund̲h̲ir. He is sometimes called al-Aʿs̲h̲ā of the Banū Nahs̲h̲al, because he was night-blind, but he lost his sight at the end of his life, which is thought to have been extremely long. Of the poems which have come down to us, the most celebrated are a *ḳaṣīda* in *dāl* dating probably from his later years and containing the usual commonplaces on life's difficulties, the approach of death, the flight of youth, the infirmities of old age, etc.

Bibliography: His poems have been collected by L. Cheikho, *S̲h̲uʿarāʾ al-Naṣrāniyya*, 475-85; two *ḳaṣīdas* figure in the *Mufaḍḍaliyyāt*, i, 445-57, 846-9; Ibn Ḳutayba, *S̲h̲iʿr*, 134 f.; idem, *Maʿārif*, Cairo 1353/1934, 282; D̲j̲umaḥī, *Ṭabaḳāt*, 33-4; Buḥturī, *Ḥamāsa*, index; Ibn Durayd, *Is̲h̲tiḳāḳ*, 149; Ag̲h̲ānī, xi, 134-9; Bag̲h̲dādī, *K̲h̲izāna*, i, 193-6; Abkāryūs, *Rawḍa*, 44 ff.; O. Rescher, *Abriss*, i, 178. (Ch. Pellat)

ASYŪṬ, town in Upper Egypt. Asyūṭ, the largest and busiest town of Upper Egypt, is situated Lat. 27° 11′ N. on the west bank of the Nile. Owing to its situation in one of the most fertile and sheltered districts of the cultivable Nile valley, and also to its being the natural terminus of great desert highways it was in antiquity an important town (Syowt, Greek: Lykopolis) and the chief town of a Nomos. Under Islām Asyūṭ remained the chief town of a *kūra* (modern *markaz*, "district"), and on the inauguration of the division into provinces became the capital of a province (*ʿamal*, now *mudīriyya*).

Asyūṭ is the colloquial form of the literary Usyūṭ. Both are Arabisms for the Coptic Siout, to which in the land registers of the Middle Ages the form Suyūṭ or Sayūṭ corresponded. But as early as the time of al-Ḳalḳas̲h̲andī (d. 821/1418) the popular pronunciation was Asyūṭ.

A history of Asyūṭ cannot be written for the reason that we scarcely find any mention of it in the historians, and only towards the end of the Mamlūk period, under ʿAlī Bey, did it play any historical part, viz. in the year 1183/1769-70, when it was for a time the centre of revolt. From the accounts of geographers and travellers we ascertain that it enjoyed unbroken prosperity throughout the entire Islamic period. At the end of the 19th century, it gained considerably in importance, especially after it became linked by rail with Cairo (in 1292/1875). Its population has risen from 28,000 in 1293/1876 to 42,000 before the first world war and about 120,000 at the present time.

In the Middle Ages Asyūṭ was famed for its agricultural products, its industry and trade. Besides corn and dates, quinces of an exceptional size were found here. The main industries were the weaving of woollen, cotton and linen goods. Owing to the alum and indigo obtained from the adjacent oases dyeing was extensively carried on; *e.g.* the materials manufactured for export to Dār Fūr were dyed here. Its specialities were fine linen goods, called *dabīḳī* after their chief place of production Dabīḳ in Upper Egypt, and fine woollen goods and carpets modelled on the classical Armenian products. Today Asyūṭ still manufactures black and white tulle shawls with silver appliqué-work, which are much sought

after in Europe, and represent the last remains of an industry once very famous throughout the Orient. Further Asyūṭ was engaged in the preparation of opium and in the making of high-quality pottery which, with its antique patterns, is still much in demand as black and red "Asyūṭ-ware".

There was a brisk trade in all these products throughout Egypt and abroad. The direct trade with the Sūdān is specially famous. The annual Dār Fūr caravans (numbering about 1500 camels) brought slaves, ivory, ostrich-feathers and other products of the Sūdān, and received in exchange the products of Egypt's industries, especially stuffs. The scholars of Napoleon's expedition made careful investigations into this trade which has now so much declined.

Like all the industrial towns of Egypt, Asyūṭ had a large Christian population—60, according to others as many as 75, churches and chapels—, but no Jews at all, a fact explicitly stated.

Caravanserais, bazaars, baths—one of the latter famous and very ancient—, mosques and other public buildings adorn the town to-day as formerly. In one of the mosques stood a *minbar* which at certain seasons was filled with corn and carried through the streets as a *maḥmal* (Ibn Duḳmāḳ). Like all the flourishing towns of modern Egypt, Asyūṭ has a strong admixture of Levantines.

Asyūṭ is the birth place of Plotinus, the Coptic Saint John of Lykopolis and of several Arab scholars named al-Suyūṭī, of whom the versatile historian Dj̲alāl al-Dīn (d. 911/1505) is the best known.

ATA. A Turkish word meaning "father", and also "ancestor" (cf. the expression *ata sözü* "proverb"). Among the Og̲h̲uz, the qualifier *ata* was appended to the names of people who had acquired great prestige; this term can also bear the derived meaning of "wise", and even of "holy", "venerated".

ʿAṬĀʾ, "gift", the term most commonly employed to denote, in the early days of Islam, the pension of Muslims, and, later, the pay of the troops. It is impossible to give here the history of the system of pay throughout the Muslim world, and this article will be confined to a general outline.

The traditional starting-point is the organisation of the pensions by ʿUmar b. al-K̲h̲aṭṭāb. The first Muslims had derived no material advantage except their share of the booty from successful expeditions. The flow of taxes into the coffers of the nascent caliphate enabled a better regulated form of reward to be envisaged, which the traditionists and jurists explain in connexion with the organisation of the first *dīwān* and within the framework of their theories, subsequently evolved, on the utilisation of *fayʾ*; the various versions which they give accord ill with one another, because they all reflect the desire, conceived at a later date, to find in the decisions of ʿUmar a precedent which did not exist. The main outlines, however, are clear: according to a hierarchic order which took into account kinship with the Prophet and especially seniority as regards admission to Islam, graduated pensions were distributed to the whole Muslim population which had been displaced from its homes by the holy war (the *muhādj̲irūn* and *anṣār* of the early days, together with the fighting men of a later date), women, children, slaves and clients (still not numerous and not by definition foreigners), but excluding, of course, the Bedouin and others who remained, in Arabia and elsewhere, unaffected by the military expansion of Islam. The amount ranged from 200 to 12,000 dirhams, the great majority of the men receiving from 500 to 1,000 dirhams annually. The registration and classification of those eligible necessitated the organisation of a service which constituted the first *dīwān*, and the division of the beneficiaries into groups, *ʿirāfa*, under the control of an *ʿarīf* [*q.v.*]. All the quotations relevant to these questions are given with a commentary in Caetani, *Annali*, iv, 368-417, to which should now be added Abū ʿUbayd Ibn Sallam, *Kitāb al-Amwāl*, 223-71, and the references in Tritton, *Notes on the Muslim system of pensions*, in *BSOAS* 1954, 170-2, which also deals with the century following.

This system, conceived in terms of conditions at the time of ʿUmar, obviously could not continue unchanged. The ramification of family trees, conversion on a large scale, the slowing-up of the rate of the conquests and the reduction in the benefits derived from war, the increasing complexity and specialisation of military techniques during the Umayyad period, and later, during the ʿAbbāsid period, the increasing professionalism and progressive "de-arabicisation" of the army, led, after many tentative procedures and irregularities, to a distinction between, on the one hand, civil pensions, reserved for the descendants of the Prophet's family (ʿAlid and ʿAbbāsid branches) and in general more of an honorary than concrete nature (we are, of course, not discussing here the salaries of officials, cf. RIZḲ), and on the other hand military pay; as regards the army, a distinction was made between the class of professional soldiers, registered in the *dīwān* and entitled to regular pay, and occasional volunteers, not registered in the *dīwān*, who received a smaller allowance confined to their period of effective service. On the other hand, whereas under the Umayyads, in spite of the ephemeral effort of ʿUmar b. ʿAbd al-ʿAzīz (cf. Wellhausen, *Arabische Reich*, 186-7), the *mawālī*, who were by that time numerous and were for the most part Iranians, were virtually excluded from the benefit of pay, under the ʿAbbāsids, it was the K̲h̲urāsānīs, and later the other elements, Turks, Daylamites, etc., who, as professionals, were almost the only persons to receive pensions, and the Arabs in the end were systematically removed from the registers in the course of the 3rd/9th century, at least in the East. In the early days, payment was made principally on a provincial basis, or, in Syria and Spain, on the basis of military districts called *dj̲und* [*q.v.*], as a charge on the local taxes; but ʿAbbāsid centralisation made the majority of these payments a charge on, or placed them under the direct control of, the Treasury (*bayt al-māl* [*q.v.*]).

Although the amount of the payments seems to have been subject to considerable fluctuation, the

annual pay of a foot-soldier, in the second century of ʿAbbāsid rule, can be estimated to be of the order of 1,000 dirhams = 70 dīnārs, or three times the pay of a Baghdād journeyman, and that of a cavalryman twice as much. Commanders and specialised corps naturally received more. Ḳudāma describes in detail the functioning of the system, the differences between the various categories, the minute detail of the rolls, the different intervals at which different payments were made (W. Hoenerbach, *Zur Heeresverwaltung der Abbasiden*, in *Isl.*, 1949). But, dating from before his time, *ad hoc* payments were made, especially on the occasion of an accession, in addition to the regular pay; and it seems that there had always been, in addition to pay proper, distributions of provisions and equipment. Arms were a charge on the Treasury. The army was therefore always expensive, and became increasingly so as military technique became more complex and heavy cavalry and siege operations played a greater part in it. Disturbances prevented the government from reducing the number of its effectives; and the troops, realising that they were indispensable, increased their demands; the Treasury found it increasingly difficult to maintain regular payments, and the discontent of the troops could only be appeased by increases in lieu of arrears, thus creating a vicious circle.

From the 4th/10th century onwards, the control exercised by the military over the political authority caused the replacement of payments by fiscal assignments which the interested parties collected from a domain the revenue of which was the equivalent of the amount of pay due (see IḲṬĀʿ).

ʿAṬĀʾ B. ABĪ RABĀḤ, a prominent representative of the ancient Meccan school of religious law. Born in Yaman of Nubian parentage but brought up in Mecca, he was a *mawlā* of the family of Abū Maysara b. Abī Khuthaym al-Fihrī. He died in Mecca in 114 or 115 (732 or 733) at a very old age (88 or even 100 years are mentioned). ʿAṭāʾ is the only ancient Meccan jurisconsult who is more than a name to us; an analysis of the doctrines ascribed to him enables us to separate an authentic core from later, fictitious accretions. In the manner common to his contemporaries, he did not hesitate to use his personal opinion (*raʾy*), both in its disciplined and in his arbitrary form (*ḳiyās* and *istiḥsān*, respectively); statements which, reflecting a later fashion of thought, make him reject *raʾy*, are therefore spurious. The extent to which ʿAṭāʾ may have used traditions from the Prophet and from the Companions as legal arguments, is difficult to ascertain; if he did so, he presumably made use of *mursal* [*q.v.*] traditions. Owing to the rapid development of Islamic law at the beginning of the second century of the *hidjra*, some of the distinctive opinions of ʿAṭāʾ seem to have become unfashionable already towards the end of his life; this is probably reflected in the statement that some younger contemporaries of his ceased attending his lectures, and that the *mursal* traditions transmitted by him are weak. This was more than compensated by attributing to him, when the attitude to traditions had changed, personal contact with an ever increasing number of Companions of the Prophet, though some Muslim critics themselves point out that he did not hear traditions from ʿAbd Allāh b. ʿUmar, Umm Salama and others, and express doubt concerning his direct contact with ʿAʾisha. At the beginning of the second century, the interest of the specialists in Islamic law had already spread from purely religious problems to more technically legal questions; the authentic doctrines of ʿAṭāʾ bear this out, and he did not specialise in the ceremonies of *ḥadjdj* as some sources assert in deference to the fiction that this was the favourite subject of the scholars of Mecca. Already during the life-time of ʿAṭāʾ, his reputation spread far beyond Mecca, and Abū Ḥanīfa states that he was present at his lecture meetings; this is perhaps the earliest authentic piece of evidence on technical instruction in Islamic religious law.

Bibliography: Ibn Saʿd, v, 344 ff.; Abū Ḥātim al-Rāzī, *K. al-Djarḥ wa 'l-Taʿdīl*, iv$_1$, Ḥaydarābād 1360, 330 f.; Abū Nuʿaym, *Ḥilyat al-Awliyāʾ*, iii, Cairo 1933, 310 ff.; Abū Isḥāq al-Shīrāzī, *Ṭabaḳāt al-Fuḳahāʾ*, Baghdad 1356, 44 f.; Ibn Kathīr, *al-Bidāya wa 'l-Nihāya*, Cairo 1351-8, ix, 306 ff.; Ibn Ḥadjar al-ʿAsqalānī, *Tahdhīb al-Tahdhīb*, vii, Ḥaydarābād 1326, 199 ff.; J. Schacht, *The Origins of Muhammadan Jurisprudence*², Oxford 1953, 250 f. (J. SCHACHT)

ʿAṬĀʾ BEY, Ṭayyārzāde ʿAtāʾ Allāh Aḥmad, known as ʿAṭāʾ Bey, Ottoman historian. He was born in Istanbul in 1225/1810, the son of a palace official. He himself was educated in the palace, and held various official positions. In 1293/1876 he went to the Ḥidjāz to take up an appointment as administrator of the sacred territory (ḥarām) of Mecca, and died in Medina in 1294/1877 or 1297/1880. His most important work is his five volume history, known as *Taʾrīkh-i ʿAṭāʾ* (Istanbul 1291-3/1874-6). Its chief interest derives from his intimate knowledge of the organisation, customs, personalities, and affairs of the Imperial household in the 19th century. An autograph copy of his *dīwān* is preserved in the *Millet* library.

MEḤMED **ʿAṬĀʾ BEY**, (1856-1919), Ottoman scholar, journalist, and public official. After the revolution of 1908 he became a member of the Financial Reform Committee and was for one week Minister of Finance. He published many articles in journals and periodicals, under the names of Mefkhari and ʿAtāʾ, and also produced a literary anthology called *Iḳtiṭāf*, which was extensively used as a school text-book. His most important undertaking was the Turkish translation of Hammer's History of the Ottoman Empire. This version, based on the French translation of J. J. Hellert, began to appear in Istanbul in 1329/1911. Of the fifteen volumes that were planned, only ten actually appeared, the last in 1337/1918.

ʿAṬĀʾ ALLĀH EFENDI [see SHĀNĪZADE].

ʿAṬĀʾ MALIK DJUWAYNĪ [see AL-DJUWAYNĪ].

ʿATĀBA, modern Arabic four line verse, common in Syria, Palestine, Mesopotamia and ʿIrāḳ. The first three lines not only rhyme, but generally repeat the same rhyming word with a different meaning (*tadjnīs tāmm*). The last line rhymes with the paradigm *ʿatāba* ("lovers' reproach"), the last syllable of which is often supplied without making sense. The metre is a sort of *wāfir*. A peculiar form common in ʿIrāḳ is called (*a*)*būdhiyye* ("man of sorrow") or *lāmī* and ends with *iyya* (*eyya*).

(H. Ritter).

ATABAK (Atabeg), title of a high dignitary under the Saldjūḳids and their successors. The term is Turkish and first makes its appearance in Muslim history with the Saldjūḳids; it is therefore reasonable to enquire whether any precedents exist in the Turkish societies of Central Asia. So far no occurrence of the actual word seems to have been reported and the fact that in the Orkhon civilisation there is apparently a person called *ata*, father, acting as a tutor to a young prince, is too vague to enable one to affirm a connexion; the same is true of similar cases existing in other civilisations (see for example Hārūn al-Rashīd and Yaḥyā al-Barmakī); moreover no such office has so far been noted even under the Ḳarakhānids. The term *atabeg*, therefore, seems to be more precisely characteristic of the Oghuz or the Saldjūḳids. Even under these latter, the first definite indication of the title, which was subsequently to make history as the title of Turkish military chiefs, applies to an Iranian "civilian": Malikshāh, who was very young when he came to power, added the term *atabeg* to the *laḳab* of his *wazīr* Niẓām al-Mulk, thereby indicating that he conferred upon him the entire delegation of his own authority, as though he were his father (Ibn al-Athīr, ed. Tornberg, x, 54; *RCEA*, vii, no. 2734-2737). Nevertheless the fact that from the death of Malikshāh the title is to be met with in all branches of the Saldjūḳid dynasty, including that of Asia Minor, which has a specific evolution, prompts one to admit its existence already at the origin of the régime. In these circumstances there is no reason to reject the evidence, not apparently previously adduced, of the *Akhbār al-Dawla al-Saldjūḳiyya*, ed. Muḥ. Nāẓim, 28-29, which places a Turkish *atabeg* beside the young Alp Arslan during his father's lifetime in the person of a certain Ḳuṭb al-Dīn Kulsāriʿ (Ḳizil Sāriʿ?). The honour conferred on Niẓām al-Mulk, a non-Turk and *wazir*, appears to have been something of an exception, all the more characteristic of his ascendancy.

However that may be, from the death of Malikshāh, the *atabegs* appear more and more regularly, whilst the role played by them increases, favoured by princely minorities and strife between pretenders. Henceforth only Turkish military chiefs are involved, corresponding to the growing influence acquired by this element during the period of the Saldjūḳid regime's decay. Malikshāh's son Barkyāruk, apparently during his father's lifetime, had the *djāndār* Gümüshtakin as "preceptor (*murabbiy*ᵘⁿ) and *atabeg*" (ʿImād al-Dīn al-Iṣfahānī, abridgement by Bundarī, ed. Houtsma, 83; cf. al-Rāwandī, *Rāḥat al-Ṣudūr*, ed. Muḥ. Ḳazwīnī, 140). He, in turn, created others for his young brothers Sandjar and Muḥammad, when he accorded them autonomous appanages, and on his death-bed, also for his son Malikshāh, who was still a child. At the same time, on the death of Malikshāh's brother Tutush, whose appanage was in Syria and who was the unfortunate rival of Barkyāruk, we find an *atabeg* with each of his sons Ruḍwān and Duḳāḳ. Henceforth every Saldjūḳid prince seems to have had an *atabeg*, at least if he was endowed with an appanage whilst still a minor; in other words, wherever there were several sons, there were also several *atabegs*. As they now issued exclusively from the category of military chiefs of servile origin, their function may in a way be associated with the duty of every slave or manumitted slave to guard the interests of his master's family to which he himself belonged. Furthermore the *atabeg* frequently made his position as a "father" complete by marrying his pupil's mother, when the latter became a widow (for example early on, Tughtakin at Damascus, the mother of Duḳāḳ). As for his authority, this consisted in his sharing in the unrestricted power of the prince and therefore it cannot be defined by precise attributions, as in the case of ordinary functions. However, he could be dismissed by another *atabeg*; in any case, when the prince grew up, the *atabeg*'s authority naturally disappeared, only leaving room for his influence as a counsellor, who had the prince's ear; if the *atabeg* assumed more than that, a rupture with the prince followed (for example, Ruḍwān and Duḳāḳ), or even the *atabeg*'s execution (Kutlughtakin by Barkyāruk's brother Muḥammad).

This, at least was the initial state. But relatively soon the *atabeg*'s position was consolidated at the expense of that of the prince. The office of *atabeg* gave its holder great authority, which he was normally tempted to perpetuate. But in addition, from the second generation of Malikshāh's heirs, the respective roles of prince and *atabeg* were reversed. The starting point now was that either willingly or under duress the sultan would bestow a major governorship on a powerful *amīr* and, in order to safeguard the formal dependence of the latter, he attached one of the Saldjūḳid children to him, whose *atabeg* he became. For a while the young prince continued to serve as a cloak beneath which the chief concealed his own ambitions; such was the case in the disputes which brought Sultan Masʿūd into conflict with various of his relatives, each of whom was urged on by his *atabeg*. Thus Fārs, Ādharbāydjān and, at one time, Mawṣil, each had their respective *atabeg* and their claimant to the Sultanate. A corresponding evolution took place in the case of the minor Saldjūḳid dynasty of Kirmān (Muḥ. b. Ibrāhīm, *Histoire des Seldjukides du Kirmān*, ed. Houtsma, 35-132 passim and index, especially under Ḳuṭb al-Dīn Muḥ. b. Būzḳush).

A further new stage was reached when the *atabeg* succeeded in making hereditary, in addition to his office, possession of the governorship, which in theory constituted his reward for it. This was accomplished after the middle of the 6th/12th century by the family of the *atabegs* of Ādharbāydjān, who were descended from Ildegiz, the *atabeg* of Sulṭān Arslan. Lastly at the beginning of the century, the death of Duḳāḳ without heir at Damascus, far away from the centres of the Saldjūḳids, enabled the *atabeg* Tughtakin to found a dynasty which was both autonomous and in his own name. Elsewhere all-powerful *atabegs* reached the same results by suppressing their sultans, who were completely devoid of resources: this was accomplished at Mawṣil on the death of the *atabeg* Zangi by his heirs in 539/1144 and was similarily achieved against the last Persian Saldjūḳid, with the help of the Caliph, by the heirs of Ildegiz, who summoned the Khʷārizmshāh into central Iran (588/1192). Moreover the sultan's disapperance did not hinder the masters of Ādharbāydjān and of Mawṣil from continuing to have themselves called *atabegs*; the word, hence-

forth, had in practice the exclusive sense of territorial prince. Thus it seems that from the middle of the 6th/12th century the title in Fārs had been adopted by the Salghūrids, the vanquishers of the real *atabegs*, without their having any longer a sultan under their tutelage. The most famous of the Atabeg dynasties is that of Mawṣil, by reason of the work devoted to them by their historian and subject Ibn al-Athīr. A further new dynasty of pseudo-atabegs was to appear in the 7th-13th century in Luristān (Ḥamd Allāh Mustawfī Ḳazwīnī, *Taʾrīkh-i Guzīda*).

The title *atabeg* was still to be met with among the successors of the Saldjūḳids, in particular under the Khwārizm-shāhs, who did not allow those who bore it, exclusively tutors of young princes, to acquire much influence (Djuwaynī, ii, 22, 33, 39, 209). Later on, in all those states which derived from the Mongol conquest, the appellation *atabeg* is to be met with upon occasion fortuitously, applied to indefinite princely tutors or as one of a number of simple honorific titles inherited from the past (see references in M. F. Köprülü, art. *Atabeg* in *IA*). More remarkable is the penetration of this title, attributed to military and feudal leaders, into Christian Georgia, which had borrowed other institutions from neighbouring Ādharbāydjān, with whom they were alternatively at war or in matrimonial relationship (J. Karst, *Le code géorgien du roi Vakhtang, Commentaire*, i, 211 ff.; M. F. Brosset, *Histoire de Géorgie*, 1/2, passim; Allen, *A History of the Georgian People*, 1932, chap. xxiii).

Among the Saldjūḳids of Asia Minor, the *atabeg* is attested from the beginning of the reign of Ḳilidj Arslan I, in the person of Khumartāsh al-Sulaymānī (consequently a manumitted slave of his father Sulaymān b. Ḳuṭlumush) (Ibn al-Azraḳ, quoted in a note by Amedroz to the History of Damascus of Ibn al-Ḳalānisī, 157). Shortly afterwards the mother of the young Saldjūḳid of Malaṭya, to protect him against his brother of Ḳunya, gave him a series of *atabegs*, whom she took in marriage, the last of them being the neighbouring Artuḳid Balak [*q.v.*] (Michael the Syrian, trans. Chabot, 194 and 200). In the main branch, *atabegs* are also reported in the 6th/12th century (*RCEA*, no. 3376-3377), and then in the 7th/13th century; the power of the sovereigns prevented them from expanding and it is only after the disaster which ended in the Mongol protectorate that the title occurs borne by men with a decisive influence on the régime, such as Djalāl al-Dīn Ḳaratāy. However, in Asia Minor the actual conditions of the evolution had given the power to a team of high dignitaries, friends or enemies according to the case, rather than to a single individual, and the *atabeg* was not the most important. In this area he does not appear to have survived the Ilkhānid regime and he was unknown to the Ottomans.

The title of *atabeg*, however, still had a fairly long independent career in the Mamlūk state. The Ayyūbids had made it known in their realms; it may perhaps have found expression in the ephemeral tutelage which al-Afḍal exercised in 595/1198 over his young nephew, the son of al-ʿAzīz in Egypt; in any case it was used more permanently and formally during princely minorities in the Yemen and particularily at Aleppo (History of Aleppo of Ibn al-ʿAdīm, passim). This is the way in which it reached the Mamlūks. The founder of the regime, ʿIzz al-Dīn Aybak, bore the title, not as tutor to a prince, but as regent-spouse of the famous heir and widow of al-Ṣāliḥ Ayyūb, Shadjarat al-Durr; and the title, sometimes accompanied by considerable power, at other times devoid of it, survived down to the end of the dynasty. If one may believe al-Maḳrīzī (*Sulūk*, trans. Quatremère i/1, 2), Aybak bore the title of *atabeg* of the armies; but no contemporary author has attributed it to him and one must perhaps envisage a confusion in al-Maḳrīzī's mind with the title of *atabak al-ʿasākir* [*q.v.*], which was usual in his time. In effect it then corresponded with a kind of supreme military command, though it only acquired this extended meaning apparently under the Circassians, following the suppression of the office of *nāʾib*.

Bibliography: The only general study is by M. F. Köprülü, *op. cit.*, where detailed references and additional information will be found. For the sources and other materials, apart from those already cited in the article, see below the articles MAMLŪKS and SALDJŪḲIDS. On the Great Saldjūḳs and their Irano-ʿIrāḳī successors, the information used here has been taken mainly from Ibn al-Athīr, ʿImād al-Dīn al-Iṣfahānī, and Rāwandī. See also Sanaullah, *The decline and fall of the Seldjukid Empire*, Calcutta 1938; M. A. Köymen, *Büyük Selçuklu Imparatorluğu Tarihi*, ii, Ankara 1954; I. H. Uzunçarşılı, *Osmanlı Devleti teşkilâtına medhal*, Istanbul 1941, 50-1. For Asia Minor, see principally the chronicles of Ibn Bībī and Aksarayi, *passim*. For the Mamlūks, see the following article.. (CL. CAHEN)

ATĀBAK AL-ʿASĀKIR. After the decline of the office of the viceroy (*Nāʾib al-Salṭana*) the Atābak al-ʿAsākir (Commander-in-Chief) of the Mamlūk Army became the most important *amīr* in the Sultanate. His functions were much broader than the name of his office indicates. For all intents and purposes he had become the sultan's viceroy. Very frequently the title *mudabbir al-mamālik* or *mudabbir al-mamālik al-islāmiyya* was appended to his name. It was common, especially in the Circassian period, for him to succeed the sultan on the throne. (See D. Ayalon, *Studies on the Structure of the Mamluk Army*, in *BSOAS*, 1954, 58-59, and references on p. 59, n. 6). (D. AYALON)

ATABEG [see ATABAK].

ATABEG AL-ʿASĀKIR [see ATABAK AL-ʿASĀKIR].

ʿAṬĀʾĪ. ʿAṬĀʾ ALLĀH B. YAḤYĀ B. PĪR ʿALĪ B. NAṢŪḤ, known as NEWʿĪ-ZĀDE ʿAṬĀʾĪ, prominent Ottoman poet of the early 17th century and continuator of Ṭashköprü-zāde's biographical work on the Ottoman *ʿulamāʾ* and dervishes. (Muḥibbī, *Khulāṣa*, iv, 263, incorrectly gives his *ism* as Muḥammad). He was born in Istanbul in Shawwāl 991/1583, where his father (who, under the *makhlaṣ*, Newʿī, enjoyed high esteem as a poet and scholar—from 998 to 1003, he was tutor to the ill-fated sons of Murād III) was at this time professor of the Djaʿfar Agha *madrasa*; his mother was the daughter of the famous Nishāndjī Meḥmed Pasha (*Sidjill-i ʿOthmānī*, iv, 131). Having studied under Ḳāf-zāde Fayḍ Allāh Ef. (the father of the anthologist Fayḍī) and Akhī-zāde ʿAbdülḥalīm Ef., he began his career as professor of the Djānbāziyye *madrasa* in Istanbul (Ṣafar 1014/1605), but was soon to be transferred to the judicial class by his appointment as *ḳāḍī* of Lofdja in Shaʿb. 1017. He held a number of such posts in Rūmili (Shaykhī gives the most detailed information about these), the last of which was Üsküb, whence he was dismissed at the end of 1044/1635. He returned to Istanbul where he died in Djumādā I, 1045 (ʿUshshāḳī-zāde, f. 26b and

Ḥādjdjī Khalīfa, i, 724, et al., id., *Fadhlaka*, ii, 168 erroneously give the year 1044; characteristically unreliable, Riḍā gives 1046) and was buried beside his father in the court-yard of the Shaykh Wafā mosque. He was survived by a son, Meḥmed, who was also of the *ʿulamāʾ* (*Fadhlaka*, loc. cit.).

The most famous and valuable of his works is the *Ḥadāʾiḳ al-Ḥaḳāʾiḳ fī Takmilāt al-Shaḳāʾiḳ* (completed in Rabīʿ II, 1044 and printed in Istanbul, 1268), in which he brings down to his own day the biographical sketches of the Ottoman *ʿulamāʾ* and dervishes begun by Ṭashköprüzāde in his Arabic *al-Shaḳāʾiḳ al-Nuʿmāniyya* (Brockelmann, ii, 425). Like the latter, it is organised according to the reign in which the individual died, the last being that of Murād IV, but the language is now Turkish and the notices are far more precise in detail and frequently contain ʿAṭāʾī's personal remarks and reminiscences. The style is similar to that used by Medjdī in his translation of the *Shaḳāʾiḳ*, and, while to the taste of recent generations almost intolerably elegant, was greatly admired by his contemporaries; and, indeed, it is this alone which redeems the work from being a mere statistical summary. The popularity of his poetry, too, has not survived (cf. Gibb, *Ottoman Poetry*, iii, 232 ff. for the 19th century Ottoman critics), though at least one modern scholar, M. F. Köprülü, has found his mathnawī works deserving of study. These latter are included in his *khamsa*, of which the fifth portion, entitled *Ḥilyat al-Afkār*, was until recently regarded as lost or non-existent. For a full analysis of the other four works and a short account of his divan, all still unpublished, cf. Hammer-Purgstall, *Gesch. osman. Dichtkunst*, iii, 244-283. (It should be remarked that the chronogram given here for the date of completion of the *Nafḥat al-Azhār* is 1020, while that given by A. S. Levend is 1034). The only other work ascribed to him is a legal monograph, *al-Ḳawl al-Ḥasan fī Djawāb al-Ḳawl Liman* ... (Brockelmann, ii, 427), which, from its title, appears to be a reply to an unfinished work by his contemporary Mollādjiḳ Aḥmed Ef. (cf. *Ḥadāʾiḳ*, 667).

Bibliography: To the works mentioned by Babinger, 171 and Brockelmann, II, 427, should be added those given by Behcet Gönül, *Istanbul Kütüphanelerinde al-Shaḳāʾiḳ al-Nuʿmāniyya Tercüme ve Zeyilleri*, *Türkiyat Mecmuasī*, vii-viii, cüz 2 (1945), 161; Shaykhī, *Waḳāʾiʿ al-Fuḍalāʾ*, (*Süleymāniyye*, Beshīr Ağa, 479), f. 3a; Riyāḍī, *Riyāḍ al-Shuʿarāʾ*, (Nuruosmaniye, 3724), f. 116b. ʿUshshāḳīzāde's *Dhayl-i Shaḳāʾiḳ* was used in the Murād Mollā MS., nr. 1432, f. 26a. Sadeddin Nüzhet Ergün, *Türk Şairleri*, ii, 541-550, gives the most extensive selection of his verse and reproduces in his article the statements of Shaykhī, Riyāḍī and Riḍā, as well as the opinions of M. F. Köprülü. On the *Khamsa*, cf. Agâh Sīrrī Levend, *Atayiʾnin Hilye-tül-Efkarʾī*, (Ankara, 1948); however, his argument in support of 1046 as the year of ʿAṭāʾī's death is unconvincing.

(J. Walsh)

ATAK (Attock), a fort in West Pākistān 33° 53′ N, 72° 15′ N, commanding the passage of the Indus just below the junction with the Kābul river. Atak was founded by Akbar in 989/1581 (under the name Atak-Banāras) to defend the main invasion route from Kābul via Peshāwar against the incursions of his brother Mīrzā Ḥakīm. For contemporary explanations of the name see Firishta, i, 502 and Abu 'l-Faḍl, *Akbar-nāma*, Bib. Ind. Text, iii, Calcutta 1881-87, 355; for a comment on its possible historical derivation see Cunningham, *Arch. Sur. India*, ii, 1871, 7.

Coming into British occupation at the end of the second Sikh war, Atak lost some of its military value with the opening (1300/1883) of the combined road and rail bridge to carry the Grand Trunk road and the North-West railway.

Bibliography: see text; also *Gazetteer of Rawalpindi District*, (rev. ed.), 1893-4, Lahore 1895, 260 and *Imperial Gazetteer* VI, 138.

(P. Hardy)

ATALİḲ. A term synonymous with *atabeg*, used not only among the Turks, but also in the Caucasus, Turkistan, and by the Tīmūrids and the Turkish dynasties of India. It was still used in the 19th century by the *amīrs* of Bukhārā and Khiva, and the *amīr* of Kāshghar, Yaʿḳūb Bey, bore the title of *atalīḳ ghāzī*.

Bibliography: See the article, with a very full bibliography, by M. F. Köprülü in *IA*, s.v.

(R. Mantran)

ʿATAMA (a.), the first third of the night, according to the lexica, from the time of waning of the *shafaḳ* (the red colour of the sky after sunset). This definition covers exactly the right time for the *ṣalāt al-ʿishāʾ*, which is therefore often called *ṣalāt al-ʿatama*, even in quite large a number of traditions. But later on, pious circles rejected this name, since the *ṣalāt al-ʿishāʾ* is expressly called thus in the Ḳurʾān. A tradition appeared which declared the use of *ʿatama* with regard to the prayer to be characteristic of Bedouins, who used to milk their camels at that time and call the milking itself *ʿatama*. Muslims are requested to use the name which Allāh himself used in the Holy Book.

Bibliography: Wensinck, *Handbook*, s.vv. *ʿatama*, *ʿishāʾ*.

(M. Plessner)

ATAR, town in Mauritania, chief place of the Circle of the Adrar, situated at a height of 230 m., on the route Saint-Louis to Tindouf, about 420 km. to the east of Port-Etienne. The Ḳṣar has 4500 inhabitants belonging for the most part to the Smacids, a tribe of marabouts. According to local tradition Atar was founded in the 16th or 17th century. At this period the pilgrims' caravan to Mecca was organised each year by the Idau ʿAli of Chinguetti (Shinḳīṭī) who used to give the imamate to a distinguished member of the Smacids. It happened that they broke with this tradition in favour of a Ghellawi. Outraged, a group of the Smacids left the town in protest and arrived at an important settlement of the Azougui which has now disappeared, but was then rich enough for the Portuguese to have established a factory there in the 15th century. So this display of temper gave birth to Atar.

Although Chinguetti has remained the spiritual and religious capital of the Adrar, Atar is now the principal commercial centre, providing a market for the great nomads and the southern outlet for the products of Moroccan workers. It is here that graziers come to sell their camels and sheep and to stock themselves up with tea, sugar, indigo, oil etc. It is also to its important palm-grove that they come to perform the process known as *geṭna*, the cleaning of the dates, which brings in great wealth at the time of the date-harvest.

When, at the beginning of the 20th century, Coppolani and his successor, Colonel Montane-Capdebosc, extended French influence to the north of Senegal, they were soon forced to the conclusion that no peace was possible in Mauritania while the

mountainous range of the Adrar provided an ideal centre for armed malcontents.

It was Atar, capital of the Adrar, "the Key to the Situation", that Colonel Gouraud chose as the objective for his column in 1908.

After defeating the Emir's warriors and the *ṭālibs* of Shaykh Mā al-ʿAynayn at the pass of Hamdoun, he entered the Ḳṣar on 9 January 1909 and received the submission of the chief of the Smacids, Sidia Ould Sidi Baba.

Since then Atar, linked by road and air to Senegal and Morocco has considerably increased its economic and commercial importance.

(S. d'Otton Loyewski)

ATATÜRK (Muṣṭafā Kemāl), the founder and first President of the Turkish Republic, was born at Salonica 1881 and died at Istanbul on 10th November 1938. He lost his father, ʿAlī Riḍā, whilst still very young, so that it was his mother, Zübeyde Khānīm, who saw to his education. When twelve years of age, he entered the military preparatory school at Salonica, where one of his teachers made him take the name of Kemāl in addition to Muṣṭafā. In 1895 he entered the Military School of Monastir, then in 1899 that of Istanbul, where he started to take an interest in political life and to play an active part in the secret opposition movements, which the despotism of Sulṭān ʿAbd al-Ḥamīd [*q.v.*] had called into being. He obtained the diploma of the Academy of War of Istanbul in 1905, and was then sent to Damascus as a Captain, where he founded the *Waṭan we Hürriyet* (Fatherland and Freedom) group. Upon his return from Salonica, he only took part from a distance in the activities of the *Ittiḥād we Teraḳḳī* (Union and Progress) movement. He took part in the defence of Tripolitania, when it was invaded by the Italians (1911-2), was appointed Military Attaché in Bulgaria and, during the first world war, distinguished himself in the Dardanelles' fighting (1915) and, as an Army Commander, in the fighting in the Caucasus (1916) and in Palestine (1917). After a short visit to Germany, he reassumed command of the 7th Army in Palestine, with which he retreated as far as the area north of Aleppo, where he was at the time of the Mudros Armistice (30th October 1918). Muṣṭafā Kemāl did not agree with the Draconic terms of the Armistice and came into conflict with Sultan Meḥemmed VI. Recalled to Istanbul, where his national feelings were severely tested, he was then appointed Inspector of the Army of the North at Erzurum on 30th April 1919. On 19th May, he landed at Samsun with his mind made up to fight for the total independence of Turkey, threatened by the designs of the Allies, by relying on the troops which had remained faithful to him. On 22nd June he issued a circular from Amasya condemning the government of the Sultan and of the Grand Vizier Dāmād Ferīd Pasha. Through the medium of the congresses which he assembled at Erzurum (23rd July) and at Sivas (4th September) he launched the demand for the independence and unity of Turkey. On 23rd April 1920, having won a certain number of political and military personalities to his cause, he assembled the first Great National Assembly (*Büyük Millet Medjlisi*) at Ankara, which elected him President. The struggle had begun against both the Government of Istanbul and the Allies, more particularly the Greeks (1920-2). His decisive part in the campaigns conducted against the latter caused the Assembly to bestow on him the title of *Ghāzī* ("The victor").

The Armistice of Mudanya (11 October 1922) set the seal on Muṣṭafā Kemāl's victory, and on 1st November 1922 he obtained the vote abolishing the Sultanate. The Lausanne Conference (November 1922-July 1923) gave complete independence to Turkey as well as national frontiers. The second Great National Assembly, the majority of whose members belonged to the People's Party (*Khalḳ Fīrḳasī*, modern Tk. *Halk Firkasī*), founded by Muṣṭafā Kemāl (subsequently the People's Republican Party: *Cümhuriyet Halk Partisi*), on 29th October 1923 proclaimed the Republic; Muṣṭafā Kemāl was elected President—an office to which he was constantly re-elected until his death—whilst ʿIṣmet Pasha (Ismet Inönü) was appointed Prime Minister and Ankara became the capital of Turkey. The abolition of the Caliphate was voted on 3rd March 1924.

The first years of the Turkish Republic were marked by the fierce determination of Muṣṭafā Kemāl to modernise the country, to free it from foreign economic tutelage and to secularise it. Relying on a single absolutely devoted party, he imposed a Constitution which virtually placed all power in the hands of the President of the Republic (30th April 1924). Secularisation, marked by the suppression of the religious courts, Ḳurʾānic schools and dervish orders, the prohibition of the wearing of the fez, the abolition of the article of the Constitution declaring Islam the state religion, brought about local risings (Kurdistan and the Izmir region) and reactions in some political circles, which were swiftly suppressed. Modernisation and turkisation proceeded hand in hand through the nationalisation of foreign companies, the impulse given to agriculture and industry, the creation of national banks, the development of means of communication, the reform of the alphabet, the vote for women and the introduction of new civil, criminal, and commercial codes. Muṣṭafā Kemāl's decisions, sanctioned by the Assembly without opposition, were disseminated throughout the country by the local sections of the People's Party and by the *Halk evleri* (Houses of the people); the whole nation was affected and impregnated by the new ideas. In November 1934, a law required all citizens to use family names; the Assembly accorded Muṣṭafā Kemāl that of Atatürk. In foreign policy, he showed himself to be pacific, though determined to protect the independence of his country: he concluded treaties of friendship or alliance with the neighbouring states and with the Great Powers. He signed a pact with Greece, Rumania and Yugoslavia, "the Balkan Entente" (9th February 1934), which was extended eastwards by the Pact of Saʿdābād (Turkey, ʿIrāḳ, Īrān and Afghanistān, July 1937).

Muṣṭafā Kemāl died on 10th November 1938 at Istanbul, mourned by a whole nation, who saw in him the liberator and the renovator of their country. A provisional tomb was erected at the Ethnographic Museum in Ankara; on 10th November 1953, his remains were solemnly transferred to the vast mausoleum erected in his honour in the capital.

Muṣṭafā Kemāl was a man uncompromising by nature, impatient of opposition, exacting in his

demands both upon himself and others, his sole objective being the restoration of his country and the promotion of its greatness. Opposed to the Sultanate and to Islam, he strove relentlessly to suppress them both, for he considered them responsible for the decay of the Ottoman Empire. His passionate love of his country led him into the severe treatment both of ethnic minorities long settled in Turkey and of prominent Turks whose crime was that they did not subscribe to all his political ideas. Yet Atatürk has imparted to the new Turkish régime the deep imprint of his personality. There could be no question for his successors of going back on his work, except in the matter of religion and in the democratisation of the régime.

(R. MANTRAN)

ATBARA, a tributary of the Nile, known to the ancients as Astaboras. It rises in Abyssinia not far from Gondar and, entering the Sūdān near Gallabat (Ḳallabāt) is joined lower down by the Salām and Setīt; it joins the Main Nile at a point about 200 miles north of Khartūm. During the flood season (end of May to end of September) it contributes a considerable amount of silt-laden water to the Nile; for the rest of the year it dries up into a series of pools.

The town of Atbara near the river mouth is important as the headquarters of the Sūdān railways (population of the Municipal council area 36,143), and as the junction for the Red Sea line. In the battle of the Atbara fought on 8 June 1898 at Nakhayla, a short distance upstream from the river mouth, the Anglo-Egyptian forces under Sir Herbert (later Lord) Kitchener destroyed a Mahdist army of 12,000 infantry and 4,000 horsemen commanded by the Darwīsh *amīr* Maḥmūd Aḥmad.

(S. HILLELSON)

ʿATEIBA [see ʿUTAYBA].

ATEK, district in Soviet Türkmenistān on the northern slope of the frontier-mountains of Khurāsān (Kopet Dagh), between the modern railway-stations Gjaurs and Dushak. The name is really Turkish, Etek, "edge border" (of the mountain-chain), and is a translation of the Persian name given to this district, viz. Dāman-i Kūh, "foot of the mountain"; but the word is always written Ātak by the Persians. During the Middle Ages no special name for Atek appears to have been in use; being a district of the town of Abīward [*q.v.*] it belonged to Khurāsān. In the 10th/16th and 11th/17th cents. it fell into the power of the Khāns of Khʷārizm, and later into that of the Turkomāns; before the appearance of the Russians the frontier with Persia was never clearly defined. Previous to the delimitation of the borders in 1881 a part of Atek with Abīward belonged to the principality of Kalāt, which was subject to the overlordship of Persia. (W. BARTHOLD*)

ʿAṬF (= connexion), an Arabic grammatical term denoting a connexion with a preceding word. Two kinds of *ʿaṭf* are distinguished: *ʿaṭf al-nasaḳ* or *aṭf* properly so-called, and *ʿaṭf al-bayān*:

1. The simple co-ordinative connexion (*ʿaṭf al-nasaḳ*) consists of the co-ordination of a word with a preceding word by means of one of the ten particles of connexion, e.g.: *ḳāma Zayd wa-ʿAmr*. The co-ordinative particles (*al-ʿawāṭif* or *ḥurūf al-ʿaṭf*) are distinguished according to their degree of strength: *wa* is used for the simple co-ordinative relationship (*li 'l-djamʿ*); *fa*, *thumma* and *ḥattā* express relationships of governance and subordination (*li 'l-tartīb*); *aw*, *immā*, or *am* express a fluctuation between these two terms (*li-taʿlīḳ al-ḥukm bi aḥadi 'l-madhkūrayn*), and *lā*, *bal*, or *lākin* an antithesis (*li 'l-khilāf*). *ʿAṭf* can connect words (*mufrad ʿalā mufrad*) as well as clauses (*djumla ʿalā djumla*). According to Ibn Yaʿīsh, *nasaḳ* is a term belonging to the terminology of Kūfa, *ʿaṭf* to that of Baṣra.

2. The explicative connexion (*ʿaṭf al-bayān*) is an apposition, which however cannot be an adjective, and which, in contrast to *badal*, explains the preceding word (*mūḍiḥ li-matbūʿihi*), e.g.: *djāʾa akhūka Zayd*, or *aḳsama biʾllāh Abū Ḥafṣ ʿUmar*. From this point of view *ʿaṭf al-bayān* has exactly the same value as *wa-huwa*.

In both kinds of *ʿaṭf*, the second word is called *al-maʿṭūf*, and the preceding *al-maʿṭūf ʿalayhi*.

Bibliography: See the works on grammar, especially Zamakhsharī, *Mufaṣṣal*, 50,[2]-51,[2]; 140,[12]-142,[11]; *Dict. of Techn. Terms*, 1007-10.

(G. WEIL)

AṬFĪḤ, town in Middle Egypt. Aṭfīḥ (also written with *t* instead of *ṭ*) is a small town of 4,300 inhabitants on the east bank of the Nile at the latitude of Fayyūm. The name of the town in old Egyptian was Tep-yeh or Per Hathor nebt Tep-yeh, i.e., "house of Hathor, lady of Tepyeh". The Copts changed this name to Petpeh, the Arabs to Aṭfīḥ. The Greeks, identifying Hathor with Aphrodite, called the town Aphroditopolis, abbreviated to Aphrodito. The town must still have possessed importance in the Christian period, for it had over twenty churches, of which ten were still standing in the 13th century. The ancient νομός, later known as Kūrat Aṭfīḥ, was also called al-Sharḳiyya by reason of its position on the east bank. On the occasion of the division of Egypt into provinces, towards the end of the Fāṭimid period, a whole province, Iṭfīḥiyya, was named after the town of Aṭfīḥ. Not until the year 1250/1834-5 was the region of Aṭfīḥ reunited to the province of Djīza, of which it constituted a district (*markaz*).

Information about Aṭfīḥ is very scanty. There is no doubt that at the time of the Mamlūks the town

was already in a state of complete decay. It was only under the Khedives that the government again began to do something for this region. The incessant raids by Bedouins and Mamlūks came to an end; canals were built or restored. Aṭfīḥ is to-day a port of no more than local importance importance; trade is only on a small scale.

(C. H. BECKER *)

AṬFIYĀS͟H, MUḤAMMAD B. YŪSUF B. ʿĪSĀ B. ṢĀLIḤ, called Ḳuṭb al-Aʾimma, Ibāḍī scholar and author of Béni Isguen (arabicised: Banū Yasd͟jan) in the Mzāb, d. 1332/1914, 94 years old. Descendant of a family of scholars, he brought about, by his extensive literary activity (of which the few items in Brockelmann, S II, 893, cannot give an adequate idea), a real renascence of Ibāḍī religious studies in the West. This went parallel with an increasing strictness in religious practices and in social life, the effects of which, seen through the eyes of the women of the Mzāb, have been described by A. M. Goichon (*REI*, 1930, 231 ff.). S͟hayk͟h Aṭfiyās͟h was in close relations with his coreligionaries in the East, where another great Ibāḍī scholar, ʿAbd Allāh b. Ḥumayyid al-Sālimī (Brockelmann, S II, 823), was his contemporary. Whilst defending his point of view vigorously, he did much to make the Ibāḍīs known to and respected by the other Muslims, and this brought him into contact with sultan ʿAbd al-Ḥamīd II. The leading Ibāḍī scholars in the Mzāb in the present time are his disciples. His library, a unique collection of Ibāḍī and other works in manuscripts and in printed and lithographed editions, is a *waḳf* in Béni Isguen; it contains many of his autograph manuscripts.

His main works are: commentaries on the Ḳurʾān: *Himyān al-Zād ilā Dār al-Maʿād*, 14 vols., Zanzibar 1350; *Taysīr al-Tafsīr*, 6 vols., Algiers 1326; traditions: *Wafāʾ al-Ḍamāna*, 3 vols., Cairo 1306-26; religious law: *S͟harḥ al-Nīl* (commentary on the *K. al-Nīl* of ʿAbd al-ʿAzīz b. Ibrāhīm al-Musʿabī, d. 1223/1808; Brockelmann, S II, 892), Cairo 1305-43; *S͟hāmil al-Aṣl wal-Farʿ*, 2 vols., Cairo 1348; *S͟harḥ Daʿāʾim Ibn al-Naẓar* (on this author, see Brockelmann, II, 538), 2 vols., Algiers 1326; *Tafḳīh al-G͟hāmir*, Algiers 1319; dogmatics: *Sharḥ Risālat al-Tawḥīd* (commentary on the *ʿaḳīda* of Abū Ḥafṣ ʿUmar b. D͟jamīʿ; Brockelmann, S II, 357), Algiers 1326; *al-D͟hahab al-Khāliṣ*, Cairo 1343; also works on grammar and philology, some poetry, and writings on various subjects.

Bibliography: biographical notice in Abū Isḥāḳ Ibrāhīm Aṭfiyās͟h (nephew of the author), *al-Diʿāya ilā Sabīl al-Muʾminīn*, Cairo 1342/1923, 100-9; J. Schacht, *Bibliothèques et manuscrits abadites*, in *R. Afr.*, vol. 100, 1956, 373 ff.

(J. SCHACHT)

AT͟HAR (A.), pl. *āt͟hār*, literally "trace"; as a technical term it denotes: 1) a *tradition* [see ḤADĪT͟H]; 2) a *relic*: *al-athar al-s͟harīf* (pl. *al-āthār al-s͟harīfa*), relics of the Prophet, hair, teeth, autographs, utensils alleged to have belonged to him and especially impressions of his footprints [see ḲADAM]; these objects are preserved in mosques and other public places for the edification of Muslims. Relics are also called, both by Christians and Muslims, *d͟hak͟hīra* ("treasure").

Bibliography: I. Goldziher, *Muh. St*, ii, 356-68. For a description, with illustrations, of the sacred relics preserved in Istanbul see Tahsin Öz, *Hirka-i Saadet Dairesi ve Emanet-i Mukaddese*, Istanbul 1953. (I. GOLDZIHER)

3) *At͟har* is also used as a technical term in the theory of causality, although it is less commonly used than *fiʿl*, *ʿilla* and *sabab* with their derivatives [*qq.v.*]. From the *muʾat͟ht͟hir*, i.e. from a higher, active being or thing, (for example, God), emanate *taʾt͟hīrāt*, "influences", to which correspond under certain conditions *āt͟hār*, "impressions", in lower beings or things. In contrast to the higher beings, the latter behave in a passive (or better: receptive) manner. This use of the word is most frequently found in the astrologers and natural philosophers, with reference to the influence of the stars (considered as higher beings possessing a soul) on the terrestrial world and on men. In addition, the atmospheric phenomena, which are also under the influence of the stars, are called *al-āt͟hār al-ʿulwiyya* [*q.v.*]. The *Meteorology* of Aristotle was translated into Arabic under this title. *Āt͟hār fi 'l-nafs* (παθήματα τῆς ψυχῆς) is the name given to the emotions and ideas of the sentient soul, because the soul experiences the impressions of things. (TJ. DE BOER *)

AL-ĀT͟HĀR AL-ʿULWIYYA, "The meteorological phenomena", title used by the Arabs to designate the Meteorology of Aristotle and that of Theophrastus.

1. In his *Risāla fī Kamiyyat Kutub Arisṭūṭālis wa mā yuḥtād͟ju ilayhi fī Taḥṣīl al-Falsafa*, al-Kindī mentions, in fourth place among the books of physical sciences (*al-ṭabīʿiyyāt*), The Book of the phenomena of the air and of the earth (*Kitāb Aḥdāt͟h al-D͟jaww wa 'l-Arḍ*); (see M. Guidi and R. Walzer, *Uno scritto introduttivo allo studio di Aristotele, Studi su al-Kindī*, i, *Atti della R. Acad. dei Lincei*, *Mem. della classe di scienze morali*, 6: 6, 1937). The same division of the *ṭabīʿiyyāt* occurs in al-Yaʿḳūbī, i, 149, who cites the book *Fī 'l-S͟harāʾiʿ wa huwa Kitāb al-Manṭiḳ fī 'l-Āt͟hār al-ʿUlwiyya*; (see also Klamroth, *Über die Auszüge aus griechischen Schriftstellern bei al-Yaqubi*, *ZDMG*, 41, 1887, 415-42). The title *al-Āt͟hār al-ʿUlwiyya* also appears in the *Fihrist*, 251, and Ibn Abī Uṣaybiʿa, 58. In D͟jābir's work *Kitāb al-Baḥt͟h*, the Meteorology belongs to the middle books, i.e., the physical writings; (see P. Kraus, *Jābir b. Ḥayyān*, i, 322 ff. *Mém. de l'Institut d'Egypte*, 45, 1942).

The first attempts to make Aristotle's works on the physical and biological sciences accessible in Arabic are represented by the paraphrases translated by the Melchite Yuḥannā (Yaḥyā) b. al-Biṭrīḳ, *mawlā* of the Caliph al-Maʾmūn. His translation of the Meteorology, clearly made on the basis of a Syriac original, has come down to us in two manuscripts, one of which is preserved at Istanbul (*Yeni* 1179), and the other at Rome (Vat. hebr. 378). The first three books of Ibn al-Biṭrīḳ's work were translated into Latin by Gerard of Cremona; (see Lacombe, *Aristoteles latinus*, i, 56). Of the fourth book, the *Treatise on Chemistry*, three versions of the Arab-Latin type have been indicated by Fobes; (see *Classical philology*, 10, 1915, 297-314). One of these texts, contained in the *ms. cod. Bibl. Nat.*, lat. 6325, represents a version made on the basis of the work of Ibn al-Biṭrīḳ.

Among the works of Abu 'l-Khayr al-Ḥasan b. Suwār (born 331/942), the *Fihrist*, 265, mentions the translation of a *Kitāb al-Āthār al-ʿUlwiyya*, but whether this title in fact refers to the Meteorology of Aristotle is uncertain. On another meteorological work of Ibn Suwār, see also Ibn Abī Uṣaybiʿa, i, 323.

The great commentary of Olympiodorus on the text of Aristotle was translated, according to the *Fihrist*, 251, by Abū Bishr Mattā b. Yūnus (died 328/940), and that of Alexander of Aphrodisias by Yaḥyā b. ʿAdī (died 363/973). None of these translations has come down to us. On the commentary of al-Fārābī see Ibn al-Ḳifṭī, 279, and Ibn Abī Uṣaybiʿa, i, 138. In the *Kitāb al-Shifāʾ* of Ibn Sīnā, the Meteorology and the Geography form part of the fifth *fann*; that part of it dealing with the halo and the rainbow has been translated by Horten and Wiedemann (*Meteorologische Zeitschr.*, 30, 1913, 533-544). In the *Kitāb al-Nadjāt* (Cairo ed. 1938, 152-7), Ibn Sīnā gives the extract of the detailed account of the *Kitāb al-Shifāʾ*. Of Ibn Rushd's commentaries on the Meteorologies, we possess the Arab text of his abridgement (ed. Ḥaydarābād 1365).

The ideas expounded by Aristotle in the Meteorology, especially those of the fourth book, have played an important rôle in the history of physical ideas in Islam. At the beginning of the third century of the Hidjra, the Muʿtazilite theologian al-Naẓẓām [*q.v.*], criticised the doctrine expounded by the *dahriyya* of the four elementary qualities (*ḳūwa ghariziyya*): this he considered to be arbitrary, since it was based only on the sense of touch (*lams*, *malsama* = τὸ ἁπτικόν). He knew the fundamental theory of the two exhalations (*bukhār arḍī*, *bukhār māʾī* = ἀναθυμίασις, ἀτμίς) and expounded an opinion on the saltness of the sea; (see the fragments of his writings cited by al-Djāḥiẓ, *Kitāb al-Ḥayawān*, v). In Djābir's system, the doctrine of the elements is clearly based on that of Aristotle; (see Kraus, *op. cit.*, 163 ff.). In the Arab tradition of the Meteorology, starting from Ibn al-Biṭrīḳ, down to Ibn Rushd, the doctrine vaguely indicated by Aristotle (339a 20 f.) of the influence of the Spheres on the sub-lunar world is interpreted in conformity with the astrological theory expounded for example in the Book of the Treasure of Alexander, the Arabic text of which is cited by Ruska, *Tabula smaragdina*, 80. According to this theory, "the world below follows the world above, and the individual bodies of the former are subject to those of the latter, because the air is contiguous (*muttaṣil*) to the exterior of all the bodies and to the Spheres as well". In the *Sirr al-Khalīḳa*, a hermetic work attributed to Balīnās (Apollonius of Tyana) (see Kraus, *op. cit.*, 147, n. 2), the idea of the influence of the Sphere is presented under the form of a cosmogony, according to which the successive development of minerals, plants and animals is due to the increasingly rapid motion of the Sphere. This idea is also present in Ibn al-Biṭrīḳ's paraphrase of *Meteor.*, i, I: "The movement of things directed (by the celestial bodies) belonging to the earth such as plants, the creation and production of animals, minerals, etc. taking into account their transformation and mutation, is produced by the celestial influences". This theory is also expounded by the *Ikhwān al-Ṣafāʾ* in the chapter on *al-Āthār al-ʿUlwiyya*, *Rasāʾil*, ii, 54 ff. It is explicitly attributed to Aristotle by ʿAlī b. Rabban al-Ṭabarī, *Firdaws al-Ḥikma*, 21. See also Ibn Rushd, *al-Āthār al-ʿUlwiyya*, 6.

2. The Meteorology of Theophrastus (Περὶ μεταρσίων), the Greek original of which is lost, was partly translated by the celebrated lexicographer Abu 'l-Ḥasan b. Bahlūl al-Ṭīrhānī (this is how it should be read, Ibn Abī Uṣaybiʿa, i, 109); see Bergsträsser, *Neue meteorologische Fragmente des Theophrast* (*Sitzungber. der Heidelb. Akad. der Wiss. Phil.-hist. Kl.*, 1918 : 9). The Syriac text translated by Bar Bahlūl has come down to us; see Drossaart Lulofs, *The Syriac translation of Theophrastus's Meteorology* (*Autour d'Aristote. Recueil d'études offert à A. Mansion*, Louvain 1955, 433-49).

(B. LEWIN)

ATHENS [see ATĪNA].

ʿATHLĪTH, formerly a harbour on the coast of Palestine between the promontory of Carmel and al-Ṭanṭūra (Dora), on a little tongue of land which lies to the north of a small bay and is washed on three sides by the sea. According to the *Itinerarium Burdigalense* there was a mutatio Certha there, but the name ʿAthlīth appears to be ancient. ʿAthlīth appears in the light of history in the period of the Crusades. In 583/1187 it fell into Saladin's hands. In 1218 the Castellum Peregrinorum, as the Franks called it was reconstructed as a powerful Templar-fortress. Along with Districtum-Détroit (Khirbet Dustrē) it had to guard the passes of Carmel leading south. In 690/1291 it was conquered and demolished by the Mamlūk Sultan al-Ashraf Khalīl. In the late 14th century al-ʿUthmānī speaks of ʿAthlīth as the southernmost *wilāya* of the *mamlaka* of Ṣafad (*BSOAS*, xv, 1953, 483).

Johns on excavations at the Pilgrims' Castle will be found in *QDAP*, ii, 1933, 41-104; iii, 1934, 145-164; vi, 1938, 121-152.

(R. HARTMANN)

ʿATHR or ʿATHTHAR (both pronunciations are well attested, the second one mostly in poetry, cf. *LA*, *TA* s.v.).

(1) Mountain not far from Tabāla [*q.v.*], known as a haunt of lions (*maʾsada*), like ʿItwad, Sharā etc. (cf. Hamdānī, 54, 127, tr. Forrer 222; Kaʿb b. Zuhayr, *Bānat Suʿād*, 46; ʿUrwa b. al-Ward, ii, 6).

(2) District in NW Yaman on the Red Sea, between Djāzān (Djizan) and Ḥamiḍa (al-Hamdānī), or Shardja and Ḥaly (ʿUmāra). Main towns: ʿAthr (see below), Baysh, Djurayb, Ḥaly, Sirrayn. *Wādīs*: al-Amān, Baysh, Rīm, ʿIramram, Zanīf, al-ʿAmūd. Having united ʿAthr, Shardja, Ḥaly and Zarāʾib (= al-Mikhlāf al-Sulaymānī) under his dominion, Sulaymān b. Ṭarf, the viceroy of the Banū Ziyād in Zabīd, made himself actually, although not formally, independent of Abu 'l-Djaysh ca. 350/960, and the territory enjoyed great prosperity until the expulsion of Banū Ṭarf in 453/1061. The annual revenue of Ibn Ṭarf from the trade is given by ʿUmāra as 500,000 *ʿathrī* dīnārs (= 2/3 of a *mithḳāl*, just as the *muṭawwaḳ* of Mecca: al-Maḳdisī 99). With the succession of the Sulaymānī *sharīfs* from Mecca there was a rapid decline, until Yaman was conquered by the Ghuzz, the mercenary troops of the Ayyūbids, ca. 560/1165.

(3) The capital of the district and a seaport of importance. It was situated on the pilgrim road

from Ṣanʿāʾ, between al-Hadjar (= Djāzān) and Bayḍ, and is quoted already in the year 11/632 as belonging to the insurgent al-Aswad [*q.v.*]. Scarcity of water and the silting up of the bay brought about the decline of the town in the 6th and 7th/12th-13th centuries. In the time of al-Djanadī (ca. 700/1300) it was since long in ruins. According to him (MS Paris 2127, fol. 153b, in the biography of Ṣāliḥ al-ʿAthrī) the name ʿAthr also was transferred to the opposite island(s), usually called Farasān [*q.v.*]. The name is not on the maps; the closest correspondents would be Khor Abū es-Seba, or Qawz (al-Djaʿāfira) 32 km. N of Djizan.

(4) A small place on the maritime road ʿAdan-Mekka, between ʿĀra and Sukyā (ʿUmāra, 8), three farsakhs from the former village (Ibn al-Mudjāwir, 100).

Bibliography: Hamdānī, tr. Forrer, 47-51; Yāḳūt, iii, 615; Maḳdisī, 53, 70, 86; Kay, *Yaman* 7, 11, 141 ff., 240 f.; Ibn al-Mudjāwir, 54 (*baṭn/khabt ʿAthr*), 100; Sprenger, *Post- u. Reiserouten*, 150; idem, *Die alte Geographie Arabiens*, 45-54, 197; on the orthography of the *nisba*: Ibn al-Athīr, *Lubāb*, ii, 122 and Dhahabī, *Mushtabih*, 377 f.

(O. Löfgren)

ʿĀTIKA, Meccan lady, the daughter of the *ḥanīf* Zayd b. ʿAmr and sister of Saʿd b. Zayd, of the clan ʿAdī b. Kaʿb. She embraced Islam early and took part in the *hidjra*. She was married first to ʿAbd Allāh, a son of Abū Bakr, then after his death to ʿUmar b. al-Khaṭṭāb (in 12/633 according to al-Ṭabarī, i, 2077), whom she bore a son ʿIyāḍ (Ibn Saʿd iii/1,190). When ʿUmar was killed, she married al-Zubayr b. al-ʿAwwām, whose death she lamented in a much quoted elegy (Ibn Saʿd iii/1,79 etc.). The sad story of this beautiful woman and her husbands whose lives ended so tragically was soon turned into a fanciful romance and embellished with spurious love-poems and elegies.

Bibliography: Ibn Saʿd viii, 193-5; ii/2,97; Ibn Ḳutayba, *ʿUyūn al-Akhbār*, iv, 114 f.; Ḥamāsa (Freytag), 493 ff.; *Aghānī*[1], xvi, 133-5; ʿAynī, ii, 278 f.; *Khizānat al-Adab*, iv, 351 f., etc.

(J. W. Fück)

ATIL, or Itil, sometimes Atil (Itil)-Khazarān, also Khazarān Atil, the Khazar capital, a double town on the lower Volga, itself called Atil, Itil [q.v.] in the early mediaeval period. The exact site is unknown. According to al-Masʿūdī (*Murūdj*, ii, 7), the capital was transferred to Atil from Samandar in the neighbourhood of the Caucasus in the time of Sulaymān (Salmān) b. Rabīʿ a al-Bāhilī, i.e. about 30/650, though elsewhere (*Tanbīh*, 62) he says that Balandjar, also in the Caucasus region, was the original Khazar capital. Already at this date the Arabic sources speak of al-Bayḍāʾ, 200 parasangs from Balandjar (al-Ṭabarī, i, 2668), by which doubtless the later capital is intended. Ibn Rusta (139) gives what are apparently the earlier Khazar names for the double town on the Volga. According to al-Iṣṭakhrī (220), the west part, which was the larger, was a straggling town of felt tents with a few clay houses, several miles in extent and surrounded by a wall. The Khazars proper, i.e. the Judaised ruling class, as well as the army and the royal castle, built of brick, were on this bank. Most of the Muslims, estimated in all at 10,000, lived on the east bank, which was the commercial part of the town. Markets, baths, mosques, etc. are mentioned. There was also a considerable Christian population, and a colony of pagan Ṣaḳāliba and Rūs (*Murūdj*, ii, 9, 12). The correct naming of the double town appears to be: west bank, Khazarān; east bank, Atil (cf. Ibn Ḥawḳal, 389 note). Like its modern counterpart Astrakhān, it was an important entrepôt of trade. The products of the north, especially furs, passed through the Khazar capital, while contact was made with Kievan Russia to the west and with Khʷārizm to the east. The slave-trade seems to have been of importance. In the sixties of the 10th century the Khazar capital was destroyed by the Rūs (Ibn Ḥawḳal, 15, 392; Russian Chronicle, *anno* 965) and never recovered its former prosperity, though the Rūs withdrew and attempts were made to rebuild it (Ibn Ḥawḳal, 398; cf. al-Maḳdisī 361). The Khazar state appears to have drawn out a precarious existence for some time afterwards, but Khazarān Atil ceases to be mentioned.

Bibliography: *Ḥudūd al-ʿĀlam*, 452 ff.; D. M. Dunlop, *History of the Jewish Khazars*, 91 n., 106, 217 n.

(D. M. Dunlop)

ATĪNA, Athens, capital of Greece. The history of Athens in pre-Islamic times will not be treated here. The first closer—admittedly hostile—contact with the Muslims was made in 283/896 , when Saracen pirates occupied the town for a short time (cf. D. G. Kambouroglous, Ἡ ἅλωσις Ἀθηνῶν ὑπὸ τῶν Σαρακηνῶν, Athens 1934). Certain Arabic remains, and influences on the ornamental style in Athens, have been traced back to this event (cf. G. Soteriou, *Arabic remains in Athens in Byzantine times*, in: *Praktiká* (*Proceedings*) *of the Academy of Athens*, iv (Athens 1929), reproduced by D. G. Kambouroglous, *l.c.*, 160; cf. also *Byzant.-Neugriech. Jahrbücher*, xi (Berlin and Athens), 233-69). The whole question still appears to be in need of clarification (cf. K. M. Setton, *On the raids of the Moslems in the Aegean in the ninth and tenth centuries and their alleged occupation of Athens*, in: *American Journal of Archaeology*, vol. LVIII (1954), 311-9). Shortly after the time of Justinian I, Athens had sunk to the level of a provincial town, and apart from its great buildings, there was nothing left of its ancient cultural importance. During the period of western rule in Greece, Athens became (1205) the capital of a duchy which was successively held by the Burgundians and the Catalans, who occupied it in 1311, bringing it under the sovereignty of the kings of Aragon (cf. Kenneth M. Setton, *Catalan Domination of Athens* 1311-1388 (Cambridge, Mass., 1948 with excellent bibliography on pp. 261-301). From 1388 to 1458 the Florentine house of the Acciajuoli ruled in Athens. In 1397 it was temporarily taken by sulṭān Bāyazīd I. In some Turkish sources this capture is mentioned as taking place before the battle of Nicopolis (which took place on 28 Sept. 1396); after the conquest of Salonica (which is mentioned as having taken place in the previous year) (Neshrī, Rūḥī); in others, as taking place after that battle (Saʿd al-Dīn and his plagiarists, Solaḳzāde and Ḥādjdjī Khalīfa as well as Münedjdjim-bashī). The later date seems preferable, as Timurtash is mentioned as the conqueror of Athens, and the *Chronicum breve* mentions a raid by Yaʿḳūb-Pasha and 'Mourtasis', Μουρτάσης = Timurtash against Morea in summer 1397. Doubtlessly it was only a temporary occupation of the town, perhaps no more than a raid, so that Greek sources do not mention the event explicitly (cf. Saʿd al-Dīn, *Tādj al-Tawārīkh*, i, 149 f. also Neshrī in ZDMG, XV (1861), 344; and concerning the whole question J. H. Mordtmann, *Die erste Eroberung von Athen durch die Türken zu Ende des 14. Jahrhunderts*, in: *Byz.-Neugriech. Jahrbücher*, IV,

346-350). It was not until Meḥemmed II, that Athens, "the city of wise men" (*madīnat al-ḥukamā'*) finally came under Ottoman rule, when the Conqueror personally made his triumphal entry in the last week of August, thus beginning nearly 330 years of Turkish occupation. Concerning this event and all its details, cf. F. Babinger, *Mehmed der Eroberer und seine Zeit*, Munich 1953, 170 f.; (Italian edition, *Maometto II il Conquistatore ed il suo tempo*, Turin 1956, 246). In the following centuries, Athens sank into insignificance, as one can gather clearly from reports of western travellers (cf. in particular Comte de Laborde, *Athènes aux XVe, XVIe et XVIIe siècles*, Paris 1854, 2 vols.). The Parthenon had been converted into a mosque, and barracks were built in the Propylaea. Turkish domination meant a time of decadence for Athens, which sank to the status of a small country town. In autumn 1687, it was besieged by a Venetian admiral, Francesco Morosini (subsequently Doge), and on this occasion the Parthenon was largely destroyed (on Sept. 26th) by a bomb which hit the ammunition stored there. The two mosques of the city were turned into places of Catholic and Protestant worship (the latter because a considerable number of German mercenaries were present) by the Venetian Provveditore Daniele Dolfin. Shortly afterwards, however, on April 9th 1688, Athens was abandoned by the occupying troops (which were much reduced by an epidemic) and the Turks re-entered. A city-wall—built largely from the remains of ancient monuments—was erected in 1777. From the 17th century onwards, there was great interest in the monuments of Greek antiquity in Athens, hence there are detailed descriptions dating from that time, especially in French (e.g. J. Spon (1678) and G. Wheler (1682); cf. also Sh. H. Weber, *Voyages and Travels in Greece, the Near East and adjacent Regions made previous to the Year* 1801, Princeton, 1953. These describe vividly to what a pitiable state Athens had sunk. The Greek fight for liberation increased this devastation. In 1822 Athens was conquered by the Greeks, but had to be ceded to the Turks again no later than 1826 (the Acropolis in 1827). It was only after the London Conference (1830), that Athens was incorporated into the new kingdom of Greece. It became the capital of the country at the end of 1834, and soon developed into an intellectual and cultural centre. Owing to the quick economic and political development there was a steep rise in population. Today, Athens has about one million inhabitants. The university was founded in 1835.

Bibliography: The best bibliography of the history of Athens during the periods of Catalan and Florentine rule is found in Kenneth M. Setton, *Catalan Domination of Athens* 1311-1388 (1948) in chapter XII, from 261 onwards. Concerning the Turkish rule cf. Th. N. Philadelpheus, Ἱστορία τῶν Ἀθηνῶν ἐπὶ Τουρκοκρατίας (Athens 1902, 2 vols.) A detailed description of Athens in the 17th century is found in Ewliyā Čelebi, *Seyāḥatnāme*, viii, Istanbul 1928, 249-67; in connexion with this, see also short notices by Hādjdjī Khalīfa, in J. v. Hammer, *Rumeli und Bosna*, Vienna 1812, 109-10. There is a thorough study of Athens in the Middle Ages and in modern times by Wm. Miller, *The Latins in the Levant*, London 1908, 335 ff., with numerous further bibliographical details. Ferd. Gregorovius, *Die Geschichte der Stadt Athen im Mittelalter*, Stuttgart 1889, 2 vols. See also G. C. Miles, *The Arab Mosque in Athens* in *Hesperia, Journal of the American School of Classical Studies at Athens*, xxv (Athens 1956), 329-44 (with plate 49). (FRANZ BABINGER)

ʿATĪRA (pl. *ʿatā'ir*) denoted, among the Arabs of the *djāhiliyya*, a ewe (and by extensions its sacrifice) offered as a sacrifice to a pagan divinity, either as a thanksgiving following the fulfilment of a prayer (concerning in particular the increase of flocks), or when a flock reached the total of a hundred head (cf. the word *faraʿa*); the head of the idols before which the sacrifice was performed was smeared with the blood of the victims. If one bears in mind on the one hand that these sacrifices (which were also called *radjabiyya*; hence the phrase *radjdjaba ʿatīratan*) took place in the month of *radjab* (i.e., in the spring), and on the other hand that in principle the first born were used for the sacrifice, a close connexion will be established with the sacrifice which took place during the *ʿumra* [*q.v.*], and also with the Jewish Passover and the magic rites which introduce a scapegoat. It seems that the Prophet forbade these sacrifices (cf. the *ḥadīth*: *lā faraʿata* (sacrifice of firstlings) *wa lā ʿatīrata*).

ATJÈH [1]) (Atchin, Achin), the most northerly part of the island of Sumatra. Here flourished the once powerful Muslim empire of Atjèh, which is now a province of the Indonesian Republic. The southern limit was, under Dutch rule, formed by the residencies of Tapanuli and "Sumatra's Oostkust", now the province Sumatra Utara. In earlier times the province (or at least the sphere of political sovereignty) of Atjèh extended much farther towards the south. A considerable part of both the east and west coasts of Sumatra was subject to the authority of Atjèh, and even pagan chiefs in the Batak regions received their rank at the hands of the princes of Atjèh.

Great-Atjèh. Only the district to the north-west with the Atjèh river and the port Atjèh, the former residence of the princes of Atjèh, was from the first reckoned as Atjèh proper. The Dutch named it Great-Atjèh and the capital Kuta Radja (i.e. fort of the prince). The port of Sabang situated on the island of Pulò Wè (to the north-east of Kuta Radja) only dates from the beginning of the present century. The inhabitants of the littoral (Barōh) are distinguished in many respects from the population of the highlands of the interior (Tunòng); the customs and speech of the former (who live of course in the vicinity of the residence) are always considered to be the more refined.

The Dependencies. The other districts situated on the west, north and east coasts were under Dutch rule usually referred to as the Dependencies. Among the important towns are: on the west coast: Meulabōh, Tapa' Tuan and Singkil; on the north coast: Sigli in the region of the former empire of Pidië (Pedir), Meureudu, Bireuën, Peusangan, Lhō'Sukōn and Lhō' Seumawè. In the region between the latter place and the river Djambō Ayé stood the flourishing empire of Pasè, which Ibn Baṭṭūṭa (ed. Defrémery and Sanguinetti, iv, 228 ff.) visited in

1) In this article *tj* is retained in deference to the official orthography in Indonesia; *é* = closed, *è* = open *e*; *ò* = open, *ō* = closed *o*; *eu* is one vowel (not a diphthong).

the year 746/1345. On the east coast are situated among others: Idi, Langsa and Kuala Simpang. A steam tramway joins the east and north coasts with Kuta Radja. A part of the population has migrated thither from Great-Atjèh; many Malays have also settled here from the neighbouring districts.

With an estimated rice export surplus of 45,000 tons in 1942, and an important export of betel nuts, patchouli, copra, rubber and live-stock, Atjèh developed under the Dutch government into a thriving country, in spite of the ruin of the traditional pepper culture, to which the settlements in one part of the Dependencies had owed their original existence. Large irrigation works were completed or were under construction. The road system was extended. In addition on the West and East Coasts of Atjèh extensive acreages of waste ground were cleared by Western estate companies for the planting of rubber, oil-palms and fibres. The BPM (Bataafse Petroleum Maatschappij) had fields in operation in Rantau (Kuala Simpang), and Peureula' (Langsa); whilst in Meulabōh a concession was granted to a gold mining concern.

Gayō and Alas-Countries. High mountain-chains overgrown with virgin forest separate the littoral from the Gayō-country; transverse chains divide the region of the Gayōs into four tablelands. The most northerly (containing the great Tawar lake and the sources of the river Peusangan) is occupied by the so-called "Urang Laut" (i.e. people of the lake), the plain to the south of it is occupied on the other hand by the "Urang Döröt" (i.e. people of the land); to the southeast lies the table-land of Sĕrbödjadi containing the sources of the river Peureula' which flows in an eastly direction. The fourth table-land, situated in the south and containing the bed of the river Tripa which discharges its waters on the west coast, is called Gayō Luös (i.e. the wide, spacious Gayō-countries). The Alas-countries lie south of this. The population of these regions, who differ in many respects from that of Atjèh, have from the first recognised the authority of Atjèh. The four chiefs appointed by the princes of Atjèh in the several parts of the Gayō-country (the so-called "Kĕdjuruns") were the mediators between the Gayōs and Atjèh. Two of these Kĕdjuruns had their sphere of influence in the region of Lake Tawar (their distinctive titles were Rödjö Bukit and Siah Utama), one among the Döröt (with the title Rödjö Linggö), and the fourth in Gayō Luös (Kĕdjurun Pĕtiambang). Sĕrbödjadi was formerly without inhabitants; later its most eminent chieftain was also called Kĕdjurun (Kĕdjurun abuk). In the Alas countries the authority of Atjèh was represented by two Kĕdjuruns.

The most important administrative centres are Takéngön, on Lake Tawar, and Blang Kĕdjĕrèn, in Gayō Luös. In the sub-district of Takéngön, which has an area of 70,000 hectares under fir trees, an important government resin and turpentine industry has developed. Plans for the establishment of a paper factory were in an advanced state of preparation at the time of the Japanese invasion in 1942.

For accurate information about the people of Atjèh we are indebted above all to C. Snouck Hurgronje, who (first in the years 1891-1892) investigated the previously but little known social, political and religious conditions of this nation (*De Atjèhers*; Batavia 1893-1894; cf. the English translation of this work which is provided with a new introduction and some additions by the author: *The Achehnese*, Batavia-Leiden 1906; *Ambtelijke adviezen* I, The Hague 1957, 47-438), and later described at length the land and customs of the Gayōs (*Het Gajōland en zijne bewoners*, Batavia 1903). A wealth of ethnographical details was collected by J. Kreemer and published in his work *Atjèh*, 2 vols., Leiden 1922-'23, which also includes the Alas region.

Population and Language. Little is known about the origin of the people of Atjèh. Linguistically they belong to the Malay-Polynesian peoples. Slaves (from the island of Nias, etc.) and other foreigners (e.g. merchants from Hindustan) have influenced to some extent the composition of the population. Atjèh has many dialects, and each dialect again many variants; the literary language has in general closest affinity with the idiom of the Barōh-district. For the literature of Atjèh see Snouck Hurgronje, *The Achehnese*, ii, 66-189. Gayō is an independent language, whilst Alas is a Northern-Batak dialect. In the 19th century Malay was almost unknown in Atjèh except among a portion of the inhabitants of the sea-ports, but formerly it was the language of the court and from earliest times in Atjèh letters, official documents and many works on theology were written in Malay. The earliest Achehnese adaptations of Arabic and Malay works date from the 17th century. Now Indonesian is the official language. For further details see C. Snouck Hurgronje, *Studiën over Atjèhsche klanken schriftleer*, in *TBG*, xxxv (1892), 346-442, also *Atjèhsche Taalstudiën*, *ibid.*, xlii (1900), 144-262; K. F. H. van Langen, *Handleiding voor de beoefening der Atjèhsche Taal*, The Hague, 1889; H. Djajadiningrat, *Atjèhsch-Nederlandsch Woordenboek*, Batavia 1933-1934; P. Voorhoeve, *Three old Achehnese MSS.*, in *BSOS* 14 (1952), 335-345; G. A. J. Hazeu, *Gajōsch-Nederlandsch Woordenboek met Nederl.-Gajōsch register*, Batavia 1907.

Tribes and Families. There are still preserved traces of a division of the population of Atjèh into 4 tribes. The members of such a tribe or family—Achehnese: *kawōm* (from the Arabic *ḳawm*, people)—regard themselves as blood-relations in the male line, and have (especially in regard to blood-feud and the payment of blood-money) common rights and obligations. The members however of the various *kawōms* are scattered throughout the country; only where many kinsmen dwell together are they wont to choose a chief to represent their common interests. The Gayōs are divided into families who dwell together under their chiefs (Rödjös). When Rödjös disagree decision rests with the Kĕdjurun.

Administration of the Villages. In Atjèh the Keutjhi' (i.e. the elder) is the head of the Gampōng—i.e. the village, also a quarter of a town (Mal. *kampung*); in case of necessity he consults the "eldest" (i.e. the people who have had experience of life). The religious affairs of the Gampōng, e.g. leading the community in the Ṣalāt, are the concern of the *Teungku meunasah*. The title *teungku* is borne in Atjèh both by people whose functions are connected with religion, and by those who have acquired some acquaintance with the sacred law. The Gampōng-Teungkus or Teungku meunasah are not men of learning. Their rank has become hereditary, and in Snouck Hurgronje's time the ignorance of many Teungkus was so great that they were scarcely able to administer their office without the help of other people.

The Princes, Ulèëbalangs and Sagi-chiefs. In historical times Atjèh has always been divided into many small districts, whose hereditary chiefs—

the so-called Ulèëbalangs (i.e. commanders-in-chief) —lived in constant feud with each other. They paid homage however to the prince of the port of Atjèh as their common over-lord. The latter had the title of Sultan in official (Malay) documents, but was usually called by the Achehnese *Radja* or *Pòteu* (i.e. "our master"). Whilst the Sultans and their male relatives bore the title *tuanku*, the male members of the Ulèëbalangs families bore the title *teuku*.

The power and dignity of the Achehnese princes and the riches and splendour of their court, which are mentioned both in the earliest Malay and European accounts, depended on the tribute of the neighbouring regions on the coasts and the harbour-dues of the capital Atjèh. The bold Achehnese mariners were master of sea and harbours; if they demanded tribute few dared resist. The interior of the country possessed little interest for the princes. Even when the empire was flourishing (2nd half of the 16th cent. and particularly during the 1st half of the 17th) the authority of the Sultan was confined to the immediate vicinity of the capital.

By the end of the 17th cent. the princes had become quite dependent on the Ulèëbalangs in Great-Atjèh. The latter had at that time apparently on the ground of common interests formed themselves into three federations, the so-called *Sagis*, "sides", i.e. of the triangular-shaped Great-Atjèh. Each Sagi had an overlord (*Panglima-Sagi*), whose authority however did not extend beyond the common Sagi-interests. (In the Dependencies also such federations are found). The Sultan chosen by the three Sagi-chiefs used to pay to them a certain sum. He usually belonged to the family of the previous ruler, but strangers, e.g. Sayyids, who dwelt in Atjèh, were sometimes elected to the Sultanate. In the course of time other chiefs obtained a voice in the choice of a ruler; according to tradition at one period 12 chiefs (including the 3 Sagi-chiefs) formed a kind of electoral college.

The majority of the Ulèëbalangs in Great-Atjèh and the Dependencies later received their authority from the Sultan's hand and in witness thereof were given a document bearing the ruler's seal (a so-called *Sarakata*; on the Hindustani origin of this seal see G. P. Rouffaer, in *BTLV*, Series 7, v, 349-384; cf. C. Snouck Hurgronje, *ibid.*, Series 7, vi, 52-55). Not all the Ulèëbalangs thought it worth while to go to the expense involved in the acquisition of a *sarakata* or deed of recognition; more important than the "*tjab sikureuëng*" (the nine-fold seal of the sultan) was the "*tjab limòng*" (the five-fold seal, i.e. signifying the hand as a symbol of power, meaning the ability to protect one's own interests). The Kĕdjuruns of the Gayō and Alas peoples on the other hand usually received a kind of dagger as symbol of their rank.

Division into Mukims. The Friday-service according to the Shāfiʿite doctrine is only valid if 40 *Muḳīm*-s are present. A Muḳīm is a person domiciled in the place and satisfying the stipulations of the law. Since the population of most of the Gampōngs was not numerous enough to be able to hold a regular Friday-service with 40 participants, it became the custom to group together several Gampōngs and as near the centre as possible of such a district to construct a mosque for the Friday-service. Hence Muḳīm (here pronounced Mukim) acquired, not only in Atjèh but also in some other Malay regions, the meaning: department, circle. Each Ulèëbalang was lord over several of these Mukims. Further the names of the 3 Sagis have been derived from the original number of their Mukims; i.e. they are called: the Sagi "of the 22 Mukims" (in the south), the Sagi "of the 25 Mukims" (in the west) and the Sagi "of the 26 Mukims" (in the east of the triangular-shaped Great-Atjèh). These ancient names were preserved even after the number of the Mukims in the Sagi of the 25 Mukims and especially in that of the 22 Mukims had mounted up owing to the increase in the population.

The chiefs of the Mukims bore the title of *Imeum*. This word denoted originally the leader of the Friday-service (Arab. *Imām*). The Imeums became however gradually hereditary, secular chiefs, who transferred the leadership of the Friday communal prayer to special officials.

Administration of Justice. Laws. As a general rule the chiefs themselves were wont to fulfil the functions of judges; they based their decisions on the unwritten law of custom (*ʿĀdat*). There are indeed some statutes (*Sarakata*), which tradition credits Meukuta ʿĀlam and other famous rulers with having issued, and the Achehnese, who know these laws only by name, ordinarily assume that they contain an exact statement of their law; they really consist however only of brief regulations regarding matters of administration, court-ceremonial (including the homage to be rendered to the ruler by the ulèëbalangs), the division of the harbour-dues and the fulfilment of several religious obligations. These regulations date from the time when the princes attempted, without permanent result however, to centralise their imperial administration; Muslim scholars at the court also left their impress on these laws (for fuller information see C. Snouck Hurgronje, *The Achehnese*, i, 4-16; K. F. H. van Langen, *De inrichting van het Atjehsche staatsbestuur onder het sultanaat* in *BTLV*, Series 5, iii, 381-471; *Translations from the Majellis Ache* [by T. Braddell] in *Journal of the Indian Archipelago*, V (1851), 26-32; an edition of the Malay text by G. W. J. Drewes and P. Voorhoeve is in the press). Further both the Sultan and the Panglimas had their *Kali* (= Ḳāḍī), but these ecclesiastical judges only took a share in the administration of justice on certain special occasions (e.g. in the division of an inheritance, in some forms of divorce, in contracting marriages, and in other cases where the religious law was usually followed; on other occasions only if the chiefs expressly took them into council). The judge of the sultan bore the title *Kali Malikōn Adé* = *Ḳāḍī Maliku 'l-ʿĀdil*; his hereditary office degenerated in course of time; he became the peculiar chief of several Gampōngs within the sultan's realms. Also the rank of the other Kalis became hereditary, and if those people who were Kali in virtue of their hereditary right possessed the knowledge requisite for this office it was by a rare chance.

Religion. From earliest times there existed trade relations between Atjèh and Hindustan. The civilisation and language of Atjèh were at first subject to Hindu influence; later Islām reached the shores of Atjèh, probably conveyed thither by Hindustani merchants. When Ibn Baṭṭūṭa visited Pasè in 1345 Islām held the field; the ruler of the country warred against his unbelieving neighbours. The Achehnese are orthodox Muslims, but Islām as it exists in Atjèh and elsewhere in Indonesia has some peculiar features which are to be explained by its Indian origin. Such are, for instance, the existence of a heterodox

mysticism and some characteristics distinctively Shī'ite. The first month, *e.g.*, is in Atjèh always called *Asan Usén*, obviously from the two martyrs Ḥasan and Ḥusayn who are held in special honour in Shī'ite countries. The representation on a captive standard of 'Alī's sword Dhu 'l-Faḳār with a Shī'ite marginal inscription has formerly led some scholars to the false opinion that the Achehnese were partly Shī'ite (cf. A. W. T. Juynboll, *Een Atjineesche vlag met Arabische opschriften* in *Tijdschrift voor Ned.-Indië*, 1873, ii, 325-340; 1875, i, 471-476; M. J. de Goeje, *Atjeh* in *De Nederl. Spectator*, 1873, 388). The Achehnese in general were lax in the fulfilment of many religious duties. The *Ṣalāt* for instance was usually neglected by the majority. On the other hand many Achehnese are wont annually to join in the *Ḥadjdj*. Further the *Kitāb*-s (Malay, Arabic and Achehnese) were studied in various places under the guidance of masters learned in the law (cf. C. Snouck Hurgronje, *Eene verzameling Arab. Mal. en Atjèhsche handschriften en gedrukte boeken* in *Notulen van het Batav. Genootschap van Kunsten en Wetensch.*, xxxix (1901), n°. vii; also *The Achehnese*, ii, 1-32). The students who mostly came from remote districts lived in a common residence (*rangkang*). Whilst yet the Empire flourished the splendour of the court not rarely induced foreign scholars from India, Syria and Egypt (including a son of the celebrated Ibn Ḥadjar al-Haytamī) to settle in Atjèh.

Many Achehnese pilgrims became members in Mecca of one of the orthodox mystic brotherhoods (especially the Ḳādiriyya or Naḳshbandiyya) but these *Ṭariḳa*-s did not have in Atjèh the same importance as in many other parts of Indonesia. Formerly there were prevalent in Atjèh the forms of pantheistic mysticism which at that period were generally spread throughout Hindustan. The most famous representatives of this heterodox tendency in Atjèh were Shams al-Dīn al-Samaṭrā'ī (i.e. of Pasè; d. 1630) [*q.v.*] and his predecessor Ḥamza Fanṣūrī [*q.v.*]. Its chief opponents were Rānīrī [*q.v.*] and 'Abd al-Ra'ūf al-Sinkilī [*q.v.*]. Certain forms of the ancient heterodox mysticism have been preserved till recent times, but such differences from the orthodox teaching, which are based on ignorance, are gradually disappearing before the increasing communication with the centre of Islam. (Fuller information in Snouck Hurgronje, *The Achehnese*, ii, 13 f.). Veneration of saints has still an important place in the popular faith of the Achehnese. The pilgrim visits the tombs of illustrious saints and seeks by gifts and vows to secure their favour and intercession. Some of the most celebrated Achehnese saints were foreigners, as e.g. the Arab Teungku Andjōng, who died in 1782, and the Turkish or Syrian "saint of Gampōng Bitay", who according to tradition came to Atjèh in the 16th cent.

At the summit of religious life stood the *ulama* (Arab. *'ulamā'*, used as a singular in Achehnese) the supreme authorities in the field of religious law and doctrine, who were held in great respect by the people. They ranked much higher than the *além*, who however learned was not considered as a real authority, any more than was the ess scholarly *malém* or the *leubè*, as anyone would be described who—even though he was quite unlearned—carried out his religious duties more or less faithfully. The *ulamas* were much more respected too than the village religious functionary, the *teungku meunasah*. In the same way that the *ulèëbalangs* were the exponents of the *adat*, so were the *ulamas* the champions of the *hukōm*, although the *ulèëbalangs*, in accordance with the *hukōm*, were at the same time the religious head of their own territory. The essential co-operation of *hukōm* and *adat*, described by Snouck Hurgronje as the basis of Achehnese society, must—as this author observed—be seen in this light:

'the *adat* assumes the part of mistress, and the *hukōm* that of her obedient slave. The *hukōm*, however, revenges herself for her subordination whenever she sees the chance; her representatives are always on the look-out for an opportunity to escape from this servile position.' (*The Achehnese*, i, 153).

History. The province of Atjèh was the first part of Indonesia where Muslim kingdoms were founded. The first mention of such a kingdom is by Marco Polo; when he visited Atjèh's north coast in 1292, there was a Muslim king in Ferlec, i.e., Pĕrlak (Ach. Peureula'), whilst two other countries, Basma or Basman and Samara, were still heathen. These last names cannot be identified with Pasè and Samudra, as the first Muslim king of Samudra-Pasè, al-Malik al-Ṣāliḥ, died in 1297, so that it seems unlikely that in 1292 the people of Samudra were still 'wild idolaters' and 'brutes of man-eaters' (H. K. J. Cowan in *Djawa* 19 (1939), 121 ff). For some centuries the port of Samudra, afterwards called Pasai (Ach. Pasè), remained an important centre for the diffusion of Islam in the Indian Archipelago. Its dynastic history may one day be reconstructed from the inscriptions on tomb-stones and coins, Malay chronicles (*Sĕdjarah Mĕlayu* and *Hikayat Radja-radja Pasai*, ed. from the unique MS. R. A. S. Raffles Mal. 67 by E. Dulaurier, *Chroniques Malayes*, 1849; romanised ed. J. P. Mead, in *JSBRAS* 66 (1914)), Chinese, Arabic (Ibn Baṭṭūṭa, see above) and European sources; until now, much material has been collected but a publication of the inscriptions is still lacking. (Reports on the work of the Archaeological Survey in: *Oudheidkundig verslag*, 1912 ff.; cf. *Encyclopaedie v. Ned. Indië*, I, 1917, s.v. Blang Mè). Many of the tomb-stones were imported from Cambay in Gudjarāt (J. P. Moquette in *TBG* 54 (1912), 536-548); one tomb, dated 781 A.H., has inscriptions in Arabic and in Old-Malay (W. Stutterheim, *AO* 14 (1936), 268-279; cf. G. E. Marrisson, *JMBRAS* 24 (1950), pt. i, 162-165); another stone, dated 823 A.H., on the grave of an Indian immigrant, is inscribed with a Persian *ghazal* by Sa'dī (H. K. J. Cowan, *TBG* 80 (1940), 15-21). The kingdom lasted until the 16th century. It was still independent when Tomé Pires collected information for his *Suma Oriental* in Malacca, 1512-'15 (ed. A. Cortesão, Hakluyt Soc. 2nd Ser. 89, 90 (1944)), and its trade profited greatly by the decline of Malacca after its capture by the Portuguese. This prosperity was not to last long. Though Pasè's traditional enemy Pedir (Ach. Pidië) was at that moment in decay owing to the death of its king Madaforxa (Muẓaffar Shāh?) and its being at war (apparently with Atjèh), the rising power was not Pasè but Atjèh. Pires describes its ruler as a pirate-king, 'a knightly man among his neighbours'. He had already subdued the adjoining country of Lambry (Lamuri, Lambri) and the land of Biar, between Atjèh and Pedir (Ach. Biheuë). This probably refers to Sultan 'Alī Mughāyat Shāh, the first sultan in Djajadiningrat's list, whose date of accession is uncertain. Tomb-stones of some of his predecessors have been found after H. Djajadiningrat compiled his list from Malay chronicles and European

sources (*BTLV* 65 (1910), 135-265), but the exact relations between these predecessors are still unexplained, and Sultan ʿAlī Mughāyat Shāh, by conquering Daya to the west and Pidiē and Pasè to the east, became the real founder of the empire of Atjèh. Leaving aside, for the time being, the data on the earlier sultans, we reproduce Djajadiningrat's list of the princes of Atjèh with only a few modifications in the dates:

I. ʿAlī Mughāyat Shāh (?-1530).
II. Ṣalāḥ al-Dīn (1530-± 1537).
III. ʿAlāʾ al-Dīn Riʿāyat Shāh al-Ḳahhār (± 1537-1571).
IV. ʿAlī Riʿāyat Shāh or Ḥusayn (1571-± 1579).
V. Sulṭān Muda (a child, reigned only some months in 1579).
VI. Sulṭān Sri ʿĀlam (1579).
VII. Zayn al-ʿĀbidīn (1579).
VIII. ʿAlāʾ al-Dīn of Perak or Manṣūr Shāh (1579-± 1586).
IX. ʿAlī Riʿāyat Shāh or Radja Buyung (± 1586-± 1588).
X. ʿAlāʾ al-Dīn Riʿāyat Shāh (± 1588-1604).
XI. ʿAlī Riʿāyat Shāh or Sulṭān Muda (1604-1607).
XII. Iskandar Muda (posthumous name: marḥūm Makota ʿĀlam) (1607-1636).
XIII. Iskandar Thānī ʿAlāʾ al-Dīn Mughāyat Shāh (1636-1641).
XIV. Tādj al-ʿĀlam Ṣafiyyat al-Dīn Shāh (1641-1675).
XV. Nūr al-ʿĀlam Naḳiyyat al-Dīn Shāh (1675-1678).
XVI. ʿInāyat Shāh Zakiyyat al-Dīn Shāh (1678-1688).
XVII. Kamālat Shāh (1688-1699).
XVIII. Badr al-ʿĀlam Sharīf Hāshim Djamāl al-Dīn (1699-1702).
XIX. Pérkasa ʿĀlam Sharīf Lamtuy b. Sharīf Ibrāhīm (1702-1703).
XX. Djamāl al-ʿĀlam Badr al-Munīr (1703-1726).
XXI. Djawhar al-ʿĀlam Amāʾ al-Dīn Shāh (reigned only a few days).
XXII. Shams al-ʿĀlam or Wandi Tĕbing (reigned only a few days).
XXIII. ʿAlāʾ al-Dīn Aḥmad Shāh or Maharadja Lela Mĕlayu (1727-1735).
XXIV. ʿAlāʾ al-Dīn Djohan Shāh or Pòtjut Auk (1735-1760).
XXV. Maḥmūd Shāh or Tuanku Radja (1760-1781).
[XXVI. Badr al-Dīn (1764-1765)].
[XXVII. Sulaymān Shāh or Radja Udahna Lela (1773)].
XXVIII. ʿAlāʾ al-Dīn Muḥammad Shāh or Tuanku Muḥammad (1781-1795).
XXIX. ʿAlāʾ al-Dīn Djawhar al-ʿĀlam Shāh (1795-1824).
[XXX. Sharīf Sayf al-ʿĀlam (1815-1820)].
XXXI. Muḥammad Shāh (1824-1836).
XXXII. Manṣūr Shāh (1836-1870).
XXXIII. Maḥmūd Shāh (1870-1874).
XXXIV. Muḥammad Dāwūd Shāh (1874-1903).

ʿAlī Mughāyat Shāh's two sons Ṣalāḥ al-Dīn and more especially ʿAlāʾ al-Dīn Riʿāyat Shāh al-Ḳahhār increased the importance of the new kingdom. From Turkish archive documents we learn that the latter sent an embassy to Constantinople in 973/1563 asking for help against the Portuguese and saying that several of the heathen rulers of South East Asia had promised to embrace Islam if the Ottomans would save them. The arrival of the embassy coincided with the Szigetvar campagn and the death of Sulaymān. The embassy therefore waited two years in Constantinople and then a naval expedition was prepared under the command of the Admiral of Suez, Kurdoghlu Khizir Reis, consisting of 19 galleys and some other ships with guns, supplies, etc. This expedition was however diverted to deal with an insurrection in the Yemen and instead two ships with supplies and military technicians were sent to Atjèh. It would seem that they entered the service of the Sultan of Atjèh and stayed there. (See Saffet, *TOEM*, 10, 604-614; 11, 678-683; I. H. Uzunçarşılı, *Osmanlı Tarihi*, ii, 1949, 388-389, and iii/1, 1951, 31-33). In the first half of the seventeenth century Atjèh reached its greatest prosperity, attaining its zenith during the reign of Iskandar Muda, honoured after his death by the title of Meukuta ʿĀlam, i.e., Crown of the World (*supra* n°. XII). The dominion of the Achehnese was extended far to the south during his reign. Iskandar's expedition with a great fleet against Pahang and Malacca forms the subject of an inportant Achehnese epic the *Hikayat Malém Dagang* (ed. H. K. J. Cowan, The Hague, 1937). In 1638, during the reign of his successor (Iskandar Thānī, *supra* n°. XIII) a Portuguese embassy came to Atjèh and tried in vain to win over the Sultan to their side in the war against the Dutch (see: Agostino di S. Teresa, *Breve racconto del viaggio ... al regno di Achien*, Roma 1652; Ch. Bréard, *Histoire de Pierre Berthelot*, Paris 1889). Four princesses ruled over Atjèh in the second half of the seventeenth century (1641-1699). This period of feminine rule was naturally much to the advantage of the Ulèëbalangs whose power and authority were thereby increased; but on the other hand many disapproved of this state of affairs and declared on the authority of a *fatwā* received from Mecca that it was forbidden by law for a woman to rule. Thereupon at the beginning of the eighteenth century arose a series of dynastic wars. Some of the princes who contended for the throne were Sayyids (i.e. descendants of Ḥusayn) born in Atjèh. The best known among these was Djamāl (*supra* n°. XX). After he was deposed in 1726, he held out for a considerable time against the later Sultans, amongst others against Aḥmad (*supra* n°. XXIII, a man of Bugis descent, ancestor of the last dynasty of Achehnese princes) and his son Djohan Shāh (*supra* n°. XXIV). The contest between Djamāl and Djohan Shāh and the death of the former are the subjects of another great Achehnese epic, the *Hikayat Pòtjut Muhamat* (still unpublished; cf. Snouck Hurgronje, *The Achehnese*, ii, 88-100). Even after the authority and wealth of the court had gradually become insignificant, there survived, indeed till quite recent times a great reverence among the Achehnese for their rulers whom they honoured as the representatives of a glorious past.

(Th. W. Juynboll-[P. Voorhoeve])

The Atjèh War. In the 19th century the piracy and slave trade of the Achehnese and their raids on neighbouring territories constituted a constant danger. The Dutch government were at first not in a position to put a stop to this evil as they had pledged themselves to England in 1824 not to extend their dominion in Sumatra to the north, but this obligation was removed by a new

treaty with England in 1871. The landing of Dutch troops in 1873 was the beginning of a war (the Atjèh War), which lasted—with several pauses—from 1873 until 1910, in which year the pacification was considered complete.

Broadly speaking the three components inspiring this unexpected opposition were the *ulamas*, the *ulèëbalangs*, and the sultanate. Of these three the *ulamas* were the strongest, and the sultanate the weakest component. This last fact is understandable, since—as we have seen above—the influence of the sultan was very limited. With the capture of Kutaradja, the sultan's stronghold, the Dutch considered the sultan's government as at an end, and the Dutch administration took over his position and rights. Meanwhile, after the death of Sultan Maḥmūd Shāh, the six-year old Muḥammad Dāwūd, grandson of Sultan Manṣūr Shāh (*supra* No. XXXIII), was elected sultan. The "pretender-sultan" Muḥammad Dāwūd, who had taken refuge with his court at Keumala in Pidië, hunted by Dutch troops from hiding place to hiding place, finally made his submission in 1903. In 1917, because of underground activities, he was banished from Atjèh. The *ulèëbalangs*, the secular authorities or "lords of the country" (*The Achehnese*, i, 88), so far as they were not willing to accept Dutch authority, had to be subdued one by one. One of the most influential of them was Teuku Panglima Pòlém Muḥammad Dāwūd, the chief of the *sagi* of the XXII *Mukims*. Now that the sultan's government had lapsed the Dutch recognised the *ulèëbalangs*—with the exception of those in Great-Atjèh, which was regarded as the personal domain of the sultan—each as independent rulers in their own right, whose relationship with the Dutch government must be determined by treaty. On the advice of Snouck Hurgronje the form of treaty selected from 1898 onwards was the so-called *korte verklaring* [short contract]. In this the rulers recognised that their territories formed part of Netherlands India, and undertook not to have any kind of political contacts with foreign powers, to follow and maintain all the regulations, and to obey all the orders given them by the Civil and Military Governor of Atjèh. The *ulamas*, the spiritual leaders of the people, were the real inspirers of the struggle. Here we can mention only one well-known family, the *Tirò-teungkus*, of whom Tjhèh Saman (d. 1890) was the best known. They were named after the *gampōng* Tirò in Pidië, an important centre of Islamic scholarship. The *ulamas* went throughout the land preaching the holy war; their war-chest was the *zakāt*-tax levied on the people. The native chieftains were ignominiously thrust into the background. The long duration of the war and the fanaticism with which it was fought are explained by the character of a holy war which it assumed. From this period comes the *Hikayat Prang Sabi* (ed. H. T. Damsté, *BTLV*, 84, 1928, pp. 545 ff). in which the faithful were called to a holy war. After the submission of the "pretender-sultan" the *ulamas* and some *ulèëbalangs* conducted a guerrilla warfare, though Panglima Pòlém also submitted a few months after the sultan. In 1911 Teungku Maʿat, the last survivor of the *Tirò-teungkus*, was killed.

It was a long time before the Dutch government came to comprehend the full significance of these three fundamental components in the Atjèh War, and to adapt their policies and tactics accordingly. The investigations of Snouck Hurgronje were the first to provide the political insight upon which the military campaigns of Governors J. B. van Heutsz (1898-1904), G. C. E. van Daalen (1905-1908), and H. N. A. Swart (1908-1918), could be based (cf. K. van der Maaten, *Snouck Hurgronje en de Atjèh-Oorlog*, 2 vols., Oostersch Instituut, Leiden 1948, and the literature listed therein). Governor Swart was the last governor to be charged both with the civil government and the military command in Atjèh.

The Dutch administration. Since the sultanate was swept away by the Atjèh War, the highest authority was considered to have passed to the "regents" of the sultan, the *ulèëbalangs*. This administrative institution which drew its sanction from *ʿādat* (local customary law) was fitted into the Dutch administrative system in the following way. The *ulèëbalangs*' territories were recognised as "native states" (*zelfbesturende landschappen*), and their relationship with the Dutch government was regulated by the *korte verklaring*. Exceptions to this were the district of Great-Atjèh, and the sub-district of Singkel, both of which were classed as "directly ruled territories" (*rechtstreeks bestuurd gebied*). Great-Atjèh, the territory of the three *sagis*, was included in this category because after the conquest it had wrongly been assumed that here, in contrast to the rest of Atjèh, the chiefs were dependent officials of the sultan. The border territory of Singkel was included on historical grounds. A section of this district had been brought under Dutch rule earlier, forming part of the residency of Tapanuli, and therefore in determining the form of administration the system in force elsewhere in that residency was followed. But here too the existing administrative frame-work based on *ʿādat* law was maintained, so that the *panglimas sagi*, the *ulèëbalangs*, and so on, as 'native chiefs' were made government officials.

The *ʿādat* system which was thus embodied in the administration presented a picture of infinite diversity. It embraced about 100 *ulèëbalangs* acting as independent rulers, and about 50 *panglimas sagi*, *ulèëbalangs* and local chiefs with various other titles in the directly ruled territories. The size of each territorial unit varied from a village to the equivalent of a Dutch province, the populations from a few hundreds to more than 50,000, and the educational background of the rulers from a simple primary school course to training at the Civil service college (*Bestuursschool*) in Batavia.

Over this Indonesian administrative framework extended the Dutch administration; its task was the creation and enforcement, through these institutions, of peace, order and the rule of law, and the economic and cultural development of the land. The Government (later Residency) of Atjèh and Dependencies, administered by a Governor (later a Resident), was for these purposes divided eventually into four districts, each administered by an Assistant Resident. These were the district of Great-Atjèh, and the districts of the North Coast, the East Coast, and the West Coast. They in their turn were subdivided into a total of 21 sub-districts, each administered by a *Controleur* (District Officer).

The policy of government was consistently directed towards promoting a larger measure of personal initiative on the part of the chiefs, and bringing the Indonesian administration into line with Western standards. So the old type of chief, ruling like a patriarchal despot, gradually made way for more progressive younger men.

Thus under the Dutch régime the administration remained wholly in the hands of the hereditary *ulèëbalang* caste, a caste consolidated on the one hand

by intermarriage between families already related to each other in a variety of ways, and divided on the other hand through the operation of historical feuds. The hegemony of this caste, moreover, was not confined to the sphere of government. In accordance with the *ʿādat* the administration of justice was also in the hands of the *ulèëbalang*s, whilst in accordance with the *ḥukōm* they were the religious leaders of their own territory. In addition they had often important trading and other economic interests, and usually disposed of extensive estates, particularly in Pidië, where a medieval system of feudal holding still prevailed. Finally—their sons being considered first for all forms of education and training—they had in a certain sense also an intellectual monopoly.

When the Japanese War broke out there were three *ulèëbalang*s of outstanding importance. Teuku Nja᾿ Arif, the chief of the *sagi* of the XXVI *Mukim*s, had represented Atjèh in the *Volksraad* until 1931. Teuku Muḥammad Ḥasan, ruler of Glumpang Payōng (Pidië), had previously been employed in the Residency offices at Kutaradja, where he exercised a great influence on political policy. Teuku Ḥadji Tjhi᾿ Muḥammad Djōhan Alamsjah was the ruler of Peusangan (Bireuën).

Whilst the *ulèëbalang* group thus linked itself increasingly closely with the Dutch régime, amongst the *ulama* group, taken as a whole, the anti-Dutch tradition was maintained. The predominant position which the *ulama*s had attained during the Atjèh War was lost again with the return of peace, and the traditional superiority of the *ulèëbalang*s was restored. So there developed gradually between these two groups, which had co-operated during the war, an antipathy—a recurring theme in the history of Atjèh—as the result of which the *ulama*s regarded the *ulèëbalang*s as traitors.

Religious life itself was left to develop freely, in keeping with the tradition of the Dutch régime. At first Tuanku Radja Keumala (whose father was a great-grandson of Sulṭān Muḥammad Shāh, *supra* XXXI), acted as adviser on religious affairs. But after his death this office was not refilled, whilst the advisory council on religious affairs established in 1919 under the title *"raad ulama"* ["Council of ʿUlamāʾ"], of which this learned descendant of the sultan formed the central figure, was discontinued. For this reason the Dutch authorities were subsequently dependent for their information about developments in the religious sphere upon the *ulèëbalang*s, who were considered legally the religious leaders of their own territories. Ultimately, just before the Japanese invasion, another descendant of a former sultan, Tuanku ʿAbd al-ʿAzīz, *Imeum* of the great mosque at Kutaradja, was made unofficial religious adviser. He was not an *ulama* in the sense which was attached to that word in Atjèh, and although known as *além* (see above) he did not enjoy anything like the prestige of his eminent predecessor.

Religious instruction retained an important place next to secular education. Besides elementary religious education Atjèh possessed a large number of so-called religious secondary schools in which geography, history, economics, etc., were also taught. Many *ulèëbalang*s made a point of having one or more religious schools in their territory, which through the fame of the *ulama*s trained in Egypt, Minangkabau, or in Atjèh itself who taught in them, would enhance their own reputations. That these *ulama*s were often more or less openly anti-Western in outlook they accepted as part of the bargain.

As for the third component in the struggle against the Dutch—the Sultan's party—its rôle was played out. The "pretender-Sultan" died in exile in 1939 in Batavia. His son was allowed to return to Atjèh. The other descendants of the sultanate remaining in Atjèh wielded little influence. An exception was Tuanku Maḥmūd, an important political figure, who had been trained at the Civil service college in Batavia. He held a government post in Celebes for some years before returning to Atjèh as senior native official in the service of the resident there. In 1931 he succeeded Teuku Nja᾿ Arif as a member of the *Volksraad*, and after the death of the "pretender-Sultan" became undisputed head of the sultan family. A campaign started in 1939 by some Achehnese merchants for the restoration of the sultanate met with little response; there was practically no support for it from the *ulèëbalang*s, who saw in it a threat to their own position.

The political situation itself developed favourably. The last resistance incident took place in 1933, and the military garrison was gradually reduced. The *kāfir*-hate and the idea of a holy war—negative expressions of the religious consciousness—gave way to a positive local Achehnese patriotism, which expressed itself in the normal impulse to be master in one's own house, or more specifically to get an increased number of posts in the administration occupied by one's fellow countrymen.

Modern nationalist ideas had as yet hardly any hold on the Achehnese people. The same was true of the Muḥammadiyya movement, which originated in Java. Though it fixed as its target the advancement of religious life, and had its connexions over the whole of Indonesia, it struck no responsive note in Achehnese religious life. It remained—despite its Achehnese leadership—a distinctly non-Achehnese movement, which attracted mainly non-Achehnese elements, or locally the militant part of Achehnese society, which in the absence of a purely political movement sought in it satisfaction for their political and social aspirations. The religious ideas of this young Islamic modernist movement were quite alien to the more conservatively orientated religious life of the Achehnese.

As a counter-weight to the modernist ideas of the Muḥammadiyya, the *PUSA* or *Persatuan Ulama-ulama Seluruh Atjèh* was founded at Bireuën in 1939, under the influential patronage of the ruler of Peusangan. Under the direction of Atjèh's most prominent *ulama*s it was to be the vehicle of that typically Achehnese strictly orthodox religious life. Its membership was not necessarily limited to *ulama*s. Anyone else who could identify himself with its aims could join it, and its most prominent leader was Teungku Muḥammad Dāwūd Beureu᾿éh from Keumangan (Pidië). The movement seemed to fulfil an important need. Through it both conservative and progressive *ulama*s were brought together, and branches were set up throughout Atjèh. To have assumed a political, let alone an anti-Dutch, character, would have been inconsistent with the aims of the movement. Its attitude towards the government and the *ulèëbalang*s was completely correct, and many *ulèëbalang*s accepted the position of adviser to their own local branch. The position of patron was offered to Tuanku Maḥmūd. A youth movement was founded under the name *Pemuda Pusa*, with its headquarters at Idi. The more advanced and militant elements, reacting against the pressure of the *adat* authorities, sought within this movement a refuge, and a means of expressing

their own ideas. As a result the youth movement quite quickly began to take on a more militant and subversive character. So the *Pusa* itself gradually developed into a new and potent weapon in the hands of the *ulamas* in their struggle against the Dutch régime and the *ulèëbalangs*.

We have already dealt briefly with economic developments in this period, and with education in its religious aspect. Secular education expanded steadily. At the time of the Japanese invasion Atjèh had one higher grade school, thirteen schools giving Western elementary education, 348 elementary vernacular schools, 45 *vervolgscholen* or advanced vernacular schools and one trade and handicraft centre, founded either by the Dutch government or the native states. There were besides a number of private schools giving elementary Western education, supported by the Muḥammadiyya and Taman Siswa societies.

The Japanese occupation. Even before Japanese troops occupied Atjèh in March 1942 rebellions against the Dutch government broke out in Great-Atjèh and in the North and West Coast districts. These took on the character of a national rising, particularly in the *sagi* of the XXII *Mukims* and in the sub-district of Tjalang, on the West coast. After the Japanese troops had landed the rebellion spread quickly. As during the Atjèh War the most important component of the rising was formed by the *ulamas*. It was led by Teungku Muḥammad Dāwūd Beuereu'èh at the head of the Pusa and the Pemuda Pusa, which provided a single organisation spread over the whole of Atjèh, admirably suited for the preaching of the holy war. The participation of the *ulèëbalangs* was at first limited to a number of discontented political elements of purely local importance. That the rebellion in the *sagi* of the XXII *Mukims* was able to assume the character of a national rising is explained by the support which the *ulamas* experienced from the chief of the *sagi*, the son of the great resistance leader of the Atjèh War, Teuku Panglima Pòlém Muḥammad Dāwūd, who had died shortly before the outbreak of the war. In Tjalang the participation of Teuku Sabi of Lageuën, one of the only two native rulers who had earlier supported the movement for the restoration of the sultanate, set its stamp on the nature of the rising there, so that the third component from the Atjèh War, that of the sultanate, re-appears at this time too. The movement was stimulated from the Japanese side, for immediately after the fall of Penang in December 1941 a fifth column organisation was formed from the Achehnese colony there, which sent its agents back to Atjèh as "refugees" from Japanese violence. Shortly before the Japanse landing Teuku Nja' Arif, the chief of the *sagi* of the XXVI *Mukims*, joined the rebellion, whilst later Teuku Muḥammad Ḥasan of Glumpang Payōng also declared that he had already been in contact with the Japanese before their attack.

From the beginning the Japanese stood in a different relationship *vis à vis* the *ulèëbalangs* and the *ulamas* than had the Dutch. From the outset they received support from the *ulamas* more perhaps than from any one else. An attempt by the Pusa to take over power locally from the *ulèëbalangs*, however, was not sanctioned by the Japanese, since they could not allow the existing social order to be dislocated by the sweeping aside of the government machinery based on the *ʿādat*. It would have undermined their own military strength. Instead Japanese policy was aimed at linking both of these political forces, that of *ʿādat* and that of *ḥukōm*, in order to obtain the co-operation of the people as a whole in their war effort. The Japanese tried therefore just like the Dutch to keep a balance between both groups. The fact that the *ulèëbalangs* too had taken an important share in the rising made this policy acceptable.

The rule of the *ulèëbalangs* was thus maintained. In the sphere of government the position of the *ulèëbalangs* was even strengthened. Dutch government officials made way for Indonesian *gun-chōs* who were chosen, with a single exception, from leaders of the *ulèëbalang* families. Two *ulèëbalangs* represented Atjèh in the delegation from Sumatra which visited Japan in 1943, one—Teuku Muḥammad Ḥasan—being designated as its leader. In the advisory Council for Atjèh created at the end of 1943, Teuku Nja' Arif was appointed chairman, and Teuku Muḥammad Ḥasan deputy chairman. As it was first constituted, the majority of its members belonged to the *ulèëbalang* class; but this was no longer the case when it was re-constituted in 1945.

Nevertheless the position of the *ulamas* was considerably strengthened, at the expense of the *ulèëbalangs*. At the beginning of 1943 Tuanku ʿAbdul ,Azis was appointed adviser for religious affairs for the whole of Atjèh, and some months later he was made chairman of the newly created advisory council on religious affairs. Teungku Muḥammad Dāwūd Beureu'èh was appointed deputy chairman of this council, which had branches throughout Atjèh, and he quickly became the leading figure in it. The principal object of this and similar organisations was to bring religion into the service of the Japanese war effort. In 1944 a court was established to hear religious cases under the name *shūkyō-hōin*, and in this too Teungku Muḥammad Dāwūd Beureu'èh and his Pusa predominated. Eventually one of the members of the executive committee of Pusa was appointed inspector of religious education. Teungku Muḥammad Dāwūd Beureu'èh and a number of other *ulama* were members both of the first and of the second Council for Atjèh.

The administration of justice too was re-organised, and largely withdrawn from the control of the *ulèëbalangs*. In the magistrates courts (*ku-hōin*) in particular a large number of those appointed as members were supporters of Pusa, leaders of the resistance movement, and other enemies of the *ulèëbalangs*.

This policy of holding a balance between both groups could satisfy neither the *ulèëbalangs*, nor the *ulamas*. To be sure, the *ʿādat* was no longer the mistress and the *ḥukōm* her obedient slave-girl. But the *ulamas* would only be satisfied with a position in which the *ḥukōm* would be mistress and the *ʿādat* the slave. So both groups conducted a remorseless struggle over the heads of the Japanese.

Meanwhile the pressure on the Japanese was growing from day to day. The Japanese army of occupation was dependent on what the country itself could provide both for its food and for the labour supply needed for the construction of roads, airfields and fortifications. To provide this, an almost intolerable burden was through the agency of both the *ulèëbalangs* and the *ulamas* imposed on the people. Increasing discontent was the result. More and more *ulèëbalangs* refused to provide the services of their men for the use of the occupying forces, whilst it became ever harder for the *ulamas* too co-operate in satisfying the Japanese demands. In September 1943 mass arrests took place throughout

Atjèh and amongst those arrested were several *ulèëbalangs*. In August 1944 the ruler of Glumpang Payōng, who was suspected of underground activities and of conspiring with the Dutch, was arrested with some other *ulèëbalangs*, and executed shortly afterwards. At the moment of these mass arrests the ruler of Peusangan was already for some months in prison. The possession of a copy of the *Hikayat prang sabi* ("Summons to the Holy War") or its recitation was made an offence. In two instances there was open resistance. As early as 1942 there was an insurrection in Bayu, in the sub-district of Lhō' Seumawè. There an *ulama* Teungku ʿAbd al-Djalil who, despite his youth, was already head of a large religious school, is said to have preached the *prang sabi* against the Japanese. He and his followers were killed in the bloody conflict which followed. In 1945 there was another insurrection in Pandraīh, in the sub-district of Bireuën. Here the heavy economic burden of compulsory deliveries and "voluntary" labour produced an outbreak which was savagely repressed.

The Japanese invasion brought at first a revival of the negative element of *kāfir* hatred. But as Japanese pressure increased the positive element of local patriotism grew, stimulating the urge to take control into Achehnese hands. In the end, as the result of the Japanese promise of independence, this developed into the idea of a unity, based on religion, which would embrace the whole of Indonesia.

Indonesian Independence. The Japanese surrender in August 1945 did not bring any restoration of the Dutch régime in Atjèh and only the island of Sabang was occupied by Dutch troops. The way was thus open for a final reckoning between the *ulamas* and the *ulèëbalangs*. In December 1945 a civil war broke out which ended in February 1946 with the annihilation of the power of the *ulèëbalangs*. A number of *ulèëbalang* families were massacred to the last male child. Hundreds of members of *ulèëbalang* families disappeared into republican internment camps as "enemies of the Republic", and their property was confiscated. Amongst them were the chief of the *sagi* of the XXVI *Mukim*s and the ruler of Peusangan.

This annihilation of the power of the *ulèëbalangs* cannot be viewed solely as a result of the antithesis between *ʿādat* and *ḥukōm*. Social, political and economic factors were also involved. Religion played the part of the instrument of a social revolution against the position which the *ulèëbalang* class held in society as a whole, a position which has been described at some length above.

Soon after the Pusa emerged victorious from the civil war, its leader Teungku Muḥammad Dāwūd Beureu'èh became military governor of Atjèh. His adherents filled those posts in the administration, the police and the judicature which had formerly been occupied by the *ulèëbalangs*. The lack of experience, high-handedness and corruption of the new rulers, who in fact were supported by only a minority of the population, soon led to increasing unrest, and in 1948 there was an abortive insurrection in Kutaradja. But so long as the central government of the Republic had not reached a settlement with the Dutch, its hands were full elsewhere and there was no question of its intervening in Atjèh. The common struggle for the recognition of Indonesian independence was in these years the only aim; Achehnese local patriotism and the idea of Indonesian unity for the moment coincided.

After the transfer of sovereignty from Holland to the Republic of Indonesia at the end of 1949 the intervention of the central government could no longer be avoided. For administrative purposes Atjèh was included in the province of North Sumatra, so that Teungku Muḥammad Dāwūd Beureu'èh lost his position as governor. Achehnese military units were gradually replaced by non-Achehnese troops, thus depriving the Pusa of their military support. In 1951 a large number of Pusa leaders were arrested under cover of the general round up of Communist leaders, undertaken throughout Indonesia at this time, and inefficient Pusa adherents in official positions were removed from their posts. But the expectation of the central government that they could in this way gradually steer the government in Atjèh back into normal channels, was not realised. In September 1953 Teungku Muḥammad Dāwūd Beureu'èh and his followers launched a rebellion against the central government. A bloody guerrilla warfare followed, which lasted until the middle of 1957 when an informal truce was reached between Teungku Muḥammad Dāwūd Beureu'èh and the local authorities. The year before, in October 1956, Atjèh was again granted the status of an autonomous province. (A. J. Piekaar)

AL-ʿ**ATK**, a valley in Nadjd, the northernmost of those cutting through the western wall of the cuesta of Ṭuwayḳ. It is a true *wādī* with a strong flood whenever there is enough rain. The valley forms the dividing line between the district of Sudayr to the north and the district of al-Maḥmal to the south. Its head (*farʿa*) is in the low ground west of Ṭuwayḳ in the vicinity of the oasis of al-Ḳaṣab, south of which there is a large salt pan (*mamlaḥa* or *sabkha*). After passing north of the hills of al-Bakarāt (pl. of *bakra* = she-camel 3-5 years old), the valley goes through the escarpment of Ṭuwayḳ by a narrow passage. Just east of this passage, the valley of Urāṭ descends from the uplands of Sudayr and the valley of Thādiḳ comes up from the south to join al-ʿAtk.

Farther on, the main valley of Sudayr—in which lie Djalādjil, al-ʿAwda, and other oases—and the valley of ʿUshayra come together and then empty into al-ʿAtk from the north, as does the valley of al-Ḥisy (a settlement of the Wahhābī Ikhwān belonging to the tribe of Subayʿ) from the south. After passing south of Khashm Abū Rukba and north of Ruwayghib (a settlement of the Ikhwān belonging to al-Suhūl), al-ʿAtk cleaves through the escarpment of al-ʿArama. The valley runs by a few kilometres north-west of the wells of Ḥafar al-ʿAtk and comes to an end at Rawḍat al-Tanhāh just west of the sands of al-Dahnāʾ. This basin also receives the waters of the valleys of al-Shawkī and al-Ṭayrī, the latter of which runs only c. 1 km. west of Ḥafar al-ʿAtk.

The sweet water wells of Ḥafar al-ʿAtk (25° 57′ 04″ N, 46° 30′ 28″ E) are over a dozen in number, all lined with stone, with a depth of c. 23 *bāʿ* (c. 40 m.). Each well has its own name; those with the most water are al-Ghabbāshiyya and Sudayra. These wells mark the western end of Darb al-Kunhurī, a well beaten desert trail coming from the town of al-Djubayl (ʿAynayn) on the Persian Gulf coast. From the wells the traveller may ascend the valley to Sudayr or al-Maḥmal or proceed westwards to the district of al-Washm lying beyond Nafūd al-Balādīn. Popular tradition has it that the first wells here were dug by the chiefs of Banū Khālid, masters of Eastern Arabia until its conquest by the rising Wahhābī state of Āl Saʿūd at the close of the 18th century. During the summer several thousand Bedouins may congregate at Ḥafar al-ʿAtk, their tents filling the depression in which the wells lie and lining the edges of the circumambient hills.

The valley is regarded as lying within the range of the tribes of Subayʿ and al-Suhūl, while the wells belong to al-Khuḍrān, a group consisting of al-Nabaṭa and al-ʿUraynāt, both sections of Subayʿ. Members of these tribes, like most of the townsfolk of Nadjd, pronounce the name *ʿatts*, while other Bedouins in Nadjd and the east say *ʿatsh*, associating the name with the word *ʿatsha* = having many bushes and trees. The pronunciation *ʿatk* is seldom if ever heard, but the written form Baṭn al-ʿAtk is in al-Hamdānī, i, 141, who also mentions al-Bakarāt and Baṭn Dhī Urāṭ. Ibn Bishr, *ʿUnwān al-Madjd* (Mecca ed.), i, 44, 72, 108; ii, 26, speaks of al-ʿAtk and Ḥafar al-ʿAtk, and Ibn Bulayhid, *Ṣaḥīḥ al-Akhbār*, i, 137, identifies al-ʿAtk as one of the two places called al-ʿItkān or al-ʿAtkān in early Arabic poetry.

(GEORGE RENTZ)

ATLAS, general name for the mountains of North Africa (Morocco, Algeria and Tunisia), which give it its originality and variety in contrast to the monotonous Sahara platform. Although this name, of unknown origin, was already used by the Greeks, the classical authors, Strabo (Book xvii) for example, give us few details. The Arab geographers lack precision and, like Strabo, often apply the name to the mountain chains otherwise called Adrār n-Deren, a term in fact reserved for the High Moroccan Atlas and the Saharan Atlas of Algeria (al-Bakrī, trans. de Slane, 2nd. ed., 281, 295); some authors (al-Bakrī, 303-4, al-Idrīsī, *al-Maghrib* 73-4, Ibn Khaldūn, *Hist. des Berbères*, trans. de Slane, i, 158) erroneously extend it as far as the Nefūsa, to Egypt and even beyond. The Northern chains—the Rif and Tell Atlas—were known to Strabo (xvii), and the Rif, to al-Bakrī (214); according to Ibn Khaldūn (i, 128) the Deren chains form "a girdle enclosing the Maghrib al-Akṣā from Asfī to Taza", including, therefore, the Middle Atlas. Leo Africanus (*Description de l'Afrique*, trans. Épaulard, Paris 1956, 4 and 49-50), rather more exact, distinguishes the northern chains from the Atlas in the strict sense extends the latter right into Egypt. Marmol (*Africa*, i, 5) distinguishes between 'la Sierra menor' and 'la Sierra de Athalante mayor' in the south, which will henceforth be referred to as the Little Atlas and the Great Atlas. French geologists and geographers, above all in the last half century, have determined their characteristics and various aspects.

The chains of the Atlas are structurally folded mountains, related to the Tertiary chains of Europe; like these, they have been rejuvenated by Pliocene and Quarternary upheavals, which raised them considerably above the Mediterranean and the rigid Sahara platform. The Sahara begins to the south of the Southern Atlas accident (fault, flexure, abrupt straightening out of the strata), which extends from Agadir to Gabès. The Dahar of Southern Tunisia and the Nefūsa, therefore, do not form part of the Atlas. As for the Anti-Atlas of Morocco, of which the Dj. Saghro is merely an extension, this stands on its own: it is only the raised edge of the Sahara platform. It is a great asymmetrical massif, reaching 2,531 metres at the Dj. Akhni, and consists of consolidated rocks of the Pre-Cambrian and Primary ages. It falls away to the depressions of the Sūs and the Dadès (which the great granitic and volcanic mass of the Sirwa, 3,304 metres, separates) and runs down to the plains of Dra (Darʿa) and Tafilalet, intersected by the wrinkle or scarp of the Dj. Bani.

In the "Atlas regions" a first complex, and the most extensive, contains both moderately folded mountains, often of considerable height, and relatively low zones: plateaux and high plains. The High Atlas is a huge "fundamental fold", a chain 750 kms. in extent, which rises to 4,000 metres and over (4,165 m. at the Tubkal, 4,070 at Mgūn); in spite of its latitude, it bears traces of quarternary glaciation, though it no longer retains everlasting snows. Hemmed in to the west between the Sūs and the Ḥawẓ of Marrakesh, it breaks up, despite several considerable peaks, into ridges and deep transverse valleys, and may only be crossed by high cols, historical routes to the Sūs (Tizi n-Test) and the High Dra (Tizi n-Tishka). In the centre and the East it becomes primarily calcarious (liassic and jurassic), with narrow faulted anticlines and broad synclines; after the Dj. ʿAyyashī (3,751 m.), the chains lose height and peter out in the South of Eastern Morocco. The "wādīs" Dadès, Gheris, Ziz (the route from Fez to Tafilalet) and Guir break away from it by majestic cross valleys—the Saharan Atlas of Algeria continues the High Atlas. Its massifs, the mountains of the Ḳṣūr, of the ʿAmūr (Dj. ʿAmūr), of the Ouled Nail and of the Zab loose height progressively from the South-West (2,236 m. at the Dj. Aissa) to the North-East (less than 1,000 m.). These are remains of folded mountains, ridges isolated by broad pediments, which the nomads easily cross in spite of their elevation above the Sahara. On the further side of the Biskra depression, rises the Aurès (Awrās), the only massif of the Saharan Atlas and the highest mountain in Algeria (2,329 m. at the Chélia). Its majestic chains with their very broad folds lying S.-W./N.-E., are separated by the deep vallies of the "wādīs" Abdi, el-Abiod and el-Arab: these "wādīs" flow through savage gorges to reach the "southern Aurès depression", which sinks down to below sea level. The Nememcha

mountains to the East of the Aurès tower above this depression and then subdivide northwards into isolated ridges, the remains of broad domes. In Tunisia, the chains deriving from the Saharan Atlas cover the entire mountain country, except the north-west. The structure of domes, frequently faulted, and of broad basins, to be observed in the Tebessa mountains, is continued in the Dorsal range of Tunisia. Its anticlines, generally calcarious, (1,154 m. at the Dj. Chambi) and separated at times by broad transverse rift valleys, rendering communications easy, converge towards the N.E. to form one single chain bristling with sierras (Dj. Zaghwān, 1,298 m.) extending as far as the Gulf of Tunis North of the Dorsal range, the High Tell and the Medjerda regions are composed of compressed folds, which, however, only produce mountains of moderate height, separated by broad basins, by the deep depression of the Middle Medjerda and by its tributary valleys: the "wādīs" of Mellègue, Tessa and Siliana. In the south the anticlinal chains of limestone or sandstone rise among broad plains, generally synclinal and covered by alluvium: from a W.-E. direction on the parallel of Gafsa, they are turned back in a S.-N. direction, bordering the plains of Eastern Tunisia.

North of the High Atlas and of the Sahara Atlas of Algeria, extend vast regions of low relief, which, however, are twice intersected by transverse chains: the Middle Atlas and the mountains of the Hodna. The Middle Atlas has the same rocks and the same style as the central High Atlas with narrow faulted anticlinal folds (Dj. Ben Nacer, 3,354 m.) and broad synclinal depressions. But in the N.W. it descends in step plateaux; the faults separating them are covered with volcanic cones and coulées. Heavily watered, it gives birth to the principal rivers of Morocco: Oum er-Rebia (*Umm al-rabīʿ*), Sebou, Moulouya. The Middle Atlas separates the rigid block of primary terrains of the Moroccan "meseta" (central plateau, hills of the Reḥama and of the Djebilet, sedimentary phosphate plateau, alluvial plains of the Tadla, the Bahira and of the Ḥawẓ of Marrakesh) from that of the Oran-Moroccan borders, which is almost completely concealed by secondary sediments. The Rokam, to the East of the Moulouya, is extended by the Debdou and Djerada plateaux, in Morocco, and by the undulating and faulted plateaux of the Tell Atlas of Oran: the mountains of Tlemcen, of the Mekarra, of Saida and Frenda. North of the Sahara Atlas, the High Algero-Moroccan plains, rising to 1,200 metres in the West and 800 metres on the meridian of Algiers, are structurally similar, consisting of simple exhausted folds, which, however, are three quarters buried beneath considerable old alluvial deposits (basins of the Chott Gharbi and Chott Chergui and of the Ẓahrez); only the Oued Touil (Upper Chelif) reaches the sea. Further to the E., the narrow chain of the Hodna mountains and the Belezma massif, separate the very low lying basin of the Hodna (400 m.) from the high plains of the eastern and Constantine regions of Algeria (800 to 1,050 m.). The W.-E. secondary chains of which they are made up, calcarious domes or ridges, leave gaps between them and continue, intermittently spaced out, across the high Constantine plains, which they dominate, rising to several hundred metres. The so-called region of the Sebakh in the south escapes the drainage of the Rhumel, the Seybouse and the Meskiana (Mellègue). As for the plains of Eastern Tunisia, these are incompletely drained behind the camber of the Sahel.

Bordering the Mediterranean, a second complex is formed, extending from Tangiers to Bizerta, by the chains of the Rif and the Tell Atlas. They are very complex in structure. The cemented and loose sediments of the Secondary and Tertiary have on several occasions been heavily folded. They have been pushed and overlapped southwards by the primary eruptive massifs of the "coastal belt", which only subsist still South of Ceuta and Kabylia; these massifs dominate in the south the lofty calcarious sierras of the Djebala and the Bokkoya (Morocco), the Djurdjura and the chain of Numidia. All the rest is formed of a thick and plastic mass of clay, sandstone and schistous sediments, usually discharged in "slip sheets" and, in Morocco, clearly carried down in a southerly direction. These structurally very complex mountains have been cut and broken up by transverse gorges and longitudinal valleys due to the vigorous erosion caused by Mediterranean torrents. The chain of the Rif, from Ceuta to Melilla, forms a crescent of mountains (2,450 m. at the Dj. Tidighine), which is enlarged in the south by a variety of hills carved by the tributary rivers of the Ouergha and Sebou in the Rif and Pre-Rif sheets. From the Melilla peninsula to the Trara massif, the heavily folded zone narrows and follows the hills of the Low Moulouya, the Beni Snassen mountains and the Tell plateaux of Oran. Then it bifurcates, continuing on both sides of a long depression, running from the *sebkha* of Oran to the elbow of the Middle Chelif; to the North are the hills of the Sahel of Oran, which are succeeded by the Dahra and Miliana mountains (Zaccar, 1,579 m.), and to the south, the Tessala and the Ouled Ali and Beni Chougrane mountains, which border the inland plains of Sidi Bel Abbès and Mascara, giving way in the East to the great Ouarsenis massif (1,985 m.), which directly dominates the high plains. The longitudinal depression recommences East of Medea and runs down by the valley of the wādī Sahel-Soummam as far as Bougie (al-Bidjāya); along its northern edge runs the Mitidja Atlas, rising above the alluvial plain of the Mitidja and the hills of the Sahel of Algiers, after which it is bordered by the Djurdjura Kabylia, culminating in the Lalla Khasidja peak (2,308 m.); to the south rise the Titeri mountains and the long Biban chain. East of Bougie, the Babor (2,004 m.) and the chain of Numidia are contiguous to Eastern Kabylia and directly dominate the softer reliefs of the Ferdjioua and Constantine mountains. The crystalline terrains of Eastern Kabylia are partly obscured by oligocene clays and sandstones, bearing cork forests. These same sandstones form the mountains encircling the littoral plain of Bône and, in Tunisia, Khroumiria and the Mogod regions.

The Atlas makes North Africa a country of mountain chains encircling plains, which are often both elevated and arid. The relief accentuates and diversifies the climatic contrasts due to the proximity of the Mediterranean and the Sahara. Dominating the Tell regions, the steppe areas of the high plains and the desert of the Saharan Piedmont, the principal massifs are original geographical environments, which have played a considerable though mainly negative rôle in the history of the Maghrib.

AṬRĀBULUS [see ṬARĀBULUS].

ATREK, a river in the north of Khurāsān, which has its source on the mountain of Hazār

Masdjid on the Gulistān ridge of the Kopet Dagh, 37° 10′ N, ca. 59° E, NE of Kočan (Kūčān), 3,975 ft. above sea level. The Atrek has a course of some 320 miles (Mustawfī: 120 *farsakhs*), running mainly westwards and runs, being some 32 ft. wide, 2-3 ft. deep, into the bay of Ḥasan Ḳulī in the SE of the Caspian Sea. On its upper reaches lie the fertile districts of Kočan and Budjnurd (in the Middle Ages Ustuwā), which are inhabited by Kurds since about 1600 A.D. From its junction with the Sīmbār (Zumbar) coming from the right (by the village of Čat or Čatlī), the Atrek has been since 1882 the frontier between Russia (or the Türkmen SSR) and Iran. Below Kharakī the Atrek flows through a region which is occupied only by a few Türkmen settlements and is almost deserted; yet there are many signs of Middle Ages irrigation and near Gudrī there has been constructed by means of a dam a northern canal wholly on Russian (Soviet) territory. The river is described by Mustawfī as scarcely permitting a crossing.—The name Atrek cannot be found in the works of the geographers of the 4th/10th century (al-Muḳaddasī, 354, 367); they speak in general of the numerous rivers of the district. It occurs for the first time in Ḥamd Allāh Mustawfī (212, transl. 205) and was later in popular etymology explained as the plural of Turk (Atrāk). — In the Middle Ages the district of Gurgān (Djurdjān, Hyrcania) bounded on the Atrek in the south, that of Dahistān [*q.v.*] in the north.

ATSİZ B. MUḤAMMAD B. **ANŪSHTIGIN**, Khwārizmshāh [*q.v.*] from 521-2/1127-8 to 551/1156, b. around 1098, followed his father as vassal of the Saldjūḳ sultan Sandjar in 521/1127 or 522/1128. All through his life it was his desire to make himself independent of this ruler, to maintain his position also with respect to the newly founded might of the Ḳara Khiṭāy and to bring under his domain the districts in the north which in earlier centuries had been temporarily connected with the Khwārizm state in order thus to achieve an expansion of it. In effect he was able (according to Djuwaynī partly still during his father's lifetime) to subject the lands between the Caspian Sea and the Aral Sea with the peninsula of the Min Ḳīshlak (Russian: Mangyshlak), as well as the country up to the Jaxartes (downwards from about Otrār) having Djand for its centre; since 536/1141 he secured the latter territory against the Ḳara Khiṭāy by the payment of tribute in kind and in money (30,000 gold *dirhams* p.a.). After a first rebellion against Sandjar, the latter was able, after initial hesitation, to drive off Atsīz by means of the bloody victory at Hazārasp, 10 Rabīʿ I 533/15 Nov. 1138 (Atsīz's son was taken captive and executed). Sandjar put in his own nephew Sulaymān b. Muḥammad (thus Djuwaynī) as Khwārizmshāh. But already in the following year Atsīz was able with the help of the inhabitants to drive him out again and to capture Bukhārā. Nevertheless Atsīz now saw fit to submit again to Sandjar (middle of Shawwāl 535/end of May 1141); but after the latter's defeat at the hands of the Ḳara Khiṭāy in the steppe of Ḳatwān (5 Ṣafar 536/9 Sept. 1141) he fell away again and took Marw (17 Rabīʿ II/19 Nov. 1141) and Nīshāpūr (Shawwāl 536/May 1142). However, by 538/1143-4 Sandjar by a campaign forced him again to recognise his authority. In spite of a third defection accompanied by the murder of Sandjar's envoy, the latter allowed Atsīz to retain his position, after the capture of Hazārasp (Jan. 1148) and the siege of Gurgandj, and in the course of a meeting (Muḥarram 543/June 1148) where Atsīz showed little submission. Yet Atsīz now remained loyal to Sandjar even after the latter's capture by the Oghuz (548/1153) and obtained from Sandjar for his support the promise to receive—though only at a later date—the fortress of Āmul (modern Čārdjūy) and other fortresses. After Sandjar's escape from emprisonment Atsīz sent him a high-flown message of congratulation and appeared (551/1156) before him at Nasā, but died shortly afterwards at Khabūshān on the Atrek (9 Djumādā II 551/30 July 1156).

Despite his own reverses he secured the power of the Khwārizmian state by his stand against the Saldjūḳs and the Ḳara Khiṭāy (to both of whom he had eventually to pay tribute), as well as by the expansion of his territory northwards, and so layed the foundation stone of its position as a great power which lasted up to the Mongol invasion.

(W. BARTHOLD-[B. SPULER])

ATSİZ B. **UVAK** (and not Abak), was one of the chiefs of the Turkomāns (perhaps of the tribe of the Īwāī and perhaps at the beginning of the Saldjūḳid expansion established in Khwārizm), who in 1070 had followed Erisgen (?), husband of a daughter of Alp-Arslan, into Asia Minor in his flight to Byzantine territory; but he refused to take service in the Christian army, and had responded to the appeal made to him by the Fāṭimid government, requesting him to come and bring some of the Palestine Bedouin to heel (1071). An initial appearance which, if one calls to mind the orthodox anti-Fāṭimid position of the Saldjūḳids, adequately discloses the extent to which the brief traditional version, portraying Atsīz as one of their lieutenants, is inaccurate. However Atsīz did not consider himself adequately paid and occupied Jerusalem, Palestine and Southern Syria on his own account and he then made an attempt at reconciliation with Malikshāh, Alp-Arslan's successor. It was in vain that the government of Cairo obtained the help against him of his own lieutenant at Acre, then that of the Saldjūḳids, the descendants of Kutlumush, who were engaged in establishing themselves in Asia Minor: Atsīz defeated them (1075), conquered Damascus (1076) and attacked Egypt itself (1077). There, however, he was defeated, and was then confronted by a revolt of the pro-Egyptian elements in Palestine, which he drowned in blood (1078). He was unable to prevent the Egyptian army coming to threaten him

in Syria proper, and appealed to Malikshāh, who decided to make Syria an appanage for his own brother, Tutush. Atsïz may perhaps have hoped to be able to retain a territory as a vassal, but in the interview which took place between the two chieftains, Tutush rid himself of Atsïz by assassination (1079).

The episode of Atsïz is interesting as the first successful attempt to establish a Turkomān principality on the Western confines of the Saldjūḳid empire. As such it is directed against the Saldjūḳid regime. Naturally the Turkomāns made themselves felt by their ravages in the surrounding countryside, as everywhere else; but once he had subdued the country, he took care to restore agriculture; the townspeople, in contrast, complained that he showed no interest in them. The episodes narrated above are sufficient evidence of his religious indifference; the hostility shown to him by the urban aristocracy, both pro-Saldjūḳid and pro-Fāṭimid, doubtless explains in part his evident good relations with the Christians, especially the Monophysites, who, in spite of what has been said on the subject, were spared at the time of the Jerusalem massacre in 1078. It is therefore wrong to consider him, as one of those responsible, by repercussion, for the preaching of the crusade in Europe.

ʿATTĀB B. ASĪD B. ABIʾL-ʿĪṢ B. UMAYYA AL-UMAWĪ, a Companion of the Prophet, who was converted on the day of the capture of Mecca; shortly afterwards, during the battle of Ḥunayn (8/629), he was appointed governor of Mecca by Muḥammad, and continued to hold this post under Abū Bakr. He agreed to marry Djuwayriya bint Abī Djahl in order to prevent ʿAlī b. Abī Ṭālib from taking a second wife in addition to Fāṭima. The date of his death varies between 12 and 23/634-44.

(ED.)

AL-**ʿATTĀBĪ** (Abū ʿAmr) Kulthūm b. ʿAmr b. Ayyūb, letter-writer and poet, died at the beginning of the 3rd/9th century. A descendant of the pre-Islamic poet ʿAmr b. Kulthūm, al-ʿAttābī belonged to a sub-group of the Arab tribe, the Taghlib (cf. Ibn Ḥazm, 287), from the neighbourhood of Ḳinnasrīn in Northern Syria. The date of his birth and of his appearance in Baghdād are unknown. According to an indication by Ibn Ṭayfur, *Taʾrīkh Baghdād*, ed. Kelley, X, 157-8, taken up again by A. Amīn, he stayed for a while at Marw and at Nishāpūr, for the purpose of consulting Persian (*sic*) manuscripts. In so far as this indication is valid, al-ʿAttābī had, therefore, a dual culture, Arab and Iranian. He held an office in the administration. Anecdotes show him as being attached to the Barmakid family. Their disgrace, moreover, was almost fatal for him, and as he was furthermore accused of *zandaḳa* [*q.v.*], he was obliged to flee to the Yemen to escape Hārūn al-Rashīd's punishment; see Yāḳūt and especially al-Marzubānī, *Muʿdjam*, 351. By his cleverness, al-ʿAttābī was nevertheless able to regain the Caliph's favour. He was also well regarded by the general Ṭāhir b. al-Ḥusayn [*q.v.*] and al-Maʾmūn. According to one indication, he seems likewise to have been protected by his patron, the general Mālik b. Ṭawḳ (died 259/873). In his last years, al-ʿAttābī is said to have done penance. He is thought to have died about 220/835 (date given by Kutubī, i, 139, who follows Ibn al-Nadīm, but there is a lacuna here in the Flügel edition). Al-ʿAttābī has left the reputation of being a witty and brillant courtier, though not always scrupulous, as is borne out by the rôle he played at the court of Hārūn al-Rashīd to bring about the fall of a rival poet; (see Ibn Ḥazm, 285).

Ibn al-Nadīm, *Fihrist*, 121 and also 316-18 (reproduced by al-Kutubī and Yāḳūt) gives a list of six works written by al-ʿAttābī; to judge from the titles, these were probably works on philology and *adab*. To assess al-ʿAttābī's merits as a prose writer, one must turn to the citations made by al-Djāḥiẓ and Ibn ʿAbd Rabbih. Al-ʿAttābī's poetical writings seem to have been considerable (the *Fihrist*, 163, speaks of a collection of 100 folios) and Ibn Abī Ṭayfur, d. 280/893, gave a selection from them; see *ibid.*, 146 *in fine*. Today they are only known to us by the quotations from them by al-Djāḥiẓ, Ibn Ḳutayba, Ibn ʿAbd Rabbih and al-Iṣfahānī. These fragments have been collected together by F. Rifāʿī. His work is that of a court poet; free in style, it seems to bear the imprint of the influence of Abu ʾl-ʿAtāhiya and Abū Nuwās, whom al-ʿAttābī admired (see *Aghānī*[3], iv, 39); a panegyric on al-Rashīd enjoyed considerable fame (see the quotation by al-Djāḥiẓ, iii, 353 and the note by the ed.). With the exception of al-Marzubānī, this poet was greatly esteemed by the men of the Islamic Middle Ages. As regards literary history, al-ʿAttābī represents the beginning of the neo-classical current, which started in Northern Syria and was later represented by Abū Tammām and Buḥturī [*q.v.*].

(R. BLACHÈRE)

AL-**ʿAṬṬĀR**, like *al-ṣaydalānī*, primarily meant a perfume merchant or druggist; but as most scents (*ʿiṭr*, pl. *ʿuṭūr*) and drugs (usually *ʿaḳḳār*, pl. *ʿaḳāḳīr*) were credited with some healing properties, *ʿaṭṭār* also came to mean chemist and homoeopath (*mutaṭabbib*). His activities combine commerce with science and medicine. He has to know "the diverse drugs, curatives, drafts and scents, their good and bad varieties, as well as what is fraudulent; he must know which things change quickly or go bad, and which do not, and what means there are for their preservation or reconstitution. Finally, he must

know the mixing of drafts and potions, powders and spices" (al-Dimashḳī, *Kitāb al-Ishāra ilā Maḥāsin al-Tidjāra*; cf. H. Ritter, in *Isl.* 7, 59). Today the term also sometimes includes dyers and dye-merchants, although the perfume merchants are the noblest and wealthiest of the *ʿaṭṭārūn*. As in the Middle Ages, herbal remedies—that is to say, the greater part of the medicines offered—are still sold dry (i.e., roots and wood chopped small; herbs, leaves, and flowers whole or crushed; and fruit or seed just dried). The containers were generally provided by the bazaar druggist (Nāṣir-i Khusraw, *Safar-nāma* [ed. Ch. Schefer], Paris 1881, 53). The plants and animals which a druggist used, and the methods of obtaining his raw materials, are particularly vividly presented in the illuminated Persian Dioscorides-manuscript Topkapī Saray Ahmed III. 2147 f. 204-475 (written in the year 867/1463 Medicines were usually given in simple form (*adwiya mufrada, Simplicia*), but they were sometimes compounded (*adwiya murakkaba, Composita*) by the *ʿaṭṭār* in the presence of the patient, who, if need be, was given a dose right away. Compare with this the miniatures in H. Buchthal, *The Journal of the Walters Art Gallery* 5 (1942), 24-33; Bishr Farès, *Le Livre de la Thériaque* in *Art Islamique*, vol. ii, Cairo 1953, plates XI and XII.

The professional knowledge of the bazaar druggist is usually scanty, and his medicines are often completely spoilt by storage under unsuitable conditions for excessive periods. Druggists have always been known for their cheating in measures and general quackery, as is attested to both by specialised works on fraudulent practices, (such as *Kitāb al-Mukhtār fī Kashf al-Asrār wa-Hatk al-Astār* of Djawbarī [7th century A.H.; cf. E. Wiedemann, *Sitzungs-Berichte der Physikalisch-medizinischen Sozietät in Erlangen* 43, 206-32], which is still much read in the Orient) and by treatises on the duties of a market superviser (*muḥtasib*). M. Meyerhof reports, for instance, how French perfumes are diluted and tampered with in the bazaar, bottled in oriental flasks, and then sold to the Europeans as genuine oriental scent and to the local inhabitants as improved Parisian products. Concerning weights, measures, and vessels used by the *ʿaṭṭārūn*, more information can be found in G. C. Miles, *Early Arabic Glass Weights and Stamps*, Supplement, New York 1951 (illustrated); for a container for measuring cf. F. E. Day, *Bulletin of the Metropolitan Museum of Art* 11, 259. In *Der Bazar der Drogen und Wohlgerüche in Kairo, Archiv für Wirtschaftsforschung im Orient* 3 (1918), 1-40, 185-218, M. Meyerhof describes how the druggists worked in mediaeval and more modern times. The best known druggists' quarter (*sūḳ al-ʿaṭṭārīn*) of ancient times was in al-Fusṭāṭ (E. J. Worman, *JQR* 8, 1906, 16-18), which was burned down almost completely in 563/1168 (but was, according to Ibn Duḳmāḳ, rebuilt under the Mamlūks), also referred to in documents from the Geniza. The *sūḳ al-ʿiṭr* of Damascus is also worthy of note (H. Sauvaire, in *JA* 9th series, vol. vii, 1896, 381, 404). A woodcut in E. W. Lane, *An Account of the Manners and Customs of the Modern Egyptians* ii, facing p. 9, gives a vivid picture of a druggist's shop in the 19th century. Original bills for medicines, prescriptions, and similar texts from a druggist's practice, exist in considerable numbers on papyrus. The fact that this particular calling was very widespread is borne out by the frequency with which the term *al-ʿaṭṭār* appears as a cognomen, especially amongst poets and scholars for whom this calling may well have served as an additional source of income. The best known instance is Farīd al-Dīn ʿAṭṭār.

The same word is used in India to denote an alcohol-free perfume-oil produced by the distillation of sandalwood-oil through flowers (for instance, roses).

Bibliography: (Apart from works already mentioned in the text): A. Dietrich, *Zum Drogenhandel im islamischen Ägypten* (*Veröffentlichungen aus der Heidelberger Papyrus-Sammlung*, N.F. no. 1), Heidelberg 1954; G. Wiet, *Les marchands d'épices sous les sultans mamlouks* (*Cahiers d'Histoire Égyptienne*), Cairo 1955. (A. Dietrich)

ʿAṬṬĀR, Farīd al-Dīn Muḥammad b. Ibrāhīm. Persian mystical poet. The dates of his birth and death cannot be fixed with any certainty. According to Dawlatshāh, he was born in 513/1119 and the general belief is that he was killed by the Mongols in Nīshāpūr in the year 627/1230. This would mean that he lived to the age of 114, which is improbable, and besides, Nīshāpūr was conquered by the Mongols as early as 617/1220. According to a *taʾrīkh* verse in some manuscripts (e.g. Ibrahim Ef. 579), in other sources (Saʿīd Nafīsī, *Djustudjū*, 607), and according to the inscription on the tomb erected by Mīr ʿAlī Shīr, he died as early as 586/1190, that is to say, three years after writing *Manṭiḳ al-Ṭayr* (Saʿīd Nafīsī 129). Saʿīd Nafīsī adheres to 627 as the date of his death, but he bases this assumption on the spurious book *Miftāḥ al-Futūḥ* and on the statement of Djāmī that ʿAṭṭār had given the *Asrār-nāma* to Djalāl al-Dīn Rūmī who had emigrated from Balkh with his father in 618/1221. This emigration, however, probably took place as early as 616/1219 (Ritter in *Isl.* 26, 1942, 117-8). Nothing definite concerning the dates of his life can be got from ʿAṭṭār's own works. The one which seems to contain most biographical information, *Maẓhar al-ʿAdjāʾib*, is a forgery, which unfortunately misled Mīrzā Muḥammad Ḳazwīnī as well as the author of this article. ʿAṭṭār was a pharmacist and doctor, and whilst not actually a Ṣūfī, he admired the holy men and was edified by the tales told about them, from his youth onward.—When attempting to compile a list of ʿAṭṭār's works, one meets with a peculiar difficulty: the works attributed to him fall into three groups which differ so considerably in content and style that it is difficult to ascribe all three to the same person. The main works of the first group are *Manṭiḳ al-Ṭayr*, *Ilāhī-nāma* and *Muṣībat-nāma*; those of the second group are *Ushturnāma* and *Djawhar al-Dhāt*; and those of the third *Maẓhar al-ʿAdjāʾib* and *Lisān al-Ghayb*. There is, in addition, a fourth group of works which can—on the basis of internal evidence—be proved not to be by ʿAṭṭār. With the exception of *Asrār-nāma*, the epics of the first group consist of a clear, well-constructed main story, which is interspersed with numerous—generally short—subsidiary tales. These tales reflect a wealth of religious and profane life. Told with masterly skill, these subsidiary tales are richly varied in subject, and they are the main charm of the works of this group. In the second group the number of tales is much reduced, and the interest is withdrawn from the external world and all that occurs in it. A limited number of ideas are pursued with intensity and great emotion, and with many repetitions. The recurring themes are: complete *fanā*, even through physical death, monistic pantheism (there is nothing other than God, and all things are of one substance), the knowledge

of one's self as everything, as God, as identical with all prophets. People are repeatedly recognised as God by others, and addressed as such. The presentation is broad and ill-ordered, and full of tiresome repetitions. Frequently one does not know who is speaking or who is being addressed. Anaphora is used excessively: on occasions a hundred consecutive lines begin with the same words. Saʿīd Nafīsī considers the works of this group as spurious, and attributes them to the writer of the third group, a man from Tūn who lived in Ṭūs for a long time, who was undoubtedly a Shīʿite and must have lived in the 9th/15th century. He considers the change of style, which had been accepted both by Muḥammad Ḳazwīnī and by the author of this article, to be impossible. One might object that a change of style and a limitation of the field of interest are not out of the question in a poet; that the beginnings of the use of anaphora can be found in the works of the first group; and also that some of the themes frequent in the second group are traceable in the first. I therefore do not regard it as utterly impossible that the works of the second group should be genuine, though it is rather doubtful. In the time of Djāmī—that is to say in the 9th century—at least, these works were considered genuine, because Djāmī's remark in the *Nafaḥāt al-Uns* that the light of Ḥallādj had manifested itself after 150 years in ʿAṭṭār, can be based only on the works of the second group, in which Ḥallādj plays an extensive part.

The epics of the third group, on the other hand, have been conclusively proved to be spurious. In the *Maẓhar al-ʿAdjāʾib* the poet asks the reader to read Ḥāfiẓ (died 791 A.H.) and Ḳāsim-i Anwār (died 837 A.H.) and prophesies the appearance of Djalāl al-Dīn Rūmī (Saʿīd Nafīsī 146 ff.). I find such a difference in style and content between the works of the second and those of the third group, that—unlike Saʿīd Nafīsī—I should not ascribe them to the same poet. With regard to the probable chronology of the works (on the basis of self-quotation), see my *Philologika* X, in *Isl.* 25, 1939, 144-156. The conclusions drawn in that article from the statements in the *Maẓhar al-ʿAdjāʾib* (whose author has the audacity to claim all ʿAṭṭār's genuine and famous works as his own) as also in my own article "Aṭṭār" in *IA*, are now superseded.

Individual works: First group:

1) *Dīwān*: apart from love poems, this contains the exposition of the same religious thoughts as govern the epics. Printed in Tehran, but not in a critical edition.

2) *Mukhtār-nāma*: a collection of quatrains arranged according to themes, with an elucidatory prose introduction describing the origin of the work —which originally formed part of the *Dīwān*—and the destruction of the two works *Djawāhir-nāma* and *Sharḥ al-Ḳalb* (Ritter, *Philologika* X, 152-155). Incomplete publication, Teheran 1353.

3) *Manṭiḳ al-Ṭayr* (*Maḳāmāt al-Ṭuyūr*): grandiose poetic elaboration of the *Risālat al-Ṭayr* of Muḥammad or Aḥmad Ghazzālī. The birds, led by the hoopoe, set out to seek Sīmurgh, whom they had elected as their king. All but 30 perish on the path on which they have to traverse seven dangerous valleys (*Haft wādī*: this part appears as an independent work in some manuscripts). The surviving 30 eventually recognise themselves as being the deity (*sī murgh* = *Simurgh*), and then merge in the last *fanā* in the divine Sīmurgh. Inadequate edition by Garcin de Tassy, Paris 1857; *Mantic uttair ou le langage des oiseaux .... par Farid-uddin Attar*; *Traduction française* and *La poésie philosophique et religieuse chez les Persans d'après le Mantic uttair, ou le langage des oiseaux de Farid-uddin Attar*, 3rd edition, Paris 1860; on the translation by Baron E. Hermelin, Stockholm 1929, see Jan Rypka in *Archiv Orientalní* 4. 1932, 149-160. The best edition known to me is the one which appeared in Bombay in 1313 A.H., published by Cooper and Cooper. For other editions of *Manṭiḳ al-Ṭayr* and for works of ʿAṭṭār in general, see E. Edwards, *A Catalogue of the Persian printed books in the British Museum*, London 1912; A. J. Arberry, *A Catalogue of the Library of the India Office, Vol. II, Part IV. Persian Books*, and the catalogues of manuscripts. A Turkish commentary was written by Shemʿī in 1005/1596-7 (MS. Carullah 1716). For Turkish translations and studies, cf. my article on "Attar" in *IA*.

4) *Muṣībat-nāma*: a *ṣūfī* disciple (*sālik*), in his helplessness and despair, is advised by a *pīr* to visit successively all mythical and cosmic beings: angel, throne, writing tablet, stilus, heaven and hell, sun, moon, the four elements, mountain, sea, the three realms of nature, Iblīs, the spirits, the prophets, senses, phantasy, mind heart and soul (the self). In the sea of the soul, in his own self, he eventually finds the godhead. The tale may have been inspired by the *ḥadīth al-shafāʿa*. Printed in Tehran 1298 A.H.

5) *Ilāhī-nāma*: a king asks his six sons what, of all things in the world, they wish for. They wish in turn for the daughter of the fairy king, the art of witchcraft, the magic cup of Djam, the water of life, Solomon's ring, and the elixir. The royal father tries to draw them away from their worldly desires and to inspire them with higher aims. Edition by H. Ritter, Istanbul-Leipzig 1940, *Bibliotheca Islamica* 12. Concerning a Turkish version, cf. the article Attâr in *IA*.

6) *Asrār-nāma*: it has no framework-story, and repeatedly mentions the gnostic motif of the entanglement of the pre-existing soul in the base material world. ʿAṭṭār is supposed to have given a copy of this book to the young Djalāl al-Dīn Rūmī. Printed in Tehran 1298/1880-1 Cf. H. Ritter, *Das Meer der Seele, Mensch, Gott und Welt in den Geschichten des Farīduddīn ʿAṭṭār* (Leiden 1955) for content and ideas of Nos. 3, 4, 5 and 6.

7) *Khusraw-nāma*: a romantic novel of love and adventure, concerning Khusraw, the son of the emperor of Rūm, and Gul, the daughter of the king of Khūzistān, with many adventures, befalling above all the faithful Gul, who is besieged by a succession of suitors. Synopsis in *Philologika* X, *Isl.* 25, 160-173. Printed in Lucknow 1295/1878.

8) *Pand-nāma*: a small moral treatise which enjoyed great popularity; it has been printed in Turkey alone at least eight times (1251, 1252, 1253, 1257, 1260, 1267, 1291). Concerning further editions see Saʿīd Nafīsī 109-10 and the above mentioned catalogues. It has been translated into several languages (compare Geiger-Kuhn, *Grundriss der Iranischen Philologie*, ii, 603 and Saʿīd Nafīsī 108-10). As early as 1809 it was published in London by J. H. Hindley, then by de Sacy together with a French translation: *Pandnameh ou Livre des Conseils*, Paris 1819. For the Swedish translation by Baron Erik Hermelin, see Jan Rypka in *Archiv Orientalní* 4, 1932, 148 ff. The Turkish translation, completed in 964/1557, was by Emrī, who died in 988/1580, and it was repeatedly printed in Turkey together with the Persian text (1229, 1266, 1280, 1282). Turkish commentaries: Shemʿī (died 1009/1600-1), *Saʿādat-nāma*; Shuʿūrī

(died 1105/1693-4 autograph of 1083 A.H. Istanbul, Darülmesnevi 185; 'Abdī Pasha (died 1113/1701-2), *Mufīd*; Bursalī Ismā'īl Ḥaḳḳī (died 1137/1724-5), in great detail, printed Istanbul 1250; Meḥmed Murād (died 1264/1849) *Māḥaḍar*, Istanbul 1252, 1260.

9) *Tadhkirat al-Awliyā*: an extensive prose work which contains the biographies and sayings of Muslim mystics. It ends with a biography of Ḥallādj, who plays such an extensive part in the works of the second group. Other biographies—over 20 in number—have been added in some manuscripts. In these, as also in his epics, 'Aṭṭār has treated his sources freely, and has often altered them in the light of his own religious ideas. For the numerous Turkish studies and translations, see the article Attâr in *IA*; in addition Sa'īd Nafīsī 110-112. The text of the edition by R. A. Nicholson, *The Tadhkiratu 'l-awliyá of Shaykh Farídu'd-dín 'Aṭṭár*, London-Leiden 1905-1907, Persian Historical Texts 3 and 5, is not always trustworthy. Other editions in Sa'īd Nafīsī 112 and in the above mentioned catalogues.

10) *Bulbul-nāma*: the birds complain to Solomon about the nightingale which, they say, disturbs them with her song to the rose. The nightingale is called upon to defend herself. Eventually Solomon orders that she be left in peace. Sa'īd Nafīsī (106-7) regards this book as spurious. Printed in Tehran 1312.

11) *Mi'rādj-nāma*: could well be an excerpt from the *na't* of any *mathnawī*. In the only manuscript which I have seen, it covers a mere two pages.

12) *Djumdjuma-nāma*: a rather short story which might come from any of 'Aṭṭār's epics. Jesus resurrects a skull in the desert; the dead man, who had been a great king, tells Jesus about the torments of the grave and of hell; he then embraces the true faith and dies for a second time. For Turkish editions of this little work, see *IA*: Attâr.

The works of the second group (described above):

13) *Ushtur* (*Shutur*)*-nāma*: the central figure of the first part of this work is a Turkish puppet player, who appears as a symbol of the deity. He has seven curtains to his stage and has seven assistants. He breaks the figures which he himself had created and tears the curtain. He sends his assistants in all directions and himself withdraws in order to guard his secret. A wise man asks him for the reason for his actions. By way of a reply, he is sent in front of seven curtains. There he beholds a strange, fantastic series of events, the meaning of which is to be understood symbolically. He is always sent on by a *pīr* without any clear information, and on his arrival at the 7th curtain he is asked to fetch from a grave some writing written on silk in green letters. On this God has revealed matters concerning Himself, the way towards Him, the creation, and the prophet Muḥammad. There is repeated mention of decapitation as a means of reaching God, and Ḥallādj is repeatedly pointed to as the great example. The fruitless wandering from one curtain to another is reminiscent of the cosmic journey of the *sālik* in the *Muṣībat-nāma*. The second part deals almost exclusively with Ḥallādj. On the scaffold he has talks with Djunayd, Shaykh-i Kabīr (Ibn al-Khafīf), Bāyazīd and Shiblī, and in these, as God, he develops a monistic-pantheistic theology. In spite of its length, the *Ushtur-nāma* is an important and interesting work which deserves closer study. Metre: *Ramal*.

14) *Djawhar* (*Djawāhir*) *al-Dhāt*: this epos was written after the *Ushtur-nāma*, because the latter (as well as the *Muṣībat-nāma*) is quoted in it. In this work, too, Ḥallādj is continuously presented as a model of the *fanā* and of becoming God. Among other stories, it contains the one of 'Alī whispering the divine secrets into a cistern. These secrets are then betrayed by a reed which had grown in the cistern and had been cut into a flute. The connexion with the 18 introductory lines of the *Mathnawī*, by Djalāl al-Dīn Rūmī, is obvious. My assumption is that it is this story (which goes back to Midas' donkey-ears via Niẓāmī) which has inspired Djalāl al-Dīn; Sa'īd Nafīsī, who considers the work a later forgery, assumes the reverse to be the case (p. 114) (H. Ritter, *Das Prooemium des Mathnawī-i Mawlawī*, in *ZDMG* 93, 169-196). The epic also contains the story of the youth who went on a sea voyage with his father, recognised himself as God and jumped into the sea in order to lose himself completely in the divine nature. The youth is also recognised as God by a fellow-passenger. The *motif* of the recognition of a man as a God by another man also appears in other works of this group. This work was printed in Teheran in 1315/1355.

15) *Haylādj-nāma*: a poor imitation of the second part of the *Ushtur-nāma*. Metre: *Hazadj*. Lithographed, Tehran 1253.

16) *Manṣūr-nāma*: a short tale in the metre *Ramal*, beginning: *Būd Manṣūr ay 'adjab shūrīda ḥāl*. It is a short description of the martyrdom of Ḥallādj.

17) *Bīsar-nāma*: a short *Mathnawī*, the centre of which consists of self-deification (*Man khudāyam man khudāyam man khudā*) and *fanā* by decapitation. It contains verses from other *mathnawīs* of this group. Its content is connected with the second part of the *Ushtur-nāma*. Lithographed, Tehran 1319 and several times in Lucknow.

The works of the third group (undoubtedly by another hand):

18) *Maẓhar al-'Adjā'ib* (the "place where miracles appear") is an honorary name for 'Alī, to whose glorification this work is dedicated. He is the divine man, the bearer of divine secrets, the Shāh of all beings, prophets and angels. Legends about 'Alī play a large part. The author claims all the works of 'Aṭṭār as his own, and gives great biographical detail, including the meeting with Nadjm al-Dīn Kubrā. Lithograph, Tehran 1323. Sa'īd Nafīsī 126 ff.

19) *Lisān al-Ghayb*: again a Shī'ite work by the same poet, who explicitly renounces Abū Bakr and 'Uthmān. Sa'īd Nafīsī 122-3. These two works have no literary value.

Works of the fourth group (demonstrably spurious on the basis of internal evidence):

20) *Khayyāṭ-nāma*: for contents see E. Berthels, *Farīdaddīn 'Aṭṭār's Khayyāṭ-Nāma*, in *Bull. de l'Ac. des Sc. de L'URSS*, Classe des Humanités 1929, 201-214. Ḥādjdjī Khalīfa attributes the work to a certain Khayyāṭ-i Kāshānī. Berthels considers it genuine.

21) *Waṣlat-nāma*: the poet is a man called Buhlūl. Sa'īd Nafīsī 131-132.

22) *Kanz al-Asrār* (= *Kanz al-Baḥr* = *Tardjamat al-Aḥādīth*): compiled 699/1299-1300. *Philologika* X, 157; Sa'īd Nafīsī 120.

23) *Miftāḥ al-Futūḥ*: compiled 688/1289-90, according to other manuscripts 587/1191-2, by a man from Zandjan, *Philologika* X, 157; Sa'īd Nafīsī 127-128.

24) *Waṣiyyat-nāma*: compiled 850/1446-7. *Philologika* X 158. Perhaps = *Waṣlat-nāma*?

25) *Kanz al-Ḥaḳā'iḳ*: contains a panegyric to a prince by name of Nīkū Ghāzī. Concerning the possibly corrupt name of this prince see Sa'īd Nafīsī

121, Ritter, *Philologika* X, 158. Concerning four other spurious works, compare *ibid.*, 154.

Bibliography: Works other than those mentioned in the text: Mīrzā Muḥammad Ḳazwīnī, Introduction to E. G. Browne's edition of the *Tadhkirat al-Awliyā*; H. Ritter, *Philologika* X in *Isl.* 25, 1939, 134-173; idem, the article in *IA*. (All three articles still take *Maẓhar al-ʿAdjāʾib* to be genuine and use it as a source for biographical matter); Saʿīd Nafīsī, *Djustudjū dar Aḥwāl u Āthār-i Farīduddīn ʿAṭṭār-i Nīshābūrī*, Tehran 1320. Apart from these, histories of literature and catalogues of manuscripts.

(H. Ritter)

AL-ʿAṬṬĀR, Ḥasan b. Muḥammad, Egyptian scholar of Maghribine origin, born in Cairo after 1180/1766. He studied at al-Azhar, and was one of the few *ʿulamāʾ* who, after the occupation of Egypt by Bonaparte, entered into relations with the French scholars and took an active interest in the new learning. He then spent many years in Syria and Turkey, and on his return to Egypt was employed as editor of the Official Journal (*al-Waḳāʾiʿ al-Miṣriyya*) founded by Muḥammad ʿAlī (1244/1828). In 1245/1830 he was installed as Shaykh al-Azhar by Muḥammad ʿAlī, with whose programme he was thought to be in sympathy, and died in office in 1250/1835. He was probably most influential as the teacher of Rifāʿa Rāfiʿ al-Ṭahṭāwī [*q.v.*], but his handbook of correspondence (*Inshāʾ al-ʿAṭṭār*) enjoyed a wide vogue, and was frequently reprinted at Cairo and in India.

Bibliography: ʿAlī Pasha Mubārak, *al-Khiṭāṭ al-Djadīda*, iv, 38-40; Ph. Tarrāzī, *Taʾrīkh al-Ṣaḥāfa al-ʿArabiyya*, i, Beirut 1913, 128-30; Brockelmann, II, 473; S II, 720; E. W. Lane, *Modern Egyptians*, chap. ix; J. Heyworth-Dunne, *Hist. of Education in Modern Egypt*, London 1940, 154, 265, 397; Sulaymān Raṣad, *Kanz al-Djawhar fī Taʾrīkh al-Azhar*, Cairo 1320, 138-41.

ATTACK [see atak].

ATTRIBUTE [see ṣifa].

AURÈS [see awrās].

AVARS (Awar, from Ādharī Turkish *avarali*: "unstable", "vagabond") *Ibero-Caucasian people*, inhabiting the mountainous part of the autonomous Soviet Socialist Republic of Dāghistān (basins of the rivers Ḳoysu of Andi, Ḳoysu Awar, Ḳara-Ḳoysu and Tleyserukh) and the northern part of the Soviet Socialist Republic of Azerbaijan. The Avars are Sunnī Muslims of the Shāfiʿī rite. In 1955 their numbers were estimated at 240,000, of whom 40,000 approximately were in the Belokanī and Zakatalī districts of Azerbaijan.

The Avars are divided into two major groups—formerly federations of tribes (*bo*), which are subdivided into clans (*kʿibilʿ*): the Maarulal group (from *maar* "mountain" in Avar, in Russian *tawlinsti* from the Ḳumīḳ *taw*: mountain) to the North of the plateau of Khūnzāḳ, and the Bagaulal (in Avar: rough men), composed of the southern clans. The Avars claim to have been converted to Islam by the Arabs. According to a legendary tradition, Islam is said to have been introduced to Khūnzāḳ by the Amīr Abū Muslim, and his tomb and sword are still shown there. In point of fact, this tradition confuses Amīr Abū Muslim, who never went to Dāghistān, and the Shaykh Abū Maslama, who is reputed to have lived there in the 5th/11th century. In point of fact, when the Arabs arrived in Dāghistān, Christianity and even Judaism had already taken root in the Avar country and Islam only penetrated very slowly, since Christianity in the Georgian rite survived at Kakhib until the 10th/16th century. However, in the 5th/11th century, the Tanush *aul*, capital of the Avar principality of the Nutsal, originally a vassal of the Ḳāzī-Ḳūmūḳ (see lak), was already a Muslim stronghold and one of the principal centres of Arab culture of Upper Daghistān. The islamisation of the country was completed during the brief period of Ottoman domination (965-1015/1558-1606), that is to say at the time of the formation of the Avar Khānate, whose rulers claimed (legendary) descent from the Arab governors of Khūnzāḳ.

In the 11th-12th/17th-18th centuries, the Avar Khānate dominated Upper Dāghistān culturally and politically, especially with Ummu-Khān Avar (died 1634), who codified the Avar *ʿādat*, and his successors who received tribute from the King of Georgia and from the Khāns of Shirwān, Shekkī and Darband. However, the lords of Khūnzāḳ were never able to completely unite Avaristān, which remains divided amongst a multitude of clans, some grouped in free federations (*bo*) and others tributary to the Khānate.

In 1727 the Avar Khānate accepted the Russian protectorate for the first time, but soon rejected it. It was again imposed for a second time on ʿUmar Khān in 1802, then once more in 1803 on his son and successor Ṣulṭān Aḥmad Khān.

In 1821, after the revolt of Sulṭān Aḥmad Khān, Avaristān was occupied by Russian forces which, without assuming power directly, were content to provide the ruler with military advisers. From that time, the plateau of Khūnzāḳ served the Russians as a springboard for the conquest of Upper Dāghistān. At the beginning of the 19th century, the Avar country became the field of activity of the initiates of the Naḳshbandiyya order, who in 1830 instigated a popular movement there directed both against the Khānate, which was in alliance with the Russians, and against the "infidels". The Khānate was overthrown in 1834 by the Imām Ḥamza Beg [*q.v.*] and the Russians were shortly afterwards expelled from Avaristān. The surrender of the Imām Shāmil [*q.v.*] on 25 August 1859 put an end to the imāmate; the Russians re-established the Avar Khānate, placing Ibrāhīm Khān of Meḥtulin at its head. However, on 22 February 1863, Ibrāhīm Khān was arrested and sent into exile; on 2 April 1864, the Khānate was finally suppressed and its territory annexed to the Avar *okrug* administered directly by the Russian authorities.

After the October Revolution, the Avar territory became part of the autonomous Soviet Socialist Republic of Dāghistān, attached to the Russian Soviet Federative Socialist republic (decree of the Supreme Soviet of January the 20th 1921).

The Avar language belongs to the North-Eastern branch (Dāghistānī) of the Northern group of Ibero-Caucasian languages. Its sphere extends from the *aul* of Čirinot to Novo-Zakatali in Azerbaijan, 170 km. further to the South; it is subdivided into numerous dialects (almost one to each clan) forming two main groups: the Northern (or Khūnzāḳ) dialects and the Southern dialects (Antsukh, Čokh, Gidatli and Zakatali). The literary language was formed from the *Bolmats* ("language of the army"), the vehicle of inter-tribal relations from the 16th century onwards. In the middle of the 17th century, Avar was endowed with an Arabic alphabet (completed by numerous signs for the transcription of

Ibero-Caucasian phonemes), (called "Old ʿAdjam") which was finally perfected by Dibir, ḳāḍī of Khūnzāḳ (1747-1827). Avar literature was born at the same period with Muḥammad b. Mūsā of Kudatli (died 1708), who wrote in Arabic, and Dibir, ḳāḍī of Khūnzāḳ, who translated *Kalīla wa Dimna* into Avar. At the beginning of the 19th century, it was enriched by a spate of religious and didactic works, then, in Shāmil's time, by satricial and lyrical works, the chief representative of which was the poet Maḥmūd of Betl-Kakhab rosso (1873-1919). This literature first of all found expression in Arabic and then in Avar. In 1920 the old alphabet was replaced by a simplified Arabic alphabet of 38 letters (called "New ʿAdjam"), for which in 1928 a new Latin alphabet was substituted and then in 1938 a Cyrillic alphabet.

At the present time (1957), the Avars are numerically the largest nationality in Dāghistān (200,000 for a total population of one million) and the most advanced. They have a literature of their own, the most famous representative of which is Ḥamzat Tsadasa (1873-1951), Lenin Prize winner in 1950, an Avar language press and a well developed network of schools, where instruction is given in the national language up to the 5th class, and in Russian in the senior classes.

The literary Avar language is used by the Arči [*q.v.*] and by the thirteen small, Andi [*q.v.*] and Dido [*q.v.*] nationalities which have no written language and are rapidly becoming absorbed into the Avar nationality; it also serves as a secondary language for certain other peoples of Upper Dāghistān, who are subject to the cultural influence of the Avars (Dargin, Laks [*q.v.*]). Russian, however, continues to be the administrative language of Dāghistān. The Avars of Azerbaijan are losing the use of their mother tongue, which is being replaced by Ādharī Turkish.

In the territory of Avaristān occupying the mountainous and little accessible region of Central Dāghistān, the Awars remain essentially nomadic sheep breeders, and in the valleys horticulturists on a small scale (terraced orchards). Traditional crafts are very much developed: woven woollen goods, carpets, copper work (*auls* of Yotsatl' and Čičali), work on leather, work in gold, artistic work on wood (*auls* of Untsukul and Batsada), wrought iron work (*auls* of Sogratl', Golotl', Kakhih). The industrialisation of the country, which was started about 1936, is still in the initial stages.

ĀWA (*Āvah, Āveh*), the name of two towns in central Īrān.

1) A town of Āwa, at present called Āwadj, lies 70 m. (111 km.) S.-W. of Ḳazwīn on the road to Hamadān, ca. 35° 35′ N. lat. and 49° 15′ E. long. (Greenw.). The town is reckoned in the cold zone (*sardsīr*) because of its altitude. In 1950 it had ca. 1800 Persian and Turkish speaking inhabitants.

There are only short notices of the town in medieval geographers. Yāḳūt, i, 387, mentions a savant called Āwaḳī from there. The only old building in the vicinity is a caravanseray from the time of Shāh ʿAbbās.

2) Another town, also called *Ābeh*, is now a village in the Djaʿfarābād county of the Sāwa district, ca. 18¾ m. (30 km.) west of Ḳumm on the usually dry Gāwmāhā River, 34° 45′ N. lat and 50° 20′ E. long (Greenw.). The medieval geographers mention it together with Sāwa. It was plundered by the Mongols but apparently regained importance, if this is the Āwa where Īl-khānid coins were minted (see B. Spuler, *Die Mongolen in Iran*, Berlin 1955, 129).

The present village had 885 inhabitants in 1950, ardent Shīʿites as in the past of the town. There are many ancient artificial mounds in the vicinity of Āwa, and an old *imāmzāda* in the village.

(R. N. Frye)

AWADH (Oudh), a tract of country comprising the Lucknow and Fayḍābād divisions of the Indian State of Uttar Pradesh. It has an area of 24, 168 square miles and a population of 15, 514, 950, of which 14, 156, 139 are to be found in the rural districts. (Census of India, 1951). From very early times Awadh, which forms part of the great alluvial plain of northern India, has been the peculiar home of Hindu civilisation. It corresponds roughly to the Middle Country, the Madhya-desha of the sacred Hindu writings, where dwelt the gods and heroes of the Epic Period whose deeds are recorded in the *Mahābhārata* and the *Rāmāyana*. Here too arose a number of religious reactions against the sacerdotalism and the social exclusiveness of Brahmanism.

Apart from marauding expeditions, such as Maḥmūd of Ghazna's attack upon Manaič and the doubtful exploits of Sālār Masʿūd Ghāzī recorded in the *Mir'āt-i Masʿūdī* of ʿAbd al-Raḥmān Čishtī, it was not until the last decade of the twelfth century, in the days of Ḳutb al-Dīn Aybak, that the Muslim invaders established themselves in Awadh and annexed it to the Dihlī Sultānate. It formed a province of Muḥammad b. Tughluḳ's extensive empire, but towards the close of the fourteenth century was absorbed by the Sharḳī kingdom of Djawnpūr, of which it remained an integral part until reconquered by the Lodī sultans of Dihlī. In the reign of Akbar it was annexed to the Mughal empire. According to Abu 'l-Faḍl it was divided into five *sarkārs* and thirty-eight *parganas*. It extended from the Ganges on the south-west as far as the Gandak on the north-east; and from the river Sai in

the south to the Tarai of Nepāl in the north. (*Āʾīn-i Akbarī*, ii, 170-7. Jarrett, H.S., *Bib. Ind.*, 1891). Local traditions in Awadh, however, conflict with the Muslim accounts and suggest that the Rādjput chiefs maintained their authority practically intact throughout the Mughal period. (W. C. Benett, *The Chief Clans of the Roy Bareilly District*, 1895). The weakness of the central government after the death of Awrangzīb gave the nawābs of Awadh an opportunity of asserting their independence, although nominally they still acknowledged the authority of the Mughal emperor.

Saʿādat Khān Burhān al-Mulk, the founder of the Awadh dynasty, was descended from a respectable Sayyid family of Nīshāpūr (*Muntakhab al-Lubāb* of Khāfī Khān, ii, 902). During his nawābship (1722-39) Benares, Ghāzīpūr, Djawnpūr and Čunār were annexed to his dominions. His successor, Ṣafdar Djang (1739-54), was appointed *wazīr* of the empire in 1748. He invited the Marāthās to assist him against the Bangash Pathāns of Farrukhābād who were supported by the Rohillas. The engagements entered into at that time formed the basis of later Marāthā claims on Rohilkhand. Ṣafdar Djang's son and successor, the *nawāb-wazīr* Shudjāʿ al-Dawla (1754-75), came into conflict with the rising power of the English East India Company and was totally defeated at Baksar in 1764 This left Awadh at the disposal of the Company By the treaty of Allāhābād (1765) Clive restored Awadh to Shudjāʿ al-Dawla with the exception of Kora and Allāhābād, which were handed over to the emperor for the upkeep of his dignity and expenses. This alliance with Shudjā al-Dawla was purely defensive. It was the germ of all subsequent subsidiary alliances with Awadh because the extraordinary expenses of all troops supplied by the Company were to be defrayed by Shudjāʿ al-Dawla. By these means Awadh was converted into a buffer state against Marāthā encroachments. In the main this was a sound policy. Its chief weakness from a strategical point of view was the handing over of Kora and Allāhābād to the Mughal emperor as the defence of Awadh necessitated the defence of these districts. The reinstatement of Shudjāʿ al-Dawla was a wise move as the Company at that time were in no position to annex and administer Awadh. By the treaty of Benares (1773) Warren Hastings placed the Company's relations with this important buffer state between Bengal and the Marāthās on a firmer footing. In future its ruler had to defray all the expenses of the Company's troops required for the defence of his country, namely 210,000 rupees a month. Because the emperor had deserted the Company and become a puppet in the hands of the Marāthās, Kora and Allāhābād were sold to the ruler of Awadh for fifty lakhs of rupees. (For these negotiations *see* *The Benares Diary of Warren Hastings*, ed. C. Collin Davies, Camden Miscellany, Royal Historical Society, vol. lxxix, 1948).

The accession of the incapable Āṣaf al-Dawla (1775-97) enabled the hostile majority on Warren Hastings' council to alter his policy towards Awadh. By the treaty of Fayḍābād (1775) the subsidy for the use of the Company's troops was raised to 260,000 rupees *per mensem* and the new nawāb was forced to cede Rāja Chait Singh's *zamīndārī* of Benares, Djawnpūr and Ghāzīpūr in full sovereignty to the Company. By the treaty of Čunār (1781) Hastings, who had regained control over his council, proposed to reform Āṣaf al-Dawla's administration by reducing the number of English troops stationed in his territories. Unfortunately the weakness of the nawāb's government prevented this and Hastings was forced to retain both the permanent and temporary brigades. His share in the resumption of the *djāgīrs* and in the sequestration of the treasures of the bēgums of Awadh, the mother and wife of Āṣaf al-Dawla, formed one of the charges against him on impeachment. Certain conclusions may be drawn from Hastings' conduct of the Company's relations with Awadh. His object was to prevent any development which would impair the efficiency of the buffer state and weaken the Company's defences. He therefore contended that the Company had a right to dethrone a disloyal or unsuitable ruler. He also insisted on ministers favourable to the British connexion. The trouble he experienced in controlling the English Residents in Awadh, both Middleton and Bristow, illustrates the difficulty of formulating written instructions which were not liable to misinterpretation. Because of the close connexion between Awadh and Bengal a policy of non-intervention was impossible. Under the incapable Āṣaf al-Dawla Awadh could not have preserved its independence without the Company's assistance. It certainly would not have been free from Marāthā depredations. In the main Hastings' policy was followed by Lord Cornwallis and Sir John Shore. Cornwallis reduced the Company's demands on Awadh to fifty lakhs of rupees a year, but, on the accession of Saʿādat ʿAlī Khān (1798-1814) Shore raised the subsidy to seventy-six lakhs. In 1801 Lord Wellesley forced Saʿādat ʿAlī Khān to cede Rohilkhand, Farrukhābād, Mainpurī, Etāwah, Cawnpore, Fatehgarh, Allāhābād, Azimgarh, Bastī, and Gorakhpur. This meant that Awadh ceased to be a buffer state, for, except where it was bounded by Nepāl, it was entirely surrounded by British territory. Its weakness as a buffer state had been Wellesley's excuse for these annexations. Saʿādat ʿAlī Khān was succeeded by his eldest son, Ghāzī al-Dīn Ḥaydar, who was the first ruler of Awadh to assume the title of king. The remaining kings of Awadh were Nāṣir al-Dīn Ḥaydar (1827-37), Muhammad ʿAlī Shāh (1837-42), Amdjad ʿAlī Shāh (1842-47) and Wādjid ʿAlī Shāh (1847-56).

It was a provision of the treaty of 1801 that the ruler of Awadh should introduce into his country a system of administration conducive to the prosperity of his subjects and calculated to secure their lives and property. In spite of repeated warnings nothing was done and misgovernment continued unchecked. On these grounds Awadh was annexed by Lord Dalhousie in 1856. Wādjid ʿAlī Shāh received a pension and was allowed to reside at Calcutta where he died in 1887, his title expiring with him. The annexation of Awadh was one of the causes of the 1857 Mutiny. Some of the fiercest fighting during this uprising took place at Lucknow and Cawnpore.

After its annexation Awadh was controlled by a Chief Commissioner, until, in 1877, both Agra and Awadh were placed under the same administrator, who was known as the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Awadh. The title of Chief Commissioner was dropped on the formation of the United Provinces of Agra and Oudh in 1902. It was not, however, until 1921 that this administration was raised to the status of a Governor's province.

The first land revenue settlement after annexation was carried out with a lack of consideration for the great *talukdārī* families of the province, who were ousted from the greater part of their estates. This

was reversed after the Mutiny when Lord Canning reverted to a *taluḳdārī* settlement and confirmed the rights of the *taluḳdārs* by *sanads*.

To-day in Awadh Muslims are to be found chiefly where they held sway in the past, their preference for urban life explaining their presence in the chief towns. The old *taluḳdārī* system has been abolished and a new rural hierarchy of officials and village organisations has sprung up as a result of the Uttar Pradesh Village Panchayat Act of 1947. Villages or groups of villages with a population of 1,500 have been constituted into a *gāon sabhā* with certain powers of local administration. Groups of *gāon sabhās* are controlled by *panchāyat ʿadālats* with judicial powers extending to civil, criminal and revenue cases. There are about 9,466 *gāon sabhās* and 2,180 *panchāyat ʿadālats* in Awadh.

(C. Collin Davies)

AWĀDHILA [see ʿAWDHILA].

AWĀʾIL. Plural of *awwal* "first", technically used to denote various ideas such as the "primary data" of philosophical or physical phenomena; the "ancients" of either pre-Islamic or early Islamic times; and the "first inventors" of things (or the things invented or done first).

In the last mentioned connotation, the term characterises a minor branch of Muslim literature with affinities to *adab*, historical, and theological literature. Among the Muslims themselves, only the 10th/17th-century Ḥādjdjī Khalīfa (Flügel), i, 490; Istanbul 1941-3, col. 1996, defines the *awāʾil* as a separate "science" relating to history and *adab*.

Curiosity about the origin of things was deeply rooted in the historical consciousness of the ancient Semites and reached the Arabs through such literary media as the Bible. The Hellenistic world possessed a literature on the first inventors (*Peri Heurêmatôn*, cf., most recently, A. Kleingünther, *Prôtos Heuretês*, in *Philologus, Supplementband* XXVI, i, 1934), the history of science, such as the origins of medicine, became known in Islam directly through translation (cf. Isḥāḳ b. Ḥunayn, *Taʾrīkh al-Aṭibbāʾ*, in *Oriens*, 1954, 55-80, whose source was Ps.-Galen's *Commentary on the Hippocratic Oath*, or, more generally, the ample material preserved in the introduction of Abū Sulaymān al-Sidjistānī's *Ṣiwān al-Ḥikma*). For the Muslims, the knowledge of the "firsts" connected with the history of Muḥammad and the beginnings of Islam was a matter of far-reaching legal and practical importance in many respects, and already the earliest known literature on the biography of Muḥammad pays attention to it. Muslim customs, such as clipping the moustache, using the toothpick, etc., were justified by ascribing their first use to the great religious leaders of the past, in this case Abraham (cf. al-Thaʿālibī, *Laṭāʾif al-Maʿārif* (De Jong), 6). With the growing historical interest of the Muslims not only in political history but also in the history of civilisation and science (cf., especially, the introductory remarks to each chapter of the *Fihrist*, on the origin of the science treated in that particular chapter), the question: Who was first ?, was soon asked in connexion with every conceivable subject and always answered, though often in a rather fanciful manner. Nevertheless, the *awāʾil* works are brilliant expressions of the cultural outlook and historical sense of their authors, and they are full of valuable material and interesting insights. The wide intellectual appeal of the subject shows itself in the fact that since the beginning of our era, the Chinese also had a literature on the origins (cf. J. Needham, *Science and Civilization in China* I, 51 ff., Cambridge 1954) and again in late medieval Europe, successful works on the first inventors were produced, such as the alphabetically arranged chapter on the inventors from *De viris illustribus* by the fourteenth-century Guglielmo da Pastrengo (published in Venice 1547, under the title of *De originibus rerum* fols. 78a-89a) and the famous, widely read *De originibus rerum*, by Polydore Vergil which first appeared in 1499.

Our oldest known representative of the Muslim *awāʾil* literature dates from the beginning of the 3rd/9th century. The large *Muṣannaf* of Abū Bakr b. Abī Shayba (d. 235/849; Brockelmann, S I, 215) is said to contain, at (or rather, near) the end, a section on *awāʾil*, which was used as a source in al-Shiblī, *Maḥāsin al-Wasāʾil ilā Maʿrifat al-Awāʾil*. It appears to deal with the *awāʾil* of early Islam and the origins of Muslim history and customs. The end of the section is preserved in MS Berlin 9409; the large sets of the *Muṣannaf* could not be consulted.

At the same period, works entitled *Kitāb al-Awāʾil* were composed by Hishām b. al-Kalbī (Yāḳūt, *Irshād*, vii, 252); al-Madāʾinī (*Fihrist*, 104); al-Ḥasan b. Maḥbūb (*Fihrist* 221), whose list of works is duplicated in Yāḳūt, *Irshād*, ii, 32, under the name of Aḥmad al-Raḳḳī; and a certain Saʿīd b. Saʿdūn al-ʿAṭṭār (*Fihrist* 171) of unknown date. Since none of these works is preserved or quoted in the later *awāʾil* literature, it remains extremely doubtful whether they dealt with *awāʾil* in the sense discussed here (or, at any rate, contained some *awāʾil* material). According to the description given in *Fihrist* 133, the *Kitāb al-Awāʾil* by the 4th/10th-century al-Marzubānī appears to have dealt not with first inventors but with the history of the ancient Persians and the Muʿtazila.

Late in the 3rd/9th century, Ibn Ḳutayba, *Maʿārif* (Wüstenfeld), 273-7, devoted to the *awāʾil* a chapter in a historical context (cf. also the later

al-Thaʿālibī, *op. cit.*, 3-17). In an *adab* context, a chapter on *awā'il* appears in the early 4th/10th century in al-Bayhaḳī, *Maḥāsin* (Schwally), 392-6. Theological *awā'il* works were written at about that time by Abū ʿArūba [*q.v.*] and al-Ṭabarānī (d. 360/971; Brockelmann, S I, 279).

Adab literature provided its first monograph treatment of the subject in the *Kitāb al-Awā'il* of Abū Hilāl al-ʿAskarī (d. 395/1005), who claims to have had no predecessors. He restricts himself to material derived from Arab and Muslim history, with the inclusion of some Persian and biblical references, and ignores 'Greek' cultural and scientific data. He succeeds in clearly underscoring the view of Muslim historians that every important and good invention dates back to the pre-Islamic and early Islamic period while subsequent ages as a rule produced insignificant and undesirable inventions. Al-ʿAskarī's book remained a much quoted standard work which served as a basis for later efforts, such as the *awā'il* works of the 8th/14th century al-ʿAtā'iḳī and al-Suyūṭī (cf. Brockelmann, I, 132; S I, 193 f.).

There appears to have been a gap of about two centuries in the *awā'il* literature. From the early 7th/13th century, we then have the *Ghāyat al-Wasā'il ilā Maʿrifat al-Awā'il* by al-Mawṣilī (cf. Brockelmann, S I, 597 f.; H. Ritter, in *Oriens*, 1950, 80 f.). A historical handbook based on the *awā'il* scheme is the above-mentioned *Maḥāsin* by the 8th/14th century Shiblī (cf. Brockelmann, II, 90 f.; S II, 82; F. Rosenthal, *A History of Muslim Historiography*, 129, fn. 1), a highly informative work. Al-Shiblī's literary effort appears to have been continued by the poet Ibn Khaṭīb Dārayyā (cf. Brockelmann, II, 17; S II, 7; Ḥādjdjī Khalīfa (Flügel), i, 490). On the other hand, the theological inclination of some 9th/15th-century scholars finds expression in their *awā'il* works, which might have followed the lead of Ibn Ḥadjar's *Iḳāmat al-Dalā'il ʿalā Maʿrifat al-Awā'il* (which has not yet been recovered, cf. Ḥādjdjī Khalīfa, *loc. cit.*). Abū Bakr b. Zayd al-Djirāʿī (form uncertain, d. in 883/1478, cf. al-Sakhāwī, *Ḍaw'*, xi, 32 f.) thus arranged his *Kitāb al-Awā'il* (Ms. Berlin 9368) more or less according to the chapters of the science of traditions, and the same was done by al-Suyūṭī, in his instructive *Wasā'il ilā Maʿrifat al-Awā'il* which was based to some degree upon al-ʿAskarī. In turn, al-Suyūṭī's work was used by ʿAlī Dede al-Bosnawī (d. 1007/1598, cf. Brockelmann, II, 562 f.; S II, 635) who, as was the custom among certain later authors, also included the "last things (*awākhir*)" that happened (cf., in this connexion al-Sakhāwī, *Iʿlān*, Damascus 1349/1930-1, 13; F. Rosenthal, *op. cit.*, 214 f. For a further user of al-Suyūṭī, cf. G. Vajda, in *RSO*, 1950, 3). Another great historian of that time, Ibn Ṭūlūn (d. 953/1546), wrote *ʿUnwān al-Rasā'il fī Maʿrifat al-Awā'il* (Ms. Cairo, Taymūr, *Ta'rīkh* 1467; cf. Ibn Ṭūlūn, *al-Fulk al-Mashḥūn*, Damascus 1348/1929-30).

The subject was also versified in a work entitled *Wasā'il al-Sā'il ilā Maʿrifat al-Awā'il* (cf. Ḥādjdjī Khalīfa (Flügel), vi, 435) which appears to have been preserved in MS. Cairo, *Madjāmīʿ* 474, fols. 28b-36b. In the Cairo manuscript, the author is called Shams al-Dīn Muḥammad b. Muḥ. b. Muḥ. b. (Abi) 'l-Luṭf, apparently either the father or the son, who died in 971/1564 and 993/1585, respectively (cf. Ibn al-ʿImād, *Shadharāt*; Brockelmann, II, 367; S II, 394). The active literary interest in the subject continued into modern times (cf. M. al-Ṭihrānī, *al-Dharīʿa ilā Taṣānīf al-Shīʿa*, ii, 481).

ʿAWĀLIḲ [see ʿAWLAḲĪ].

ʿAWĀMIR, AL- (sg. ʿĀmirī), a tribe of Bedouins and villagers in Southern and Eastern Arabia. The tribe is split into three main groups living in the following areas: (1) al-Ḳaff between the southern edge of al-Rubʿ al-Khālī and Wādī Ḥaḍramawt, (2) southern al-Ẓafra between Ḳaṭar and al-Buraymī, and (3) ʿUmān. The groups are completely separate and have little intercourse with each other, though they recognize their common kinship, and the two main divisions of the tribe, Āl Badr and Āl Lazz, exist in all three groups. The southern group, whose range abuts on that of al-Ṣayʿar at the well of Tamīs in the west and on that of al-Manāhīl at the well of Thamūd in the east, is mainly nomadic, though its members are not accustomed to pasturing their herds in the sands of al-Rubʿ al-Khālī, as is done by most of the Bedouin tribes in this region. The chief (*tamīma*) of this group is Ibn al-Ṭabāzā of Āl Badr. Like most of the Arabs in this part of Arabia, the southern ʿAwāmir are Shāfiʿīs. The central group consists entirely of nomads, who are among the hardiest sand-dwellers of eastern al-Rubʿ al-Khālī, moving about so much that they have no claim to a range of their own. The shaikhly clan headed by Ibn al-Rakkāḍ of Āl Badr is said to have had an origin outside the tribe. Some of these ʿAwāmir are Ḥanbalīs, the rest Shāfiʿīs. The eastern group is found almost entirely in villages in the area between Wādī Ḥalfīn and Wādī ʿAndām south of the Samā'il pass through the mountains of al-Ḥadjar, with some offshoots in al-Bāṭina, al-Ẓāhira, and the vicinity of Muscat. There are two principal chiefs in this group, Ibn Khamīs of Āl Badr in Ḳalʿat al-ʿAwāmir and Ibn Sulaymān of Āl Lazz in al-Ḥumayḍa. As Ibāḍīs the eastern ʿAwāmir recognise the Ibāḍī Imam of ʿUmān and the temporal authority of his lieutenant in al-Sharḳiyya, Ṣāliḥ b. ʿĪsā al-Ḥārithī. These ʿAwāmir have a tradition of having emigrated long ago from Nadjd, and their war-cry of *Yā awlād ʿĀmir b. Ṣaʿṣaʿa* indicates their claim to a descent from the famous tribe of ancient times (see ʿĀMIR B. ṢAʿṢAʿA). Certain smaller elements in Eastern Arabia such as Āl Silm and Bayt Ḳayʿāl tend to associate themselves with the ʿAwāmir; in some cases this may be due to the attraction of a glorious name.

(R. L. HEADLEY)

ʿAWĀNA B. AL-ḤAKAM AL-KALBĪ, Arabic historian, d. 147/764 or 153/770. His genealogy and descent are disputed. His father's name is given as al-Ḥakam b. ʿAwāna b. ʿIyāḍ b. Wizr (Yāḳūt, vi, 93; cf. *Djamhara* (Lévi-Provençal), 428, and *Fihrist* 134); Abū ʿUbayda, however, asserted that al-Ḥakam's father was a slave tailor (Yāḳūt, *ibid.*, citing verses by Dhu 'l-Rumma, for which cf. Ibn Sallām, *Ṭabaḳāt al-Shuʿarāʾ* (M. Shākir), 482, and *Aghānī*, xvi, 121). Al-Ḥakam was the lieutenant of Asad al-Ḳasrī in Khurāsān in 109/727 (Ṭabarī, ii, 1501; Balādhurī, *Futūḥ*, 428) and later governor of Sind, where he founded al-Maḥfūẓa and al-Manṣūra (Balādhurī, 444). According to Ibn al-Nadīm, ʿAwāna was a blind Kūfan narrator and scholar in poetry and genealogy, and compiled two historical works, on the life of Muʿāwiya and the Umayyads. The latter are known only from citations in later works; al-Ṭabari quotes ʿAwāna in 51 passages, all of which (except for one passage relating to ʿUmar and another to the battle of «the Camel») relate to events from Muʿāwiya to ʿAbd al-Malik; al-Balādhurī cites him frequently for the same events, and in *Futūḥ* adds further citations relating to the conquest of al-ʿIrāḳ, also to the conquest of Ṭabaristān under Sulaymān. He is thus one of the chief authorities for the earlier Umayyad period. He seldom cites his own sources, but shows some care in fixing the dates of events; his style is clear and lucid, and his narratives are often detailed. He is also interested in poetry and literary events (for which he is often cited in the *Aghānī* and in other literary works), as well as in social life and administration. Although he is charged with partiality towards the ʿUthmāniyya and the Umayyads (Yāḳūt, vi, 94), the quotations from his works show little evidence of prejudice, whether for the Umayyads, or for Kūfa, or for Kalb. They are transmitted chiefly through Hishām b. al-Kalbī, al-Madāʾinī, and al-Haytham b. ʿAdī, but occasionally also by other scholars; he is not, however, as is asserted by one of Yāḳūt's authorities, the source of most of al-Madāʾinī's information.

AWAR [see AVARS].

ʿAWĀRIḌ. A term used under the Ottoman régime down to the second quarter of the nineteenth century to denote contributions of various types exacted by the central government in the sultan's name, and hence often referred to as *ʿawāriḍ-i dīwāniyye*. The Ottoman fief-system dispensed the central government from the collection of revenues for the payment of the feudal militia and many officers and officials, while the institution of *waḳf* likewise relieved it of responsibility for the initiation and upkeep of public works of all kinds. But both deprived it of vast revenues, and those that remained to it, whose collection was sanctioned by the *sharīʿa*, often proved insufficient for its needs. At first only in emergencies, but later annually, therefore, it resorted to the exaction, by the sultan's *ʿurf*, or customary, authority, of money payments, of unpaid services, or of contributions in kind, either from the generality of tax-payers, or from those of particular areas; and it was to these demands that the term *ʿawāriḍ* was applied, apparently because the total exacted varied according to the government's need and was hence regarded as *ʿāriḍ*, "accidental".

ʿAwāriḍ were imposed, not directly on individuals, but on what were called *ʿawāriḍ-khānes*, which, however, were not actual "households", but rather "contribution units", so that a whole village or quarter of a town, for instance, might constitute no more than a fraction of one of them. Care was taken, when *ʿawāriḍ* were first imposed, or at least when their imposition was regularised, to ensure a just apportionment of the burden amongst all contributors according to their resources, and if for any reason those resources were impaired as time went by, the government's demands were adjusted accordingly.

It seems to be uncertain whether *ʿawāriḍ* were originally money payments on the one hand, or contributions in kind or by way of service on the other. Eventually, in any case, units that rendered services, or furnished supplies, were exempt from payments in cash (*ʿawāriḍ aḳčesi*). As regards these latter, when in any emergency it was decided how much mony was needed, the total was apportioned amongst all the *ʿawāriḍ-khānes* concerned and the provincial *ḳāḍīs* were instructed to collect a similar sum from each. As for persons rendering services to the state on the *ʿawāriḍ* principle, typical of these were the *kürekčis* (oarsmen supplementing the war captives and criminals likewise employed in the imperial galleys), each of whom was supported during his term of service by contributions from the other members of his *ʿawāriḍ-khāne*. Among supplies furnished as *ʿawāriḍ* were barley, straw and other provisions, together with carts and animals to transport them, for troops on campaign; timber, pitch, sailcloth, etc. for the admiralty; foodstuffs for the imperial kitchens; and cloth for the uniforms of the Janissaries.

Units that normally performed services or furnished supplies might be obliged, if they were unable, or were not required, to do so for any reason, to make cash payments to the treasury instead. The term applied to such payments was *bedel* (plural *bedelāt*) (see BADAL); they became more and more usual from early in the seventeenth century, by which date the exaction of *ʿawāriḍ* was no longer occasional; and that these *bedelāt* were distinguished from the *ʿawāriḍ aḳčesi* proper may indicate that *ʿawāriḍ* had been in origin cash exactions, from which units performing services or furnishing supplies were exempted by way of recompense, and that this exemption endowed those units with as it were an *odjaḳ* status, which they preserved by paying *bedelāt* instead of reverting to the payment of *ʿawāriḍ aḳčesi*.

During the seventeenth and eighteenth centuries many fresh *ʿurfī* contributions were exacted from tax-payers under a large variety of names; and since little care was by that time taken to ensure that the tax-payers could meet the demands made upon them, many found it hard to do so. It therefore became a practice among the charitable, when founding *waḳfs*, to devote all or part of the revenues so engaged to the assistance of such needy contributors; and the term *ʿawāriḍ waḳfī* was used of such foundations. In course of time, however, the original object of such *waḳfs* would often be forgotten; and then the revenues in question would be devoted to

other needs of the village, or the quarter of the town, concerned.

AL-ʿ**AWĀṢIM**, name of a part of the frontier zone which extended between the Byzantine Empire and the Empire of the Caliphs in the North and North-East of Syria. The forward strongholds of this zone are called *al-Thughūr* [*q.v.*] or frontier strongholds properly so called, whilst those which were situated further to the rear, are called *al-ʿAwāṣim*, literally "the protectresses" (sing. *al-ʿāṣima*).

Following their quick successes in Syria and Mesopotamia, the Arabs for a while made no attempt to extend their conquests and confined themselves to making raids into Byzantine territory, on the further side of the Amanus (al-Lukām, [*q.v.*]) and the Taurus. In the time of ʿUmar and ʿUthmān, the Muslim frontier strongholds were those which were later to be called *al-ʿAwāṣim*, situated between Antioch and Manbidj, whilst those which were more precisely to bear the name al-Thughūr were in a kind of *no man's land*, in the vast region extending to the North of Antioch and Aleppo, up to Tarsus and the Taurus, where the towns had been purposely depopulated by Heraclius when he withdrew from Syria, and where the Byzantines only left guard-posts (*masāliḥ*) held by local irregular troops, the Mardaïtes; they are perhaps to be identified with the Djarādjima [*q.v.*] who were sometimes on the Byzantine side and sometimes on the side of the Arabs, whom they also provided with *masāliḥ* and spies. This region, periodically ravaged by Muslim incursions, was designated by the Arabs by the name *al-ḍawāḥī*, the outside countries, the exterior zone, or *ḍawāḥī al-Rūm* (al-Ṭabarī, ii, 1317; cf. Ibn al-Athīr under 98), an expression still in use in ʿAbbāsid times by the poets Abū Tammām and Buḥturī. The Umayyads began to acquire a footing in this zone on the further side of Antioch and to occupy the main strategical points situated where roads intersected or at the entrance to the mountain passes. According to Theophanes (ed. Bonn, 555-6, A. M. 6178), the withdrawal of the Mardaïtes, as a result of the treaty of Justinian II with ʿAbd al-Malik, left this whole region undefended, and was subsequently disastrous for the Byzantine Empire.

The whole of this frontier zone in the beginning was dependent on the *djund* of Ḥims. But from the time of Yazīd b. Muʿāwiya, it was detached and made into a special *djund*, that of Ḳinnasrīn. In 170/786, Hārūn al-Rashīd, with a view to ensuring the defence of the frontier region exposed to Byzantine attacks, rather than with any offensive objective, (for he also organised the advanced zone for defence), detached from the *djund* of Ḳinnasrīn a certain number of strongholds, Manbidj, Dulūk, Raʿbān, Ḳūrus, Antioch, Tīzīn, which he called *al-ʿawāṣim*, because the Muslims protected themselves by them and because they afforded them protection and defended them when they returned from their expeditions and left the frontier (*thaghr*) (al-Balādhurī). Another definition is provided by Ibn Shaddād: "because the inhabitants of the frontier strongholds (*ahl al-thughūr*) protected themselves by them when a danger threatened them from the enemy", and al-Ḳalḳashandī gives another: "because they protected from the enemy the Muslim territory which was behind them (*dūnahā*), for they bordered upon the country of the Infidels". The same author thinks that the expressions *al-thughūr* and *al-ʿawāṣim* are different names applied to the same thing, which is certainly not correct, for they are both quite distinct and must have been so at an early period. But as, at the time of the creation of this province, which from 173 had the ʿAbbāsid ʿAbd al-Malik b. Ṣāliḥ as governor with residence at Manbidj, the advanced strongholds were included in it, both expressions must have been used interchangeably (see al-Ṭabarī, iii, 604: Hārūn al-Rashīd separated all the frontier strongholds of the Djazīra and Ḳinnasrīn, made them into a single territory and called them *al-ʿawāṣim*).

ʿAwāṣim and *thughūr* are often united under a single command, at times with the *djund* of Ḳinnasrīn. At other times the *thughūr* form a separate province. The geographers do not agree on the number of localities which form part of the *ʿAwāṣim*: Ibn Khurradādhbih also includes al-Djūma, Būḳā, Bālis and Ruṣāfat Hishām; Ibn Ḥawḳal: Bālis, Sandja, Samosate (Sumaysāṭ), Djisr Manbidj. Ibn Shaddād also names Baghrās, Darbasāḳ, Artāḥ, Kaysum, Tall Ḳabbāsīn. Yāḳūt includes other localities. In the 10th century, the capital of the *ʿAwāṣim* was Antioch.

The region of the *ʿAwāṣim*, like that of the *thughūr*, was the scene of bloody wars between Byzantium and the Arabs; it was reconquered by Nicephorus Phocas, who obliged the emirate of Aleppo to cede him the whole western and northern part of the region. Thenceforth, the word *al-ʿawāṣim* is simply a geographical expression, which continues to be used in the period of the Crusades and the Mamlūks by the Arab geographers.

We have only sparse information on the economic situation of this region, which seems to have been fairly prosperous in ʿAbbāsid times. The sum of the taxation of the *djund* of Ḳinnasrīn and the *ʿawāṣim* together was 400,000 dinars according to Ibn Khurradādhbih, and 360,000 according to Ḳudāma. The population was very mixed. It included, besides indigenous elements (Christians of the towns and settlements, Djarādjima of the Amanus) several elements which had emigrated or been transported thither: Arab tribes, especially Ḳaysites, who had established themselves there, the Kilāb extending up to Dulūk, foreign elements coming from India via Mesopotamia, such as the Sayābidja [*q.v.*], brought to the region of Antioch by Muʿāwiya, and the Zoṭṭ [*q.v.*], also transported to the same region by Muʿāwiya, then by al-Walīd b. ʿAbd al-Malik. It is known that one of the reasons why the Zoṭṭ were settled in this country (as in Cilicia by Yazīd II and by al-Muʿtaṣim), is that this tribe practised the breeding of water buffaloes, and the presence of buffaloes cleared marshy territories, such as those of the ʿAmḳ [*q.v.*] of Antioch, or of Cilicia, of the lions which infested them (see al-Balādhurī, 162, 376; Wellhausen, *Das Arabische Reich*, 415; M. Hartmann, *Das Liwā Haleb*. 71).

(M. Canard)

ʿAWĀZIM, al- (sg. ʿĀzimī), a Bedouin tribe in North-eastern Arabia of reputedly ignoble origin, in that its descent is not regarded by other tribes as pure (*aṣīl*). Although Arabs of pure stock do not intermarry with the ʿAwāzim, the tribe has earned their esteem for its desert lore and courage in battle, having been one of the most loyal and effective supporters of ʿAbd al-ʿAzīz Āl Saʿūd during his conflicts with other tribes in Eastern Arabia in 1333-48/1915-29. During this period the ʿAwāzim broke away from their relationship as clients of the powerful tribe of the ʿUdjmān. The ʿAwāzim range through the northern part of the Eastern Province of Saudi Arabia, mainly in the areas of al-Sūda and al-Radā'if, and along the coast of Kuwayt and in the Neutral Zone between the two countries. Although the Ruler of Kuwayt has a number of ʿAwāzim as personal retainers, the tribe is officially recognised as subject to the authority of Saudi Arabia. Its members are preponderantly Mālikīs. It has *hidjras* at Thādj, al-Ḥinnāh, and ʿUtayyiḳ. The chief of the tribe (1957) is ʿĪd ibn Djāmiʿ.

(W. E. Mulligan)

AWDAGHOST (or Awdaghosht) African town, now no longer extant. According to al-Bakrī, it was situated between the country of the Blacks and Sidjilmāssa, at about 51 days' march from this oasis and 15 from Ghāna. Barth thinks that it must have been situated between long. 10°-11° W. and lat. 18°-19° N., not far from Ḳṣār and Barka, that is to say to the South-West of the post of Tidjikja in French Mauritania.

Little is known about this town, which seems to have been at the outset a trading colony established by the Zenāga (Ṣanhādja) on the Northern border of the Kingdom of Ghāna. At the end of the 4th/10th century, after the Zenāga had conquered a large part of the Kingdom of Ghāna, Awdaghost became the capital of a powerful state. As its sovereign, from 350-60/961-71, it had a Ṣanhādjī, who numbered more than thirty black kings among his vassals and whose empire measured sixty days' march in length and breadth. In the following century, Awdaghost was attacked by Ibn Yāsīn, the founder of the Almoravid dynasty. The town was taken by assault, pillaged and its inhabitants massacred (446/1054-5). From that time onwards, the power of the Zenāga progressively declined; their kingdom was invaded by the Sūsū, at the beginning of the 7th/13th century; they had to abandon it, or were reduced to the rôle of tributaries.

In al-Bakrī's time (5th/11th century), Awdaghost was still a flourishing city. The population, quite considerable in numbers, was composed of Arabs from the Maghrib and Ifrīkiya, Berbers (Berkadjenna, Lawāta, Zanāta, Nafūsa and especially Nafzāwa) and doubtless also Blacks. The town, surrounded by a suburb of gardens and palm groves, contained mosques and schools, sumptuous public buildings, elegant houses and busy markets. An important trade flourished there in cereals and fruits from the Muslim lands, ambergris brought from the Atlantic coast, worked copper and gold thread; gold dust served as money. Signs of decadence were already visible in the time of al-Idrīsī (6th/12th century). The population was very scanty, trade exiguous, and the inhabitants maintained themselves almost exclusively by camel breeding. Doubtless, Awdaghost's disappearance coincided with the ultimate destruction of the power of the Zanāta.

Dozy and De Goeje, 34; Barth, *Reisen*, iv, appendix ix, 602-4 (according to the *Ta'rīkh al-Sūdān* by Saʿdī); P. Laforgue, *Notes sur Aoudaghost*, in *Bull. Soc. Géog. Oran*, 1943; R. Mauny, *Les ruines de Tegdaost et la question d'Aoudaghost*, in *Notes Africaines* (*IFAN*), Oct. 1950.

(G. Yver)

ʿAWDHALĪ, (pl. ʿAwādhil, coll. ʿAwdhilla; cf. al-ʿAwd (with *d* for *dh*) in al-Hamdānī, *passim*), dynastic title of (a) tribe, (b) district (ca. 2,000 sq.km., 10,000 inhabitants) in the Western Aden Protectorate. It lies between the Lower Yāfiʿī (W), Faḍlī (S) and ʿAwlaḳī (E) territories. In the N, beyond the "*status quo* line" of 1934, are the districts Ḍāhir (Dahr) (< Ẓāhir, cf. al-Hamdānī) and Raṣṣāṣ (capitals: Bayḍā' *viz.* Meswara). Part of Ḍāhir (with ʿAryab as its centre) and Dathīna (with Ḳulayta) have been incorporated into the ʿAwdhilla-district. Its N part is dominated by the mighty mountain al-Kawr (Kōr), serving as a barrier between Sarw Ḥimyar and Sarw Madhidj (al-Hamdānī 80, tr. Forrer 102: Kūr, with erroneous vocalisation); it is ca. 2,000 m. high. On the terraced hill-slopes and in the fertile plateaus round Mukayras and Lōdar (N respectively S of al-Kawr) fruit and vegetables are grown for export. Honey is an essential product of the country, the climate of which is near tropical. The Sultan belongs to the ʿAwāsidj, a branch of the old Haytham tribe, hence the dynastic name Ibn al-ʿAwsadjī. His residence is at Lōdar (also called al-Ghudr). After family feuds at the turn of the century (Landberg, *Daṯīna*, 1624) the political situation was stabilised; a treaty with the British was made in 1912 by Ṣāliḥ b. Ḥusayn Djibil. The population mostly consists of free tribes, who only obey the Sultan in case of war. In the border countries (especially Dathīna) the local *shaykhs* are almost independent. There is a *sharīʿa*-court at Zara, two self-supporting schools and two dispensaries in the district. At Lōdar and Mukayras are landing-grounds for aircraft.

AWDJ [see nudjūm].

AWDJILA. This name designates both an oasis and a group of three palm groves situated on the traditional caravan route, which in the South of Cyrenaïca and between the 30th and 29th parallels, joins Sīwa, in Egypt, and Djarabûb to Tripolitania and Fezzān by Marada and the Djofra. Awdjila has been known, since Herodotus (iv, 172, 182) and the classical authors, for its abundance of dates and as a halting place. Its rôle as a halting place seems to have been enhanced by the Arab conquest of the Maghrib. Ibn Ḥawḳal (trans. de Slane, *JA*, 3rd series, xiii, 163) describes it in the 4th/10th century as a small town recently attached to the province of Barḳa; likewise, 200 years later, al-Idrīsī (trans. Jaubert, i, 248); in the 5th/11th century, al-Bakrī (*Description de l'Afrique septentrionale*, trans. de Slane, 32) speaks of it as an important centre with several mosques and bazaars; he notes that Awdjila is the name of the district, that of the town being Arzaḳiyya. In the 10th/16th century, grain was imported from Egypt (Leo Africanus, *Description de l'Afrique*, trans. Épaulard, 4564). Awdjila was occupied by the Turks in 1640. It has been visited and described by the travellers Hornemann (1798), Hamilton (1852), Beurmann (1862) and Rohlfs (1869 and 1879) (see the bibliography). The development, from the middle of the 19th century, of the intransigeant Sanūsī order has kept Europeans away, except Rosita Forbes and Hasseneïn-bey (1920). It has only been studied during the Italian occupation (1928-1943), in particular by the geographer Scarin. Since then, it has formed part of the Kingdom of Libya.

The name Awdjila only designates the most westerly oasis whilst that of Djālo (which is applied to El-Erg and El-Lebbe, 30 km. to the S.S-E.) has imposed itself on a whole area, which also includes the mediocre palm grove of Djikerra (or Leshkerreh), 30 km. to the North. The three oases, which are situated in slight depressions with scanty pastures in the middle of a vast desolate plain of sand and gravel (*serīr*), have a continental and very arid climate, with little wind: the annual rainfall between 1931 and 1940 was 11 mm. 7.

Water, which is not far below the surface and is fairly copious, is obtained by draw-wells (worked by donkeys) and from wells functioning with balance-beams. It is used primarily to water the palms, occasional pomegranate and fig trees, little patches of cereals, lucerne and vegetables. Stockbreeding is very poor and trade dwindling, even at Djālo, which for a century has taken Awdjila's place in the caravan trade with the Sudan and Egypt. This economic and demographic decline, due to emigration, was halted by the Italians, who established their residence at El-Erg (Djālo) and joined the oases to Adjdābiya by a track extending for 270 km. (and from there a road, 190 km. long, goes to Benghāzī).

Awdjila itself, very much in decay, possessed in 1934 18,000 palm trees, 170 gardens, and 1,500 inhabitants, who have remained Berber-speaking and are grouped in four divisions, living in four adjoining wards: Es-Sobka, Es-Sarahna, El-Hati and Ez-Zegagna—plus a small group of Madjabra, Arabic-speaking, living dispersed in the palm grove. Djālo, which has not declined to the same extent, has 50,000 palm trees, 123 gardens and 2,700 inhabitants divided up into 14 "families". They are distributed between two villages, one of which, El-Erg, is rather dispersed, whilst the other, El-Lebba, is more concentrated, and in a number of dwellings scattered throughout the oasis. These are the Madjabra most of whom are former nomads who have become arabicised and who have a taste for trade. Djikerra is simply a palm grove (13,000 palm trees) and not systematically irrigated; it is inhabited only by a few very poor families (400 inhabitants) and visited for the date harvest by the Zūiya nomads of the Ouadi Fareg region to the North-West. The houses of these settlements, built of large unbaked bricks and more rarely of loose stones, have no upper storeys, and are strung out along twisting lanes and blind alleys. The dwellings, located apart in the gardens, often inhabited by former slaves, are usually palm huts (*zeriba*). The mosques, very rustic in character, have multiplied under the influence of the Sanusiyya; those of Awdjila generally have several domes; the mosque of Djikerra is made of palm trees, including the minaret.

Basset, *La langue Berbère*, in *Handbook of African Languages*, Oxford 1952, 69-70. (J. Despois)

AWFĀT (or Wafāt; in the Ethiopian chroniclers Ifāt), an Ethiopian Muslim state (1285-1415) situated in the plateau region of Eastern Shoa, including the slopes down to the valley of the Ḥawāsh. At the end of the 7th/13th century a number of Muslim states existed in eastern Shoa; the predominant one (whose Makhzūmid dynasty had been founded according to tradition in 283/896) shown in a document recently discovered by E. Cerulli to be in the last stages of disruption, was conquered in 684/1285 by the ruler of one of its tributories, whose dynastic title was Walasmaʿ. He conducted campaigns to reduce various Shoan and ʿAfar regions, including the nomad state of Adal. The reconstituted state, under the name of Awfāt, is first mentioned by Ibn Saʿīd, who says that the region was also known as Djabara (Djabarta). Awfāt seems to have been alternately tributary to the powerful pagan kingdom of Dāmot, to the Christian kingdom of Abyssinia, and at times independent. The northernmost of a number of Muslim states (Hadya, Faṭadjār, etc.), it became the buffer-state against the advance of the Abyssinian power southwards. Ḥaḳḳ al-Dīn, warring against ʿAmda Ṣyōn, was overwhelmed in 1328 and Awfāt made tributory to Abyssinia. Al-ʿUmarī's important account of Awfāt at this time shows that its territory extended eastwards to include Zaylaʿ. Continually in revolt against Abyssinia, its last attempt to regain independence was under Saʿd al-Dīn, with whose defeat and death in 817/1415 the kingdom came to an end and its original territory was annexed to Abyssinia. When the Walasmaʿ, after brief exile in Yaman, returned to

Africa they formed a new state out of their former provinces of Adal-Zaylaʿ, and took the title of kings of Adal or Zaylaʿ [*qq.v.*] with their capital at Dakar and later Harar [*q.v.*].

(J. S. Trimingham)

ʿAWFĪ, Muḥammad b. Muḥ., Sadīd al-Dīn (wrongly called Nūr al-Dīn) Bukhārī, renowned Persian anthologist. ʿAwfī traced his descent from ʿAbd al-Raḥmān b. ʿAwf, a companion of the Prophet, from whom he derived his surname. He came from a learned family of Transoxiana, and was probably born and certainly educated at Bukhārā. The exact date of his birth is not known. In 597/1201 he went to Samarḳand to serve at the court of Ilak Khān Sulṭān Djalāl al-Dīn Ibrāhīm b. al-Ḥusayn Ṭamghādj Khān of Samarḳand where his maternal uncle Sharaf al-Zamān Madjd al-Dīn Muḥammad b. ʿAdnān al-Surkhakatī was serving as a court-physician. In 600/1203, when the tension between the Ghūrid Sultan Muʿizz al-Dīn, or Shihāb al-Dīn Ghūrī, and Sulṭān ʿAlāʾ al-Dīn Muḥammad Khʷārazmshāh had become acute, he went to Khʷārazm. Soon afterwards he went to Shahr-i Naw and Nasā, and attended some of the meetings of Shaykh Madjd al-Dīn Sharaf Ibn al-Muʾayyid al-Baghdādī. Then he started on his literary tour of Khurāsān and was in Nīshāpūr in 603/1206, where he stayed for a considerable period and made the acquaintance of various eminent persons. From there he went to Harāt and remained in Sidjistān till 612/1215. It appears that he returned to Bukhārā, journeyed through Khurāsān and Ghazna, crossed the river Indus, and, passing through Sind and Gudjarāt came for the first time to Lahore to seek the patronage of the *wazīr* ʿAyn al-Mulk Fakhr al-Dīn al-Ḥusayn at the Court of Malik Nāṣir al-Dīn Ḳabāča, to whom he dedicated his famous anthology, the *Lubāb al-Albāb* in 617/1220. He served for a time as *ḳāḍī* in Kanbāyat or Cambay, where he completed his Persian translation of al-Tanūkhī's *al-Faradj baʿd al-Shidda* in 620/1223. This period coincides with the attack of the Mongols on Khʷārazm and their advance towards Multān and Delhi, when Shams al-Dīn Iltutmish besieged the fort of Bhakkar and overthrew Ḳabāča in 625/1228. ʿAwfī changed masters and attached himself to the court of Iltutmish, to whose *wazīr* Niẓām al-Mulk Muḥammad ibn Abī Saʿd al-Djunaydī he dedicated his famous collection of anecdotes, the *Djawāmiʿ al-Ḥikāyāt wa Lawāmiʿ al-Riwāyāt* in 625/1228. It appears that ʿAwfī lived in Delhi till 630/1232, in the early years of Raḍīyya's reign.

The *Lubāb* occupies an honourable place among Persian anthologies, but Awfī's *magnum opus* is the *Djawāmiʿ* which contains more than 2000 historical and literary anecdotes relating to various dynasties that ruled in Persia before the Mongol invasion. Much of the material for this book is drawn from rare or lost works, hence its importance as an original source. A comprehensive *Introduction* to this work was published in the Gibb Memorial Series in 1929. The Persian text, based on the earliest MSS., is ready for press, and the first volume is to appear shortly.

Bibliography: ʿAwfī, *Lubāb*; Muḥammad Niẓāmud-Dīn, *Introduction to the Jawāmiʿ ul-Ḥikāyāt*, London 1929; Storey, i, 781-4.

(M. Nizamuddin)

al-**AWḤAD** [see Ayyūbids].

AWḤADĪ, Rukn al-Dīn, Persian poet, born c. 680/1281-2 at Marāgha in Ādharbāydjān. The fact that he lived for many years in Iṣfahān has led the author of the *Haft Iḳlīm* to state that he was a native of that city. Little is known about his life, but there is scarcely any doubt that he died in 738/1337-8. He was buried at his birthplace where his tombstone is still to be seen.

Awḥadī, who took his *takhalluṣ* from the name of his master, Shaykh Awḥad al-Dīn of Kirmān, was the author of a *dīwān* which amounts to about ten thousand verses. Some of these are eulogies of his patrons, Abū Saʿīd, the Īlkhān, and his vizier, Ghiyāth al-Dīn Muḥammad, son of Rashīd al-Dīn Faḍl Allāh. In one of his poems he attacks the pretensions of a contemporary poet, Salmān of Sāwa.

As a poet, Awḥadī displays little originality. He is reckoned by most Persian critics as second-rate in view of some weakness which is to be found in his poetic diction. Moreover, the greater part of his verse, although not without some grace, is often laboured and lacks that subtle light and shade in bringing his ideas before the reader which is characteristic of the best Persian poetry.

Awḥadī's best work is to be found in his two *mathnawī* poems, the earlier of which is entitled *Dah-nāma* or, as it is called in some MSS., *Manṭiḳ al-ʿUshshāḳ*. This consists of ten letters addressed by an imaginary lover to his mistress and is not of outstanding poetic merit. It was dedicated to Wadjīh al-Dīn, grandson of Naṣīr al-Dīn of Ṭūs, in 706/1306-7. The other *mathnawī*, the *Djām-i Djam* (the goblet of Djamshīd), is longer and far better known. It displays a more fully developed talent, and when it was first composed, achieved a great measure of popularity. Like the *Ḥadīḳat al-Ḥaḳīḳa* of Sanāʾī, it covers the whole field of ethics, with advice on moral discipline, the upbringing of children, civic responsibilities and so forth; but the last part changes its theme and deals with the Ṣūfī Path and all that appertains to it. The *Djām-i Djam* was written in 733/1332-3 and was dedicated to Ghiyāth al-Dīn Muḥammad.

Bibliography: Dawlatshāh 210 f.; Browne, iii, 141-6; Ethé in the *G.I.P.*, ii, 299. Edition of the *Djām-i Djam*, Tehrān, 1347/1928-9, and of the *Dīwān* by A. S. Usha, Madras 1951.

(G. Meredith-Owens)

AWḲĀF [see waḳf].

ʿAWL (a., literally "deviation by excess"), the method of increasing the common denominator of the fractional shares in an inheritance, if their sum would amount to more than one unit. This has, of course, the effect of reducing each individual share. For instance, a man dies leaving a widow, two daughters and both parents. The share of two daughters would be $^2/_3 = {}^{16}/_{24}$, that of the widow $^1/_8 = {}^3/_{24}$, that of the father $^1/_6 = {}^4/_{24}$, and that of the mother $^1/_6 = {}^4/_{24}$, total $^{27}/_{24}$. The denominator is therefore increased to 27, and the two daughters receive $^{16}/_{27}$, the widow $^3/_{27} = {}^1/_9$, and the

father and the mother each $^{1}/_{27}$. This particular problem is called *al-masʾala al-minbariyya*, because ʿAlī is reported to have solved it off-hand when it was submitted to him, whilst he was on the *minbar*. The *ʿawl* is accepted by all the Sunnī schools of Islamic law. The Ibāḍīs, too, recognise it, but they ascribe its introduction to ʿUmar. The *Ithnā-ʿashariyya* or "Twelver" Shīʿites, on the other hand, reject it and reduce the share of the daughter (or daughters) or that of the full or consanguine (but not of the uterine) sister (or sisters) instead.

AWLĀD [followed by the name of the eponymous ancestor of a tribe, see under the name of that ancestor].

AWLĀD AL-BALAD was the term used during the Sudanese Mahdiyya (1881-98) to designate persons originating from the northern riverain tribes, of which the Danāḳla group and Djaʿliyyīn were the most important. Many *awlād al-balad* were domiciled, temporarily or permanently, away from their tribal centres by the main Nile. The Danāḳla were boatbuilders and sailors, especially on the White Nile, while both they and the Djaʿliyyīn played an important rôle as merchants and slave-traders in Kurdufān, the Baḥr al-Ghazāl and Dār Fūr. The Mahdī Muḥammad Aḥmad found much support among the *awlād al-balad*, particularly those dispersed in the west and south. In general they formed the ruling class under him. After his death in June 1885, they were gradually displaced from the chief offices by his successor, the Khalīfa ʿAbd Allāh, but clerical and other subordinate posts were largely filled by *awlād al-balad* until the end of the Mahdiyya. Chief among the *awlād al-balad* were the *Ashrāf*, relatives of the Mahdī, whose nominal leader was the Khalīfa Muḥammad Sharīf. In 1886 this group attempted to overthrow ʿAbd Allāh but failed. The *awlād al-balad* were seriously weakened by the defeat of the Mahdist invasion of Egypt at Ṭūshkī in 1889, since they had formed the bulk of the expeditionary force and large numbers perished, including their leading general ʿAbd al-Raḥmān al-Nudjūmī. A rising of the *Ashrāf* and Danāḳla in Omdurman in 1891 was foiled by ʿAbd Allāh and was followed by repressive measures. In 1897 the Djaʿliyyīn of al-Matamma under their chief, ʿAbd Allāh Saʿd, revolted and communicated with the Anglo-Egyptian forces under Kitchener. A Mahdist army under Maḥmūd Aḥmad put down the rebellion and sacked the town.

Bibliography: Special allusion to the term is made by F. R. Wingate (J. Ohrwalder), *Ten years captivity in the Mahdi's camp*, London 1892, many ed. (P. M. HOLT)

AWLĀD AL-NĀS. The mamlūk upper class constituted an exclusive society. Only a person who himself was born an infidel and brought as a child-slave from abroad, who was converted to Islam and set free after completing his military training and who usually bore a non-Arab name, could belong to that society. These rules implied that the mamlūk upper class should be a non-hereditary nobility, for the sons of the mamlūks and mamlūk amīrs were Muslims and free men by birth, were born and grew within the boundaries of the mamlūk sultanate and bore Arab names. As such they could not belong to the upper class and were automatically ejected from it. They were joined to a unit of non-mamlūks called the *ḥalḳa* [*q.v.*] which was socially inferior to the pure mamlūk units. Within the *ḥalḳa* the sons of amīrs and mamlūks formed the upper stratum. They were known as *Awlād al-Nās* 'children of the people', i.e. 'of the best people, of the gentry', for *the* 'people' were the mamlūks, the members of the exclusive society.

The *Awlād al-Nās*, but for quite a small number of exceptions, attained no higher rank than that of Amīr of Ten and Amīr of Forty. Occasionally the *Awlād al-Nās* were favoured for political reasons. Thus sultan al-Nāṣir Ḥasan (748/1347-752/1351) preferred amīrs from *Awlād al-Nās* to mamlūk amīrs. The privileged position of the *Awlād al-Nās* under sultan Ḥasan was, however, exceptional, and contrasted sharply with their status under other rulers. Since theirs was an element which, by its very nature, was excluded from the ranks of the mamlūks, their chances for advancement and for attaining key positions were seriously limited. In the course of time they declined together with the *Ḥalḳa*, and saw the same restrictions applied to them as to the rest of that body, viz. reductions in pay, sale of their fiefs, exemptions from military expeditions in exchange for cash payments (*badīl*), tests in the use of the bow and arrow designed to prove that they were badly trained and thus not entitled to all the privileges of full-fledged soldiers. Toward the end of the mamlūk era, the name *Ḥalḳa* fell into disuse, while that of the *Awlād al-Nās* became extremely common.

There was, both among the *Awlād al-Nās* and the other members of the *Ḥalḳa*, a strong leaning toward piety and pre-occupation with other-worldly affairs. Many of them left the military service and became theologians or *faḳīhs*. (See D. Ayalon, *Studies on the Structure of the Mamluk Army*, in *BSOAS*, 1953, 456-58 and references on p. 456, n. 1).

(D. AYALON)

AWLĀD AL-SHAYKH (Banū Ḥamawiya) were originally an Iranian family of *ṣūfīs* and Shāfiʿī *fuḳahā*, a branch of whom emigrated to Syria and became influential under the later Ayyūbid kings, al-Malik al-Kāmil (615-35/1218-38) and his sons. The member of the clan earliest known, Abū ʿAbd Allāh Muḥammad b. Ḥamawiya (Pers. form Ḥamawayh) al-Djuwaynī, died in 530/1135-6, was a celebrated ṣūfī, *faḳīh* and author of several works on mysticism (al-Samʿāni; Ibn al-Athīr, xi, 30; Abu 'l-Faradj Ibn al-Djawzī, *al-Muntaẓam*, Ḥaydarābād, x, 63-4; Yāḳūt, ii, 425; Ḥadjdjī Khalīfa, ed. Flügel, iii, 612, no. 7231). His grandson ʿImad al-Dīn Abu 'l-Fatḥ ʿUmar b. ʿAlī, (died 577/1181), went to Damascus, and in 563/1167 Nūr al-Dīn, 541-69/1146-74, appointed him inspector of all the *ṣūfī* institutions at Damascus, Ḥamāh, Ḥimṣ, Baʿalbak and other places in Syria. Hence he became the ancestor of the Syrian and Egyptian division of the family; but the connexions with the Iranian branch were maintained (Sibṭ Ibn al-Djawzī, *Mirʾāt al-Zamān*, Ḥaydarābād, 272). Of these his brother

ʿAbd al-Wāḥid (died 588/1192; Ibn al-Furāt, *cod. Vind.* iv, 146a), and his grand-nephew Saʿd al-Dīn Muḥammad (died 650/1252; *EI* ii, 260 & IV, 33; Sibṭ Ibn al-Djawzī, 651) are the best known.—ʿImād al-Dīn ʿUmar had two sons: *Shaykh al-shuyūkh* Ṣadr al-Dīn Abu 'l-Ḥasan Muḥammad (543-617/1148-1220), was born in Khurāsān, came with his father to Damascus and became his successor. He married the daughter of the famous *Ḳāḍī* Ibn Abī ʿAṣrūn (died 585/1189; Ibn Khallikān, no. 334; transl. de Slane ii, 32-5) by whom he had four sons, famous as Awlād (Banū) *shaykh al-shuyūkh*. Ṣadr al-Dīn, a friend of Sulṭān al-Malik al-ʿĀdil, 595-615/1198-1218, later went to Egypt, where he was invested with the same offices as he had held at Damascus. He died at Mawṣil on the way to Baghdād as an ambassador of al-Malik al-Kāmil.—His younger brother Tādj al-Dīn Abū Muḥammad ʿAbd Allāh, 572-642/1177-1244, went in 593/1196 to the Maghrib and served under the Almohād sultans al-Manṣūr Yaʿḳūb (580-95/1184-98) and al-Nāṣir Muḥammad (595-610/1198-1213) for seven years in a military capacity. After his return he settled down at Damascus and followed his father and brother as an inspector of the *ṣūfī* institutions of the Syrian capital. He wrote several works on history only the titles of which have survived; Ibn Khallikān saw the autograph of one of his books about Spain at Damascus in the year 668/1269 (Ibn Khallikān, no. 839, transl. de Slane, iv, 337).—The fame of the family rests upon the four sons of Ṣadr al-Dīn, especially on Fakhr al-Dīn Yūsuf. Born about 580/1184, he entered upon a political career, and al-Kāmil sent him in 614/1217 as his envoy to the caliph. He gained his reputation as a skilled diplomat, being al-Kāmil's ambassador to the Hohenstaufen emperor Frederick II from 624/1229 until the conclusion of the treaty concerning Jerusalem, February 18th, 1229. During this period he became the friend of the emperor who discussed with him even non-political problems and wrote him two letters after his return to Italy (Ibn Naẓīf al-Ḥamawī, *Ta'rīkh al-Manṣūrī*, M. Amari, *Bibl. Sic. App.* ii, 25). Fakhr al-Dīn Yūsuf held several high posts during the latter part of the reign of al-Kāmil and was a member of the crown council at Damascus after the king's death in Radjab 635/Feb.-March 1238. After his return to Cairo al-ʿĀdil II b. al-Kāmil (635-7/1238-40) dismissed him despite his good services and even threw him into prison. He remained out of office until 643/1246, when al-ʿĀdil's successor and brother al-Ṣāliḥ Nadjm al-Dīn Ayyūb b. al-Kāmil (637-47/1240-9) restored him to all his former honours and appointed him commander-in-chief of the Egyptian army. When in 1249 Louis IX of France threatened to attack Egypt, Fakhr al-Dīn Yūsuf was entrusted with her defence; but after the Frankish invasion of the Nile Delta he sacrificed Damietta and retreated with his army southwards to al-Manṣūra. When al-Ṣāliḥ died shortly afterwards (Monday 14th Shaʿbān 647/22th Nov. 1249) the sultana Shadjar al-Durr made Fakhr al-Dīn regent in the absence of the new sultan al-Muʿaẓẓam Tūrānshāh b. Nadjm al-Dīn Ayyūb. In the meantime the crusaders slowly advanced towards al-Manṣūra and in a surprise attack crossed the Nile and entered the city. In the fighting Fakhr al-Dīn was killed on Thursday 4th Dhu 'l-Ḳaʿda 647/8th Feb. 1250.—The three brothers of Fakhr al-Dīn, ʿImād al-Dīn ʿUmar, Kamāl al-Dīn Aḥmad and Muʿīn al-Dīn Ḥasan started their political activities only in the later part of al-Kāmil's reign having been before engaged in the teaching of the Shāfiʿī *madhhab* at Cairo. They, too, belonged to the crown council after al-Kāmil's death at Damascus and thanks to the influence of ʿImād al-Din ʿUmar the nephew of the late sultan, al-Djawwād Yūnus b. Mawdūd b. al-ʿĀdil, died 641/1243 was elected vice-regent of Damascus. When he conspired against al-ʿĀdil II, the sultan sent ʿImād al-Dīn back to Damascus in order to force the abdication of al-Djawwād. But al-Djawwād had him arrested soon after his arrival and murdered on Thursday, 26th Djūmadā I 636/4th January 1239.—Kamāl al-Dīn Aḥmad, the least famous of the four brothers, was appointed by al-Ṣāliḥ in 637/1240 as an ambassador to negotiate a peace-treaty with Count Theobald of Jaffa and the king of Navarre, and afterwards commander-in-chief of an army to regain Damascus. But Kamāl al-Dīn was defeated by al-Djawwād and al-Nāṣir Dāwūd b. al-Muʿaẓẓam (died 656/1258) in Dhu 'l-Ḳaʿda 638/May-June 1241, and taken prisoner. He died a year later on 13th Ṣafar 640/12th Aug. 1242 at Ghazza.—The youngest brother Muʿīn al-Dīn Ḥasan was appointed *wazīr* by al-Ṣāliḥ in 637/1240 and four years later became his representative and commander-in-chief in the campaign for the reconquest of Damascus. The siege began at the end of 642/May 1245, and six months later Muʿīn al-Dīn forced ʿImād al-Dīn Ismāʿīl b. al-ʿĀdil (died 648/1250-1) to give up the Syrian capital, which he had held since 637/1239, in return for Baʿalbak, Boṣrā and some other places. Muʿīn al-Dīn survived his triumph for only a few months and died of typhoid on Monday 24th Ramaḍān 643/12th Febr. 1246.

Of the two sons of Tādj al-Dīn Muḥammad the elder Saʿd al-Din Khiḍr, 592-674/1196-1246, is known as the author of a small chronicle from which Sibṭ Ibn al-Djawzī and al-Dhahābī drew most of their information about the Banū shaykh al-shuyūkh.

ʿAWLAḲĪ (pl. ʿAWĀLIḲ, vulg. Mawāleḳ; for the etymology, see Landberg, ii, 1684 f.) (a) tribal confederation and (b) territory in South Arabia, between the Indian Ocean and the desert (Ramlat Sabateyn). It is the eastermost district of the Western Aden Protectorate. The boundaries are, in the W the Faḍlī, ʿAwdhalī and Bayḥānī districts, in the E the Dhiēbī territory of ʿIrḳa, the Wāḥidī sultanate of Bal-Ḥāf and the indeterminate area of Djerdān, ʿIrma (ʿUrma) with Shabwa, and Āl Burayk. This country is divided by Kawr al-ʿAwd (the continuation of Kawr ʿAwdhilla) into two halves of very different character:

1. Upper ʿAwlaḳī territory (ca. 100,000 sq.km., 30-50,000 inhabitants) is by far the richest and most powerful. The climate is tropical, the fertile ground produces wheat, maize, tobacco and indigo. Arḍ al-Maḥāḍjir in the N belongs to this tribal confederation (cf. al-Hamdānī, 89) which comprises the subtribes Marāzīḳ, Rabīz, Hammām, Dayyān and Daḳḳār. They inhabit the district round Anṣāb (Niṣāb), where the Sultan of Upper ʿAwāliḳ has his residence.

He also controls the wide plateau Arḍ Markha, where Nisiyyīn bedouins live in Wāsiṭ, Hadjar and Hudjayr. The main *wādīs* are: ʿAbadān, Ḍurā, Khawra, Markha. In the NW, not far from Bayḥān al-Ḳaṣāb, are rich salt-mines at Khabt. The other great tribal federation, the Maʿn or Maʿan (cf. Maʿīn, Maʿān "Minaeans"), is grouped round the old town (Sūḳ) Yeshbum, in the SE part of the territory. Here resides the second chieftain, the *shaykh* of Upper ʿAwāliḳ, who like the Sultan always is chosen from the Maʿn. Their sub-tribes are: Madhidj, Bū Bekr, Bā Rās, ʿAtīḳ, Sulaymān, Ṭawsala, Miḳraḥa and Thawbān. For the most part these tribes are independent *ḳabīlīs*, they are fond of fighting and often enlist for service abroad. Treaties with the British were signed in 1903 by the *shaykh* of Yeshbum, Muḥsin b. Farīd, and in 1904 by the Sultan of Anṣāb, ʿAwaḍ b. Ṣāliḥ. There is an aerodrome at Anṣāb.

2. Lower ʿAwlaḳī territory (ca. 80,000 sq.km., 12-15,000 inhabitants) is for the most part arid and barren; there is seldom rain enough in the mountains to make the *wādīs* flow. The most important valley-system is that of W. Aḥwar (also called ʿUthrub), formed by the junction of W. Djaḥr, coming from Dathīna, and W. Ḍēḳa (Laiḳa), which starts S of Ḥabbān [*q.v.*] and passes through the highland of Munḳaʿa. Here live Ḥimyaritic clans (*mashāʾikh*), the Ḳumūsh in W. Labākha and Ahl Shamʿa in Maḥfid S of Yeshbum; they exercise a certain authority over the primitive bedouins of the tribe Bā Kāzim, who are scattered all over the W and S parts of the territory. Other towns in W. Ḍēḳa are: Khabr, Shadjma and Ḳulliyya. On the coast are small villages, inhabited by fishermen. The Sultan resides at Aḥwar (Ḥawar), ca. 5 km from the coast and a little E of the wādī. Just as Abyan and Laḥdj, Aḥwar properly denotes the district, then its centre, al-Madjābī (acc. to Landberg II, 273, 326, 1834), which is a series of villages rather than a town. The population (ca. 5,000) is chiefly agricultural. A treaty with the British of 1888 was renewed in 1944 by Sultan ʿAydarūs b. ʿAlī (murdered in 1948). The adviser agreement has resulted in better security and a revival of agriculture and trade. There is an aerodrome and a wireless station. One sub-grade and one indigenous school are reported in the district.

(with map); Amīn Rīḥānī, *Mulūk al-ʿArab*, i, 1929, 384; Doreen Ingrams, *A survey of social and economic conditions in the Aden Protectorate*, 1949, *passim* (with map). (O. Löfgren)

AWLIYĀ ATA, (T., "holy father") is the old name of the city called since 1938 Djambul after the Ḳazakh poet Džambul Džabaev (1846-1945), which lies on the left bank of the Ṭalās in the Ḳazakh SSR. Until 1917 it was the capital of the district of the Sīr Daryā in Russian Turkistān and obtained its name from the grave of the holy man Ḳara Khān (which is mentioned as early as the 17th century; see Maḥmūd b. Walī, *Baḥr al-Asrār*, MS India Office 545, fol. 119r). His mausoleum dates from the 19th century and bears no inscription. On the other hand the grave of the "little holy one" (*Kičik Awliyā*) there is an inscription of 660/1262; the grave is that of the prince Ulugh Bilge Iḳbāl Khān Dāʾūd Beg b. Ilyās. (The inscription is published in *Zap. Vost. Otd. Imp. Russk. Arkheol. Ob.va*, xii, V.)—The city of Awliyā Ata which came into being only in the 19th century, was conquered by the Russians in 1864, became a fortress, and contained, in 1897, 12,006 inhabitants; it was famous for its fruit growing and its cattle and wool trade. In the surrounding district of Awliyā Ata (71,097 sq.km., with 297,004 inhabitants) ancient Turkish inscriptions were found in 1896 (*Zap. etc.*, xi).

The present day city of Djambul lies on the Turksib line just north of the frontier of the Ḳirgiz SSR, and contained in 1926 19,000 and by 1939 as many as 62,700 inhabitants. It possesses a sugar, a meat processing, and other factories, and is besides a centre of trade. The district of Djambul (since 1936) contains 138,600 sq.km. and is mountainous in the south; in the north there lies the Bad Pak Dala steppe.

Close to Awliyā Ata—Djambul lay evidently the city of Ṭarāz [*q.v.*], which may be regarded as its precursor.

(W. Barthold-[B. Spuler])

AWLONYA, Alb. Vlora, Valona, town in southern Albania. (see Arnawutluḳ) Awlonya, usually called Valona, is today a town of about 10,000 inhabitants. It lies in the bay of the same name, and is some 2½ m. (4 km.) inland from the harbour. It played an important part in antiquity as Aulon (hence Avlona). Concerning its history in the Middle Ages, cf. Konst. Jireček, *Valona im Mittelalter*, in: Ludwig v. Thallóczy, *Illyrisch-albanische Forschungen*, i, Munich and Leipzig 1916, 168/87. In June 1417, the Ottoman armies entered the area of Valona, and occupied the town, together with the fortress of Kanina and Berat. The general Ḥamza-Beg became commander-in-chief of Awlonya, and the Ottomans—who had never before possessed an Adriatic port—soon began to build ships there. In 1418, there was a vain attempt by the seigniory of Venice to regain Awlonya for its former owner Rugina (the widow of Duke Mrkša), a citizen of Venice. Awlonya remained Ottoman property, admitted Christians as farmers of taxes, and was governed by a Sandjaḳ-Bey; it was an important bulwark against the West. As late as the 14th century, the inhabitants (apart from Albanians and Slavs) were mostly Greeks, and deuominationally belonged to the autocephalous archbishopric of Ohrid up to the 18th century. Awlonya was used twice during the 15th century by the sultan Meḥemmed II as a base for a raid on Apulia, Italian territory only 47 m. (75 km.) away. (Otranto; cf. F. Babinger, *Mehmed II. der Eroberer und seine Zeit*, Munich 1953, 430 ff. and Ital. transl., *Maometto II il Conquistatore, ed il suo tempo*, Turin 1956, 570 ff.). As governors, Valona had particularly capable civil servants who were devoted to the sultan, as for instance Gedik Aḥmed Pasha, who maintained this as a base for ambassadors and emissaries sent to Italy. In the nearby fortress of Kanina, there were the Vloras, who had been there

since the time of Bāyezīd II and were related to him by marriage (cf. Ekrem Bey Vlora, *Aus Berat und vom Tomor*, Sarajevo 1911, *Zur Kunde der Balkanhalbinsel*, No. 13) and who traced their origin back to Ghāzī Sinān-Pasha (cf. F. Babinger, *Rumelische Streifen*, Berlin 1938, 24 f.). In the 17th century, the fortress of Awlonya was surrounded by high and thick walls with many bastions. Within the fortress, there was a mosque endowed by Sulaymān the Magnificent, and in the middle there was a tower—identical with the white tower of Salonica—built for the same sultan, supposedly by the Ottoman architect Sinān. There is a clear description by Ewliyā Čelebi of the Awlonya of his day (cf. the German translation by F. Babinger, *Rumelische Streifen*, 25 f.). The order of the Bektāshī appears to have been very active around Valona. After 400 years of Turkish rule, Albanian independence was declared in Awlonya in 1912, and it seceded from the Ottoman Empire. From 1914 to 1920, the town was occupied by the Italians, and during the First World War it formed an important base for military operations in the Balkans. By the Treaty of Rapallo, this bridge-head on the Adriatic and barrier in the Straits of Otranto had to be returned to Albania—with the exception of the island of Saseno. From April 1939 to autumn 1943 Awlonya, together with the rest of Albania, was once again in the hands of the Italians.

Bibliography: Apart from works mentioned in the text of the article, cf. the travels of Pouqueville, W. M. Leake, Lord Holland, L. Heuzey, G. Weigand, C. Patsch, which give a description of old Awlonya. (F. BABINGER)

ʿAWNĪ [see MUḤAMMAD II].

AWRANGĀBĀD, a town and district in the state of Bombay having in 1951 a population of 1,179,404. During the reign of ʿAlāʾ al-Dīn Khaldjī the Hindu rulers of this part of the Deccan were forced to pay tribute to the Muslim invaders. In 1347 it was incorporated in the Bahmanī kingdom and with the disintegration of that kingdom became part of the Niẓām Shāhī sultanate of Aḥmadnagar. Under Malik ʿAmbar, an able Abyssinian minister, Aḥmadnagar offered a stubborn resistance to the Mughal invaders, but, after his death in 1626, it was annexed to the Mughal empire. During the decline of Mughal power in the first half of the eighteenth century Awrangābād was added to the dominions of the Niẓām of Ḥaydarābād. In 1956 it was incorporated in the state of Bombay.

The town of Awrangābād, previously named Khirkī, was the capital of the Aḥmadnagar sultanate in the days of Malik. ʿAmbar It was burned to the ground by Mughal forces in 1612, but was rebuilt and renamed Awrangābād in honour of Awrangzīb, who lived there during his second viceroyalty of the Deccan. The neighbouring village of Khuldābād contains the tombs of Malik ʿAmbar, Awrangzīb, and Āṣaf Djāh, the founder of the Ḥaydarābād state. It was once famous for its gold brocade, but this and other industries have declined.

There is another small town of the same name in the Gāyā district of Bihār.

(C. COLLIN DAVIES)

AWRANGĀBĀD SAYYID, a small town in the Bulandshahr district of Uttar Pradesh, founded in 1704 by Sayyid ʿAbd al-ʿAzīz, a descendant of Sayyid Djalāl al-Ḥusayn of Bukhārā.

(C. COLLIN DAVIES)

AWRANGZĪB, ABUʾL-MUẒAFFAR MUḤAMMAD MUḤYI ʾL-DĪN AWRANGZĪB ʿĀLAMGĪR BĀDSHĀH-I GHĀZĪ (1027-1118/1618-1707), the third son of Shāhdjahān and Mumtāz Maḥall (daughter of Āṣaf Khān) was born at Dhod in Mālwa on 15 Dhu ʾl-Ḳaʿda 1027/3 Nov. 1618.

I. *Early Years* (1027-68/1618-58). He certainly received a very good education according to the standards of the day, for throughout his life he could hold his own in disputations with the *ʿulamāʾ* as well as men of letters, and his Persian compositions have been regarded with respect.

In 1044/1635 Awrangzīb was made a commander of ten thousand and put in nominal charge of a successful campaign against Djūdjhar Singh Bundelā. In 1045/1636 he was appointed Viceroy of the Dakhin but resigned in 1053/1644, either owing to a fit of religious fervour or on account of his bitterness against Dārā, his elder brother, whom Shāhdjahān seems to have had chosen as his successor. Nevertheless he accepted the governorship of Gudjarāt and was thence transferred in 1055/1646 to the command of Balkh, which the Mughal officers had conquered under the nominal command of Murād Bakhsh, the Emperor's youngest son. But the Uzbegs were too strong and Dihlī was too far; Awrangzīb established his reputation as a general and an administrator, but he had to give up Balkh to Naẓar Muḥammad Khān and beat a retreat. Appointed governor of Multān in 1057/1648, Awrangzīb was directed by the Emperor to recapture Ḳandahār from the Persians. He besieged Ḳandahār twice — in 1058/1649 and 1061/1651—but the enterprise was too difficult and he had to retreat. Awrangzīb can hardly be blamed for this, for Dārā Shukōh to whom the third siege of Ḳandahār was assigned failed even more disastrously.

Awrangzīb was assigned the Viceroyalty of the Dakhin for a second time in 1062/1652. His revenue expert, Murshid Ḳulī Khān, did much to settle that desolated territory by his revenue system (*dhara*). In 1065/1655 Awrangzīb laid siege to Gulkunda and could have extinguished that kingdom but the Emperor ordered him to accept a tribute and make peace. In 1066/1657 he attacked Bidjāpūr and had captured Bidār and Kalyānī when orders once more came from the Emperor directing him to accept peace terms. Soon after that Shāhdjahān fell ill (27 Dhuʾl-Ḳaʿda 1067/6 Sept. 1657) and his four sons prepared to fight for the throne.

II. *War of succession*, 1067-68/1658-59. The war of succession shows Awrangzīb at his best as a general and an administrator; he was never to attain that standard again. Dārā Shukōh, the heir-designate at Āgra, had the prestige of the imperial authority and the advantage of moving on interior lines. But he showed himself lacking both in capacity of organisation and strategy. Shudjāʿ, the second son, who was governor of Bengal, assumed the crown (as did the youngest brother, Murād) and moved towards the capital. But he was decisively beaten at Bahādurpūr (11 Djumādā I 1068/14 Feb. 1658) by the imperial army under Radja Djai Singh and Sulaymān Shukōh and fled back to Mungīr. But Dārā's southern army, under Djaswant Singh, could not prevent Awrangzīb and Murād from joining their forces near Udjdjain. The two brothers crushed Djaswant's forces at Dharmat (12 Radjab 1068/15 April 1658) and then crossing the Chambal, defeated Darā decisively at Sāmūgarh, eight miles from Agra (26 Shaʿbān 1068/29 May 1658). Awrangzīb interned his father in the Āgra fort and then arrested Murād near Mathurā and sent him to Gwāliar where he was executed in Rabīʿ II-Djumādā I 1072/ Dec.

1661. Awrangzīb crowned himself hurriedly at Dihlī and then pursued Dārā as far as Multān. Then he had to march eastwards to meet Shudjā', whom he defeated signally at Khadjwāh, near Allāhābād (10 Rabī' II 1069/5 Jan. 1659). Leaving Mīr Djumla to pursue Shudjā' to Arrakān, where that unfortunate prince met his death, Awrangzīb once more marched west because Dārā, supported by Shāh Nawāz Khān, the governor of Gudjarāt, had entrenched himself at Deorai, near Adjmēr. Dārā was defeated after a three day battle (28 Djumādā II 1069/23 March 1659) and, while he was fleeing towards Ḳandahār, Malik Djuwān, his Balučī host, captured him and brought him to Āgra, where, after being paraded with every disgrace, he was put to death as a heretic. Awrangzīb's power was now unchallenged and he celebrated his second coronation on 14 Ramaḍān 1069/5 June, 1659.

First half of the reign, 1068-92/1658-81. The Mughal Empire during Awrangzīb's long reign was really ruined by a series of wars, many of which were of his own seeking. His general, Mīr Djumla, conquered Kuč Behār and Assām (1071-3/1661-3) with a terrible loss of life, including his own, but the territory was lost within four years. The Paṭhāns rose in revolt—the Yūsufzaīs in 1077/1667 and the Afrīdīs in 1083/1672—but though the Emperor stationed himself at Ḥasan Abdāl (Rāwalpindī district), the efforts of the imperial officers were strangely unavailing and peace could not be restored till 1085/1675. The death of Mahārādja Djaswant Singh of Mārwār on 25 Shawwāl 1089/10 Dec. 1678, started the Rādjpūt war. Awrangzīb stationed himself at Adjmēr for the better conduct of the campaign, but his own son, Prince Akbar, rebelled against him and fled to Sambhādjī. The Emperor made peace with Rāna Rādj Singh in Djumādā I or II 1092/June 1681, but the Raṭhors of Mārwār continued their struggle till Adjīt, son of Mahāradja Djaswant, entered Djodhpur as a victor in 1118/1707. Meanwhile a new opponent of the Empire had risen in the Deccan, Shīwādjī son of Shāhdjī Bhonsla, a first rate diplomat, guerrilla warrior and organiser of victory. Shāyista Khān, the Emperor's uncle, was sent against him and failed disastrously, but Djai Singh, who succeeded Shāyista, compelled Shiwādjī by the treaty of Purandar (Dhu 'l-Ḳa'da-Dhu 'l-Ḥidjdja 1075/June 1665) to hand over 23 out of his 37 forts. Shīwādjī came to Awrangzīb's court, found that he would only be given the status of a *pandj-hazārī* (commander of five thousand), and pretended to faint owing to a weak heart; he was interned by the Emperor's order but succeeded in escaping back to his homeland. In 1080/1669 he began offensive operations against the Empire, plundered Sūrat for a second time (1081/1670) and started a series of plundering raids for the levy of *čauth* (one-fourth) against the imperial territories. Though Shīwadjī, who had crowned himself in 1085/1674, died in 1091/1680, Mughal administration in the Deccan was completely demoralised. Meanwhile all the great officers of Awrangzīb, including even Radja Djai Singh, had failed disastrously against Bidjāpūr. In Sha'ban-Ramaḍān 1092/Sept. 1681 Awrangzīb decided to march to Burhānpūr; he was not destined to return to northern India again.

Second half of the reign, 1092-1118/1681-1707. In spite of the increasing inefficiency of the imperial civil and military machine, which Persian writers have loved to make the object of their humour, the Emperor succeeded in his three immediate objectives. The city of Bidjāpūr, governed by a minor king, Sikandar 'Ādil Shāh, and torn by internal strife, only surrendered after it had withstood a siege of sixteen months (23 Shawwāl 1097/12 Sept. 1686. Gulkanda was conquered after a siege of eight months, owing to the treachery of one of its principal officers (14 Dhu'l-Ḳa'da 1098/21 Sept. 1687). Lastly, Sambhādjī, son of Shiwādji, was captured at Sanganeshwar and executed (26 Sha'bān 1100/15 June 1689). But this did not bring the Deccan under Awrangzīb's control. The absence of a centralised Mahratta power left the field open to Mahratta captains—half heroes, half bandits—and the imperial officers often preferred to make a separate peace with them. Forts were captured and lost. "All the various tribes residing in central and southern India were up in arms with Mahratta aid and concert against the officers of the Emperor and the cause of law and order in general." In the midst of this turmoil Awrangzīb died on 27 Dhu 'l-Ḳa'da 1118/2 March 1707.

One need not go beyond these exhausting wars to discover the reason for the failure of the Mughal Empire. The picture left for us by Khāfī Khān, a historian whose family had been in Awrangzīb's service, is one of increasing corruption, harassment of the peasantry, neglect of government orders by officers in charge and failure of the state's financial resources. Whatever the reason, the Emperor was lax in the maintenance of discipline and Khāfī Khān repeatedly tells us that no imperial officer, whatever his offences, was seriously punished. Awrangzīb's religious policy has been a matter of controversy, which will continue to simmer on for some time to come. Equally valid evidence seems to be available on both sides. Even with reference to his *djizya*, (1090/1679), a retrogressive poll-tax on the higher classes of Hindus at the rate of Rs. 3-1/3, 6-2/3 and 13-1/3 (but not higher) per year, we have Khāfi Khān's statement that it could not be levied and remained largely a tax on paper. To avoid misunderstanding it should be added that the term *djizya* was used in a very loose sense in medieval India and often meant any tax other than the land-tax (*kharādj*). [See also AL-FATĀWĀ AL-'ĀLAMGĪRIYYA].

Bibliography: A complete list of all the available authorities on Shāhdjahān and Awrangzīb is given in Storey, 564-99. Only the more important printed works are listed here: Djalāl Ṭabāṭabā'ī, *Pādshāh-nāma*, Lucknow 1892; Salih Kanboh Lāhawrī, *'Amal-i Ṣāliḥ* (Bibliotheca Indica); *Wāḳi'āt-i 'Alāmgīrī* (ed. by Syed Ẓafar Ḥasan), Aligarh; *'Ālamgīr-nāma* (Bibliotheca Indica); *Waḳā'i'-i Ni'mat Khān 'Ālī*, Lucknow and Cawnpore; the *Djung-nāma* of Ni'mat Khān 'Ālī, Lucknow and Cawnpore, also English translations by Chandra Lal Gupta and Agan Lal Verma (Agra 1909) and by Baij Nath Figār (Lucknow 1928); *Ma'āthir 'Ālamgīrī* (Bibliotheca Indica); *Aḥkām-i 'Ālamgīrī*, Persian text and English translation by Sir Jadunath Sarkar; Khāfī Khan, *Muntakhabul Lubāb* (Bibliotheca Indica). Two contemporary works—Bernier, *Travels* and Manucci, *Storia do Mogor*, 1656-1708 (Ed. W. Irvine)—are available in English. Among modern works, Sir Jadunath Sarkar, *History of Awrangzeb*, 5 vols. stands pre-eminent. Reference may also be made to Mawlānā Shiblī, *Awrangzēb 'Ālamgīr* (in Urdu); Lane Poole, *Awrangzēb*; Zaheeruddin Faruqi, *Awrangzēb* (Newal Kishore); Sir J. N. Sarkar, *Anecdotes of Awrangzeb*.

(W. IRVINE-[MOHAMMAD HABIB])

AWRĀS (Aurès; Αὐράσιον ὄρος in Procopius, *De bello vand.*, i, 8, ii, 12-13. 19-20) mountain massif of Algeria, forming part of the Eastern Saharan Atlas. So far it has not been possible to discover the meaning of the word Awrās.

The Awrās is a compact massif 8,000 sq. km. in area, which extends from the depression leading from Batna to Biskra as far Khenchela and the valley of the Wādi 'l-ʿArab, between the high plains of southern Constantine (Sbā̱kh̲) and the Saharan depression of the Zibān. Its summits (D̲j̲ibāl Chélia, 2,327 m., and Kef Mahmel, 2,321 m., the highest in Algeria) and its ridges tower nearly 1,000 m. above the "South-Aurasian" depression. The western Awrās comprises three long chains running S.W.-N.E., separated by the deep valleys of the Abdi and al-Abiod Wādīs, which discharge through narrow gorges into the Sahara. The eastern Awrās is much more massive. Differences of altitude and aspect create a diversity of bio-geographical zones. The northern and north-western slopes, short and steep, nevertheless have an adequate rainfall and can be cultivated without irrigation; they are covered with forests of holm-oak and, on the often snow-clad peaks, there are forests of cedar and grassy mountain glades. The southern slopes, which are much longer and drier, comprise three zones in which crops are irrigated in terraced fields : a cool zone, above 1,500 m., also often covered with snow, and characterised by forests of holm-oak, pastures, summer crops and walnut-trees; a middle zone, with patches of badly-neglected Aleppo pine and juniper forest, and, in the foothills, winter (barley and wheat) and summer (maize and sorghum) cereal crops, figs, apricots; below 800 m., the first palm-trees appear, growing along the *wādīs*, at the foot of slopes on which are found only occasional junipers, clumps of *alfa* and extremely poor pasture.

The inhabitants of the Awrās live on cereals, which they sow on the mountain and at the foot of the northern (Chara) and southern (Sahara) slopes, fruit, and a few vegetables, and by stockbreeding, in which goats play a greater part than sheep. For the cultivation of the crops, the men move from the northern slope to the Sahara. The winter migration, during which the flocks are moved from the high zone to the foot of the mountain, involves families in a semi-nomadic way of life.—The inhabitants of the Awrās are villagers, except in the east, where they live in hamlets of *gourbis* dispersed in the woods. Their villages, often built on the hillside, with the houses in terraces, are sometimes dominated by a *guella* (*ḳalʿa*, fortified granary). The people of the Awrās (115,000) are still Berber-speaking, except on the borders where there has been penetration by arabicised tribes.

These Berbers are called S̲h̲āwiya by the Arabs. The women continue to speak Berber whilst the men adopt Arabic for use outside the family.

Worked stones show that the Awrās has been occupied since Old Neolithic times. Roman influence is indicated by the ruins of cisterns and irrigation ditches, oil-mill grinding stones, etc. The Byzantines confined themselves to building a line of forts along the foot of the Northern face of the Awrās. When ʿUḳba b. Nāfiʿ [*q.v.*] entered the Mag̲h̲rib, the Berbers inflicted serious losses on him and it was near the Awrās, at Tahūda, that he met his death when returning from his great expedition towards the West. After the destruction of the Kingdom of Kusayla [*q.v.*], the Awrās became the centre of the resistance offered to the Muslims, who only succeeded in suppressing it at the beginning of the 2nd/8th century, after the bloody struggles to which the legend of the Kāhina [*q.v.*] is attached. Following upon these wars, Berbers from Tripolitania and the South of Ifrīḳiya established themselves in the Awrās; converted to Islam willingly or by compulsion, they retained a spirit of independence which was shown by the eagerness with which they adopted heretical doctrines, Ibāḍism in the 2nd/8th century, the Nakkārī doctrines in the 4th/10th century; it was from the Awrās that Abū Yazīd appeared, whose revolt for a brief moment imperilled the Fāṭimid Empire. The Hilālī invasion contributed to the arabisation of the whole area of the mountain massif, but the populations succeeded in retaining their independence intact, escaping from the authority of the Ḥafṣids [*q.v.*], then from the domination of the Turks; the latter, however, set up in the area some chieftains devoted to their policy, whose authority remained precarious. From the 10th/16th century, preachers from the extreme South of Morocco gave the Islam of the Awrās the appearance which it was to retain until about 1935: a religion closely linked with a specific social structure. At this last date, the Algerian *ʿulamāʾ* intervened, especially against the cult of Saints.

The inhabitants of the Awrās have always retained their old political organisation, of which the village remained the basis, a true municipal republic administered by the assembly of the people, or *d̲j̲amāʿa*, in conditions analogous to, though rather more sketchy than, those which existed in Kabylia. The French occupation only superficially put an end to this state of affairs. In 1845 the Duc d'Aumale took Ms̲h̲ūnes̲h̲, whilst Bedeau made the main tribes recognise French authority; further expeditions, however, were required in 1848-1849 and 1850 to repress a revolt; French troops had to intervene again in 1859 and 1879, when risings had broken out. In 1866, the judicial system of the Mālikīs was applied to the Awrās and *Ḳāḍīs* were sent there, but local customary law continued to be applied, as a supplement to Islamic Law and the French Penal system.

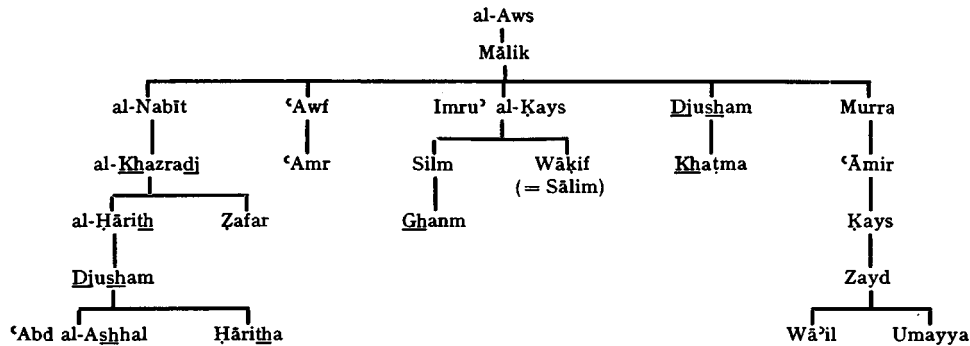
(G. YVER*)

AL-**AWS**, one of the two main Arab tribes in Medina. The other was al-Khazradj, and the two, which in pre-Islamic times were known as Banū Ḳayla from their reputed mother, constituted after the Hidjra the 'helpers' of Muḥammad or Anṣār [*q.v.*]. The genealogy as given by Ibn Saʿd (iii/2,1) is: al-Aws b. Thaʿlaba b. ʿAmr (Muzayḳiyāʾ) b. ʿĀmir (Māʾ al-Samāʾ) b. Ḥāritha b. Imriʾ al-Ḳays b. Thaʿlaba b. Māzin b. al-Azd b. al-Ghawth b. Nabt b. Mālik b. Zayd b. Kahlān b. Sabaʾ b. Yashdjub b. Yaʿrub b. Ḳaḥṭān. The following table gives the genealogical relationships of the chief divisions of the tribe:


The name al-Aws probably means 'the gift' and seems to be a contraction for Aws Manāt, 'the gift of Manāt' (the goddess whom they worshipped). The fuller form tends to be restricted to the clans of Wāḳif, Khaṭma, Wāʾil and Umayya b. Zayd, and was changed in Islamic times to Aws Allāh; but these four clans seem to be called simply 'Banu 'l-Aws' in the Constitution of Medina (Ibn Hishām, 341-3).

The traditional story is that, some time after the emigration from the Yaman led by ʿAmr Muzayḳiyāʾ, his descendants quarrelled, and al-Aws and al-Khazradj separated from Ghassān and settled in Yathrib or Medina, which was then controlled by Jewish clans. For a time Banū Ḳayla were subordinate to the Jews, but under the leadership of Mālik b. al-ʿAdjlān of the Khazradjī clan of Sālim (Ḳawāḳila) they became independent and obtained a share of the palm-trees and strongholds (*(āṭām*, sing. *uṭum*) A contemporary and rival of Mālik was Uḥayḥa b. al-Djulāḥ, chief of B. Djaḥdjabā, a branch of the Awsī clan of ʿAmr b. ʿAwf.

It is to be doubted whether there was at this time any conception of the Aws (or the Khazradj) as a unity. The effective units seem to have been the subdivisions of these two tribes, here called 'clans'. Even the clans may not have been constituted as the genealogies lead one to suppose, since the genealogies, which are later compilations, are entirely patrilineal, whereas there are many indications that matrilineal kinship was important in Medina. The feuds at Medina in the decades before the *hidjra* are commonly said to be between the two tribes, but the sources speak of fighting between clans and groups of clans; and even in the Constitution of Medina the units responsible for blood-money, which are apparently independent political entities, are single clans or groups of clans, like al-Nabīt, which consisted of the clans of ʿAbd al-Ashhal, Ẓafar and Ḥāritha. It is probable that the conception of the Aws and the Khazradj as tribes was fostered in order to create closer ties between the clans in alliance with one another, and that this was happening shortly before the *hidjra* and more particularly after it.

In the generation before the *hidjra* the leading man among the Aws was Ḥuḍayr b. Simāk, who by genealogy belongs to ʿAbd al-Ashhal, but appears at one point as leader of the clan of ʿAmr b. ʿAwf against the Khazradjī clan of al-Ḥārith, while the chief of ʿAbd al-Ashhal was Muʿādh b. al-Nuʿmān. Another leader was Abū Ḳays b. al-Aslat of the clan of Wāʾil, but on several occasions when he was in command of a party his followers fled, and latterly he yielded the supreme command to Ḥuḍayr where both were present. During this period various small feuds became linked with one another, until there was a conflagration in which most of Medina and some of the surrounding nomads were involved. After a serious defeat the clans of ʿAbd al-Ashhal and Ẓafar had withdrawn from Medina, while ʿAmr b. ʿAwf and Aws Manāt had made peace. The oppressive policy, however, of the Khazradjī leader, ʿAmr b. Nuʿmān of Bayāḍa, drove the Jewish tribes of Ḳurayẓa and al-Naḍīr into alliance with the two exiled clans, and enabled them to fight back. They were also helped by the nomadic clan of Muzayna, and the other clans of the Aws joined in, with the exception of Ḥāritha, which had been driven from its lands by ʿAbd al-Ashhal. The ensuing battle of Buʿāth went in favour of the Aws and their allies, but their leader Ḥuḍayr was killed. Peace was not made after this battle, but there was no further large-scale fighting.

Such was the situation when Muḥammad commenced negotiations, first with the Khazradj and then with the Aws also. While nearly all the Khazradj entered into agreement with Muḥammad, many of the Aws held back, viz. the clans of Khaṭma, Wāʾil, Wāḳif and Umayya b. Zayd, and some of ʿAmr b. ʿAwf. Nevertheless the conversion of Saʿd b. Muʿādh b. al-Nuʿmān, chief of ʿAbd al-Ashhal,

was a decisive event in the growth of Islam in Medina, and from the battle of Badr until his death in 5/627 he was the leading Muslim of the Banū Ḳayla or Anṣār [*q.v.*]. The enmity between the Aws and the Khazradj died away gradually, and is not heard of after the institution of Abū Bakr as caliph.

Wüstenfeld, *Geschichte der Stadt Medina*, Göttingen 1860, 32-40); idem, *Khulāṣat al-Wafāʾ*, Mecca 1316; Ibn al-Athīr, i, 492-511; J. Wellhausen, *Skizzen und Vorarbeiten*, Berlin 1889, iv/1, 'Medina vor dem Islam'; A. P. Caussin de Perceval, *Essai sur l'histoire des Arabes avant l'Islamisme*, Paris 1847, ii, 202, 212, 646-90. (W. MONTGOMERY WATT)

AWS B. ḤADJAR, the greatest pre-Islamic poet of the tribe of Tamīm; al-Aṣmaʿī frequently praises and comments on his poetry; in contrast the early anthologies, except the *Ḥamāsa* of al-Buḥturī, do not mention him at all. Whether al-Farazdaḳ, when he boasts of having "inherited from the family of Aws a tongue like poison", means our poet, cannot be ascertained. Fragments of some length do not appear before the time of Ibn al-Sikkīt, who probably wrote a commentary to his *dīwān*, and quotes him in his lexicographical work.

With the early critics Aws was famous for his description of the (wild) ass, the bow, and "noble virtues". He exhorted the Lakhmid king ʿAmr b. Hind to avenge his father al-Mundhir III, who was murdered in 544, and mentions the battles of al-Kāʿ and al-Suʾbān in which his tribe was involved. A charming anecdote tells the story of his acquaintance with Faḍāla b. Kalada of the Banū Asad to whom he dedicated a well-known elegy. Aws seems to be earlier than al-Nābigha.

Tradition relates that Zuhayr was the transmitter (*rāwī*) of both Aws and Ṭufayl al-Ghanawī. Krenkow makes Aws the *rāwī* of Ṭufayl without indicating his source.

AWTĀD (Ar., sing. *watad*), literally "pegs", the 3rd category of the hierarchy of the *Ridjāl al-Ghayb*, comprising four holy persons, also called *al-ʿUmūd*, "the pillars" [see ABDĀL]. Each of them is charged with the surveillance of one of the four cardinal points, in the centre of which they have their dwelling-place. (I. GOLDZIHER)

AL-ʿ**AWWĀʾ** [see NUDJŪM].

AWWAL (fem. *ūlā*, plur. *awāʾil*), first. — I. As a philosophical term, *awwal* was brought into Muslim thought by the Arab translators of Aristotle and Plotinus as the equivalent in Arabic of the Greek words πρῶτος and ἀρχαί. Thus in the *Pseudo-Theology* of Aristotle, that is to say, in the Arabic translation of the last three *Enneads* of Plotinus, *awwal* indicates either the *First Being* or the *First Created*. Similarly, in the Ikhwān al-Ṣafā we already find the expression *al-ḳaṣd al-awwal* to express the first causality derived from God, the same expression being again found in the *Budd al-ʿĀrif* and the *Sicilian Questions* of Ibn Sabʿīn. The word *awwal* is likewise used by the Muʿtazilites, al-Kindī and al-Fārābī; but it was Ibn Sīnā who systematised its use in philosophical terminology. The word *awwal* subsequently became customary among those Eastern and Western thinkers familiar, either directly or indirectly, with the thought of Avicenna.

II. Used in the singular, *awwal* indicates among the philosophers God in the sense of *First Being*. With the expression the *Necessary Being*, it is the name of God most frequently employed by Muslim philosophers; in this sense it is usually employed alone, though at times such reiterative expressions as *al-mabdaʾ al-awwal*, *First Principle*, are to be encountered.

III. In several compound expressions, *awwal* indicates essentially causal priority, and secondarily temporal priority, as in the terms *al-maʿlūl al-awwal* (First Caused), *al-adjsām al-ūlā* (*First or Elementary bodies*), *al-ḥaraka al-ūlā* (*First movement*).

IV. Used in the plural, *awāʾil* [*q.v.*] indicates the first ones in date and, in philosophy, the thinkers of former ages.

V. Likewise in the plural, *awāʾil* also indicates the *first principles* in the order of being and knowledge; for example: *al-mabādi ʾal-ūlā*, the *First Principles* in the order of Being or *Separate Intelligences*, or *al-maʿḳūlāt al-ūlā*, the *First Intelligibles* that is to say, the *First Principles* of Knowledge.

VI. From *awwal* is derived the abstract noun *awwaliyya* (plur. *awwaliyyāt*), which in the Philosophers indicates the essence of *that which is first*.

VII. In the plural, *awwaliyyāt* translates τὰ πρῶτα and ἀρχαί indiscriminately and means the *First Principles* in the order of knowledge, that is to say, the propositions and judgements immediately evident by themselves.

AL-**AWZĀʿĪ**, ABŪ ʿAMR ʿABD AL-RAḤMĀN B. ʿAMR, the main representative of the ancient Syrian school of religious law. His *nisba* is derived from al-Awzāʿ, a suburb of Damascus, so called after a South Arabian tribe, or an agglomeration (*awzāʿ*) of clans, who lived there (Ibn ʿAsākir, *Taʾrīkh Dimashḳ*, ed. al-Munadjdjid, ii, 1954, 144; Yāḳūt,

i, 403 f.). An ancestor of his had been made a prisoner in Yaman (al-Masʿūdī, *Murūdj*, vi, 214). He seems to have been born in Damascus, and he did part of his studies at least in al-Yamāma, where he went in Government employment. Later, he moved to Bayrūt where he died, about 70 years old, in 157 (774); he is buried in the village of Ḥantūs, near Bayrūt, where his tomb is still visited by pilgrims (Heffening, 148, n. 4).

Al-Awzāʿī's writings, which he dictated to his disciples and of which the *Fihrist*, 227, mentions a *Kitāb al-Sunan fi 'l-Fiḳh* and a *Kitāb al-Masāʾil fi 'l-Fiḳh*, have not been preserved in their original form. His *Musnad* (Ḥādjdjī Khalīfa, ed. Flügel, no. 12006) was presumably composed at a later date, as were the other works of this kind. Al-Awzāʿī's opinions, however, are extensively quoted (1) in Abū Yūsuf's *al-Radd ʿalā Sīrat al-Awzāʿī* (Cairo 1357; also, with comments by al-Shāfiʿī, in his *K. al-Umm*, vii, Būlāḳ 1325, 303-336; cf. Ḥādjdjī Khalīfa, ed. Flügel, no. 251), a refutation of al-Awzāʿī's criticisms of the opinions of Abū Ḥanīfa; an original version of al-Awzāʿī's *K. al-Siyar*, by one of his immediate disciples, was still in existence in the 11th/17th century (Heffening, 149 f.); (2) in al-Ṭabarī's *K. Ikhtilāf al-Fuḳahāʾ* (ed. F. Kern, Cairo 1902, and J. Schacht, Leiden 1933).

Al-Awzāʿī's opinions, as a rule, represent the oldest solutions adopted by Islamic jurisprudence. The archaic character of his doctrine makes it likely that he, who was himself a contemporary of Abū Ḥanīfa, conserved the teaching of his predecessors, who are nothing more than names for us, in the generation before him. His systematic reasoning, though explicit, is on the whole rudimentary; it is overshadowed by his reliance on the "living tradition". By this he understands the uninterrupted practice of the Muslims, beginning with the Prophet, maintained by the first Caliphs and by the later rulers, and verified by the scholars; this is the "*sunna* of the Prophet", even though it may not be expressed in formal traditions going back to him. Al-Awzāʿī opposes this idealised concept of *sunna* to the actual administrative practice, and he makes the "good old time" last until the killing of the Umayyad Caliph al-Walīd (II) b. Yazīd (II) in 126 (744) and the civil war which followed it, so that it includes most of the Umayyad period. In this concept of *sunna* and in other respects, al-Awzāʿī's doctrine comes nearest to that of the ancient ʿIrāḳians.

Al-Awzāʿī shows as yet no trace of the anti-Umayyad feeling which became fashionable under the ʿAbbāsids, and it is likely that his attitude to the ʿAbbāsids was cool (this is reflected by an anecdote about his meeting with the ʿAbbāsid conqueror ʿAbd Allāh b. ʿAlī, though the story itself seems to be legendary; cf. Barthold, in *Isl.*, xviii, 244). Nevertheless, he succeeded in gaining the respect and esteem of the new rulers, and in particular of the future Caliph al-Mahdī as a prince, whom he seems to have met. The applications which al-Awzāʿī addressed to this prince, to the Caliph al-Manṣūr, and to influential persons at the Court, on behalf of political prisoners, the public of Bayrūt, and others (Ibn Abī Ḥātim, *Taḳdimat al-Maʿrifa*, 187 ff.), are doubtless genuine. The statement that Ibn Surāḳa (governor of Damascus on behalf of the Umayyad al-Walīd II and of the ʿAbbāsid ʿAbd Allāh b. ʿAlī; cf. al-Ṣafadī, *Umarāʾ Dimashḳ*, ed. al-Munadjdjid, Damascus 1955, 55) made al-Awzāʿī come from Bayrūt to Damascus (Ibn Abī Ḥātim, *ibid.*, 187), is difficult to fit into what little is known of al-Awzāʿī's biography.

A number of al-Awzāʿī's disciples, amongst whom al-Walīd b. Mazyad (d. 203) is prominent, are mentioned by Yāḳūt (i, 785 f., s.v. Bayrūt). Similarly to what happened in the other schools of religious law, the ancient school of the Syrians transformed itself into the personal *madhhab* [*q.v.*] of al-Awzāʿī. It prevailed not only in Syria but in the Maghrib, including al-Andalus (Islamic Spain), before it was superseded by the *madhhab* of Mālik, in the Maghrib about the middle of the 3rd (9th), in Syria towards the end of the 4th (10th) century (J. Lopez Ortiz, *La recepción de la escuela malequí en España*, Madrid 1931, 16 ff.; R. Castejon Calderon, *Los juristas hispano-musulmanes*, Madrid 1948, 32, 43 ff.; Heffening, 148; Barthold, *ibid*). The anecdotes on how al-Awzāʿī overcame Mālik in disputation (Ibn Abī Ḥātim, *ibid.*, 185 f.), reflect the struggle between the two schools.

ĀYA—plu. *āyāt*, a sign, token, miracle, verse of the Ḳurʾān. The original meaning is a *sign* or *token* and as such is found in the pre-Islamic poetry (plur. *āy* and *āyāt*, with plur. of plur. *āyā*, cf. *Nöldeke's Belegwörterbuch*, sub. voc.), where it is the equivalent of the Hebrew *ōth*, Aramaic *āthā*; Syriac *āthā*, the plur. *ōthōth* occurring in the Lachish Letters (iv, 11) for the fire-beacons used for signalling. This original meaning occurs in the Ḳurʾān, where the ark is called the token of Saul's kingship (ii, 248/249), and the sun and moon are signs of day and night (xvii, 12/13). The wonders of nature are also tokens of Allāh's presence and power (xxx, 20/19 ff.; xii, 105 etc.), but such are also portents from which men should take warning (ii, 164/159, 266/268; xxvi, 67 ff. etc.). It is the duty of the Messengers whom Allāh sends to rehearse to men these demonstrations of Allāh's power, or wisdom, or judgment as they appear in nature or in history, and it is the condemnation of communities that they reject the signs of Allāh that are rehearsed to them (ii, 61/58; x, 73/74; xxvii, 81/83 ff.; vii, 182/181). From wonder to miracle is an easy step (xliii, 47; iii, 49/43; xiii, 38; xxvi, 154), and by a further step the accounts telling of such portents or tokens of Allāh's might could be called His signs (ii, 252/253; xii, 7; xv, 75; xxxiv, 19/18; v, 75/79). By a final step each verse of such an account becomes a sign (vi, 124; xxviii, 87; iii,

108/104 etc.). In the Massorah to the Ḳurʾān *āyā* (plur. *āy*) always means verse, and there was considerable discussion as to verse-endings (*ruʾūs al-āy*), verse-numbering, and the *faḍāʾil* of certain verses such as the "Throne Verse" (ii, 255/256), the "Light Verse" (xxiv, 35), the final verses of *sūra* ii, etc., which brought peculiar blessings to such as recited them in specified ways. These various meanings of *āya*, save the last, correspond closely with Jewish and Christian usage, where the particular religious use of the word is for the signs that attest the divine presence and which accompany and testify to the work of the Prophets.

AYA SOFYA, the largest mosque in Constantinople (Istanbul), and at one time the leading Metropolitan Church of Eastern Christendom. It was known generally as Ἡ Μεγάλη Ἐκκλησία up to 1453, having been called Σοφία (without the article) around 400 A.D., and since the 5th century, Ἡ Ἁγία Σοφία.

According to the most recent research, the original Aya Sofya was not built by Constantine the Great, but, in accordance with his last wishes, by his son, Constantius, after the latter's victory over his brother-in-law Licinius. It was then built in the shape of a Basilica, and consecrated on 15 February 360 (cf. A. M. Schneider, *Die vorjustinianische Sophienkirche*, in *BZ*, 1936, 36). This" Great Church" met with frequent and diverse changes. There were fires and earthquakes which ravaged it (the first wooden-roofed basilica went up in flames on 20 June 404 on the occasion of the expulsion of Bishop John Chrysostom). Reopened on 8 October 415, it remained undamaged for over a century until the night of the 13th of January 532, when once again it went up in flames (as did the greater part of the city, including the imperial archives) during the fight between the rival hippodrome factions.

The emperor Justinian immediately made known his decision to rebuild the church in such splendour as had never been seen before. Even before this, Justinian had already ordered that valuable materials from old monuments in the provinces of his vast empire (where heathen works of art were deliberately left to decay) were to be sent to the imperial residence, and after the fire these materials were largely used to rebuild Aya Sofya. Two of the greatest architects of all times, Anthemius of Tralles and Isidore of Miletus, were placed in charge of the reconstruction. Since the emperor had ordered that the new building must be proof against both fire and earthquake, they decided to use a dome-and-cupola design as being the surest means of escaping these dangers. The opening of this magnificent building took place on 27 December 537 with enormous pomp, and the proud Justinian could exclaim "Solomon, I have surpassed you!" Even during his own reign, however, the eastern part of the dome collapsed in an earthquake (on 7 May 558) and the ambo, tabernacle, and altar were smashed. The dome had been designed too flat, and it was now raised by more than 20 feet, whilst the supports of the big pillars were strengthened. It was ready for reopening on 24 December 562. The church has an enviable position: to the south there is the Augusteum, with an equestrian statue of Justinian, meant for national festivities; to the north (well within the Saray walls of today) are court churches, noble monasteries and the palaces of the court officials; and to the east, that is to say towards the sea, stands the imperial palace.

The west presented a court-yard called the Atrium, flanked by open halls, to the visitor. From here, a number of doors (perhaps four or five) led into an enclosed hall (Exonarthex) which still belonged to the Atrium. From this, five doors led to the actual Narthex (Esonarthex), in addition there is a door at the extreme north and south ends. Further passages branch off, and nine rectangular openings from the entrances to the inner part of the church. The centre one of these was elaborately coloured and used to be the king's door.

The area covered by the church is almost square: the internal length is about 75 metres (excluding the main apse to the east) and the breadth is about 70 metres. The floor is shaped in the form of a cross, and above it the almost hemispherical pendentive dome rises to a height of 56 metres. Since the outside walls alone could not have carried it, it had to be supported in addition by four pillars, and these in turn are supported by small but structurally important arches and their corresponding pillars. To the east and west of the dome, there are two further semi-circular chambers, each of which has three semi-domes over it. Of greatest importance for the shaping of the interior was the two-storey arrangement of all the side-chambers adjacent to the centre aisle, where the galleries (as was customary in Byzantine churches) were reserved for women. The weight of the building is carried by 107 columns (40 below and 67 above), usually monoliths of coloured marble (*verde antico*), but in some cases of red porphyry. An overwhelming impression was created for the mediaeval spectator by the wealth of ornament: the lavish use of marble everywhere, the pictures of Christ and of the Mother of God, the Prophets, Apostles, and other saints which turn the walls into a sea of colour, not to mention the mighty Seraphim (in the spherical triangles of the main dome), and the gold-mosaic which adorned the dome and walls with such a splendour as had never been seen before. The mosaic ornamentation was probably not finished until the last years of Justinian, and during the reign of Justinos II.

The original walls and vault of the original building consist of brick throughout. The sanctuary (βῆμα) lay to the east of the central part of the church and was divided from it by an iconostasis of considerable height, adorned with pictures and open-work pillars. It contained the altar and the ciborium and led into the main apse. There were 425 priests (who admittedly also served three other churches) and 100 doorkeepers in the days of Justinian. Shortly before the collapse of the Byzantine Empire, the number of church officials in the Aya Sofya was estimated at 800.

The first major repairs to Aya Sofya were made in the time of the emperor Basil II. A part of the dome collapsed during an earthquake on 26 October 986. The emperor had the damage repaired (the clumsy flying buttresses on the western façade probably date from that time; cf. A. M. Schneider, *Die Grabungen im Westhof der Sophienkirche*, Berlin 1941, 32 ff.). In 1204 the church was severely damaged during the Latin

sack of Constantinople, when it was ruthlessly plundered, the holy vestments and vessels even being used to clean and feed the invaders' horses; yet it became, nevertheless, the chief church and place of coronation for the new dynasty. The most extensive changes still undertaken in Byzantine times were made in the 14th century. In the first half, the walls were strengthened on all sides, the eastern wing in particular being buttressed from outside by high and broad supports.

We have no description of the interior of Aya Sofya in Byzantine times from Muslim reports. The first Muslim who mentions the cathedral in detail is Aḥmad b. Rusta (124 ff.; trans. G. Wiet, Cairo 1955, 139 ff.); the author lived around 290/902-903 but derives his description from Hārūn b. Yaḥyā, who was a prisoner of war in Constantinople some time during the ninth century. Hārūn does not really describe the building, which he calls al-Kanīsa al-ʿUẓmā (i.e. Μεγάλη Ἐκκλησία), but he does describe in vivid detail a feast-day procession, to the church of the Byzantine emperor. On this occasion, the Muslim prisoners of war were led to the church (this might perhaps mean to the atrium of it), and there they greeted the emperor with the cry "May God preserve the king for many years" (*ibid.* 125). One detail is of particular importance: he mentions that beyond the *Madjlis* (by which he presumably meant benches) there were 24 small doors with openings a span square, at the western gate (these are not mentioned anywhere else). One of these little doors opened automatically, and closed again of its own accord, at the end of each of the 24 hours. With the decline of the Caliphate, the Muslims after Ibn Rusta grow more and more silent about far-away Constantinople. Only four centuries later, after Asia Minor had been occupied by Turkish tribes, Shams al-Dīn Muḥammad al-Dimashḳī (ed. Frähn and Mehren, St. Petersburg, 1865, 227)—who, however, is dependent on the work of the slightly earlier paper-merchant Aḥmad (*ibid.*, VIII)—mentions the Aya Sofya in a few lines. The one remarkable thing is his statement that the church harboured an angel whose home was surrounded by a barrier (*darābazīn*), presumably meaning the area of the altar and ciborium together with the iconostasis itself.

A few decades later, Muḥammad b. Baṭṭūṭa (ed. Defrémery and Sanguinetti, ii, 434) is the first to ascribe the erecting of Aya Sofya to Āṣaf b. Barakhyā [*q.v.*], supposedly a cousin of king Solomon. Ibn Baṭṭūṭa's main merit is the detailed description of the atrium. As he stresses, he was not allowed to enter the church itself, possibly because he would not comply with the order (mentioned by him) to kneel before the cross at the entrance.

When the Turks conquered Constantinople (29 May 1453), crowds of the defenceless population fled into the church, in the firm belief that an angel would appear in the sky and drive the victors forever back into their Asiatic home-country after they had advanced as far as the column of Constantine the Great. However, the Turks came on, smashed the doors of the house of God, and dragged the frightened people—both men and women—away to slavery. Eye-witnesses do not, however, mention any blood-bath in the holy place, as was often stated to have been the case. After this wild spectacle of loot and plunder, the ruler himself—though not seated upon a horse, as it was usually stated—entered the church. His *muʾadhdhin* spoke the invitation to prayer which contains the confession of faith, and he threw himself down—together with his followers—before the one God, and thereby the temple of Constantius and Justinian was dedicated to Islam.

There are very considerable changes in the interior resulting from the rules of the victorious religion. The mosaics which had formerly adorned the walls and vaults, and which had seemed to their Greek creators to have been fashioned for eternity, were hidden under a grey lime-wash (since Ewliyā Čelebī, *Seyāḥatnāme* i, mentions the mosaics, a few must still have been visible in his time, that is to say, in the 17th century). The iconostasis between the priests and the lay folk was torn down, and the rich decorations of the east wing, the *Bēma*, were stripped. As the ancient Byzantine churches faced Jerusalem, whilst the Ṣalāt had to be performed facing Mecca, the Turks have prayed more towards the south, and not towards the eastern wing of the mosque, ever since the days of the conquest. From the time of Meḥemmed II, the preacher— bearing a wooden sword—ascended the pulpit on Fridays, on every afternoon of Ramaḍān, and on Bayrām festivals (see the article ʿANAZA and Juynboll, *Handbuch des islam. Gesetzes*, 84, 87); and there were always two flags by the side of the pulpit. Furthermore, we know that Meḥemmed II erected the mighty buttresses against the south wall, where he also built the first of those high, slim minarets. Selim II erected the two buttresses in the north and the second minaret on the north-east corner. His son, Murād III, was responsible for the other two.

Sultan Murād III undertook thorough repairs of the mosque. In the first place, this meant the correction of minor defects which had come to light as time went on, but he also contributed considerably to the embellishment of the bare chamber. He placed the two huge alabaster urns on the inside near the main entrance; each of which holds 1250 litres; he also donated the two large estrades (*maṣṭaba*). On the right hand one, the Ḳurʾān was recited during most of the day in that chanting intonation which is peculiar to the oriental liturgy of all denominations, whilst the other was meant for the prayer leaders. At great expense, Murād III also gilded the half-moon which crowned the dome. This had a diameter of 50 ells, and had replaced the cross. Thus the Muslim subjects of the Porte could behold the emblem of their faith from as far off as the summit of Bithynian Olympus.

In the second half of the 16th century, the conversion of the churchyard immediately to the south of the mosque into a mausoleum for the sultans was begun. The oldest tomb is that of sultan Selīm II. His son Murād III and his grandson Meḥemmed III are also buried there. Sulṭān Meḥemmed III's 19 brothers, whom he had killed on his accession to the throne, are also entombed here. A few decades later, the dethroned sultan Muṣṭafā I suddenly died, and a suitable grave could not be found immediately; the old baptistry (on the southern side of the narthex), which the Turks had used for oil storage since their conquest, was taken over for the purpose. Later on, the nephew of Muṣṭafā I, Sultan Ibrāhīm, was likewise buried there. Since then, the large oil stores have been kept in the hall and courtyard on the north side of the baptistry.

Sultan Murād IV (1623-1640), whose reign saw a certain measure of general revival, had the bare walls embellished in a memorable way by the great calligrapher Bičaḳdji-zāde Muṣṭafā Čelebī, with large gold-lettered quotations from the Ḳurʾān. Some

of these letters, such as *Alif*, are as much as ten ells long. These beautifully painted and often intertwining verses are, however, dwarfed by the clear and boldly drawn names of the first four Caliphs (these are written by Teknedji-zāde Ibrāhīm Efendi, cf. *Ḥadīḳat al-Djawāmiʿ*, i, 4). There is a magnificent *minbar* dating from those days. It is also known that it was Aḥmed III who erected the enclosed raised throne for the ruler, the *maḳṣūra*, on the north side of the main apse. Maḥmūd I (1730-1754) donated the large sultan's loggia on the first floor in the gallery and also a charming fountain and a school (both in the courtyard on the southern side), the large eating-house (*ʿimāret*) in the north, and above all the valuable library in the mosque itself. There is, however, indubitable proof that this last was built on an older foundation already in the mosque. All of this is essentially part of the House of God in the Orient.

From the time of Murād IV, the conqueror of Baghdād, there was a perceptible decline in the maintenance of the mosque, which coincided with the general decline of the empire. In 1847, Sultan ʿAbd al-Medjīd commissioned the Italian brothers Fossati as architects to renovate the building in order to avoid the threatened collapse of some parts, as well as to give the whole a more dignified appearance. The work took two years. The lime-wash was only left in the places which depicted human forms; apart from this, the walls came back into prominence with the disclosure of their old splendour. The red and yellow striped paint on the outside dates from the restoration. The way in which the sultan showed his veneration for the great deeds of his forbears is somewhat strange: all the minarets were repaired with the exception of that of Meḥemmed II, who had dealt the final and decisive blow against the Byzantine empire. The Italian architects, however, were eventually allowed to make this minaret as high as the others. The eight round tablets inscribed by the calligrapher Muṣṭafa ʿIzzet Efendi were put into Aya Sofya under Sultan ʿAbd al-Medjīd.

It is fortunate indeed that the mosque has not suffered from earthquakes since the 10th century. It must be admitted that it is largely thanks to the buttresses which the last Byzantines and the Turks put up against three sides of the walls that this gigantic building (standing, as it does, on seismic ground) has served mankind longer than any other building in Europe. The storms which blow from the Balkans or from the sea, on the other hand, seem to be increasingly dangerous to the mosque.

In summer 1906 the Minister of Education ordered thorough repairs in the library building, which was looked after by 5 *Khōdjas* who officiated one day of the week each.

In Ramaḍān, the mosque made an interesting picture when princes and officials assembled for afternoon prayers. At the *tarāwīḥ* prayers (said an hour and a half after sun-down) there was less ceremony. The dome was lit by innumerable lamps which were arranged in a circle. The greatest splendour of all was to be seen during the 27th night or the *Laylat al-Ḳadr* (Turk. *Kadīr gecesi*), in which the Ḳurʾān descended from heaven to earth. The earlier rulers frequently attended the ceremony, but Sulṭān ʿAbd al-Ḥamīd II only honoured the mosque with his presence (if at all) in the middle of Ramaḍān, when he came by boat to do honour to the relics of the Prophet in the ancient castle of his ancestors during a short visit (*Yawm-i Ziyāret-i Khīrḳa-i Saʿādet*).

Immediately after the conquest, the Turks took over the many legends which had grown up concerning the origin and the excellence of the church during the last years of Byzantine rule, refurbishing them in Muslim terms. A history of Aya Sofya (library of Aya Sofya, No. 3025) was written very shortly after the victorious entry, by Aḥmad b. Aḥmad al-Gīlānī (in Persian, on a Greek model) at the order of Meḥemmed II. This was later translated into Turkish by Niʿmat Allāh (died 969/1561-2). According to Kâtib Čelebī (ed. Flügel, II, 116) there was a second Persian work written for the same ruler by the astronomer and cosmographer ʿAlī b. Muḥammad al-Ḳushdjī [*q.v.*]. This work, however, can apparently no longer be identified. There is another version of the year 888/1483-4, by an anonymous author, which is now in the Staatsbibliothek Berlin (MS. Orient. 8°. 821) as an appendix to an Ottoman history (the *Tawārīkh-i Ḳosṭanṭiniyya* [Fleischer, *Kat. Dresden*, No. 113; Pertsch, *Türkische Hss. zu Berlin*, no. 231] written three years later) which is more interesting but otherwise similar in thought and sources. According to the *Tawārīkh-i Ḳosṭanṭiniyya* the story is that Āṣafiyya, the extremely wealthy wife of the great Ḳonsṭanṭin b. ʿAlāniyya, died very young and ordered in her last testament that a church should be built which should exceed all other buildings of the world in height. An architect is said to have arrived from Firangistan. He is reported to have begun by digging down 40 ells, in order to reach water; then, having built the church with the exception of the dome, he is said to have fled. The building then stood untouched for 10 years, until he returned and put on the dome. It is also stated that the particular marble —otherwise only known by the Dīws (it is actually a "marble metal", *Mermer Maʿdeni*)—was brought from many countries. The "metal" for the four mottled (*ṣomāḳī*) pillars (in fact, of course, they are simply of the hardest marble) is said to have come from Mount Ḳāf, and the large doors are alleged to have been made from planks of Noah's ark and already used by Solomon for his buildings in Jerusalem and Kyzikos (Aydīndjīḳ). The total expenditure is said to have come to 360,000 gold bars (each of 360,000 filori). In the time of the grandson of Constantine the Great, emperor Heraclius (a contemporary and secret follower of the Prophet), the dome is said to have crashed down, but the pious ruler rebuilt it immediately. The *Tawārīkh-i Ḳosṭanṭiniya wa Āyā Ṣōfya* of ʿAlī al-ʿArabī Ilyās, who was then in the service of the Grand Vizier ʿAlī the Fat (died 28 June 1565) and was a teacher (Flügel, *Kat. der Kais. Hofbibl. Vienna*, iii, 97), dates from the time of Suleyman the Great. The earliest edition belongs to the year 970/1562-3. Two years later, the author added a few insignificant details to the work and brought it out under a different title (*Tawārīkh-i Binā-yi Āyā Ṣōfya*, in the Bibl. Nationale in Paris, Turkish MSS. Suppl., no. 1546; *Tawārīkh-i Ḳosṭanṭiniya wa Āyā Ṣōfya wa baʿḍ-i Ḥikāyāt*, in Pertsch: *Catalogue of Turkish manuscripts of the Kgl. Bibl. Berlin*, no. 232. Fourmont has a further manuscript, *Cat. cod. man. Bibl. Reg.*, 319, no. 147, I). According to this, Aya Sofya was built under the emperor Ustūniānō by the architect Ignādūs (as also in Meḥmed ʿĀshiḳ). Generally speaking, the author of this is more plausible. He also gives far more detail than his predecessor of the 15th century, because he gives various versions. Thus, he must be regarded as the best Turkish authority on the history of their greatest mosque,

although he is utterly unreliable from our point of view.

The contents of the legends which continue to be woven around Aya Sofya change from one epoch to the next. They seem to have their spiritual peak in the 17th century, a time when the Ottomans in general also appear as the greatest despisers of this world. At that time the place was shown on which the Arabic heroes of the first century A.H. were said to have prayed on the occasion of their siege of Constantinople; the place in the centre of the nave, from which Khiḍr supervised the building of the church. In the southern gallery a hollowed stone is pointed out as having been the cradle of Christ. One of the anecdotes which one could still hear told by young theologians in much later years mentioned Ḥusayn-i Tabrīzī and the way in which he is supposed to have got his professorship in the mosque: the mystic (*Ṣūfī*) Sultan Meḥemmed II the Conqueror had held out his hand to him so that he had to kiss the inside (*āyā*), instead of the back of the hand, whereupon he promptly asked for the appointment as *mudīr* of the Aya Sofya. The so-called "Damp Pillar" (*yash direk*) and the "Cold Window" (*so'uk pendjere*) near the *Ḳibla* gained great fame as places of pilgrimage where miracles happened within the holy walls in the time of ʿAbd al-Ḥamīd II. The window was the place where Shaykh Aḳ Shams al-Dīn (whose words had a truly rousing influence on the men of his time, amongst them Meḥemmed the Conqueror himself) first expounded the Ḳur'ān. Until very recently, everyone was still convinced that the blessings brought by the currents of fresh air which entered through this "Cold Window" were of beneficial influence to the depth of theological knowledge.

In 1934, President Kemal Atatürk decreed that Aya Sofya was to cease being a place of Islamic worship, and put it under a museum administration. Subsequently, the lime-wash which had covered the figures in the mosaics was removed, and amongst others the following pictures reappeared in 1936: a beautiful representation of an enthroned Madonna and Child, surrounded by the emperors Constantine (with a model of the town he founded) and Justinian (with a model of the church of St. Sophia) above the southern narthex door; and over the central door, leading from the narthex to the church (the old Emperor's Door), a representation of Christ enthroned, with an emperor (Leo VI? or, more likely, Basil I, cf. A. M. Schneider in *Oriens Christianus* 1935, 75-79) at his feet in adoration; and, finally, a Madonna in the curve of the apse.

Bibliography: Procopius, Agathias, and Paulus Silentiarius are the most trustworthy of the Byzantine sources of the time of Justinian. Of the more recent ones, there are above all: Pierre Gilles, *De topographia Constantinopoleos libri* iv (Lyons, 1561 and repeatedly after that date); idem, *De Bosphoro Thracio libri tres* (Lyons 1561, and repeatedly after that date); Charles du Fresne, sieur du Cange, *Historia Byzantina*, Paris 1680; J. von Hammer, *Constantinopolis und der Bosporus*, i, Pesth 1822; Σκαρλάτος Α. Βυζάντιος, Κωνσταντινούπολις, i, Athens 1851; C. Fossati, *Aya Sophia of Constantinople as recently restored*, London 1852; W. Salzenberg, *Altchristliche Baudenkmäler von Konstantinopel*, Berlin 1854; Auguste Choisy, *L'art de bâtir chez les Byzantins*, Paris 1883; J. P. Richter, *Quellen der byzantinischen Kunstgeschichte*, special number of *Quellenschriften für Kunstgeschichte und Kunsttechnik des Mittelalters*, Vienna 1897, by Eitelberger von Edelberg and Ilg; W. R. Lethaby and Har. Swainson, *The Church of Sancta Sophia, Constantinople; a study of Byzantine building*, London and New York 1894; Heinr. Holtzinger, *Die Sophienkirche und verwandte Bauten der byzantinischen Architektur* (in *Die Baukunst*, edited by R. Borrmann and R. Graul, no. 10, Berlin and Stuttgart 1898); Εὐγένιος Μιχαὴλ Ἀντωνιάδης, Ἔκφρασις τῆς Ἁγίας Σοφίας (in: Βιβλιωθήκη Μαρασλῆ 3 vols., Athens and Leipzig, 1907-1909); Alfons Maria Schneider, *Die Hagia Sophia zu Konstantinopel*, Berlin n.d. (1938); a Turkish account, giving the inscriptions and a description of the additional buildings in Turkish times: Ḥāfiẓ Hüseyn, *Ḥadīḳat al-Djawāmiʿ*, Istanbul 1281/1864, i, 3-8; further bibliography in *IA*, ii, 47-55 (Arif Müfid Mansel). On the description of Hārūn b. Yaḥyā see M. Izzedin, *Un prisonnier arabe à Byzance . . .*, in *REI*, 1941-6, 41 ff., where earlier studies are cited; on the Muslim legends see F. Tauer, *Notice sur les versions persanes de la légende de l'édification d'Aya Sofya, in Mélanges Fuad Köprülü*, Istanbul 1953, 487 ff.; idem, *Les Versions persanes de la légende sur la construction d'Aya Sofya, in Byzantinoslavica* xv/1, 1954, 1-20.

Not far from the Great Sophia, there is the Small Āyā Ṣōfya (Küčük Āyā Ṣōfya) near the Djundī square. It was built by Justinian, and was formerly dedicated to Saint Sergius and Saint Bacchus. A cupola rose from an octagonal base (which was extended by four apses). The guardian of the ḥarem of Meḥemmed II (Ḳizlar Aghasi) changed it into a mosque, and since then it has been fully equipped for Muslim teaching and worship. The porch, and the five flat cupolas rising from it, are of Turkish origin.

(K. Süssheim-[Fr. Taeschner])

AYA SOLŪK, Ayasulūḳ, Ayasulūgh, Ayatholūgh (from Ἅγιος θεόλογος, i.e., the apostle and evangelist John, who lived and died there). In mediaeval western (Latin) sources, the town is referred to as Altoluogo, today (since 1914) it is known as Selčuk. It is a small town on the western coast of Anatolia, 37° 55′ north, 27° 20′ east, on the site of the Ephesus of antiquity (still referred to as Afṣūs or Ufsūs by Arabic geographers) in the plain which surrounds the mouth of the river Küčük Menderes (the Kaystros of antiquity), at the foot of the Bülbül Daghi (Koressos), and now on the railway between Izmir and Aydin. It is the capital of the *nāḥiye* of Akincilar in the *kaza* of Kuşadasi (*wilāyet* of Izmir). At the end of the 19th century it had 2,793 inhabitants (according to V. Cuinet, *La Turquie d'Asie*, iii, 505), in 1935 it had 4,025 (the *kaza* of Kushadasi had 17,819).

In the Middle Ages, Aya Solūk was a town of considerable importance. Ibn Baṭṭūṭa, who visited it in 733/1333 (ii, 308 f.), describes it as having 15 gates, and it was an important commercial centre on the banks of the river Kaystros, where gardens and vineyards flourished. The harbour, which had been the source of the town's prosperity, was silted up with deposits from the river Kaystros as early as the Middle Ages. Instead of Ephesus, the harbour of Kushadasi, some 15 kms. to the south-east (referred to as Scala nova in western mediaeval sources) began to flourish; this had 5,442 inhabitants in 1945.

The advance of the Arabs to Ephesus was only a temporary one (182/798). Similarly, the occupation by Turkish troops after the victory of Melāzgerd (1071)—under the Saldjūḳ sultan Alp Arslan—came to an end with the victory of the crusaders of the

first Crusade near Dorylaeum (1097). When the Rūm-Saldjūḳ Empire fell into decline, Turkish troops again penetrated western Anatolia as far as the Aegean coast. Under their leader, they founded principalities, and then Ephesus/Aya Solūk came under the principality of Aydln. Here Ibn Baṭṭūṭa met the Aydln-oghlu Khlzlr Beg as the local prince. He was in contact with the Italian Republics, and there was a Venetian and a Genoese consulate in Aya Solūk. In 1391, when Bāyazīd II absorbed the principality of Aydln, Aya Solūk came under Ottoman rule for the first time, but after his defeat, it was returned to the princes of Aydln by Tīmūr in 1402. Under Murād II, Aya Solūk finally became part of the Ottoman Empire in 1425, and henceforth it was a *ḳaḍā* of the *sandjaḳ* of Aydln (*eyālet* of Anadolu, later *wilāyet* of Aydln). The fortress, however, was under the Kaptan Pasha, being a part of the *sandjaḳ* of Ṣughla (Izmir). Aya Solūk gradually fell into decay, and is now little more than a village. This is due in part to the changes at the mouth of the river Kaystros, where the plain is now a fever-infested swamp, and in part to the growth of the neighbouring Kushadasl.

Noteworthy monuments include the ruins of the ancient Ephesus, the remains of the Basilica of St. John, and the imposing Mosque of Aydln-oghlu ʿĪsā Beg I (towards the end of the 14th century)—built on the same plan as the Umayyad Mosque in Damascus. At the foot of the fortress hill, the Panaylr Daghl (the ancient Pion), one can see the cave in which the Seven Sleepers are said to have slept. Up on the Bülbül Daghl, there is a small early Christian building, in which the Virgin Mary is said to have lived and died (Panaya Kapulu). In recent times, this has developed into a place of pilgrimage, and the Turkish government has built a road to it.

AYA STEFANOS]see Yeshilköy].

AʿYĀN. Plural of the Arabic ʿ*Ayn* in the sense of 'notable person' and often used to denote the eminent under the caliphate and subsequent Muslim regimes (cf. the celebrated *Wafayāt al-Aʿyān*—'Obituaries of Notable Men'—of Ibn Khallikān). Under the Ottoman regime, from having at first denoted merely the most distinguished inhabitants of any district or town-quarter, the term, often used as a singular, acquired a more precise significance, coming, in the eighteenth century, to be applied to those among such persons as then first exercised political influence and were accorded official status. A factor in their rise to such influence was the institution by the Porte, during the 17th century, of *Mālikāne* tax-farms—that is to say of farms leased to holders for life. For many of these were taken up by such local notables, who not only prospered financially thereby, but also came virtually to control the districts to which these tax-farms related. During the Russo-Ottoman war of 1767-1774 it was largely to *aʿyāns* all over the country that the Porte resorted in order to raise funds and recruits for the army; and in due course they were accorded official recognition as the chosen representatives of the people vis-à-vis the government, the provincial *wālīs* furnishing them with documents known as *aʿyānlıḳ buyuruldusu* on payment of a fee called *aʿyāniyye*. In 1779 this right of appointment was transferred from the *wālīs*, who had abused it, to the Grand Vizier; and in 1786 it was decided to abolish *aʿyānlıḳs* altogether. On the outbreak of war again in the following year, however, the Porte, as before, found itself unable to dispense with the aid of these local notables; and in 1790 *aʿyānlıḳs* were duly revived. Many *aʿyāns* in both Rumelia and Anatolia came during the reigns of Selīm III, Muṣṭafā IV, and Maḥmūd II, to play a part in Ottoman affairs very similar to that of the *dere-beyis* [*q.v.*], often defying the Porte for long periods and managing the districts over which they had extended their control in virtual independence, although often providing contingents for the Ottoman army in time of war. Among these the most celebrated were perhaps Pāswān Oghlu [*q.v.*] (who, if not strictly speaking an *aʿyān* himself, was the son of one), the Bayraḳdār Muṣṭafā Pāshā [*q.v.*] (who became one early in his career), and Ismāʿīl Bay of Serez. It was chiefly to breaking the power of the *aʿyāns* (and *dere-beyis*) in the provinces that Maḥmūd II successfully devoted the first half of his reign.

ĀYĀS, town on the coast of Cilicia, on the western shore of the gulf of Iskenderun, to the east of the mouth of the river Djayhan (Pyramos), 36° 53′ north, 35° 46′ east, capital of the *nāḥiye* of Yumurtalık in the *ḳaḍā* of Ceyhan (*wilāyet* Seyhan/Adana). In antiquity it was known as Aigai (Ramsay, *Historical Geography of Asia Minor*, 385 f.). Italian seamen and merchants in the Middle Ages knew it as Ajazzo or Lajazzo. In 1935 it had 667 inhabitants (the *nāhiye* 11,024) (Pauly-Wissowa, i, 945).

The harbour of Āyās (which at that time formed part of the Christian principality of Little Armenia) only became important in the second half of the 13th century. As a result of the withdrawal of the Franks from the lands of the Crusaders on the eastern shores of the Mediterranean, and also of the silting up of the harbour of Tarsus, the whole of the trade between the West and the Orient was concentrated in this harbour, which was also connected by good overland routes with Syria and Mesopotamia, as well as with Iran via eastern Anatolia. It was from here that Marco Polo started out on his journey across country through Asia in the year 1271. At the end of the 14th century, the Florentine Pegolotti describes the caravan route to

Tabriz which began here (*La pratica della Mercatura scritta da Francesco Balducci Pegolotti*, vol. iii of *Della Decima e delle altre Gravezze .... de Fiorentini fino al Secolo XVI*, Lisbon and Lucca 1766, 9-11 [critical edition by Allan Evans, Cambridge Mass. 1936, index s.v. Laiazol; cf. W. Heyd, *Geschichte des Levantehandels*, index). Āyās was the seat of a Venetian Bailo.

The town was plundered by Muslim armies in 665/1266 and 674/1275, conquered in 722/1322 by the Mamlūk sultan al-Nāṣir Muḥammad, and rebuilt by the Christians after the peace treaty of 1325; it finally fell into the hands of Egyptian Mamlūks in 748/1347. It then began to decline, and the process was accelerated by the fact that sedimentation broadened the mouth of the river Djayḥān, until the whole area around Āyās became a fever-infested swamp. It is, however, still mentioned in 1400 as the administrative centre of the province of Ḥalab. After the conquest of the Mamlūk Empire by the Ottoman Selīm I (1517), Āyās became a *ḳaḍā* in the *evālet* of Adana. Today, Āyās/Yumurtalık is an impoverished coastal town with a great number of ruins.

AYĀS PASHA (886-7?-946/1482?-1539), Ottoman Grand Vizier. Ayās Pasha was an Albanian born in the region of Cimera (Himara) not far from Valona (ʿĀlī; Bragadino (9 June 1526); Geuffroy). According to Bragadino, Ayās Pasha was 44 years old in 932/1526, had three brothers ("tre fradelli": not, as in Hammer, "tre fratelli monachi") and sent each month 100 ducats to his mother, "christiana monacha a la Valona". The inscription on the gravestone of Ayās Pasha at Istanbul refers to him as Ayās b. Meḥmed. Recruited through the *devshirme* in the reign of Bāyazīd II (886-918/1481-1512), Ayās Pasha went out from the Palace with the rank of *agha* (ʿĀlī). He fought at the battle of Čaldirān (920/1514) as Agha of the Janissaries (Shukrī; Ewliyā Čelebī) and also in the war (921/1515) against ʿAlā' al-Dawla, prince of Albistān (Ewliyā Čelebī). Holding the same office, he served throughout the Syrian and Egyptian campaigns 922/3 1516-1517) of Selīm I and, according to one version of the events, had a considerable share in the ultimate defeat and capture of Ṭūmān Bāy, the last Mamlūk Sulṭān of Egypt (Suhaylī). At the time when Sulṭān Sulaymān ascended the throne (September 1520) Ayās Pasha seems to have been Beglerbeg of Anatolia, a new Agha of the Janissaries having been appointed in 925/1519 (Muṣṭafā Čelebī; Ṣolāḳ-zāde).

After helping to crush the revolt of Djānberdi al-Ghazālī in Syria (1520-1521) (Suhaylī), Ayās Pasha became governor of Damascus, an appointment that he held from Rabīʿ II 927 to Muḥarram 928/ March-December 1521 (Laoust; Nadjm al-Dīn al-Ghazzī; Ibn Iyās). He fought, as Beglerbeg of Rumeli, at the siege of Rhodes (928/1522) (Muṣṭafā Čelebī; Ferīdūn) and, rising thereafter to the rank of third and, later, of second vizier, served in the campaigns of Mohács (932/1526), Vienna (935/1529), Güns (938/1532) and ʿIraḳ (941-2/1534-1535) (Muṣṭafā Čelebī; Ferīdūn; Pečewī; Ṣolāḳ-zāde; Kemāl Pashazāde). On the death of Ibrāhīm Pasha (22 Ramaḍān 942/15 March 1536) Ayās Pasha became Grand Vizier and retained this rank until his own death in 946/1539. The main events which occurred during his tenure of the office were the war against Venice (944-7/1537-1540), the Austrian raid on Eszék (944/1537), the Moldavian campaign (945/1538) and the expedition of Sulaymān Pasha, governor of Egypt, against Diu in India (945-6/1538-1539). In the course of the Corfu campaign (944/1537) Ayās Pasha brought under Ottoman control the Albanians settled in the neighbourhood of Valona, a new *sanjaḳ* of Delwīne being now created in this region (Muṣṭafā Čelebī; ʿĀlī; Pečewī). Ayās Pasha died on 26 Ṣafar 946/13 July 1539. In the eyes of his contemporaries he had the reputation of being an illiterate man endowed with no great political talent (ʿĀlī; Bragadino; Gévay). Of his daughters one was married to Güzeldje Rustem Pasha, who became Beglerbeg of Buda (*Sidjill-i ʿOthmānī*), while another (or perhaps the same?) daughter is mentioned as having married the *sandjaḳ beg* of Silistria (Gévay). A brother of Ayās Pasha, Aḥmed, was governor of Ḳaramān and, later, of Damascus, according to the information given in Ibn Ṭūlūn (Laoust).

(V. J. Parry)

ĀYĀT [see Āya].

AYĀZ, Abu 'l-Nad͟jm, favourite slave of Sulṭān Maḥmūd of G͟haznīn. Details of the life of the historical Ayāz are difficult to discover, but he was a Turkomān and, if the tradition utilised by D͟jalāl al-Dīn Rūmī, iv, 887, is accepted, of humble origin also. The *Taʾrīk͟h-i Bayhaḳī* reports Maḥmūd's successor Masʿūd as describing Ayāz as his father's 'sneeze' and as unsuitable for appointment to the governorship of Ray because of his lack of experience of life outside the court. His death is recorded by Ibn al-At͟hīr under 449/1057-8. According to the *Čahār Maḳāla*, Ayāz was not remarkably handsome but possessed a sweet expression and olive complexion, and was greatly endowed with the arts of pleasing, in which respect he had few rivals in his time. This tradition is also found in Saʿdī.

In Persian literature Ayāz appears as a symbolical figure under many guises. In the *Gulistān* and *Bustān* of Saʿdī he appears as a symbol of true love, in the *Mat͟hnawī* of D͟jalāl al-Dīn Rūmī he figures as a type of the Perfect Man, in ʿAwfī's *D͟jawāmiʿ al-Ḥikāyāt* as a model of loyalty and sagacity and as a fit brother-in-law to Maḥmūd. In the *Čahār Maḳāla* the cutting off of Ayāz's locks in a fit of passion by Maḥmūd is made the occasion of a display of poetical skill by ʿUnṣurī; in the *Tad͟hkirat al-Awliyā* an unsuccessful attempt by Maḥmūd to pass off Ayāz as sultan before S͟hayk͟h Abu'l-Ḥasan K͟hurḳānī is used as proof of that saint's sagacity. In his *Maḥmūd u Ayāz*, Zulālī has woven romance around the relationship of the sulṭān and his catamite.

(P. Hardy)

AYĀZ, the Amīr, lord of Hamad͟hān, played an important rôle in the struggles for the throne between the rival Sald͟jūḳ princes Barkiyāruḳ and Muḥammad I. After having first taken the side of the latter, in 494/1100 he went over to the side of Barkiyāruḳ, and, after the latter's death, became the Atabeg of his son Maliks͟hāh, who was a minor. He could not, however, hold his own against Muḥammad, and was treacherously murdered by him in 499/1105.

Bibliography: Ibn al-At͟hīr, x, 199 ff.; Houtsma, *Receuil*, ii, 90; see also Barkiyāruḳ and Muḥammad b. Maliks͟hāh.

(Ed.)

AYBAK (Turkish pronunciation Aybeg), properly called ʿIzz al-Dīn Abu 'l-Manṣūr Aybak (Aybeg) al-Muʿaẓẓamī (as a *mamlūk* of al-Malik al-Muʿaẓẓam) S͟haraf al-Dīn ʿĪsā, who was first (597-615/1200-1218) governor of Damascus and then (615-624/1218-1227) sultan of the empire of Damascus after the death of his father al-Malik al-ʿĀdil. In 608/1211-2, Aybeg received the town of Ṣalk͟had in the Ḥawrān and the adjacent lands as a fief and was appointed major-domo (*ustād͟h-dār*). When al-Malik al-Nāṣir Dāwūd succeeded his father on the throne of Damascus, Aybeg even became regent of Damascus and had the entire political administration in his hands. Shortly afterwards, however, al-Malik al-As͟hraf, Dāwūd's uncle, took possession of Damascus; Aybeg was deprived of the office of regent, but retained his fiefs in the Ḥawrān. In 636/1238-9, he was still called "Lord of Ṣalk͟had and of Zurʿa". He was subsequently suspected of treason and lost his political standing; he died in Cairo in 646/1248-9. His remains were taken to Damascus and placed in the mausoleum built for him. The districts dependent on Aybeg were indebted to him for buildings of various types which he undertook. He erected three Ḥanafī academies at Damascus and one in Jerusalem. As major-domo, it fell to him especially to attend to the building of k͟hāns: as governor of Ṣalk͟had, he sought to render flourishing that part of the trade route from Northern Arabia and from Babylonia to Damascus which crossed his territories; he built the desert fortress, Ḳalʿat al-Azraḳ and repaired the great reservoir (*matk͟h*; elsewhere *birka*) at ʿInāk and had a great *k͟hān* set up at Sāla. His zeal for building communicated itself to his subordinates, especially to his *mamlūk* ʿAlam al-Dīn Ḳayṣar. Among the buildings which he erected in his fiefs, the following are especially worthy of mention; a *k͟hān* at Ṣalk͟had (611/1214-5); a tower in the fortress of Ṣalk͟had (617/1220-1); arcades and a tower (minaret) in the mosque of Ṣalk͟had (630/1232-3); a fort in the Ḳalʿat al-Azraḳ (634/1236-7); a *k͟hān* at Zurʿa (636/1238); a reservoir at ʿInāk (636-637/1238-1240); a mosque at al-ʿĀyin (638/1240-1). The mosque and *k͟hān* of Sāla must have been built about 630/1232-3. The exact date cannot be established because of the fragmentary state of the inscriptions. S͟haraf al-Dīn ʿĪsā and his *mamlūk* Aybeg are both known at the time of the Crusades.

Bibliography: Ibn K͟hallikān, see under *al-Muʿaẓẓam ʿĪsā*; van Berchem, in *ZDPV*, xvi, 84 ff.; E. Littmann, *Semitic Inscriptions*, 204 ff.; Dussaud and Macler, *Missions dans les régions désertiques de la Syrie moyenne*, 326 ff., 336 ff.

(E. Littmann)

AYBAK ḲUṬB AL-DĪN [see Delhi, Sultanate of]

ʿAYDARŪS (ʿEdrūs, often misunderstood as Idrīs; etymology obscure, cf. S͟hillī, *Mas͟hraʿ*, ii, 152) a family of learned *sayyids* and *ṣūfīs* in South Arabia, India and Indonesia, belonging to the Saḳḳāf branch of the Bā ʿAlawī [*q.v.*] and still playing an important rôle in Ḥaḍramawt. Wüstenfeld (*Çufiten*, 29 ff.) quotes from al-Muḥibbī the details on more than thirty members of the family down to the 11/17th century. In the 19th century there

were in Ḥaḍramawt five ʿAydarūs *manṣabs*, at Ḥazm, Bawr, Ṣalīla, Thibī and Ramla. Among the numerous members of the clan, known for its literary activity, are:

1. The ancestor, ʿAbd Allāh b. Abū Bakr (al-Sakrān) b. ʿAbd al-Raḥmān al-Saḳḳāf (811-865/1408-1461) of Tarīm, who was called by his father al-ʿAydarūs. He received the *khirḳa* from his uncle ʿUmar al-Miḥḍār and succeeded him at his death (833/1430) as *naḳīb* (*manṣab*) of the Bā ʿAlawī. By that time he had already won a reputation for piety by means of severe asceticism. He taught *tafsīr*, *ḥadīth* and *fiḳh*, but had a predilection for the mystics (al-Ghazzālī). Writings: (a) *al-Kibrīt al-Aḥmar*; (b) *Manāḳib* of his *shaykh* Saʿd b. ʿAlī (i.e. al-Suwaynī Bā Madhidj, d. 857/1453); (c) *Rasāʾil*. ʿUmar b. ʿAbd al-Raḥmān Ṣāḥib al-Ḥamrāʾ wrote his biography: *Fatḥ al-Raḥīm al-Raḥmān* etc. See Sakhāwī, *Ḍawʾ*, v, 16 (without *laḳab*!); *Mashraʿ*, ii, 152 ff.; Wüst., *Çufiten* 5, 29; Brockelmann, S II, 566.

2. His son, Abū Bakr b. ʿAbd Allāh al-ʿAydarūs, Fakhr al-Dīn (b. 851/1447 in Tarīm, d. 914/1508 in ʿAdan), the patron saint of ʿAdan, where he spent his last 25 years and won great fame for piety and hospitality. He was initiated into Ṣūfism by Saʿd b. ʿAlī Bā Madhidj (cf. above) and others. Among his disciples were Ḥusayn b. Ṣiddīḳ al-Ahdal [*q.v.*], Djār Allāh b. Fahd and Muḥ. b. ʿUmar Baḥraḳ (d. 930/1524) who wrote *Mawāhib al-Ḳuddūs f Manāḳib Ibn al-ʿAydarūs*. Writings: (a) *al-Djuzʾ al-Laṭīf fī ʿIlm al-Taḥkīm al-Sharīf* (on Ṣūfism) cf. Serjeant, *Mat.*, 581; (b) three litanies (*awrād*); (c) *Dīwān* (a *muwashshaḥ* was commented upon by ʿAbd al-Ḳādir, below, no. 4). His mausoleum, built by the *amīr* Murdjān, who also was buried there in 927/1521, and his mosque are in the Aden Crater, where the *ziyāra* of the saint is celebrated on the 15th Rabīʿ II. Al-Ghazzī in his chronicle (see below) has the curious tradition, taken over by Ibn al-ʿImād, of Ibn al-ʿAydarūs having introduced the habit of drinking coffee into Arabia. The *nisba* al-Shādhilī is perhaps due to some sort of confusion with the famous *shaykh* of Makhāʾ (Mokha) ʿAlī b. ʿUmar (d. 821/1418), cf. KAHWA. The non-ascetic attitude of Ibn al-ʿAydarūs is in harmony with a trend of the Shādhiliyya, but the ʿAydarūsiyya is reckoned as a branch not of this order, but of the Kubrāwiyya (see TARĪḲA). See Ibn al-ʿImād, *Shadharāt*, viii, 39 f. (s.a. 909! an error of the compilator, repeated in Brock.), 62 ff.; Ghazzī, *Kawākib*, i, 113 f.; *Nūr*, 81 ff.; *Mashraʿ*, ii, 34 ff.; al-Saḳḳāf, *Taʾrīkh*, i, 105 ff.; Brockelmann II, 181, S II, 233.

3. Shaykh b. ʿAbd Allāh b. Shaykh b. ʿAbd Allāh (no. 1), b. 919/1513 in Tarīm, d. 990/1582 in Aḥmadābād (Gudjarāt). After studies in Mecca, Zabīd and Shiḥr he removed to India, where he had many disciples and entered the service of the vizier ʿImād al-Dīn. Writings: (a) *al-ʿIḳd al-Nabawī wa ʾl-Sirr al-Muṣṭafawī*; (b) *al-Fawz wa ʾl-Bushrā*; (c) *Tuḥfat al-Murīd* (*ḳaṣīda*) with commentaries: *Ḥaḳāʾiḳ al-Tawḥīd* and *Sirādj al-Tawḥīd* (cf. Brockelmann); (d) *Dīwān*. Aḥmad b. ʿAlī al-Baskarī wrote *Nuzhat al-Ikhwān wa ʾl-Nufūs fī Manāḳib Shaykh b. ʿAbd Allāh al-ʿAydarūs*. See *Nūr*, 372 ff.; *Mashraʿ*, ii, 119 ff.; al-Saḳḳāf, *Taʾrīkh*, i, 171 ff.

4. ʿAbd al-Ḳādir b. Shaykh (no. 3) al-Hindī, Muḥyi ʾl-Dīn (978-1038/1570-1628) of Aḥmadābād, Ṣūfī scholar, author of numerous works on mysticism and biography. He was initiated into Ṣūfism by his brother ʿAbd Allāh (945-1019) and Ḥātim al-Ahdal [*q.v.*], in whose memory he wrote *al-Zahr* (*al-Durr*) *al-Bāsim min Rawḍ al-Ustādh Ḥātim*. He made wide travels for the sake of study and collecting books. Among his disciples was Aḥmad Bā Djābir al-Ḥaḍramī, on whose premature death in 1001 he wrote *Ṣadḳ al-Wafāʾ bi-Ḥaḳḳ al-Ikhāʾ*. On his father's mystic ode *Tuḥfat al-Murīd* he wrote the commentary *Bughyat al-Mustafīd*. Other works: (a) *al-Futūḥāt al-Ḳuddūsiyya fī ʾl-Khirḳa al-ʿAydarūsiyya*; (b) *al-Nūr al-Sāfir* etc. (see below); (c) *Taʿrīf al-Aḥyāʾ bi-Faḍāʾil al-Iḥyāʾ* (Cairo 1311, in the margin of *Itḥāf al-Sāda* by Murtaḍā al-Zabīdī). For further details see *Nūr* 334-343 (autobiogr.); *Mashraʿ*, ii, 148 ff.; Wüst., *Çuf.* 31 ff.; Brockelmann ii, 418 f., S II, 617; Sarkis 1399 f.

5. Shaykh b. ʿAbd Allāh b. Shaykh (no. 3), b. 993/1585 in Tarīm, d. 1041/1631 in Dawlatābād. After studies in his native town, in Yaman and Ḥidjāz he sailed for India in 1025, visited his uncle ʿAbd al-Ḳādir in Aḥmadābād and was taught by him. From there he went to Deccan and was favourably received by Sulṭān Burhān Niẓām Shāh and his Grand Vizier, Malik ʿAnbar (Ambar). After a rupture he entered the service of Ibrāhīm II ʿĀdil Shāh at Bīdjāpūr. He held a privileged position with this sultan, whom he had cured from a disease. After the death of ʿĀdil Shāh he returned to Dawlatābād and was in high favour with the vizier Fatḥ Khān, the son of ʿAnbar. He wrote a book on Ṣūfism called *al-Silsila* but it fell into oblivion. See *Mashraʿ*, ii, 117 ff.; Wüst., *Çuf.*, 39 f.

6. ʿAbd Allāh b. Shaykh (no. 5), b. 1017 (?)/1608 in Tarīm, d. 1073/1662 in Shiḥr. He was educated by his uncle ʿAlī Zayn al-ʿĀbidīn (no. 7) and his cousin ʿAbd al-Raḥmān al-Saḳḳāf, whom he succeeded in the dignity of a *manṣab*. After two visits to Mecca and Medina he went to India, visited his cousin Djaʿfar al-Ṣādiḳ (no. 8) in Sūrat, a disciple of his father, the Grand vizier Ḥabash Khān, and Sultan Maḥmūd b. Ibrāhīm Shāh at Bīdjāpūr. Back in Arabia he spent his last years in the seaport of Shiḥr, where his grave and mosque are venerated and visited by pilgrims. See *Mashraʿ*, ii, 177 f.; Wüst., *Çuf.* 40 f.; Berg, *Hadhramout*, 85, 94.

7. ʿAlī b. ʿAbd Allāh b. Shaykh (no. 3), called Zayn al-ʿĀbidīn and Tādj al-ʿĀrifīn (984-1041/1577-1632) of Tarīm. He had many disciples, and won great influence at the court of the Kathīrī sultan. His literary production is restricted to a collection of *Rasāʾil*, among them one sent to the Zaydī Imām al-Ḥusayn b. al-Ḳāsim in answer to his claim for obedience from the people of Ḥaḍramawt. See *Mashraʿ*, ii, 221 ff.; Wüst., *Çuf.* 58.

8. Djaʿfar al-Ṣādiḳ b. ʿAlī Zayn al-ʿĀbidīn (no. 7), b. 997/1589 in Tarīm, d. 1064/1654 in Sūrat. Having finished his studies in Arabia he migrated to the Deccan in India, where he had a hight position a the court of the Grand Vizier Malik ʿAnbar. During his stay there he learnt Persian and translated *al-ʿIḳd al-Nabawī* (above, no. 3) into that language. After the fall of Fatḥ Khān in 1038 he continued his literary activity at Sūrat. He translated the Persian work of Dārā Shikūh (ca. 1065/1655) into Arabic with the title *Tuḥfat al-Aṣfiyāʾ bi-Tardjamat Safīnat al-Awliyāʾ*. See *Mashraʿ*, ii, 85 ff.; al-Saḳḳāf, *Taʾrīkh*, i, 214 and (enlarged) ii, 9 ff.; Wüst., *Çuf.* 37 f; Brockelmann, S II, 619.

9 Djaʿfar b Muṣṭafā b. ʿAlī Zayn al-ʿĀbidīn (no 7), b. 1084/1673 in Tarīm, d. 1142/1729 in Sūrat. In 1105 he left his home and sailed from Shiḥr to India, where he witnessed the conquest of Sūrat by Bahādur Shāh, and found favour with the sultan. Writings: (a) *Kashf al-Wahm ʿan mā Ghamaḍa min al-Fahm*; (b) *Miʿrādj al-Ḥaḳīḳa*; (c) *al-Fatḥ al-*

Ḳuddūsī fi 'l-Naẓm al-ʿAydarūsī (comm. on a *muwashshaḥ* of Abū Bakr, no. 2); (d) *ʿArḍ al-La'ālī* (on a *ḳaṣīda* by ʿUmar Bā Makhrama, [*q.v.*]); (e) *Dīwān*. See al-Saḳḳāf, *Ta'rīkh*, ii, 78 ff.

10. ʿAbd al-Raḥmān b. Muṣṭafā b. Shaykh b. Muṣṭafā b. ʿAlī Zayn al-ʿĀbidīn (no. 7), b. 1135/1723 in Tarīm, d. 1192/1778 in Cairo, the most extensive traveller and most productive writer among the Bā ʿAlawī. Having spent the years 1151-1155 in India (Sūrat, Bharūč) he returned to Arabia, stayed for some time in Ṭā'if, then settled in Cairo (1174). After a visit to Damascus (1182) he returned to Egypt. The long series of his travels in the Near East was concluded by a visit to Istanbul in the year before his death. He had numerous disciples from all parts of the Islamic world, among them Sulaymān al-Ahdal, his son ʿAbd al-Raḥmān and Muḥammad Murtaḍā al-Zabīdī [*q.v.*], who wrote *al-Nafaḥāt al-ḳuddūsiyya* (cf. Brock.) on the principles of the *ṭarīḳa*. His literary production comprises more than sixty works, the titles of which are given by al-Saḳḳāf and Brockelmann. Only two collections of poetry have so far been published: (a) *Tarwīḥ al-Bāl wa-Tahwīdj al-Balbāl*, Būlāḳ 1283; (b) *Dīwān* (1304) in three parts: *Tanmīḳ al-Asfār*, *T. al-Safar* and *Dhayl*. Among the remaining titles the following categories can be distinguished: (a) treatises on Ṣūfism, *e.g. Mir'āt al-Shumūs* (on the ʿAydarūsiyya), *al-Irshādāt al-Saniyya* (on the Naḳshbandiyya), *al-Nafḥat al-ʿAliyya* (on the Ḳādiriyya); (b) commentaries, *e.g. al-Fatḥ al-Mubīn* (on a *muwashshaḥ* by Abū Bakr, no. 2, with the supercommentaries *Tashnīf al-Ku'ūs min Ḥumayyā Ibn al-ʿAydarūs* and *Tarwīḥ al-Humūs min Fayḍ Tashnīf al-Ku'ūs*), *Sharḥ al-Raḥmān bi-Sharḥ Ṣalāt Abī Fityān* (i.e. al-Badawī, cf. Brockelmann I, 450) and a comm. on a poem by ʿUmar Bā Makhrama [*q.v.*]; (c) *manāḳib* works, e.g. *Ḥadīḳat al-Ṣafā'* (on ʿAbd Allāh al-Bāhir b. Muṣṭafā), *Tanmīḳ al-Ṭurūs* (on Shaykh b. ʿAbd Allāh, no. 3). *Tashnīf al-Samʿ bi-baʿḍ Laṭā'if al-Waḍʿ*, listed by al-Saḳḳāf among his works, is accord. to Brockelmann, S III, 1290 a comm. on his *Risāla fī 'l-Waḍʿ* by ʿAbd al-Raḥmān al-Udjhūrī, who also commentated *al-Istighātha al-ʿAydarūsiyya*. In his poetry this author also used the special Ḥaḍramī form called *ḥumaynī* (see Serjeant, *Poetry* 5). His grave with a monument is in an open place close to the mausoleum of Zaynab bint Fāṭima in Cairo. His biography (*manāḳib*) was written by his son Muṣṭafā with the title *Fatḥ al-Ḳuddūs*. See Murādī, *Silk al-Durar*, ii, 328; Djabartī, *ʿAdjā'ib al-Athār*, ii, 27-34; ʿAlī Mubārak, *al-Khiṭaṭ al-Djadīda*, v, 11-14; al-Saḳḳāf, *Ta'rīkh*, ii, 183-214; Sarkis, 1398 f.; Brockelmann, II, 352, S II, 478 f.

11. Ḥusayn b. Abū Bakr al-ʿAydarūs (d. 1798 in Batavia), Indonesian saint. His grave and big mosque at Luar Batang constitute one of the most frequented goals of pilgrimage in the Indian Archipelago.

On the ʿAydarūs dynasty of Kubu (Borneo), founded ca. 1770 by a *sayyid* of that name, see Berg, *Ḥadhramout*, 202; cf. ʿAWLAḲĪ (Lower).

ʿAydarūs as an individual name is rather common; the Ḥaḍramī *sayyid* ʿAydarūs b. ʿUmar b. ʿAydarūs al-Ḥabshī (d. 1314/1895 in al-Ghurfa) wrote *ʿIḳd al-Yawāḳīt al-Djawhariyya fī Dhikr Ṭarīḳat al-Sāda al-ʿAlawiyya* (Sarkis, 1399; Brockelmann, S II, 812).

ʿAYDHĀB, harbour on the African coast of the Red Sea, the ruins of which still exist on a flat and waterless mound 12 miles N. of Ḥalayb, at 22° 20′ N., 36° 29′ 32″ E. It is mentioned already in the 3rd/9th century as a port used by pilgrims to Mecca and merchants from al-Yaman (Yaʿḳūbī 335; cf. *BGA* iii, 78), and was linked to the Nile valley by caravan roads from Aswān (15 days) and Ḳūṣ (17 days). Originally a small village of huts, it grew in importance from the 5th/11th century in consequence of increasing Egyptian commerce with al-Yaman, and was especially flourishing in the period of the Kārimī merchants, when it is described by Ibn Baṭṭūṭa (i, 109-11) in 725-1325 as a large town. The local population was formed mainly of Muslim Budjāh (Bejas), whose ruling family, called by the Arabic name of al-Ḥadrabī (or Ḥadrubī) frequently clashed with the Egyptian representatives over their share in the control and revenues of the port. It was destroyed during the reign of the Mamlūk sultan Barsbay (825-42/1422-38), allegedly in retaliation for the pillage of a caravan proceeding to Mecca, and its place was taken by Sawākin [*q.v.*].

AYDIN, also known as Güzel Ḥiṣār ("Beautiful Fortress"), formerly Tralleis, a town in western Anatolia 60-80 m. above sea level, 37° 50′ north, 27° 48′ east. It lies at the foot of the Gevizli Daghī (Messogis), which forms the northern boundary of the valley of the Büyük Menderes (in antiquity the Maeander), on the little river Tabak Çay (formerly Eudon) which flows thence to the Menderes. It is surrounded by fields and gardens, and the railway line from Izmir (via Dinar) to Afyon Ḳaraḥiṣār passes through it. It is the capital of the *wilāyet* of the same name and has 18,504 inhabitants (1945; at the end of the last century there were, according to Cuinet, 36,250 inhabitants with a strong Greek minority); the *vilâyet* (with 294.407 inhabitants) consists of the following *kazās*: Aydln (105,155 inhabitants), Bozdoğan, Çine, Karacasu, Nazilli and Söke.

Tralleis was occupied by the Turks for the first time after the victory of the Saldjūḳ sultan Alp Arslan over the Emperor Romanus IV at Malāzgerd in 1071. It was surrendered, however, after the crusaders' victory at Dorylaeum in 1098. It was occupied by the Turks for the second time—together with the Maeander valley—in 1176, after Sulṭān Ḳilič-Arslan II's victory over the Emperor Manuel; the Emperor succeeded in winning it back before long. The *sāḥil begi* Amīr Menteshe brought it finally under Turkish rule in 1280, in the time of Ghiyāth al-Dīn Kay-Khusraw III, and henceforth it became known as Güzel Ḥiṣâr. In 1310, another

Turkish prince took possession of the town, Aydîn-og̲h̲lu Meḥmed Beg, whose family name was henceforth added to that of the town; the actual capital of the principality of Aydîn was, however, generally Birgi. The Ottoman Sultan Bāyazīd I absorbed the principality of Aydîn, but Tīmūr re-established it. In 806/1403 both town and principality finally came into Ottoman possession, and from then on formed a *sand̲j̲aḳ* of their own (with Tire as capital) within the *eyālet* of Anadolu. In the 18th century, the *sand̲j̲aḳ* of Aydîn and the *sand̲j̲aḳ* of Saruhan together formed the hereditary governorship of the family of the Kara-ʿUt̲h̲mān-og̲h̲ullarî; it was not until 1249/1833 that Maḥmūd II brought it again under the direct administration of the Porte, when it again became a *wilāyet* in its own right. In 1850, however, it was brought under the *wilāyet* of Izmir as a *sand̲j̲aḳ*. Kemal Atatürk re-instituted it as a *wilāyet* in 1924. In the war between Turkey and Greece, the town of Aydin was burnt down on 7th September 1922.

Historical buildings of the town are the Uways D̲j̲āmiʿ (before 998/1589), Ramaḍān Pas̲h̲a D̲j̲āmiʿ (1000/1594-95), Süleymān Bey D̲j̲āmiʿ (1005/1683) and D̲j̲ihānzāde D̲j̲āmiʿ (built in 1170/1756 by D̲j̲ihānzāde ʿAbd al-ʿAzīz Efendi).

AYDÎN-OG̲H̲LU, a Turkomān dynasty which reigned from 708 to 829 (1308 to 1425) over the emirate of the same name. Aydîn-og̲h̲lu Meḥmed Beg (708-734/1308-1334), *ṣubas̲h̲î* of the emir of Germiyān, separated from him in the early years of the 8th/14th century and started to make war on his own account, associating himself with Sasa Beg, son-in-law of the emir of Mentes̲h̲e. After having conquered Birgi, Ayaṣoluḳ and Keles, Sasa turned against his former ally and was defeated and put to death by him in 708/1308. Meḥmed Beg added to his conquests those of the acropolis of Izmir, Tyre, Sulṭān-Ḥiṣārî and Bodemya. His son Umūr Beg (734-748/1334-1348) added to the glory of the dynasty by his victories which were celebrated in a *destān*. He took possession of the fortress of the port of Izmir, held by the Genoese Martin Zaccaria, and organised a fleet, with which he proceeded to lay waste the islands of the Archipelago, even extending his incursions into Greece. On the death of Andronicus III, John VI Cantacuzenus, who a few years previously had succeeded in winning the emir's friendship, appealed to him for help in his war against the supporters of the rightful heir, John V Paleologus. Umūr Beg proceeded to Rumelia in 743/1342, 744/1343 and 745/1345 and helped Cantacuzenus to subdue Thrace. But whilst he was engaged in making his contribution to the triumph of his friend, Pope Clement VI preached a Crusade against him, in which Venice, Genoa, the King of Cyprus, the Knights Hospitallers of Rhodes and the Duke of Naxos participated and which culminated in the taking of the fortress of the port of Izmir in October 1344. Shortly afterwards, the leaders of the Crusade perished in a fight against the emir, who also, in 746/1346, repulsed the Crusade of the Dauphin, Humbert II le Viennois. Umūr, however, was killed in the spring of 1348 whilst attempting to retake the fortress of Izmir. The immediate result of his death was the treaty of 18 August 1348 which gave the Latins great advantages. During the reigns of his brothers, K̲h̲iḍr 748-760/1348-1460) and ʿĪsa (760-791/1360-90), the emirate lost its importance and was finally annexed by Bāyazīd I, who in 1390 ratified the treaty of commerce of 1348, to the Venetians' advantage. In 1402, after the battle of Ankara, Tīmūr restored their principality to ʿĪsa's two sons, Mūsā and Umūr II. After the death of these princes, the power passed to their cousin D̲j̲üneyd (808-828/1405-25), the son of Ibrāhîm Bahādur b. Meḥmed, well known for his intrigues against the Ottomans. He supported the claims of Düzmed̲j̲e Muṣṭafā and his son, but was defeated by Murād II and took refuge in the fort of Ipsili, from whence he sought unsuccessfully to obtain the assistance of Ḳaramān-og̲h̲lu and of Venice. He was besieged by the Sulṭān, taken prisoner and executed together with all the members of his family in 829/1425-6. This was the end of the Aydîn-og̲h̲lu, and the emirate was finally annexed by the Ottomans.

AL-**AYKA** [see Madyan].

AYLA, seaport at the north end of the Gulf of ʿAḳaba, now succeeded by al-ʿAḳaba [*q.v.*].

Nelson Glueck, who excavated the site of Biblical Ezion-geber (Tall al-K̲h̲ulayfa) near the shore of the Red Sea about three kilometres north-west of al-ʿAḳaba, has concluded that the original sites of Biblical Ezion-geber and Elath (the predecessor of Ayla) are identical. The Biblical narrative sometimes distinguishes the two (Deut., ii, 8, I Kings, ix, 26, II Chron., viii, 17), while at other time it gives the impression that they were one (II Kings, xiv, 22, 16: 6). The Old Testament name Elat̲h̲, of doubtful etymology, is the ancestor of the Arabic Ayla.

Judaean control of Elath-Ezion-geber, established since the time of Solomon, was finally lost to the Edomites in the reign of Ahaz (735-15 B.C.), and the site remained occupied until the 4th century B.C. In the following century the town was transferred, probably by the Nabataeans, a short distance to the south-east, where it was situated at the time of the Islamic conquest.

During the Ptolemaic period (when it was known for a time as Berenike), Ayla continued as a port for trade with Arabia and Ethiopia. Under Roman rule it was garrisoned by the 10th Legio Fretensis and constituted the southern terminus of the road built by Trajan (A.D. 98-117) to connect the port with the important commercial centre of Bostra (Buṣrā) in Syria. Already in A.D. 325 Ayla was the seat of a bishopric and four capitals of its Byzantine church were to be seen in the courtyard of the customs house at al-ʿAḳaba in 1940. Just prior to Islam, Ayla lay in the territory controlled by the G̲h̲assānid phylarchs on behalf of Byzantium.

Ayla first makes its appearance in the Islamic

period in the year 9/630-1, when the town under its bishop Yuḥanna b. Ru'ba made peaceful submission to the Prophet during his Tabūk campaign. Under Islam Ayla became an important meeting-place for Mecca-bound pilgrims coming from Egypt and Syria, and trade flourished. Although the town stood at the meeting-point of Egypt, Syria, and the Ḥidjāz it was generally considered as belonging to Syria and is described by al-Muḳaddasī (178), writing in 985-6, as "the port of Palestine." The 4th/10th century marked the height of its prosperity under Muslim rule, as is clear from the account of al-Muḳaddasī. In 415/1024-5) Ayla was sacked by ʿAbd Allāh b. Idrīs al-Djaʿfarī and some of the Banū al-Djarrāḥ, while in 465/1072-3 it is said to have been destroyed by an earthquake (Ibn Taghrībirdī, *Nudjūm* (Popper), ii, 239).

The Crusading period brought a long era of strife to Ayla and at the end of it the town lay largely in ruins. Baldwin I, King of Jerusalem, took Ayla (Helim) in 1116 and it became incorporated into the Latin Kingdom of Jerusalem under the barony of al-Karak and Montréal. In 1171 the Franks were driven out by Saladin, who left a garrison in the town. Frankish control was briefly reasserted by Renaud de Châtillon, lord of al-Karak, in 1182-1183 during his remarkable but foolhardy campaign against the coast of the Ḥidjāz and the Red Sea. With the destruction of Renaud de Châtillon's fleet by Saladin's commander Ḥusām al-Dīn Luʾluʾ in 1183, Ayla passed permanently into the hands of Islam, but in a depleted condition. Abu'l-Fidāʾ (1273-1332) states that in his time nothing was left of the town but the stronghold near the shore (*Taḳwīm*, 86-7).

This stronghold, which probably was the predecessor of the still-standing late Mamlūk fortified caravanserai in al-ʿAḳaba [*q.v.*], does not represent the original fortification of Ayla. The original fort that protected Ayla lay on the island now known as Djazīrat Firʿawn, which lies on the opposite side of the Gulf of the coast of Sinai but within sight of the town. This island was already occupied in Byzantine times. It was this island fort which was besieged by Renaud de Châtillon in 1182, and the first fort on the mainland appears to have been built by Renaud de Châtillon in 1182 or 1183. In Abu'l-Fidā's day this mainland stronghold was the residence of an Egyptian governor.

AYLŪL [see Taʾrīkh].

AYMAK, Mongol and Eastern Turkish word meaning "tribe" and "group of tribes" (= Turkish *il*); in Modern Mongolian, "province", in the USSR, "*rayon*". In Afghānistān the four nomadic tribes of partly nomad origin: Djamshīdī, Hazāra, Fīrūzkūhī and Taymanī, are called the "Four Aymaḳs" (Čār, or Čahār. Aymaḳ) [see čahār aymak].

(B. Spuler)

AYMAN b. **KHURAYM** b. Fātik b. al-Akhram al-Asadī, Arab poet of the Umayyad period, son of the Companion of the Prophet Khuraym al-Nāʿim, whose *ḥadīths* he has handed down. After settling at Kūfa, he composed, like many of the poets of that town *ghazal* poems, but also panegyrics on the Umayyad princes ʿAbd al-ʿAzīz and Bishr, son of Marwān; although he contracted tubercular leprosy (*abraṣ*), his poetry allowed him to enjoy their intimate friendship, and this favour won him the surname of *khalīl al-khulafāʾ* (the friend of caliphs). In some of his poems he touches on political matters; he ventures to compose a panegyric on the Banū Hāshim, and manifests his desire not to take up arms against other Muslims (particularly against ʿAbd Allāh b. al-Zubayr, with regard to whom he wished to remain neutral); on the other hand, he is hostile to the Khāridjites and the murderers of ʿUthmān, so that, contrary to the *Aghānī* which makes him a Shīʿī, he must rather be considered a partisan of ʿUthmān.

ʿAYN [see Hidjāʾ].

ʿAYN in its basic sense signifies the eye, the organ of sight, acquires then the meaning of the function of sight, the seeing, and as is frequent in semantics compare e.g. *khalḳ*, creation, and *fiʿl* action, which can mean in Arabic as in English the acting and the effect of the acting—can also denote the effect of the function of sight, the aspect, the thing viewed, and especially in the plural, *aʿyān*, the particular things that are perceived in the exterior world. It is therefore not astonishing when we read in Khʷārizmī's *Mafātīḥ al-ʿUlūm* (ed. van Vloten, 143) that in an old translation of Aristotle's *Categories* which he ascribes to ʿAbd Allāh b. al-Muḳaffaʿ, the first category, οὐσία, substance, which signifies a particular concrete individual, e.g. a particular horse or a particular man, was rendered by *ʿayn*. However, in a later translation of the *Categories* by Isḥāḳ b. Ḥunayn the word *ʿayn* is replaced by the Persian word *djawhar* and this word becomes the technical term in all later philosophy for all the meanings of οὐσία, substance. But in a less technical sense to express the concrete things the philosophers still frequently use the term *ʿayn*. When e.g. Avicenna in his *Nadjāt* repeats the Aristotelian statement at the beginning of the *Hermeneutics* that the written words are the signs of the spoken words, the spoken words the signs of what is in the soul, i.e. its representations and concepts, and these representations and concepts in the soul the signs of the things in the exterior world, he uses for the things in the exterior world (in Greek τὰ πράγματα) the term *aʿyān*. It is interesting to note that Isḥāḳ b. Ḥunayn in his translation of the *Hermeneutics* translates τὰ πράγματα by the term *al-maʿānī*, a literal translation of the Stoic term σημαινόμενα or λεκτά, "meanings" (these "*meanings*" are called by the Stoics πράγματα —see Sextus Empiricus, *adv. log.* II. 12—but in another sense than that which the term πράγματα has in Aristotle). The Muslim philosophers accept from the Stoics the division of the "something", τί, in

Arabic *shay*ʾ, (i.e. anything that can be thought of) into two classes, things that exist in the exterior world, and things that exist in the mind, and they use for the former the expression *fi 'l-aʿyān*, for the latter *fi 'l-adhhān* (*adhhān* is the plural of *dhihn*, mind) and it is in this opposition of the exterior world to the purely mental entities that the term *aʿyān* is specially used by the philosophers. In this sense *ʿayn* is synonymous with *shakhṣ*, *individuum*, and it can express also the identity of the individual thing. But a common word denoting a concrete individual, like "horse", can signify both a particular horse, e.g. the horse in my stable, and the class "horse", when you say "this is a horse", meaning that this is an animal which possesses the nature, the general characteristics of a horse (according to the Arabian grammarians an *ism ʿayn*, a word denoting a concrete individual is an *ism djins*, a generic word). The philosophers give to this universal character of a thing the name of *māhiyya*, quiddity, or *dhāt*, essence, but in theology and mysticism the term *ʿayn* is frequently used to express this meaning. And since according to the neoplatonising mystics and philosophers the universals exist eternally in God's mind, these eternal ideas are called by the mystics *aʿyān* or *aʿyān thābita* (*thābita* means stable or eternal), whereas the philosophers use different other terms like *ḥaḳāʾiḳ* and *maʿānin* (some Muʿtazilites too employ the terms *aʿyān* or *ḥālāt* to express the eternal ideas in God). Now, since for the neoplatonising mystics our world is but a dream—world and true reality lies in a world beyond and God is the one truly Real and the ultimate source from which all being and all beings spring, *ʿayn* in its double sense of the real and of source—for in Arabic *ʿayn* can mean also source—is used by the mystics to indicate the super-existence of God's deepest essence. In this sense it is rare in philosophy, but we find it in Avicenna, for instance when he speaks in the *Ishārāt* (ed. Forget 205) of those mystics who penetrate to the *ʿayn*, the contemplation of God's inner nature. Finally it may be remarked that the term *ʿayn al-yaḳīn*, the contemplation of the evident, can be used in the double sense of "intuition", i.e. the pre-rational sense of intuitive understanding of the philosophical first principles, and the post-rational sense of the intuitive understanding of super-rational mystical truth.

Bibliography: see ANNIYYA; for the mystical use of the term see R. A. Nicholson, *Studies in Islamic Mysticism*. (S. VAN DEN BERGH)

ʿAYN in the medical terminology of the Arabs, like "eye", "oeil", "Auge" etc. in that of the Europeans, not only refers to the bulb or eye-ball, Ar. *muḳla*, *kurat al-ʿayn*, but also to the whole of the organs which make up the apparatus of vision, *djamiʿ ālāt al-baṣar*.

The study of the human eye, for the doctors of medicine and those who wrote on the subject in the Islamic world, constituted one of the most remarkable branches of their science. This branch of knowledge, which is the equivalent of the ophthalmology of the West at the present day, has borne different names at various periods. Thus it was called *kuḥl*, a word which originally designated collyrium (black) of antimony—the pre-eminent medicine and cosmetic in the East—, which was subsequently used in a much wider sense for the "science and art of caring for the eyes";—*kaḥḥāla*, from the same root and used in the same wide sense;—*ṭibb al-ʿayn*, *ṭibb al-ʿuyūn*, an expression still in use;—*ṭibb ramadī* and *ʿilm al-ramad*, where this latter term, which originally only meant "conjunctivitis", now embraces eye diseases of all types.

From the point of view of the history of medicine, this branch synthesises and reflects the evolution of Arab Medicine as a whole. Thus it is that two periods are distinguishable here: the initial period of formation, when the scholars of the East, for the most Christians, translated Greek ophthalmological science into Arabic and used it as it stood; and secondly, the period of development, during which other scholars systematised this material, perfected it and enriched it by their original contributions. Among the former must be mentioned Yuḥannā b. Māsawayh, a native of Djundīshāpūr and the author of the *Kitāb Daghal al-ʿAyn*, and Ḥunayn b. Isḥāḳ of Ḥīra (194-264/809-877), to whom the *Kitāb al-ʿAshr Maḳālāt fi 'l-ʿAyn* has been attributed; and among the latter, ʿAlī b. ʿĪsā [*q.v.*], also a Christian, of Baghdād (first half of the 5th/11th century), author of the celebrated *Tadhkirat al-Kaḥḥālīn*, and his great contemporary ʿAmmār b. ʿAlī [*q.v.*], a Muslim of Mawṣil who practised in Cairo, author of the *Kitāb al-Muntakhab fi ʿIlādj Amrāḍ al-ʿAyn*. The works of these four authors must be considered as the cornerstones of Arab ophthalmology.

To give an idea of the originality of Arab thought on this subject, it is sufficient to recall the relationships of cause and effect, which ʿAlī b. ʿĪsā was the first to discern, between trachoma (*djarab al-ʿayn*, today *ramad ḥubaybī*, *tarākūma*, *tarākhūma*) and the acute conjunctivitises which precede it, on the one hand, and the "cornea pannus" (*sabal*) and "entropion-trichiasis" (*inḳilāb al-shaʿar*) which follow it, on the other hand; and in the operation of cataract (*māʾ*, *māʾ nāzil fi 'l-ʿayn* and in the modern language *katārakta*) the astonishing suction of the (soft) crystalline lense performed by al-Mawṣilī, which eight centuries later, was to be adopted in the West and continued down to the the present day. New contributions in this special field are to be sought in the treatises on general medicine, like the *Ḳānūn* of Ibn Sīnā, where, for example, we find the first "anatomical" description of the eye motor muscles, as well as of the lachrymal ducts; also in the works of non-medical authors, such as the famous treatise on Optics, the *Kitāb al-Manāẓir*, of Abū ʿAlī b. al-Haytham, of Baṣra (died *ca.* 431/1039), in which this great scholar put forward his rational theory of vision, refuting that of the Greeks' "sight-spirit", inherited by the Arabs (*rūḥ al-baṣar*, *rūḥ baṣarī*, *rūḥ nūrī* etc.). Neither should the numerous minor works on ophthalmology be neglected which appeared everywhere and with great frequency in Islamic countries, some of which are in dialogue form (see the *Kitāb al-Masāʾil fi 'l-ʿAyn* of Ḥunayn) and even in poetic form (see the *Manẓūma fi 'l-Kuḥl*, author unknown, Vat. Borg. 87/3). Finally it should not be forgotten that there were oculists who enjoyed great fame, none of whose works on the subject have yet come to our knowledge. Such is the case, for example, of Isḥāḳ al-Isrāʾīlī (3rd/9th century), who practised in Cairo before moving to al-Ḳayrawān, where he became one of the most enlightened masters and authors on general medicine of the Middle Ages.

ʿAYN, "evil eye". Belief in the evil eye is well established in Islam. According to Abū Hurayra, the Prophet said *al-ʿaynᵘ ḥaḳḳᵘⁿ* "The evil eye is a reality" (al-Bukhārī, commentary of al-Ḳasṭallānī on the *Ṣaḥīḥ*, viii, 390, 463); it is the evil action of an envious glance which is envisaged by the recommendation given in the Kurʾān, cxiii, 5. Orthodoxy, however, makes the Prophet condemn this belief (*Muntakhab Kanz al-ʿUmmāl*, iv, 22; *Nihāya fi Gharīb al-Ḥadīth*, iv, 202). This superstition, universally current, dates from before Islam in the Muslim countries, where it continues to be prevalent. It frequently finds expression both in religious traditions and in popular folklore: "the majority of human beings die as victims of the evil eye", "the evil eye empties the houses and fills the graves", etc. The effect of the evil eye, *iṣāba bi 'l-ʿayn, laḳʿ, shawba*, etc. is generally instigated by a desire to harm transmitted by a look pregnant with hate or envy, *nāfis, nadjūʾ* or *nadjīʾ*, but it can be involuntary and result from the naturally injurious power of a strange or staring look *masfūʿ* (Ibn al-Sikkīt, *Tahdhīb al-Alfāẓ*, ed. Cheikho, 545-46; al-Mubarrad, *Kāmil*, 329). Deep-set eyes, blue eyes or eyebrows which meet are reputed to be baneful. Some animals, such as the viper (al-Damīrī, *Ḥayāt al-Ḥayawān*, i, 24) are considered as having a poisonous glance. The eye suffices to disseminate the evil. Its power, however, may be coupled with that of the spoken word: evil eye, *fascinum oculo*, and evil mouth, *fascinum lingua*, frequently go together. An unfortunate word or misplaced praise is capable of harming the person to whom they are addressed and of releasing the malefic action. Of all people suspected of possessing the evil eye, the most feared are women, especially old women or those who are unmarried or sterile. But likewise equally all who are ill-favoured or consider themselves placed at a disadvantage by nature. As a corollary, pregnant women, small children and, generally speaking, everything which is beautiful, happy, or precious, is liable to the assaults of envy, and certain circumstances augment the vulnerability of persons and things which are enviable: pregnancy, childbirth, marriage and in general, feasts and celebrations. Illness, debility, death of those concerned; loss of livestock, deterioration or destruction of objects or situations; the consequences feared from the evil eye are innumerable. People strive to protect themselves against it or to remedy its calamitous effects. Whether preventative or curative, the prophylaxis of the evil eye is varied (al-Suyūṭī, *Raḥma*, 56-58): use of formulas, gestures; fire rites, fumigations; use of salt, alum, horn, metal, etc.; the wearing of phylacteries, amulets, jewels; tattooing. Originally, doubtless the veil worn over the face was one of these means of prophylaxis. The most effective protective symbol is the number five, *khamsa* [*q.v.*] and the figuration of the five-fingers of the hand spread out (Lefebure, in *Bull. Soc. géogr. Alger*, 1907, 411-417). The ritual attaching to the evil eye, like the belief itself, is very much more a matter of magic and superstition than of religion, even where the formula is derived from orthodox Islam.

ʿAYN DILFA is a spring in the north of Syria which is of some importance on account of its situation on the road between Antioch and Aleppo, somewhat west of the large ruins of the monastery of Ḳaṣr al-Banāt. Its source is on the northern slope of the Djabal Bārīshā and it runs through a narrow channel cut out in the rock into a well-house (*sabīl*). According to an Arabic inscription, this well-house was built in 877 (1472-1473) by an inhabitant of the neighbouring village, of the name of Maḥmūd b. Aḥmad. It is highly probable that on account of the spring a settlement already occupied the spot in ancient times. A few remains of buildings from the Christian era, still more from Islamic times, can yet be seen. There are also a few inscribed Muslim tombstones. The place is nowadays uninhabited; it belongs to the people of Sermedā. From time to time nomadic Turcomans or Kurds used to camp there in their tents. The spring was of importance for the caravans between Antioch and Aleppo, which often used to rest there.

(E. Littmann)

ʿAYN DJĀLŪT, spring of Goliath, mentioned by the mediaeval geographers as a village between Baysān and Nābulus, in the Djund of Filasṭīn. It stood at the head of the Wādī Djālūt, and is said to have owed its name to a tradition that by it David slew Goliath (cf. A. S. Marmardji, *Textes géographiques arabes sur la Palestine*, Paris 1951, 152; G. Le Strange, *Palestine*, 384, 461). In the chronicles of the Crusaders the neighbourhood is called Tubania or Tubanie. It first achieves mention in Djum. II 578/Sept. 1183, when the armies of Saladin and of the Franks camped there face to face and then separated without an engagement (W. B. Stevenson, *The Crusaders in the East*, Cambridge 1907, 232-3; R. Grousset, *Histoire des Croisades*, ii, Paris 1948, 724; S. Runciman, *A History of the Crusades*, ii, Cambridge 1952, 439; K. M. Setton (ed.), *A History of the Crusades*, i, Philadelphia 1955, 599).

ʿAyn Djālūt is chiefly known as the site of the famous battle, fought on Friday 25 Ramaḍān 658/3 September 1260, in which a Mongol army, commanded by Kitbuga Noyon, was defeated by a Mamlūk army from Egypt, led by the sultan Al-Malik al-Muẓaffar Ḳuṭuz. The vanguard of the Mamlūk army was commanded by Baybars [*q.v.*]. The strength of the Mamlūk force was estimated at 120,000; that of the Mongols at 10,000 horsemen

(thus the Syriac and Arabic texts of Bar-Hebraeus; Rashīd al-Dīn speaks of "a few thousand"). The Mongol forces and their Christian auxiliaries, after at first sweeping the Mamlūk left wing (or, according to others, vanguard) before them, were set upon and annihilated by the main body of the Mamlūk army. The Mongol general Kitbuga was captured and put to death. Hülekü, infuriated by the defeat, prepared to send a punitive expedition to Syria, but was prevented from doing so by the inner struggle within the Mongol Empire following the death of Möngke Ḳaan (Mangu Khān) in September 1259 (cf. Rashīd al-Dīn, 359).

The Arabic and especially the Egyptian chroniclers regard the battle of ʿAyn Djālūt as a decisive victory, which saved the Syro-Egyptian Empire and indeed Islam itself from the Mongol menace. For the first time, a Mongol army had been defeated in pitched battle; the fact that the victors were largely Turkish, and overcame the Mongols by using their own methods of warfare against them, if anything added to the significance of the victory, for it meant that the vitality and energies of the steppe peoples were now being harnessed to the service of Islam (see for example the remarks and verses of Abū Shāma, *Tarādjim*, 208 and Yunīnī 367; D. Ayalon, in his *The Wafidiya in the Mamlūk Kingdom, IC*, 1951, 90, has drawn attention to the highly significant comments of Ibn Khaldūn, *al-ʿIbar*, v, 371, on the rôle of the steppe peoples in rejuvenating and renewing Islam). The Persian and other sources sympathetic to the Mongols tend rather to present the battle as an inconclusive engagement in which a small Mongol force was overwhelmed by vastly superior numbers, who were saved from retribution only by Hülekü's preoccupation with other and more important matters.

The victory by no means ended the danger from the Mongols, who continued to hold Mesopotamia and 'Irāḳ and to threaten Syria from both north and east. In the event, however, ʿAyn Djālūt was the high water mark of Mongol advance, though it seems likely that the ebbing of the Mongol tide was due to events in the East at least as much as to Mamlūk resistance.

Bibliography: the contemporary Egyptian accounts of the battle are those of the two biographers of Baybars, Ibn Shaddād and Ibn ʿAbd al-Ẓāhir, whose narratives seem to underlie those of most subsequent Egyptian historians. Ibn Shaddād's account of ʿAyn Djālūt is unfortunately not included in the surviving fragment of his work (MS. Selimiye 1507, Edirne; published in Turkish translation only: M. Şerefüddin Yaltkaya, *Baybars Tarihi*, Istanbul 1941). which, however, contains several allusions to the victory. A probably abridged version of Ibn ʿAbd al-Ẓāhir's narrative was published from the B. M. manuscript by S. F. Sadeque, *Baybars I of Egypt*, Dacca 1956 (13 ff., and index). A fuller text of the same book is to be found in Istanbul (MS. Fatih 4367). Ibn ʿAbd al-Ẓāhir is at some pains to emphasise Baybars' vital contribution to the victory. Of the later Egyptian accounts, the most accessible are those of Maḳrīzī (*Sulūk*, i, 430 ff. = Quatremère, *Sultans Mamelouks*, I, i, 104-6) and Abu 'l-Maḥāsin, Cairo ed., vii, 79. There are also Syrian (Abū Shāma, *Tarādjim Ridjāl al-Ḳarnayn al-Sādis wa 'l-Tāsiʿ*, Cairo 1948, 207-9; Yunīnī, *Dhayl Mirʾāt al-Zamān*, i, Ḥaydarābād 1954, 360 ff., citing Ibn al-Djazarī, etc.) and ʿIrāḳī (Ibn al-Fuwaṭī, *Al-Ḥawādith al-Djāmiʿa*, Baghdād 1351, 344) accounts, as well as brief allusions in Frankish and Eastern Christian sources (*Eracles*, ii, 444; Wm. Tyre Cont. ed. Migne 1044; the Armenian chronicle of Grigor of Akancʾ, ed. R. P. Blake and R. N. Frye, *HJAS*, xii, 1949, 349; Mufaḍḍal b. Abi 'l-Faḍāʾil, ed. and tr. E. Blochet, *Patr. Or.* xii, 417; Bar-Hebraeus, *Chronographia*, Oxford 1932, 439-40; Abu 'l-Faradj, *Taʾrikh Mukhtaṣar al-Duwal*, Beirut 1890, 489; al-Makīn b. al-ʿAmīd (ed. Cl. Cahen), *BÉt. Or.* xv, 1955-7, 175). The chief Persian source is Rashīd al-Dīn (ed. and tr. E. Quatremère, Paris 1836, 349-352). See further B. Spuler, *Die Mongolen in Iran*, Leipzig 1939, 57; H. H. Howorth, *History of the Mongols*, iii, London 1888, 167 ff.; R. Grousset, *Croisades*, iii, 603 ff.; Runciman, *Crusades*, iii, 312-3; Stevenson, *Crusaders*, 334; A. Waas, *Geschichte der Kreuzzüge*, i, Freiburg 1956, 317; Cl. Cahen, *La Syrie du Nord*, Paris 1940, 710-1.

(B. LEWIS)

AYN AL-DJARR, an ancient and important site in the Biḳāʿ [*q.v.*] and an Umayyad residence, the Arab name of which, now pronounced ʿAndjar, corresponds to the Greek and Syriac Gerrha and ʿIn Gero. The main source of the Litani, which comes forth at the foot of the Anti-Lebanon, not far from the modern road from Beirut to Damascus, for a long time formed a swampy lake there stretching to Karak Nūḥ, which was only finally drained in the Mamlūk period. The remains of a temple, later converted into a small fort (hence the expression *ḥiṣn Madjdal* used at the period of the Crusades), which still dominate the present-day village of Madjdal ʿAndjar, doubtless mark the site of ancient Chalcis of the Lebanon, the capital of a state which extended from Coelesyria to Ituria, before being annexed to the Roman Empire. In contrast, the archaeological remains which exist not far away, in the interior of a vast enclosure furnished with towers, and which the excavations now being undertaken will make better known to us, have been identified by J. Sauvaget with the Umayyad town founded about 95-96/714-715 by the Caliph al-Walīd b. ʿAbd al-Malik and built, as is attested by inscriptions and the Aphrodito papyri, with stones from the quarries of Kāmid in the Biḳāʿ and by the use of forced labour. Its character as an agricultural settlement has been inferred from the existence of hydraulic works, contemporary with the ruins, but at what period it was completely abandoned is not known. The Arabic texts, which first speak of the victory there of Marwān b. Muḥammad, in Ṣafar 127/November 744, over the troops of Sulaymān b. Hishām and the passage of the ʿAbbāsid forces when they occupied Syria, continue in fact to mention it incidentally without giving any precise information as to the actual condition of the old Umayyad town at the time.

(J. SOURDEL-THOMINE)

ʿAYN MŪSĀ: (1) A spring at the entrance of the Sīḳ at Wādī Mūsā (Petra). It was a source of water for a large Edomite site now known as Ṭawīlān, occupied in the 13th-6th centuries B.C. (Nelson Glueck, *The Other Side of the Jordan*, New Haven, 1940, 24). Islamic tradition associates this spring with Ḳuʾrān 2 : 57, where Moses strikes a rock with his staff and brings forth twelve springs. This appears to represent a blending of the twelve springs of Elim (Exodus 15 : 27) with the striking of the rock at Horeb in Exodus 17: 6. Yāḳūt (s. v. Wādī Mūsā) gives the same story repeated later by al-Bayḍāwī (*Tafsīr*, commentary on Ḳuʾrān 2 : 60 according to the Egyptian verse numbering) that the twelve springs burst forth from a stone that Moses had carried with him and set down on this spot. William of Tyre (*A History of Deeds Done Beyond the Sea*, tr. E. A. Babcock and A. C. Krey, New York, 1943, ii, 144) associates the spot with Exodus 17 : 6, which probably represents the then current Crusader tradition. Musil (*Arabia Petraea*, iii, Vienna 1908, 330) reports that in his day the spring was venerated by the Liyāthina Arabs because of its association with Moses.

(2) A spring north of al-Kafr in Ḥawrān, in Syria (René Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927, 349; Baedeker, *Palestine and Syria*, Leipzig 1912, 165).

(3) A small spring near the foot of Djabal al-Muḳaṭṭam east of Cairo (Les Guides Bleus, *Egypte*, Paris 1950, 253).

ʿUYŪN MŪSĀ: (1) A group of springs rising near Mt. Nebo north of Maʾdabāʾ in Jordan. They give their name to the Wādī ʿUyūn Mūsā, which drains into the Dead Sea. The springs, which are now used as a water supply for the town of Maʾdabāʾ, probably were associated with Moses already in Byzantine times (F.-M. Abel, *Géographie de la Palestine*, i, Paris 1933, 460). The local Arabs are reported to believe that the springs are inhabited by spirits, to whom the Arabs annually make a sacrifice (Archimandrite Būlus Salmān, *Khamsat Aʿwām fī Sharḳ al-Urdunn*, Ḥarīṣā (Lebanon) 1929, 185).

(2) A group of about a dozen springs approximately 12 km. SE of Suez, near the shore of the Gulf of Suez. Al-Maḳdisī (2nd ed. de Goeje, Leiden 1906, 67) mentions them by name, but says nothing further about them. At this spot there exists a small settlement, which formerly carried on trade in turquoise with the Bedouin from Sinai (T. Barron, *The Topography and Geology of Sinai (Western Portion)*, Cairo 1907, 36-37, 101, 212; Léon Cart, *Au Sinaï et dans l'Arabie Pétrée*, Neuchâtel 1915, 15-16). (H. W. GLIDDEN)

ʿAYN SHAMS is a town in Egypt. ʿAyn Shams is the Arabic name of the ancient Egyptian town of Ōn, which the Greeks called Heliopolis because of its famous sun-temple. A recollection of this cult is contained in the Arabic name ("the spring, or the eye, of the sun"), which must be a popular arabicised form of an old name. In the first centuries of Islam ʿAyn Shams was still, according to some authorities, an important town, and the capital of a district (*kūra*), but according to others, a collection of ruins used as a public quarry. The Fāṭimid al-ʿAzīz built castles on the spot but afterwards the buildings fell completely into ruins. The extensive ruins, especially the two obelisks (*misallatān*) of the temple, stirred the imagination of the Arabs. One of them has been preserved until the present day; the other fell down in 656/1258. It is said to have contained over 200 *ḳinṭār*s (quintals) of brass. During the Arab period a statue of a beast of burden with a man on its back still stood between the two obelisks.

The other curiosity of ʿAyn Shams was its balsam-garden, which was cultivated under the supervision of the government. During the Middle Ages the balsam-tree is said to have grown only here, though formerly it had also been a native plant in Syria. According to a Coptic tradition known also by the Muslims, it was in the spring of ʿAyn Shams that Mary, the mother of Jesus, washed the clothes of the latter on her way back to Palestine after her flight to Egypt. From that time onwards, the spring was beneficent, and during the Middle Ages balsam-trees could only produce their precious secretion on land watered by it.

(C. H. BECKER)

ʿAYN AL-TAMR, a small town in ʿIrāḳ in a fertile depression on the borders of the desert between Anbār and Kūfa. It is 80 miles west of Karbalāʾ.

The Arabic name means fountain of dates. It was probably called so because of an abundance of palm trees (Yāḳūt, iii, 759).

According to Ibn al-Kalbī, it was part of the Ḥīrite kingdom of Djudhayma al-Abrash (al-Ṭabarī, 750; Yāḳūt, ii, 378). There Shāpūr is said to have married Naḍira, the daughter of the King of Hatra. (Al-Ṭabarī, i, 829; Yāḳūt, ii, 283; al-Hamdānī, *al-Buldān*, 130). It was probably also a *tassūdj* of the *astān* of Bihḳubādh al-Aʿlā, as it was in the ʿAbbāsid period (Ibn Khurradādhbih, 8; Ḳudāma, 236; Yāḳūt, i, 241, 771).

When the Muslim commander Khālid b. al-Walīd attacked it in the year 12 A.H., ʿAyn al-Tamr was a military post (al-Ṭabarī, i, 2057; al-Balādhurī, 246) with a fortified citadel (al-Ṭabarī, i, 2064, al-Balādhurī, 246-7). Khālid defeated and massacred the garrison (al-Ṭabarī, i, 2064; al-Balādhurī, 110; Yāḳūt, iii, 759; Caetani, *Annali*, ii, 261, 940, 991). He captured and enslaved some of its non-combatant inhabitants. These were the first enslaved captives to arrive in Medina (al-Ṭabarī, i, 2076). The sons and grandsons of many of these captives became prominent figures in the military, administrative and intellectual life of Islam (cf. their names in al-Ṭabarī, i, 2064, 2121, 3472, ii 801; al-Balādhurī, 247, 230, also 14, 142, 352, 367; Yāḳūt, iv, 807; Aghānī, iv, 3256).

Scanty information about the Muslim conquests indicates that ʿAyn al-Tamr had a Christian population and a church (al-Ṭabarī, i, 2064; al-Balādhurī, 247; Yāḳūt, iv, 807), and also a Jewish Community and a synagogue (al-Yaʿḳūbī, ii, 151). But probably the majority were Arabs from the tribes of Taghlib, Namīr and Asad, who were sedentary agriculturists.

ʿAyn al-Tamr preserved its importance in the Islamic period, not only for its products by which the nomads of Arabia and ʿIrāḳ were supplied, but also for its geographical situation on the routes of communication between the fertile centre of ʿIrāḳ and the Syrian desert. It also commanded the military approaches from the western desert to ʿIrāḳ and especially to Kūfa (cf. al-Ṭabarī, i, 2069,

2072, 2121, ii, 946, 1352; al-Balādhurī, 62; Yāḳūt, iv, 137; Ibn Khurradādhbih, 97; Ibn Ḥawḳal, i, 34; A. Musil, *Middle Euphrates*, 41, 295-311).

Its importance led the governors of Kūfa to station in it a military force to protect one of the approaches to their *Miṣr* (cf. al-Ṭabarī, i, 3444: ii, 773, 1352, 1945, 1946, ii 21; al-Balādhurī, *Ansāb*, v, 295).

Its rather isolated position induced some of the Khāridjites to make it a centre for grouping revolutionary forces (al-Ṭabarī, ii, 183, 773; al-Yaʿḳūbī, ii, 228, 387; al-Balādhurī, *Ansāb*, v, 45; Yāḳūt, iii, 759).

By the end of the 3rd/9th century ʿAyn al-Tamr was inhabited by the Banī Asad (al-Ṭabarī, iii, 225).

ʿAyn al-Tamr was a fortified town (al-Muḳaddasī, 117) in the 4th/10th century, a *tassudj* of the *astān* of Bihḳubādh al-Aʿlā. At this time its products included 14 *baydar*, 300 *kurr* of wheat, 400 *kurr* of barley and 45,000 *dirhems* per year (Ibn Khurradādhbih, 10; Ḳudāma, 237). Its lands were considered *ʿushrī* (al-Balādhurī, 248).

For the period of the decline of ʿIrāḳ from the 6th/12th century onwards, information on ʿAyn al-Tamr is scanty and it is confused with Shthatha, a neighbouring village. It was captured and looted by the Mongols who captured Baghdād (ʿAzzāwī, *Taʾrīkh al-ʿIrāḳ bayn Iḥtilālayn*, i, 357). During the turbulent 10th/16th century some of the Bedouins used it for a refuge (ʿAzzāwī, *op. cit.*, v, 182).

Gertrude Bell visited ʿAyn al-Tamr and described it as a walled village with a citadel. She mentioned its sulphurous waters, cereals and 170,000 palm trees (*Amurath to Amarath*, London 1924, 139).

At present ʿAyn al-Tamr is the centre of a district (*nāḥiya*). It has four quarters: Albu Hardan, Ḳaṣr Thamir, Ḳaṣr al-ʿAyn, and Ḳaṣr Abū Hwaydī. The sedentary population numbers 2144, and the rural and nomadic population is 3183 (1947 Census of ʿIrāḳ).

Bibliography: quoted in the article.

(SALEH A. EL-ALI)

ʿAYN TEMUSHENT, a town in Algiers situated 45 m. (72 km.) S-W of Oran, on the road to Tlemcen, and on the site of the Roman city of Albulae and of Kaṣr Ibn Sinān, mentioned by al-Bakrī in the 5th/11th century (de Slane's trans., 1913, 146, 160) to the S-E of the plain of Zīdūr. A redoubt, erected by the French in 1839 near the spring called Aïn Temouchent (French orthography), and unsuccessfully attacked by the troops of ʿAbd al-Ḳādir in 1845, is the source of a centre of colonisation which has grown into a town with now more than 20,000 inhabitants, one-third of whom are Europeans. It is the market for the rich agricultural region of Orania; its black, fertile soil, of volcanic origin, is used primarily for the cultivation of the vine, and also for market gardening and the cultivation of citrous fruits, cereals and pulses. (J. DESPOIS)

ʿAYN AL-WARDA is a locality which, according to Yāḳūt, is identical with Raʾs ʿAyn [*q.v.*]. It owes its fame to the great battle of 24 Djumādā I 65/6 Jan. 685, in which the Shīʿites of Kūfa were slaughtered by the Syrians. See Weil, *Chalifen*, i, 360 ff.; Müller, *Der Islam im Morgen- und Abendland*, i, 374; al-Ṭabarī, index and especially i, 257 and ii, 554 f. (ED.)

ʿAYN ZARBA, deserted town of Anatolia, situated to the south of Sīs and to the north of Miṣṣīṣa (the former Mopsuestia), a little to the north of the confluence of the Sombaz Čay with the Djayḥān, built on an isolated hill in the middle of the plain, on top of the ruins of an ancient town which was called Anazarba (cf. Hirschberg in Pauly-Wissowa, i, col. 2101). The Arabs took the first element of the name *Ana* for *ʿAyn*, spring; cf. Sachau, in *ZA* VIII, 98. It acquired a certain importance from the time of Hārūn al-Rashīd who organised the frontier for defence. In 180/796 he rebuilt and fortified it, and settled people from Khurāsān there (al-Balādhurī, 171; Ibn al-Faḳīh, 113; Ibn Shaddād, in Ibn al-Shiḥna, *al-Durr al-Muntakhab*, 185). In 212/827 ʿAbd Allāh b. Ṭāhir, governor of the region between Raḳḳa and Egypt, settled Africans from Egypt in the town (Michael the Syrian, iii, 60). In 220/835 al-Muʿtaṣim brought in some Zoṭṭ (al-Balādhurī, *loc. cit.*, al-Masʿūdī, *al-Tanbīh*, 355) were the object of a Byzantine attack in the same year, and of another in 241/855 when they were captured with their families and their buffaloes and carried off to Constantinople (al-Ṭabarī, iii, 1169 and 1426; cf. Vasiliev, *Byzance et les Arabes*, Fr. edit., i, La *dynastie d'Amorium*, 126 and 224). In 287/900, the eunuch Waṣīf, who wanted to cross from ʿAyn Zarba into Byzantine territory was captured by the troops of al-Muʿtaḍid to the north of the place.

ʿAyn Zarba is included by the Arab geographers among the frontier towns of the Thughūr (Ibn Khurradādhbih, 100, Ḳudāma, 229, 253, Ibn Rusta, 107, al-Yaʿḳūbī, 362 etc.). It flourished mainly in the 4th/10th century. In his book on the Thughūr, Ibn Ḥawḳal, 121, described it as a town like those of the Ghawr (probably because of the similarities of climate and products), in the middle of a plain where palms grow, and surrounded by fertile lands (cf. al-Iṣṭakhrī, 55, 63). It was fortified by the Ḥamdānid Sayf al-Dawla who, says Yāḳūt, iii, 761, spent 3 million dirhems on it. Nevertheless it was taken by Nicephorus Phocas, to whom it surrendered at the end of the year 350/962 (see the detailed description of the siege and the ravages of the Byzantines, particularly the felling of 50,000 palm trees, in Ibn Miskawayh, ii, 190-1; for other references see M. Canard, *Hist. de la dynastie des Ḥamdanides*, i, 806-8). The Muslims were expelled and emigrated to Syria. The town remained in Byzantine hands until the time when the Armenians, expelled from Armenia, occupied it together with the other towns of Cilicia, and it became part of the territories belonging to Philaretus. But, a little before the arrival of the First Crusade the Saldjūḳs took Tarsus, Miṣṣīsa and ʿAyn Zarba (Michael the Syrian, iii, 173, 179). Tancred, nephew of Bohemond, conquered Cilicia in 1097 and Bohemond, installed in the principality of Antioch, took possession of it and also of Tarsus, Adana and Miṣṣīsa in 1098. These places, the object of a dispute between Bohemond and the Byzantines, were recaptured by the latter, but the Armenian Thoros I, a descendant of Roupen, who was established in the mountains to the north of Sīs, and who reigned from 1100 to 1129, took Sīs and Anazarba from the Byzantines (*RHC Arm.* I, 499). During the reign of Leo I, brother of Thoros, Bohemond wanted to establish himself again in Cilicia and marched on ʿAyn Zarba, but he came into conflict with the Dānishmandid of Cappadocia who also wanted the country, and was killed in 1130. After Leo had conquered Tarsus, Adana and Miṣṣīsa in 1132-33, the Byzantines invaded Cilicia in 1137 and John Comnenus recaptured ʿAyn Zarba and took Leo prisoner (Kamāl al-Dīn, ed. S. Dahan, ii, 263), but in 1151 Thoros II, son of Leo, regained ʿAyn Zarba as well as the other large towns in Cilicia. Ḳilīdj Arslān II of Ḳonya, at the instigation of his ally Manuel Comnenus, attacked ʿAyn Zarba without success. In 1159

Manuel reoccupied it with the other places in Cilicia, but Thoros II took it again in 1162 (cf. concerning these events, F. Chalandon, *Les Comnènes*, ii, 115-6, 426-30 and R. Grousset, *Hist. des Croisades*, ii, 51, 86, 333, 399, 566).

The Rupenians kept Cilicia until the 14th century. From 1266 the Mamlūks of Egypt made numerous invasions into the kingdom of Little Armenia (see the articles ARMENIA, CILICIA, MIṢṢĪSA, SĪS); during one of them the region of ʿAyn Zarba was pillaged (in 1279, Bar Hebraeus, *Chronography*, 462). Finally in 823 Arm. = 776 A.H. = 1374 A.D., in the reign of Malik Ashraf Shaʿbān, Cilicia was conquered, ʿAyn Zarba destroyed, and Leo led into captivity in 1375 (see *RHC Arm.* i 686 and 719). After this the town lost all importance. Like the rest of Cilicia it passed into the hands of the Turkomān family of Ramaḍān-oghlu in the 15th century and then to the Ottomans in the 16th.

In the 14th century the name of the town was corrupted into Nāwarzā (cf. Abu 'l-Fidāʾ, ii, 2nd part, 29). To-day the place is in ruins and is known as Anavarza.

Bibliography: In addition to the sources mentioned in the course of this article, see Le Strange, 129; Ritter, *Erdkunde*, xlx, 56; G. Schlumberger, *Un empereur byzantin au Xme siècle, Nicéphore Phocas*, 191 ff. (M. CANARD)

AYNABAKHTĪ, Turkish name for Lepanto, or Naupaktos, in Greece. It is on the Gulf of Corinth, has a picturesque position, but is—these days—an impoverished small town, called Epaktos by the people and Lepanto by the Italians. It is surrounded by crumbling walls which date from the times of Venetian rule, and is dominated by a fortress. In the Middle Ages, Aynabakhtī ruled over the Gulf of Corinth, and in 1407 it came under Venetian rule (cf. Vitt. Lazzarini, *L'acquisto di Lepanto*, 1407, in: *Nuovo Archivio Veneto*, XV (Venice 1898), 267-833; in 1483 it was unsuccessfully besieged by the Ottomans, but was taken by them in 1499. Don Juan of Austria (at the age of 26) won a victory near the Oxia islands on 7 Oct. 1571 in a very bloody sea-battle, in which he commanded 250 ships (partly Venetian, partly Spanish), supported by the Pope, and met a Turkish fleet of equal strength of which he sank 200 vessels. The town remained the seat of a Turkish Sandjaḳ-Bey until it was once more conquered by the Venetians in 1687, who retained it until the Peace of Karlovac (26 Jan. 1699). After this it became Turkish again, and on 12 March 1829 it became Greek. Opposite the Bay of Aynabakhtī, the Gulf of Corinth narrows to a width of 1¼ m. (2 km.). The fortifications erected here by the Venetians, called Kástro Moréas in the south, and Kástro Roumelías in the north, were formerly known as the Small Dardanelles, but have long fallen into ruins. Today, the town has about 2000 inhabitants and is the seat of a bishop.

ʿAYNĪ, ḤASAN EFENDI AL-SAYYID ḤASAN B. ḤASAN AL-ʿAYNṬĀBĪ, one of the most celebrated poets of the reign of Maḥmūd II, born at ʿAynṭāb in 1180/1766 and died at Constantinople in 1253/1837. Of very humble origins, he left his native town in 1780, travelled about Anatolia for ten years and settled in Istanbul, where he studied at the *madrasa* of Sulṭān Aḥmad; after holding various appointments in the offices of the administration, in 1831 he became professor of Arabic and Persian in the Chancellery of the Sublime Porte. His poetry caused Sulṭān Maḥmūd II to look on him with particular favour, and to grant him pensions and honours. On his death he was buried at the Mawlawī monastery at Galata. His contemporaries did not have a very high opinion of him, and have left us a picture of him as having been very much a courtier in outlook, with a love of luxury and money, and profoundly egoistical. Though belonging to the Mawlawī sect, he was in constant communication with members of the Naḳshbandī sect, who exerted a strong influence over him.

Works: *Naẓm al-Djawāhir* (1236/1820-1), Turkish, Arabic and Persian dictionary; *Nuṣrat-nāma*, a *mathnawī* on the destruction of the Janissaries; *Kulliyyāt* (1258/1842), comprising the *Dīwān*, which contains *ḳaṣīdas* and encomia written for the Sulṭāns Selim III and Maḥmūd II, *ghazals*, stanzas, chronograms and *mathnawīs*, and the *Sāḳī-nāma*, a résumé of his philosophical reflections on the life of man from the Creation. It cannot be said that ʿAynī displayed either great poetic temperament or great literary culture.

AL-**ʿAYNĪ**, ABŪ MUḤAMMAD MAḤMŪD B. AḤMAD B. MŪSĀ BADR AL DĪN, was born 17 Ramaḍān 762/21 July 1361, at ʿAynṭāb, a place situated between Aleppo and Antioch. He belonged to a family of scholars (his father was a *ḳāḍī*) and began his studies at an early age, first in his birthplace and then at Aleppo. When he was 29 years old, he visited Damascus, Jerusalem and Cairo. He was initiated into the mystical doctrines of Ṣūfism in the latter town and for a time entered the darwīsh monastery of the Barḳūḳiyya, which had recently been founded. After making several journeys to Damascus and to the town of his birth, he established himself finally in Cairo, where he was appointed *muḥtasib* in 801/1398-1399, during the reign of the Sulṭān al-Malik al-Ẓāhir; he was several times dismissed and re-appointed, and, in 803/1400-1, he succeeded in obtaining the much envied post of inspector of pious foundations (*nāẓir al-aḥbās*). On the accession of the Sulṭān al-Malik al-Muʾayyad Shaykh (815/1412), he was disgraced. However, shortly after he was again in favour and was again appointed to the office of *muḥtasib*. His knowledge of the Turkish language, moreover, contributed to making him

persona grata with the rulers of his time, the Sulṭāns al-Muʾayyad, al-Malik al-Ẓāhir Tatar and al-Malik al-As̲h̲raf Barsbāy. He translated al-Ḳudūrī's legal treatise into Turkish for Tatar; he read his Arabic chronicle, translating it orally into Turkish as he went along, to the Sulṭān al-Malik al-As̲h̲raf in the long and frequent interviews he had with him. For the rest, the one-time Ṣūfī of the Barḳūḳiyya, now become a perfect courtier, composed panegyrics in honour of his masters (a *Life of Muʾayyad*, a *Eulogy of al-Malik al-As̲h̲raf*). Appointed in 829/1425-6 chief *ḳāḍī* of the Ḥanafīs, he occupied this post for 12 consecutive years. In 846/1442-3, he even succeeded in combining the offices of *muḥtasib*, inspector of pious foundations and chief *ḳāḍī* of the Ḥanafīs, a unique achievement according to his biographers. In addition he was professor at the Muʾayyadiyya *madrasa*. He lost favour in 853/1449-50 and died two years later (4 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 855/28 December 1451). He was buried in the ʿAyniyya *madrasa*, which he had founded and where, later on, another commentator of al-Buk̲h̲ārī, al-Ḳasṭallānī, also found his resting place.

The life of al-ʿAynī affords a most interesting testimony on the relationships of the scholar class with the Mamlūk Sulṭāns. This scholar took an active part in the intellectual movement of his century and was in contact, though on rather bad terms, with two of the most outstanding men in Muslim science of the period, al-Maḳrīzī and the S̲h̲ayk̲h̲ al-Islām Ibn Ḥad̲j̲ar al-Asḳalānī; he supplanted the former in the office of *muḥtasib*, thus incurring his hatred; he sustained a very lively argument against the latter concerning his commentary on the *Ṣaḥīḥ* of al-Buk̲h̲ārī.

Al-ʿAynī's works are very numerous; some of them are in Turkish, though the majority are in Arabic. The three best known are: (1) his general history called *ʿIḳd al-D̲j̲umān fī Taʾrīk̲h̲ Ahl al-Zamān* (an extract in *Recueil des historiens des croisades. Hist. or.*, II^{a}, 183-254); (2) his commentary on the poetical examples cited in four commentaries of the *Alfiyya* of Ibn Mālik, entitled *al-Maḳāṣid al-Naḥwiyya fī S̲h̲arḥ S̲h̲awāhid S̲h̲urūḥ al-Alfiyya* (printed on the margin of the *K̲h̲izānat al-Adab* of al-Bag̲h̲dādī, Būlāḳ 1299, 4 volumes); (3) his great commentary on the *Ṣaḥīḥ* of al-Buk̲h̲ārī, entitled *ʿUmdat al-Ḳārī fī S̲h̲arḥ al-Buk̲h̲ārī* (printed in Cairo 1308, and Constantinople 1309-1310, 11 volumes); in this last work, al-ʿAynī shows proof of a certain method, which contrasts with the usual confused disorder prevalent in the work of Muslim exegetes; in the study of each *ḥadīt̲h̲* he proceeds in the following order: connexion between the *ḥadīt̲h̲* and the chapter heading; study of the *isnād*, of its peculiarities and its authorities; enumeration of other works or other chapters of the *Ṣaḥīḥ* where the *ḥadīt̲h̲* occurs; study of the literal sense; study of the juridical or ethical rules which can be deduced from the *ḥadīt̲h̲*.

ʿAYNṬĀB (Arm. Antaph, Lat. Hamtab, to-day Antep or Gaziantep since 1921: ethnically *ʿaynī* and also *ʿanṭabī*, see *1001 Nights*, Night 864, Cairo edition) important town, chief place of a *vilāyet* in the south-east of Anatolia, with 50,965 inhabitants (1935). The *vilāyet* has five *kazas*: Gaziantep, Kilis, Nizip, Islahiya and Pazarcik.

The town is situated on the upper Sad̲j̲ūr, a tributary of the Euphrates, near the junction of two important roads, one running north-south from Marʿas̲h̲ to Aleppo, with a fork just south of Marʿas̲h̲ to Malaṭya; the other east-west; the latter runs from Diyarbakir, Urfa (Edessa) and Bired̲j̲ik on the Euphrates, and, after following a short section of the Marʿas̲h̲ road just outside Gaziantep, branches off towards Adana. Secondary roads also diverge from Gaziantep, one to Besni (Bahasnā) to the north-east, the other to the Syrian frontier in the south-east. A new railway line links, through Gaziantep, the Adana-Malaṭya line to the Bag̲h̲dād line, thus avoiding the détour into Syrian territory via Aleppo. Gaziantep is 55 km. from Bired̲j̲ek, 45 from the Syrian frontier and 100 from Aleppo.

The region of ʿAynṭāb has always been the hub of important routes, but it was Dolichè (Dulūk, now Dülükbaba), a little to the north-east, which in ancient times took the place of ʿAynṭāb, and the latter, which was probably the Diba of Ptolemy, the Tyba of Cicero, was only a dependency of it. It was not until Dulūk had been taken by the Byzantines in 351/962 under the Ḥamdānid Sayf al-Dawla that ʿAynṭāb began to assume the importance lost by Dulūk, with which Yāḳūt wrongly identifies it. On the eve of the First Crusade it was part of the domain of the Armenian Philaretus. It was allotted in fief, with Tell Bās̲h̲ir, to Joscelin of Courteney, vassal of Baldwin of Le Bourg, count of Edessa, then to his son Joscelin II. After the capture of Joscelin II by the troops of Nūr al-Dīn in 1150, it was ceded by the Franks, together with the rest of the region, to the Byzantine emperor Manuel Comnenus, but in 1151 the Sald̲j̲ūḳ of Ḳonya, Masʿūd, annexed it. After his death in 1153, it was taken by Nūr al-Dīn. It was from then on part of the province of Aleppo and was an advance post, first for the Ayyūbids and then the Mamlūks, against the Sald̲j̲ūḳs and the Armenians. It was temporarily occupied by the Mongols in the course of their expeditions against northern Syria in 1271 and 1280. Taken in 1400 by Tīmūr, it was then annexed by Ḳarā Yūsuf of the Turkomān dynasty of the Ḳara-Koyūnlū, master of the two ʿIrāḳs, and then it passed to the Turkomān dynasty of the D̲h̲uʾl-Ḳadr, who submitted to the Ottomans in the 16th century. It was from then on part of the Ottoman empire, and was only temporarily detached to Egypt in the time of Muḥammad ʿAlī, between 1832 and 1840. At the end of the First World War, ʿAynṭāb was occupied by the English in 1919, then by the French until 1921.

Before the First World War ʿAynṭāb contained a large proportion of Armenians, nearly a third of its total population. It was also the centre of an American mission which had a college there. The region is also the centre of the preserve or must of grapes called *pekmez*. It was a stronghold with its citadel towering on a great mound of which the ruins are still visible.

For the fighting round ʿAynṭāb in 1920, see Andréa, *La vie militaire au Levant*, Paris 1923, — see also the article Ayintab in *IA*, which lists the Turkish monographs on the town. (M. CANARD)

AYT, a Berber word meaning "sons of", the singular of which, *w* (and var.: *u, aw, əg, ag(g), i*) appears in compounds and before proper nouns. *Ayt* consists of a suffix of number *t*, a complementary element *a* and the radical velar sonant *w* palatalised as the second element of a diphthong; it is known to most of the Berber dialects, which use it either in compounds (thus: *ayt-ma* "sons of mother = brothers"), or before a proper noun to indicate a tribe (Ayt Izdəg, Ayt Warayn, etc.), in the same conditions as the Arabic *Banū* (>*Bnī*) or Awlād (> *Ūlād*); in the more evolved dialects, *Ayt* tends to be replaced by these Arabic terms, but it is still very prevalent in the more conservative dialects (particularly in Morocco, where, however, in the Sūs, it is challenged by a composite *id-aw*: Id-aw Səmlal); in the spirant dialects (Rif, Kabylia, etc.), the evolved form *Ath*, from which the actual radical has disappeared, has replaced *Ayt* (*Ath* Iznasən, *Ath* Iratən, etc.). In Touareg, *ayt* is very prevalent in its primary function (see Ch. de Foucauld, *Dict. touareg-français*, Paris 1951, iii, 1440 ff.), but in the names of tribes, although it is known, it disappears before *Kgl* (Ch. de Foucauld, *Dict. abrégé touareg-français des noms propres*, Paris 1940, *passim*). (CH. PELLAT)

AYWALİK (Greek Kydonia), small town on the Aegean coast of western Anatolia. Situated on a peninsula in the gulf of Edremit, 39° 18′ north, 26° 40′ east, opposite the island of Mytilene (Midilli). It is the capital of a *ḳaḍā* of the same name in the *wilāyet* of Balikesir [*q.v.*]. In 1945 it had 13,650 inhabitants (V. Cuinet gives the number 20,974—largely Greek Orthodox—for the end of the last century), and the *ḳaḍā* 24,742. There is a small group of islands in the gulf, called the Yund Adalarî, in antiquity known as Hekatonnesoi.

Aywalik was completely destroyed in the Greek War of Independence (1236/1821), but soon regained its former prosperity. Following the agreement between Turkey and Greece (30th January 1923) to exchange minorities, the Greek population—which had hitherto formed the greater part of the inhabitants—left, and was replaced by returning Turks from Midilli, Crete and Macedonia. Today the population is exclusively Turkish and Muslim.

Bibliography: Pauly-Wissowa, vii, 2799 (Hekatonnesoi); ix, 2307 (Kydonia); A. Philippson, *Reisen und Forschungen im westlichen Kleinasien* i, 31 and 86 ff.; Ch. Texier, *Asie Mineure*, 207; V. Cuinet, *La Turquie d'Asie*, iv, 268-71; Djewdet Pasha, *Taʾrīkh*, xi, 283-5 (details concerning the reasons for the destruction of the town); *IA*, ii, 78 (Besim Darkot). (FR. TAESCHNER)

AYWĀN [see ĪWĀN].

AYWAZ, ʿAYWAḌ. (1) A term applied to the footmen employed in great households in the later Ottoman Empire. They were generally Armenians of Van, sometimes Kurds. A *ḥukm-i sherīf* to the çavushbashî, dated Rabīʿ I 1164/January-February 1751, speaks of "the Armenian *dhimmī*s who have for some little time been employed in the houses of the *ridjāl-i dewlet-i ʿaliyye*" and who drink wine and steal in their places of employment and evade payment of *djizya*: henceforth Armenian and Greek *dhimmī*s are not to be employed in the houses of the great, but are to be replaced by Muslims (Ahmet Refik, *Hicrî on ikinci asirda Istanbul hayatî*, Istanbul 1930, 171). To what extent Greeks were in fact so employed is not clear. This order could have had no lasting effect, for an *aywaz* called Sergis, an Armenian of Van, is one of the stock figures in the Ḳaragöz shadow-plays: in modern Arabic he is known as *ʿeywāz*, and has a wife, Umm Maʿwaẓa (A. Barthélemy, *Dictionnaire Arabe-Français*, Paris 1935-54, 562, 567).

The duties of the *aywaz* included waiting at table, lighting and stoking the *mangals*, filling and cleaning the lamps, and doing the shopping for the household (*bazara giden* in the *ḥukm* quoted above). There is reason to suppose that this last duty was sometimes a source of profit to both servant and tradesman: *ayvaz kasap hep bir hesap* ("*aywaz* and butcher; it all amounts to the same") is still a Turkish saying used of two identical things. A senior *aywaz* who acted as steward was entitled *aywaz kyaḥya* (*ketkhudā*).

The usual dress of an *aywaz* was a purple jacket, waistcoat and trousers, variously coloured woollen stockings and black shoes, with a white towel over the shoulders, a broadstriped apron, and a fez surrounded by a turban.

Pakalîn (see Bibliography) states that certain men-servants in government offices were also called *aywaz*, and that there was an *aywaz* in the Foreign Ministry "till recently", whose job was to clean the carpets.

The origin of the word is dubious: it is thought to be a corruption of the Arabic *ʿiwaḍ* (so *IA*: see Bibliography): the plural *aʿwāḍ* would seem a more likely etymon, on formal grounds, though *ʿayvaz* is the form taken by the Arabic *ʿiwaḍ* in the dialect of Gaziantep (Ömer Asîm Aksoy, *Gaziantep ağzî*, Istanbul 1945-6, iii, 60). Either way, the connexion of ideas is hard to see.

(2) Ayvaz (ʿAywāḍ or ʿIwaḍ Khān) is the name of a leading character in the Köroghlu folktales: he is the son of a butcher (from Georgia, Urfa, or Üsküdar in the several versions), who is kidnapped by Köroghlu and eventually becomes his most valiant follower (see Pertev Naili, *Köroğlu destanî*, Istanbul 1931, passim; and Pertev Naili Boratav, *Halk hikâyeleri ve halk hikâyeciliği*, Ankara 1946, Index s.v. Ayvaz).

Bibliography: *IA*, article *Ayvaz*, by Sabri Esat Siyavuşgil, from which the present article is largely drawn, as is the article Ayvaz in M. Z. Pakalîn, *Osmanlî tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946-56. (G. L. LEWIS)

AYYĀM AL-ʿADJŪZ "the days of the old woman". In the Islamic countries bordering on or near to the Mediterranean, certain days of recurrent bad weather, generally towards the end of winter, are called "days of the old woman". This expression, which is old, is also to be met with in contemporary folklore. It refers to a period of variable duration, from one to ten days, though more frequently of one, five or seven days duration. Its place in the yearly cycle varies according to the country. There is only

one reference mentioning the winter solstice (see R. Basset). It often involves the last four (or three) days of February and the first three (or four) days of March (months of the Julian calendar or their equivalents): this is the case with the Turks, in Syria and the Lebanon and in Egypt. These seven days each have a special name: Ṣinn, Ṣinnabar, Wabr, Āmir, Muʾtamir, Muʿallil, Muṭfiʾ al-Djamr (var. Mukfī al-Ẓaʿn); if there are five days, the fourth, fifth and sixth names are omitted: the study of these eight names has still to be undertaken (see an interpretation in R. Basset). In the West, this seven day period at the end of February and the beginning of March bears another name, and it is the last day of January or the first of February which is connected with the legends about the "old woman", though it is rarely called "day of the old woman". In point of fact, this appellation, even in the East, has numerous variants based on Arabic, to which must be added, for the West, the Berber variants: 1.—"days of the old women"; or indeed "cold of the old woman" (Turkey, Persia, Syria, Lebanon, Egypt); "the old woman" (Berber Morocco); 2.—"the borrowed day or days" (Syria, Lebanon, Kabylia, Northern Morocco). 3.—"cold or bad weather or period of the goat" (Egypt, Tunisia, Algeria, Morocco). These various expressions are almost always connected with a legendary commentary in which an old woman is the main actor; an old woman dead from cold, an old woman predicting a cold spell, an old woman killed by the wind when the people of ʿĀd were exterminated, in the case of the old texts, and, as regards contemporary folklore, in the majority of cases, a story about the old woman and her calf, her goat or her flock, combined with the legend of the borrowed days, explaining why February has only 28 days (hence the expressions 2 and 3 above). This legendary old woman seems to come from remote ages. No doubt this tradition should be linked with those existing in the countries of Europe and which concern certain meteorological phenomena, certain place names and perhaps certain themes of folklore involving an old woman.

(P. GALAND-PERNET)

AYYĀM AL-ʿARAB, "Days of the Arabs", is the name which in Arabian legend is applied to those combats (cf. *Lisān*, s.v. *yawm* xvi, 139, 1 according to Ibn al-Sikkīt) which the Arabian tribes fought amongst themselves in the pre-Islamic (sometimes also early Islamic) era. The particular days are called for example *Yawm Buʿāth* = "Day of Buʿāth", or *Yawm Dhī Ḳār* = "Day of Dhū Ḳār". Their number is considerable. Many of them however are not commemorative of proper battles like the "Day of Dhū Ḳār", but only of insignificant skirmishes or frays, in which instead of the whole tribes, only a few families or individuals opposed one another. The Arabs themselves sometimes noticed this fact. Al-Zubayr b. Bakkār for example, when speaking of the combats between the Aws and Khazradj tribes, observes that only on the day of Buʿāth a proper battle had been fought, and that on the remaining days the fight had been limited to throwing of stones and beating with sticks (*Aghānī*, ii, 162, l. 12; this passage was evidently derived from Zubayr's account of the combats between the Aws and Khazradj, which is mentioned in the *Fihrist* i, 110). The number of these combats, handed down by tradition, has moreover been increased by the fact that a great many were called by different names after the settlements, well-springs, hills etc., near which they took place. Consequently one and the same occurrence has been recorded in various places under different names.

The course of events on each individual day follows a somewhat similar pattern. In this respect what has been said by Wellhausen (*Skizzen und Vorarbeiten*, iv, 28 ff.) about the particular combats between the Aws and Khazradj, applies to the Ayyām in general. At first only a few men come to blows with one another, perhaps in consequence of a border dispute, or some insult offered to the protégés of a man of influence. Then the quarrel of a few grows into the hostility of whole races or even of entire tribes. They meet in battle. Bloodshed is generally followed by the intervention of some neutral family. Peace is soon restored. The tribe which has lost fewer men, pays to the adversary the price of blood for the surplus of dead bodies.

The accounts of the Ayyām, written in good old prose, together with the ancient poems, supply excellent information concerning conditions before Islām. They especially afford us an insight into the chivalrous spirit, by which the old Arabian warriors were inspired. Popular memory kept the recollection of these heroes alive for centuries. Hence similar subject-matter to that found in the Ayyām often recurs in later popular romances, drawn out, it is true, in legendary fashion. One example may suffice: Zīr, a hero of the *Siyar Banī Hilāl* is none other than Muhalhil, brother to Kulayb Wāʾil, who acts a leading part in the Basūs war between the Bakr and Taghlib tribes (Muhalhil is already called al-Zīr = "the visitor of women" in *Aghānī*ʾ iv, 143, 13).

Tradition affirms (cf. Ibn ʿAbd Rabbihi, *ʿIḳd*, Cairo 1302, iii, 61 towards the end), that Muḥammad's companions already discussed the events of the *Djāhiliyya* in their assemblies (*madjālis*). Consequently the Ayyām al-ʿArab afforded at an early period a favourite subject of study to the *Akhbāriyyūn*, i.e. traditionists, who were engaged on the *Akhbār al-ʿArab*, the old Arabian tales, amongst which the Ayyām are included. In the *Fihrist* (*maḳāla* iii, *fann* i) several of these authors are mentioned as having written narratives of particular battle-days or of all of them. None of these works on the Ayyām has come down to us in its original form; but considerable extracts by

subsequent writers are extant. Most of these have borrowed from Abū ʿUbayda (d. 210/825). Of his work on our subject only the title is mentioned in the *Fihrist* (i, 53 ff.). Something more concerning him is reported by Ibn Khallikān (ed. Wüstenfeld, no. 741, who is followed by Ḥādjdjī Khalīfa, i, 499 no. 1513 s.v. *ʿIlm ʿAyyām al-ʿArab*). According to these authorities Abū ʿUbayda wrote two books on the Ayyām, a shorter one describing 75 days, and a more extensive one, in which he treats of 1,200.

The information concerning the Ayyām which later writers have preserved, is partly given in scattered bits, and partly in entire chapters in proper sequence. Instances of the former are found in al-Tibrīzī's *Ḥamāsa* commentary, in the *Kitāb al-Aghānī*, where they are inserted by way of explanation of events alluded to in the ancient verses, in the collections of proverbs, and in the works on geography (al-Bakrī, Yāḳūt). Examples of the latter are contained in the *ʿIḳd al-Farīd* of Ibn ʿAbd Rabbihi (iii, 61 *ff*.), in al-Nuwayrī's encyclopaedia *Nihāyat al-Arab fī Funūn al-Adab* (*fann* v, *ḳism* iv, *kitāb* v) and in Ibn al-Athīr's historical work *al-Kāmil fi 'l-Taʾrīkh* (i, 367-517).

The account in the *ʿIḳd* was probably based on the minor work of Abū ʿUbayda. It is very concise, often to such an extent as to obscure the meaning, which can only be ascertained by comparison with more detailed accounts by other writers. Al-Nuwayrī has—apart from details—copied the whole chapter on the Ayyām from the *ʿIḳd*. Ibn al-Athīr has tried to arrange the separate "Days" in chronological order, in accordance with the character of his history. His account goes into greater detail than that of the *ʿIḳd*. A great deal of it must doubtless be traced back, either directly or indirectly, to the larger version of Abū ʿUbayda's work; much also to other sources all of which cannot be retraced.

Finally, it should also be noted that al-Maydānī treats of the Ayyām al-ʿArab in the 29th chapter of his *Madjmaʿ al-Amthāl*. His narratives are extremely short, but very useful for quick orientation. He restricts himself as a rule to giving the pronunciation of the name, explaining its meaning and enumerating the tribes which engaged in the battle. In this way 132 pre-Islamic days are dealt with by al-Maydānī. In addition to those, 88 Islamic days are moreover enumerated in a second section of that chapter. For further bibliography cf. E. Mittwoch, *Proelia Arabum paganorum* (*Ajjâm al-ʿArab*) *quomodo litteris tradita sint* (Diss.) Berlin 1899; C. I. Lyall, *Ibn al-Kalbī's account of the First Day of al-Kulāb*, in *Orientalische Studien* (Nöldeke-Festschrift) 127-154; W. Caskel, *Aijām al-ʿArab*, in *Islamica*, iii, Suppl. (1930), 1-99; I. Lichtenstädter, *Women in the Aiyam al-Arab*, London 1935. (E. MITTWOCH)

AYYĀR [see TAʾRĪKH].

ʿAYYĀR, literally 'rascal, tramp, vagabond'; Arabic pl. *ʿayyārūn*, Persian pl. *ʿayyārān*. From the 9th to the 12th century it was the name for certain warriors who were grouped together under the *futuwwa* [*q.v.*] in ʿIraḳ and Persia, and gradually also in Transjordania, similar to the *aḥdāth* [*q.v.*] in Syria and Mesopotamia, and to the *rindān* (v. AKHĪ) in Anatolia. Occasionally, the term is used to mean the same as *fityān* (v. FATĀ). Thus one of their leaders might sometimes be referred to as *sar-ʿayyārān*, and sometimes as *raʾīs al-fityān*. On occasions they appeared as fighters for the faith in the inner Asian border regions, on others they formed the opposition party in towns and came into power at times of weakness of the official government, when they indulged in a rule of terror against the wealthy part of the population, as they did, for instance, in Baghdād in the years 1135-44.

It is perhaps of interest, concerning the attitude of the *ʿayyārān*, that in the *Kābūs-nāma* (written in 475/1082), or *Andarz-nāma*, ed. R. Levy, 142, ll. 13-143, l. 4; trans. 248, there is mention of rivalry between the *ʿayyārān* of Marw and those of Ḳuhistān over the *futuwwa* (*djuwānmardī*) being resolved by virtue of "juridical expedients" (*ḥiyal* [*q.v.*]). In Ṣūfī literature there is mention of a Ṣūfī by the name of Nūḥ al-ʿAyyār al-Nīsābūrī as a representative of the *futuwwa* (cf. R. Hartmann in *ZDMG* 72, 1918, 195; and idem, in *Der Islam*. 8, 1918, 191; Fr. Taeschner in: *Der Islam*, 24, 1937, 50 f.). At any rate, a distinction was made between the *ʿayyārān* and the Ṣūfīs as far as the *futuwwa* was concerned. In this connexion, the following remark is of some interest: Hudjwīrī (d. 465/1072) mentions that this very Nūḥ al-ʿAyyār has said that the *futuwwa* of the *ʿayyārān* consisted in their wearing the *murakkaʿa* of the Ṣūfīs, in other words that they behave like Ṣūfīs and keep the holy law, the *sharīʿa*, whereas the *futuwwa* of the Ṣūfīs of the Malāmatī persuasion (see MALĀMATIYYA) consisted not in wearing any external marks, but in keeping the mystical spirit (*ḥaḳīḳa*). (The *Kashf al-maḥjúb* . . . . . . by ʿAlí . . . . al-Hujwírí, transl. . . . . by R. A. Nicholson, Leiden and London 1911, 183; *Kitāb-i Kashf al-maḥdjūb*, ed. V. Schukovskij, Leningrad 1926, 228. lines 10-18; Farīd al-Dīn ʿAṭṭār, *Tadhkirat al-Awliyāʾ*, ed. R. A. Nicholson, i, 332, lines 9-16). The same Nūḥ al-ʿAyyār defines the difference between these two *futuwwa* by saying that the one of the *ʿayyārān* consists in faithfulness to the spoken word, whilst that of the gnostics (*ʿārifūn*, i.e. the Ṣūfīs) consists in faithfulness to the spirit. This report first appears in Ibn Djaʿdawayhi (5th/11th century) (Fr. Taeschner in: *Documenta Islamica inedita, Festschrift R. Hartmann*, Berlin 1952, Sentence No. 19, 113 and 118).

Bibliography: Apart from works already mentioned in the article: Compilation of excerpts concerning the *ʿayyārūn* (*ʿayyārān*) by Fr. Taeschner in: *Die Welt als Geschichte*, iv, 1938, 390-392; idem, in: *Beiträge zur Arabistik, Semitistik und Islamwissenschaft*, ed. R. Hartmann and H. Scheel, Leipzig 1944, 348-352; idem, in *Schweizerisches Archiv für Volkskunde* 1956, 132-135. Concerning the rule of the *ʿayyārūn* in Baghdād between 1135 and 1144, compare my review of Gerard Salinger's essay, *Was the Futuwwa an Oriental form of Chivalry*? in: *Oriens* 5 (1952), 332-336, where the relevant passages are translated. (FR. TAESCHNER)

AL-ʿAYYĀSHĪ, ABU 'L-NAṢR MUḤAMMAD B. MASʿŪD B. MUḤAMMAD B. ʿAYYĀSH, a Shīʿite writer of the 3rd/9th century. He was a native of Samarḳand, and was said to have been descended from the tribe of Tamīm. Originally a Sunnī, he was converted while still young to Shīʿism, and studied under the disciples of ʿAlī b. al-Ḥasan b. Faḍḍāl (d. 224/839-al-Ṭūsī 93) and of ʿAbd Allāh b. Muḥammad b. Khālid al-Ṭayālisī (al-Astarābādī, 211). He spent his patrimony of over 300,000 dīnārs on scholarship and tradition, and his house was a centre of Shīʿite learning. He is credited with the authorship of over 200 books. Though accused of relating traditions on weak authorities, he is often cited by later Shīʿite writers. Muḥammad b. ʿUmar al-Kashshī, author of a well-known Shīʿite biographical work, was his pupil.

Bibliography: al-Kashshī, *Ridjāl*, Bombay 1317, 379; al-Ṭūsī, *Fihrist Kutub al-Shīʿa* (*Bibl. Ind.* no. 60) 317-320; Ibn Shahrāshūb, *Maʿālim al-ʿUlamā*ʾ, ed. ʿAbbās Iḳbāl, Tehran 1934, 88-9; al-Nadjāshī, *Ridjāl*, Bombay 1317, 247-50; al-Astarābādī, *Minhādj al-Maḳāl*, Tehran 1306, 319-310; Ibn al-Nadīm, *Fihrist* (ed. Fluegel) 194-6; Brockelmann, S.I. 704; W. Ivanow, *The Alleged Founder of Ismailism*, Bombay 1946, 15, 95.

(B. Lewis)

AL-ʿAYYĀSHĪ, Abū Sālim ʿAbd Allāh b. Muḥammad, man of letters, traditionist, lawyer and Ṣūfī scholar, born in the Berber tribe of the Aït (Ayt) ʿAyyāsh of the Middle Moroccan Atlas at the end of Shaʿbān 1037/April-May 1628, died of plague in Morocco on 10 Dhu 'l-Ḳaʿda 1090/13 December 1679. After having travelled through Morocco "in search of knowledge" and obtained an *idjāza* from ʿAbd al-Ḳādir al-Fāsī [*q.v.*], in 1059/1649 he made his first pilgrimage to Mecca going via Touat, Ouargla and Tripoli; then, in 1064/1653-4 he made a second pilgrimage, on returning from which he wrote his *Riḥla*, called *Māʾ al-Mawāʾid* (Fez 1316/1898, 2 vols). This is one of the most important travel accounts for information on the road taken by caravans going from the Maghrib to Mecca, in spite of the fact that the author attaches less importance to describing the countries through which he passed than he does to the enumeration of the celebrated men whom he met, especially scholars and Ṣūfīs; the style of the *Riḥla* is faitly simple when al-ʿAyyāshī is not speaking of Ṣūfism, though it is lacking in colour and vivacity. This work, which enjoys great popularity in the Maghrib, has only been partially translated into French (see A. Berbrugger, *Voyages dans le Sud de l'Algérie* ..., in *Exploration scient. de l'Algérie*, ix, 1846, and Motylinski, *Itinéraires entre Tripoli et l'Égypte*, Algiers 1900). Another travel account, composed in letter form, has been translated into French by M. Lakhdar (*Les étapes du pèlerin de Sidjilmasa à la Mecque et Médine*, in *4e Congrès Fédér. Soc. sav.*, Algiers 1939, ii, 671-88).

Al-ʿAyyāshī is, moreover, the author of several further works: *Manẓūma fi 'l-Buyūʿ*, a treatise in verse on sales, with a commentary; 2) *Tanbīh Dhawī 'l-Himam al-ʿĀliya ʿala 'l-Zuhd fi 'l-Dunyā al-Fāniya*, treatise on Ṣufism; 3) a study on the particle *law*; 4) *al-Ḥukm bi 'l-ʿAdl wa 'l-Inṣāf al-Dāfiʿ li 'l-Khilāf fi-mā waḳaʿa bayn Fuḳahāʾ Sidjilmāssa min al-Ikhtilāf*; 5) *Iḳtifāʾ al-Āthār baʿd Dhahāb Ahl al-Āthār*, biographical collection; 6) *Tuḥfat* (*Itḥāf*) *al-Akhillāʾ bi-Asānīd al-Adjillāʾ*, biographies of his masters (these last two works probably forming his *Fahrasa*).

(M. Ben Cheneb-[Ch. Pellat])

AYYIL. The word, for which different pronunciations are transmitted (also *uyyal* and *iyyal*, the latter being considered as the best one), is commonly explained by Arab lexicographers as meaning the mountain-goat (*waʿil*). This identification, however, is not fully borne out by the descriptions of the *ayyil* which are given by Muslim zoologists. Here, the properties and ways of behaviour ascribed to the animal only partly apply to the mountain-goat, while, in the main, they rather point to the deer, which is also in keeping with the meaning commonly attributed to corresponding forms in other Semitic languages. This conclusion, moreover, gets support by a comparison of the terms used in earlier foreign sources and in the respective accounts as transmitted in Arabic zoological literature. However, in pre-Islamic and early Islamic poetry (see, e.g., *Nöldeke's Belegwörterbuch*, 53, and *TA*, ii, 121₁₈; against Hommel, 279) *ayyil* may actually mean the mountain-goat, since the deer probably never existed in the Arabian peninsula.

These facts can serve as an illustration of the inconsistencies in medieval zoological terminology, which not infrequently denotes different animals by one name and vice versa. For this reason, too, part of the information given by several writers with regard to the *ayyil* is to be found, e.g., in Ḳazwīnī under the heading *baḳar al-waḥsh*. Comp. also Djāḥiẓ, iv, 227 with vii, 30 f. (on *waʿil*). Because of the graphic similarity of *ayyil and ibil* both words have sometimes been confused through mistranscription, and the accounts on either animal became transferred to the other.

A considerable part of the information on the *ayyil* contained in Arabic works goes back to foreign sources, such as Aristotle's *Historia Animalium* (quoted, e.g., by Djāḥiẓ) and the ancient *Physiologus* literature. The latter, especially, contributed a number of fabulous accounts.

According to Arab pharmacologists certain parts of the *ayyil*'s body and in particular its horns can be put to various medicinal uses.

Al-Damīrī does not indicate the rôle of the *ayyil* in the interpretation of dreams, which is pointed out, e.g., in ʿAbd al-Ghanī al-Nābulusī's *Taʿṭīr al-Anām* (s.v.).

(L. Kopf)

AYYŪB, the Biblical Job. The name apparently occurs in pre-Islamic Arabia but only as a name derived from the Biblical story. Job is mentioned twice in the Ḳurʾān in lists of those to whom Allāh had given special guidance and inspiration (iv, 163/161; vi, 84), and fragments of his story are given in xxi, 83-84; xxxviii, 41/40-44, Muḥammad being expressly bidden to make mention of him in his preaching. These fragments merely tell of his suffering affliction at the hands of Satan, crying unto his Lord for relief, and being healed, so that his case becomes an admonition for men. In the story of the miraculous spring by which he was healed there seems to be a confusion with the Naaman story of II Kings v, and in the obscure verse about his

taking a bundle in his hand and striking with it, there may be a similar confusion with the story in II Kings xiii, 14 ff. (See Bell, *Qur'ān*, 454 and *Introduction to the Qur'ān*, 162, 163).

Later Muslim writers greatly amplified this meagre Ḳur'ānic account, drawing partly on the Biblical Book of Job, (which Ibn ʿAsākir actually quotes), partly on Rabbinic tales from Talmud and Midrash (for which cf. *Encyclopedia Judaica*, s.v. Job) and the Greek Testament of Job, but also exercising pious imagination in developing various details of the story. That Job was a descendant of Abraham through Isaac is generally agreed, though there is great confusion in the names which appear in his genealogy. His mother was a daughter of Lot. His wife, who figures so largely in the story, is generally called Raḥma, daughter of one of the sons of Joseph, though some said she was Leah the daughter of Jacob (obviously a confusion of Leah with Dinah, who in Rabbinic sources is said to have been Job's wife). His great wealth is described in detail, and his unparalleled kindness and generosity to the poor, the unfortunate, the guest and the stranger. This piety excited the enmity of Iblīs who challenged Allāh to let him test Job. The testing is permitted in three stages, against his property, his family and his body, Iblīs being assisted in the afflicting of Job by the *ʿafārīt* under his command. Job is abandoned by all save his faithful wife, who continues to tend him even when he is cast out on the dunghill, and to his bodily afflictions is added that of lack on understanding on the part of his friends. Failing to move Job by these afflictions Iblīs attempts to seduce him through his wife as he had formerly seduced Adam through Eve. Job, however, sees through his stratagems and takes an oath that he will beat his wife for having listened to Satan. The exegetes are obviously puzzled by Allāh's granting permission for His faithful servant to be so afflicted and so are at pains to suggest a variety of explanations, the favourite being that Job's pride in his piety needed a lesson. Finally Gabriel brings him news of his release from his sufferings by the water of a miraculous spring from which he drinks and in which he bathes and so is restored. His wealth, his property, his children are also restored to him double and he dies at the age of seventy-three in the place where he had lived.

Since he was a prophet (*nabī'*) we are told that he came after Joseph in the prophetic series (though Ibn al-Kalbī placed him after Jonah), that he had a *risāla* and preached to his own community in the Ḥawrān, being peculiar in that he was a prophet whom no one ever treated as false. Job will appear in the events of the Last Day, for at the Accounting Allāh will use him as an example to answer those who seek to excuse their negligence in religion on the ground of their ill health, and he will be the leader of "those who patiently endured" as the various groups make their way to Paradise. Al-Masʿūdī, *Murūdj*, i, 91 reports that the shrine over his grave was a place of visitation at Nawā near Damascus, where people were still shown the rock on which he sat during his affliction and the spring in which he bathed and was healed (Cf. also Yāḳūt, ii, 645).

AYYŪB KHĀN, the fourth son of Shīr ʿAlī, Amīr of Afghānistān, and brother of Yaʿḳūb Khān. Like all rulers of Afghānistān, Shīr ʿAlī had trouble with his sons. When, in 1873, he nominated his favourite son ʿAbd Allāh Djān as his heir-apparent, Ayyūb Khān fled to Persia. In 1879, when Yaʿḳūb Khān succeeded Shīr ʿAlī as amīr, Ayyūb Khān returned to Afghānistān and was appointed governor of Harāt. Towards the end of the Second Afghān War (1878-80) Lord Lytton's government selected a Sadōzai prince, named Shīr ʿAlī, as the *wālī* of Ḳandahār. From this position he was ousted by Ayyūb Khān, who also decisively defeated a British army under General Burrows at Maiwand, on 27 July 1880. The situation was retrieved by Sir Frederick (afterwards Lord) Roberts, who marched rapidly from Kābul to Ḳandahār, routing Ayyūb's troops and forcing him to retire on Harāt. When ʿAbd al-Raḥmān Khān became Amīr of Kābul, his first task was to extend his control over the country. In July, 1881, Ayyūb Khān, who was in possession of Harāt, declared a *djihād* against ʿAbd al-Raḥmān because he was a British nominee, and occupied Ḳandahār. Towards the end of 1881, he was crushingly defeated by ʿAbd al-Rahmān, who also expelled him from Harāt and forced him to seek refuge at Mashhad in Persia. Once more, in 1887, during the Ghalzai rebellion, he attempted to regain his position in Afghānistān but was defeated and compelled to flee to India. Here he remained until his death on 6 April 1914.

AYYŪB ṢABRĪ PASHA, Ottoman naval officer and author. A graduate of the naval college, he held various appointments, and served for a while in both the Ḥidjāz and Yemen. He died in Istanbul in 1308/1890. He was the author of a number of historical and descriptive works on Arabia, including an account of Mecca and Medina (*Mir'āt al-Ḥaramayn*, 3 vols., Istanbul 1301-6), and a history of the Wahhābīs (*Ta'rīkh-i Wahhābiyyān*, Istanbul 1296). Besides these he wrote a biography of the Prophet called *Maḥmūd al-Siyar* (Edirne 1287).

(B. LEWIS)

AYYŪBIDS. Name of the dynasty founded by Ṣalāḥ al-Dīn b. Ayyūb, which, at the end of the 6th/12th century and in the first half of the 7th/13th century, ruled Egypt, Muslim Syria-Palestine, the major part of Upper Mesopotamia, and the Yemen.

The eponym of the family, Ayyūb b. Shādhī b. Marwān, born in the village of Adjdanaḳān near Dvin (Dabīl) in Armenia, belonged to the Rawwādī clan of the Kurdish tribe of the Hadhbānī, and, at the beginning of the 6th/12th century, had been in the service of the Shaddādid dynasty, likewise Kurdish, which had been installed in the government of this region by the Saldjūḳid Sulṭān Alp Arslan in the middle of the preceding century. Gradually, however, all the Kurdish princes and lords were eliminated by the Turks, many of them, to avoid losing everything, entering the service of the latter, with whom their Sunnī ardour and taste for war provided a close affinity. When in 524/1130, the Shad-

dādids lost Dvin, Shādhī entered the service of the Saldjūḳid military governor of ʿIrāḳ, Bihrūz; Bihrūz, who held Takrīt as an *iḳṭaʿ*, made Shādhī governor of that town, a post in which his son Ayyūb soon succeeded him (V. Minorsky, *Prehistory of Saladin*, in *Studies in Caucasian History*, Cambridge 1953, 107-129). It was in this capacity that Ayyūb earned the gratitude of the master of Mawṣil and Aleppo, Zankī (Zangī), who after being defeated by the Caliph, was able, with the help of Ayyūb, to cross the Euphrates and withdraw without a disaster. In the country behind Mawṣil, Zankī first of all adopted a systematic policy of subduing and then of recruiting the Kurds. In 532/1138, Ayyūb entered his service. He was at once used by him in Syria, being appointed governor of Baʿlbak, opposite Damascus. On Zankī's death, Ayyūb placed himself under the Būrid prince of Damascus, who gave him the governorship of that town, whilst his brother Shīrkūh, followed Zankī's son, Nūr al-Dīn, the master of Northern Syria, who gave him Ḥimṣ as an *iḳṭāʿ*. However, the trend of public opinion in Damascus finally led to the unification of Muslim Syria, with a view to the more effective prosecution of the war against the Franks, under the command of the prince with the most power and the greatest enthusiasm for the *djihād*, Nūr al-Dīn; in the surrender of Damascus the activities of the two brothers Shīrkūh and Ayyūb played a major rôle, and Ayyūb chose the side of Nūr al-Dīn, the governor of the Syrian capital.

It is impossible to describe the activities of Shīrkūh in Nūr al-Dīn's service in detail here. The family fortunes began, when he was chosen, rather against his will, by Nūr al-Dīn to lead the army to Egypt, which, at the request of the *wazīr* Shāwar, was to intervene in that country against his adversaries. The result of several years of difficult fighting was the assassination of Shāwar and the proclamation of Shīrkūh as his successor to the wazīrate. It is true that he died a few weeks later (564/1169), but his nephew, Ṣalāḥ al-Dīn b. Ayyūb, was with him, and quickly succeeded in getting himself recognised by the occupying troops as his successor.

Ṣalāḥ al-Din (known in Europe as Saladin) is the real founder of the dynasty. Its history can be divided into three periods: that of Ṣalāḥ al-Dīn himself, a formative period bearing the imprint of his personality, the strongest in the family, to which, however, the policy of his successors was opposed on many points; the period of his early successors, a period of organisation, up to the death of al-Malik al-Kāmil (635/1238); lastly, the period of long-drawn-out decline. Under the second period it will be convenient to group together the study of several problems of interior organisation, which are common to the whole history of the régime.

I. The detailed history of the reign of Ṣalāḥ al-Dīn cannot be given here, but will be given in the article concerning him; an attempt will only be made to reveal those features which are indispensable for the understanding of the following period, which one has especially in mind when speaking of the Ayyūbids.

Although the assumption of power by Shīrkūh and Ṣalāh al-Dīn took place in Egypt with much the same forms as in the case of the preceding *wazīrs* of the Fāṭimid régime, by the conferring of a diploma by the Caliph al-ʿĀḍid, they were none the less the representatives of the orthodox militant tradition inherited from the Saldjūḳids, more or less common to all the Turkish princes of Muslim Asia at that time, and especially typified by Nūr al-Dīn. In 566/1171, Ṣalāḥ al-Dīn considered he was able to suppress the Fāṭimid Caliphate and proclaim the return of Egypt to the family of states owing allegiance to the ʿAbbāsid Caliph of Baghdād. For the first time in two centuries, Egypt became officially Sunnī again; in point of fact, the majority of the population had never been won over to the Ismāʿīlism of the Fāṭimids, and although those elements which were most strongly attached to the régime, and which were, moreover, partly of foreign origin, attempted to re-establish their position by revolts, the advent of the new régime was received among the masses with the same passivity which they had shown to its predecessor.

Invested by the Fāṭimid Caliph, then by the ʿAbbāsid Caliph, and at the same time a vassal of Nūr al-Dīn, Ṣalāḥ al-Dīn found himself in an equivocal position vis-à-vis the latter, which would doubtless have led to conflicts, had Nūr al-Dīn not died in 569/1174. Disagreements and the weakness of his successors produced the immediate result that the dominant military power in the neighbourhood of the "Latin Orient", which for fifty years had resided in Northern Syria, now passed to Egypt. Whilst Nūr al-Dīn's successors dropped the policy of the holy war, which had given the former his prestige and strength, Ṣalāḥ al-Dīn adopted the idea, though it is not possible to discern to what extent ambition was combined with undoubtedly sincere conviction. (H. A. R. Gibb, *The Achievement of Saladin*, in *Bull. of the John Rylands Library*, xxxv-1, 1952, 46-60). However that may be, this idea led him to claim for himself the unified command of the Muslim armies, to win a large share of public opinion for his cause and, ultimately, to constitute to his own advantage a state, in which the heritage of Nūr al-Dīn, including Egypt, Muslim Syria and a part of the Djazīra, was regrouped and extended, in a more solid manner than that of his predecessor's kingdom, at the time of its brief and final apogee; this was an accomplished fact in 1183. At the same time, relatives of his established themselves in the Yemen and one of his generals, Ḳarakush, on the borders of Tunisia.

The power formed in this way enabled Ṣalāḥ al-Dīn to utilise the internal crisis of the Kingdom of Jerusalem, the difficulties of the Byzantine Empire and the tension which had arisen since 1180 between himself and the Latins, to undertake to drive the latter out of Palestine and Syria. His success was his main title to glory among his contemporaries and posterity; in 583/1187 the Franks were crushed at Ḥaṭṭīn, Jerusalem became Muslim again after eighty years, and in the ensuing months, almost all the Christian territories fell, including a large part of the coast, where only Tyre, Tripoli and Antioch still held out against him.

Ṣalāḥ al-Dīn's power was founded on the strength of the army, and his whole policy required a strong army. This was no longer, with the exception of a few contingents of irregulars, the army of the Fāṭimids. It was the Kurdo-Turkish army, completely alien to the Egyptian population, inherited from Nūr al-Dīn and developed by Ṣalāḥ al-Dīn by means of the resources of Egypt. In 577/1181, the Egyptian army amounted to 111 amīrs, 6,976 *ṭawāshī* (cavalrymen with full equipment) and 1,153 *ḳaraghulām* (second grade cavalrymen), without mentioning the Arab frontiersmen, unfit for foreign campaigns (H. A. R. Gibb, *The armies of Saladin*, in *Cahiers d'Histoire Égyptienne*, iii/4, 1951, 304-320). To this

army must be added the Syro-Djazīran contingents, including those of Mawṣil, which the treaty subsequent to the hostilities of 1174-1183 allowed Ṣalāḥ al-Dīn to call together in case of need: a little over 6,000 men in all. It was with almost his entire forces, some 12,000 horsemen, that Ṣalāḥ al-Dīn won the victory at Ḥaṭṭīn and his later successes. But, as was the case with the European armies, such an assembly of troops could not normally be kept on campaign for a protracted period, owing to the revictualling requirements of the soldiers (cf. *infra*). And considerable efforts and conviction would be required to maintain the indispensable effective strength over the whole of the time which the struggle against the Third Crusade lasted. Campaign and siege equipment, which had probably increased in quantity and quality, was also the object of attention, as is shown by the treatise on gun-making of Murḍā (or Marḍī) b. ʿAlī, which has come down to us (ed. Cl. Cahen, in *B. Ét. Or.*, xii, 1948, 108-163).

In the first years of his rule, Ṣalāḥ al-Dīn had been threatened by the Byzantine, Norman and Italian fleets, using the bases in the Latin Orient. He made a great effort to reconstitute the Mediterranean navy of the Fāṭimids, which had deteriorated in the 6th/12th century as the result of internal troubles and the progress of the Crusaders and the Italians. By this means he was even able to carry out offensive operations against the nearest Frankish ports. The possibility cannot be excluded that the expansion of Ḳarakush along the African coast had as its aim, at the same time as providing an outlet for turbulent Turkomāns, the control of the shores along which Muslim vessels were able to range, and a closer approach to the source of supplies of wood and sailors. The Crusade put an end to this effort, which was weakened by Egypt's inferiority in these last two respects, and it does not seem to have been repeated by his successors (A. S. Ehrenkreutz, *The place of Saladin in the naval history etc.*, in *JAOS.*, LXXV-2, 1955, 100-116).

There is no doubt that it was partly the need to procure the raw materials required by his armament on land and sea, and not only preoccupation with commercial interests, that led Ṣalāḥ al-Dīn, very soon after he came to power, to renew and increase the connexions which had existed under the Fāṭimids with the Italian trading cities, including Pisa, which had gone furthest in encouraging the Franks to attack Egypt. Pisans, Genoans and Venetians flocked to Alexandria, where the Venetians found, more than at Acre, compensation for the impossibility of trading at Constantinople, a situation in which the Byzantine government placed them from 1171 to 1184 (Cl. Cahen, *Orient Latin et commerce du Levant*, in *Bull. de la Fac. des Lettres de Strasbourg*, xxix-8, 1951, 332). Ṣalāḥ al-Dīn could boast in his letters to the Caliph that Franks themselves were delivering arms to him which were destined to be used against other Franks (Akū Shāma, i, 243).

Saladin also took advantage of political developments in Byzantium and Cyprus to negotiate, unbeknown to either of them, with their princes against the Franks. When he felt the approach of the European menace, he attempted, after having been, via Ḳarakush, the ally of the Almoravid Banū Ghāniya of the Balearic Islands against the Normans and the Almohads, to draw near to the latter to form an alliance, mainly maritime, against the Crusaders: this attempt, however, met with no success (cf. Gaudefroy-Demombynes, in *Mélanges René Basset II*, and Saʿd Zaghlūl ʿAbd al-Ḥamīd, in *Bull, Fac. Arts Univ. Alexandria*, vi-vii, 1952-3, 24-100). The same reasons explain his negotiations with the Saldjūḳids of Asia Minor.

A war policy, naturally, was expensive and all the evidence goes to show that Ṣalāḥ al-Dīn was a bad financial administrator, always on the point of going bankrupt. In necessary conformity with the religious ideal with which he infused all his propaganda, he everywhere suppressed the taxes deemed by *fiḳh* to be illegal. Similarly, his desire to eliminate all traces of the Fāṭimid régime, led him to replace the coinage by a new one, of variable weight, in the case of both gold dinars and dirhams, which could no longer be obtained at a fixed value; but the burden of expenditure, the decline in income, especially to begin with, as the result of disorders, the exhaustion of Egyptian gold, the precariousness of the routes towards Sudanese gold, which were controlled by the Almohads, even caused instability in the standard of the dinar, the minting of dirhams containing variable quantities of alloy in addition to the legal Egyptian dirham, (which contained 30 % silver, worth 1/40th. of a dinar), and, as a natural consequence, the disappearance of sound coinage. Ṣalāḥ al-Dīn, and after him, al-ʿAziz, lived on loans from the merchants and amīrs, which were never repaid. Of course, it could be maintained that the profits derived from the war would make it possible, in the long run, to restore financial stability. But this calculation, if ever made, turned out to be wrong, as the result of the Third Crusade (cf. A. S. Ehrenkreutz, *Contribution to the knowledge of the fiscal administration of Egypt* . . . ., in *BSOAS*, xv-3, 1953 and xvi-3, 1954; *The standard of fineness of gold coins in Egypt* . . . in *JAOS.*. LLXIV/3, 1954; *The crisis of the dinar in the Egypt of Saladin, ibid.*, LXXIV/3, 1956.

One of the results of Saladin's policy was the formation of a coalition, for the salvation of the Latin Orient, of the western forces, which was even joined by the Italian towns, adversely affected by the loss of the Syrian ports. In the end, even if the Franks did not retake Jerusalem, at least they recovered the major part of the Syro-Palestinian coast; moreover, they laid hands on Cyprus, which henceforth provided a secure naval base and a position to which they could withdraw. Ṣalāḥ al-Dīn was by no means defeated. But the formidable effort which he had had to sustain for two years, convinced him that it was fruitless to wish to expel the Franks, and made a period of *détente* and recovery a matter of urgency. It is impossible to know what Ṣalāḥ al-Dīn might have done, for he died a few months after the conclusion of peace (589/1193).

II. The period of the reigns of al-Malik al-ʿĀdil and al-Malik al-Kāmil (died in 635/1238) appears essentially as one of *détente* and organisation after the disorders which followed the death of Ṣalāḥ al-Dīn.

The first eight years which followed the disappearance of the founder of the dynasty put to the test the conception of family unity which he had entertained as regards his monarchy and succession. He had granted, either in the form of fiefs during his lifetime or as shares in his inheritance, in addition to the Yemen, where two of his brothers reigned in succession, Central and Southern Syria to his son al-Afḍal, Egypt to his other son al-ʿAziz, Aleppo to a third son, al-Ẓāhir Ghāzī, whilst Ḥamā passed to his nephew Ṭakī al-Dīn ʿUmar, Ḥimṣ to his cousin, Shīrkūh's grandson, al-Mudjāhid, and lastly the Djazīra to his brother al-ʿĀdil Abū Bakr. The

latter, who had played an important rôle during the reign of Ṣalāḥ al-Dīn as a diplomat and administrator, was now the eldest member of the family and indisputably the most eminent of its surviving members. The sons of Ṣalāḥ al-Dīn, who were incapable of doing anything but amuse themselves or wrangle among themselves, upon several occasions sollicited his alliance or his arbitration. Whether or not al-ʿĀdil was an ambitious man, it was becoming clear that the security of the Ayyūbid monarchy required him to take over its destinies. In 597/1200, he had himself proclaimed Sulṭān in Cairo, distributed the governments of Damascus and Djazīra among his sons, and after the last hostilities in 1201, of the other former princes, he only permitted those of Aleppo, Ḥimṣ and Ḥamā, who were forced to do homage to him, to continue to exist. Naturally, after al-ʿĀdil's death, similar problems again arose. The presence at that moment (615/1217) of a Crusade at Damietta maintained solidarity for a time around his eldest son, al-Kāmil, who, like him, governed Egypt, and was moreover an imposing personality. Once the Frankish danger was removed, the agreement between him and his brother al-Muʿaẓẓam of Damascus, who died in 625/1228, and then the latter's son and successor, al-Nāṣir Dāʾūd, was disrupted. Al-Kāmil was helped by the loyalty of his other brother Al-Ashraf, to whom he gave Damascus in exchange for Diyār Muḍar, whilst Dāʾūd was relegated to Karak. Then, for a few years, al-Kāmil was the undisputed head of the family; however, a coolness was making itself increasingly felt between al-Ashraf and himself, when the former died (635/1237); al-Kāmil then took Damascus away from the other brother, al-Ṣāliḥ Ismāʿīl, whom al-Ashraf had designated as his successor, but he himself died at the beginning of the following year; he was the last Ayyūbid who might have been able to unite the whole Ayyūbid family behind him. One should not be misled by the disagreements; up till then there had always been a majority of members of the family willing to place solidarity in the face of their common enemies above their individual interests, and, in one way or another, solidarity had always been restored for half a century or so; after the death of al-Kāmil the situation changed.

Ayyūbid rivalries with neighbouring princes, however, interfered with their dissensions among themselves. In 604/1207, the troubles at Akhlāṭ provided al-Awḥad, the son of al-ʿĀdil and at that time governor of Diyār Bakr, with the possibility of annexing to Ayyūbid territory the inheritance of the Shāh-Armin (upon al-Awḥad's death, he was succeeded there by al-Ashraf). Other annexations were carried out in Diyār Bakr and Diyār Rabīʿa, and lastly, in 631/1233, that of Āmid and Ḥiṣn Kayfā; only a single branch of the old Artuḳid dynasty subsisted, that of Mārdīn. Thus it was that the Ayyūbids emerged from these wars increased in stature.

However, from about 1225, Mesopotamo-Iranian politics were dominated by the approach of Djalāl al-Dīn Mangubertī, who at the head of his Khwārizmians fleeing before the Mongol invasion, was putting Iran and its borders to fire and sword. Al-Muʿaẓẓam and the Djazīran opponents of al-Ashraf and al-Kāmil adhered to him, and he was eventually able to take Akhlāṭ, which was pillaged in terrible fashion (1229). The Khwārizmshāh then invaded Asia Minor, where the Saldjūḳid Sulṭān was reinforced by al-Ashraf: this time the invader was crushed near Erzindjān (628/1230).

There were more lasting causes of friction between the Saldjūḳids and the Ayyūbids. The interests of the two dynasties had already clashed at Diyār Bakr in the time of Ṣalāḥ al-Dīn, and in the 13th century the development of the Saldjūḳid power made conflicts inevitable. The Saldjūḳids sought to spread from their mountains over the Arab plains, from Northern Syria to Diyār Bakr. According to circumstances, they achieved this either by attacking the Ayyūbid territories or by posing as the sovereign-protectors of the Aleppo branch against their Egyptian cousins. Al-Ashraf's expedition to the assistance of Kaykubādh gave al-Kāmil the impression that the conquest of the Eastern part of the Saldjūḳid territory would be an easy matter: in 1233, a coalition of all the Ayyūbid forces invaded it. Ignorance of the country and the lack of enthusiasm of some of those taking part led to failure of the enterprise. Later, the Saldjūḳid army took Āmid from al-Kāmil's successors (1241). It had already taken the ruins of Akhlāṭ from the lieutenants of al-Ashraf.

Finally, there were the Christian enemies: the Georgians, whom it had been necessary to fight in the vicinity of this same Akhlāṭ, and, naturally, the Franks themselves. In the latter case, the Ayyūbids drew from the Third Crusade a moral diametrically opposed to the policy of Ṣalāḥ al-Dīn. Their aim was to preserve the peace, by avoiding any hostile action, on the one hand in view of the economic advantages of peaceful relations, and on the other hand to avoid giving any pretext for further crusades. Further crusades did in fact take place, but their immediate initiative came entirely from Europe, rather than from the Franks of the East. Naturally the Ayyūbids took every precaution in their power to resist them, and there was no question of military negligence. The fall of Byzantium and the decline of the Almohads deprived them of the possible allies which Ṣalāḥ al-Dīn had endeavoured to obtain, and, having relinquished the maintenance of a large and vulnerable fleet, they afforded Egypt protection by the land army, by fortifications, sometimes by destroying coastal installations (Tinnīs), and by espionage. However, with the Crusaders, even al-ʿĀdil and al-Kāmil had tried as far as possible to replace the costly chances of war by diplomacy.

In accordance with the tendencies of this policy, in 1204 al-ʿĀdil restored to the Franks the coastal places which he was occupying, which reconstituted the continuity of the Frankish territories, with the exception of the enclave of Lādhiḳiya, which belonged to the principality of Aleppo. At the time of the Fifth Crusade, his successor al-Kāmil, whilst calling his brothers in Asia to his assistance, offered to restore Jerusalem to the Franks, who refused it, in exchange for the evacuation of Damietta, and took care to avoid any real battle. It was especially at the time of the Crusade of Frederick II that this attitude was disclosed in a manner most calculated to affect public opinion. Al-Kāmil's desire for peace with the Franks was then strengthened by the menace of al-Muʿaẓẓam, the ally of the Khwārizmians. Aware of circumstances which predisposed the Emperor for his part to negotiations, he finally granted him Jerusalem, with the reservation that it should not be fortified and freedom of worship should be maintained; pious Muslims and pious Christians were equally scandalised. A real friendship arose between the two sovereigns, which was to continue even between their successors.

The principality of Aleppo was confronted by slightly different local problems. These princes,

disturbed at being the only direct descendants of Saladin to confront the family of al-ʿĀdil, sought both to ally themselves with them by marriage and to guard themselves against the masters of Egypt, sometimes through the Ayyūbids of Djazīra, Ḥimṣ and Ḥamā, and at other times through the Saldjūḳids of Rūm, and naturally also, at times, with the ones against the others who had encroached too far. The ambitions of the Armenian kingdom of Cilicia also troubled them, and they several times intervened, with the Saldjūḳids against it, giving assistance to the Frankish princes of Antioch, who were weaker.

A normal and intended consequence of the peace policy adopted towards the Franks was the resumption and intensification of commercial relations with the Italians (and now, to a lesser extent the Southern French and the Catalans). Even before formal treaties had been concluded once more, as is shown by the private documents in the Venetian and Genoan archives, Genoan, Pisan and Venetian ships, after the Third Crusade, were once again going to Alexandria, and, to a lesser extent to Damietta. Under al-ʿĀdil, a series of agreements confirmed their rights, a reduction in customs' dues and administrative and judicial facilities. Furthermore, the accessibility of the principality of Aleppo to the sea had the result that even in Syria, Italian merchants were to be seen no longer confining themselves to Frankish ports, but were also disembarking at Ladhiḳiya and regularly visiting the markets of Aleppo and Damascus. An important personage of Genoa, William Spinola, seems at one time to have enjoyed al-ʿĀdil's special favour, accompanying him on his journeys through his estates (this can be seen from a comparison between the *Annals of Genoa* used by Schaube, *Handelsgeschichte der Mittelmeer-Romanen* 121, and Ibn Naṭīf, cited in Amari, *Biblioteca arabo-sicula*, ii, Appendix, 35, which was unknown to Schaube). Egypt sold to Europe, besides the products of the Indian Ocean which passed through its territory in transit, native resources, the chief of which at this time seems to have been alum. Naturally the Crusades, or the fear of surprise attacks, were liable to provoke crises, as for instance the day in 1215 when three thousand merchants assembled at Alexandria were temporally arrested. But even after the Damietta Crusade, relations were resumed (as is shown among other things by a document of immunity in Arabic from al-Kāmil to the Venetians which is to be published by Subḥī Labīb) and lasted in the main without undue interruption until the middle of the century.

But, though the Italians were the masters in the Mediterranean, and Egypt played a purely passive rôle in trading with them, only making a profit from the taxes and commissions, they were prevented from access to the Red Sea, and the commerce of the Indian Ocean remained exclusively in the hands of the subjects of Muslim (or Hindu) states. We are not in a position to determine exactly what rôle the Egyptians played, or that of the Yemenites or other more easterly peoples. The exact nature of the merchants called Kārimī, specialists at Aden and in Egypt in the trade in products brought from the Indian Ocean and especially spices, still remains obscure; they appear to have existed since Fāṭimid times, but it is in the Ayyūbid period that they really make their appearance in the rôle which was to be more especially theirs in the following century (cf. the elucidations of Goitein and Fischel in the press for the *Journal of the Economic and Social History of the Orient*, 1958, and G. Wiet, *Les marchands d'Épices* ... in *Cahiers d'Histoire Égyptienne*, 1955). The occupation of the Yemen may have had as its primary motive the hemming in of the supporters of a Fāṭimid restoration or the formation there of an eventual refuge for the Ayyūbids; but its object was doubtless also the improvement, which in any case occurred, of commercial relations, of primary importance for both parties, between the Yemen and Egypt, with whom Yemenite currencies and some measures were aligned (Ibn al-Mudjāwir, ed. Löfgren, 12 ff.).

The almost complete internal peace which Egypt enjoyed, and the relatively long periods of peace from which Syria profited, certainly had a favourable influence, though it is difficult to give precise indications, on their economy, which was also stimulated by the possibilities of trade and which the Ayyūbids deliberately strove to promote, even though only for their fiscal interests. For Syria and the Djazīra we are able to gain a certain idea of their resources through the *Aʿlāḳ* of Ibn Shaddād, who describes the situation on the eve of the Mongol assault; more precisely, for the crafts of Damascus, much information is to be found in the treatise on *ḥisba* composed about 600/1200 by ʿAbd al-Raḥmān b. Naṣr al-Shayzarī (ed. ʿArīnī, Cairo 1946, trans. Bernhauer, *Les institutions de police etc.* in *JA*, 1860, where the author is called Nabrawī), apparently the prototype of all successive treatises of this kind in Syria and Egypt. For Egypt, besides the information preserved by al-Maḳrīzī, many indications are to be found in the treatises of Ibn al-Mammātī and al-Nābulusī (cf. *infra*); the latter especially attests al-Kāmil's interest in the maintenance of forests, irrigation works, state cultivation of sugar cane etc. In general, Egypt, in contradistinction to the other Ayyūbid states, remained, as always, the country *par excellence* with a partly nationalised economy, especially for mining and forest production, trade in metals and wood, certain means of transport and tools, arms etc. The *Lamʿ* of al-Nābulusī, a pamphlet composed after the disorders which followed al-Kāmil's death, stresses the harm done by the interference of private undertakings with those of the State, and by the frauds perpetrated by officials at the first relaxation of control.

Under al-ʿĀdil and al-Kāmil, in addition to the attention paid to economic matters, a strict financial policy was maintained. Al-ʿĀdil's great minister, Ibn Shukr, made himself famous by his competence combined with intractable behaviour towards everyone, including his own sovereign. After him, al-Kāmil maintained an equally energetic control over expenditure and resources (including the *iḳṭāʿ* of the amīrs) and on his death left a treasure almost equivalent to a year's budget. For Egypt, the inquiry carried out by al-Nābulusī in the Fayyūm, although relating only to 642, shows the minuteness of the cadastral survey and accounts (cf. Cl. Cahen, *Le régime des impôts dans le Fayyūm ayyūbide*, in *Arabica* iii/1, 1956). For the northern states, Ibn Shaddād has left us lists of taxes for the towns of Aleppo, Manbidj, Sarūdj and Bālis. The care taken with the finances and the economy also made possible the resumption of the large-scale minting of dinars at the standard normal before Ṣalāḥ al-Dīn. Nevertheless, it seems to have been difficult to check the flight of silver coinage before that of copper (De Boüard, *L'évolution monétaire de l'Égypte medievale*, in *L'Égypte Contemporaine*, 1939).

The internal history of the Ayyūbid states has been the subject of few studies. Yet it is essential that it should be known, especially for Egypt, since it is at this period, by means of a partial break with the Fāṭimid past and the introduction of Saldjūḳid and Zankid traditions from further Asia, but also inevitably with some retention of the Egyptian heritage and with innovations and adaptations, that the foundations were laid of the régime which, to a large extent, the Mamlūks, for two centuries, simply prolonged and completed in detail. Naturally only a few rather incidental allusions can be made here.

The Ayyūbid régime, approximately up to the late years of al-Kāmil, was a semi-feudal family federation, as, for example, had been that of the Būyids and, to a lesser extent, of the Saldjūḳids and Zankids. Under a sovereign to whom all owed allegiance, a certain number of territories were distributed to vassal "princes of the blood" who, apart from the limitations imposed by their primarily military allegiance to the ruler, enjoyed complete autonomy in administering them (cf. for example, the diploma of investiture of a prince of Ḥamā by al-Kāmil preserved at the end of the Chronicle of Ibn Abi 'l-Damm, Oxford Bodl. Marsh 60). Within these great appanages, there were lesser ones, likewise distributed to princes of the blood of second rank or to a few great officers, whose loyalty was to the vassal prince, and whose effective independence was naturally more restricted. It was only still lower down the scale that the military *iḳṭāʿ* properly so-called, of which we shall speak later, were to be found. However, towards the end of al-Kāmil's reign, this régime began to undergo certain modifications; the aggravation of family conflicts obliged the Sulṭān, who during his absence in Egypt had himself represented by a *nāʾib*, sometimes belonging to his family and sometimes not, to replace the princes in the Asiatic provinces also by governors, taken from among their domestic attendents, as for example at Diyār Bakr, Shams al-Dīn Ṣawāb, either standing beside a young prince or not, and whose title of *nāʾib* also stressed his dependence better than any other title would have done. The conditions in which, after al-Kāmil, al-Ṣāliḥ Ayyūb reconstituted Ayyūbid unity, led to the triumph of this centralist conception; moreover, in Egypt, there had never been autonomous appanages, except as a quite exceptional and temporary measure (for example in Fayyūm). In Asia, on the other hand, all the autonomous princes, like the sovereign in Egypt, now bore the title of Sulṭān, which Ṣalāḥ al-Dīn had never officially made use of, perhaps because of its connexion, in the Fāṭimid heritage, with that of *wazīr*; and even the subordinate Ayyūbids bore that of *malik*.

The organisation of the Ayyūbid states, as a natural result of the preceding considerations, was never unified. In general, leaving aside the Yemen, there can be distinguished on the one hand the territories of Asia, which perpetuated Zankid institutions without any great modifications, and on the other, Egypt, where newer institutions were introduced, or at least newer as regards Egypt. As is normal, the central organs of government there were transformed to a greater extent, in relationship to the Egyptian past, than the fundamentals and rules of local administration. An attempt to adjust matters was made, once the initial troubles were over, during the lifetime of Ṣalāḥ al-Dīn himself, as is shown by the description of Fāṭimid institutions composed for the new régime by Ibn al-Ṭuwayr (extracts in al-Maḳrīzī and Ibn al-Furāt), the treatise of the ḳāḍī Abu 'l-Ḥasan on *kharādj* (extracts in al-Maḳrīzī) and the famous *Ḳawānīn al-Dawāwīn* of Ibn al-Mammātī, which have been preserved; others could be added, as, for example, a little later the more literary work of Ibn Shīt al-Kurshī on the *dīwāns*. As the counterpart of and a contrast to these methodical accounts, there appeared at the end of the Ayyūbid régime the various treatises, preserved or known only through quotations, of ʿUthmān b. Ibrāhīm al-Nābulusī, which are a vivid witness of his concrete experience.

The central government was naturally directed, more or less effectively according to temperament, by the Prince himself; most of the princes holding appanages had a *wazīr*, that is to say, an official who ensured in the Prince's name the unity of direction of the whole administration. But the institution was less usual in Egypt; whatever prestige the ḳāḍī al-Fāḍil may have enjoyed in Ṣalāḥ al-Dīn's eyes, he certainly never, despite what has been said, bore the title or fulfilled the functions of *wazīr*, first because this sovereign himself performed the functions of government, and second because it was as *wazīr* that he had originally come to power in Egypt in accordance with the late Fāṭimid practice endowing the wazīrate with plenary authority. For quite a long time his brother al-ʿĀdil had the redoubtable Ibn Shukr as his *wazīr*, whom he had learned to value as his associate in directing Ṣalāḥ al-Dīn's navy; al-Kāmil took him back for a time, but then subsequently assumed the direction of the administration himself, with the help of high officials, to whom he sometimes, but not always, gave the title of *nāʾib* of the wazīrate. After him, al-Ṣāliḥ Ayyūb had as his *wazīr* one of the "Sons of the Shaykh", of whom we shall speak again later. Princes who were minors and orphans had an *atabeg* [*q.v.*]. The *ustādhdār*, a kind of intendant of the Sovereign's "Household", played an important political rôle.

Below the prince and the *wazīr*, the central administration was divided between the *dīwāns*, the names and attributions of which no longer exactly corresponded to those of the Fāṭimid period. It was essentially the army for which the régime still operated, hence the importance of the *Dīwān al-Djuyūsh*, a section of which dealt with the *iḳṭāʿ* and, in this respect, possessed a competency which in part coincided with that of the *Dīwān* of Finance; on this latter were dependent all questions of taxation, income and expenditure, and the Treasury, with a section devoted to the finances of 'the Gate' itself; it is described in detail, with the exclusion of the others, in the treatise of Ibn al-Mammātī. The third great *Dīwān*, which in certain respects was pre-eminent among those just mentioned, was the *Dīwān al Inshāʾ*, the Chancery, entrusted with correspondence and the composition of diplomas; of this the director enjoying the greatest reputation was al-Fāḍil, who had been taken over from the Fāṭimid regime (ʿImād al-Dīn al-Iṣfahānī, who emulated him in belles-lettres, was private secretary to Ṣalāḥ al-Dīn). Finally, marginal, though of no less importance, was the *Dīwān* of the *ḥubūs*, indicated by al-Nābulusī, which naturally enjoyed complete autonomy as against those just mentioned. The Ayyūbids adopted the Saldjūḳid *ṭughrāʾ*, which they distorted (Cl. Cahen, in *BSOAS*, xiv/1, 42). The work of these offices involved large numbers of documents and employees supervising

one another. The most striking institution of the Ayyūbid régime seems to have been the *shadd*, the office of the *mushidd*. The administration was dependent, naturally, on a native personnel, frequently Copts, who alone possessed the requisite traditional training; but either because it did not inspire sufficient confidence or because on its own it had insufficient power to make its decisions effective against powerful, especially military officials, there was attached to each *Dīwān* and also, perhaps, to the *Dīwān*s as a whole, a *mushidd*, that is to say an amīr entrusted with the supervision of the ordinary civil administration, which he supported with his own military contingents.

The army seems to have had contingents at least equal to those of Ṣalāḥ al-Dīn's time and, in case of need, it could of course be temporarily augmented by the distribution of new provisional *iḳṭāʿ*. Though pay or direct distribution did not entirely disappear, the *iḳṭāʿ*, however, was the main source of revenue for the army, or at least for the amīrs. The Ayyūbid *iḳṭāʿ* was connected with both the Fāṭimid and Saldjūḳid traditions, but, especially in Egypt, did not exactly correspond to either of these models. It was freer, economically, than the Fāṭimid *iḳṭāʿ*, in the sense that it was no longer subject to tithes; but, compared with the Zankid *iḳṭāʿ*, which conferred on the holder a kind of seigneurial autonomy over his territory, it was much more closely incorporated in the State administration: although the *muḳṭāʿ* was responsible for some items of expenditure, in reality he possessed no actual administrative rights, being merely the assignee of a definite revenue, the composition of which did not depend on him, and which could be withdrawn from him or transferred elsewhere at any time. This revenue was calculated according to an estimate, *ʿibra*, in a unit of account, the *dīnār djayshī*, which was made up of a specific combination of payments in cash and in kind from the crops; however, generally speaking, it was the interested party who, at the time of the harvest, was obliged to go and supervise the levying of the tax due to him (hence the difficulty of maintaining an army in the field for any considerable time). The *iḳṭāʿ* of the great amīrs were, generally speaking, made up of parcels of land at a distance from one another. The number of men, which the *muḳṭāʿ* could and had to maintain on them, was stated precisely (likewise in the Ayyūbid territories in Syria), and it became the custom, unknown until then, to speak of amīrs of 10 men, 100 men etc. (Cf. Cl. Cahen, *L'évolution de l'iḳṭāʿ*, in *Annales ESC*, 1953).

One of the weaknesses of this army lay in the fact that the various corps of which it was constituted were lacking in unity and were mutually jealous. A few traces of ethnic hostility can be found between Kurds and Turks. It does not appear to be attributable to any great extent to the fact that the former were apparently free men and the latter, at least prior to their promotion to the amīrate, slaves. The most seriously significant factor was that each ruler tended to form a body of troops of his own, acquired by him individually and therefore personally devoted to his cause; the disappearance of a ruler, however, did not entail that of the body or bodies of troops formed by him, within which there prevailed a vigilant solidarity, arising out of fear of the new bodies of troops. The rivalries between *asadiyya* (from Asad al-Dīn Shīrkūh), *ṣalāḥiyya*, *ʿādiliyya*, *kāmiliyya*, *ashrafiyya* etc. play a great part in the quarrels between Ayyūbid pretenders.

The military policy of the Ayyūbids was completed by the construction of impressive fortresses both urban (Aleppo, Cairo etc.) and rural, which they matched especially against those of the Crusaders.

At times there has been speculation as to the extent to which certain characteristics of the Ayyūbids can be attributed to their "Kurdism". Considerations of this kind too often derive from gratuitous prejudices and falsified information. It does not seem that the presence of Turks beside Kurds in the Ayyūbid regime differed profoundly from that of Kurds beside the Turks in the Zankid régime, and both institutionally and intellectually the two régimes are related, allowance being made for the consequences of environmental conditions. Yet it is probably not a matter of chance that the Ayyūbids sought to expand to Diyār Bakr and Akhlāṭ, that is to say towards their country of origin, or at least into Kurdish territory, so as to ensure the continuity of Kurdish recruitment. However, within the actual dynasty, in the course of successive generations, Turkish and Kurdish blood was mixed; and we shall see that in its last days the régime divested itself of its Kurdish aspect.

The Ayyūbids in any case, like the Zankids and their other contemporaries, were staunch Sunnī Muslims, working, under the aegis of the sovereign, to promote Orthodox Islam against heresy. This attitude was first of all revealed by the reintroduction of Egypt into the ʿAbbāsid family, and more durably, at a time when the Caliph al-Nāṣir had restored a certain prestige to the Caliphate, it was manifested by an expression of respect, of a concordance of opinions which, whilst naturally not diminishing the autonomy of the Ayyūbids, were not however purely verbal, authorising, for example, in the settlement of disputes, the frequently effective mediation of such caliphal ambassadors as Ibn al-Djawzī. Furthermore, the Ayyūbids, like other rulers of their times, entered the kind of *futuwwa* order by which al-Nāṣir tried to take in hand the lower classes of Baghdād and at the same time consolidate his administration and reassert his moral authority among the aristocracy; he hoped to associate the princes with himself in this undertaking, both in order to attach them to himself and to enable them to conduct a similar line of action among their own people (cf. the latest assessment of this question by Fr. Taeschner, *Die Futuwwa* etc., in *Schweizerisches Archiv für Volkskunde*, LIII, 1956).

The orthodox attitude of the Ayyūbids is also shown in the concrete encouragement which they and their high dignitaries gave, after the Saldjūḳids and Zankids, to increasing the numbers of *madrasas* in Syria and the Djazīra, and to their introduction into Egypt. Al-Ṣāliḥ Ayyūb appears to have been the initiator of a new form, the *madrasa* for the four rites including in its buildings the tomb of the founder. On the other hand, the Ayyūbids welcomed the mystical orders, often originating in the East, for whom they founded various *khānaḳāh*s, under the direction of a *shaykh of shaykhs*. More generally evident is the fact that quite a few immigrants of recent or remote Iranian origin are to be found surrounding them, as with the Saldjūḳids and Zankids, especially in the controlling spheres of intellectual life; there seems also have been a tendency for them to associate the ḳāḍīs and religious circles more extensively with the government. Especially remarkable under their rule was the so-called family of the Sons of the Shaykh, of Khurāsānian origin (see AWLĀD AL-SHAYKH), who,

contrary to the almost universal particularisation between the military, religio-legal and administrative castes, succeeded in being eminently represented in all three, especially in the case of the *wazīr* Maʿīn al-Dīn and his brother the amīr Fakhr al-Dīn who, for a short time before his death in the battle of Manṣūra, acted as regent of the realm.

Nevertheless, if one compares the behaviour of the Ayyūbids with that of the Great Saldjūķs, a greater flexibility is certainly to be observed. This is doubtless connected with the general aim of relaxing tension which we have noted, moreover, in the policy adopted towards the Franks. But it must also be said that the heretics of Syria had been sufficiently weakened by the Zankids for it to be no longer really necessary to fight them, and that in Egypt Ismāʿīlism seems hardly to have left any regrets. At Aleppo, however, the government of al-Ẓāhir Ghāzī was stained by the blood of the Iranian mystic Suhrawardī Maķtūl, executed during the lifetime of Ṣalāḥ al-Dīn; but it must be said that this was a very special individual case, and that this measure was demanded by pietistic circles of Aleppo. The majority of the Ayyūbids were Shāfiʿīs, in contradistinction to the Turks who were Ḥanafīs; and although doctrinally this does not impute to the latter a stronger degree of intolerance, the result may nevertheless have been that the Ayyūbids had a less intimate contact with the pietists, devoted to the militant spiritual mission of the Saldjūķids. However, al-Muʿaẓẓam and his son Dāʾūd were Ḥanafīs, and this perhaps partly explains their conflicts with al-Kāmil; they certainly appear, for example, at the time of the dealings with Frederick II, doctrinally to represent the intransigent party.

Christians and Jews, generally speaking, likewise appear to have had no grounds for complaint against the dynasty. As is almost always the case, when an exception occurs, the motive is political and not confessional. There is no doubt that the Ayyūbid occupation impaired the exceptionally favourable conditions enjoyed by the Armenians under the last Fāṭimids (see ARMĪNIYA). But it was the Copts who profited from these confiscations and not the Muslims. Similarly, when Ṣalāḥ al-Dīn retook Jerusalem, he favoured such of the native Christian communities there as could not be suspected of covenanting with the Franks (cf. *inter alia* Cl. Cahen, *Indigènes et Croisés, un médecin d'Amaury et de Saladin*, in *Syria* 1934, and E. Cerulli, *Etiopi in Palestina*, i, Rome 1943). The Ayyūbid period in Egypt was one of vitality for the Coptic Church. When moments of tension arose, it was generally as a counter effect of Crusades, in so far as collusion might be feared, for example, between Melkitis and Latins. That it was not considered necessary, however, in normal circumstances, to prohibit intercourse between indigenous and Latin Christians is shown by the permission accorded by the Ayyūbids for Dominican and Franciscan missionaries to enter their kingdom, provided that no attempt was made to convert Muslims. It is true that the traditional discriminatory measures in respect of non-Muslims were from time to time revived, always with the same ineffectiveness. The Jews were also passably well treated, even being invited to return to reconquered Jerusalem, and refugees from Spain, such as Maimonides, were favourably received (see E. Ashtor-Strauss, *Saladin and the Jews*, in *Hebrew Union College Annual*, 1956, 305-26).

The climate certainly offers a partial explanation for the intensity of cultural life in the Ayyūbid domains. Syria in the 13th century was truly the heart of Muslim culture in the Arabic language. Egypt was soon to rival her, but had not as yet quite achieved a synthesis between the survivals from her own past and the imported elements favoured by the Ayyūbids. All the credit for this flowering cannot indeed be claimed by the Ayyūbids, but it would be injust to deny any credit to princes who were themselves frequently men of letters and scholars, and who in general sought to protect and attract the representatives of all disciplines compatible with orthodoxy. The economic progress and the general advance of Muslim recovery in the area which the Crusades had involved most directly in the struggle, must have accomplished the rest. There is little object in giving a list of names of men of letters and scholars. The names of the historians and geographers will be found in the bibliography of sources; Ibn al-Ķifṭī (*wazīr* of Aleppo) and Ibn Abī ʿUsaybiʿa, biographers of scholars and physicians, draw our attention to the importance of the support given to these latter in the hospitals; among the poets (some of whom were studied by Rikabi, *La Poésie profane sous les Ayyūbides*, 1949), the historian will perhaps more especially note al-Amdjad Bahrāmshāh, himself an Ayyūbid, or a man of the *sūķs* such as Ibn al-Djazzār (cited in the *Mughrib* of Ibn Saʿīd). Furthermore, emphasis should be laid on the many Spanish refugees who established themselves in the Ayyūbid domains, men as diverse as the historian-geographer Ibn Saʿīd, the grammarian Ibn Mālik, the botanist Ibn al-Bayṭar and the mystic Ibn al-ʿArabī.

It is not possible to speak at length here of the Ayyūbid principality of the Yemen; Ayyūbid intervention here certainly had the same importance for the country as was the case in Egypt. Ayyūbid rule to a certain extent restricted the quarrels of sects and princelings who divided the country among themselves, and brought about a political unity which was to survive them; although, from 629/1232, the Ayyūbids were supplanted by the Rasūlids, the latter had their origins in their officer *milieu* and continued their traditions. The Ayyūbid régime reintroduced Sunnī Islam to the Yemen and linked it more closely to Egypt, politically, economically and institutionally. The persistence of religious divisions in the population may have been the origin of the strange attempt on the part of the third Ayyūbid to pass himself off as an autonomous Umayyad Caliph; after his overthrow, al-ʿĀdil and al-Kāmil stressed their intention of not allowing the Yemen to escape from their hands by sending one of the sons of the latter to take over the succession. Al-Kāmil, however, was unable to prevent the accession of the Rasūlids, but the latter were at pains to show themselves, at least at the outset, as allies of the Ayyūbids; later there arose conflicts of influence between them at Mecca; commercial relations, however, seem never to have been broken off.

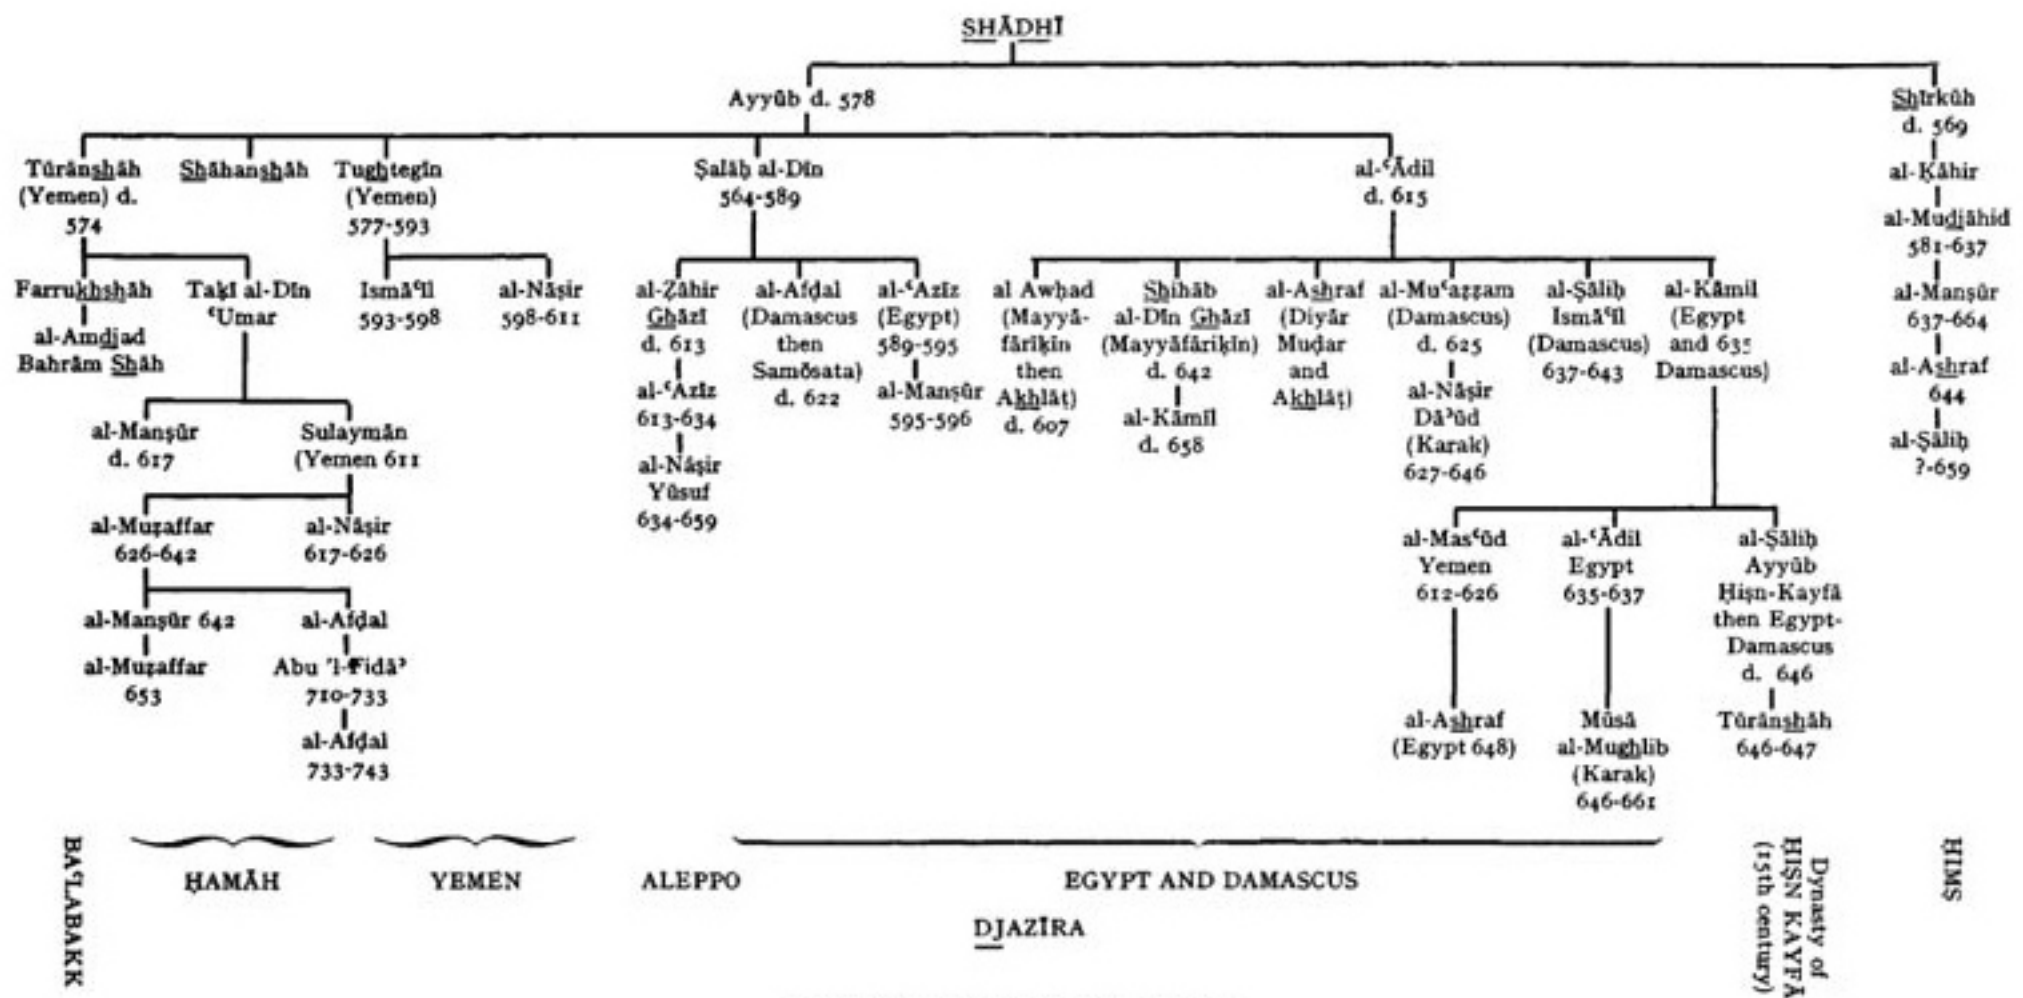
III. The death of al-Kāmil marks the end of the true Ayyūbid régime, with the reservation that the resulting degradation was, in a large measure, implicit in its very constitution. Al-Kāmil had relegated his eldest son al-Ṣāliḥ Ayyūb to the government of Ḥiṣn-Kayfā and designated his youngest son al-ʿĀdil to succeed him; al-ʿĀdil made himself disliked and his opponents appealed to al-Ṣāliḥ. The latter, in the course of fierce struggles, accompanied by

many reverses, conquered his throne and restored the unity of command of the Ayyūbid states (a unity rendered ephemeral by his death), not only at the expense of his younger brother, but also of the majority of the Ayyūbids of Syria, especially al-Ṣāliḥ Ismāʿīl, who had become master of Damascus. It is true that there had already been conflicts between Ayyūbids, but these conflicts did not prevent either of the protagonists from in the first place receiving the territories which they governed from the Sulṭān, the head of the family, or family solidarity from keeping the harmful effects of these conflicts within definite limits. This time, the adversaries viewed one another as usurpers, and it was naked strength which gave the victory to al-Ṣāliḥ. Nevertheless, this strength was no longer derived from the old Kurdo-Turkish army; during al-Kāmil's lifetime, the disgrace of al-Ṣāliḥ had been due to the fact that, as his father's lieutenant in Egypt, in his distrust of the Kurds, he had carried out a large scale recruitment exclusively of Turkish slaves. The army which he organised on becoming master of Egypt was exclusively Turkish. But, in the meantime, his successes had been due to an even more disquieting element: the Khwārizmians who, after the defeat and death of Djalāl al-Dīn, had been driven back from Asia Minor where for a time they had served the Saldjūḳids, and were seeking an employer and a territory. He invested them with Diyār Muḍar and summoned them to fight against his enemies in the Djazīra and in Syria; it was partly due to them that these wars were of so devastating and ruthless a character, until at last al-Ṣāliḥ, having no further need of them, caused them to be annihilated by his cousins of southern Syria. Furthermore, though the previous Ayyūbids had kept the peace with the Franks, and at one point al-Kāmil had even entertained an alliance with Frederick II against his brothers, such plans had never been actually realised. This time, the Franks appeared in alliance with al-Ṣāliḥ Ismāʿīl and with al-Nāṣir Dāʾūd of Karak himself against al-Ṣāliḥ Ayyūb and the Khwārizmians, which resulted in an irreparable disaster for both of the former. This marks the appearance in al-Ṣāliḥ of a warlike spirit against the Franks which was unknown to his predecessors, and the ordeals of the Franks gave rise to a new Crusade, that of St. Louis, at the beginning of which the Ayyūbid ruler died.

In effect, he was the last Ayyūbid. His son Tūrānshāh was massacred after a few months by his troops, and even though several child puppets still carried on the name of the Ayyūbid dynasty for a time, it was in fact from 647/1249 that the establishment of the new so-called Mamlūk régime dated. Al-Ṣāliḥ was the real creator of this régime. The well-knit and well-disciplined army of Turkish slaves, called the Baḥriyya from the name of the barracks on an island in the river (Baḥr), was the real arbiter of the situation; neither al-Ṣāliḥ nor Tūrānshāh were military leaders. The dynasty might have lasted longer if the latter had not been unbalanced; it was inevitable that sooner or later the Baḥriyya would supplant him by a leader promoted from among themselves, which they in fact did when, on the death of Tūrānshāh, they raised the Turkomān ʿIzz al-Dīn Aybak to power, first as *atabeg* and then as sultan. The "Kurdish" dynasty was succeeded by the "Turkish" régime, in the words of contemporaries.

The Northern Ayyūbids continued for a little while longer, but without further success. Their lives were spent under the shadow of the terror caused by the approach of the Mongols. They hesitated between submission which they feared might be annihilation, and armed resistance of which they despaired in advance. However, al-Nāṣir of Aleppo, with the advent of the Mamlūk régime, had become the standard-bearer of the Ayyūbid cause, and it required the mediation of the Caliph in face of the Mongol danger to bring about an agreement that all Syria belonged to him, the Mamlūk Sulṭān being satisfied with Egypt. But in 1258 Baghdād fell and, in 1260, Aleppo, Damascus and Mayyāfāriḳīn were either taken or capitulated of their own accord before the invader, who seemed to be invincible. The unfortunate al-Nāṣir, who unlike others did not dare to seek refuge in Egypt, was finally captured by the Mongols and, well treated at first, paid with his life when news arrived of the defeat of a Mongol army by the Mamlūks at ʿAyn Djālūt [*q.v.*] in Syria at the end of the same year. In the ensuing conquest of Syria by the Mamlūk sultan Baybars, the principality of Karak (which moreover had been lost to the family of Dāʿūd in 1248), which was of great strategic importance, was subjugated; the principalities of Aleppo and Ḥimṣ had disappeared of their own volition; that of Ḥamāh alone, made illustrious by its writer-prince Abu 'l-Fidāʾ, was restored, and existed (with one interval) until 1342, by reason of its absolute docility.

There was however another branch which survived for more than two centuries under the Mongols and their successors, in the vicinity of Ḥiṣn Kayfā; reduced to the level of a local seigniory, it returned in a rather odd way to its origins, in that it drew a large part of its strength from the Kurdish tribes who had become powerful in the region and among whom it attempted to play an ever-repeated rôle as arbiter. It succeeded in surviving the Tīmūrid catastrophe, preserving a centre of culture, but in the end succumbed to the Āḳ Ḳoyūnlū; nevertheless several of its members regained a minor local importance at the time of the Ottoman conquest (cf. Claude Cahen, *Contribution à l'Histoire de Diyār Bakr au XIVᵉ siècle*, in *JA*, 1955).

Bibliography: A. Sources. A number of archival documents of the Ayyūbid period have been preserved; official documents, reported in Sinaī (A. S. Atiya, *The Arabic MSS. of Mt. Sinaī*, Baltimore 1955), or discovered in the Italian archives and published (M. Amari, *Diplomi arabi del Archivo Fiorentino*, 1863-67; Tafel and Thomas, *Urkunden zur älteren Handelsgeschichte Venedig*, 3 vols. 1856-7); cf. also Ṣubḥī Labīb cited above); private documents, in the collections of papers of Cairo, Vienna. etc. (cf. for example A. Dietrich, *Eine Eheurkunde aus der Aiyubidenzeit*, in *Doc. islam. ined.*, Berlin Akad. Wiss. 1952). Moreover partial collections have been preserved of copies of the correspondence of the Ḳāḍī al-Fāḍil (on whom see A. N. Helbig, *Der Kadi al-Fadil*, 1909, inadequate), of the Ayyūbid al-Nāṣir Dāʾūd (Brockelmann, I, 318, and Cl. Cahen, *REI*, 1936, 341), and of al-Afḍal's *wazīr*, Ḍiyā al-Dīn b. al-Athīr (analyses of MSS. by Margoliouth, Xth Congress of Orientalists, Ḥabīb Zayyāt, in *Machriq* xxxvii/4, 1939; and Cl. Cahen, in *BSOAS*, xiv/i); numerous extracts of the first also occur in Abū Shāma cited infra; various Jewish documents in the collections of the Cairo Genīza.


ABRIDGED GENEALOGICAL TABLE
(3 detailed tables in Zambaur)

On the whole, the essential sources for us continue to be the narrative sources, on which several comprehensive studies are to be found in the Introductions of Cl. Cahen, *La Syrie du Nord à l'époque des Croisades*, 1940, and H. Gottschalk, *al-Malik al-Kāmil* (in the press); for the times of Ṣalāḥ al-Dīn, H. A. R. Gibb, *The Arabic Sources for the Life of Saladin*, in *Speculum*, xxv/i, 1950. For this first period, the main source is ʿImād al-Dīn al-Iṣfahānī, *al-Barḳ al-Shāmī*, of which only two fragments exist, at Oxford (cf. H. A. R. Gibb, in *WZKM*, LII, 1953), but of which more or less complete summaries are given in all the subsequent literature and especially in Abū Shāma, *K. al-Rawḍatayn*, Cairo ed. 1287/1872, 2 vols. (the first part of a new critical edition by Hilmy M. Ahmad appeared in Cairo in 1956; it goes as far as 558/1163); extracts in *Hist. Or. Crois.*, iv and v); it should be completed by *al-Fatḥ al-Ḳussī*, idem, ed. C. Landberg, devoted to the events of 1187 (cf. J. Kraemer, *Der Sturz des Königreichs Jerusalems in der Darstelling* des —, Wiesbaden 1952). The other important Arabic sources are Ibn Shaddād, *Life of Saladin*, in *Hist. Or. Crois.* iii; Ibn Abī Ṭayyī quoted in Abū Shāma, op. cit.; the *Bustān al-Djāmiʿ*, ed. Cl. Cahen, in *BEO*, Damascus 1937 and the Christian Abū Ṣāliḥ the Armenian, *Churches*, etc., ed. Evetts. For the beginning of the 7th/13th century, the *Kāmil* of Ibn al-Athīr becomes the main Arab source, to which must be added the last pages of Ibn Abī 'l-Damm (Oxford MS. Marsh 360), Ibn Naṭīf (MS. Leningrad IM 159 ed. in preparation by H. Gottschalk: a few extracts in Amari, *Bibliotheca Arabo-Sicula*, ii, Appendices; continually utilised in Ibn al-Furāt, *infra*), the extracts from the Memoirs of ʿAbd al-Laṭīf preserved in the *Taʾrīkh al-Islām* of Dhahabī and the authors quoted for the following period. For the 7th/13th century of the Ayyūbids as a whole and especially from about 1220, the fundamental source is the *Mufarridj al-Kurub* of Ibn Wāṣil (ed. undertaken by al-Shayyāl, who so far has published the first two volumes stopping at the death of Saladin; extracts quoted in the *Bibliothèque des Croisades* of Michaud, iv (by Reinaud) and in the comments on the translation of Maḳrīzī by Blochet in *ROL*, ix-xi); this work and the *Mirʾāt al-Zamān* of Sibṭ Ibn al-Djawzī (facsimile ed. Jewett, on which is based that of Ḥaydarābād, ii, 1952, inadequate, cf. *Arab.* 1957/2 review by Cl. Cahen), especially important for Damascus, are the two sources used almost exclusively for the whole of subsequent historiography; the overrated Abu 'l-Fidāʾ in the main only reproduces the work of his less noble compatriot for this period; Ibn Wāṣil had previously written a more concise *Taʾrīkh Ṣāliḥī*, based on different sources of information (unpublished). To these authors must be added especially Abū Shāma, *Dhayl ʿala 'l-Rawḍatayn*, Cairo ed. 1366/1947, the Christian al-Makīn b. al-ʿAmīd (edition in *BÉt.Or.*, 1958, by Cl. Cahen), the *History of the Partiarchs of Alexandria* (this part unpublished, quotations, among others, in Blochet-Maḳrīzī *loc. cit.*), the extracts of Saʿd al-Dīn (Cl. Cahen, *Une source pour l'Histoire des Croisades, les Mémoires de* —, in *Bull. Fac. Lettres Strasbourg*, xxviii-7, 1950); for Northern Syria, the *Zubda* of Kamāl al-Dīn Ibn al-ʿAdīm (ed. undertaken by Sami Dahān; meanwhile, Blochet trans. in *ROL*, iv-vi) and the *Bughya* by the same author (unpublished), and ʿIzz al-Dīn Shaddād, cf. *infra*; the ʿIrāḳī point of view is to be found in Ibn al-Fuwaṭī, *al-Ḥawādith, etc.*, ed. Must. Djawād; the Khwārizmian in Nasawī, *Vie de Djalāl al-dīn*, ed. trans. Houdas; the Saldjūḳid (of Rūm) in Ibn Bībī, ed. Houtsma (somewhat abbreviated: in Persian). See also the historians of the Mongols and of the first Mamlūks. Among later Arab historians who have preserved some original materials, Djazarī (Cl. Cahen, in *Oriens*, IV/1, 1951, 151-3), Dhahabī (ed. in preparation), Nuwayrī (Cairo ed.), Ibn al-Furāt (this part unpublished), Maḳrīzī (*Sulūk*, ed. Must. Ziadā; *Khiṭaṭ*, Būlāḳ ed. and, for the beginning, ed. Wiet, the only good edition). For the Yemen under the Ayyūbids, better than the celebrated Khazradjī (ed. trans. *Gibb Mem. Ser.*), of late composition, the contemporary Ibn Mudjāwir (ed. Löfgren) and Hamdānī (Brockelmann, I 323, unpublished). For the principality of Ḥiṣn Kayfā, the anonymous Vienna manuscript studied in Cl. Cahen, *Contributions etc.* cited above. A general history of the whole Ayyūbid family was composed at the beginning of the 9th/15th century by an anonymous Syrian (Brit. Mus. Add. 7311, unpublished). On the whole, too many important sources are still in manuscript form and their publication (at least photographically) is a pressing desideratum. Translated extracts from the Arabic historians will be found in F. Gabrieli, *Storici arabi delle Crociate*, Rome 1957, and J. Østrup, *Arabiske Krøniker til Korstogenes Periode*, Copenhagen 1906.

To the historians must be added the biographers, not only Ibn Khallikān, but also Ibn al-Kifṭī (ed. Lippert) and Ibn Abī ʿUsaybiʿa (ed. Aug. Muller), and the geographers, Yāḳūt, Ibn Saʿīd (unpublished), and especially ʿIzz al-Dīn b. Shaddād (Northern Syria, ed. Ledit in *Machriq*, 1935; Aleppo, ed. Sourdel, Damascus 1958; Damascus, ed. Dahān 1957; Djazīra, analysis by Cl. Cahen in *REI*, 1934; further extracts by Sobernheim in *Centenario di Amari*, ii, (Baʿlbak) and in the *Corpus Inscriptionum Arab.* passim), historical and administrative, to be completed by Sibṭ Ibn al-ʿAdjamī, *Les Trésors d'Or*, analysis and trans. Sauvaget, 1950, and ʿUlaymī, *Description de Damas*, ed. Sauvaire, in *JA*, 1894.

As administrative treatises must be cited (besides the extracts preserved by Maḳrīzī) Ibn al-Mammātī, *Ḳawānīn al Dawānīn* (ed. Atiya, 1943), Ibn Shīt al-Kurshī, *Maʿālim al-Kitāba*, ed. Khūrī Ḳusṭantīn Pasha, 1913; and the tracts of Nābulusī, *Akhbār al-Fayyūm*, ed. B. Moritz, cf. Cl. Cahen, *Les Impôts*, etc., quoted above, and *Lamʿ al-Ḳawānīn*, ed. Cl. Cahen to appear shortly, extracts by C. Owen in *JNES*, 1935; finally the *Nihāyat al-Rutba* of al-Shayzarī and the technical treatises like the treatise on gun-making, and the monetary treatise of Ibn Baʿra analysed by Ehrenkreutz in *Contributions etc.* quoted above; I do not know the *Tadhkira fi 'l-Ḥiyāl al-Ḥarbiyya* dedicated by ʿAlī al-Harawī to al-Ẓāhir Ghāzī (Rescher in *MFOB*, v, 1912, 495 ed. in preparation by J. Sourdel-Thomine). The *dīwāns* of the poets should not be neglected.

Naturally non-Arab and non-Muslim literature must also be consulted, which cannot be given in detail here: especially the Latin and French historians of the Crusades and of the Latin Orient, and Syriac literature (Michael the Syrian, ed. and trans. Chabot; Bar-Hebraeus, ed. and trans.

Budge; *Chronique anonyme syriaque*, ed. Chabot, in *Corpus Script, or.*, iii, 14-15).

The epigraphical material has been collected in the *RCEA*, vii-ix; the inscriptions of Ṣalāḥ al-Dīn studied by Wiet in *Syria*, iii. To the numismatic material provided by the usual catalogues, should be added the recent studies of Balog, Minost and Jungfleisch in *MIE* since 1950.

B. Modern Works. There is no complete general study on the Ayyūbids. The two best general accounts, though short, are those of G. Wiet in the *Histoire de la Nation Égyptienne* edited by Hanotaux, iv, and of H. A. R. Gibb in *History of the Crusades* (Philadelphia), i, (Saladin) 1955 and, ii (The Ayyūbids after Saladin) in the press. There is not even a serious biography of Saladin; the latest is that of A. Champdor, Paris 1956, and the least bad still that of Lane-Poole, New York 1898. Of the rest of the Ayyūbids, al-Kāmil alone has just been the subject of an important work, by H. Gottschalk (in the press; the same author has given notice of an article on Ayyūbid Yemen). The studies on various special problems have been quoted in the article. For trade, hardly anything new has been added from our point of view to the two old classical works of W. Heyd, *Histoire du Commerce du Levant*, i, 1882, and of Schaube, *Handelsgeschichte der Mittelmeerromanen*, 1906, which view matters from the Western point of view. Some information on institutions is contained in W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1929. See also the general histories on the Crusades and the Latin Orient; F. Butcher, *The history of the church of Egypt*, 1897; and *supra* and *infra* the articles devoted to the individual rulers, as well as the section on *madrasa* in the article MASDJID.

(CL. CAHEN)

AL-ʿAYYŪḲ [see NUDJŪM].

ʿAZAB. An Arabic word meaning "an unmarried man or woman", "a virgin", applied to several types of fighting men under the Ottoman and other Turkish régimes between the 13th and the 19th centuries. The soldiers of various Ottoman formations, notably all those recruited by *dewshirme* [*q.v.*], were forbidden to marry before retirement; and it may be assumed that the earliest *ʿazabs* we read of —those employed as marine troops by the Aydln Oghullarl in the 13th century—were bachelors recruited from coastal villages. The term was probably used likewise for marines both in the Saldjūḳid state of Ḳonya and in those of its smaller successor states that were possessed of seaboards.

Presumably because the men concerned were again unmarried, the term *ʿazab* was also applied from early Ottoman times to the light archers, recruited *ad hoc* for campaigns in whatever numbers were considered necessary, whose office in battle it was immediately to face the enemy from a station in front of the artillery and the Janissaries and to open the fight with a hail of arrows. These *ʿazabs* were drawn one from every twenty or thirty "*khānes*" in the provinces, and supported whilst on service from the contributions of those *khānes*, which stood in lieu of tax payments (cf. ʿAWĀRIḌ).

From the middle of the 14th century, further, there were *ʿazabs* employed in the garrisons of Ottoman fortresses. These *ḳalʿe ʿazablarl*, as they were called, were organised more or less like the Janissary and other *odjaḳs* recruited by *dewshirme* (though not so recruited themselves) and paid in cash by the Treasury. Though they may all have started their service as bachelors, these men must have been permitted eventually to marry, since places in these corps were heritable by competent sons. After the 16th century the *ḳalʿe ʿazablarl* were sometimes employed as bridge-builders and sappers (*laghlmdjilar*). It is perhaps these *ʿazabs* of whom D'Ohsson states (*Tableau*, vii, 309) that they were charged with the care of munitions and were incorporated in the corps of the *djebedjis*, and again (*Tableau*, vii, 363) that though really *djebedjis*, they were often called *ʿazabs*, particularly in Egypt. This "incorporation" presumably took place after the *djebedjis* ceased being recruited by *dewshirme*. Another late reference to "frontier" *ʿazabs* is made by Juchereau de Saint-Denys (*Révolutions* i, 90). Writing of the second decade of the 9th century (between the collapse of the *Niẓām-i Djedīd* and the abolition of the Janissaries), he lists the *ʿazabs*, under *Serḥadd Ḳullarl*, as élite infantry stationed on the frontiers.

Finally, the Ottomans continued the tradition of the Aydln Oghullarl in employing *ʿazabs* at sea, as Treasury-paid musketeers, organised in companies under officers (*reʾīs*) who might rise either to the command of galleys or to some of the chief posts at the Admiralty (next to which there was an *ʿazab* barracks), as for instance its *kāhyallk*. The men of the Admiralty *odjaḳ* were indeed also known as *ʿazabs*, who, like those employed at sea, were Treasury-paid. Their duty was to guard war-ships whilst in dock.

Bibliography: Muṣṭafā Nūrī, *Netāʾidj al-Wuḳūʿāt*, i, 144; d'Ohsson, *Tableau de l'Empire Ottoman*, vii, loc. cit.; Hammer, *Des osmanischen Reichs Staatsverfassung*, etc. ii, 280, 287-8; Zinkeisen, iii, 202; *EI*¹ art. *Lewend* (Kramers); *IA* art. *ʿAzab* (Uzunçarşlll); Gibb and Bowen, *Islamic Society and the West*, i (part I) index.

ĀZĀD, ABUʾL-KALĀM [see Supplement].

ĀZĀD, MUḤAMMAD ḤUSAYN, an Indian Muslim writer and poet, who wrote in Urdū and is noted for the unique charm of his agreeable and picturesque style and for the important rôle he played in the field of literature and education. He was born in Delhi about 1834, being the son of Mawlawī Muḥammad Bāḳir, himself a pioneer of journalism in Northern India. After the political upheaval of 1857, he left Delhi and after several years' wandering arrived in Lahore in 1864. He spent the rest of his life there in the service of the education department of the Government of the Pandjāb, writing among other things text-books for students of the Urdū and Persian languages. He also made journeys to Persia and Central Asia. He died at Lahore in 1910.

His principal works are: *Āb-i Ḥayāt*, a history of Urdū poetry, with an introduction on the history of the Urdū language; it is his greatest and best-known work, which is celebrated and highly prized not only for its subject-matter but also for its vivid and graphic style; *Sukhandān-i Pārs*, on Persian philology and the development of Persian prose style; *Nigāristān-i Pārs*, dealing with Persian poets of India and Persia; *Nayrang-i Khayāl*, a collection of allegorical essays, translated or adapted from the English; *Darbār-i Akbarī*, which deals with the reign of the Mughal Emperor Akbar the Great and his brilliant court, and *Ḳiṣaṣ-i Hind*, or stories from Indian history. He also collected and edited the poetical compositions of his master, Muḥammad Ibrāhīm Dhawḳ.

He used Āzād as his pen-name; and along with Alṭaf Ḥusayn Ḥālī [*q.v.*] he is regarded as a pioneer

of the new school of Urdū poetry, which is characterised by naturalness and greater breadth of subject and treatment and also by increased attention paid to thought and matter as opposed to language and form.

Bibliography: B R. Saksena, *A History of Urdu Literature*, Allāhābād 1927; M. Bāķir in *Supplement to the Oriental College Magazine* (Lahore) for Feb., 1939; Muḥammad Ṣādiķ, *Muḥammad Ḥusayn Āzād, his Life, Work and Influence*, Doctoral Dissertation in the Pandjāb University, 1939; S. M. Ḥusayn Riḍawī, *Āb-i Ḥayāt ka Tanķīdī Muṭāla'a*, Lucknow 1953.

(Sh. Inayatullah)

ĀZĀD BILGRĀMĪ, Mīr Ghulām ʿAlī b. Nūḥ al-Ḥusaynī al-Wāsiṭī, b. at Bilgrām on 25 Ṣafar 1116/29 June 1704; he received his early education from Mīr Ṭufayl Muḥammad Bilgrāmī (*Subḥat al-Mardjān* 99-4) and later studied with Mīr ʿĀbd al-Djalīl Bilgrāmī (*Ma'āthir al-Kirām*, i, 257-77). In 1151/1738 he performed the pilgrimage to Mecca and Medina and learnt *ḥadīth* from Shaykh Muḥammad Ḥayāt Sindī al-Madanī and ʿAbd al-Wahhāb Ṭanṭāwī (*Ma'āthir al-Kirām*, i, 162). He returned to India in 1152/1739, and settled at Awrangābād where he died in 1200/1786; he was buried at Khuldābād (Deccan) (T. W. Haig, *Historic Landmarks of the Deccan*, Allāhābād 1907, 58).

When his friend Ṣamṣām al-Dawla Shāh Nawāz Khān [*q.v.*], *dīwān* of Ḥaydarābād, was murdered and his house plundered (1171/1758), Āzād recovered most of the dispersed fragments of the unfinished MS. of the latter's *Ma'āthir al-Umarā'*, which he re-arranged and edited. The works of Āzād himself cover *ḥadīth*, belles-lettres, history, biography and poetry. His Arabic *ķaṣā'id* in praise of the Prophet have earned him the title of Ḥassān al-Hind, after the Prophet's panegyrist Ḥassān b. Thābit [*q.v.*].

His notable works are: In Arabic: (1) *Subḥat al-Mardjān fī Āthār Hindustān* (lith. Bombay 1303/1886), incorporating two independent works by the author: *Shammāmat al-ʿAnbar* and *Tasliyat al-Fu'ād*, the former containing references to India in Ķur'ānic commentaries and *ḥadīth* and the latter on biographies of Indian scholars and *ʿulamā'*. The chapter on rhetorical figures was later translated into Persian by the author himself under the title of *Ghizlān al-Hind* (MSS. Āṣafiyya, i, 169; Ethé, 2135; Berlin 1051); (2) *Dīwān* in 3 vols. (Ḥaydarābād 1300-1/1882-3) containing more than 3000 verses; a selection from his seven other *dīwāns* entitled *al-Sabʿa al-Sayyāra* was published at Lucknow, 1328/1910; (3) *Ḍaw' al-Darārī Sharḥ Ṣaḥīḥ al-Bukhārī*, an incomplete commentary on al-Bukhārī (MS. Nadwat al-ʿUlamā', Lucknow, 99); In Persian: (4) *Khizāna-i ʿĀmira*, alphabetically arranged notices of some 135 ancient and modern Persian poets with a brief history of the Marathas, (Cawnpore 1871, 1900); (5) *Ma'āthir al-Kirām*, on the pious and learned men of Bilgrām (lith. Agra 1910); (6) *Sarw-i Āzād*, biographies of 143 Persian and Urdū poets of India (Lahore 1913); (7) *Yad-i Bayḍā'*, alphabetically arranged lives of 532 poets, originally compiled at Sīwastān (i.e. Sihwān, in Sind, where he was *nā'ib Waķā'iʿ-nigār*) in 1145/1732 (MS. Āṣafiyya, iii, 162; Ind. Off. 3966 (b); (8) *Rawḍat al-Awliyā'*, a short compendium on the saints of Deccan (lith. Awrangābād 1310/1892). For a detailed list of his works see *GJASB* (*L*), 1936, 119-30; Shams Allāh Ķādirī, *Ķāmūs al-Aʿlām* i, 32-5; Storey, i/2, 855-66.

Bibliography: Autobiography in *Subḥat al-Mardjān* 118-23, *Khizāna-i ʿĀmira* 123-45, *Ma'āthir al-Kirām* 161-64, 303-11; Ṣiddīķ Ḥasan Khān, *Ithāf al-Nubalā'*, 530; idem, *Abdjad al-ʿUlūm*, 920; *Ḥadā'iķ al-Ḥanafiyya*, 454; *Tadhkira ʿUlamā-i Hind* 154; Wadjīh al-Dīn Ashraf, *Baḥr-i Zakhkhār* (MS), fol. 315; Rieu, *Pers. Cat.*, i, 373 b, iii, 976 b; *Asiatick Miscellany*, Calcutta 1785, i, 494-511; Shiblī Nuʿmānī, *Maķālāt* (in Urdū), v, 118-35; Brockelmann, S II, 600-1; Maķbūl Aḥmad Ṣamdanī, *Ḥayāt-i Djalīl Bilgrāmī* (in Urdū), Allāhābād 1929, ii, 163-77; Ibrāhīm Khalīl, *Ṣuḥuf-i Ibrāhīm*, s.v.; Zubayd Aḥmad, *Contribution of India to Arabic Literature*, index; Lačmī Narāyan Shafīķ: *Gul-i Raʿnā*, s.v.; Muḥyī'l-Dīn Zor, *Ghulām ʿAlī Āzād Bilgrāmī*, Ḥaydarābād.

(A. S. Bazmee Ansari)

AZAĶ, Russian Azov; called Tana by the Italians after the ancient Tanaïs (the Old-Tana of Jos. Barbaro) is first found on an Italian map of 1306. The Turkish name Azaķ has appeared on coins since 717/1317. First the Genoese around 1316, then the Venetians in 1332, established trade colonies in Azaķ. It appears, however, to have remained essentially a Muslim-Tatar city which was administered by Tatar governors such as Muḥammad Khwādja about 1334, Sichi-beg in 1347 and 1349, Tolobey about 1358. A mint of the khāns was active there as late as 1411. An emporium of the East-West trade in the 14th century, Azaķ declined perhaps more from the competition of the Genoese Kaffa than Djani-bek's hostile policy toward the Italian colonies (1343-1358) or Tīmūr's depredations (September 1396). Conquered by the Ottomans in 1475, Azaķ is described as a *ķaḍā* of the *sandjaķ* of Kaffa in the *defter* of 1545. The town consisted of three parts: 1. Venedik-ķalʿesi (in Ewliyā Čelebi, Frenk-hisārī) with 198 Muslim families including garrison; 2. Djeneviz-ķalʿesi (later Orta-ḥiṣār) with 109 Muslim families including garrison; 3. Toprak-ķalʿe with 500 Tatar aķīndjī and 104 families of fishermen and 57 Greek families. Extensive fisheries and large production of caviar as well as slave-trade were the chief economic resources in this period. Later when the Cossacks, Čerkes and Russians began threatening it Azaķ was transformed into the main Ottoman bastion in the North. The first serious siege was attempted by Dimitrash, a chief of the Cossacks, in 1559. They eventually captured it in 1637, but had to abandon it in 1642. As the attacks were renewed in subsequent years especially in 1656 and 1659, the Ottomans made it stronger than ever (in 1666 Ewliyā Čelebi saw a garrison of 13 thousand men and numerous cannons in it) and later erected new fortifications around it such as Sedd-i Islām. After an unsuccessful attack in 1695, Peter the Great captured Azaķ on August 6, 1696. Compelled to surrender it at the treaty of the Prut (1711), he only evacuated it two years later. The Russians recaptured it in 1736.

(H. Inalcik)

AZAL [see ķidam.]

AZALAY (current orthography: *azalai*), a term for the great caravans made up of several thousand camels (or to be more precise, dromedaries), which in the spring and autumn carry the salt from the salt deposits of the Southern Sahara to the tropical

regions of the Sahel and the Sudan. This salt, which used to be exchanged by the Blacks against its weight in gold, if one is to believe al-Bakrī (trans. de Slane, 2nd. ed., 327), is exchanged today for food-stuffs: rice, millet, sugar, tea ... The salt from Idjil, to the West, which has perhaps been known since the 6th century A.D. (Anonymus of Ravenna), is collected by manumitted slaves of the Kounta (Moors) of Chinguiti and transported by the Moors to the markets of the Western Sudan. The salt deposits of Taoudenni have replaced those of Teghaza, a source of wealth of the kings of Mali and of Gao (14th-15th centuries), and have been worked since 1585; the salt, after being collected by sedentary miners, is taken to Timbuctoo by the Kounta and by a few small Touareg caravans; it is distributed throughout the whole of the Central Sudan and the Upper Volta. To the East, the salt deposits of Bilma, Seguedine and Fachi are worked by the Kanouri and the salt transported by *azalay* by the Touareg of Aïr and Damergou; it is sold in Nigeria and in the Niger Colony. The salt of Borkou (Faya) and of Ennedi furnishes supplies to the blacks of the plains of French Equatorial Africa. As regards the salt of Amadror, to the North of Tamanrasset, this is collected and transported by the Kel Ahaggar and the Kel Ajjer.

The *azalaï* is the only type of great caravan which has survived. The salt trade has always been a source of wealth to the nomads of the Southern Sahara. It persists, in spite of the competition from salt from Europe and of the sea salt deposits of Kaolak.

Bibliography: Capot-Rey, *Le Sahara français*, Paris 2 ed. 1959 (with bibliog.). (J. Despois)

AZALĪ, name given to those Bābīs [*q.v.*] who followed Mīrzā Yaḥyā, called Ṣubḥ-i Azal [*q.v.*], after the death of the Bāb.

AʿẒAMGARH, town and head-quarters of the district of the same name in the province of Uttar Pradesh (India), situated in 26° 5' N. and 83° 12' E. on the river Tōns, notorious for its frequent and devastating floods; it was founded in 1076/1665-6 by Aʿẓam Khān I, a scion of an influential Rādjpūt family, whose head Abhīman Singh, embraced Islām during the reign of Djahāngīr (1014/1605-1037/1627) and was named Dawlat Khān. Population in 1951: 26,632; district: 2, 102, 423. A series of battles between the successors of Aʿẓam Khān I and the Nawābs of Awadh for political supremacy culminated in the battle of Djawnpūr in 1175/1761-2, which resulted in the death of both the Rādja of Aʿẓamgarh and the *ʿāmil* (revenue collector) of Niẓāmābād (Awadh). Aʿẓamgarh was then occupied by Faḍl-i ʿAlī Khān, ruler of Ghāzīpūr. On the defeat of Shudjāʿ al-Dawla at Buxar in 1178/1764-5 at the hands of the British, Aʿẓam Khān II returned to his ancestral estate. On his death in 1185/1771-2 the entire estate was annexed to the kingdom of Awadh. In 1216/1801-2 it was ceded by Saʿādat ʿAlī Khān, Nawāb of Awadh, to the East India Company. The town was badly disturbed during the Mutiny of 1857 when the local prison was stormed and the inmates were set free.

The dilapidated fort built by Aʿẓam Khān I and a temple erected towards the close of the 12th/18th century are the only buildings of note. Aʿẓamgarh has been frequently visited by serious floods causing widespread damage. The floods of 1871, 1894, 1896, 1898 and 1956 were particularly heavy. It has earned a bad name for Hindū-Muslim riots, which frequently took place.

Aʿẓamgarh is now famous as a centre of cultural activity, being the seat of the Dār al-Muṣannifīn (Shiblī Academy) and its Urdū organ the "*Maʿārif*".

Gazetteer of Ind.* 1908, vi, 155-6, 162-3; Sulaymān Nadwī, *Ḥayāt-i Shiblī*, Aʿẓamgarh 1362/1943, 50-5; Gird'hārī (Lāl), *Intiẓām-i Rādj-i Aʿẓamgarh*, (Edinburgh Univ. MS. No. 237); Amīr ʿAlī Riḍawī, *Sargudhasht-i Rādjahā-i Aʿẓamgarh*, (Edinburgh Univ. MS. No. 377); Anon., *Tāʾrīkh-i Aʿẓamgarh* (I.O. MS. 4038); Ṣabāḥ al-Dīn ʿAbd al-Raḥmān, *A History of Aʿẓamgarh* (in the Press). (A. S. Bazmee Ansari)

AZAMMŪR (Fr. Azemmour, Span. and Port. Azamor), town on the Atlantic coast of Morocco, about 75 km. South-West of Casablanca and 10 km. North-East of Mazagan, on the left bank and some 3 km. from the mouth of the Wādī Umm al-Rabīʿ (Oum er-Rbiʿa). It possessed approximately 15,000 inhabitants in 1953, mostly Muslims, with a small Jewish minority (*mellāḥ*) and a very small number of Europeans. The name is connected with the Berber *azemmūr* (wild olive tree). The town is famous for shad fishing, which is one of the population's principal means of livelihood and takes place each year from December to March. Its patron saint is a *sayyid* who lived at the time of the Muʾminid dynasty: Mūlāy Būshʿīb (= Mawlāy Abū Shuʿayb).

The history of Azammūr remains obscure until the time of its contacts with the Spanish and Portuguese. The former, setting out from the maritime coast of Lower Andalusia, appear to have made several incursions, between a date which it has not been possible to fix and the ratification at Toledo in 1480 of the Hispano-Portuguese treaty of Alcáçovas, which abandoned the Atlantic part of Morocco to Portugal. In 1486, the town appears under the sovereignty of the King of Portugal, who was then John II (1481-1495). Twenty years later, doubtless at the instigation of a party formed among the local chieftains, the Portuguese wished to occupy it effectively; in August 1508, during the reign of Manuel the Fortunate (1495-1521), they made an unsuccessful attempt to carry this out; they repeated their efforts at the beginning of September 1513, under the command of the Duke of Braganza, and this time their efforts were completely successful. As in their other places in Morocco, the Portuguese built strong fortifications at Azammūr the whole of which still exists. When their positions in Southern Morocco were shaken by the fall of Santa Cruz do Cabo de Gué in March 1541 (see art. AGADIR), King John III (1521-7) decided to concentrate all his forces at Mazagan, and had Azammūr evacuated at the same time as Safi, towards the end of October 1541 (see AṢFĪ). Azammūr, which thus became a centre of the holy war, from then onwards lived in a state of permanent hostility with Mazagan, until the Portuguese abandoned the latter place in 1769. Azammūr was first occupied by French troops in 1908 and was incorporated into the French Protectorate in 1912.

Azammūr is probably the home of Estebanico de Azamor, a Moroccan negro, celebrated in the history of the exploration of the American continent, who took part in 1528-1536 in the great trek of the Spaniard Cabeza de Vaca across the southern part of the present-day United States.

Bibliography: See the works listed under the article, AṢFI, especially *Sources inédites*, etc., and Ricard, *Études*, etc. In addition: *Villes et tribus du Maroc*, xi, *Région des Doukkala*, ii, *Azemmour et sa banlieue*, Paris 1932 (the historical

part is rather uncertain), and Ch. Le Coeur, *Le rite et l'outil*, Paris 1939. (R. Ricard)

ĀZAR, the commonly accepted name of Abraham's father, based on Ķur'ān, vi, 74 "When Abraham said to his father, Āzar: 'Dost thou take idols as gods?' ", where Āzar is taken as a proper name, in apposition to "father", though some of the commentators, aware that the name of this father was Terah, explain Āzar as an exclamation of disgust, an abusive epithet, or the name of an idol. The majority opinion, however, is that it is the name of Abraham's father, either a second name for Terah, as Israel was for Jacob, or a title. In any case it was recognised as a foreign word and is listed among the *mu'arrabāt* of the Ķur'ān. There can be little doubt that it is a deformation of the Hebrew Eleazar, the name of Abraham's faithful servant in the Genesis story which, as that story came to Muḥammad, was mistaken for the name of his father. [Cf. also IBRĀHĪM].

AZĀRIĶA, One of the main branches of the Kharidjites [*q.v.*]. The name is derived from that of its leader Nāfi' b. al-Azraķ al-Ḥanafī al-Ḥanẓalī, who, according to al-Ash'arī, was the first to cause disputes among the Khāridjites by supporting the thesis according to which all adversaries should be put to death together with their women and children (*isti'rāḍ*). As regards the man himself, it is known that he was the son of a manumitted blacksmith of Greek origin and that in 64/683 he came to the aid of 'Abd Allāh b. al-Zubayr, beseiged in Mecca by the troops of the Syrian general Ḥusayn b. Numayr al-Sakūnī. Once the seige was raised, Nāfi' with other Khāridjite leaders, including Nadjda b. 'Āmir and 'Abd Allāh b. Ibāḍ, returned to Baṣra, where he at once took advantage of the disturbances which had broken out on the announcement of the death of Yazīd b. Mu'āwiya. It was the Khāridjites under his orders who assassinated the governor nominated by 'Ubayd Allāh b. Ziyād, Mas'ūd b. 'Amr al-'Atakī, and who subsequently refused to recognise the governor sent by 'Abd Allāh b. al-Zubayr, 'Umar b. 'Ubayd Allāh, so that the latter was obliged to use force to gain possession of the town; in this he was helped by the inhabitants, who found it difficult to tolerate the Khāridjites' importunities. Expelled from Baṣra, Nāfi' encamped at the gates of the town and, after collecting reinforcements, succeeded in defeating 'Umar b. 'Ubayd Allāh in the course of fierce fighting and in retaking the town. To re-establish the situation, Ibn al-Zubayr dispatched an army under the command of the general Muslim b. 'Ubays. It is probable that it was on this occasion that the opposition between the moderate elements and the extremist elements arose in Baṣra which led to the division of the Khāridjites into Ibāḍites and Azāriķa, an event placed by tradition in that year (65/684-5). Whilst the former, less courageous, preferred not to fight Muslim and remained in Baṣra, the latter, resolved to fight to the end, left the town and under the leadership of Nāfi' withdrew to Khūzistān (al-Ahwāz). Muslim caught up with them at Dūlāb: in the severe fighting which ensued, both Nāfi' and the Zubayrid general met their deaths (65/685). The Azāriķa, however, reorganised themselves under the command of 'Ubayd Allāh b. al-Māḥūz and continued the struggle until the enemy troops, exhausted and discouraged, withdrew to Baṣra. For several months the region between Baṣra and a-Ahwāz was the scene of massacres, looting and arson, the Azāriķa massacring all who refused to recognise their sect. The population of Baṣra in alarm called upon al-Muhallab b. Abī Ṣufra, who agreed to lead the struggle against the Azāriķa. After dislodging them from the Tigris, he inflicted a severe defeat on them near Sillabrā to the East of Dudjayl, (66/686), following which they withdrew into Fārs. 'Ubayd Allāh b. al-Māḥūz was killed in the fighting and the command passed to his brother Zubayr, who, having reorganised his supporters within a short space of time, again set out on a campaign. Descending once more into 'Irāķ, he advanced as far as al-Madā'in, which he sacked, massacring the inhabitants. But, faced by an army from Kūfa, he turned about and attacked Iṣfahān, which was governed by 'Attāb b. Warķā'. In an engagement near the town, the Azāriķa suffered a reverse and, on the death of Zubayr b. al-Māhūẓ, they fled in complete disorder into Fārs and thence into the mountains of Kirmān (68/687-8). It was a warrior from Luristān, Ķaṭarī b. al-Fudjā'a, who, combining fierce energy with exceptional gifts as an orator and a poet, succeeded in rekindling their enthusiasm and reorganising their ranks. After a period of time, he became active and, having occupied al-Ahwāz, descended once again into 'Irāķ and advanced towards Baṣra. The new governor of the town, Muṣ'ab b. al-Zubayr, convinced that only al-Muhallab would be capable of opposing the Azāriķa, recalled him from Mawṣil, where he had sent him as governor, and entrusted him with the direction of the campaign. But, although al-Muhallab succeeded in launching a wide offensive against the Azraķī condottiere, the latter succeeded in keeping him in check for a long time and in holding his position on the left bank of the Dudjayl, even after 'Irāķ had fallen into the hands of 'Abd al-Malik following the defeat of Muṣ'ab at Maskin (71/690). The situation did not change until al-Ḥadjdjādj b. Yūsuf, having completed the pacification of Western Arabia, took over the government of 'Irāķ (75/694). The latter confirmed al-Muhallab in his command of the operations and ordered him to go over to the attack at once. Then it was that there started a long series of campaigns, conducted by al-Muhallab against the Azāriķa, which led to their being increasingly relegated to the periphery of the Empire. For, in spite of their fierce resistance, they were compelled to abandon Dudjayl, retreat to Kāzirūn and finally to evacuate Fārs and withdraw into Kirmān. Having established their headquarters in the town of Djīruft, they managed to hold their positions for a few years until the divergencies which arose in their army between Arabs and *mawālī* led to a split. Whilst Ķaṭarī with the Arabs was compelled to abandon the town and to take refuge in Ṭabaristān, the *mawālī* continued to hold Djīruft under the command of 'Abd Rabbih al-Kabīr (in addition to whom the sources speak of an 'Abd Rabbih al-Ṣaghīr, who is supposed to have commanded a second group of dissidents). Whilst al-Muhallab was easily able to deal with the Azāriķa remaining in Kirmān and massacred them all, the Kalbī general Sufyān b. al-Abrad, who had joined the governor of Ṭabaristān, caught up with Ķaṭarī in the mountains of this region and inflicted a

decisive defeat on him. The brave condottiere, having fallen from his horse and been abandoned by his own men, was discovered and killed (78-79/698-99). His head was taken to Damascus to be shown to the Caliph. The remnants of the Azāriḳa who, under the leadership of ʿAbīda b. Hilāl, had barricaded themselves in at Sadhawwar, near Ḳūmis, after a prolonged siege were exterminated in an attempted sortie. In this manner the revolt, which of all the Khāridjite disturbances was undoubtedly the most dangerous to the unity of the Muslim Empire and the most terrible by reason of its savage fanaticism, came to an end.

Doctrine: The principal religious theses which separate the Azāriḳa from the other Khāridjites are, according to al-Ashʿarī: 1. The exclusion from Islam (*barāʾa*) of the quietists (*al-ḳaʿada*); 2. The examination (*miḥna*) of all who wished to join their army; 3. Regarding as unbelievers (*takfīr*) those Muslims who did not make the *hidjra* to them; 4. The slaughter of the women and children of their adversaries (*istiʿrāḍ*); 5. The exclusion from Islam (*barāʾa*) of those who recognised *taḳiyya* either in word or deed: 6. The children of the *mushrikūn* are in Hell, as are their parents. Further, according to al-Shahrastānī and al-Baghdādī: 7. Suppression of the stoning of adulterers which is not prescribed by the Ḳurʾān; 8. The possibility of God's sending a Prophet, whom He knows will of necessity become impious or who was so before his mission; further, according to Ibn Ḥazm: 9. Amputation of the thief's hand, *i.e.* arm, from the humerus; 10. Women during the menses must perform the prayers and observe ritual fasting; 11. Ban on killing those who acknowledged that they were Jews, Christians or Zoroastrians (evidently because they enjoyed the *dhimma*).

AZARQUIEL [see al-Zarḳālī].

ʿAZĀZĪL, fallen angel or *Djinn* in the legendary tradition of Islam (does not occur in the *Ḳurʾān*). He gets his name from the biblical ʿAzāzēl (Leviticus xvi, 8, 10, 26), perhaps demon of the desert (see L. Koehler, *Lexicon in Veteris Testamenti Libros*, 693). In point of fact the Muslim tradition extends and develops that of some of the Apocrypha (Enoch and the Apocalypse of Abraham) and of Jewish texts, in which ʿAzāzēl is more or less connected with the fallen angels ʿUzza and ʿAzāʾēl (in Muslim tradition, Hārūt and Mārūt, [*q.v.*]); the *ḥadīth*, however, would appear to innovate in considering ʿAzāzʾēl as the name of Iblīs [*q.v.*] before his fall, a tradition which is traced back to Ibn ʿAbbās and which is even repeated in *al-Insān al-Kāmil* of al- Djīlī.

AZD (by assimilation from Asd, both spellings are current), name of two ancient Arab tribal groupings in the highlands of ʿAsīr (Azd Sarāt) and in ʿUmān (Azd ʿUmān), which united in Basra and Khurāsān in Islamic times. Hence the later reports that the Azd were a tribe in Yaman, of whom part migrated to the north and part to the east, after the breach of the Maʾrib dam. One cannot, however, prove any basic relationship between these two tribes of the same name. In the genealogical system (al-Azd b. al-Ghawth b. Nabt b. Mālik b. Zayd b. Kahlān b. Sabaʾ, where al-Azd is the surname of the tribal ancestor Dirʾ/Darrāʾ b. al-Ghawth) there is a fusion not only of the Azd Sarāt and the Azd ʿUmān, but also the Ghassān, Khuzāʿa, al-Aws and Khazradj appear as part of the Azd in it. The name Azd, however, can only be applied to those tribes who derive from Naṣr b. al-Azd (in Sarāt and ʿUmān), to the Bāriḳ and Shakr (Sarāt), derived from ʿAdī b. Ḥāritha b. ʿAmr Muzayḳiyāʾ, to the al-ʿAtīk and al-Ḥadjr (ʿUmān), derived from ʿImrān b. ʿAmr Muzayḳiyāʾ, and to the tribes of al-Hinw b. al-Azd, Ḳarn b. ʿAbd Allah b. al-Azd, ʿArman, Almaʿ and Ḥidjina b. ʿAmr b. al-Azd (Sarāt).

The Azd Sarāt, who were well known as weavers, were largely settled, hence their homes remained essentially static. The tribes of Daws (Sulaym b. Fahm, Ṭarīf b. Fahm, Munhib b. Daws) and the Banū Māsikha were the ones furthest north, parts of them as far as north-east of Ṭāʾif, most of them on the upper Wādī Dawḳa. To the east and south-east of them were the tribes of Zahrān (Salāmān, Kadāda, ʿUbayd b. ʿUbra); further east, in the Sarāt Ghāmid were the Namir b. ʿUthman, al-Ghaṭārīf, Zāra, Athbāb, Lihb, Thumāla, Ghāmid, Ḳarn b. Aḥdjan and others. Their area reached from the upper Wādī Ḳanawnā eastwards. These tribes were separated from their relatives living further east by the Khathʿam. To the east of the Khathʿam were the al-Buḳūm (from Ḥawāla b. al-Hinw) in Turabā, the Banū Shakr (Banū Wālān) were to the north-west and the Ḳarn b. ʿAbd Allāh to the south of Tabāla. Further south, still in the Sarāt al-Ḥadjr, were the numerous branches of al-Ḥadjr b. al-Hinw (the most important were the Banū Shahr with the Bal-Asmar) who were in the area round Ḥalabā in the north and reached as far as the areas south of the Wādī Tanūma/Wādī

Bal-Asmar. Their main centres were: Ḥalabā, al-Khaḍrā', Nimās, Tanūma. Some few lived further south still, towards the Wādī Ibil, as neighbours of the ʿAnz. The Bāriḳ lived in the area of the Wādī Bārīḳ to the west, enclosing the Khathʿam enclave from the south. On the whole they lived in the valleys, whilst the Khathʿam inhabited the highlands. A few groups of the Azd (Almaʿ, Yarfā b. al-Hinw and parts of the al-Ḥadjr b. al-Hinw) were settled as neighbours of the Kīnāna on the coast around Ḥalī. Originally, the Azd Sarāt had been much further south, and only in comparatively recent times did they penetrate to their later region, after continuous battles against the Khathʿam. Remnants were still living under the Banū Maʿāfir in Islamic times, south-west of Taʿizz, and under the Banū Awd in the Dathīna. The frequent term Shanū'a remains obscure. As the name appears as a war-cry in a poem by the poet Ḥādjiz b. ʿAwf, one may suppose that it is a genealogical rather than a geographic term. The current explanation (Shanū'a = al-Ḥārith b. Kaʿb b. ʿAbd Allāh b. Mālik b. Naṣr b. al-Azd) is obviously erroneous; which individual tribes belonged to the Shanū'a can no longer be ascertained.

The Azd ʿUmān consisted of those tribes which derived from Mālik b. Fahm in genealogy (Hunā'a, Farāhīd, Djahāḍim, Nawā, Ḳarādīs, Djarāmīz, ʿUḳā'a, Ḳasāmil, Ṣulaymī, Ashāḳir), some descended from Naṣr b. Zahrān (Yaḥmad, Ḥuddān, Maʿāwil) and those descended from ʿImrān b. ʿAmr Muzayḳiyā', that is, the al-ʿAtīk and al-Ḥadjr b. ʿImrān (it is probable that the link with ʿImrān, which made them brother tribes of the Anṣār, was postulated in honour of the Muhallabids; the true link was preserved in the genealogy al-ʿAtīk b. al-Asd b. ʿImrān). There is little information concerning the sites on which the individual tribes lived. The Maʿāwil were in and around Ṣuḥār; the Yaḥmad and the Hunā'a in the neighbouring coastal areas. The Humaym (from Maʿn b. Mālik b. Fahm) were in Nazwā; al-ʿAtīk in Dabā and al-Ḥadjr nearby; the Ḥuddān were in the hinterland of the Pirate Coast. In between, there were some non-Azd tribes, particularly the Sāma b. Lu'ayy, who were later collectively known as the Nizār. The Banū Djudayd (from Ashāḳir) advanced in Islamic times to the west as far as Ẓufār Ḥaḍramawt, where they captured the sea-port of Raysūt after battles against the Mahra. Even in pre-Islamic times, parts of the Azd ʿUmān, such as the Salima b. Mālik b. Fahm, migrated to the islands in the Persian Gulf and to Kirmān. As fishermen, sea-farers and merchants, the Azd ʿUmān did not enjoy a good reputation among the other Arabs. The term Muzūn, occasionally applied to them, seems to have been a nickname. It may be supposed that they immigrated from the north and imposed themselves on the previously settled non-Arab inhabitants. The tradition which identifies them with the Asad (2), [*q.v.*] mentioned in inscriptions, and which makes them the allies of the Tanūkh, is erroneous.

Little is known of the Azd Sarāt in pre-Islamic times, as there are hardly any poetic writings; the only well-known poet was Ḥādjiz b. ʿAwf (Banū Salāmān). There is mention of battles against Khathʿam and Kināna, and fights by some tribes against the powerful clan of the Āl Ghiṭrīf (in the Wādī Ḳanawnā) at the beginning of the 7th century. Members of that clan are said to have been the keepers of the shrine of Manāt in Ḳudayd. It is possible that the name Ghiṭrīf in the genealogical lists of Medina from came that quarter. The following are mentioned as deities of the Azd Sarāt: Dhu 'l-Sharā, Dhu 'l-Khalaṣa (shrine in Tabāla), Dhu 'l-Kaffayn and ʿĀ'im. Still less is known of the early history of the Azd ʿUmān. Apart from mythical fights against Persians and Mahra, there is mention of one against the ʿAbd al-Ḳays. Bādjar/Nādjir is mentioned as their deity.

The Azd Sarāt accepted Islam in 10/631. Small risings during the *ridda* were quickly put down in 11/632 by ʿUthmān b. al-ʿĀṣ, the governor of Ṭā'if. As early as 13/634, there were a few Azd in the contingent which ʿUmar sent to the Euphrates. Some Azd Sarāt were amongst the first settlers in Basra and Kufa and some went to Egypt. On the whole, however, there was little emigration. Islam had already entered ʿUmān a few years before. This was due to a difficult situation into which the brothers Djayfar and ʿAbd—heads of the ruling group, the al-Djulandā (from Banū Maʿāwil in Ṣuḥār)—had got themselves in relation to al-ʿAtīḳ and other tribes of the inland regions under the leadership of Laḳīṭ b. Mālik al-ʿĀtikī. ʿAmr b. al-ʿĀṣ was sent to Ṣuḥār in the year 8/629, and with his assistance, the brothers managed to recover their power completely. Laḳīṭ tried his luck once more during the *ridda* and ʿAmr had to flee, but in the year 11/632 the rising was finally put down by ʿIkrima b. Abī Djahl. The Banu 'l-Djulandā remained practically complete rulers in ʿUmān for many years. ʿAbbād b. ʿAbd b. al-Djulandā took over the rule in the time of ʿUthmān. He was killed in battle against the Khawāridj of the Yamāma in 67/686. His sons Saʿīd and Sulaymān succeeded him. It was not until the time of al-Ḥadjdjādj that the two brothers could finally be ousted from ʿUmān, and the territory re-incorporated. A great number of Azd ʿUmān had emigrated to Baṣra in 60-61/679-680. In the process, some of them remained in eastern Arabia, where an Azd emirate was founded in Zāra in the 3rd/9th century. They united themselves with the Azd Sarāt who were already settled in Baṣrā, made an alliance with the Rabīʿa and thereby became the opponents of the Tamīm. As early as 38/658, the Azd Sarāt of Basra had protected the governor Ziyād b. Abīhi against the Tamīm. Similarly, ʿUbayd Allāh b. Ziyād got assistance from the Azd, when, after the death of Yazīd I (64/683) the Tamīm rose against him. The subsequent tribal warfare, in the course of which Masʿūd b. ʿAmr al-ʿĀtikī, the leader of the united Azd and Rabīʿa was killed, with be settled by al-Aḥnaf, the leader of the Tamīm. The enmity, however, remained and spread to Khurāsān, especially when the Azd there (again in league with the Rabīʿa) became the leading tribe under the Muhallabids after 78/697. They were greatly offended at the removal of the Muhallabids and were largely responsible for the events which led to the defeat and death of Ḳutayba b. Muslim in 96/715. The Azd remained the leading group up to the beginning of the reign of Yazīd II in 101/720. The subsequent systematic extermination of the Muhallabids brought for them a time of subjugation by Ḳaysid governors. Their enmity against these contributed greatly to the fall of the Umayyads. During the troubled times at the end of the reign of the Umayyads, the Azd—apart from a few short-lived alliances—remained in opposition to the governor Naṣr b. Sayyār, a fact which considerably facilitated the advance of Abū Muslim. In Baṣra too, the Azd followed the ʿAbbāsids, having risen against Umayyad rule and having been beaten by Tamīm and Syrian troops. Ibāḍī teaching, brought

over from Basra, began to be accepted in ʿUmān atba out the same time. In 132/749, al-Djulandā b. Masʿūd, a member of the old ruling house of the Banu 'l-Djulandā, was elected the first Imām. He was killed in 134/751, fighting against Khāzim b. Khuzayma, general of Abu 'l-ʿAbbās. The subsequent years were very troubled ones for the country. Nominally, it was under an ʿAbbāsid governor, but there were constant battles, usually between the Banu 'l-Djulandā—who were trying to re-establish their former rule—and the Ibāḍīs. It was not until 177/793 that the latter gained the upper hand and elected a new, rightful Imām. Henceforth, Nazwā became the seat of the Ibāḍī Imāms, who were, almost without exception, of the Yaḥmad tribe. After 230/844 troubles broke out again. In addition to the activities of the Banu 'l-Djulandā, there was tribal warfare between the Azd and the Nizār. The Banū Sāma b. Luʾayy applied for assistance to the caliph al-Muʿtaḍid in 277/890, to help them against the Ibāḍīs. The last independent Imām, ʿAzzān b. Tamīm fell in 280/893, fighting against Muḥammad b. Nūr, the ʿAbbāsid governor of Baḥrayn. After 282/875, there were again Ibāḍī Imāms in Nazwa, but their powers remained limited.

AL-AZDĪ, Abū Zakariyyāʾ Yazīd b. Muḥ. b. Iyās b. al-Ḳāsim, historian of Mosul, who died in 334/945-6. While the work on Mosul by Ibrāhīm b. Muḥ. b. Yazīd al-Mawṣilī, who lived a generation before Al-Azdī, appears to have been concerned only with the biographies of religious scholars, al-Azdī wrote both on the "Classes of Mosul *ḥadīth* Scholars" and on the political history of Mosul, either in one combined or in two separate works. His treatment of *ḥadīth* scholars is known only from quotations and seems to have been restricted to the limited information usually found in *ridjāl* works. The political annalistic history of the city, the first work on this particular subject, is preserved for the years 101/719-20—224/838-9. It treats the history of Mosul in the framework of general contemporary history and is a highly creditable achievement of early Muslim historiography.

AZEMMŪR [see AZAMMŪR].

AZERBAYDJĀN [see ĀDHARBAYDJĀN].

ĀZERĪ [see ĀDHARĪ].

AẒFARĪ, Muḥammad Ẓahīr al-Dīn Mīrzā ʿAlī Bakht Bahādur Gūrgānī, a lineal descendant of Awrangzīb and a grandson of ʿIffat Ārāʾ Begum (daughter of Muḥammad Muʿizz al-Dīn Pādshāh (i.e. Djahāndār Shāh), son of Shāh ʿĀlam (Bahādur Shāh I), was born in the Red Fort at Delhi in 1172/1758 and educated within the fort. Like other princes of the line of Tīmūr, Aẓfarī was in receipt of an allowance from the East India Company. Aẓfarī decided in 1202/1789 to escape from the fort. Passing through Djaypur and Djodhpūr, Aẓfarī reached Lucknow where he was received with open arms by Āṣaf al-Dawla, the ruler of Awadh. For seven years he stayed there and then left for Patna *en route* to Maḳṣūdābād, (an old name for Murshidābād [*q.v.*]) where he arrived in 1211/1797. After a stay of some ten years he left for Madras, where he stayed until his death in 1234/1818.

Aẓfarī was polyglot and spoke Arabic, Persian, Turkish and Urdū fluently; during the closing years of his life he also learned a little English. He was well-versed in different sciences such as medicine, astrology, prosody, geomancy and metrics, but was more attracted by poetry. In addition to an Urdu *dīwān* he left behind a large collection of verses in Persian and Turkish. These Persian and Turkish collections as well as some of his works enumerated at the end of his memoirs (a Čaghatay grammar, *Tenkarī-Tār*—a Turkish-Hindī compilation) are, however, lost.

His chief work is the *Wāḳiʿāt-i Aẓfarī* (MSS Berlin 496, Rieu, iii, 1051 b; Madras, i, 450, 451) commenced in Murshidābād in 1211/1797 and completed at Madras in 1221/1806. It is an account of his wanderings and personal experiences in addition to being a valuable historical sketch of the ephemeral rise of Ghulām Ḳādir Rohilla [*q.v.*], who captured Delhi in 1203/1788 and blinded the Emperor Shāh ʿĀlam I. This work is also of great geographical value.

At the end of his above-noted memoirs Aẓfarī mentions 7 of his works, in addition to an earlier one: (i) *Lughat-i Turkī-i Čaghatāʾī* (compiled during his stay in Lucknow); (ii) A Persian translation in rhymed prose of ʿAlī Shīr Nawāʾī's [*q.v.*] Turkish work *Maḥbūb al-Ḳulūb*; (iii) *Niṣāb-i Turkī*, (in verse); (iv) *Tenkarī Tār*, a Turkish-Hindi compilation on the lines of *Khāliḳ-bārī*, erroneously ascribed to Amīr Khusraw; (v) A Persian metrical translation, from Arabic, of the *Risāla-i Ḳabriyya*, a supposed treatise by Hippocrates on the signs of approaching death; (vi) *Nuskha-i Sāniḥāt*, detailing his experiences and tribulations. It contains 109 anecdotes; (vii) A metrical grammar of Čaghatay Turkish (composed at ʿAẓīmābād (Patna) on the request of Rāyīʾ Tīkā Rām, a hereditary *bakhshī* [*q.v.*] of his family; (viii) *Fawāʾid al-Mubtadī*.

AL-**AZHAR** (al-Djāmiʿ al-Azhar). This great mosque, the 'brilliant one' (a possible allusion to Fāṭima al-Zahrāʾ, although no ancient document

confirms this) is one of the principal mosques of present-day Cairo. This seat of learning, obviously Ismāʿīlī from the time of its Fāṭimid foundation (4th/9th century), whose light was dimmed by the reaction under the Sunnī Ayyūbids, regained all its activity—Sunnī from now on—during the reign of Sultan Baybars. Its influence is due on the one hand to the geographical and political position which Cairo occupies in the Muslim world (especially since the downfall of the Baghdād ʿAbbāsids), attracting scholars and students and accommodating many Maghribī pilgrims on their way; on the other hand it is due to the situation of this capacious mosque itself in that quarter which was up to the 19th century the epicentre of the town of Cairo. One institution of learning among many others in the Mamlūk era, it benefited from the almost complete disappearance of all the Cairo colleges under Ottoman domination, and became the only stronghold in the capital where the study of the Arabic language and religious learning could be maintained. From the 18th century, in spite of the decadence of its intellectual methods, its organisation, becoming consolidated, gained for it the dignity of a harmonious whole, at once a school and a university; and it can be considered from that time as the principal religious university of the Islamic world. In the 20th century al-Azhar, outgrowing the framework of its mosque, began to acquire a whole network of establishments of Islamic education. With its faculties in Cairo of university status, and with the various primary and secondary institutions in Egypt which are directly connected with it, its strength in 1953 was a total of 30,000 pupils and students, 4,500 of whom were foreigners. Some institutions situated outside Egypt, moreover, function within its orbit. Its work is at present carried out by its teachers, a certain number of whom are sent out to different Muslim countries; it makes its influence felt by its monthly journal and, in a special way, through the foreign pupils and students who come to take its courses in Egypt. A few of the latter remain in Cairo, but the majority return to their native lands, thus contributing to the propagation of the knowledge of the Arabic language and Muslim political and religious ideas.

I. Buildings and furnishings. The mosque of al-Azhar was conceived as the place of worship of the capital al-Ḳāhira which the conquering Fāṭimid general Djawhar al-Kātib al-Ṣiḳillī established as an entity, and where his master, the Fāṭimid Caliph Abū Tamīm Maʿadd al-Muʿizz li-Dīn Allāh, his entourage and his troops, were intended to reside. The construction of the mosque, situated at the South and in the neighbourhood of the palace, began on 24 Djumādā I 359/4 April 970, and lasted for two years. It was inaugurated immediately, on 7 Ramaḍān 361/22 June 972, cf. the text of an inscription, now disappeared, on the cupola, with the date 360 (in al-Maḳrīzī, *Khiṭaṭ*, Cairo 1326, iv, 49 ff.). It was frequently referred to as the 'mosque of Cairo', *Djāmiʿ al-Ḳāhira*, and indeed played the same rôle in Fāṭimid Cairo as the mosque of ʿAmr at Miṣr-Fusṭāṭ or that of Ibn Ṭūlūn at al-Ḳaṭāʾiʿ. All three of these were the religious centres of their respective quarters, at that time small, independent, neighbouring towns; the Friday prayer was conducted in these three mosques, and the Caliph from time to time caused the *khuṭba* to be read in them. After 380/990 the new *al-Djāmiʿ al-Anwar* (al-Ḥākimī), which was built on the Northern side of Fāṭimid Cairo, enjoyed the same privileges as al-Azhar. Many Fāṭimid Caliphs worked for the enhancement of al-Azhar and enriched it with gifts and endowments. The original roof, which was too low, was soon raised, at an unknown date (*Khiṭaṭ*, iv, 53). Al-ʿAzīz Nizār (365-86/976-96)—who perhaps added the two (North and South) lateral *liwāns* of three bays—and al-Ḥākim bi-Amr Allāh (386-411/996-1020) made some improvements there. A deed of *waḳf* dating from the year 400/1009-10 throws light on the organisation of its personnel and on its apparatus of worship (but none on the teaching; text in *Khiṭaṭ*, iv, 49 ff.). From this epoch dates the appearance of the vast central courtyard surrounded by porticos with Persian arches, as does that of the prayer hall of five parallel bays on the *ḳibla* wall. The construction is of brick rendered with either plain or chased plaster; the arches of the courtyard, of the prayer-hall and of the lateral *liwāns* are supported by slender columns which have been used for a second time. One must mention the work of the Caliphs al-Mustanṣir, al-Ḥāfiẓ (improvements, rearrangement of the Fāṭimid *maḳṣūra* from beside the west door) and al-ʿĀmir (wooden *miḥrāb* now in the Cairo museum). During the whole of this epoch al-Azhar, by its teaching, played an important rôle in Fāṭimid propaganda, which explains why it suffered from the Sunnī reaction of the Ayyūbids (rulers of Egypt from 567/1171-2 on). Ṣalāḥ al-Dīn had certain ornaments torn down (silver band from the *miḥrāb*), and took to himself the privilege of the *khuṭba*; the Friday prayers in al-Ḳāhira took place only in the al-Ḥākimī mosque. This mosque had been restored to Muslim worship by Ṣalāḥ al-Dīn after having been used by the Franks as a church. Al-Azhar continued to exist, although on the decline (ʿAbd al-Laṭīf al-Baghdādī taught medicine there at the end of the 6th/12th century: see Ibn Abī Uṣaybiʿa, ii, 207), but the buildings were very neglected. With the Mamlūk sultans the situation changed. The amīr ʿIzz al-Dīn Aydimur al-Ḥillī, residing in the neighbourhood, was so distressed by the dilapidation of al-Azhar that he financed some works with the help of sultan al-Ẓāhir Baybars, who amongst other things permitted the *khuṭba* to be read again in 665/1266 (*Corp. Inscr. Arab. Egypt*, i, no. 128). Some *waḳfs* were allocated to provide for Sunnī teachers. Once again vigorous life returned to it, never to cease up to the present day. Badly damaged (*saḳaṭa*) by the well-known and disastrous eartquake of 702/1302-3, it was restored by the amīr Salār. Marble made its appearance, discreetly, in the undated repairs of the *miḥrāb* (beginning of the 14th century), though it was used with magnificent effect in the *miḥrābs* of the three small new erections of fine stone built against the exterior of the mosque, which were later to be incorporated with it: the *madrasa* of the amīr Ṭaybars, founded in 709/1309 to the right of the west door; that of the amīr Aḳbughā ʿAbd al-Wāḥid in 740/1339-40 to the left of this door; and the charming *madrasa* founded by the eunuch Djawhar al-Ḳanḳabāʾī, who was buried here in 844/1440-1, at the eastern corner of the mosque. In 725/1325 some constructions are recorded, and about 761/1360 the *maḳṣūras* were rebuilt, some improvements were made, funds for feeding the poor and for teaching were established, *e.g.*, a *sabīl* for water, and teaching the Ḳurʾān to orphans. A minaret which was at a dangerous angle was demolished and then rebuilt on three occasions for the same reason (800, 817, 827/1397-8, 1414-5, 1423-4). On this last date, a cistern (*ṣahrīdj*) with a wash-basin (*mīḍaʾa*) was built in the middle of the mosque, and an unsuccessful attempt was made to

establish four trees in the courtyard. The sultan Ḳāytbāy was responsible for much work: for the west door, which he demolished, he substituted an elegant doorway with minaret attached (873/1469; *Corp. Inscr. Arab.* i, no. 21), had a host of little dwellings, which were excrescences on the terraces, cleared away (881/1476), and ordered a general restoration (901/1496). Ḳānṣūh al-Ghūrī bestowed on al-Azhar another minaret, thanks to which it can today be recognised from afar among the assembly of minarets in Cairo (915/1510). Funds for teaching continued during this period. At the time of the Ottoman conquest the sultan Selīm looked with favour on al-Azhar. The 18th century was, in the history of al-Azhar, as important as the Fāṭimid era; possessing from that time on the monopoly of religious studies in Egypt, the mosque was considerably enlarged. A chapel for the blind (*Zāwiyat al-ʿUmyān*) was built by ʿUthmān Katkhudā al-Kazdoghlī (Ḳaṣid Oghlu), who died in 1149/1736. But its greatest benefactor was ʿAbd al-Raḥmān Katkhudā or Kiḥya (died 1190/1776, buried in the mosque), who caused the following constructions, which lack the beauty of the ancient works, to be carried out: demolition of the *ḳibla* wall of the prayer-hall except for the original *miḥrāb* which remains, the addition at the rear of four new bays of stone arches on slightly raised ground, a new *miḥrāb*, a *minbar*, his tomb, a cistern, and a Ḳurʾānic school for children. Victuals and gifts in kind were provided for poor students. A new enclosure, with doorway, brought in on the west the two *madrasas* of Ṭaybars and Aḳbughā, whose façades were rebuilt (1167/1753).

The Azharīs, like students of all countries, came out into the streets from time to time. Al-Djabartī indicates that there were some troubles in the quarter, in which they took part. He makes mention of the rising against the French under Bonaparte who were occupying Cairo (10 Djumāda I 1213/20 October 1798); the immediate repression found in al-Azhar and its neighbourhood the last bastion of resistance. The mosque suffered from the final bombardment, and was profaned by the troops. The restoration of autonomous rule, under Muḥammad ʿAlī, was scarcely favourable to al-Azhar, whose *waḳf*s were misused. Later the Khedives and then the kings of Egypt became its benefactors, reserving to themselves the upper hand in its affairs, and hoping in return for the tractability of its shaykhs, a hope which was generally realised except in a few cases of proud and sudden boldness which even today form a topic of conversation. ʿAlī Pasha Mubārak (*Khiṭaṭ Dj.*, iv, 14-26) gives a minute description of the buildings and of Azharī life about 1875. The great wretchedness and decay of so many mosques in Cairo in this period had not left al-Azhar untouched. The Khedives Tawfīḳ and ʿAbbās Ḥilmī had important restorations carried out. That of the courtyard and of the porticos which surround it date from 1890-2. At the western corner of the mosque, on the site of ʿAbd al-Raḥmān's Katkhudā's minaret which was demolished, ʿAbbās Ḥilmī had the *riwāḳ* built which bears his name, a vast building with lodgings for students and an oratory (inaugurated in 1315/1898). The participation of the Azharīs in the risings of 1882 (ʿUrābī Pasha) and 1919 (against the British) did not entail any material damage to the buildings, but only a temporary suppression of the courses at the time of the second incident. The number of students up to 1935 caused al-Azhar to conduct part of its courses in the neighbouring mosques, which were used as annexes. In 1930 the separation of the three faculties of higher study had as a necessary consequence the taking over of lay buildings in Cairo, to house these faculties outside the mosque. These places were given up when a new area was built behind al-Azhar (modern installations, classrooms with desks and benches, chemical laboratory, etc.). There were erected in 1935-6 a general administrative building, on the site to the north of al-Azhar, and three more four-storied buildings intended as the primary and secondary institutes, and medical block with boarding infirmary. In 1950, again to the east, a building was constructed for the Aula Magna with room for 4,000, with a high minaret, and a building for the faculty of *sharīʿa* law; in 1951 came the building for the faculty of the Arabic language. In 1955, again on the East, some old houses were pulled down, in order to prepare a site for the future faculty of theology (still housed in the Shubrā quarter). At the present time the principal library (of manuscripts, etc.) is housed in Aḳbughā's *madrasa* (rebuilt by the Khedive Tawfīḳ). A *cité universitaire* for foreign Azharīs is in construction (1956-1957) on the site of the ancient Mīdān al-Ghafīr at ʿAbbāsiyya, in conformity with the social policy of the new Egyptian Republic. This will allow for the rehabilitation of students, who were overcrowded in the precincts of the mosque itself, or were sleeping in the town in properties belonging to the trustees of the *waḳf*s, or with private families. The courtyard and the prayer-hall of the mosque are still used for certain courses for foreigners, and for exceptional private lessons. Some young Azharīs do come here to go over their books again; walking up and down, or even seated on the ground, they still keep up the old tradition and thus help to maintain the ever busy appearance of the mosque. In addition, the Azharīs have modern installations everywhere; likewise in the provinces, the local institutions have special buildings outside the mosques.

Bibliography: Texts, among which the most important are those of Maḳrīzī (*Khiṭaṭ*, iv, 49-56, 60-2, 223-4), Djabartī, ʿAlī Pasha Mubārak, and for the modern period Van Berchem and Flury, are collected with references in Creswell, *The Muslim Architecture of Egypt*, i, Oxford 1952, 36-64, with plates and plan. See also Hautecœur and Wiet, *Les mosquées du Caire*, Paris 1932, 2 vols; Ḥasan ʿAbd al-Wahhāb, *Taʾrīkh al-Masādjid al-Athariyya*, i, Cairo 1946. See also *EI*[1], article *Azhar* § I.

II. Al-Azhar as a sanctuary and house of the people. Like all mosques, al-Azhar had this dual function. The regular prayers were said here, as well as those on exceptional occasions. Its history from this point of view is linked with that of Egypt: people collected here in times of catastrophe (such as epidemic, famine, or war) to call upon God, and to hear special readings from the Ḳurʾān or from al-Bukhārī; it was also a place of refuge for fugitives (see Ibn Iyās, ii, 177, 264, iii, 106, 132, 167). In modern times also, some events of national significance have been organised there. The spaciousness of its buildings, and the constant presence of students, were appropriate for large meetings, *e.g.*, that of 1919 (see *Madjallat al-Azhar*, XXVII, 396-400). Here they exalted the *Mudjāhidūn* or combatants during the Palestine war (1948), and at the time of the guerilla warfare against the British in the Suez Canal in 1951-2. Al-Azhar is, moreover, a 'people's house' for those poor men who, since its

foundation, have found there either a temporary or a permanent shelter: many have spent the night there, as al-Maḳrīzī points out with regard to the intervention of the *amīr* Sudūb, *nāẓir* of al-Azhar, who in 818/1415-6 wished to free the mosque of all who were dwelling therein, whether students or otherwise. His intervention was the occasion for pillage, and opinion turned against him. Some inhabitants of Cairo, even the well-to-do, would pass the night here, specially in Ramaḍān, at the beginning of the 15th century (*Khiṭaṭ*, iv, 54-5). At the present time, among the poor pilgrims coming on foot from as far as North Africa and the Atlas Mountains (1400 in 1952), many stay at al-Azhar during the month of Ramaḍān before setting off for the Ḥidjāz. Many Azharī students give them moral and material help (in the middle ages the Maghribī pilgrims camped at Ibn Ṭulūn—*Khiṭaṭ*, iv, 40). Countless gifts have been made by rich Muslims at all times for the poor of al-Azhar, In the middle ages al-Azhar was open to Ṣūfīs also, although its tendencies were predominantly juridical. ʿUmar b. al-Fāriḍ chose to live there towards the end of his life (Ibn Iyās, i, 82, 3). One text mentions the *dhikr*s which took place there (*Khiṭaṭ*, iv, 54). Aḳbughā's *madrasa* is also said to have had a permanent group of Ṣūfīs (*ibid.*, iv, 225). The mosque of al-Azhar was above all a "people's house" for the teachers and the pupils whom it housed under its arcades, and its history here again is inseparable from that of Islamic teaching in Egypt (see Ibrāhīm Salāma, *L'enseignement islamique en Égypte*, Cairo 1939). Teachers found within it peace and adequate quarters; sometimes, however, their position there was not official: at times we hear of passing scholars supported by a sovereign during their stay. There were above all the *waḳf*s maintaining what could be described as chairs of learning, and others again for the maintenance of certain categories of students.

III. Teaching in the mediaeval and post-mediaeval periods. Information on the situation in early times is both fragmentary and incomplete. Under the Fāṭimids in 365/975 the great official propagandist ʿAlī son of al-Ḳāḍī al-Nuʿmān taught Ismāʿīlī law at al-Azhar, and dictated the *Mukhtaṣar*, a work of his father's (*Khiṭaṭ*, iv, 156; Brockelmann, SI, 325). After having been named *wazīr*, Yaʿḳūb b. Killis held in his own home meetings of *littérateurs*, poets, jurists and men of the *kalām* (theologians), to whom he gave a pension, and who thereafter taught the Ismāʿīlī doctrine in the mosque of ʿAmr. Al-Azhar profited by this trend. In 378/988-9 al-ʿAzīz assigned to 35 jurists a house near to al-Azhar, with provision for their support. On Fridays, between midday and the *ʿaṣr* prayers, they held meetings, and their chief, Abū Yaʿḳūb Ḳāḍī al-Khandaḳ, was responsible for the teaching. (*Khiṭaṭ*, iv, 49; al-Ḳalḳashandī, III, 367). Al-Maḳrīzī, writing of the al-Anwar (al-Ḥākimī) mosque only recently inaugurated, notes that in Ramaḍān 380/991 'groups of listeners followed courses there given by the teachers who instructed in the mosque of Cairo, that is to say, al-Azhar' (*Khiṭaṭ*, iv, 55), which implies that it must have always had a stable organisation. It is known, moreover, that Ibn al-Haytham elected to live at al-Azhar (Ibn Abī Uṣaybiʿa, ii, 90-91). But the remarkable effort of the Fāṭimids in both sacred and secular culture is specially evident in the *Dār al-ḥikma* founded by al-Ḥākim in 395/1005, which became the real cultural centre of Cairo at this period (*Khiṭaṭ*, iv, 158). Under the Ayyūbids the Shīʿite teaching was swept away. Al-Azhar had always opened its doors to scholars (*e.g.*, for ʿAbd al-Laṭīf al-Baghdādī), but it was supplanted by the official Sunnite *madrasas* recently created. Under the Mamlūks al-Azhar regained its position.

In 665/1266 the *amīr* Bīlbak al-Khāzindār installed a vast *maḳṣūra* and provided it with a fund in order that a group (*djamāʿa*) of jurists might teach Shāfiʿī law there. He appointed a teacher of *ḥadīth* and spiritual doctrine (*ḥaḳāʾiḳ*), seven people to 'read' the Ḳurʾān, and a tutor (*mudarris*) (*Khiṭaṭ*, iv, 52). In 761/1359-60 a course of Ḥanafī law was started, at the same time as a Ḳurʾānic school for orphans. In 784/1382-3 a decree of Sulṭān Barḳūḳ provided that students should inherit the property of those of their friends who died without heir (see Tritton, *Education* 123, for a discussion of arrangements of this kind). Al-Maḳrīzī, on the events of 818/1415-6, mentions 750 provincial or foreign inhabitants, ranging from Maghribīs to Persians, as residing in the mosque, grouped according to strict *riwāḳ*s. They read the Ḳurʾān and studied it. They devoted themselves to law (*fiḳh*), to tradition (*ḥadīth*), to commentaries on the Ḳurʾān, to grammar (*naḥw*), to meetings devoted to preaching and to *dhikr* (*Khiṭaṭ*, iv, 53-4). It is often said nowadays that al-Azhar was always the Egyptian Muslim university *par excellence*; in fact, in the Cairo of the Mamlūks, bursting with life, it was an important centre of learning, but a centre among many others (see MASDJID). Al-Maḳrīzī, writing in the 15th century, makes mention of more than 70 *madrasas* in Cairo (*Khiṭaṭ*, iv, 191-258). He points out the intellectual activity within the mosques: in that of ʿAmr, before the great plague of 749/1348, he mentions forty-odd courses or *ḥalḳa* (*ibid.*, iv, 21); in that of Ibn Ṭulūn, at the beginning of the 14th century, courses in the law of the four schools and a course in medicine (*ibid.*, iv, 40-1); in that of al-Ḥākim, in the same period, law courses in the four schools (*ibid.*, iv, 57). There was moreover still *ṣūfī* teaching in the convents or *khānḳāh*s. Ibn Khaldūn, for example, from the time of his arrival in Cairo in 784/1383, taught at al-Azhar, which he later left in order to teach elsewhere (Ibn Khaldūn, *Taʿrīf*, 248). The Ottoman era was a time of decadence for learning in Cairo. Ibrāhīm Salāma, *L'enseignement*, 111-121, has enumerated the causes of this: economic unrest, the impoverishment of Egypt, the devaluation of the *waḳf*s or the perversion of these latter to other purposes (the Ḥanafī law administered by the Ottomans permitted a judge to modify the provisions of a *waḳf*), and finally the triumph of the Ṣūfī *khānḳāh*s in tending to replace the *madrasas*. All that obtained of non-mystical teaching activity was concentrated in al-Azhar. One could name the titles of a good thousand works preserved in this era in the library of al-Azhar and those of the neighbouring mosques, from Ḥādjdjī Khalīfa, ed. Flügel, vii, 3-22. A catalogue of more than 2000 works belonging to the '*riwāḳ* of the Syrians', probably at al-Azhar, exists in a manuscript of the 18th century (no. 4.476, Slane. Bibl. Nat. de Paris). (On the Ottoman period see further H. A. R. Gibb and Harold Bowen, *Islamic Society and the West*, i/2, London 1957, index).

But henceforward, and up to the end of the 19th century, scholarship consisted of learning by heart a traditional corpus of material, encumbered by all that successive generations had added to it. Instead of the direct study of those great texts which were capable of engendering noble thoughts, there were substituted the studies of manuals, of commentaries (*sharḥ*), of marginalia on the commentaries (*ḥawāshī*),

and sub-commentaries on these glosses (*taḳārīr*). All the energy of the students was absorbed by the effort of memory necessary to retain by heart this complicated learning, which was presented with no pedagogical method whatever. General culture was non-existent. Arithmetical studies were limited to that elementary technique necessary for apportioning an inheritance, and astronomy to that which allowed the times for prayer, or the beginning of the lunar months (*al-miḳāt*), to be determined. But one should not judge the mediaeval intellectual activity of Cairo by this period of post-mediaeval decadence.

In the middle ages, the office of superintendent (*nāẓir*) of al-Azhar was held by a person of high rank. Moreover, each *riwāḳ*, a group analogous to the 'nations' of the mediaeval universities of Europe, as well as each faculty, had its own head (*s̲h̲ayk̲h̲*, *naḳīb*). From Ottoman times al-Azhar had its rector (*s̲h̲ayk̲h̲ al-Azhar*), who remained in office until his resignation, dismissal or death. The *s̲h̲ayk̲h̲*s of the different departments were subordinate to him, and he was directly responsible to the government. Al-D̲j̲abartī gives us a partial roll of these from the beginning of the 18th century (see § V, below). ʿAlī Pas̲h̲a Mubārak has described (*K̲h̲iṭaṭ D̲j̲*., iv, 26-30) life at al-Azhar as it was in 1875 at the dawn of the modern reforms. This picture gives an idea of the ancient customs: the students were grouped in a 'circle' (*ḥalḳa*, literally 'circle', extended to mean 'course'), seated on the mats (*ḥaṣīra*) of the mosque around the teacher, who himself was seated Turkish-fashion on a low wide armchair placed at the foot of a pillar, each pillar having its own accredited holder and being, moreover, up to 1872 the undisputed property of one juridical school. Morning lectures were reserved for the most important subjects, that is to say successively *tafsīr*, *ḥadīt̲h̲*, *fiḳh*, then at noon the Arabic language; other subjects were kept over for the afternoon. At the end of each class the students kissed the hand of their teacher. The Azharī lived meagrely on the regular issues of food (*d̲j̲arāyāt*), supplemented by that which came from his family, and would often work in order to earn a little more, by giving readings from the Ḳurʾān, copying manuscripts, etc. He lived in the mosque or in the town. There was no examination at the end of the course of study. Many of the students were well advanced in years. Those who left al-Azhar obtained an *id̲j̲āza* or licence to teach; this was a certificate given by the teacher under whom the student had followed courses, testifying to the student's diligence and proficiency. Teacher-pupil relationships had a rather patriarchal aspect, disturbed only by rather rare rebellions. Quarrels between rival cliques of students were more frequent. A proctor (*d̲j̲undī*) was responsible for the administration of the rules, for the care of the books, and for distributing the provisions in kind; he had a staff of some size under his command. In 1293/1876 the distribution of the 361 teachers and 10,780 students according to schools was: S̲h̲āfiʿīs: 147 teachers, 5,651 students; Mālikīs: 99 teachers, 3,826 students; Ḥanafīs: 76 teachers, 1,278 students. The Ḥanbalīs were poorly represented: 3 teachers, 25 students. There were in addition some non-registered students. The students were grouped into 15 *ḥāras* and 38 *riwāḳ*s (*K̲h̲iṭaṭ D̲j̲*., iv, 28). There were numerous foreign students (see list of *riwāḳ*s, EI[1], s.v. *Azhar*, § II, VI). The vacation began in the month of Rad̲j̲ab and ended in mid-S̲h̲awwāl; there was in addition the twenty days leave for the great Bayrām (festival of sacrifices), the same for the *mawlid* of the saint of Ṭanṭā, Aḥmad Badawī, etc. . . . (*K̲h̲iṭaṭ D̲j̲*., iv, 28).

IV. The reform of al-Azhar. The shock that Bonaparte's expedition gave to Egypt, and the efforts of Muḥammad ʿAlī and his successors to modernise the country, left al-Azhar indifferent or hostile. There were individual sympathisers, but they were immobilised by the unshakable apathy of the majority. Al-Azhar rightly feared the influence of certain European ideas; but very few understood how to draw the line between the contributions which were acceptable to Islam and those which were inadmissible. Others became obdurate in passive resistance. It was, however, from among the Azharīs (there was no other intellectual group at that time) that the activist element of the new Egypt was recruited. (Educational mission of Egyptians sent to Paris with Rifāʿa al-Ṭahṭāwī in 1825-31; journey of Muḥ. ʿAyyād al-Ṭanṭāwī to Russia; later Saʿd Zag̲h̲lūl, Muḥammad ʿAbduh, and others. But these people were always at cross purposes with the conservative element of al-Azhar, since they emerged and acted in a way which was not that of the traditionalists. Al-Azhar at the beginning of the 19th century could well have been called a religious university; what it was not was a complete university giving instruction in those modern disciplines essential to the awakening of the country. However, it seems that the conservative section of al-Azhar did not appreciate at the time either the necessity of creating new academic branches (in al-Azhar or outside it) or that of reforming the organisation and programmes of religious teaching in al-Azhar. The fear of being contaminated by imitating Europe paralysed everything.

Al-Azhar had nevertheless to take the path of reform. The interference of the government in its affairs, an everyday phenomenon which was sometimes suffered with some resentment, proved decisive at this juncture. When authority had opposed reform (for example during the last years of Muḥ. ʿAbduh) the conservative forces, having no counterweight, paralysed everything. Nothing less than the full Khedival (later the royal) power was necessary to impose reform. The principal stages of reform were these: in 1288/1872, a decree instituting a diploma at the end of the course of study; a maximum of six students would each year sit for a long and exacting examination in eleven subjects. Success would obtain for them the title of *ʿālim* (1st, 2nd or 3rd class, according to their ability), would assure for them material advantages, and would give them the right to teach in al-Azhar. This measure was still clearly inadequate (*K̲h̲iṭaṭ D̲j̲*., iv, 27-8; the newspaper *Wādī al-Nīl*, 26 Feb. 1872).—In 1872, the creation of the higher school of *Dār al-ʿulūm* where a certain number of Azharīs could specialise and prepare themselves for teaching in the new schools. (Muḥ. ʿAbd al-D̲j̲awwād, *Taḳwīm Dār al-ʿUlūm*, Cairo 1952; résumé in *MIDEO*, I, 160-2).—In 1312-3/1895 the Khedive ʿAbbās instituted an advisory council (*mad̲j̲lis idārat al-Azhar*) consisting of members *outside* al-Azhar as well as others from al-Azhar itself. This institution, demanded by Muḥ. ʿAbduh [*q.v.*], was the prelude to the reform of 1896. Muḥ. ʿAbduh, as a member of the council, was its inspiration.—In 1312-3/1895 the institutes of Ṭanṭā, Damietta and Dasūḳ became affiliated to al-Azhar. —A decree on the salaries of teachers, some of whom had only very meagre salaries.—A law of 20 Muḥarram 1314/1 July 1896, inspired by Muḥ. ʿAbduh, decreed that the council of al-Azhar should

consist of three *ʿulamā* from al-Azhar and two official *ʿulamā* from the government; it fixed the minimum age for the admission of pupils at 15; declared that conditions of admission were to be able to read and write, and to know half the Ḳurʾān by heart; it reorganised the programmes, forbade the teaching of glosses to new pupils and restricted it for the older ones. Two examinations led, either after a minimum of 8 years study, to the diploma of *ahliyya*, or after 12 years, to the diploma of *ʿālimiyya* (with three honour classes). Modern subjects were introduced, either obligatory (such as elements of arithmetic, algebra) or optional (such as the history of Islām, composition, elements of geography, etc). The length of the vacations (summer, Ramaḍān, festival of sacrifices) was fixed. A medical officer was appointed to be in charge of health and hygiene. A list of prescribed texts for the syllabus was drawn up. The implementation of this law came up against fierce resistance, which was likewise expressed in the press. —In 1903 came the foundation of the institute of Alexandria, affiliated to al-Azhar.—In Muḥarram 1325/Feb.-March 1907 came a law instituting the *ḳāḍīs*' school (for the *sharʿī* tribunals) within the orbit of al-Azhar.—The law of 2 Ṣafar 1326/6 March 1908 set out the studies in three standards, primary, secondary and higher, each of four years' duration with a certificate given after each final examination. The optional subjects of 1896 were made compulsory. This law was regarded as a blow to the autonomy of al-Azhar, and provoked an outcry. There was a serious student revolt in Cairo, and in Ṭanṭā (quickly put down), but nowhere else. It was decided to apply this law only gradually.—In December 1908 came the foundation of the Free University of Cairo, the embryo of the four present State universities, and of the western type. This was the origin of a competition that was painful for al-Azhar.—The law of the 14 Djumādā I 1329/13 May 1911 harked back to that of 1908: it laid down that the rector was to be nominated by the Khedive, enlarged the advisory council (the rector, the *shaykhs* of the four schools, the director-general of the *waḳfs*, and three members nominated by the decision of the council of ministers), created the tribunal of the 30 chief *ʿulamā* who were incumbents of the 30 special chairs, from among whom the rector was to be elected. In the conditions of entry for pupils, the age limit was from 10-17 years; other provisions were as in 1896. Modern studies were slightly augmented, etc. This law was still the subject of opposition. One interesting problem arose, in that the graduates of the *Dār al-ʿulūm* and of the school of the *ḳāḍīs* obtained situations more easily than the Azharīs, and earned more. —In 1921 the conditions for entry required the knowledge of the whole of the Ḳurʾān, no longer just half.—In the law of 13 Muḥarram 1342/26 August 1923 the highest standard was renamed 'specialisation' (*takhaṣṣuṣ*) and comprised many branches. The school of the *ḳāḍīs*, which since 1907 had been bandied about between different ministries, was at last affiliated to al-Azhar and abolished as such, becoming simply a branch of specialisation (1923-5). In this period several missions from al-Azhar were sent to study in Europe before returning to teach at al-Azhar.—In 1925 the State University of Cairo (Fuʾād al-Awwal University) replaced the Free University.—A law of the 24 Djumāda II 1349/16 November 1930 laid down that the Tribunal of the chief *ʿulamā* was competent to judge whether any *ʿālim* was guilty of any act not in conformity with his dignity. It enlarged the advisory council of al-Azhar (Grand *muftī*; the *shaykhs* of the three faculties instead of the *shaykhs* of the four schools, etc.), and stipulated that students should be under 16 years of age on admission (18 in the case of foreigners, who were exempted from knowing the whole Kurʾān by heart). The primary course was 4 years, the secondary 5 years, the higher 4 years, in one of the three faculties constituted by this law (Islamic law or *sharīʿa*, theology or *uṣūl al-dīn*, the Arabic language or *lugha ʿarabiyya*), and in appropriate cases more specialisation or *takhaṣṣuṣ*, in those faculties which existed only in Cairo, was allowed. The programme of the higher standard (*ʿālimiyya*) was completed by the special mention of those who had attained distinction in their specialist studies, for example the grade of *ustādh* in such and such a subject, etc. A 'general section' was created for those unable to take the normal courses. The vacations were to be fixed each year.—The law of the 3 Muḥarram 1355/26 March 1936, still in force in 1955, provided that the age of entry be from 12-16 years; duration of specialisation, 2 years. The regulations concerning the subjects to be taught (these were to be still more detailed in the individual syllabuses printed later) make this law the real charter of present-day teaching. Apart from the traditional subjects, the following should be noted: English or French language (compulsory for the *uṣūl al-dīn* faculty, optional for the two others); rudiments of philosophy, history of philosophy, etc., for the *uṣūl al-dīn* and *lugha ʿarabiyya* faculties; common international law, and comparative law, in the *sharīʿa* faculty. Certain branches of *takhaṣṣuṣ* had in addition a compulsory Oriental language (section of *waʿẓ wa irshād*), or the elements of Hebrew and Syriac (sections of *naḥw* and *balāgha*), the history of religions, etc. The normal programme (*niẓāmī*) of the secondary course had as modern subjects the rudiments of logic and the art of rhetoric, of medicine (with the use of the microscope), of chemistry, zoology, botany, history and geography. The primary course comprised history, geography, arithmetic, algebra (up to simple equations with one unknown), and hygiene. The *ḳism al-buʿūth*, reserved for foreigners who were unable to follow the normal courses, comprised 12 years' study divided into three courses of four years, with an easier syllabus. Of modern subjects they had only arithmetic, history, geography and logic. It must not be forgotten that all these modern subjects take a secondary place in the teaching, and that little time is given to them.—In 1945 the *dār al-ʿulūm* was affiliated to the University of Cairo, with the status of Faculty. In 1952 the *dār al-ʿulūm* ceased to be reserved for Azharīs, and admitted candidates coming from Government schools. A women's section was opened in 1954.—About 1954 there was a slight alteration of the programmes at al-Azhar; a foreign language became compulsory in the faculty of *lugha ʿarabiyya*. The retirement age for teachers was fixed at 65; this applied equally to the chief *ʿulamā*, who previously had been appointed for life.—In 1955 came the abolition of the *sharʿī* tribunals, thus doing away with the chief outlet for the Azharīs of the *sharīʿa* faculty. There was talk of opening a women's section at al-Azhar; by the end of 1957, everything was ready, only budgetary credit was lacking.

In 1953, the faculties comprised respectively 1,603 *sharīʿa* students, 1,655 for *lugha ʿarabiyya*, 707 for *uṣūl al-dīn*. The institutes had 12,398 primary students, 6,559 secondary, and 3,703 in the attached

sections; the free institutes had 2,458. At the end of 1955 there were in Egypt some institutions directly affiliated to al-Azhar (*niẓāmī*) in the following towns: (*a*) primary and secondary, Cairo, Ṭanṭā, Manṣūra, Shībīn al-Kōm, Ḳenā, Suhādj, Girgā (Djirdjā), Asyūṭ, Minyā, Fayyūm, Manūf, Samannūd, Zaḳāzīḳ, Dasūḳ, Damiette (Dumyāṭ), Alexandria, Damanhūr; (*b*) primary only, Banī Suwayf, Banhā, Kafr al-Shaykh; (*c*) free institutes supervised (*taḥt ishrāf*) by al-Azhar, primary only, Ṭahṭā, Balasfūra, Banī ʿAdī, Mallāwī, Abū Ḳurḳās, Abū Kabīr, Fāḳūs, Minshāwī, Cairo (ʿUthmān Māhir).

In 1953 the number of foreign students was as follows: Sudan, 2,634; Nigeria, Gold Coast, Senegal 141; Abyssinia, Eritrea, Somaliland, Zanzibar, 309; French Sudan, 57; Uganda and South Africa, 37; India and Pakistan, 46; China, 8; Java and Sumatra, 80; Afghānistān, 13; Kuwayt, 6; ʿIrāḳ, Bahrayn, Īrān (*riwāḳ al-Akrād*) 21; Turkey, Albania, Yugoslavia (*r. al-Atrāk*), 206; Syria, Lebanon, Jordan, Palestine (*r. al-Shawwām*), 724; Yemen, 20; North Africa and Libya (*r. al-Maghāriba*), 267; Ḥidjāz, 17; total, 4,586.

In 1953 the group of *ʿulamā* at al-Azhar had 112 teachers or preachers on missions in the following countries: ʿIrāḳ, 2; Kuwayt, 16; Sudan (the Umm Durmān Institute), 23; the Muslim School of the Philippines, 2; Eritrea (the Asmara Institute), 7; Malākal, 5; Barḳa, 3; Gaza, 1; Ḥidjāz, 40; Lebanon, 5; the Islamic Cultural Centre, London, 1; the Islamic Cultural Centre, Washington, 1; Equatorial Africa, 1; Syria, 3; the School of Djūbā, 3. (1953 statistics from *al-Sidjill al-thaḳāfī sanat* 1953, Cairo 1955; 473-4; Sāṭiʿ al-Ḥuṣrī, *Ḥawliyyat al-thaḳāfa al-ʿarabiyya*, iv, Cairo 1954, 301).

Until the Law no. 15 of 1927 was promulgated, al-Azhar was directly responsible to the King. The Council of Ministers had until then to consider his opinion in the matter of appointing rectors, etc. Its budget was submitted for Government approval, and increased continually (£E 136,000 in 1919; in 1954, £E 1,617,200, of which only £E 94,380 was provided by the *waḳf*s, the rest furnished by the Ministry of Finance.) All the scholars and students benefited from the gratuity, and received a grant for food, and a lodging allowance, if they found no room in the official quarters. For the primary and secondary grades this was about 50 piastres per month in 1955, plus school books and gifts from Egyptian charitable societies. There was a minimum of £E 2½ for foreigners in lodgings For students of the faculties, help was available, and could exceed £E 5. The Sudanese, who were favoured, received in all £E 8. Certain countries added a supplementary lodging allowance for their nationals. The Islamic Congress, dating from 1953, has aided certain Azharīs (*MIDEO*, iii, 471-8). The *Dār al-ʿulūm*, likewise, gave help to students (discontinued for those who entered after 1953). These material advantages made al-Azhar, and still makes it, the only place for higher studies open to poor families (except for the bursaries of the State University). There is now a medical service for Azharīs.

The well-organised library of the mosque contains upward of 20,000 manuscripts, and has a printed catalogue. The libraries of some *riwāḳ*s have interesting manuscripts, but still uncatalogued in 1955. Each establishment has in addition a library for its students. Since 1349/1930 al-Azhar has had its monthly review, the official organ of its teachers, and whose title *Nūr al-Islām* was changed to *Madjallat al-Azhar* at the end of its sixth year. A second monthly review, the organ of the *waʿẓ wa irshād* section, has retained the name of *Nūr al-Islām*. In addition, certain courses are printed, and many Azharīs contribute to the literary productions of present-day Egypt. To answer numerous juridical questions addressed to al-Azhar, a commission, *Ladjnat al-fatwā*, was set up in 1354/1935 (having a president and 11 other members, at the rate of 3 per school); this is not to be confused with the *Dār al-iftāʾ*, dependant on the Grand Mufti of Egypt.

V. List of Rectors. The chronicle of al-Djabartī has preserved for us the names of the *shaykh*s (plural *mashāyikh*) of al-Azhar since the year 1100 A.H. The rectorship (*mashyakha*) was a coveted post which was occupied by the most prominent scholars, and which gave rise to long disputes between the schools. The rectors came from the most varied social strata: there were members of the landed aristocracy, as well as simple men who had done copying to earn a living at the beginning of their careers. Most of them, in the 18th and 19th centuries, composed commentaries or other works, as their biographers have noted. In 1954 the budget of al-Azhar provided £ E 2,000 for the rector per annum (see list and references in al-Khafādjī, *al-Azhar fī alf ʿām*, Cairo 1374, i, 147-96). It is, incidentally, with regard to the biographical notice of a third party, that al-Djabartī mentions the name of a rector, the earliest that is known to us. 1, Muḥ. b. ʿAbd Allāh al-Khirshī, d. 1101/1690; 2, Muḥ. al-Nashratī, d. 1120; 3, ʿAbd al-Bāḳī al-Ḳalīnī, whose nomination was the occasion of a battle, and some firing, within the mosque; 4, Muḥ. Shanan, one of the richest men of his time, d. 1133; 5, Ibrāhīm b. Mūsā al-Fayyūmī, d. 1137; 6, ʿAbd Allāh al-Shabrāwī, poet and wit, frequented and defended the Ṣūfīs, d. 1171; 7, Muḥ. b. Sālim al-Ḥifnāwī al-Khalwatī, Ṣūfī and jurist, author of glosses, d. 1181, perhaps poisoned by the *amīrs*; his tomb became an object of veneration (Brockelmann, II, 323; S II, 445); 8, ʿAbd al-Raʾūf al-Sadjīnī, d. 1182; 9, Aḥmad b. ʿAbd al-Munʿim al-Damanhūrī, d. 1192; 10, ʿAbd al-Raḥmān al-ʿArīshī, of the Ḥanafī school, who had been initiated into Ṣūfism by the *Shaykh* al-Ḥifnāwī, and was rapidly dismissed under Shāfiʿī pressure; 11, Aḥmad al-ʿArūsī, Ṣūfī and commentator, d. 1208/1793-4; 12, ʿAbd Allāh al-Sharḳāwī, whose rectorship saw the expedition of Bonaparte, a scholar whose works were very widely read in their time, d. 1227/1812; 13, Muḥ. al-Shanawānī, who supplanted a rival, al-Mahdī, who was rector only in name, d. 1233; 14, Muḥ. al-ʿArūsī, d. 1245; 15, Aḥmad b. ʿAlī al-Damhūdjī, d. 1246; 16, Ḥasan b. Muḥ. al-ʿAṭṭār [*q.v.*] who had associated with Bonaparte's French and had been a supporter of the reforms, d. 1250; 17, Ḥasan al-Ḳuwaysnī, d. 1254; 18, Aḥmad al-Ṣāʾim al-Saftī, d. 1263; 19, Ibrāhīm b. Muḥ. al-Bādjūrī, d. 1277, known as a theologian (Brockelmann, II, 487; S II, 741); 19*a*, an interregnum of four years during which a council of four curators conducted al-Azhar's affairs; 20, Muṣṭafā al-ʿArūsī (to 1287/1870-1), paved the way for the reforms which his successor introduced; 21, Muḥ. al-ʿAbbāsī al-Mahdī al-Ḥanafī, temporarily replaced by Muḥ. by Muḥ. al-Anbābī during the uprising of ʿUrābī Pasha (1299/1882), ceded his place in 1304/1886; 22, Muḥ. al-Anbābī, a scholar but opposed to all innovations, who had to be pressed for a long time before his retirement in 1313/1895 (Brockelmann, S II, 742); 23, Ḥassūna al-Nawawī, a man of character, admired by the Egyptians, had had in the law school an influence on his disciples, who played an im-

portant part in Egyptian politics; he had presided over the Governing Body of al-Azhar, was chosen to supervise the 1896 reforms, and resigned in 1317/1899; 24, ʿAbd al-Raḥmān Ḳuṭb al-Nawawī, his brother, d. the same year: the rapid resignations of his successors show the unrest that the reforms had provoked; 25, Salīm al-Bis̲h̲rī, a pious man who had known poverty, the last in date of the *muḥaddit̲h̲ūn* (he knew the very authorities for the traditions), fiercely opposed to Muḥ. ʿAbduh and to the reforms which he instigated, resigned in 1320; 26, ʿAlī al-Biblāwī, resigned in 1323; 27, ʿAbd al-Raḥmān al-S̲h̲irbīnī, greatly esteemed for his piety and integrity, resigned 1324; 28, Ḥassūna al-Nawawī, for the second time, resigned in 1327/1909 consequent on the 1908 law. 29, Salīm al-Bis̲h̲rī, for the second time, d. 1335; 30, Muḥ. Abū ʾl-Faḍl al-Ḏj̲īzāwī, d. 1346/1928; 31, Muṣṭafā al-Marāg̲h̲ī, disciple of Muḥ. ʿAbduh, resigned in 1348/1929; 32, Muḥ. al-Aḥmadī al-Ẓawāhirī, resigned in 1354/1935; 33, Muṣṭafā al-Marāg̲h̲ī, second time d. 1364/1945; 34, Muṣṭafā ʿAbd al-Rāziḳ, a very cultured man, admirer of Muḥ. ʿAbduh, had taught Arabic at the University of Lyons (France), and later Muslim philosophy at the Egyptian University. He was nominated by King Fāruḳ although he was not of the body of the chief *ʿulamā*, and was at al-Azhar the victim of such hostile demonstrations that he died of a heart attack in 1366/1947; 35, Muḥ. Maʾmūn al-S̲h̲innāwī, d. 1369/1950. The brief duration of the following rectorships corresponds to the political undercurrents of Egypt: the struggle against the British in the Canal Zone, the Cairo riots of 26 January 1952, the *coup d'état* of 23 July 1952. In several cases, the Government brought pressure to bear on the rectors in order to secure their departure. 36, ʿAbd al-Mad̲j̲īd Salīm, resigned, 4 September 1951; 37, Ibrāhīm Ḥamrūs̲h̲, resigned 10 February 1952; 38, ʿAbd al-Mad̲j̲īd Salīm (second time), resigned 17 September 1952; 39, Muḥ. al-K̲h̲iḍr Ḥusayn, resigned at the beginning of January 1954; 40, ʿAbd al-Raḥmān Tād̲j̲, *docteur ès lettres* of the University of Paris, nominated 8 January 1954.

VI. Results of the reform. It is difficult for those who are neither Muslims nor Egyptians to assess these; one requires to know in what spirit the programmes were implemented, and in each case the portion of them which is made effective in the classes. From the outside it can only be assumed that, in spite of the significant improvements referred to above, all is not well. Further signs, indicated by the Egyptians themselves, are revealing. Many teachers of al-Azhar send their sons to Government schools and not to their own establishment. The Government has not accepted the principle of equality between the teachers of the State Universities and those of the higher standard at al-Azhar. Outside their functions as teachers in their own establishment, as *imāms*, and as preachers, which are theirs by law, the Azharīs have positions in life inferior to those of their colleagues in the State universities. The recent suppression of the *s̲h̲arʿī* tribunals has abolished a traditional outlet for Azharīs. The channel of Azharī study to which one is committed at the age of 6 on entry into a Ḳurʾānic school, and that of normal secular study, are poles apart. Entry as a student into the State Universities is refused to Azharīs. If the latter wish to be admitted as teachers of Arabic into the cadre of the Ministry of National Education they have to pass through the *Dār al-ʿulūm* or through the Institute of Education. Furthermore, al-Azhar feels that she is criticised by the State Universities, and suspects certain opponents of resenting her autonomy, and of wishing to abolish the primary and secondary institutes, perhaps even of wanting to tamper with the faculties (see *Mad̲j̲allat al-Azhar*, xxvii, no. 4, Rabīʿ II 1375/1955, entirely devoted to defending herself against such attacks). The question becomes complicated when one sees, among the Egyptians who desire more far-reaching reform, not only atheists but also sincere Muslims, even members of the Muslim Brotherhood. For sixty years the question of al-Azhar has from time to time been a vexed one. Fundamentally it is a question of knowing what exactly al-Azhar's real mission is with respect to the needs of the Muslim community of the twentieth century, and further whether the intellectual and moral instruction that she provides is adapted to these needs.

Al-Azhar has laid great stress on the place that her teachers and former pupils have held, and continue to hold, in the life of Egypt and the Islamic countries. She has asked for recognition of the fact that she has deserved well of scholarship. This scholarship, in fact, presents many aspects. First of all stands that knowledge of the great Muslim values that her students absorb by the very atmosphere of their place of study as much as through the intellectual medium of the courses. Al-Azhar has in this way continued to maintain Islamic ideas in traditional circles, both rural and urban. She has upheld those virtues which make up her appeal: a religious and serious attitude to life, hospitality, respect of parents and teachers, and the duty of almsgiving. She recalls the finest aspects of the Ḳurʾān and of the *ḥadīt̲h̲*s that are traditionally stressed. Some of her teachers, specialists in the Arabic language and in law, have again taken up the traditional subject-matter and restated it in simpler forms, without, however, modifying the basic assumptions and principles, except on a few points (polygamy, etc.). In history, certain modern monographs (for example, on al-Azhar itself) fulfil the same function as the mediaeval works, and use the same methods (compilation of documents, biographies, etc.). Other teachers, who are conversant with an impressive number of ancient linguistic or religious treatises, have been able to produce editions of texts invaluable to scholars. Such scholarship as a whole is adapted to the needs of millions of Muslims whose peaceful and untroubled faith has not been touched by foreign ideas, or even to those people 'nearer to nature', as the present rector calls them, among whom, as in Africa, Islam does not cease to make progress. Azharīs agree, however, that there is a decline in the Muslim faith in many universities, and that the West is impervious to the message of Islam. As a counter-measure, they teach their pupils to answer this by short compositions, rather stereotyped, educational or apologetic, which are taught in the *ins̲h̲āʾ* or essay classes of the primary and secondary courses (*e.g.*, personal hygiene, the use of the ritual alms or *zakāt*, the evils of wine, the wisdom of polygamy, etc.). Reviews and sermons continually give examples of these apologetics. But more vital problems are not considered in them. Some of the Muslim brotherhood in their exhortatory efforts, while developing this sort of stereotyped apologetics, have seemed more aware of modern difficulties. In 1951 one of them urged al-Azhar to speak of such topics as the dignity of labour, of social questions, of Capitalism, of Marxism, etc. (Sayyid Ḳuṭb, in the review *al-Risāla*, 18 June 1951). The *Mad̲j̲allat al-Azhar* followed this with

several replies (among others, xxiii (1371), 89-95). But the substance of these replies is very brief, and it does not appear that the defenders would have recognised themselves in the picture that has been drawn of them, elementary as it is.—Such a conception of scholarship has given and still gives service, but those Westerners who are in the best position to observe events are struck by its limitations, which Egyptians educated by modern methods also perceive. There is as yet no question at al-Azhar of studies profiting by modern historical methods or broadening themselves under the influence of modern trends of thought. Learning by heart, and storing up pages of texts in the memory, seems to be the essential requirement of students. Some would wish to attribute the cause of this limitation to a withering casuistry in which vital subjects, *e.g.*, divorce, are taken as subjects for abstract logical exercises, wholly oblivious of their human repercussions (see the daily *al-Djumhūriyya* from 9 to 17 January 1954). Others reproach al-Azhar with having always put a brake on any reforms, and of posing as the only defender of Islam, although Islam is a religion based on equality, refusing clericalism, and one in which every intelligent believer has a voice in affairs. Some bodies, such as the State Universities, which have their own courses of Ḳurʾānic exegesis, of Islamic law, of Arabic, etc., would wish to be their own masters and the only judges of such culpable deviation among their students or their teachers as is a matter for internal discipline (case of Muḥ. Aḥmad Khalaf Allāh, 1947-51, see *MIDEO*, i, 39-72). Recently two censures made by al-Azhar have been quashed by the civil tribunals (judgment of 27 May 1950 permitting the reprinting of the proscribed book *Min hunā nabdaʾ* of Muḥ. Khālid Muḥ.; the case of Shaykh Bakhīt in 1955 (*MIDEO*, iii, 46, 8). The Grand National Assembly at Ankara has likewise discussed the question of al-Azhar with regard to according or refusing student status to Turkish subjects who are students there: the final vote was negative (13-16 February 1954).

But, in their turn, Azharīs reproach their adversaries with forgetting the needs of the Muslim community. Few Azharīs would willingly consent to a reduction of their establishment to the status of a Faculty of Higher Religious Studies as was the case with the Zaytūna at Tunis a short while ago. On the contrary, although the prestige associated with the name of al-Azhar has been much diminished in Egypt, it is still as strong as ever abroad. For many Muslims throughout the world, al-Azhar is Egypt. Perhaps the exigences of foreign policy will help to moderate the current of opposition to al-Azhar which exists at the present time in Egypt.

Bibliography: See particularly Ibrāhīm Salāma, *Bibliographie analytique et critique touchant la question de l'enseignement en Égypte depuis la période des Mamelūks jusqu'à nos jours*, Cairo 1938. Besides the references given above, see: Maḳrīzī, *Khiṭaṭ*, Cairo 1326, iv, 49-56; Suyūṭī, *Ḥusn al-Muḥāḍara*, 1299, ii, 183-4; the chronicle of Djabartī and *al-Khiṭaṭ al-Djadīda*, iv, 19-44, of ʿAlī Pasha Mubārak. For the third quarter of the 19th century, see: Sulaymān Raṣad al-Ḥanafī al-Zayyātī, *Kanz al-Djawhar fī Taʾrīkh al-Azhar* (Cairo, c. 1322), and Muṣṭafa Bayram, *Risāla fī Taʾrīkh al-Azhar*, Cairo 1321. For the modern period: Maḥmūd Abu 'l-ʿUyūn, *al-Djāmiʿ al-Azhar, Nubdha fī Taʾrīkhihi*, Cairo 1368/1949, and especially the indispensable Muḥ. ʿAbd al-Munʿim Khafādjī, *al-Azhar fī Alf ʿĀm*, Cairo 1374 (1955), 3 vols., which likewise deals with the ancient documents, and ʿAbd al-Mutʿāl al-Ṣaʿīdī, *Taʾrīkh al-Iṣlāḥ fī 'l-Azhar*, Cairo, n.d., which ends with the end of 1950. This last historical work is one of the most interesting among the abundant literature occasioned by the reforms at al-Azhar; it contains the titles of works studied at al-Azhar since the end of the 19th century. For the organisation of studies, see Vollers, *EI*[1], s.v., E. Dor, *L'instruction publique en Égypte*, 1889, 34 ff., 205ff.; P. Arminjon, *L'enseignement, la doctrine et la vie dans les universités musulmanes*, Paris 1907; also Johs. Pedersen, *Al-Azhar, et Muhammedansk Universitet*, Copenhagen 1922; A S. Tritton, *Materials on Muslim Education in the Middle Ages*, London 1957; J. Heyworth-Dunne, *An Introduction to the History of Education in Modern Egypt*, London 1939; Ibrāhīm Salāma, *L'enseignement islamique en Égypte*, Cairo 1939; ʿAlī ʿAbd al-Rāziḳ, *Min Āthār Muṣṭafā ʿAbd al-Rāziḳ*, Cairo 1957. The French translation of official texts, laws, etc., concerning al-Azhar since 1911, is to be found in *REI*, 1927, 95-118; 465-529; 1928, 47-165, 255-337, 401-472; 1931, 241-276; 1936, 1-43; all preceded by a study by A. Sekaly. The official syllabuses of the different degrees, in conformity with the law of 1936, are printed in separate brochures by the press at al-Azhar (a first series in 1938-45; a reissue with slight modifications in 1953-6). The annual budget is likewise printed; I have consulted *Mīzāniyyat al-Djāmiʿ al-Azhar wa 'l-Maʿāhid al-Dīniyya li-Sanat* 1953-4 *al-Māliyya*, giving the number of teachers distributed according to establishments, standard of courses, etc. (J. JOMIER)

AL-**AZHARĪ**, an ethnic appellation which, in general denotes a person who has studied at the al-Azhar [*q.v.*] University at Cairo.

AL-AZHARĪ, AḤMAD B. ʿAṬĀʾ ALLĀH B. AḤMAD, author of a work on rhetoric, written in 1161/1748 and entitled *Nihāyat al-Iʿdjāz fī 'l-Ḥaḳīḳa wa 'l-Madjāz*. This work, with a commentary by the author's son, is known through the medium of a manuscript which has been described by Ahlwardt; see Brockelmann, II, 287. (C. BROCKELMANN *)

AL-AZHARĪ, IBRAHĪM B. SULAYMĀN AL-ḤANAFĪ, wrote about the year 1100/1688 *al-Risāla al-Mukhtāra fī Manāhī 'l-Ziyāra*, in which he shows that it is contrary to the law, when visiting graves, to touch or kiss them, or lie on them (see Ahlwardt, *Verzeichniss der arab Hss. der Kgl. Bibliothek zu Berlin*, no. 2694). He is also the author of a monograph on the ordinances of *fiḳh* concerning expectoration, and kissing and embracing, entitled *Raḥīḳ al-Firdaws fī Ḥukm al-Riḳ wa 'l-Baws* (*ibid.*, 5596).

Bibliography: Brockelmann, II, 410.

(C. BROCKELMANN *)

AL-AZHARĪ, KHĀLID B. ʿABD ALLĀH B. ABĪ BAKR, Egyptian grammarian, born at Djardjā in Upper Egypt (whence is derived the ethnic appellation al-Djardjāwī which is sometimes applied to him), died at Cairo in 905/1499. He is the author of a grammatical treatise known by the title of *al-Muḳaddima al-Azhariyya fī ʿIlm al-ʿArabiyya* (ed. Būlāḳ 1252, with a commentary by the author; new eds. Būlāḳ 1287 and Cairo 1307, with glosses by various schoolmen). Al-Azharī is also the author of a certain number of manuals of grammar, of a commentary on the commentary of Ibn Hishām on the *Alfiyya* of Ibn Mālik [*q.v.*], and of commentaries on the *Burda* of al-Būṣīrī [*q.v.*] and the Djarrūmiyya. Al-

Azharī enjoyed great renown in his time. Al-Suyūṭī is reckoned as one of his pupils.

Bibliography: Brockelmann, II, 27; Sarkīs, *Muʿdjam al-Maṭbūʿāt al-ʿArabiyya* 811.

(C. BROCKELMANN *)

AL-**AZHARĪ**, ABŪ MANṢŪR MUḤAMMAD B. AḤMAD B. AL-AZHAR, Arab lexicographer born in 282/895 at Harāt, died in the same town in 370/980.

Al-Azharī was a pupil of his compatriot, the lexicographer Muḥammad b. Djaʿfar al-Mundhirī (329/940), who was himself a disciple of Thaʿlab [*q.v.*] and al-Mubarrad [*q.v.*] (see Yāḳūt, *Irshād*, vi, 464 = Cairo ed., xviii, 99 ff.), and seems to have come to ʿIrāḳ whilst still fairly young. At Baghdād he received instruction in grammar from Nifṭawayh, according to Yāḳūt, but came only slightly under the influence of al-Zadjdjādj and Ibn Durayd. If one relies on the lists of Shāfiʿī jurists, given by Yāḳūt, who are supposed to have been al-Azharī's masters, he must have had a thorough knowledge of Shāfiʿī law. In 312/924, he was returning from Mecca to Kūfa with the pilgrim caravan, when they were attacked by the Ḳarāmiṭa [*q.v.*] at al-Habīr and partly massacred or taken prisoner. Al-Azharī spent two years as a prisoner of the Bedouins of Baḥrayn who were converted to Carmathianism. In a passage cited by Yāḳūt and Ibn Khallikān, he describes how he took advantage of his sojourn among these nomads to study their language, which according to him, was very pure. The rest of his life remains a mystery for us and seems to have been spent in his birthplace in study and retirement.

Al-Azharī's work is known to us by a list containing fourteen titles provided by Yāḳūt and Ibn Khallikān (reproduced in part by al-Suyūṭī, *Bughyat al-Wuʿāt*, 8); with the exception of his commentaries on the *Muʿallaḳāt* and the *Dīwān* of Abū Tammām, these are lexicographical studies. Among these works, a dictionary has come down to us (ten volumes in Ibn Khallikān's time) entitled *Tahdhīb al-Lugha*. The work has still not been edited; there are MSS. of it in London, Istanbul and in India; see list in Brockelmann. This is a compilation made by means of the materials, which al-Azharī received from his master al-Mundhirī; Yāḳūt, *Irshād*, *loc. cit.*, even speaks of a *riwāya* of a dictionary of al-Mundhirī. The essential feature of the work is that it continues the tradition initiated by Khalīl in his *Kitāb al-ʿAyn*; the roots are not arranged in the usual alphabetical order, but in accordance with a phonetic classification, commencing with the "gutturals" and ending with the labials. The *Tahdhīb* was copiously used by Ibn Manẓūr in his *Lisān al-ʿArab*.

Bibliography: Yāḳūt, *Irshād*, vi, 197-9 = Cairo ed., xvii, 164-7; Ibn Khallikān, Cairo ed., 1310, i, 501 = ed. Muḥyi 'l-Dīn, Cairo 1948, iii, 458-62; Zettersteen, in *MO*, xiv (1920), 1-106; Kraemer, in *Oriens*, vi (1953), 213; Brockelmann, i, 129, *S* i, 197.

(R. BLACHÈRE)

ʿAẒĪM ALLĀH KHĀN, said to have been the brain of the political upheaval (known as the Mutiny) of 1857 in India, came of a poor Pathān family which had settled in Cawnpore long before the famine of 1837-8 (George Dunbar, *A History of India from the Earliest Times to the Present Day*, London 1943[3], ii, 483). An orphan, saved from starvation by a Christian missionary, he began life as a *khidmatgār* in an Anglo-Indian family of Cawnpore (Mowbray Thompson, *The Story of Cawnpore*, London 1859, 54; G. O. Trevelyan, *Cawnpore*, London 1907, 58), who sent him to school, where he learnt English and French, and acquired high proficiency in both. Soon after completing his education he joined the same school as a teacher. On the request of Nānā Ṣāḥib, adopted son of Bādjī Rāo II, the last of the Pēshwās, he entered his service as a private tutor and English secretary. He soon found favour with Nānā who appointed him as his political adviser. Following the death of Bādjī Rāō II in 1851, Nānā Ṣāḥib succeeded to his title, pension and estate but the Governor-General of India, Lord Dalhousie, discontinued his pension and refused to recognise him. Thereupon ʿAẓīm Allāh Khān prepared a memorial for his master which was submitted to the British authorities in 1852. It was, however, rejected by the Court of Directors of the East India Company. In 1853 ʿAẓīm Allāh Khān left for England to plead Nānā's case personally. Here he failed in his mission, but through the charm of his personality he won the heart of many ladies who continued to write him scores of letters even after his return to India in 1855. These letters were later published in two vols., *The Indian Prince and the English Press* and *Love Letters*, which were soon proscribed (Trevelyan, 59). On his way back from England, ʿAẓīm Allāh Khān visited Paris, Constantinople, Sebastopol and the theatre of war in the Crimea (Russell, *My Diary in India*, London 1860, 165-7).

A frustrated and disillusioned man, having spent £50,000 on his fruitless mission to England and anxious to continue in the favour of his master, ʿAẓīm Allāh Khān suggested to Nānā the overthrow of the British power in India through a military *coup d'état*. With this aim in view he visited, early in 1857, along with Nānā, military stations in northern India but met with little success. Some Indian princes falsely promised help to Nānā's emissaries sent out at the instance of ʿAẓīm Allāh Khān, who himself took part in many of the lost actions which his master subsequently fought against the British. On the fall of Bithūr, Nānā's stronghold near Cawnpore in Dhu 'l-Ḳaʿda Dhu 'l-Ḥidjdja 1273/July 1857, he disappeared from the scene, never to be heard of again. He is said to have died in Rabīʿ I-II 1276/October, 1859 at Bhuṭwāl (Nēpāl) where he had fled along with the other leaders of the Revolt. His end, however, like his origin, still remains shrouded in mystery.

(A. S. BAZMEE ANSARI)

ʿAZĪMA (A.), literally: "determination, resolution, fixed purpose"; thence:

1. In religious law, an ordinance as interpreted strictly, the opposite of *rukhṣa*, an exemption or dispensation (e.g. the dispensation from observing the dietary laws, if there is danger to health or life). ʿAbd al-Wahhāb al-Shaʿrānī, in his *Kitāb al-Mīzān al-Kubrā*, consistently explains the divergent opinions of the several schools of religious law as expressing these two complementary tendencies. Cf. Goldziher, in ZDMG, 1884, 676 f.; idem, *Die Ẓâhiriten*, Leipzig 1884, 68 f.

2. In magic, an adjuration, or the application of a formula of which magical effects are expected. Cf. Goldziher, in *Orientalische Studien Theodor Nöldeke ... gewidmet*, Giessen 1906, i, 307.

(I. GOLDZIHER*)

AZIMECH [see NUDJŪM].

AL-ʿ**AẒĪMĪ** (Muḥ. b. ʿAlī b. Muḥ., Abū ʿAbd Allāh al-Tanūkhī, called ~) (483/1090-post 556/1161), chronicler of Aleppo. A full but dry universal history—mainly Syrian—by him, which extends to the year 538/1143-44 (published by me—from the year 455/1063—in *JA*, 1938, 353-448), has come down to us, but in addition, he composed above all a great *History of Aleppo* which was used copiously especially by Kamāl al-Dīn b. al-ʿAdīm and Ibn Abī Ṭayyī (the latter up to 556/1161). The interest of the portions of al-ʿAẓimi's work which have been preserved does not reside in their intrinsic value, but rather in the fact that they are the only texts which escaped the destruction of North Syrian historiography between the middle of the 5th/9th century and that of the 6th/12th century; they thus enable us, to a certain extent, to complete or criticise the great works of the following century, on which we are dependent for the history of this period, by bringing us closer to their sources: a necessary test in view of the changes which had taken place in the meantime in the Syrian moral and social climate.

Bibliography: Mukrimin Halil (Yinanç), *XII asır tarihcileri ve muverrihi Azimi*, in *Ikinci Türk Tarih Kongressi Neşriyatı*, 1937; Cl. Cahen, preface to the edition cited above, and *La Syrie du Nord à l'époque des Croisades*, 1940, 42-3.

(CL. CAHEN)

AZIMUT [see AL-SAMT].

AL-ʿ**AZĪZ** [see AYYŪBIDS].

AL-ʿ**AZĪZ BIʾLLĀH** NIZĀR ABŪ MANṢŪR, fifth Fāṭimid Caliph and the first whose reign began in Egypt. He was born on 14 Muḥarram 344/10 May 955 and had been designated as his successor by his father al-Muʿizz after the death of his brother ʿAbd Allāh in 364/974. He succeeded his father on 11 Rabīʿ II 365/18 December 975 (or 14 Rabīʿ II/21 December) after the latter had had him recognised as his successor by his family and dignitaries on the preceding day. The official proclamation, however, only took place on 10 Dhu ʾl-Ḥidjdja 365/9 August 976.

The sources describe him as tall, with red hair and blue eyes, generous, brave, fond of horses and hunting and very humane and tolerant in disposition. He was an excellent administrator, subjected the State finances to a rigorous supervision, introduced the system of fixed salaries for officials, whom he forbade to accept bribes and presents, and issued an order that no payments should be made except on the production of written documents. He was the first to assign fixed rates of pay to his troops and palace personnel. He was, moreover, the first of the Fāṭimid Caliphs to employ Turks in the army, a practice which was later to be fraught with serious consequences.

He was well supported by his minister Yaʿḳūb b. Killis, the director of taxation, to whom in 368/979 he gave the title of *wazīr*, previously unknown to the Fāṭimids, and who remained *wazīr* until his death in 380/991, with two short periods in disgrace, one because he was accused of having had the Turk Alptakīn (Alptegin; see below) poisoned in 368/979, and the other in 373/984 when he was imprisoned and had his possessions confiscated, perhaps because of the famine which broke out in that year, but two months later he recovered his liberty, possessions and offices. It was to Ibn Killis that al-ʿAzīz's finances owed their prosperity. He also played an important literary rôle, according pensions to the men of letters, lawyers and poets whom he gathered round himself, and composed a book of Ismaʿīlī Law based on pronouncements by al-Muʿizz and al-ʿAzīz.

The *wazīrs* who succeeded him did not remain as long in office. These were ʿAlī b. ʿUmar al-ʿAddās, Abu ʾl-Faḍl Djaʿfar b. al-Furāt in 381/992, al-Ḥusayn b. al-Ḥasan al-Bāziyār, Abū Muḥammad b. ʿAmmār, al-Faḍl b. Ṣāliḥ, who had been a collaborator of Ibn Killis, and lastly in 385-386/995-996, the Christian ʿĪsā b. Nesṭūrus, formerly Secretary for Finance. Another important officer of al-ʿAzīz was the Jew Manashshā (Manasseh), Secretary for Syria.

The employment of a Christian and a Jew in high offices was in keeping with the spirit of toleration of the Fāṭimids in matters of religion and race. Al-ʿAzīz was still further inclined to toleration, being influenced by his Christian wife, the mother of his son and successor al-Ḥākim. This Princess's two brothers were indebted to his influence and to the Caliph's recommendation for being appointed, the one, Orestes, Patriarch of Jerusalem, and the other, Arsenius, Metropolitan of Miṣr and Cairo in 375/986. The Christians, throughout his reign, enjoyed great freedom. The Coptic Patriarch Ephraim, in spite of strong Muslim opposition, obtained permission to rebuild the Church of Abu ʾl-Sayfayn (St. Mercurius) near al-Fusṭāṭ. The Caliph looked favourably on the controversies between the Bishop of Ashmunayn, Severus b. al-Muḳaffaʿ and the ḳāḍī Ibn al-Nuʿmān, president of the Court of *Maẓālim*. He refused to take action against a Muslim who had become a Christian convert. This policy was bound to cause considerable discontent among the Muslims, and tracts were circulated against Manasseh and Ibn Nesṭūrus. To appease the Muslims, the Caliph had the Jew and the Christian imprisoned, but as it was difficult to do without their services, they soon re-established their position. In 386/996, this discontent provoked a popular movement against the Christians, following the burning of the fleet, of which some merchants from Amalfi were accused; the latter were massacred and several churches were looted.

Though al-ʿAzīz was tolerant towards Christians and Jews, he was less so towards the Sunnī Muslims. He followed a strict Ismaʿīlī policy (defamatory inscriptions for the companions of the Prophet; suppression of the *ṣalāt al tarāwīḥ* of Ramaḍān in 372/982; the punishment in 381/991 of a man who had in his possession the *Muwaṭṭaʾ* of Mālik). In 366/976, he inaugurated in Cairo the mourning ceremonies on the feast of the ʿĀshūrāʾ. On the other hand, however, the holding of solemn processions on the Fridays in Ramaḍān and the distributions of sweetmeats at the feast ending the fast (*fiṭra*) are due merely to his love of display.

The reign of al-ʿAzīz was in fact a period of luxury. His fondness for precious stones, cut glass

ware, rich materials of *dabīḳī* and of *siḳlaṭūn*, rare animals, truffles and sea fish etc. (once cherries from Baʿalbakk were brought to him by carrier pigeons), involved great expenditure which made necessary the rigorous handling of the finances referred to above, but at the same time it contributed to the economic resurgence of Egypt. Ibn Killis his *wazīr*, who received a salary of 100,000 dinars, also lived in great style. Al-ʿAzīz also spent a great deal on buildings like the Ḳaṣr al-Dhahab, the Ḳaṣr al-Baḥr, parts of the group of buildings known under the name of Great Palace, the Mosque of al-Ḳarāfa and that called the Mosque of al-Ḥakīm, which however was started by al-ʿAzīz.

The foreign policy of al-ʿAzīz was really only active in Syria. In North Africa, he confirmed Yūsuf Bulukkīn in his office. The latter's son, al-Manṣūr (373-386/984-996), however, likewise confirmed by the Caliph, was by no means docile; he did not hesitate to go to war against the Kutāma, in spite of the Caliph's disapproval, and progressively detached himself from Egypt. Similarly in Sicily, the Caliph confined himself to bestowing the investiture, after the event, on amīrs of the Kalbite family. He entertained diplomatic relations with the Buwayhid ʿAḍud al-Dawla who, according to Hilāl al-Ṣābiʾ (in Sibṭ Ibn al-Djawzī) is said to have taken the initiative in the matter. The letter of ʿAḍud which has been preserved, seems to indicate that he recognised the Fāṭimid's sovereignty, but this seems doubtful, for, according to Ibn Ẓāfir, ʿAḍud al-Dawla disputed the official Fāṭimid genealogy.

Al-ʿAzīz's principal aim was to ensure his possession of Southern and Central Syria, and latterly that of the Amīrate of Aleppo, so as to realise his dreams of expansion at the cost of Byzantium and the ʿAbbāsids. In Southern Palestine, the Bedouin chief Mufarridj b. Daghfal al-Ṭāʾī, master of Ramla, was not readily submissive to the Caliph's orders. In Damascus, the Turk Alptakīn, who came from Baghdād, had installed himself in 364/975 and had proclaimed the sovereignty of the ʿAbbāsids, whilst al-Muʿizz had been unable to expel him from the city. Al-ʿAzīz determined to retake Damascus from Alptakīn, who had allied himself with the Ḳarāmiṭa, the enemies of the Fāṭimids. In 365/976, he sent an army against him under the command of Djawhar. After two months of fighting before Damascus, however, Djawhar, faced by the arrival of the Ḳarāmiṭa, had to withdraw towards Tiberias and then to Ramla and ʿAsḳalān. Here he was besieged, had to negotiate, cede the territory from Damascus to ʿAsḳalān to Alptakīn, and suffer the humiliation of making his exit from the place passing beneath a sword and a lance hung over the gate (367/978). The Caliph reacted and marched in person against Alptakīn, whom he defeated and captured (Muḥarram 368/August 978). But he was obliged to pay an annual tribute to the Ḳarāmiṭa to secure their withdrawal. Against all expectations, he showed Alptakīn every consideration, took him into his service with his Turks and covered him with honours. However, Alptakīn died shortly after from the effects of poison, a victim of Ibn Killis's hate.

In spite of this, Damascus did not remain in the possession of the Caliph, for shortly after it fell into the hands of one of Alptakīn's former auxiliaries, Ḳassām, a navvy by origin. An army, commanded by one of Ibn Killis's favourites, Faḍl b. Ṣāliḥ, was sent against him, but proved useless and Faḍl had to return to Palestine. At that time, the Ḥamdānid Abū Taghlib, who had been evicted from Mawṣil, and had got into communication with the Caliph, was in Palestine after having tried unsuccessfully to take Damascus, and was regarded with hostility by Mufarridj b. Daghfal. The latter, fearing lest al-ʿAzīz might give his favour to Abū Taghlib at his expense, launched an attack against him, and the Ḥamdānid fell into his hands and was put to death in 369/979. The Fāṭimid general played an equivocal rôle in the affair. Ḳassām and Mufarridj successfully resisted further Fāṭimid expeditions, notably that led by Salmān b. Djaʿfar b. Falāḥ, and it was only in 372/982 that the Turkish general Yaltakīn mastered the two of them. Mufarridj, defeated, fled to Ḥimṣ, and from there he made for Antioch, where he placed himself under the protection of the Byzantines. Ḳassām surrendered and was sent to Cairo at the beginning of 373/983.

Al-ʿAzīz, however, was still attracted by the idea of taking Aleppo, although Ibn Killis, considering a nominal recognition of Fāṭimid sovereignty by the Ḥamdānid as sufficient, persuaded him against it, and thought he could make the Ḥamdānid governor of Ḥimṣ, Bakdjūr, the instrument of his ambitious designs. He offered him the government of Damascus and the support of his troops in his rebellion against the amīr of Aleppo, Saʿd al-Dawla. Bakdjūr proceeded to invest Aleppo in 373/983. However, the Byzantine general Bardas Phocas came to the assistance of Aleppo. Mufarridj, who was in the Byzantine army and in correspondance with Bakdjūr, gave him warning. The latter fled, not stopping at Ḥims, which was entered by Bardas Phocas and halted at the frontiers of the Fāṭimid territory. The Caliph, faithful to his promise, gave him the government of Damascus. He was joined by Mufarridj. The intrigues of Ibn Killis, who distrusted Bakdjūr and Mufarridj, and who made several attempts to rid himself of Bakdjūr, led finally to his being expelled from Damascus by a Fāṭimid army in 378/988. He took refuge at Raḳḳa. After the death of Ibn Killis in 380, Mufarridj obtained the Caliph's pardon and Bakdjūr once again won al-ʿAzīz over to the idea of a conquest of Aleppo. The Caliph promised him the support of the garrison of Tripoli. However, at the instigation of the secretary Ibn Nesṭūrus, whom Bakdjūr had made ill-disposed toward himself, the Fāṭimid general abandoned Bakdjūr at the decisive moment in the fighting against Saʿd al-Dawla, so that he was defeated and handed over to the Ḥamdānid in 381/991, being then put to death. After his victory, Saʿd al-Dawla threatened to invade al-ʿAzīz's realm. Death prevented him from putting his plan into execution.

The Caliph was once again urged to undertake the conquest of Aleppo by the former secretary of Bakdjūr, ʿAlī b. al-Ḥusayn al-Maghribī, who had taken refuge in Egypt, as well as several amīrs who had left the Ḥamdānid Abu 'l-Faḍāʾil. From 382/992 until his death, al-ʿAzīz methodically pursued his attempts to take Aleppo, but without any success, owing to the support given by the Byzantines to their dependant, the amīr of Aleppo. The first attempt, led by the Turkish general Mangūtakīn, supported by Ibn al-Maghribī, was marked by an unsuccessful siege of Aleppo, though there were successful engagements fought to the north of Aleppo against the Byzantine governor of Antioch, Burtzes (al-Burdjī), whom the Emperor Basil II, informed by Ḥamdānid messengers when in Bulgaria, had instructed to intervene. At the end of 382 (end of 992 or beginning of 993), Mangūtakīn, without

authorisation from the Caliph and at the instigation of al-Maghribī, who was dismissed for that reason, raised the siege and returned to Damascus. After the consolidation of Fāṭimid territorial gains south of the amīrate of Aleppo, a second attempt took place in 384/994. There was a first period of siege lasting two months, then Mangūtakīn was obliged to march against Burtzes, and routed him at the ford of the Orontes in September 994, after which he resumed the siege, which lasted until May 995 and was only lifted on the arrival after forced marches of the Emperor Basil II in person, whom the Ḥamdānid messengers had again gone to summon from the Bulgarian front. The Emperor saved Aleppo, but did not succeed in adequately ensuring the defence of the advance positions of the amīrate of Aleppo against the Fāṭimids, for though he placed a garrison at Shayzar, he was unable to take Tripoli. Al-ʿAzīz resolved to intensify the struggle and the close of the year 385/995 and the beginning of 386/996 were marked by great military and naval preparations in Egypt.

The navy built by Ibn Nesṭūrus having been accidentally set on fire (see above), a new navy was immediately called into existence and sent against Anṭarṭūs, a Byzantine stronghold, to which Mangūtakīn, after having executed in the spring of the year 996 several incursions in the direction of Antioch and Aleppo, was laying siege. The intervention of the Byzantine troops from Antioch caused the operation to fail, but the southern region of the amīrate of Aleppo remained under Fāṭimid influence. The Caliph decided to take the field in person, and set out to place himself at the head of his armies, accompanied by the coffins of his ancestors, like al-Muʿizz on his departure from Africa. However, he fell ill and died at Bilbays on 28 Ramaḍān 386/14 October 996.

Al-ʿAzīz was certainly the wisest and the best of all the Fāṭimid Caliphs of Egypt. Though he did not realise all his aims, it was, nevertheless, during his reign that the domination of the Fāṭimids reached, at least nominally, its greatest extent, for the *khuṭba* was read in his name from the Atlantic Ocean to the Red Sea, in the Yemen, in Mecca and, on one occasion, even at Mawṣil under the ʿUḳaylid ruler.

ʿAZĪZ EFENDĪ [see ʿALĪ ʿAZĪZ GIRIDLĪ].

ʿAZĪZ MIṢR, the mighty one of Egypt. In the Kurʾān (xii, 30, 51) the title al-ʿAzīz is given to the unnamed Egyptian who buys Yūsuf. In later legend and commentary he is called Kiṭfīr [*q.v.*], from the Biblical Potiphar. The title al-ʿAzīz seems to connote the office of chief minister under Pharoah, as the same title is applied to Yūsuf himself when he reaches that position (Kurʾān, xii, 78, 88). In some of the Arabic dictionaries the term is defined as meaning the ruler of Egypt (Miṣr) and Alexandria (Lane, *s.v.*). In Ottoman texts the epithet ʿAzīz Miṣr is sometimes applied to the Mamlūk sultans of Egypt (*e.g.*, in the headings of the *Munshaʾāt-i Salāṭīn* of Ferīdūn), but does not appear to have formed part of their official titles. An attempt was made to bring the title into official use during the negotiations between Ismāʿīl Pasha, the viceroy of Egypt, and Sulṭān ʿAbd al-ʿAzīz, which culminated in 1867 with the granting by the Sultan to the pasha of the title of Khedive. Ismāʿīl, who already enjoyed hereditary status by virtue of the ferman of 1841, was anxious to obtain a special title which would indicate his superiority to the other pashas of the Ottoman Empire, and proposed the title ʿAzīz Miṣr. According to the Ottoman Minister of Internal Affairs of that time, Memdūḥ Pasha, this proposal was not acceptable, in part because the suggested title coincided with the Sultan's own name.

Bibliography: Memdūḥ Pasha, *Mirʾāt-i Shuʾūnāt*, Izmir 1328, 34-5; E. Dicey, *The Story of the Khedivate*, London, 1902 38. (B. LEWIS)

ʿAZĪZĪ, Ottoman poet, died in 993/1585. His name, according to some, was Muṣṭafā, according to others, Meḥemmed. He lived in Istanbul, near the Castle of the Seven Towers (Yedi Ḳule), as a bookbinder and, presumably later, as the warden of the guards of the castle. He died there and was buried in the large cemetery outside the city walls, near Yedi Ḳule. His portrait in ʿĀshiḳ Čelebi's *tedhkire* (ʿAlī Emīrī

no. 772) shows him with a white beard. Among the poets his contemporaries who used the *nom de plume* ʿAzīzī he was the most famous.

All his biographers found it noteworthy that, in contrast to the works of most of the other poets of his time, his poetry was inspired not by boys, but by women. This reputation seems to have derived from his most famous poem, a *shehrengiz* on the courtesans of Istanbul, entitled *Rengīn-nāme*, which is remarkable for its lively style and bold use of idiomatic expressions and proverbs; each of the 49 beauties is described, in a set of three couplets, with images befitting her name or nickname. Other poems by him are found scattered in *tedhkires* and anthologies.

Bibliography: Gibb, *Ottoman poetry*, iii, 179-86 (1904), with English translation of 12 stanzas of the *shehrengiz*; Sadeddin Nüzhet Ergun, *Türk şairleri*, ii, 632-37 (about 1938), containing passages on ʿAzīzī from various *tedhkires*, and several of his scattered poems; İstanbul Üniversite Kütüphanesi, Turkish MSS. no. 9492, is a complete copy (dated 1304/1886-87) of the *Rengīn-nāme*; article in *IA*. (A. TIETZE)

ʿAZĪZĪ [see KARAČELEDI-ZĀDE].

ʿAZL, *coitus interruptus*. According to the *ḥadīth* this practice was not unknown to the ancient Arabs, and the Messenger of God did not declare it to be *ḥarām*. The doctors of the Law agree that the master can practise it with his slave concubine unconditionally, and the husband with his wife; in the latter case, however, there is controversy on the question whether the wife's permission is necessary. According to al-Ghazālī, although *ʿazl* is not in conformity with the general spirit of marriage, it is not forbidden, and is at the most only mildly reprehensible: it may also be practised with a view to ensuring, for example, that the consequences of a confinement do not imperil the husband's "continued enjoyment of marital rights"; with greater justification, and although it is preferable to leave the matter trustingly in God's hands, "the fear of incurring great financial hardship on account of the size of one's family" renders this contraceptive practice admissible.

Book xii, "On Marriage", has been translated into German by Bauer, and into French by Bercher and Bousquet. See also G. H. Bousquet, *La Morale de l'Islam et son Ethique sexuelle*, 137-140.

(G. H. BOUSQUET)

ʿAZL, dismissal [see SUPPLEMENT].

ʿAZMĪ-ZĀDE MUṢṬAFĀ, Ottoman poet and stylist, as a poet known under the name of Ḥāletī. Born in the so-called *laylat al-berāt* in Istanbul on 15 Shaʿbān 977/23 Jan. 1570. He was the son of ʿAzmī-Efendi, who was the well-known and well-respected tutor of Murād IV as well as a poet, writer, and translator (died 990/1582). As a pupil of Saʿd al-Dīn [*q.v.*] who became famous as a historian, he studied law, and to him he owed his special love for historical investigation. He became *müderris* at the *madrasa* of Ḥādjdjī-Khātūn in Istanbul, but in 1011/1602-3 he was transferred to Damascus as a judge. Two years later he went to Cairo in the same capacity. When Dāmād Ibrāhīm-Pasha (cf. Hammer-Purgstall, iv, 136 ff.) the governor of Egypt, was killed in a military rising in Cairo, ʿAzmī-zāde (who had occasionally represented him) was dismissed because of his lack of prudence, and soon afterwards (1015/1606-7) he was moved as Mulla to Brusa. As a reward for his good services in the fight against the ʿAlīd rebel Ḳalender-oghlu, he became Mullah of Adrianople in 1020/1611-2. His behaviour when a judge was punished for wrong-doing led to his transfer to Damascus where, however, he remained only until 1023/1614, to go from there to Istanbul as a judge. This important office he held for four years. Subsequently he was sent to the provinces once again, this time to Cairo. In Rabīʿ II 1030/Feb.-March 1621, he next became a military judge in Anatolia and in Rabīʿ I 1037/Nov. 1627, in Rumelia, after he had again been without office (*maʿzūl*) since Dhu 'l-Ḳaʿda 1032/Sept. 1623. This last post, too, he held only for a short time. He was dismissed in Ramaḍān 1038/April-May 1629, and moved to the school attached to the Sulaymāniyya mosque (*dār al-ḥadīth*) in Istanbul. He died soon afterwards (26 Shaʿbān 1040/30 March 1631), and is buried in the courtyard of his school, not far from his house in Sofular Čarshusu.

As the poet Ḥāletī, ʿAzmī-zāde achieved fame because of his *dīwān*, his *Sāḳī-nāme*, and his quatrains (*rubāʿī*), and he was known as the Turkish ʿUmar Khayyām by his successors. He was very widely read and left a library of manuscripts of some 4000 volumes, all of which are annotated in his own hand. The library was dispersed. None of his works has yet been printed, and his poetry deserves a fuller critical appreciation. ʿAzmī-zāde's *Sulaymān-nāme* would appear to have nothing to do with the sultan Sulaymān the Magnificent; the contents stands in need of an examination (there is a manuscript in the Esʿad-Efendi library in Istanbul (No. 2284, cf. *GOW*, 76)). The best example of his skill in prose is his *Munshaʾāt*, of which there is a manuscript in the Ḥamīdiyya library in Istanbul (No. 599). There is another one in London, in the British Museum (Or. 1169, cf. Rieu, 96b.) with a reference to a further manuscript in Vienna (National-bibliothek) containing only 13 letters (cf. G. Flügel, catalogue I, 265), Cf. also Hammer Purgstall, iv (1828), viii.

Hammer, *GOD*, iii (1837), 214 ff.; Gibb, *Ottoman Poetry*, iii, 221 ff.; Brūsalī Meḥmed Ṭāhir, *ʿOthmanlī Müellifleri*, ii (1333), 311 f. Briet notices in Hammer-Purgstall, iv (1829), 629, based on ʿAṭāʾī. (F. BABINGER)

AL-AZRAḲĪ ABU 'L-WALĪD MUḤAMMAD B. ʿABD ALLĀH B. AḤMAD, historian of Mecca and of its sanctuary. The ancestor of the family was a Byzantine (*Rūmī*) slave of Kalada or al-Ḥārith b. Kalada in al-Ṭāʾif, called al-Azraḳ on account of his blue eyes. According to Ibn ʿAbd al-Barr (*Istīʿāb*, *s.v.* Sumayya), he married Sumayya, the mother of Ziyād b. Abīhi. During the siege of al-Ṭāʾif in 8/630 al-Azraḳ went over to Muḥammad, was freed, and settled at Mecca. His descendents rose to power and influence and married into the Umayyad aristocracy. In order to obliterate their humble origin they pretended to belong to the clan of ʿIkabb of the Banū Taghlib (Ibn Saʿd, iii/1, 176) but later, when the antagonisms between Ḳays and Yaman

became prominent, they were persuaded by the Khuzāʿa to join the Yamanite camp by maintaining that al-Azraḳ was the son of ʿAmr b. al-Ḥārith b. Abī Shamir and hence a member of the royal family of the Ghassānids (Ibn Saʿd, l.c.; see also al-Azraḳī 458, and 460).

A great-great-grandson of al-Azraḳ was Aḥmad b. Muḥ. b. al-Walīd b. ʿUḳba, d. 222/837 (Ibn Saʿd v, 367; al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, i, 222; Ibn Ḥadjar, *Tahdhīb*, i, 79). He was interested in the history of Mecca and its sanctuary and gathered from Sufyān b. ʿUyayna, the *muftī* Saʿīd b. Sālim, the *faḳīh* al-Zandjī, Dāwūd b. ʿAbd al-Raḥmān al-ʿAṭṭār and other Meccans a huge mass of relevant information. His materials were utilised and considerably enlarged by his grandson Abu 'l-Walīd, the author of *Akhbār Makka*. The traditions collected in this book go back in the main to the so-called school of Ibn ʿAbbās and represent its doctrines and Ḳurʾānic exegesis. With regard to the legendary history of Mecca in pre-Islamic times Ibn Isḥāḳ, al-Kalbī and Wahb b. Munabbih are also quoted. The topographical description is in the main the work of Abu 'l-Walīd. Abu 'l-Walīd transmitted the book to the "reader" Abū Muḥammad Isḥāḳ b. Aḥmad al-Khuzāʿī (a descendent of ʿUmar's governor of Mecca Nāfiʿ b. ʿAbd al-Ḥārith) d. 308/921, who made many additions, especially about the renovations of the Kaʿba in 281-4/894-7, and transmitted the book to his grand-nephew Abu 'l-Ḥasan Muḥammad b. Nāfiʿ al-Khuzāʿī, d. after 350/961 (who made only three additions). This is the text that was printed by Wüstenfeld, *Die Chroniken der Stadt Mekka*, i, Leipzig 1858.

Azraḳī's book was plagiarised c. 272/885-6 by Muḥammad b. Isḥāḳ al-Fākihī (see Wüstenfeld, *op. cit.*, i, xxiv-xxix and ii, i). It was also utilised by Saʿd al-Dīn Saʿd Allāh b. ʿUmar al-Isfarāʾinī c. 762/1361 in his *Zubdat al-Aʿmāl* (see Rieu, *Supplement*, nr. 575). Al-Kirmānī wrote in 821/1418 a *Mukhtaṣar Taʾrīkh Makka* (autograph in Berlin, Ahlwardt no. 9752).

Bibliography: For Azraḳ see also Ibn Ḳutayba, *Handbuch*, 131; Ṭabarī, iii, 2315, 2 and *Iṣāba s.vv.* al-Azraḳ and Sumayya Umm ʿAmmār. For Abu 'l-Walīd al-Azraḳī see *Fihrist*, 112; Samʿānī 28a; Brockelmann, S I, 209. J. W. Fück, *Der Ahn des Azraqi* (*Studi Orientalistici in onore di G. Levi Della Vida*, i, 336-40). (J. W. Fück)

AZRAḲĪ, Zayn al-Dīn Abū Bakr b. Ismāʿīl al-Warrāḳ, Persian poet who, according to Ethé, died in 527/1132-33 or in 524/1130; but Mīrzā Muḥammad Ḳazwīnī has shown (*Čahār Maḳāla*, 175 ff.) that he died certainly before 465/1072-3. He wrote a *Dīwān* which, among other poems, contains panegyrics on Ṭughānshāh b. Alp Arslan, the governor of Harāt (not, as is often stated, of Nīshāpūr), and on Amīrānshāh, the son of Ḳāwurd [*q.v.*], the first Saldjūḳid sultan of Kirmān. His verses comprise outstanding *ḳaṣīdas* and *ḳiṭʿas*; he excels in descriptive poetry but is sometimes exaggerated in his praise, and he is not free from far-fetched and affected comparisons. It seems improbable that he is also, as Ḥādjdjī Khalīfa and others assert, the author of the *Sindbād-nāma* and of an obscene book entitled *Alfiyya wa-Shalfiyya*.

Bibliography: ʿAwfī, *Lubāb*, ii, 86 ff.; Dawlatshāh, 72 ff.; Niẓāmī-i ʿArūḍī, *Čahār Maḳāla* (ed. Ḳazwīnī), 44, 170 ff. (trans. Browne, 123-125 and index); Djāmī, *Bahāristān*, chapter vii (trans. Massé, 172); Houtsma, *Recueil*, i, 14 ff.; Ethé, *Gr. I. Phil.*, ii, 258; Browne, ii, 323. (H. Massé)

AZRAḲITES [see azāriḳa].

AZULEJO [see khazaf].

ĀZURDA, Ṣadr al-Dīn Khān b. Luṭf Allāh, Indian writer of Kashmīrī extraction, was born in Delhi in 1204/1789. He learnt the traditional sciences from Shāh ʿAbd al-ʿAzīz and Shāh ʿAbd al-Ḳādir [*qq.v.*] and the rational sciences from Faḍl-i Imām of Khayrābād, whom he succeeded in 1243/1827 as the last grand *muftī* and *ṣadr al-ṣudūr* of Imperial Delhi. In addition to his proficiency in various branches of knowledge he was a great authority on the Urdū language, and celebrated poets like Ghālib and Muʾmin often invited his opinion on their compositions. Before the Mutiny his house in Matyā Maḥall, Delhi, was the favourite meeting-place of scholars and poets. (He was the first to prescribe the *dīwān* of al-Mutanabbī as one of the courses of study in India.) Suspected of complicity in the Mutiny of 1857, he was gaoled. His property, including his large private library, was confiscated and auctioned. After his release his property, but not his library, was restored to him. He had many pupils. Before his appointment as *ṣadr al-ṣudūr* he served as a tutor to Yūsuf ʿAlī Khān, ruler of Rāmpūr (1855-65). His other pupils included: Ṣiddīḳ Ḥasan Khān [*q.v.*]; Faḳīr Muḥammad Lāhōrī, author of *Ḥadāʾiḳ al-Ḥanafiyya*, and Abu 'l-Khayr, father of Abu 'l-Kalām Āzād. He was struck with paralysis in 1862 and died six years later on 24th Rabīʿ I 1285/15th July, 1868 and was buried in Delhi.

Among his works, some of which perished during the Mutiny, are two tracts in Arabic: *Muntaha 'l-Maḳāl fī Sharḥ Ḥadīth lā Tashudd al-Riḥāl*, in refutation of the arguments of Ibn Taymiyya and others to prove that visits to the shrines of saints and divines are unlawful; *al-Durr al-Manḍūd fī Ḥukm Imraʾt al-Mafḳūd*. He is also the author of a short biographical work on Urdū poets entitled *Tadhkira-i Mukhtaṣar dar Ḥāl-i Rekhtagūyān-i Hind* (Browne, *Suppt.*, 304). Some of his poems were reproduced by (Sir) Sayyid Aḥmad Khān in the *Āthār al-Ṣanādīd*[1], Delhi 1846, 72-114.

Bibliography: Faḳīr Muḥammad Lāhōrī, *Ḥadāʾiḳ al-Ḥanafiyya*[2], Lucknow 1906, 93-4; Ṣiddīḳ Ḥasan Khān, *Abdjad al-ʿUlūm*, Bhopal 1295, 917; Muẓaffar Ḥuṣayn "Ṣabā", *Rūz-i Rawshan*, Bhopal 1297, 70-3; Raḥmān ʿAlī, *Tadhkira-i ʿUlamāʾ-i Hind*[2], Lucknow 1914, 93-4; Muṣṭafā Khān Shēfta, *Gulshan-i Bēkhār*, Delhi 1846, 10-1; Ghawth Muḥammad Khān, *Sayr-i Muḥtasham*, Delhi 1851, 247-8; Nūr al-Ḥasan Khān, *Tadhkira-i Ṭūr-i Kalīm*, Agra 1298, 6; ʿAbd al-Ghafūr Khān "Nassākh", *Sakhun-i Shuʿarāʾ*, Lucknow 1291, 23; Imtiyāz ʿAlī "ʿArshī", *Makātīb-i Ghālib*, Bombay 1937, 62; Ghulām Rasūl Mehr, *Ghālib*[4], Lahore 1947, 278-85; ʿAbd al-Ḥaʾiy Lakhnawī, *Nuzhat al-Khawāṭir* (MS), vii, s.v.; idem, *Gul-i Raʿnā*, Aʿẓamgarh 1364, 327-8; A. ʿAZZA [see kuthayyir].

ʿAZZA AL-MAYLĀʾ, "ʿAzza with the graceful walk", celebrated singer and lute player of Medina, *mawlāt* of the Anṣār, died probably before the end of the 1st/7th century, after a long career. A pupil of Sāʾib Khātir and Nashīṭ, singers of Persian origin, then of Rāʾiḳa and Djamīla [*q.v.*], she in her turn numbered among her pupils such famous singers as Ibn Muḥriz and Ibn Suraydj [*q.v.*], but, unlike Djamīla, she did not form an actual school. She differed from the latter, too as regards her practice of giving recitals in aristocratic households, but she also used to receive in her own home poets (ʿUmar b. Abī Rabīʿa, Ḥassān b. Thābit whom she used to move to tears) and important personalities (Muṣʿab b. al-Zubayr, Saʿīd b. al-ʿĀṣ, and others). Greatly beloved for her art and, it is said, for her excellent morals, ʿAzza was a popular figure in 1st/7th century Medina.

Bibliography: *Aghānī*, index (particularly xvi, 133 ff.); Ibn Khallikān, no. 557; Caussin de Perceval, *Notices anecdotiques* ...., Paris 1874 (= *JA*, 1873), 55; ʿAmrūsī, *al-Djawārī al-Mughanniyāt*, Cairo n.d., 74-85. (Ch. Pellat)

B

BĀ (cf. Bū), genealogical term used in S. Arabia, especially among the *sayyids* and *mashāʾikh* of Ḥaḍramawt, to form individual and (secondarily) collective proper names, *e.g.*, Bā ʿAbbād, Bā ʿAlawī, Bā Faḍl, Bā Faḳīh, Bā Ḥasan, Bā Ḥassān, Bā Hurmuz, Bā Wazīr (see special articles and the lists of Nallino (in Gabrieli, *Nome proprio*, 88) and van den Berg (*Ḥadhramout*, 51-61)). Ibn al-Mudjāwir (my ed., 254) gives details on this Ḥaḍramī nomenclature, which seemed so strange to the custom-house officers at Aden that they refused to register these names. While he and al-Shardjī (*Ṭabaḳāt al-Khawāṣṣ*, *passim*) use the archaising form *ʾabā*, other authors have Abū/ī/ā, or simply omit Bā. Hence the same person is cited as Bā Ḥassān, Abā Ḥassān, Abū Ḥassān and Ḥassān (for Ibn Ḥassān, see below).

The genuine Bā thus would be identical with indeclinable Abā "father" forming individual (pseudo) *kunyas*, with the actual function of a *nisba* in -ī, or of *dhū* in western Yamanite tradition. This is the view of Ibn al-Mudjāwir, al-Shillī (*Mashraʿ*, i, 28), al-Saḳḳāf (*Taʾrīkh al-Shuʿarāʾ al-Ḥaḍramiyyīn*, i, 53 n.) and Flügel (*ZDMG*, ix, 227) In order to denote the tribe or family *ʾāl* or *ʾawlād* is prefixed to Bā, *e.g.*, Āl Bā ʿAlawī, Awlād Bā Kushayr; this may have caused the equation Bā = Banū found in al-Muḥibbī (*Khulāṣa*, i, 74) and approved of by Wüstenfeld (*Geschichtsschreiber*, 256; *Çufiten*, 4 n. 1).

From this primary Bā-formation must be distinguished another with Bal- (sometimes Bil-) < *bin al-*, *e.g.*, Bal-Faḳīh (not identical with the Bā Faḳīh cited above) = Ibn al-Faḳīh (al-Saḳḳāf, *op. cit.* ii, 54 n. 2), Bal-Ḥādjdj (surname of members of the Bā Faḍl) = Ibn al-Ḥādjdj. The use of Bin, along with the *nisba* in -ī, as a *nomen unitatis* of Bā-names, attested by van den Berg (*loc. cit.*), as also that of Ibn Ḥassān for Bā/Abū Ḥassān (cf. *MO*, xxv, 131 and *BSOAS*, xiii, 291/299), may reflect different local habits or even some uncertainty on the part of native authorities.

Bibliography: van den Berg, *Le Ḥadhramout et ses colonies Arabes*, Batavia 1886; G. Gabrieli, *Il nome proprio arabo-musulmano*, Rome 1915; al-Muḥibbī, *Khulāṣat al-Athar*, 1-4; al-Shillī, *al-Mashraʿ al-Rawī*, 1-2; R. B. Serjeant, *The Saiyids of Ḥaḍramawt*, London 1957. (O. Löfgren)

BĀ ʿABBĀD, a family of Ḥaḍramī *mashāʾikh* and scholars, associated with the shrine of the prophet Hūd. Among its members were (1) ʿAbd Allāh b. Muḥammad b. ʿAbd al-Raḥmān Bā ʿAbbād al-Ḥaḍramī (d. 687/1288) and (2) Muḥammad b. ʿUmar b. Muḥammad b. ʿAbd al-Raḥmān (d. 721/1321) both of them buried in Shibām (al-Shardjī, *Ṭabaḳāt* 70, 139). For two *manāḳib*-works on this family, see Serjeant, *The Saiyids of Ḥaḍramawt*, 6, 11 f. (O. Löfgren)

BĀ ʿALAWĪ (more precisely : Āl Bā ʿAlawī, cf. art. BĀ; according to al-Shillī [*Mashraʿ*, i, 31] *ʿalawī* is "a well-known bird"; *nisba*: al-ʿAlawī [also al-Bāʿalawī], not to be confounded with the usual *nisba* belonging to ʿAlī), a large and influential clan of S. Arabian sayyids and Ṣūfīs, for the most part living in Ḥaḍramawt, in or near the town of Tarīm [*q.v.*], and buried in the Zanbal cemetery there. The noble descent of the Bā ʿAlawī sayyids is said to have been checked in the sixth century by the traditionist ʿAlī b. Muḥammad b. Aḥmad b. Djadīd (d. 620/1223; *Taʾrīkh thaghr ʿAdan*, ii, 157; *Mashraʿ*, ii, 233) by means of trustworthy witnesses. Special works on S. Arabian *sāda* are: *al-Djawhar al-Shaffāf* by ʿAbd al-Raḥmān b. Muḥammad al-Khaṭīb (d. 855/1451); *al-Barḳa al-mushīḳa* by ʿAlī b. Abū Bakr al-Saḳḳāf [*q.v.*]; *Ghurar al-Bahāʾ al-ḍawʾī* by Muḥammad b. ʿAlī Kharid (below no. 10); *al-Tiryāḳ al-wāf* by ʿUmar b. Muḥammad b. Aḥmad Bā Shaybān (below no. 9); *al-Manhal al-ṣāfī* by ʿAbd Allāh b. ʿAbd al-Raḥmān Bā Hārūn. From these sources and general biographical works Muḥammad b. Abū Bakr al-Shillī (d. 1093/1682) brought together more than 280 biographies in his *al-Mashraʿ al-Rawī fī Manāḳib al-Sāda Āl Abī ʿAlawī* (Maṣr 1319); see art. *al-Shillī*. The valuable study of Wüstenfeld, *Die Çufiten in Süd-Arabien* (1883), being based on al-Muḥibbī's *Khulāṣat al-Athar*, only covers the 11th/17th century, but gives useful genealogical tables of different branches of the Bā ʿAlawī sayyids (to be used with caution as to details). Much material is to be found in the *Taʾrīkh al-Shuʿarāʾ al-Ḥaḍramiyyīn* by ʿAbd Allāh b. Muḥammad b. Ḥāmid al-Saḳḳāf (1353/55). Here only the most prominent members of the main line can be listed; for the branches ʿAydarūs, Bā Faḳīh, Bal-Faḳīh, al-Djufrī, al-Ḥabshī, al-Ḥaddād, al-Saḳḳāf, al-Shillī, see separate articles.

1. Eponymous ancestor: ʿAlawi b. ʿAbd/ʿUbayd Allāh b. Aḥmad b. ʿĪsā al-Muhādjir b. ʿAlī al-ʿUrayḍī b. Djaʿfar al-Ṣādiḳ b. Muḥammad al-Bāḳir b. ʿA Zayn al-ʿĀbidīn b. al-Ḥusayn b. ʿAlī b. Abū Ṭālib. On this senior ʿAlawī and his brothers Baṣrī and Djadīd (Djudayd) see art. AḤMAD B. ʿĪSĀ AL-MUHĀDJIR. Biogr.: *Mashraʿ*, i, 30.

2. ʿAlī b. ʿAlawī b. Muḥammad b. ʿAlawī (no. 1), known as Khāliʿ Ḳasam (village east of Tarīm), was the first one of this house who settled in Tarīm, in 521/1127; he died there in 527/1133. *Mashraʿ*, ii, 230, cf. Wüstenf., *Çufiten*, 4.

3. Muḥammad b. ʿAlī (no. 2), called Ṣāḥib Mirbāṭ, settled in this famous seaport (= Ẓafār al-ḳadīma) and died there after 550/1155. *Mashraʿ*, i, 198. From his great grandson Aḥmad b. ʿAbd al-Raḥmān b. ʿAlawī al-Faḳīh (*Mashraʿ*, ii, 62) come the families Bā Faḳīh and al-Ḥaddād.

4. Muḥammad b. ʿAlī b. Muḥammad (no. 3), called al-Ustādh al-aʿẓam, "the great Master", and al-Faḳīh al-muḳaddam (574-653/1178-1255), was a central figure in S. Arabian mysticism and the founder of the special ʿAlawī *ṭariḳa*. He became familiar with Sufyān al-Yamanī of Laḥdj (*Taʾrīkh thaghr ʿAdan*, ii, 93), when this Ṣūfī visited Ḥaḍramawt and brought about rainfall after a long drought. Apart from *risālas* sent to Sufyān and to Saʿd al-Dīn b. ʿAlī al-Ẓafārī (d. 607/1210) no writings are ascribed to him. By the medium of ʿAbd Allāh al-Ṣāliḥ b. ʿAlī al-Maghribī and ʿAbd al-Raḥmān al-Muḳʿad b. Muḥammad al-Ḥaḍramī he was impressed with the doctrines of Abū Madyan Shuʿayb b. al-Ḥusayn al-Tilimsānī, and was the first one to introduce special Ṣūfistic discipline (*taḥkīm*) into Ḥaḍramawt (cf. Wüst., *Çufiten*, 5). al-Shillī (*Mashraʿ*, ii, 260) traces the spiritual *ṭariḳa* of the Bā ʿAlawī, alongside with the genealogy (*ṭarīḳat al-ābāʾ*) mentioned above. Five sons: ʿAlawī (junior), ʿAbd Allāh, ʿAbd al-Raḥmān, ʿAlī and Aḥmad (ancestor of the Bal-Faḳīh branch [*q.v.*]). Biogr.: *Mashraʿ*, ii, 2-11.

5. ʿAlawī b. Muḥammad (no. 4), d. 669/1270, and his son ʿAbd Allāh Bā ʿAlawī (638/1240-731/1330), both of them renowned Ṣūfīs, introduce the line Bā ʿAlawī, strictly speaking. For details on their life see the full biographies in *Mashraʿ*, ii, 211, esp. 184 ff.

6. Muḥammad b. ʿAlī b. ʿAlawī (no. 5), b. 705/1305 in Tarīm, d. there 765/1364. Having performed the pilgrimage he settled in a place near the tomb of Hūd called Yabḥar, hence his surname Mawlā l-Dawīla "patron of the old town (sc. Yabḥar)". His son is ʿAbd al-Raḥmān al-Saḳḳāf (739-819), ancestor of the important branches Saḳḳāf and ʿAydarūs (see these arts.). *Mashraʿ*, i, 199 ff.; al-Saḳḳāf, *Taʾrīkh*, i, 71.

7. ʿUmar b. ʿAbd al-Raḥmān b. Muḥammad b. ʿAlī b. Muḥammad b. Aḥmad b. Muḥammad (no. 4), called Ṣāḥib al-Ḥamrāʾ, b. 823/1420 in Tarīm, d. 889/1484 in Taʿizz. After visiting Mecca, Aden, Laḥdj he settled down in the village al-Ḥamrāʾ. Beside poetry and minor *risālas* he wrote *Fatḥ Allāh al-Raḥīm al-Raḥmān fī manāḳib ʿAbd Allāh b. Abū Bakr b. ʿAbd al-Raḥmān* (*i.e.*, al-ʿAydarūs, *q.v.*). *Mashraʿ*, ii, 240; al-Saḳḳāf, *Taʾrīkh*, i, 86.

8. Aḥmad b. ʿAbd Allāh b. ʿAlawī b. Ḥasan b. Aḥmad b. Muḥammad b. Ḥasan b. ʿAlī b. Muḥammad (no. 4), called Shanbal, d. 920/1514. He compiled an historical work, *Taʾrīkh Shanbal*, on which see Serjeant, *Materials*, 291 f; *Mashraʿ*, ii, 67.

9. ʿUmar b. Muḥammad b. Aḥmad b. Abū Bakr Bā Shaybān b. Muḥammad Asad Allāh b. Ḥasan b. ʿAlī b. Muḥammad (no. 4), 881-944/1476-1537. He wrote *Tiryāḳ al-Ḳulūb al-Wāf bi-Dhikr Ḥikāyāt al-Sāda al-Ashrāf* (cf. supra and Brockelmann II, 401; Serjeant, *Materials*, 583), with biographies of 355 Bā ʿAlawī sayyids. *Mashraʿ*, ii, 248 (cf. i, 3); Wüstenfeld, *Çufiten*, 48.

10. Muḥammad b. ʿAlī b. ʿAlawī b. Muḥammad b. ʿAbd al-Raḥmān b. Muḥammad b. ʿAbd Allāh b. ʿAlawī (no. 5), called Kharid, b. 890/1485, d. 960/1553. He wrote *al-Wasāʾil* (on tradition), *al-Nafaḥāt* (on Ṣūfism), and *Ghurar al-Bahāʾ al-Ḍawʾī fī Manāḳib al-Sāda Banī ʿAlawī* (var. *Banī Baṣrī wa-Djadīd wa-ʿAlawī*), cf. supra and *Mashraʿ*, i, 196; al-Saḳḳāf, *Taʾrīkh*, i, 142; Serjeant, *Mat.*, 582.

11. Sālim b. Aḥmad b. Shaykhān b. ʿAlī b. Abū Bakr b. ʿAbd al-Raḥmān b. ʿAbd Allāh ʿAbbūd b. ʿAlī b. Muḥammad (no. 6), b. 995/1587, d. 1046/1636 in Mecca. He was introduced into Ṣūfism by Aḥmad al-Shanāwī (d. 1028/1619) and wrote numerous works, listed by his son Abū Bakr in a *risāla* inserted by al-Shillī into his biography (*Mashraʿ*, ii, 104-110), among which are: *Bulghat al-murīd wa-Bughyat al-mustafīd*; a commentary on parts 4-5 of *al-Djawāhir al-khams* by Muḥammad Ghawth Allāh b. Khaṭīr al-Dīn (Brockelmann, II, 418); *al-Sifr al-masṭūr li ʾl-dirāya fī ʾl-Durr al-manthūr li ʾl-wilāya*; *Miṣbāḥ al-sirr al-lāmiʿ bi-Miftāḥ al-djafr al-djāmiʿ*; *Ghurar al-bayān ʿan ʿumr al-zamān*; *al-Burhān al-maʿrūf fī mawāzīn al-ḥurūf* etc. Cf. Brockelmann, II, 407, S II, 565; Wüstenfeld, *Çufiten*, 77. On his son Abū Bakr (d. 1085/1674) see *Mashraʿ*, ii, 26; Brockelmann, S II, 566.

12. ʿAḳīl b. ʿUmar ʿImrān b. ʿAbd Allāh b. ʿAlī b. ʿUmar b. Sālim b. Muḥammad b. ʿUmar b. ʿAlī b. Aḥmad b. Muḥammad (no. 4), Abu'l-Mawāhib, b. 1001/1593 in al-Ribāṭ (near Ẓafār al-Ḥabūḍī), d. 1062/1652 in Ẓafār and buried in his birth-place. Among his writings are: *al-ʿAḳīda* (comm. by Aḥmad b. Muḥammad al-Ḳashshāshī and ʿAlī b. ʿUmar Bā ʿUmar); *Fatḥ al-Karīm al-Ghāfir fī Sharḥ Ḥilyat al-Musāfir* (comm. on a *ḳaṣīda* by Saʿīd b. ʿUmar Bal-Ḥāf). Biogr.: *Mashraʿ*, ii, 203; Wüst., *Çufiten*, 51; cf. Brockelmann, S II, 533 (with two more titles).

13. Muḥammad b. Zayn b. Sumayṭ ʿAlawī b. ʿAbd al-Raḥmān b. ʿAbd Allāh b. Muḥammad Sumayṭ, b. in Tarīm 1100/1689, moved to Shibām in 1135/1723, d. there 1172/1758. He wrote *manāḳib*-works on his teachers ʿAbd Allāh b. ʿAlawī al-Ḥaddād (d. 1132/1720) and Aḥmad b. Zayn al-Ḥabshī (d. 1145/1732), entitled *Ghāyat al-Ḳaṣd wa ʾl-Murād* (Bombay 1885) and *Ḳurrat al-ʿAyn* resp.; *Bahdjat al-Fuʾād* (an abridgement of the first-named); *Lubb al-Lubāb* (an abridgement of *Madjmaʿ al-Aḥbāb*); a *dīwān* of poetry. See al-Saḳḳāf, *Taʾrīkh*, ii, 127-135; Serjeant, *Mat.* 582; Brockelmann, S II, 566.

14. Among recent members of the clan are:

a) ʿAbd Allāh b. Ḥusayn b. Ṭāhir b. Muḥammad al-Djāwī (d. 1272/1855). He wrote *Sullam al-tawfīḳ ilā maḥabbat Allāh ʿalā l-taḥḳīḳ* (comm. *Mirḳāt Ṣuʿūd al-Taṣdīḳ* by Muḥammad Nawawī al-Djāwī) and other works, see Sarkis, 518, Brockelmann, S II, 820 (814).

b) ʿAbd al-Raḥmān b. Muḥammad b. Ḥusayn b. ʿUmar (ca. 1250/1835), *muftī* of Ḥaḍramawt, wrote *Bughyat al-Mustarshidīn fī Talkhīṣ Fatāwī baʿḍ al-Aʾimma al-Mutaʾakhkhirīn* and *Ghāyat Talkhīṣ al-Murād min Fatāwī Ibn Ziyād* (Miṣr 1303). Sarkis, 517; Brockelmann, S II, 817.

c) Faḍl b. ʿAlawī b. Muḥammad b. Sahl Mawlā ʾl-Dawīla (d. 1283/1866) wrote *Sabīl al-Adhkār wa ʾl-Iʿtibār* etc. (in marg. of al-Ḥaddād: *al-Naṣāʾiḥ al-Dīniyya*); *ʿIḳd al-Farāʾid min Nuṣūṣ al-ʿUlamāʾ al-Amādjid*; see Sarkis, 517, Brockelmann, S II, 566.

d) Abū Bakr b. ʿAbd al-Raḥmān b. Muḥammad,

called Ibn S̲h̲ihāb (1262-1341/1846-1923), see Sarkis 140 f. (with titles of nine works, printed in India 1305-1331).

e) Muḥammad b. ʿAḳīl b. ʿAlī b. Yaʿḳūb (1279/1862-1350/1931) wrote *al-ʿAṭab al-d̲j̲amīl* (pr. 1342); Brock., S II, 822.

Bibliography: R. B. Serjeant, *The Saiyids of Ḥaḍramawt*, London 1957; idem, *Materials for South Arabian history*, in *BSOAS*, xiii, 1950, 281-307, 581-601, and the works cited above. (O. Löfgren)

BĀʾ [see mawāzīn].

BAALBEK [see baʿlabakk].

BĀB = Gate. This question is best treated under two headings, (i) in mosques, (ii) in fortifications.

(i) In mosques, mausoleums, etc.

Down to the end of the 3rd/9th century, no mosque had a monumental entrance. All mosques, large or small, were entered by simple rectangular doorways in the enclosure wall, e.g. the Mosque at Ḳaṣr al-Ḥayr al-Sharḳī, 110/729; the Great Mosque at Ḥarrān, entrance, *c*. A.D. 744-50; the Mosque of Cordova, 170/787; the Mosque of ʿAmr of 212/729; the two entrances which date from 221/836 in the Great Mosque of Ḳayrawān; the Mosque of Bū Fatātā at Sūsa, 223-6/838-41; The Great Mosque at Sūsa, 236/850-1; the Great Mosques of Sāmarrā 234-7/848-52, and Abū Dulaf, 247/860-61; and the Mosque of Ibn Ṭūlūn, 263-5/876-9. The first mosque to have a monumental entrance was the mosque built by the Fāṭimids at the foundation of Mahdiyya on the Gulf of Gabes in 308/920-21. It has obviously been inspired by one of the Roman triumphal archways, which must have been more numerous in North Africa in 920 than they are to-day (Plate XXV*a*).

This type was brought to Egypt by the Fāṭimids, where it appears in the Mosque of al-Ḥākim in 393/1003, but on a more imposing scale (6.16 m. projection and 15.50 in width, against 3 m. × 8 for Mahdiyya. It also appears in the Mosque of al-Aḳmar, 519/1125 on a much reduced scale, and in the Mosque of Baybars, 665-7/1266-9 on a very large scale (8.86 × 18.83 m.) with its flanks decorated by three arched panels, against two in al-Ḥākim and one at Mahdiyya (Plate XXV*b*).

But a new type, the so-called stalactite doorway, had just appeared in Syria. The earliest example is the entrance of the Madrasa of S̲h̲ādbak̲h̲t at Aleppo (Plate XXVI*a*), 589/1193. This was followed by other fine examples, e.g. the Ribāṭ Nāṣiri (Plate XXVI *b*) at Aleppo, 635 H. = 1237/8); the D̲j̲āmiʿ al-Tawba at Damascus, 632/1234; etc.

It was first employed in Egypt in the Madrasa of Baybars, 662/1264, and then in the Madrasa-Mausoleum of Zayn al-Dīn Yūsuf (Plate XXVII *a*) 698/1299, but it did not become general until the second half of the 8th/14th century, for several early 14th century monuments exist in which it is not employed.

The origin of this beautiful form of monumental entrance cannot be demonstrated, for the embryonic stages in its evolution appear to have perished, but it seems probable that it was derived from portals such as the lateral ones of the Bayt al-K̲h̲alīfa at Sāmarrā, where a deep entrance bay is covered by a semi-dome on a pair of squinches. Given this scheme it is obvious that, on its importation at a later date into Syria, the squinches would be replaced by the device there in use for supporting domes. That this has actually happened may be realised on comparing our earliest example, the entrance bay of the Madrasa of S̲h̲ādbak̲h̲t (Plate XXVI *a*) with the pendentives of the dome in front of the *miḥrāb* of the nearly contemporary Mas̲h̲had of Ḥusayn at Aleppo, 608/1211-12. In both cases we have the typically Syrian treatment, a series of horizontal courses, decorated with niches, set straight across the corner and advancing one over the other.

In Persia the earliest portals such as that of the Mausoleum of Čihil Duk̲h̲tarān at Dāmg̲h̲ān (Sarre, *Denkmäler*, Abb. 156), 446/1054, the Gunbad-i Surk̲h̲ at Marāg̲h̲a (Pope, *Survey*, Plate 341 A, and Godard in *At̲h̲ār-é Īrān*, I, fig., 89), 542/1148, and the Mausoleum of Muʾmina K̲h̲ātūn (*ibid*, Plate 345 and Sarre, *op. cit*. Taf. 3, reproduced here, Plate XXVII *b*) at Nak̲h̲čivān, 582/1186, consist of a rectangular doorway with an arched tympanum above, set in a shallow rectangular recess. The next step, apparently, was to replace the arched tympanum by a shallow recess filled with stalactites, e.g. a tower-tomb at Khiov (Pope, *op. cit*., Plate 343) and another at Salmās (*ibid*., Plate 344, reproduced here, Plate XXVIII *a*). During the XIVth century, portals usually take the form of a high arched bay, like a small *līwān*, covered by a semi-dome on stalactite pendentives (quite different, however, from the Egyptian variety), e.g. the K̲h̲ānḳāh at Naṭanz (*ibid*., Plate 367), 704/1304-5, the Shrine of S̲h̲ayk̲h̲ Bāyazīd at Bisṭām (*ibid*., Plate 416, reproduced here, Plate XXVIII *b*), 713/1313, the Great Mosque at Varāmīn (*ibid*., Plate 406), 723-6/1323-5, the Mausoleum of Bābā Ḳāsim at Iṣfahān (*ibid*., Plate 417), 741/1340, the Great Mosque at Kirmān (*ibid*., Plate 541 A), 750/1349, and the Masd̲j̲id-i Pā-Manār, 794/1391, also at Kirmān (*ibid*., Plate 451 B). At the end of the 15th century we have the remarkable portal at Balk̲h̲ belonging to the Shrine of Abū Naṣr Pārsā (*ibid*., Plates 422 and 424), which projects boldly from the façade. In the central part is a high arched bay, with the entrance at the back as usual, but the flanks are bevelled off at 45°, and are in two storeys, each with a pointed arched recess.

This portal may well be the prototype of some of the monumental Indian examples such as the famous Buland Darwāza at Fatḥpūr Sikrī, 1010/1602, and the main entrance of the Great Mosque at Delhi, A.D. 1644-58.

At Constantinople mosque entrances are usually in the form of a slight salient, in which is set the entrance bay, covered by a very high stalactite hood composed of very small niches, e.g. the Mosque of Sulṭān Bāyazīd, 906-11/1500-1505, the Mosque of Sulṭān Selīm (Plate XXIX *a*), 929/1522, the Mosque of S̲h̲āhzāde, 955/1548, etc.

In North Africa the entrances of mosques are usually emphasised, not by a vaulted salient (as at Mahdiyya), but by an elaborat eawning resting on brackets and covered by a sloping roof of tiles, e.g. at Fez (see H. Terrasse, *La Mosquée des Andalous*, pl. XV-XVII.

(ii) In fortifications

The earliest gateways of Muslim fortified enclosures were simple "straight-through" entrances defended by a māchicoulis and a pair of half-round flanking towers, e.g. the single gateway of the

Lesser (Plate XXIX*b*) and the four gateways of the Greater Enclosure of Ḳaṣr al-Ḥayr al-S͟harḳī, built by the Caliph His͟hām in 110/729.

But as early as the building of Bag͟hdād by al-Manṣūr in 145-7/762-5 a new type appears—the bent entrance—which was employed for the four gateways of the outer wall. This is clear from the description of al-K͟haṭīb, who says: "When one entered by the K͟hurāsān Gate one first turned to the left in an oblong passage (*dihlīz āzād͟j*) with a vault of brick, 20 cubits wide and 30 cubits long, ***the entrance of which was in the width and the exit in the length***, and passed out into a *raḥaba* ... at the far end of which was the second gateway which was that of the city". Only one turn is mentioned, and as one then passed into a courtyard at the far end of which was the main gateway, it follows that the first direction must have been at right angles to the direction of exit, so it is obvious that the entrance must have been in the flank of the gateway tower.

It is frequently stated that bent entrances occur in Byzantine fortifications in N. Africa. It is not going too far to say that ***not a single example*** of such an entrance is to be found in any work of Justinian's reign, or before it, either in North Africa, Rome, Constantinople itself, or anywhere else in the Byzantine Empire (see my art. in the *Proc. Brit. Academy*, xxxviii, 101-5). The first bent entrance in Byzantine architecture is the south gate of the inner Citadel at Ancyra built, according to an inscription, by Michael III in A.D. 859.

It is probable that the device was brought by the ʿAbbāsids (who came from the north-east) from the Oxus region, where pre-Muslim fortified enclosures have recently been discovered by the expedition led by Tolstov. The oldest of them, D͟janbās Ḳalʿa, is about 50 km. from the river, in a region no longer irrigated. It consists of a fortified enclosure of mud brick, measuring 200 × 170 m. with walls still standing 10 m. high, provided with a bent entrance (see Field and Tolstov, in *Ars Islamica*, vi, 150).

The Arabic term for a bent entrance is *bās͟hūra*, as is perfectly clear from the passage in which Maḳrīzī describes the Bāb Zuwayla of Cairo: "... he (Badr al-D͟jamālī did not make a *bās͟hūra*, as is the custom for the gates of fortresses. This disposition consists in arranging a bend (*ʿatf*) in the passageway to prevent troops taking it by assault during a siege, and to render impossible the entry *en masse* of cavalry" (*K͟hiṭaṭ*, ii, 380, l. 35, 381, l. 5).

Normally, therefore, the *bās͟hūra* was an integral part of the gateway (as in all the examples of a bent entrance cited below), but it could happen that alterations were made subsequently to an old "straight through" gateway to convert it into a bent entrance, e.g. the Bāb al-S͟harḳī at Damascus. This was a triple gateway of the usual Roman type, but von Kremer (*c.* 1850) found that the central and southern openings had been walled up and an addition (long since removed) built in front of the northern one, so as to force people to make a right-angled turn to pass through (*Topographie von Damascus*, I, fig. on p. 10). This helps us to understand what Maḳrīzī means when he speaks of a *bās͟hūra* at the entrance of the Bāb al-Naṣr and Bāb al-Futūḥ, although they disappeared in the xvth century. They must have been additions built in ***front of them*** subsequently, as at Damascus, to remedy the weakness of these "straight through" gateways. I say "subsequently" because there is no trace on the well preserved masonry of these two gates of anything having been torn away.

On the other hand it follows than when a *bās͟hūra* is mentioned anywhere (e.g. at Subayba near Baniyās) and the gateway itself has a right-angled turn (*ʿatf*), there is no need to assume that there was ever any structure in front of it.

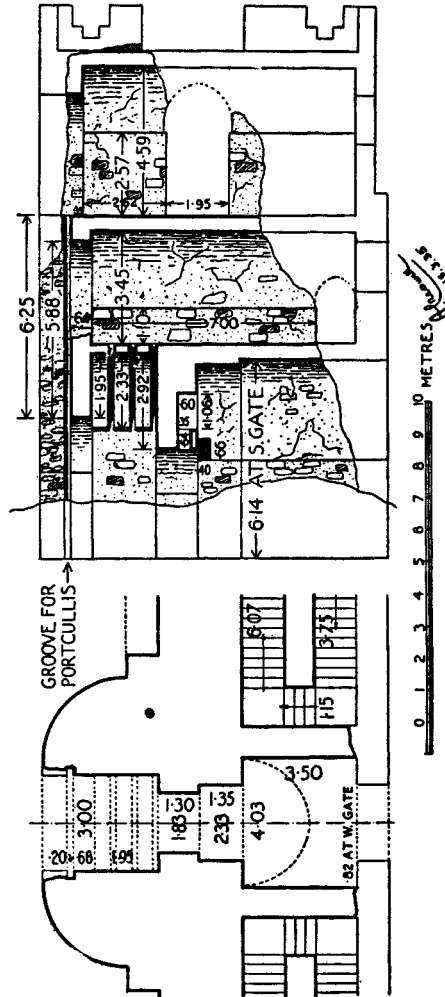
But in spite of its obvious advantages the bent entrance did not become the general rule henceforth; it was not even employed by al-Manṣūr himself when he built Raḳḳa a few years later. The architect merely adopted the "oblique approach" system (see my *E.M.A.*, ii, 38-45).


Fig. 1. Uk͟hayḍir: plan and section of west entrance.

Nevertheless a very formidable type of gateway is employed in the famous Uk͟hayḍir (Plate XXIX*a*) towards the end of the 2nd/8th century. The entrance arch, which is 3 m. wide, is set back 91 cm. between two quarter-round towers. On both sides, close up to their inner corners, a deep groove 20 cm. wide runs right up, showing that there must have been a portcullis here. Behind this entrance arch, at a distance of 1.95 m. is another archway, and between the two is a vestibule, 3 m. wide and 1.95 deep, covered by a tunnel-vault in which there are three slits 17 cm. wide running from wall to wall (Fig. 1). Now supposing Uk͟hayḍir were about to be attacked, the portcullis would be kept in a hauled-up position

until a party of men entered the outer archway to try to break down the door behind the inner archway. At a signal, given by men looking through the slits in the vault, the portcullis would be released and missiles, molten lead, or boiling oil dropped on the storming party trapped below. It was impossible for a storming party to approach the door without exposing themselves to be fatally trapped in this fashion.

The finest gateways of the 5th/11th century are the three Fāṭimid gates of Cairo, the Bāb al-Naṣr, Bāb al-Futūḥ (Plate XXX) and Bāb Zuwayla, built by
Fig. 2. ALEPPO: Entrance of the Citadel. (From Herzfeld).

Badr al-Djamālī in 480-85/1087-92, but they are "straight through" and not bent entrances. In each case the gateway proper is set back in an arched recess between two round-fronted towers, and at the back of the arch is a slit whereby missiles could be dropped from the platform above on a storming party attacking the door with a battering ram.

But the wars of the Crusades in the two following centuries and the great military experience gained by both sides soon resulted in the bent entrance coming into general use. It was invariably employed by Ṣalāḥ al-Dīn, e.g. at Ḳalʿat Djindī in Sinai, about 578/1182, in the three gateways of the Northern Enclosure of the Citadel of Cairo, 572-9/1176-84, and likewise the gateways in that part of the Wall of Cairo due to him (Plate XXXI *b*). So thoroughly were the advantages of the bent entrance appreciated that it had even reached the Far West of Islam before the end of the 6th/12th century, e.g. the gateway of the Ḳaṣba of the Oudāya at Rabāṭ in Morocco.

For the 7th/13th century three typical examples of it may be cited: Ḳalʿat al-Nadjm on the Euphrates, 605-12/1208-15; and two at Baghdād, the Talisman Gate (blown up by the retreating Turks in 1918) and the Bāb al-Wusṭānī.

The supreme example of a bent entrance is al-Malik al-Ẓāhir's gateway in the Citadel of Aleppo finished according to Ibn Shaddād in 611/1214. Here there are no less than five right-angled turns in the passage-way (Plate XXXII and Fig. 2).

(K. A. C. CRESWELL)

BĀB, a term applied in early Shīʿism to the senior authorised disciple of the Imām. The hagiographical literature of the Twelver Shīʿa usually names the *bābs* of the Imāms. Among the Ismāʿīliyya [*q.v.*] *bāb* was a rank in the hierarchy. The term was already in use in pre-Fāṭimid times, though its significance is uncertain (cf. W. Ivanow, *The Alleged Founder of Ismailism*, Bombay 1946, 125 n. 2, citing al-Kashshī, *Ridjāl*, 322; idem, *Notes sur l'Ummu 'l-Kitab*, in *REI*, 1932, 455; idem, *Studies in early Persian Ismailism*², Bombay 1955, 19 ff.). Under the Fāṭimids in Egypt the *bāb* comes immediately after the *Imām*, from whom he receives instruction directly. He in turn instructs the *ḥudjdjas*, who conduct the *daʿwa*. The term thus appears to denote the head of the hierarchy of the *daʿwa*, and to be the equivalent in Ismāʿīlī terminology of the expression *dāʿī al-duʿāt*, which is used in the general historical literature but rarely appears in Ismāʿīlī texts. Thus, for example, al-Muʾayyid fī 'l-Dīn al-Shīrāzī, who is described in Ismāʿīlī writings as the *bāb* of al-Mustanṣir, is called his *dāʿī 'l-duʿāt* by the historians (e.g. Ibn Muyassar, 10) and is actually named as such by al-Mustanṣir in a *sidjill* of Ramaḍān 461/July 1069 addressed to the Ṣulayḥid ruler of the Yaman (*Al-Sidjillāt al-Mustanṣiriyya*, ed. ʿAbd al-Munʿim Mādjid, Cairo 1954, 200). Some indications of the status and functions of the *bāb* in Fāṭimid Ismāʿīlism will be found in Ḥamīd al-Dīn al-Kirmānī, *Rāḥat al-ʿAḳl*, ed. M. Kāmil Ḥusayn and M. Muṣṭafā Ḥilmī, Cairo 1953, index; cf. R. Strothmann, *Gnosis-Texte der Ismailiten*, Göttingen 1943, index, espec. 82, 102, 175; W. Ivanow, *Studies*, 20-23). In the post-Fāṭimid *daʿwa* the office dwindled in importance and seems eventually to have disappeared. In the description of the *daʿwa* organisation at Alamūt given by Naṣīr al-Dīn al-Ṭūsī, (*Taṣawwurāt*, ed. W. Ivanow, 97, introduction xliii), there is only a *bāb-i bāṭin*, who ranks with the *dāʿī*, and in later Ismāʿīlī writings the term seems to drop out altogether.

In the system of the Nuṣayriyya [*q.v.*] the *bāb* comes after the *ism* and is identified with Salmān [*q.v.*]. The *bāb* is personified in each cycle. (Lists of Nuṣayrī *bābs* are given in R. Strothmann, *Morgenländische Geheimsekten in Abendländischer Forschung*, Berlin 1953 (Abhandlungen der deutschen Akademie der Wissenschaften zu Berlin, Klasse für Sprachen, Literatur und Kunst, Jahrgang 1952 Nr. 5) 34-5; L. Massignon, *Nuṣairiya*, in *EI*¹; for a similar Ismāʿīlī list see Djaʿfar b. Manṣūr al-Yaman, *Kitāb al-Kashf*, ed. R. Strothmann, 1952, 14).

BĀB, an appellation [see the preceding art.] made specially famous by Sayyid ʿAlī Muḥammad of Shīrāz, the founder of the new religion of the Bābīs [*q.v.*] and, according to the Bahāʾīs [*q.v.*] the precursor of the new prophet Bahāʾ Allāh [*q.v.*]. He is also called by his disciples *Nuḳṭa-i ūlā* ('the first point') or *Ḥaḍrat-i aʿlā* ('the supreme presence').

Sayyid ʿAlī Muḥammad was born at Shīrāz, of a merchant family, on 1 Muḥarram 1235/20 October 1819 (but according to other sources, exactly a year later, 9 October 1820); becoming an orphan at an early age, he was placed under the tutelage of his maternal uncle Āghā Sayyid ʿAlī. At the age of about 19 or 20 he was sent to Būshahr, on the Persian Gulf, to trade there; here, at the same time, he gave himself up to earnest religious meditations, as he had done before since his childhood. When on a pilgrimage to Karbalāʾ, he made the acquaintance of Sayyid Kāẓim Rashtī [*q.v.*], the head of the religious movement of the Shaykhīs, who showed a high and unusual regard for him. Sayyid Kāẓim died at the end of 1259/December 1843; before his death he had sent disciples into all parts of Persia in search of the awaited *Mahdī*, the *Ṣāḥib al-zamān*, who, according to his prophecies, would not be long before manifesting himself. One of the disciples of the *sayyid*, Mullā Ḥusayn of Bushrūya, who had arrived at Shīrāz and had been strongly affected by the fascination of the young ʿAlī Muḥammad, was the first to recognise him as the 'gateway' to Truth, the initiator of a new prophetic cycle, since, during the night of 5 Djumādā I 1260/23 May 1844, he had replied in a satisfactory way to all his questions, and had written in his presence, with extreme rapidity and all the time intoning what he was writing in a very melodious voice, a long commentary on the *sūra* of Yūsuf; this commentary is known to the Bābīs by the name of *Ḳayyūm al-Asmāʾ*, and considered as the first 'revealed' work of the Bāb. The rapidity with which he wrote and the indescribable charm of his voice seem to have been the characteristics which have most impressed Muslim as well as Bābī writers. In the summer of 1844, the Bāb, who had been making drastic attacks on corrupt Shīʿī *mullās* and *mudjtahids* with their own weapons, quickly collected a number of disciples, among whom were 18 called by him the *Ḥurūfāt al-Ḥayy* ('The Letters of the Living'). Mullā Ḥusayn is also known among the Bābīs by the title of *awwal man āmana* ('the first believer'), and by that of *Bāb al-Bāb*, which the Bāb himself later gave him. In the autumn, after the 'Letters of the Living' had been despatched to proclaim his mission in the various provinces of Persia, the Bāb set out on a pilgrimage to Mecca. The journey left a bad impression on him. This is reflected in several passages in the *Bayān*, where he speaks of the dirt and promiscuity of the boats and of the low moral character of the quarrelsome and violent pilgrims. Either during a stay in the port of Muscat, or in the heart of the holy city of Mecca, the Bāb, according to the sources, must have declared more openly his mission as *mahdī*, but to no purpose. In the spring of 1261/1845 the Bāb returned to Shīrāz, where his preachings and public declarations (for during the journey he had written another book, *Ṣaḥīfa-i bayn al-Ḥaramayn* ('book [written] between the two Holy Places') in which he lays down the purport of his mission) caused some trouble; the Bāb's missionaries who, on his order, had dared to add to the *adhān* [*q.v.*] the phrase 'and I confess that ʿAlī before Nabīl (the Bāb) is the mirror of the breath of God', were arrested, brought before the Governor of Shīrāz, Mīrzā Ḥusayn Khān Ādjūdān-bāshī, severely punished, and expelled from the city. A representative of the reigning sovereign (Muḥammad Shāh), Sayyid Yaḥyā-i Dārābī, sent to conduct an enquiry, was won over by the charm of the Bāb, and became converted to the new doctrine. Whilst all this was going on, Mīrzā Nūrī (the future Bahāʾ Allāh) and his brother Mīrzā Yaḥyā Nūrī (the future *Ṣubḥ-i Azal*) at Tehran persisted in the new faith, after a meeting with Mullā Ḥusayn. At Shīrāz an epidemic of cholera broke out, and everyone from the Governor down prayed for deliverance. The Bāb remained at Iṣfahān, where he was protected by the governor, the Georgian Manūčihr Khān Muʿtamad al-Dawla. On the death of the latter the Bāb was called to Tehran by order of the minister Ḥādjdjī Mīrzā Āghāsī, but shortly before arriving in the city he was arrested and sent as a prisoner to the fortress of Māhkū in the trackless mountains of Ādharbāydjān (summer of 1263/1847). In 1264/April 1848, following more serious disorders which had broken out in different parts of Iran on account of Bābī propaganda [see BĀBĪS], the Bāb, whose powerful religious influence had converted the governor of the fortress of Māhkū, ʿAlī Khān, was transferred to a more rigorous prison, the remote castle of Čihrīḳ. Shortly afterwards, in July, he was removed to Tabrīz to be questioned by a committee of *mudjtahids*; it was decided to condemn him forthwith. The powerful minister Mīrzā Taḳī Khān, who had succeeded Ḥadjdjī Mīrzā Āghāsī after the latter's dismissal by the new sovereign Nāṣir al-Dīn Shāh (1848), considered that the death of its founder would break up this dangerous movement which was continuing to attract new adherents. In the spring of 1266/1850 the news of the execution of the seven martyrs of Tehran [see BĀBĪS], among whom was his uncle and well-beloved tutor, reached the Bāb in the fortress of Čihrīḳ where he had been re-imprisoned, and greatly distressed him. He prophesied that his end was near. He was taken at the end of the month of Shaʿbān 1266/July 1850 to Tabrīz, and was condemned to be shot at the same time as two of his disciples, Mullā Muḥammad ʿAlī of Yazd and Āghā Sayyid Ḥusayn. The second, during the doleful procession of the three condemned men through the streets of Tabrīz, under insults and blows, made pretence of abjuring the Bābī faith, and was released; he had previously been charged by the Bāb to carry out his last wishes and to deposit some of his personal belongings and writings in a safe place. (He was, however, killed at Tehran shortly after having carried out this mission). The Bāb was secured with the same ropes as his disciples to a pillar in the courtyard of the barracks at Tabrīz, and the Christian regiment of the Bahādurān, commanded by Sām Khān, fired. The first shot, according to the descriptions even in Muslim sources and others hostile to the reformer, merely severed the ropes, leaving the Bāb completely free. Sām Khān, terrified, refused to re-open fire, and consequently another firing-squad was detailed. On 9 July 1850, about midday, the Bāb paid for preaching his doctrine with his life. The mangled body was thrown into a ditch in the town and after many vicissitudes (disinterred by the Bābīs, hidden for several years at Tehran), it was removed on the order of Bahāʾ Allāh [*q.v.*] to ʿAkkā, where it now rests in a large mausoleum on the slopes of mount Carmel.

Works.—The works of the Bāb, all manuscript—some lost, others of doubtful authenticity (partially due to unexpected feuds after his death between Bahāʾīs and Azalīs, see BĀBĪS)—are very numerous. In more or less chronological order, and mentioning only the best known, they are: 1. The *Ḳayyūm al-Asmā*ʾ or commentary on the *sūra* of Yūsuf, referred to above, of more than 9,300 verses divided into 111 chapters (one per verse of the famous *sūra*), which opens with the well-known apostrophe to the kings of the earth: 'O kings! O sons of kings! do not take unto yourselves that which belongs to God!'; this work is in Arabic, but has been translated into Persian in full by the famous Bābī heroine Ḳurrat al-ʿAyn Ṭāhira; 2. Epistles (*alwāḥ*) to various persons, such as Muḥammad Shāh, Sulṭān ʿAbd al-Madjīd, Nadjīb Pasha, *wālī* of Baghdād. 3. the *Ṣahīfa-i bayn al-Ḥaramayn*, written on his pilgrimage between Mecca and Medina (1844-5). 4. The Epistle to the Sharīf of Mecca. 5. The *Kitāb al-Rūḥ* (Book of the Spirit) of 700 *sūras*. 6. The *Khaṣāʾil-i Sabʿa* (the seven Virtues), wherein the modification of the *adhān* is set forth. 7. *Risāla-i Furūʿ-i ʿAdliyya* (treatise on the divisions of justice). 8. Commentaries on the *sūras al-Kawthar* (cviii) and *Wa 'l-ʿaṣr* (ciii), and other small treatises and epistles all of which date from the beginning of his imprisonment at Māhkū. 9. Nine commentaries (*tafsīr*) on the entire Ḳurʾān, now lost, written, according to the testimony of his copyist Shaykh Ḥasan-i Zunūzī, in the castle of Māhkū. 10. Various epistles to leading Shīʿī theologians and to Muḥammad Shāh, written in the same fortress. 11. The Arabic (shorter) *Bayān* and the Persian *Bayān*, the sacred books *par excellence* of the new relevation; the former divided into 11 *wāḥids* (units) of 17 chapters (*bābs*) each, the latter into 9 *wāḥids* of 19 *bābs* each except the last *wāḥid*, which has only 10 *bābs*. 12. The *Dalāʾil-i Sabʿa* (the seven Proofs), the most important of the polemical works of the Bāb. 13. The *Lawḥ-i Hurūfāt* (Table of the Letters), a semi-cabalistic writing addressed to the Believer (*dayyān*) from the castle of Čihrīḳ, etc. Although the Bābīs are also called *ahl-i Bayān* (the people of the *Bayān*), one must understand by *Bayān* in this sense, according to the explicit declaration of the Bāb himself (Persian *Bayān*, 3rd *wāḥid*, chapter 17), everything which issued from his pen.

The Doctrine of the Bāb. The contents of the *Bayān* can perhaps be reduced to four fundamental points: (a) the abrogation of sundry laws and pronouncements of the Ḳurʾānic *sharīʿa* regarding prayer, fasting, marriage, divorce, and inheritance, but nevertheless upholding the truth of the prophetic mission of Muḥammad, whose prophetic cycle ends with the year 1260/1844; (b) the spiritualistic interpretation of the eschatological terms which appear in the Ḳurʾān and other sacred works, such as 'Paradise', 'Hell', 'Death', 'Resurrection', 'Return', 'Judgment', 'Bridge' (*Ṣirāṭ*), 'Hour', etc., all of which allude not only to the end of the physical world but also to that of the prophetic cycle. From certain passages it seems that it must be understood that the true world being that of the spirit, of which the material world is nothing but an exteriorisation, God effectively destroys the world at the end of each prophetic cycle in order to re-create it by the Word of the subsequent prophet; the creative worth of the Word is given great importance in the *Bayān*; (c) the establishment of new institutions: a new *ḳibla* (towards the abode of the Bāb), a new, and rather complicated, devolution of inheritance, etc.; (d) a continuous and powerful eschatological tension towards *man yuẓhiruhu allāh* ('the One whom God will manifest'), the future prophet. It could thus be upheld that the expectation of the 'Promised One' is the essence of the *Bayān*; indeed, the most banal precepts are set forth in an eschatological light. For example, having stated that the Bābī should possess no more than 19 books, and all these on the *Bayān* and the knowledge of the *Bayān*, it adds: 'All these commands are for this reason, that nothing be put in the presence of Him Whom God Shall Manifest, unless it be the *Bayān* itself' (Arabic *Bayān*, trans. Nicolas, 223).

With regard to the precepts concerning travelling, it is laid down that journeys shall not take place at the time when the 'Promised One' towards whom alone all must travel, will be made manifest (*ibid.*, 166). The care for property, particularly recommended by the Bāb, is justified eschatologically, in order that the eyes of 'Promised One' shall not look upon anything unclean (159). As well as the familiar passage (166) 'All of you get up from your seats when you hear the mention of the name of Him W.om God Shall Manifest .... And in the ninth year you shall attain to perfect Good', which the Bahāʾīs interpret as predicting the prophetic vision of Bahāʾ Allāh [*q.v.*] in the Tehran prison in the year 9, *i.e.*, 1269/1852-3, various other passages of the *Bayān* effectively suggest that the Bāb believed the Future Manifestation possible at a nearer date. Particularly interesting is the fine chapter XI of the IVth *wāḥid* of the Arabic *Bayān* (138-9): 'Be not the instruments of your misfortunes, for not to be grieved is one of the greatest commands of the *Bayān*. The fruit of this command shall be that you shall not grieve Him Whom God Shall Manifest'.

The metaphysics of the Bāb is similar in certain ways to that of the Ismāʿīlīs. It sets out, in essence, as opposed to the unitary conception of existence as in Pantheism and to the dual conception (divine/human) of orthodox Islām, a division of Being into three parts: the World of the Essence of God, absolutely unattainable and transcendent, the World of Nature and of Man, and the World of the Manifestation, that very pure mirror in which alone God can see himself. The Bāb's doctrine seems to attach very great importance to this invisible world which is concealed behind and between visible things: thus, all the eschatological terms, such as beatific vision, death, eternity, paradise, etc., being solely in accordance with the vision of the prophet, there remains only very little room in which to interest oneself in the life of the other world, which has led certain authors, perhaps wrongly (see E. G. Browne in the Preface to M. H. Phelps, *Abbas Effendi*, London 1912), to believe that the Bāb denies the immortality of the individual soul, at least in the traditional sense of the word. In the same way, his conception of the return of Muḥammad, of the *imāms*, etc., in its actual presentation has led some writers wrongly to believe that he subscribes to the doctiine of reincarnation. On the contrary, the Bāb in his original conception of the novelty of the different 'worlds' of the successive prophetic cycles, besides denying the Islamic and Christian dogmas of the resurrection of the body, denies as well the reincarnation of the soul in another body; when he writes (Arabic *Bayān*, *wāḥid* I, chapter 2 ff.) 'Those (our lieutenants) are, firstly Muḥammad, the prophet of God, then those who are the witnesses (the *imāms*) of God for his creatures ...', he means to say that they 'have been created in another

world', *i.e.*, that God has re-created them *ex novo* in the world of the *Bayān after* having created them in the world of the Ḳur'ān. It is easy to deduce from such a 'bookish' conception of the worlds of nature and of the spirit that letters, the written word, and the corresponding numerical values have enormous significance for the Bāb. The love of calligraphy (according to tradition, his own writing was superb) is for him a feature of religion, and more than once, in the *Bayān*, he commands that copies of the Holy Book should be conserved in the most elegant writing possible. The number 19, for instance, has great importance in Bābī numerology; having abolished the 'natural' calendar, the Bāb substitutes for it a purely spiritual and mental calendar of 19 months each of 19 days, each one bearing the name of an an attribute of God. The last month (that of *ʿAlā'*) is that of fasting, effective from dawn to sunset. This calendar, with some minor modifications, has been adopted by the Bahā'īs also. The Bāb took pleasure also in writing the most complicated *hayākil* (pl. of *haykal*, 'temple' or 'shape'), a kind of talisman in an obscure *shikasta* script, which he considered to be the most acceptable to God.

It would be difficult to put into order the very varied moral and juridical precepts contained in the *Bayān*. Beside such excellent verses as 'Each day recalls my Name. And if each day my thought penetrates into your heart, then are you among those who are always in God's thoughts' (Arabic *Bayān*, *wāḥid* V, chapter 9), one finds prescriptions which seem not a little strange, such as the injunction, already quoted, not to possess more than 19 books, or discursions on the correct way to eat eggs. The extreme leniency of the penalties, which are reduced to fines and to the prohibition of sexual relations with one's own wife, is characteristic. The greatest penalty is incurred by the homicide: the culprit is condemned to pay 11,000 *mithḳāl*s of gold to the heirs of the victim, and to abstain from all sexual activity for 19 years. Some penalties are likewise inflicted not only on those who strike their fellow-creatures, but also on those who lift their voices against them. Certain passages seem, however, to deal with relations between believers and unbelievers (it is only in the Bahā'ī doctrine that Holy War and the confiscation of the goods of unbelievers have been definitely abrogated). There exist, moreover, regulations concerning taxes on benefits, on capital, etc. Divorce is allowed, but discouraged. Widowers and widows are obliged to remarry, the first after 90 days, the latter after 95. Ritual purity and seclusion of women are abolished. Public worship is abolished, except for the rites of the dead. The Bāb's birthplace, the places of his imprisonment, etc., are recommended as places of pilgrimage. Every 19th day one should invite 19 persons, giving them 'if only a glass of water'. All alcoholic drinks are forbidden, and it is as strictly forbidden to beg as it is to give individual alms to beggars.

(A. BAUSANI)

BĀB AL-ABWĀB, 'Gate of the Gates', in the older texts AL-BĀB WA'L-ABWĀB, 'the Gate and the Gates', and often simply AL-BĀB, the Arabic designation of a pass and fortress at the E. end of the Caucasus, in Persian Darband, later under Turkish influence 'Iron Gate', mod. Derbent. The 'Gates' are the mouths of the E. Caucasus valleys (Ibn Khurradādhbih, 123-4; cf. Yāḳūt, i, 439), al-Bāb itself ('the Gate') in the main pass being the most important. It was originally fortified against invaders from the N. at some date not determined, traditionally by Anūshirwān (6th century A.D.), who is said to have built a wall seven *farsakhs* in length from the mountains to the sea (Ḳazwīnī, *Cosmography*, 341). The present remains of fortification extend from Derbent to the Ḳara Syrt.

When the first Muslims reached Darband in 22/643, a Persian garrison was in possession, but we have no description of what the place looked like. During the fighting of the next decade between the Arabs and the Khazars, at this time the principal power N. of the Caucasus, Bāb al-Abwāb is frequently mentioned, and so also in the following century. Maslama b. ʿAbd al-Malik in a spectacular retreat from Khazaria in 113/731 reached the neighbourhood of al-Bāb with his troops at their last gasp. In 119/737 Marwān b. Muḥammad (later Caliph as Marwān II) assaulted the Khazars simultaneously from Bāb al-Abwāb and Darial (Bāb al-Lān, [*q.v.*]), and for a short time was master of the country to the Volga. The Khazars gradually ceased to be dangerous. Their last great invasion of the lands of Islam via Bāb al-Abwāb took place in 183/799.

According to the description of Bāb al-Abwāb given by al-Iṣṭakhrī (circa 340/951) there was a harbour for ships from the Caspian inside the town. The oblique harbour-entrance between the two sea-walls was narrow and further defended by a chain or boom. These arrangements, like the wall mentioned above, and the city-wall, no doubt mostly went back to Sāsānid times, but owed improvements to the Arabs, *e.g.*, under the celebrated vizier ʿAlī b. al-Furāt (after 296/908) (Hilāl al-Ṣābi', *Kitāb al-Wuzarā'*, ed. Amedroz, 217-218). Al-Iṣṭakhrī adds that Bāb al-Abwāb was a principal port of the Caspian in his time, and larger than Ardabīl, the capital of Ādharbāydjān. It exported linen garments, of which it had practically a monopoly in these parts, also saffron, and slaves from the infidel lands lying to the N. Writing about the same time, al-Masʿūdī mentions as imported to Bāb al-Abwāb the black fox-skins of Burṭās (on the Volga) which were the best in the world (*Tanbīh*, 63). For al-Masʿūdī Bāb al-Abwāb, in spite of earlier attempts to plant Arab colonies there (cf. Balʿamī, ed. Dorn, 538) and in spite of its name, was evidently no Arab town.

Recent investigations have brought to light the existence of a dynasty in Bāb al-Abwāb, the Hāshimids, having connexions with the neighbouring Shirwān Shāhs, as early as the 4th/10th

century (*Ḥudūd al-ʿĀlam*, 411). The principal source of information about them is an anonymous 11th century *Taʾrīkh al-Bāb*, which is quoted by Aḥmad b. Luṭf Allāh Munadjdjim (Müneccim) Bāshī (17th century) in his *Djāmiʿ al-Duwal*. This source also adds considerably to our knowledge of the movements of the Rūs, *e.g.*, it mentions that in 423/1032 the *ghāzīs* of al-Bāb caught and destroyed a party of Russian raiders in a defile of the Caucasus (Minorsky, *Studies in Caucasian History*, 77).

The period of Turkish predominance at al-Bāb, in common with the neighbouring provinces, begins in the time of the Saldjūḳs (cf. A. Zeki Velidi Togan, *Umumî Türk tarihine giriş*, i, 190, 411). Under the Mongols al-Bāb figured in the march of Subutāi northwards through the Caucasus (1222). Tīmūr and Djaba (Jebe) campaigned more than once in the neighbourhood. The general effect of the Mongol period was to confirm the Turkification of the N.-W. provinces of what had formerly been the Caliphate.

The most detailed account of Bāb al-Abwāb comes from al-Ḳazwīnī (674/1275), who describes the place as a thriving Muslim town, built of stone, its wall washed by the waters of the Caspian. In length it was about 2/3 of a *farsakh* and in breadth a bow-shot. There were towers on the city-wall, at each of which was a mosque, to serve the neighbourhood and those occupied with the religious sciences. Guards were constantly maintained upon the wall, and a beacon-fire on an adjoining peak was kept in readiness against the danger of invasion from the N. Al-Ḳazwīnī mentions what he calls talismans set up to keep back the Turks, probably remains of sculpture from the pre-Muslim period. He speaks of a cistern outside the city with steps descending to the water. Outside the city also was a mosque, said to contain the sword of Maslama b. ʿAbd al-Malik.

Already when al-Ḳazwīnī wrote al-Bāb had ceased to be the frontier of an empire. Its history henceforward resembles that of other semi-independent Caucasian principalities, sometimes enjoying independence, at other times annexed to a more powerful neighbour. Having previously belonged to Persia, it became Russian in 1806. Since last century its population has shown a slight increase, but evidently it is of much less relative importance than formerly.

BĀB-I ʿĀLĪ (modern orthography *Babı âli*), less frequently *Bāb-i āṣafī*, the (Ottoman) Sublime Porte, former ministerial department of the Grand Vizier, originally called *Pasha* (or *Vezīr*) *Ḳapusu*.

The custom of calling the palace, court or government of a ruler "porte" or "doorstep" was very prevalent in ancient times (Iran of the Sāsānids, Egypt of the Pharaohs, Israel, Arabs, Japan). The term returned to Iṣfahān in the more Turkish form of *ʿĀlī Ḳapu* (Chardin).

The "Porte", which at the same time was the personal dwelling of the Grand Vizier and at the outset tended to be rather mobile, gradually lost the character of a semi-private residence and became finally established, under what was henceforth to be its official name, from 1718, when the Grand Vizier Newshehirli Ibrāhīm Pasha returned with his father-in law, Sulṭān Aḥmad III, from Adrianople to Istanbul, after the peace of Passarovitz (*Sidjill-i ʿOthmānī*, iv, 755). Prior to this date the term *Bāb-i ʿālī* denoted rather the palace of the Sultan or the Imperial *dīwān*. The same confusion arises in Byzantine and European usage with the terms Porta, Porte, Pforte, πύλη, θύραι, which moreover corresponded to the Turkish Kapu (Löwenklau alias Leunclavius and Dukas, in the 9th/15th and 10th/16th centuries, etc.).

Up till the end of the Empire, the Sublime Porte also housed the Ministry of the Interior (*Dākhiliyye Neẓāreti*), the former offices of the *Ketkhüdā* (*Kahya, Kehaya, Kihaya*) Bey, the Ministry of Foreign Affairs (*Khāridjiyye Neẓāreti*), the former department of the *Reis ül-küttāb* (*Reis-kitap*), literally "Chief of the Secretaries", the Council of State (*Shūrāyi Dewlet*), without counting two more modern commissions which were suppressed by the Young Turks.

Five days after the abolition of the Sultanate (1 November 1922), the premises, prior to becoming the seat of the *wilāyet* of Istanbul, served as the offices of the Delegation of the Government of Ankara (Refet Pasha, soon replaced by Rauf Bey and Adnan Bey Adivar, all three of whom later belonged to the opposition).

The road formerly called *Bāb-i ʿālī djāddesi*, which climbs northwards from the station of Sirkedji and circles round the enclosure (which also contains a mosque), has been renamed *Ankara djāddesi* (*caddesi*). It is lined with bookshops and runs into the Souk Česhme road, passing between this enclosure and that of the Top Kapî Saray. It is in this latter road that the main entrance is to be found, opposite the gate of the Saray, which is called the Souk Česhme gate; at a short distance from this is to be found a huge belvedere, called *Alay köshkü*, incorporated in the same wall, which was built by Maḥmūd II in 1235/1819-20, so that he could be present at official "processions".

BĀB-I HUMĀYŪN, the "Imperial Gate", the principal entrance in the outer wall of the Sultan's New Serail or *Ṭop-ḳapu Sarāyî* [*q.v.*] at Istanbul. Situated behind the Aya Sofya mosque, the massive rectangular building gives access to the first court of the Serail through a high, double-arched portal. On either side of the passage between the outer and the inner door are the rooms of the *Ḳapudjîs* who guarded the gate. In or near the deep niches in the façade the heads of political delinquents used to be exposed. Over the doorway is a beautiful Ḳurʾān inscription and, below it, an Arabic inscription referring to the erection of the Serail wall by Sulṭān Meḥemmed II in Ramaḍān 883/Nov.-Dec. 1478. The *tughras* of Maḥmūd II and ʿAbd al-ʿAzīz on the gate commemorate some of its later restorations. Originally the gateway was surmounted by an upper storey (destroyed in the last century). At one time

the effects of those who died without known heirs were deposited here; at others it served as archives of the Treasury or for other purposes.

Many European writers, especially in the 19th century, ignoring Hammer (*Staatsverfassung*, ii, 95) and D'Ohsson (*Tableau*, vii, 158), asserted that *Bāb-i Humāyūn* meant "Sublime Porte" (the Western name for the Ottoman Government), while in fact the latter denoted the Grand Vizier's residence [see BĀB-I ʿĀLĪ]. There is even no reason to assume that the term "Porte", which until the 18th century signified the Sultan's Court, originated from this gate, as some travellers (*e.g.*, Tournefort, *Voyage du Levant*, Paris 1717, i, 496) believed (cf. DERGĀH, ḲAPU).

BĀB AL-LĀN (BĀB ALLĀN), 'Gate of the Alans', Persian Dar-i Alān, mod. Darial (Dariel), a pass in the middle Caucasus, E. of Mt. Kazbek and S. of Vladikavkas. It is described as a magnificent gorge through which the Terek rushes between granite cliffs rising to heights of from 4,000 to 5,000 ft., and was apparently known to the ancients as the Caucasian Gates (cf. Pauly-Wissowa, XXXII, i, col. 325). It lay in the territory of the Alans, in the early days of Islam and later a national group of hardy mountaineers, distinct from and usually independent of their neighbours N. and S. of the Caucasus. Their present-day representatives, the Ossetes, live athwart the pass.

Bāb al-Lān was scarcely reached by the first wave of Muslim conquest. It is mentioned in 105/724, when al-Djarrāḥ b. ʿAbd Allāh al-Ḥakamī invaded Khazaria by this route. Next year al-Djarrāḥ is said to have received the *djizya* and *kharādj* from the Alans (Dhahabī, *Taʾrīkh al-Islām*, ed. Cairo, iv, 88), but Maslama b. ʿAbd al-Malik in 109/727 had to occupy Darial (Yaʿḳūbī, ii, 395). It was perhaps at this time that Maslama placed an Arab garrison, mentioned by al-Masʿūdī (*Murūdj*, ii, 44), in the fortress which defended the pass. This fortress was built on a massive rock overlooking a bridge across the ravine and was, says al-Masʿūdī, one of the most famous in the world. Yet in 112/730 the Khazars marched through the pass, defeated al-Djarrāḥ in a pitched battle and captured Ardabīl, before retiring with their booty (Ṭabarī, ii, 1530-1531). In the operation of Marwān b. Muḥammad against Khazaria in 119/737, he himself advanced through the Darial pass to a rendez-vous with Abū Yazīd al-Sulamī advancing from Bāb al-Abwāb. This was the beginning of a highly successful campaign north of the Caucasus, but Marwān did not attempt any permanent occupation. The Arabs made sporadic attempts to hold Darial, *e.g.*, again under Yazīd b. Usayd al-Sulamī circa 141/758 (Balādhurī, 209-210). But no great fortress-city developed here as at Bāb al-Abwāb [*q.v.*]. Al-Masʿūdī states that in his time (4th/10th century) there was still in the pass an Arab garrison, provisioned from Tiflīs, at five days' distance through infidel country (*ibid.*). The Darial pass is mentioned repeatedly in the Mongol period, and later retained its importance.

Bibliography: Masʿūdī, *Murūdj*, ii, 43-45; *Ḥudūd al-ʿĀlam*, 446; D. M. Dunlop, *History of the Jewish Khazars*, Princeton 1954, index. (D. M. DUNLOP)

BĀB AL-MANDAB, the straits between the Red Sea and the Gulf of Aden. They are divided by the volcanic island of Mayyūn [*q.v.*], called Perim by Westerners, into Large Strait, c. 14 km. wide, and Small Strait, c. 2.5 km. wide, the former being generally used by large vessels. Water runs out of the Red Sea during the south-west monsoon from June to September and into it during the north-east monsoon from November to April, causing currents which make the passage dangerous for sailing craft. The hill of al-Manhalī (270 m.) on the Arabian shore rises east of Small Strait, and just north of this strait is the site of al-Shaykh Saʿīd [*q.v.*], from which, as from Mayyūn, entrance into the Red Sea can be controlled.

Arab tradition holds that Asia and Africa were joined together until Dhu 'l-Ḳarnayn split them asunder here and created the Red Sea. Yāḳūt associates the origin of the name al-Mandab ("place of lamentation for the dead") with a crossing of the Abyssinians over the sea to the Yaman, and al-Hamdānī applies it to a not clearly identified portion of the southern Yaman coast, which lay within the territory of Banū Madjīd and Farasān. Amber (called *ḥashīsh al-baḥr*) used to be collected in al-Mandab.

Two Sabaean inscriptions of the early 6th Christian century (Ry 507 and 508) mention *sślt* (or *sslt*) *mdbn* (= *silsilat al-Mandab*) in connexion with the conflict between Yūsuf Asʾar Dhū Nuwās and the Abyssinians; this may have been a chain stretched across the very narrow and shallow mouth of the inlet at al-Shaykh Saʿīd, if al-Mandab lay as far south as that, as its appearance in the name of the straits would suggest. Such a barrier may well have been the source of the implausible tradition of a chain across the straits themselves.

The variant Bāb al-Mandam, probably to be explained by no more than the not unusual substitution of *m* for *b*, is especially current among seafaring Arabs, who often refer to the straits simply as al-Bāb.

BĀB-I MASHĪKHAT, (also SHAYKH AL-ISLĀM KAPÎSÎ, BĀB-I FETWĀ and FETWĀKHĀNE), a name which became common in the Ottoman Empire during the 19th century for the office or department of the Shaykh al-Islām [*q.v.*], the Chief Muftī of Istanbul. Until 1241/1826 the Chief Muftīs had functioned and issued their rulings from their own residences or, if these were too distant, from rented quarters. In that year, after the destruction of the Janissaries, Sulṭān Maḥmūd II gave the former

residence of the Agha of the Janissaries, near the Süleymāniyye Mosque, to the Chief Muftī, who thus acquired a permanent establishment. This step, taken simultaneously with the creation of an Inspectorate of *waḳf* to centralise the supervision and control of *waḳf* revenues, prepared the way for the bureaucratisation of the *ʿulamāʾ*. Deprived of both their financial and their administrative autonomy, the *ʿulamāʾ* were gravely weakened as against the sovereign power, and were unable to resist effectively successive diminutions of their competence, authority, and status. In the course of the 19th century, they lost control of education and justice to the new Councils and Ministries created for these matters, and even the drafting of *fetwās* was entrusted to a committee of legal specialists in the Chief Muftī's office. The Chief Muftī himself became a government office-holder, a minister or head of department and a member of the cabinet. Eventually a point was reached when his term of office ended automatically with the fall of the cabinet. Unlike the other ministers, he was appointed by the Sultan and not by the Grand Vizier, with whom he was theoretically equal (cf. Art. 27 of the 1876 constitution). The office however declined steadily in influence and importance, especially after the Revolution of 1908. Finally, on 3rd March 1924, the day the Caliphate was ended, the office of Shaykh al-Islām, which had lapsed with the Sultanate in 1922, was replaced by a department of religious affairs attached to the office of the Prime Minister in Ankara. The head of this department (*Diyanet Işleri Reʾisi*) is the chief religious functionary of the Turkish Republic, with responsibility for mosques and mosque personnel, but not for *waḳf*, law, or education.

BĀB-I SERʿASKERI or Serʿasker kapīsī, the name of the War Department in the Ottoman Empire during the 19th century. After the destruction of the Janissaries in 1241/1826, the Agha of the Janissaries was replaced by a new commanding officer, the Serʿasker [*q.v.*]. The title was an old one, given to army commanders in former times. As applied by Maḥmūd II, it came to connote an officer who combined the functions of commander-in-chief and minister of war, with special responsibility for the new style army. In addition, he inherited from the Agha of the Janissaries the responsibility for public security, police, fire-fighting, etc. in the capital. In a period of growing centralisation and enforced change, the police function came to be of increasing importance and the maintenance and extension of the police system one of the chief duties of the Serʿasker. In 1262/1845 the police were taken from the jurisdiction of the Serʿasker and placed under a separate department called Zabṭiyye (see ḌABTIYYA) Mushīriyyeti.

Maḥmūd II at first lodged the Serʿaskerate in the old Saray, from which a few remaining parts of the Imperial Household were transferred to the new Saray. Later, in 1282/1865, new buildings were provided for the Serʿasker and his staff. For a short time in 1297/1879-90, and then permanently in 1324/1908, the old name of Serʿaskerate was replaced by Ministry of War (*Ḥarbiyye*). These buildings remained the seat of the Ministry until the time of the transfer of the capital to Ankara, when they were handed over to the University of Istanbul.

Serasker. (B. Lewis)

BABA, (Turkish and also Persian) "father"; in East Turkish it also denotes "grandfather" (Vambéry, *Čagat. Sprachstudien*, 240; Süleymān Efendi, *Lughāt-i djaghatay*, 66). Baba, put after the name, is used in various ways as an honorific for older men, and in Turkey it is used as a form of address even today. As part of a name, it is best known from the story of "Ali Baba and the 40 thieves" in *The Thousand and One Nights*. As a cognomen, it was used particularly in Dervish circles (e.g. Geyikli Baba, who is said to have accompanied Orkhān Beg in the siege of Brusa), and there particularly with the Bektashī. Akhī Bābā [*q.v.*], in corrupt form also Ahū Baba and similar forms) was the title of Akhī Ewrān's [*q.v.*] successor in his Tekke in Kīrşehir (Anatolia) and master of the leather guilds (tanners, saddlers, and shoemakers), in which he held the privilege of inducting apprentices into the guild. There was a movement of dervishes who called themselves Bābāʾīs [*q.v.*] under the Rūm Saldjūḳ Sulṭān Kaykhusraw II. The epithet Baba also occurs with non-religious civil servants in the ancient Ottoman Empire, e.g. Agha Babasī (Barbier de Meynard, *Supplément*, i, 257), the leader of the 40 guardians (*kapīdjī*) of the imperial harem, who were white eunuchs. In Iran the epithet Baba precedes the name, again frequently in the case of dervishes (e.g. the dialect poet Bābā Ṭāhir ʿUryān [see BĀBĀ-ṬĀHIR]). Occasionally, Bābā appears in its own right, e.g. a member of the Khān family Girāy on the Crimea, Bābā Girāy, son of Muḥammad Girāy, who, after the death of his father, succeeded him as Kalgha, but was murdered six months later (929/1522); as also the Özbek prince Bābā Beg [*q.v.*].

As part of a place name, Bābā indicates that the place had dervish associations. Thus, for example, Bābā Daghī [see BABADAGHĪ], in the Dobrudja, where the tomb of the famous saint Ṣarī Ṣaltīk Baba is; there is another Bābā Daghī near Denizli in Anatolia, and foothills called Bābā Burnu (formerly Assos) in western Anatolia, a part of mount Ida in Troas, at the foot of which lies the harbour Baba Limanī. In eastern Thrace there is a small town called Babaeski [*q.v.*].

BĀBĀ AFḌAL al-Dīn Muḥammad b. Ḥusayn Kāshānī (or Kāshī), generally called Bābā Afḍal, a Persian thinker and the author of poems in quatrains, born in Maraḳ near Kāshān, where he is also buried. His dates are still rather uncertain. According to Saʿīd Nafīsī he was born around 582/1186-7, or 592/1195-6, and died after 654/1256 or 664/1265-6; the date given as the date of his death by Brockelmann, II, 280, *viz.* Radjab 666/March-April 1268, is near to this. According to M. Mīnovī, Bābā Afḍal died considerably earlier, at the beginning of the 7th/13th century; the date of death given by

E. G. Browne and others, 707/1307-8, is certainly incorrect. There is scant information on his life, and that of little importance. Thus, for example, the relationship between Bābā Afḍal and Naṣīr al-Dīn Ṭūsī [*q.v.*], which has been accepted by some, proves on closer examination to have been impossible. Admittedly Naṣīr al-Dīn Ṭūsī had a teacher named Kamāl al-Dīn Muḥammad Ḥāsib, who had been a pupil of Bābā Afḍal. Of the two quatrains in praise of "Afḍal" ascribed to Naṣīr al-Dīn Ṭūsī, one is not definitely his whilst the other is in self-praise. The assertion that Naṣīr al-Dīn had protected Kāshān from Hūlāgū to please Bābā Afḍal is a fiction. It is hardly possible that there was ever a meeting between Bābā Afḍal and Saʿdī. Bābā Afḍal's thought was influenced by the Bāṭiniyya and Avicenna, whom he resembles also in his attempts to substitute Persian technical terms for Arabic ones. His writings comprise 16 treatises, a posthumous book of questions and answers, some 40 short essays, 6 letters, a collection of quatrains, some *ghazal*s and *ḳiṭʿa*s. These figures, especially where the short essays and letters are concerned, must not be regarded as final, because—though most of his treatises had already been printed individually before—scientific and systematic research into his works has only recently commenced. He wrote chiefly in Persian, though occasionally also in Arabic (cf. primarily the *Madāridj al-Kamāl*, which he later translated into Persian by request). His prose works are concerned with philosophy, theosophy, ethics, and logic; they are partly original, partly editions or translations, and are distinguished by their simple, clear and readily intelligible style, which follows that of the ancients closely. M. Bahār regards his translation of the *Kitāb al-Nafs* of Aristotle as exemplary. Bābā Afḍal's logic *al-Minhādj al-Mubīn* is based on *al-ʿIlm wa 'l-Nuṭḳ* of Aristotle though it is not identical with its model, but has independent developments of its own. Bābā Afḍal's *Čahār ʿUnwān* gives a selection from Ghazzālī's *Kīmiyā-i Saʿādat*, which consists partly of selected pieces from the Persian text of Ghazzālī, partly of translations of the Arabic parts of the book, which Ghazzālī had not included in the Persian version. Bābā Afḍal's quatrains are extremely attractive, and their occasionally shrill note has already been remarked on by E. H. Whinfield. It is no wonder that several of them have achieved currency as works attributed to ʿUmar Khayyām.

Bibliography: Muḥammad Taḳī Dānishpuzhūh lists all of Bābā Afḍal's prose works so far identified, their manuscripts, all printed and lithographed editions, translations, etc. in his essay *Niwishtahā-i Bābā Afḍal*, in *Mihr* 1331 AH solar, viii, 433-6, 499-502. For special mention here: *Muṣannafāt* I: *Madāridj al-Kamāl* (see above), *Rāh-andjām-nāma*, *Sāz u Pīrāya-i Shāhān-i Pur-māya*, *Risāla-i Tuffāḥa*, *ʿArḍ-nāma*, *Djāwidān-nāma*, *Yanbūʿ al-Ḥayāt* (translated by Bābā Afḍal), ed. Mudjtabā Mīnovī and Yaḥyā Mahdawī, Tehran 1331 AH solar (Publications of the University, no. 138, vol. II, including a biography and assessment, indices and vocabulary in preparation). *The Book of the Apple* [*Kitāb al-Tuffāḥa*, *Sīb-nāma*], ascribed to Aristotle, edited in Persian and English by D. S. Margoliouth, in *JRAS* 1892, 187-252 (no attempt being made to identify the Persian translator of this dialogue); *Tardjama-i Rawān-shināsī yā Risāla-i Nafs-i Arisṭū*, ed. M. Bahār *Malik al-Shuʿarā*, Tehran 1316 AH solar (Bābā Afḍal's Persian translation is based on the Arabic rescension by either Abū Zayd Ḥunayn b. Isḥāḳ ʿIbādī [who died in 264/877-8] or by his son Isḥāḳ [who died in 298/910-1]); *Rubāʿiyyāt-i Bābā Afḍal-i Kāshānī* (483 items); Tehran 1311 AH solar, with critical biography and survey of the whole work by Saʿīd Nafīsī (also with a French title on the cover). There is a selection of quatrains with a sensitive prose translation in *Hoséyne-Âzad*, *La Roseraie du Savoir*, *Choix de Quatrains mystiques*, Leiden 1906. Concerning Bābā Afḍal: H. Ethé, *Neupersische Literatur*, *Gr. I. Ph.*, ii, 277; Browne, ii, 110; Brockelmann, S II, 280; J. E. Bertel's, *Avicenna i persidskaya literatura*, in *Izvestija AN SSSR. Taḳī Bahār *Malik al Shuʿarā*, *Sabk-shināsī*, iii (1319 AH solar), 163-6; *Madjmaʿ al-Fuṣaḥā*, i, 98 etc. (J. Rypka)

BĀBĀ BEG, an Özbek chief of the family of the Keneges, who was till 1870 prince of Shahrisabz. This town having been conquered by the Russians, he fled with a small body of those faithful to him. Finally he was seized in Ferghānā and obliged to reside at Tashkent. In 1875 he entered Russian military service and took part in the campaign against Khoḳand. He died about 1898 at Tashkent. (W. Barthold-[B. Spuler])

BĀBĀ DĀGHĪ [see Babadaghī].

BĀBĀ ESKISI [see Babaeski].

BĀBĀ FIGHĀNĪ [see fighānī].

BĀBĀ ISḤĀḲ [see bābāʾī].

BĀBĀ-ṬĀHIR, a mystic and poet who wrote in a Persian dialect. According to Riḍā Ḳulī Khān (19th century), who does not give his source, Bābā-Ṭāhir lived in the period of Daylamī rule and died in 401/1010. Among his quatrains there is an enigmatical one: "I am that sea (*baḥr*) which entered into a vase; that point which entered into the letter. In each *alf* ("thousand", *i.e*, of years?) arises an *alif-ḳadd* (a man upright in stature like the letter *alif*). I am the *alif-ḳadd* who has come in this *alf*". Mahdī Khān in the *JASB* has given an extremely curious interpretation of this quatrain: the letters *alf-ḳd* have the value 215, the same as the letters of the word *daryā* (Persian equivalent of the Arabic *baḥr* "sea") and those of the name of the poet *Ṭāhir*. If we add *alf-ḳd* (215) to *alf* (111) we get 326 (the same value by the way as the Persian word *hazār*, "thousand", if we spell it *hā*, *zā*, *alif*, *rā*). In this way the phrase "an *alif-ḳadd* came into the *alif*" would give the date (326) of the birth of Bābā-Ṭāhir who may well have lived till 401.

In spite of the ingenuity of this explanation, it is nevertheless true that the only historical evidence that we possess about Bābā-Ṭāhir is that of the *Rāḥat al-Ṣudūr* (c. 601/1204, *GMS*, 98-99), the author of which "had heard" that when the Saldjūḳ Sulṭān Tughrīl entered Hamadān (in 447/1055), Bābā-Ṭāhir addressed an admonition to him ("O Turk, how are you going to act towards the Muslims?") which much impressed the conqueror. The anecdote suggests for the death of Bābā-Ṭāhir a date later than 447/1055 but is in no way contradictory to the statement that Bābā-Ṭāhir flourished under the Daylamīs, *i.e.* under the Būyids and their relatives, the Kākoyids, whose rule in Hamadān lasted till the expedition of Ibrāhīm Yināl in 435/1043-4. Bābā-Ṭāhir may well have been the contemporary of Avicenna (Ibn Sīnā) who died at Hamadān in 428/1037, but the legends which make him a witness of

the execution of the mystic ʿAyn al-Ḳuḍāt of Hamadān in 533 and the contemporary of Nasīr al-Dīn Ṭūsī (d. 672) are pure inventions.

The sources sometimes call Bābā-Ṭāhir Hamadānī (cf. the Arabic MS. 1903 of the Bibl. Nat. Paris, the *Sarandjām*, etc.), sometimes Lurī (Lūrī). This latter form—in place of Lur [*q.v.*]—is somewhat puzzling: does it mean some other connexion than that of origin between Bābā-Ṭāhir and Luristān? It is certainly well to remember that in the 5th/11th century there were very close links between Hamadān and Luristān and the poet may have spent his life between the two places. In Khurramābād there is a quarter bearing the name of Bābā-Ṭāhir (cf. Edmonds, *Geogr. Journ.*, June 1922, 443). The association of Bābā-Ṭāhir with Luristān in the beliefs of the Ahl-i Ḥaḳḳ [see below] is also significant. In the quatrains of Bābā-Ṭāhir (cf. nos. 102, 200, 274 of the *Dīwān*), Mount Alwand [*q.v.*] overshadowing Hamadān is frequently mentioned. The tomb of Bābā-Ṭāhir lies on a little hill to the north-west of the town in the Bun-i bāzār quarter; beside the tomb of Bābā-Ṭāhir are those of his faithful Fāṭima [see below] and Mīrzā ʿAlī Naḳī Kawtharī (19th century); the building is a humble one and of no interest. The tomb is mentioned in Ḥamd Allāh Mustawfī, *Nuzha* (740/1340), 75; cf. the photograph in Minorsky, *Matériaux*, Moscow 1911, xi, and Williams Jackson, *A visit to the Tomb of Bābā Ṭāhir at Hamadān*, in *A Volume presented to E. G. Browne*, Cambridge 1922, 257-260.

The stories one hears in Māzandarān about Bābā-Ṭāhir's connexion with that province have no foundation and may have been brought by immigrants from Luristān (the Läk). Besides, all the nomads of Persia like to claim Bābā-Ṭāhir as a compatriot.

The language of Bābā-Ṭāhir. Since all the facts and traditions connect the poet with Hamadān and Luristān, it is reasonable to expect to find in his dialect traces of a dialect of this region of Persia. But as this dialect was very close to Persian and as so many different mouths have been trying to render more comprehensible the verses transmitted orally, there is little hope of re-establishing the text in its dialectic purity. It is not an improbable suggestion that Bābā-Ṭāhir simply wanted to imitate the dialects of his adepts. In our own day a Kurd Christian claims to have made verses in the Gūrānī dialect, quite distinct from his own, in order to "transmit the message" to the Ahl-i Ḥaḳḳ (Dr. Saʿīd Khān, in *MW*, Jan. 1927, 40).

The country between Hamadān and Khurramābād still has many dialects, but that of Bāhā-Ṭāhir is not connected with any definite one and seems to borrow from all. The closeness of the present text of Bābā-Ṭāhir to literary Persian is undeniable; on the other hand changes like *nām* > *nūm* "name", *dastam* > *dastum* ("my hand"), *raftam* > *raftum* ("I have gone"), *dūr* > *dīr* (cf. Huart, xiv = *Dīwān*, no. 82) are typical of the Lur dialects; the stems *vādj* "to speak", *kar* "to do" are common to the Kurdish and central dialects; the forms *mī-kar-ū* "he does" and *āy-ū* "he comes" recall particularly the Gūrānī spoken much farther to the west. For certain peculiarities (*dāram* > **dērom*) we only find analogies at Kāzrūn (near Shīrāz).

Hadank's detailed analysis has plainly proved this mixture of dialects (*Dialektgemisch*) in the quatrains, at least as we know them now. The term "Muḥammadan Pahlavi" proposed by Huart (1885) for the language of Bāhā-Ṭāhir has not been accepted by scholars.

The metre of the quatrains of Bābā-Ṭāhir and of his *ghazals* is almost exclusively *hazadj musaddas mahdhūf* ⏑– – – | ⏑– – – | ⏑– – which has made the new editor call the quatrains *du-baytī* (distichs) instead of *rubāʿī*, the last term being too closely associated with the metre *hazadj makfūf maḳṣūr* – – ⏑⏑ | – – ⏑⏑ | – – ⏑⏑ | – . The authenticity of some regular *rubāʿī* attributed to Bābā-Ṭāhir seems doubtful. The metre of Bābā-Ṭāhir is also found in popular songs (Mīrzā Djaʿfar [Korsch], *Gramm. Pers. Yazīka*, Moscow 1901, 308).

Bābā-Ṭāhir—poet. Down to 1927, all that was known of his poems was a rather small number found for the most part in anthologies of the 18th and 19th centuries. Huart's researches produced in 1885, 59 quatrains, and in 1908, found 3 new quatrains (they are moreover very doubtful). Leszczynski (who used the Berlin manuscripts) has translated 80 quatrains and one *ghazal* (a different one from Huart's). Finally Ḥusayn Waḥīd Dastgirdī Iṣfahānī, editor of the Persian review *Armaghān*, published in 1306/1927 at Tiḥrān a *Dīwān* of Bāhā-Ṭāhir containing 296 *du-baytī* and 4 *ghazals* of this poet; as an appendix the editor gives 62 *du-baytī* found in the "different collections" and the 3 *rubāʿī* added by Heron Allen. The quatrains of the *Dīwān* are arranged in the alphabetical order of the rhymes. The editor unfortunately gives no details of the manuscript of the *Dīwān* reproduced in his edition. The new quatrains several of which mention Ṭāhir's name, the mountains of Alwand and Maymand (?) etc., confirm the characteristics already known of Bābā-Ṭāhir, while making them a little more banal by the inevitable repetitions. The dialectical flavour of most of the quatrains is in favour of their authenticity, although an imitation of the peculiarities of the language of Bābā-Ṭāhir would really not be a very difficult matter. The question of the authenticity of the quatrains of Bābā-Ṭāhir certainly arises, as it did in the case of those of ʿUmar Khayyām. Žukowski says that quatrains of Bābā-Ṭāhir are found in the *Dīwān* of Mullā Muḥammad Ṣūfī Māzandarānī (5th/11th cent.). A certain Shāṭir Beg Muḥammad, a modern poet of Hamadān, claimed to be the author of several "Kurdī (Pahlawī)" quatrains attributed to Bābā-Ṭāhir (cf. *Dīwān*, 21).

The choice of subjects in Bābā-Ṭāhir is very restricted, but the poet's work bears the stamp of a distinct personality. We give an analysis of the 59 quatrains published by Huart to enable the reader to judge. As usual it is difficult to draw a rigid distinction between the expression of mystical and that of profane love; 34 quatrains are almost equally divided between two categories of lyric poetry. Two quatrains are simple hymns to God. The rest is more individual and characteristic. Bābā-Ṭāhir often refers to his life as a wandering *darwish-ḳalandar*, without a roof above his head, sleeping with a stone for a pillow, continually harassed by spiritual anxieties (nos. 6, 7, 14, 28). Cares and melancholy torment him; the "flower of grief" alone flourishes in his heart; even the charms of spring leave him still unhappy (34, 35, 47, 54). Bābā-Ṭāhir professes the philosophy of the true Ṣūfī, confesses his sins, implores pardon for them, preaches humility, invokes nirvana (*fanāʾ*) as the only remedy for his misfortunes (1, 13, 45, 50, 58). One human failing is especially

characteristic of Bābā-Ṭāhir: his eyes and his heart do not readily detach themselves from the things of this world; his rebellious heart burns within him, leaves him no rest for a moment and the poet cries in anguish: "Art thou a lion, a panther, O my Heart, thou who art continually struggling with me. If thou fallest into my hands, I shall spill thy blood to see what colour thou art, O my heart" (3, 8, 9, 26, 36, 42).

Bābā-Ṭāhir's psychology shows striking contrast to that of ʿUmar Khayyām. Bābā-Ṭāhir shows no trace of the hedonism of the latter (d. 517/1123?) nor of his serenity in face of the changes brought by death, while ʿUmar Khayyām lacks the mystic fire of Bābā-Ṭāhir (cf. Christensen, *Critical Studies in the Rubāʿiyāt of ʿUmar-i Khayyām*, Copenhagen 1917, 44).

What pleases in Bābā-Ṭāhir is the freshness of his sentiments which Ṣūfī routine had not yet stereotyped, the spontaneity of his images, the naiveté of his language, with the local tang.

Bābā-Ṭāhir—mystic. The Persian dervishes with whom Žukowski talked about Bābā-Ṭāhir knew that he was the author of 22 metaphysical treatises (cf. also Riḍā Ḳulī Khān) but it is only from Ethé and Blochet that we have learned in Europe of the existence in Oxford and Paris of commentaries on the maxims of Bābā-Ṭāhir. The complete treatise [*al*-]*Kalimāt* [*al*]-*ḳiṣār* ("The brief sayings") has now been published in the edition of the *Armaghān*. This treatise consists of 368 Arabic maxims divided into 23 *bāb* dealing with the following subjects: knowledge (*ʿilm*); gnosis (*maʿrifa*); inspiration and penetration (*ilhām, firāsa*); reason and the soul (*ʿaḳl, nafs*); this world and the beyond (*dunyā, ʿuḳbā*); the musical performance (*samāʿ*) and the *dhikr*; sincerity and spiritual retreat (*ikhlāṣ, iʿtikāf*), etc.

Here are a few specimens of these maxims: no. 86: "Real knowledge is the intuition after the knowledge of certainty has been acquired" (*al-ḥaḳīḳatu 'l-mushāhadatu baʿda ʿilmi 'l-yaḳīni*); no. 96: "Ecstasy (*wadjd*) is the loss (of the knowledge) of existing things and is the existence of lost things"; no. 368: "he who has been the witness of predestination (coming) from God remains without movement and without volition"; no. 300: "he whom ignorance has slain has never lived, he whom the *dhikr* has killed will never die".

The "Brief Sayings" seem to have enjoyed considerable popularity among the Ṣūfīs. The Persian editor mentions the following commentaries on this treatise: the Arabic commentary attributed to ʿAyn al-Ḳuḍāt al-Hamadānī (d. in 533/1138-9 but often associated in legends with Bābā-Ṭāhir); another Arabic commentary by an unknown author; the Arabic and Persian commentaries by Mullā Sulṭān ʿAlī Gunābādī: the Persian commentary was printed in 1326/1906 but is very rare. The editor of the *Armaghān* expresses the hope of being one day able to publish the "Brief Sayings" accompanied by one of the commentaries.

The Arabic manuscript 1903 of the Bibl. Nat. contains the first 8 chapters of the maxims of Bābā-Ṭāhir in an abridged form (fol. 100b-105b), as well as a commentary on them (fol. 74a-100a) entitled *al-Futūḥāt al-Rabbāniyya fī Ishārāt al-Hamadāniyya*.

The manuscript seems to be in the hand of the author of the commentary, Djānī Beg al-ʿAzīzī, who began his work in Shawwāl 889 and ended it on 20th Shaʿbān 890/1 September 1485. The commentary was written at the request of a certain Shaykh Abu 'l-Baḳā who had possessed the *Ishārāt* of Bābā-Ṭāhir since 853/1449-50. He had let them fall into the well of Zamzam at Mecca but the manuscript was miraculously recovered. The *ʿulamāʾ* had dissuaded Abu 'l-Baḳā from writing a commentary on the text on account of its profundity and obscurity. Finally Abu 'l-Baḳā engaged Djānī Beg to accomplish this task. The commentary deals with the text of the maxims of Bābā-Ṭāhir word by word.

Bābā-Ṭāhir—saint. As is the case with the majority of the mystical poets (ʿAṭṭār, Djalāl al-Dīn Rūmī, Ḥāfiẓ), there are numerous legends of the life and miracles of Bābā-Ṭāhir. It is related that when Bābā-Ṭāhir had asked the students of the *madrasa* of Hamadān to show him the way to acquire knowledge, the students as a joke told him to spend a winter night in the icy water of a tank. Bābā-Ṭāhir carried out the advice and next morning found himself enlightened and exclaimed: *Amsaytu Kurdiyyan wa-aṣbaḥtu ʿArabiyyan* ("last night I was a Kurd and this morning I have become an Arab"). This story was heard by Žukowski in Tehran and by Heron Allen's informant at Būshīr; it is widely current in Hamadān (cf. the preface to the *Dīwān*, 17 and the manuscripts from Hamadān). This Arabic utterance is found in the preface to the *Mathnawī* of Djalāl al-Dīn Rūmī, where however it is referred to an unknown (mystic?) ancestor of Ibn Akhī, a Turk of Urmiya. In the *Nafaḥāt al-Uns* of Djāmī, ed. Nassau Lees, 362-363, the phrase is attributed to Abū ʿAbd Allāh Bābūnī (a Gūrānī tribe, see Ibn Athīr, ix, 247).

Other pious legends represent Bābā-Ṭāhir as making the snow on Mount Alwand melt by the ardour of his spiritual fire, tracing with the point of his great toe the solution of an astronomical problem which had been put him, etc. (Žukowski, Heron Allen, Leszczynski, preface to the *Dīwān*, manuscripts from Hamadān).

Gobineau, *Trois ans en Asie*, Paris 1859, 344, already knew that the adepts of the Ahl-i Ḥaḳḳ sect were in the habit of "praising exceedingly and giving pride of place to the names of famous Ṣūfīs, notably of Bābā-Ṭāhir whose poems in the Lur dialect are highly esteemed, and of his sister Bibi Fatima" etc. The discovery of the religious work *Sarandjām* has enabled us to locate Bābā-Ṭāhir in the theogony of the sect. The Ahl-i Ḥaḳḳ [*q.v.*] believed in 7 manifestations of the divinity, each of which was accompanied by a retinue of 4 angels, each of whom had special duties. Bābā-Ṭāhir is regarded as one of the angels of the third period and the incarnation of Azrāʾīl and Nuṣayr. The mystic stage to which the period of Bābā Khoshīn generally corresponds is the *maʿrifa*. The events of this cycle take place in Luristān and Hamadān. The manuscript of the *Sarandjām* recounts the visit of the "King of the World" to Bābā-Ṭāhir in Hamadān. Bābā Khoshīn is meant by the "King of the World" but the legend seems to be inspired by memories of the episode of Tughrīl (see above). Bābā-Ṭāhir and Fāṭima Lärä ("the thin") of the tribe of Bärä Shāhī (of the Gūrān country?), who was in his service, fed the whole army of the King with a *čār-yak* of rice. The latter tempts Bābā-Ṭāhir with all the treasures of the world but he only desires the "beauty of the King". Fāṭima wants to follow the King of the World; she lays her head on his knees and gives up the ghost. The King consoles Bābā-Ṭāhir for his loss

and promises that on the day of the Last Judgement he will reunite him to Fāṭima so that they shall be like Laylā and Madjnūn. 13 poetical fragments (mutilated but in the style of Bābā-Ṭāhir) are scattered through the text (cf. *Minorsky*, 29-33, 99-103; these facts have been utilised by Leszczynski, *op. cit.*, 18-25). Fāṭima Lārā, who is mentioned in the text is buried beside Bābā-Ṭāhir. According to the custodians of the tomb of Bābā-Ṭāhir, she is not to be confused with another Fāṭima also buried in the same *buḳʿa* (?). Gobineau and A. V. W. Jackson mention the sister of Bābā-Ṭāhir, Bībī Fāṭima or Fāṭima Laylā. Āzād-i Hamadānī (*Dīwān*, 16-21) speaks of the tomb of the *dāya* "nurse" of Bābā-Ṭāhir: everyone seems to endeavour to translate into the language of everyday life the mystic relations of Bābā-Ṭāhir to Fāṭima.

The quatrain already quoted at the beginning of this article (*alf, alif-ḳadd*) may reflect some high aspiration of Bābā-Ṭāhir.

Bibliography: The MSS. containing the quatrains of Bābā-Ṭāhir are as follows: Ḳonya Museum no. 2547 (848/1444): 2 *Ḳiṭʿas*, 8 *du-baytī*, see M. Mīnuwī, *Madjalla-yi Dānishkada-yi Adabiyyāt*, Tehrān, iv/2, 1325, 54-9; Asiat. Soc. Bengal, Pers. no. 923, Catal. Ivanow, 424 (a *madjmūʿa* of 1000 [1592]); Preuss. Staatsbibl., Catal. Pertsch, 727, no. 697 (written in 1820 and used by Leszczynski): 56 quatrains; Bibl. Nat. de Paris, pers. 174, Cat. Blochet, ii, 290-292 (collection made by Bakhsh ʿAlī Ḳarabāghī, dated 1260 [1844]): 174 quatrains and a *ghazal*. In the library of the mosque of Sipāhsālār in Tehrān, Žukowski found a manuscript, *Ḥālāt-i Bābā-Ṭāhir bā-indimām-i ashʿārash*, but the title does not correspond to the contents of the MS. The MSS. of the mystical treatises of Bābā-Ṭāhir are as follows: Bibl. Nat. de Paris, Arab 1903 (Blochet, *o.l.*, ii, 291) and the Oxford MS. Ethé, *Cat. Pers. Mss. Bodleian Lib.*, no. 1298, fol. 302b-343. The anthologies which mention the poet are: ʿAlī Ḳuli Khān Wālih, *Riyāḍ al-Shuʿarāʾ*, 1161/1748, cf. Leszczynski, 10; Luṭf ʿAlī beg, *Ātashkada*, 1193/1779, Bombay 1277, 247 (25 quatrains); ʿAlī Ibrāhīm Shāh, *Ṣuḥuf-i Ibrāhīm*, 1205/1791, unique MS. in the Preuss. Staatsbibl., Pertsch, 627, no. 663 (utilised by Žukowski and Leszczynski); Riḍā Ḳulī Khān, *Madjmaʿ al-Fuṣaḥā*, Tehrān 1295, i, 326 (10 quatrains); idem, *Riyāḍ al-ʿārifīn*, Tehrān 1303, 102 (24 quatrains); 57 quatrains of Bābā-Ṭāhir were published at Bombay in 1297 and 1308 (with those of ʿUmar Khayyām); 32 quatrains (with the *Munādjāt* of Anṣārī) at Bombay 1301; 27 quatrains (with those of Khayyām) at Tehrān 1274; the *ghazal* of Bābā-Ṭāhir is given in the appendix to the *Dīwān* of Shams-i Maghribī, Tehrān 1298, 158, in the appendix to the *Munādjāt* of Anṣārī etc.. The *Dīwān* of Bābā-Ṭāhir (cf. text) with the *Kalimāt-i ḳiṣār*, a preface by the editor, a biography by Maḥmūd ʿIrfān, a description of the tomb of Bābā-Ṭāhir by Āzād-i Hamadānī, etc. were published as a supplement to the 8th year of the magazine *Armaghān*, Tehrān 1306/1927, 1-124.— Huart, *Les quatrains de Bābā-Ṭāhir ʿUryān en pehlévi musulman*, in *JA*, series viii, vol. vi, Nov.-Dec. 1885, 502-545; Žukowski, *Koye čto o B. Ṭāhirĕ Golīshĕ*, *Zap.*, 1900, xiii, 104-108 (bibliography, 3 anecdotes, 2 new quatrains one of which = no. 146 of the *Dīwān*), cf. also *Zap.*, ii, 12; E. Heron Allen, *The Lament of Bābā-Ṭāhir*, London 1902 (text of 62 quatrains, transl. by the editor and verse by Elisabeth Curtis Brenton); Browne, i, 83-87, ii, 259-261; Mīrzā Mahdī Khān (Kawkab), *The quatrains of Bābā-Tahir*, in *JASB*, 1904, no. 1, 1-29 (new edition of the quatrains of Heron Allen [+ 1 quatrain] with important corrections and a very interesting commentary); Huart, *Nouveaux quatrains de Bābā Ṭāhir*, in *Spiegel Memorial Volume*, ed. J. J. Modi, Bombay 1908, 290-302 (28 quatrains and 1 *ghazal*) completing the collection of 1885 recently discovered: in an extract from the *Kashkūl al-Fuḳarāʾ* of which the original is in the Muḥammadiyya mosque (Fātiḥ) of Constantinople, in the *Dīwān* of Maghribī and in an album (*djung*). This second collection of quatrains published by Huart contains sundry pieces, the translation of which is not certain; Minorsky, *Materiali* ("Matériaux pour servir à l'étude des croyances de la secte persane dite les Ahl-i Ḥaqq ou ʿAlī-Ilāhī"), vol. xxxiii, of the *Trudi Lazarew. Instituta*, Moscow 1911, 29-33 (transl. of the passages from the *Sarandjām*), 99-103 (Persian text of the intercalated poems and notes); G. L. Leszczynski, *Die Rubāʿiyāt des Bābā-Ṭāhir ʿUryān oder Die Gottesträncn des Herzens, aus d. west-medischen* [*sic*!] *Originale*, Munich 1920 (biographical and bibliographical, verse transl.); K. Hadank, *Die Mundarten v. Khunsār*, etc., in *Kurd.-pers. Forsch. v. O. Mann*, series iii, vol. i, Leipzig 1926, introduction, xxxvii-lv (complete study of the question of the language of Bābā-Tāhir, bibliography); A. J. Arberry, *Poems of a Persian Ṣūfī, being the quatrains of Bābā-Ṭāhir*, Cambridge 1937, (60 *dubaytī* translated into excellent five-lined stanzas in the style of A. E. Housman). (V. MINORSKY)

BABADAGHI, a town in the Dobrudja, now part of Rumania. Its Turkish name refers to the semi-legendary dervish (Baba) Sarl Saltlḳ, who is said to have led a number of Anatolian Turcomans to the Dobrudja in the mid-thirteenth century, and to have settled with them in the neighbourhood of Babadaghl. (On this settlement see Paul Wittek, *Yazijioghlu ʿAlī on the Christian Turks of the Dobruja*, in *BSOAS*, 1952 XVI, 639 ff.). There are several tombs of Sarl Saltlḳ in various towns; the most generally accepted is that of Babadaghl. What appears to be the first reference to it occurs in a passage in the travels of Ibn Baṭṭūṭa, who mentions 'Bābā Salṭūḳ' as the furthermost outpost of the Turks, and briefly describes the saint that is buried there. Though Ibn Baṭṭūṭa's 'Bābā Salṭūḳ' cannot be located with certainty, it seems likely that it is the place later known as Babadaghl. He passed that way in about 1332-3.

According to Ewliyā Čelebi, the town was first conquered for the Ottomans by Bayezīd I, and was consecrated by Bayezīd II as a *waḳf* for Sarl Saltlḳ and his followers. Two documents relating to the *waḳf* of Bayazīd, of 1078/1667 and 1111/1699, are listed in the catalogue of the Topkapl Sarayl (*Arşiv Kllavuzu*, Istanbul 1938, i, 52). The area was no doubt occupied by Bayezīd I in the course of his Danubian campaigns, but its final annexation by the Ottomans would seem to date from the year 819/1416-7, (ʿĀshiḳpāshāzāde, chapter 75; Neshrī, ed. Unat Köymen, Ankara 1957, ii, 534 ff.; Saʿd al-Dīn, i, 284; cf. Osman Turan, *Tarihl Takvimler*, Ankara 1954, 21, 57). The region was settled by Bayezīd with Tatar colonists (Ḥādjdji Khalīfa; cf. Hammer-Purgstall*, i, 629).

In 945/1538 Sultan Suleymān stayed there for four days, during his Rumanian campaign, and visited

the tomb of Sarî Saltîḳ (*Mohačnāme*; Hammer-Purgstall*, ii, 152). At this time it seems to have been included in the *sandjaḳ* of Silistre, though it was not large enough to be listed as a town (M. Tayyib Gökbilgin, *Kanunî Sultan Süleyman devri başlarında Rumeli eyaleti, livaları, şehir ve kasabaları, Belleten*, xx, 1956, 254-5, 266-7). In the late 16th and early 17th centuries the town and district suffered greatly from the depredations of the Cossacks and even, on occasions, of the Crimean Tatars. As a result many of the Turkish population left and migrated southwards. During the reign of Murād IV the construction of a fortress was begun, under direction of Kodja Kenʿān Pasha, but by the time that Ewliyā Čelebi wrote (ca. 1652) the fortress was not manned and only the foundation walls and towers were standing. During the 17th century Babadaghî became the concentration point for Ottoman armies marching north, and in war-time served as winter quarters for the Grand Vizier. The town, which from 1001/1593 constituted a *voyvodalîḳ* in the *eyalet* of Özü, was described by Ewliyā as a flourishing commercial centre, with 3000 houses, 380 shops, and many gardens (but no closed market—*bezzāzistān*). Its status was that of a pasha's appanage (*pasha khāṣṣî*). Ewliyā names three large mosques (*djāmiʿ*)—Ulu Djāmiʿ, built by Bayezīd II, near the convent of Sarî Saltîḳ; ʿAlī Pasha Djāmiʿi, in the market place; Defterdār Derwīsh Pasha Djāmiʿi; and three *ḥammāms* including those of Bayezīd II and ʿAlī Pasha. (Ḥādjdjī Khalīfa reports 5 mosques and only 2 baths). There were also several *masdjids*, three *madrasas*, 20 boys' schools (*mekteb ṣibyānî*) 8 Khāns and 11 dervish convents (*tekke*) of which the largest and most prosperous was that of Sarî Saltîk. His *türbe* was a place of pilgrimage. It was built by Bayezīd II (or, according to another version, by the Crimean Khan Mengli Giray). The chief industries, according to Ewliyā Čelebi, were cloth, bows, and arrows; its specialities were grapes, white bread, yoghurt, and grape-juice.

In 1809, during the Russo Turkish war, the town was occupied by the Russian general Pozorovsky. It was returned to Turkey in 1812 but was ceded to Rumania in 1878. At the time of its transfer Babadaghî was a *ḳaḍāʾ* in the *sandjaḳ* of Tulča in the *wilāyet* of Tuna.

(B. LEWIS)

BABAESKI (Bābā-yi ʿatîḳ) or Babaeskisi, a small town in eastern Thrace, situated 50 km. S.E. of Edirne, on the railway line which links Kîrklareli to the Edirne, Istanbul main line. At the time of the Byzantine empire it was called Bulgarophygon; its present name is derived from the Turkish dervishes (*baba*) who settled there, as at other places, during the Ottoman expansion in the Balkans.

Babaeski was a *ḳaḍāʾ* of the *sandjaḳ* of Viza in the 17th century, and was later attached to the *sandjaḳ* of Kîrkkilise (Kîrklareli). Taday it is one of the *ḳaḍās* of the *wilāyet* of Kîrklareli; its population in 1945 was 5,936. The population of the whole region, numbering 37,607 (1945), is mainly occupied in agriculture.

The town has two mosques, one dating from the time of Meḥemmed II, and the other built by the architect Sinān in the name of the Grand Vizier ʿAlī Pasha Semiz [*q.v.*]. A stone bridge, built during the reign of Murād IV on the river Ergene, to the west of the town, also deserves mention as a historic monument.

(E. KURAN)

BĀBĀʾÎ, the name of a religio-social movement which disturbed the Turkomān centres of Asia Minor a few years before the Mongol invasion, and which seems to have been of great importance in the general history of the social and cultural development of the Turkish people. It can only be understood by reference to certain general features of the development of the Saldjūḳid state of Rūm. By the 7th/13th century, the latter had become a state with a strong administrative and cultural framework, the product of Iranian influence, based on the Muslim and mainly Sunnī population of the towns; the Turkomān element of the rural areas and the frontiers, which had remained far more faithful to the old Turkish traditions and had been penetrated to a much greater extent by heterodox doctrines, was thus becoming more and more isolated. At the very moment when the rift between the State and the Turkomān element was widening in this way, the Turkomāns, as the result of the influx of their Turkomān cousins who had been pushed back first by the Khwārizmians, then by the Mongols, received simultaneously reinforcement in numbers and the seeds of future troubles, in the form of doctrines stemming from Central Asia. This was the environment in which shortly before 638/1240 a *baba* (popular preacher), Isḥāḳ, better known under his self-assumed title of «rasūl (Allāh)», who came from the Kafarsūd region on the Syrian border, began preaching to the Turkomāns both of the region south of the eastern Taurus, and of the region of Amasya, and then of all the intervening and surrounding districts. In 638, taking advantage of the fact that the breach between Kay-Khusraw and the Khwārizimians, the remnants of whom, after finding a temporary home in Asia Minor, had taken refuge in Djazīra, had weakened the régime, Bābā Isḥāḳ raised the standard of revolt. He successively defied several large Saldjūḳid armies, and was only finally defeated and captured by the employment of «Frankish» mercenaries; even then the movement was not completely suppressed.

Little is known of the distinctive features of the movement. The adepts wore a red cap (as did, later, the *kizil-bash*), black robes, and sandals. Isḥāḳ called himself a prophet, and allied himself to the extremist forms of Shīʿism which were prevalent in Irano-Turkish popular circles; his precise relations with another Bābā, of Khurāsānī origin, Ilyās, and with the *ḳalandars* (Djawāliḳī) of Asia Minor, are yet to be established. At all events, the movement was fundamentally opposed to the aristocratic movement of Djalāl al-Dīn Rūmī and the Mawlawīs.

Although so little is known about it, the Bābāʾî movement must have been of great importance, since it is mentioned, apart from the Saldjūḳid chronicler Ibn Bībī (phot. MS. ed. 498-502, Houtsma's summarised ed. 227-231), by the contemporary Arab from Damascus Sibṭ Ibn al-Djawzī (éd. Jewett 845),

the Franciscan missionary Simon of St. Quentin (in Vincent of Beauvais, *Speculum*, xxxi, 139-40), and, a little later, by the Syriac historian Bar Hebraeus (ed. trans. Budge, 405-6). The basic problem is to establish the connexion between this movement and, on the one hand, the creation of the Ḳaramānid principality of Taurus, and, on the other hand, in the second half of the century, the religious group of Ḥādjdjī Bektāsh; Eflaki (amend Huart's trans., i, 296, following Köprülü, *Orig.* (see bibl. below), 407) explicitly connects the latter, which was destined to have such important developments, with the Bābāʾī movement. There are doubtless other popular creeds of the period of the Mongol Protectorate which are worthy of consideration. Although the texts are so vague, there is little doubt that the Bābāʾī movement was at the head of currents which the dislocation of the Saldjūḳid state later rendered irresistible, and it is this which gives it its importance.

(CL. CAHEN)

BĀBAK, head of the Khurramī sect [see KHURRAMĪS]; his name is an arabicised form of the Iranian Pāpak. The son of an oil-merchant from al-Madāʾin (or, according to some, the descendant of Abū Muslim), he was following an obscure calling in Ādharbaydjān when he was noticed by Djāwīdhān b. Sahl, head of the Khurramīs, who died shortly afterwards. Bābak claimed that the spirit of Djāwīdhān had entered into him, and began to stir up the people living in the region of al-Badhdh, a place, not extant to-day, situated in the mountainous region of Arrān, not far from the Araxes [see ĀDHARBAYDJĀN, map]. He imparted new vigour to this religious and social movement, derived in part from Mazdakism, and employed particularly violent methods. It appears that his operations date from 201/816-7, and that they were assisted by the rebellious schemes of the governor of Armenia, Ḥātim b. Hartama, and facilitated by the various difficulties in the eastern province which followed al-Maʾmūn's return to Baghdād.

In 204/819-20, al-Maʾmūn sent against Bābak Yaḥya b. Muʿādh, who attacked him without success on several occasions, as did other commanders whose efforts were attended by no better fortune. By the end of al-Maʾmūn's caliphate the revolt had spread as far as the Djibāl, and first concern of al-Muʿtaṣim was to exterminate the insurgents in this region. In 220/835, he placed al-Afshīn [*q.v.*] in charge of operations against Bābak. This commander rebuilt the fortresses on the al-Badhdh road which Bābak had destroyed, and, despite the defeat suffered by Bughā the Elder at Hashtād-Sar, succeeded in surprising one of the rebel leaders, Tarkhān. Then, reinforced by troops under Djaʿfar al-Khayyāṭ and by Abū Dulaf's volunteers, he established in 222/837 a camp, protected by mountain scouts, from which he harassed the fortress of al-Badhdh. After an unsuccessful attack by the volunteers, al-Badhdh was taken and sacked on 9 Ramaḍān 222/15 August 837 as the result of an assault by the troops from Farghāna. Bābak fled, and after being handed over to al-Afshīn by the Armenian elder Sahl b. Sunbāt, with whom he had taken refuge, was sent to Samarrā where he arrived on 3 Ṣafar 223/4 January 838. Al-Muʿtaṣim had him paraded on an elephant and executed with extreme cruelty; his body remained hanging on the gallows, which gave its name to a quarter of the town.

The capture and execution of Bābak did not put an end to the Khurramī movement, which continued to give evidence of its existence during the 3rd/9th century; the devotees of the former rebel, calling themselves Bābakiyya, continued in the 5th/11th century, at al-Badhdh, to wait for the Mahdī and to practise certain special rites.

(D. SOURDEL)

BĀBALYŪN (Babylon), a town in Egypt. The name Babylon, denoting the mediaeval Egyptian town in the neighbourhood of the modern Cairo, is, according to Casanova, the Graëcised form of an ancient Egyptian Pi-Hapi-n-On through assimilation to the Asiatic βαβυλών which was familiar to the Greeks. This etymology is not quite free from objections but there is no doubt that some ancient Egyptian place-name underlies it. By the name is meant the ancient town and fortification of the Greeks which — situated on the borders of Upper and Lower Egypt — commanded the interior. Even to the present day portions of the ancient fortification have survived in the Ḳaṣr al-Shamʿa. Babylon's position was much more favourable, and its importance greater, in ancient times, as the Nile then flowed further to the East. At the time of the conquest of Egypt by ʿAmr, the decisive battles were fought here. With the fall of Babylon (21 Rabīʿ II 20/9 April 641) the fate of Egypt was settled. The Arab military camp which later developed into the city of Fusṭāṭ-Miṣr was then pitched near this place, important from the military point of view, and the remains of the old fortress were used in its construction. As far as we know from papyri, a distinction was still made between Babylon and Fusṭāṭ at the end of the 1st/7th century. In Fusṭāṭ lived the Muhādjirūn where their *khiṭaṭ* were marked out. In Babylon were the great corn-merchants and the seat of the administration. The arsenal on the island of Rōḍa which is also mentioned in papyri, was closely connected with the fortress. The original distinction between Fusṭāṭ and Babylon was naturally soon lost. The name Babylon fell out of use among the Arabs and only survived among the Copts, its application by them being being extended, for the Copts occasionally used Babylon to describe the whole of the great series of towns from Ḳaṣr al-Shamʿa through Fusṭāṭ and Cairo to Maṭariyye-Heliopolis. This usage then spread to western writers. This is why Babylonia, with varying orthography, appears as a name for Cairo in the numerous commercial treaties between

Egypt and Western States, written in Latin and published by Amari. The name may also be found in the contemporary literature of Europe as well as in charters; for example in the works of the traveller Mandeville and of Boccaccio who calls Saladin "Soldano di Babilonia".

BĀBĀN, the name of an important family and dynasty of ʿIrāḳī Kurdistān. It rose early in the 11th/17th century from an obscure origin in the Pīshdār country in the person of one Aḥmad al-Faḳīh, whose son became a power, and his grandson Sulaymān Beg a major power, in the Shahrizūr area. They made their home at Ḳara Čolān, which remained the Bābān head-quarters until the foundation of Sulaymāniyya [*q.v.*] in 1198/1783; and in spite of an unsuccessful invasion of Persia, and chequered fortunes in his own newly-created principality, Sulaymān Beg gained a measure of recognition from the sultan and transmitted a princely position (or at least princely pretensions) to his sons. Under his grandson Bakr Beg, early in the 12th/18th century, Bābān rule, always insecure and unaccompanied by any regular administration, stretched from the Lesser Zāb to the Sirwān (Diyālā).

In spite of the violent fall of Bakr Beg and the re-assertion of Turkish authority, the Bābān prince of the time (Khāna Pasha) gave important military help to the *wāli* of Baghdād in the struggle against the Persians (1136-1160/1723-1747). Under his nephew Sulaymān Pāshā (1167/1754) Bābān rule covered the *sandjaḳ* of Koy, Khāniḳīn and wide areas of Western Persia; but it remained precarious, resented by the Turkish authorities in the ʿIrāḳī *wilāyets*, threatened by rivals in the same family, and weakened by ceaseless intrigues with (and by) Persian supporters of this or that candidate. In these conditions, even valuable services rendered from time to time to the pashas of Baghdād could not secure consistency in Turkish policy towards the Kurdish principality, nor a respectful attitude by the latter; even the greatest of the Bābāns—notably ʿAbd al-Raḥmān Pasha, in power (with interruptions) from 1204/1789 to 1227/1812—fell victims every few years, or months, to the constant vicissitudes of frontier warfare and intrigue, and the rivalries among their brothers and cousins. Their territory was more than once occupied by Persian or Turkish forces.

The final eviction of the Bābān rulers, which was anyhow inevitable under the modernising policy of the Turkish Government after 1246/1830, was the easier since the appearance of signs of Turko-Persian accord—frontier agreements were reached between the two powers in 1239/1823 and 1264/1847—and the destructive rivalries of the sons of ʿAbd al-Raḥmān Pasha. In spite of a brief "Indian summer" when new weapons and modern military methods were introduced in the Bābān armed forces, the centralising efforts of the mid-century *wālis* of ʿIrāḳ prevailed finally in 1267/1850, when the last of the Bābān princes left Sulaymāniyya. Numerous descendants of the family survive.

BĀBAR [see BĀBUR]

BABBAGHĀʾ (and also *babghāʾ*) «parakeet(s)» «parrot(s)». The form is the same for both the male and the female, and represents the singular or the collective. Etymologically, according to Djāḥiẓ, the name is derived from the bird's cry. It occurs in languages of Romance origin, for example the Provençal *papagaï*, Spanish *papagayo* and Old French *papegai* (and the *papagan* of the *Roman de la Rose*). In the 3rd/9th century, ʿIrāḳ only knew those varieties of psittacids which were native to the Indian Archipelago; al-Danūrī mentions in addition to green and red parrots, a white crested species. Poets, in the Orient, sometimes describe this gorgeous bird; the silence of their rivals in Spain is noticeable at least until the 5th/11th century.

Bibliography: Djāḥiẓ, *Ḥayawān*[2], iii, 516, vii, 170; Damīrī, *Ḥayāt al-Ḥayawān*, Cairo n.d., i, 166; H. Pérès, *La Poésie andalouse, en arabe classique*, 2nd ed., Paris 1953, 242-6. (R. BLACHÈRE)

AL-BABBAGHĀʾ "the Parrot", the soubriquet under which is celebrated the Arab poet and letter-writer Abu 'l-Faradj ʿAbd al-Wāḥid b. Naṣr, born 313/925, died 397/1007. The ethnic appellation al-Makhzūmī which was given to him implies fictitious Arabian descent. A native of Naṣībīn, al-Babbaghāʾ seems to have attached himself to the entourage of the Ḥamdānid amīr Sayf al-Dawla, when the latter was established at Aleppo, and therefore after 333/944. He sang the praises of this amīr, and achieved prominence in the literary milieu which existed in this town. A fervent admirer of al-Mutanabbī [*q.v.*], he met the latter again at Baghdād; after residing for a short time at Mosul, he himself settled at Baghdād, where he eventually died.

At the end of the 4th/10th century, the poetical works of al-Babbaghāʾ, according to Ibn al-Nādim, comprised a collection of three hundred pages; of these poems, only the extracts selected by al-Thaʿālibī are known to us. The same anthologist also quotes long and significant passages from his letters. As a panegyrist, al-Babbaghāʾ belongs to the neo-classical school, such as is represented by al-Buḥturī or al-Mutanabbī. In his elegaic or bacchic pieces, on the other hand, al-Babbaghāʾ is not without a certain distinctive charm. He is however, chiefly remarkable for the virtuosity and richness of his letters in rhymed and cadenced prose. In this genre, and in his own period, he stands out as a master.

(R. Blachère)

BĀBIL. Ancient Arab writers used to give the name "Bābil" to the city of Babylon as well as to the country of Babylonia. The city's ruins lie some 54 miles due south of Baghdād on the Baghdād-Ḥilla road. Those writers differed, however, in determining the boundaries of the country. Some of them extended its limits over a vast area, whereas others restricted it to a lesser area. According to Muslim historians and geographers, the original city of Bābil had been devastated long before the Islamic conquest, and there was then in its place a small village which had the name of Bābil. This village is reported to have existed down to the ʿAbbāsid epoch in the 4th/10th century. For instance, Ibn Ḥawḳal mentions that, in his time, Bābil was a small village. He also remarks that "Its buildings are considered the most ancient ones in ʿIrāḳ and the city itself was founded by the Canaanite kings who adopted it as their state seat, and it was settled by their successors as well. The remains of its imposing buildings speak of its past grandeur".

Abu 'l-Fidā', who cites the above-mentioned account of Bābil by Ibn Ḥawḳal, adds: "It was in it that Ibrāhīm was thrown into the fire. And in these days it is no more than desolate ruins on which stands a small village".

In the 7th/13th century, Al-Ḳazwīnī described the ruins of Bābil and mentioned the quarrying of its bricks by people for building their houses—a practice which has continued until recent years—. In this connexion, he states: "Bābil: the name of a village which formerly stood on one of the branches of the Euphrates in ʿIrāḳ. Currently, people carry off the bricks of its ruins, and there exists a well known as 'the Dungeon of Dānyāl' which is visited by Jews and Christians on certain yearly occasions and on holidays. Most of the population hold the opinion that this dungeon was the well of Hārūt and Mārūt".

Al-Bakrī refers to the Tower of Bābil, which he designates as *Al-Madjal*. He says, following earlier writers, that this tower (identified by modern archaeologists as a *ziggurat*) was built by Namrūd in Bābil and that it rose some 5000 cubits aloft in the sky, and that this building is the authentic tower referred to in the Ḳurʾān, xvi, 26, the relevant text of which appears hereunder:

"Those before them did indeed devise plans, but Allāh demolished their building from the foundations, so the roof fell down on them from above them, and the chastisement came to them from whence they did not perceive".

There has been much controversy among Muslim writers about the history and authenticity of Babylon. Yāḳūt al-Ḥamawī, however, summarises the various notions and legends prevailing among them on this city. For instance, it is said that Noah was the first to build and settle in this city after the Deluge. The Persians say, as related by Yazdidjird b. Mihmāndār, that it was the king al-Ḍaḥḥāk who has built this city. Ibn al-Kalbī says that the city's area was 12 × 12 *farsakhs*, that the Euphrates flowed beneath its walls until Bakhtanaṣṣar (Nebuchadnessar) diverted its waters to their present course, as a precaution against the possible collapse of the city walls, and that Bābil continued to prosper until it was destroyed by Alexander the Great.

The information previously possessed on Babylon's history and culture, following its downfall, was in a state of confusion and contrasts, as set forth above. Actually, they had no other established reference on this subject but the relevant accounts mentioned in the Old Testament, statements related by some of the ancient Greek historians of the classical period and sagas transmitted by uninformed people.

The real facts about this city were not discovered until the arrival of archaeologists at its ruins early in the 19th century A.D.; they brought to light innumerable relics and artifacts, among which were tablets with cuneiform inscriptions. Upon deciphering these writings, practically all of the facts about this city were set in the right order, thus putting an end to the numerous previous legendary and unfounded accounts; these are now replaced by established facts, which are found in the many works on this city in various European languages.

(G. Awad)

BĀBĪS, followers of the religion founded by the Bāb [*q.v.*]. The history of the Bābīs has been and still is, at least in the East, one of persecution. It can be divided into two phases: the first, from the foundation of the new faith (1260/1844) up to the persecutions following the attempt on Nāṣir al-Dīn Shāh (1268-9/1852-3), which seemed as though they would crush the new movement for ever, a period characterised by a frequently violent attitude on the part of the Bābīs themselves; the second, which might be called 'pacifist', from that date to the present day, a period which has seen the schism of the Bābīs into two factions of unequal numbers and importance. After the first dissemination of the faith following the declaration of the founder's mission (see Bāb) and the first persecutions, which the Bābīs in various localities resisted with force, the most important event in the history of the community is the convention of Badasht (1264/1848), at which the Bābīs, abandoning their initial precautions, openly declared their total secession from Islam and the *sharīʿa*; in this a major rôle was played by the famous Bābī heroine, the beautiful and cultured poetess Zarrīn-Tādj, better known by the names of Ḳurrat al-ʿAyn and Djanāb-i Ṭāhira ('H. H. The Pure'), born at Ḳazwīn, the daughter of the erudite theologian Mullā Ṣāliḥ. There, first among Persian women, she dared to show herself unveiled to her brothers of the Faith, a living example of the abrogation of the Islamic *sharīʿa*. After the convention, in which many of the principal Bābīs, among them the future Bahā' Allāh [*q.v.*], took part, Mullā Ḥusayn of Bushrūya (see Bāb) ensconced himself with a small troop of Bābīs in the

sanctuary of Shaykh Tabarsī near Bārfurūsh, where with another 'Letter of the Living', Mullā Muḥammad ʿAlī Bārfurūshī called Ḳuddūs, he resisted heroically the troops of Nāṣir al-Dīn Shāh (shortly afterwards succeeded by Muḥammad Shāh), even making succesful sorties; but eventually Mullā Ḥusayn was killed, and Ḳuddūs and the other survivors surrendered when it was promised that their lives would be spared, though they were in fact vilely and cruelly massacred (Ramaḍān 1265/July-August 1849). Shortly afterwards, at Nayrīz in Fārs, another heroic Bābī insurrection took place, led by one Sayyid Yaḥyā-i Dārābī, who had been converted by the Bāb at Shīrāz (see BĀB) and who had assumed the name of Waḥīd; the Bābīs, barricaded within the old citadel of the town, defended themselves bravely, with the sympathy of the population, for several days until they were all massacred (January 1850). Almost at the same time there occurred an insurrection of even greater magnitude at Zandjān. The Bābīs, under the leadership of Mullā Muḥammad ʿAlī-i Zandjānī surnamed Ḥudjdjat ('the Proof'), barricaded themselves in the citadel called Ḳilʿa-i ʿAlī Mardān Khān. After various turns of fortune the Bābīs, who numbered more than 3,000, were cruelly massacred (February 1850). Four months prior to the execution of the Bāb, Tehran also had her heroes, the so-called 'seven martyrs of Tehran', one of whom was the tutor and uncle of the Bāb; their heroic conduct in the face of most horrific punishment is a glorious chapter in the history of the Bābī faith. The unsuccessful attempt on Nāṣir al-Dīn Shāh (28 Shawwāl 1268/16 August 1852) by two Bābīs maddened by the persecutions led to a new reign of terror, to which numerous personalities of the Bābī faith fell victims. Among these was the poetess Ḳurrat al-ʿAyn, strangled after long imprisonment. The principal Bābīs, among whom were Bahāʾ Allāh (Mīrzā Ḥusayn ʿAlī Nūrī) and his half-brother Ṣubḥ-i Azal (Mīrzā Yaḥyā Nūrī) were banished to ʿIrāḳ. The persecutions continued, however, sporadically throughout Persia. The Bahāʾī tradition speaks of about 20,000 martyrs, including those killed in battle. After the declaration of the Garden of Riḍwān and, later, that of Adrianople (see BAHĀʾ ALLĀH), dissensions arose between those who were henceforth called Bahāʾī [*q.v.*] and the followers of Ṣubḥ-i Azal, who adhered to the letter of the *Bayān* and maintained that the Bāb had nominated Mīrzā Yaḥyā as his successor. The Bahāʾīs, on the other hand, maintained, and still maintain, that it was a question of only a temporary nomination and *pro forma*, and that, in any case, Ṣubḥ-i Azal never had the right to oppose 'Him Whom God Shall Manifest, who is', according to them, Mīrzā Ḥusayn ʿAlī Nūrī, Bahāʾ Allāh. The Azalīs remained always in the minority, however, and even the number of 50,000 which some authorities have ascribed to them seems in fact to be somewhat exaggerated.

Bausani, *Un "ġazal" di Qurratu 'l-ʿAin*, in *OM*, xxix, 1949, 190-2.—On Bābī and Bahāʾī literature, see Browne, iv, 194-221. (A. BAUSANI)

BĀBUR, Ẓahīr al-Dīn Muḥammad, soldier of fortune, first of the Mughal rulers in India, diarist and poet, was descended on his father's side in the fifth generation from Tīmūr and through his mother Ḳutlūk Nigār Khānum in the fifteenth degree from Čingiz Khān. He was born on 6 Muḥarram 888/14 February 1483 and succeeded his father ʿUmar Shaykh as *Mīrzā* of Farghānā in Ramaḍān 899/June 1494.

Bābur inherited his father's struggle with his kinsmen for the towns and fertile areas of Central Asia. By Rabīʿ I 903/November 1497 he had fended off the attempts by his elder paternal uncle Sulṭān Aḥmad Mīrzā of Samarḳand and by his elder maternal uncle Sulṭān Maḥmūd of Tashkent to deprive him of his father's position in Farghānā, and using quarrels among his cousins had occupied Samarḳand. Four months later lack of booty and conspiracy at Andīdjān, his headquarters, forced him to let Samarḳand go. Andīdjān he soon recovered and then as soon lost to the Mughals under Tanbal who nominally were supporters of his brother Djahāngīr. In 905/1498-99 Bābur divided Farghānā with his brother, married and was forestalled in a race for Samarḳand by Shaybānī Khān Uzbak (Özbeg). Next year he took the city by surprise, only to be starved out by Shaybānī Khān after losing the battle of Sar-i Pul in Ramaḍān 906/April-May 1501. Bābur, having relinquished Andīdjān to his brother when he took Samarḳand, now became a fugitive nomad, dependent for his personal safety on ties of kinship.

His uncles, grudging hosts, the Khāns of Tashkent and northern Mughalistān, furnished him with troops against Tanbal and finally marched to his support. Tanbal however appealed to Shaybānī Khān who routed and executed the Khāns at Arčiyān in Dhu 'l-Ḥidjdja 908/June 1503.

For nearly a year Bābur wandered with a small following among the nomads of remote Sukh and Hushyār, safe in their hospitality. But Shaybānī Khān's continuing success decided Bābur to seek a headquarters outside the main area of Uzbak interest. In Muḥarram 910/June 1504 he turned for Kābul, an uncle's possession until 907/1501, but then in Arghūn hands. Joined by other refugees from the Uzbaks, Bābur, with his brother, secured Kābul and successfully asserted his claims to tribute from the surrounding Afghān tribes. By 911/1506 Bābur could leave Kābul for Herāt, in response to Sulṭān Ḥusayn Mīrzā Bāyḳarā's appeal for aid against the Uzbaks.

The death of Sulṭān Bāyḳarā and the ineffectiveness of his sons allowed Shaybānī Khān to conquer most of Khurāsān, so that Bābur recrossed the Hindū Kush empty-handed. In 913/1507 he took Ḳandahār from the Arghūns, but withdrew towards India rather than defend it personally when Shaybānī Khān besieged the new acquisition. But Shaybānī Khān came into conflict with Shāh Ismāʿīl Ṣafawī,

who defeated and slew him at Marw on 1 Ramaḍān 916/2 December 1510.

Bābur thereupon occupied Samarḳand for the third time, in Radjab 917/October 1511, but as a client of Shāh Ismāʿīl, making an outward profession of Shīʿism and probably striking coins in the name of his Ṣafawid overlord. (The numismatic evidence on this is equivocal. See bibliography). His acceptance of Shīʿism cost him popular support, and when defeated by the Uzbaks at Kul-i Malik in Ṣafar 918/May 1512, he could not hold the city. On the defeat at Ghudjuwān on 3rd Ramaḍān 918/12th November 1512 of the brutally intolerant Ṣafawid general Nadjm-i Thānī, whom Bābur hastily abandoned, Bābur's last attempt to win the city nearest his heart ended.

After two years adventuring in the Ḳunduz area Bābur returned to Kābul, his centre thenceforth for enterprises to the more promising east and south. Several attempts to retake Ḳandahar from the Arghūns ended in its occupation by negotiation in Djumādā II 928/May 1522. This secured, Bābur turned more vigorously towards Hindūstān, probed by minor expeditions since 922/1516.

The victor at Ḳandahar was invited into Hindūstān by Dawlat Khān Lodī of Lahore and ʿĀlam Khān, uncle of Ibrāhīm Lodī, sultan of Delhī, to help them against Ibrahīm. On his second advance, having dispossessed Dawlat Khān and utilised ʿĀlam Khān to attract Afghān support, Bābur destroyed the forces of Ibrāhīm Lodī at Pānīpat in Radjab 932/April 1526. He occupied Delhī and Āgra and his forces pressed as far eastwards down the Ganges as Djawnpūr and Ghāzīpūr. Bābur's victory at Khānuā over Rānā Saṅgā of Čitor in Djumādā I 933/March 1527 secured the Rādjasthānī flank, while victory over the eastern Afghāns in Shaʿbān 935/May 1529 at the junction of the Gogra and Ganges extended his paramountcy in Hindūstān up to Bengal. He died on 6 Djumādā I 937/26 December 1530, at Āgra. Several years later his body was moved to its present grave in one of the gardens of Kābul.

Bābur had been born a member of a class of political entrepreneurs, some still semi-nomad, who competed within Central Asia for the power to draw revenue from herdsmen and agriculturalists and from the craftsmen and traders of an area enriched by the caravan traffic between China, India and ʿIrāḳ. His career, like that of his rivals and enemies, was based upon the loyalties and antagonisms of family and clan rather than those of linguistic or national states. His birth gave him entry to the ruling élite; his tournament successes depended upon his attractive personal qualities—resilience and resource, courage, a cheerful and cultivated humanity—and the qualities of his partners. He was a cautious general who learnt much from the great Uzbak commanders, and applied the lessons of organised discipline and the techniques of field defences and entrenchment, musketry and artillery, and of the encircling movement with telling effect in his Indian career. His experience enabled him to hold together small collections of defeated but still personally ambitious Tīmūrids, and the even less reliable Mughals, who had gathered around him in Kābul, until success gave him the undisputed power to command.

(J. B. Harrison and P. Hardy)

Literary Works. 1. *Bābur-nāme*. In this famous autobiography, written in Čaghatāy Turkish, Bābur tells his story from childhood to the last years of his life, with no attempt to conceal his weaknesses, his mistakes, or his defeats. It is in no sense an *apologia pro vita sua*; indeed, so matter-

of-fact and unemotional is the tone of the work that the casual reader might not recognise it as the memoirs of a skilful and valiant soldier and the founder of a dynasty, which closer study reveals it to be. It cannot be said that Bābur is impartial in his picture of himself, his friends, or his enemies. For example, we can see that his feelings got the better of him in his evident desire to belittle the important and worthy Shaybānī Khān. But despite occasional injustices of this nature, the *Bābur-nāme* is far more reliable than the general run of such works. The author's keen powers of observation and his analytical mind are apparent in his descriptions and explanations of works of art, of flora and fauna, of the group-psychology of peoples, and the characters of individuals. As a literary work, the simple and chaste language of the *Bābur-nāme*, its natural style, its colourful and lively descriptive passages, are some of the reasons which justify our regarding it as one of the finest examples not only of Čaghatāy but of Turkish prose generally.

2. *ʿArūḍ risālesi*. It was known that Bābur had written a Čaghatāy treatise on prosody, from the *Bābur-nāme*, certain copies of his *Dīwān*, and the *Muntakhab al-Tawārīkh* of Badāʾūnī (Calcutta 1868, i, 343), but the work did not come to light till 1923, when it was discovered by M. Fuad Köprülü in a Paris manuscript (E. Blochet, *Cat. des MSS turcs*, Paris, Bibl. Nat. *Supp*. no. 1308). It does not differ greatly from similar works in Persian; its chief importance is that on certain *ʿarūḍ* verse-forms used by the Turkish poets its information is fuller than that given by Nawāʾī in his *Mīzān al-Awzān*. Bābur gives both Persian and Turkish examples of metres in general use, including some from his own poems, but only Turkish examples of metres of his own invention. At the end of his *Dīwān* he states that the *ʿArūḍ risālesi* was finished 2 or 3 years before the completion of the conquest of India; *i.e.*, between 932 and 934/1525-8.

3. *Mubayyan*. A *mathnawī* in *khafīf* trimeter catalectic (*faʿilatun mafāʿilun faʿilun*), completed, according to a reference in the *ʿArūḍ risālesi*, in 928/1521-2. It deals with some problems in Ḥanafī law, together with some matters relating to campaigning. This simple didactic work is of no artistic importance, but it does show that Bābur was interested in *fiḳh* and was a sincere Ḥanafī. Till recently it was known to Orientalists as *Mubīn*; A. S. Beveridge so refers to it, even though she mentions that the Indian historians Abu 'l-Faḍl and Badāʾūnī read the title as *Mubayyan* (and that Sprenger called it *Fiḳh-i Bāburī*). *Mubīn* is in fact the name of a commentary on this work, written by Bābur's secretary, Shaykh Zayn.

4. Translation of *Risāle-i Wālidiyya*. The author of this work on Ṣūfī ethics was Khᵂāja ʿUbayd Allāh Aḥrārī, the great Central Asian Ṣūfī and spiritual aide of the Tīmūrids. As the title implies, he wrote it at his father's insistence. Bābur's Čaghatāy translation was made in 935/1528-9, and forms part of his *Dīwān*. It is a *mathnawī* of 243 lines in *Ramal* trimeter catalectic (*faʿilātun faʿilātun faʿilun*). Though pleasantly and simply written, it has no aesthetic merit, but is of interest as showing Bābur's Ṣūfī leanings.

5. The *Dīwān*. The bulk of this is in Turkish, but some of the poems are in Persian. The verse-forms represented include the *ghazal*, *mathnawī*, *rubāʿī*, *ḳiṭʿa*, *tuyugh*, *muʿammā*, and *mufrad*. We find in it the various verses whose composition he mentions in the *Bābur-nāme*. The existing copies are not arranged in the classical *Dīwān* manner; the poems are set down in no apparent order. In the technique of versification Bābur was not inferior to any of the 15th-century Čaghatāy poets, not even Nawāʾī, and he expresses his thoughts and feelings in an unaffected language and style. Side by side with Ṣūfī songs of love and wine there are poems on everyday themes. Signs of the influence of earlier poets, especially Nawāʾī are not wanting, but there are no slavish imitations. Though Bābur had a taste for literary artifices and poetic *tours de force* (there are 29 of the latter in the *Dīwān*), and though, in obedience to the fashion prevailing at the time in both Persian and Turkish literature, he wrote numerous *muʿammā*s (the *Dīwān* includes 52), the greater part of his work is simple, sincere, and natural. He wrote a number of *tuyugh*s, a verse-form peculiarly Turkish, as well as some *rubāʿīs* of great beauty. Among his *türkü*s, which belong to popular poetry, we find one poem in syllabic metre (cf. *MTM*, i, 27). He was capable of writing Persian poems—there are over 20 in the *Dīwān*—but his affection for his mother-tongue is evident in the preponderance of Čaghatāy. Further, in his poems he often refers to the valour of the Turks, and the fact that he is one of them. In this respect he was following the intellectual and literary trend which had begun with Nawāʾī in the previous century and which prevailed not only in Khurāsān but at all the Tīmūrid courts. The literary influence of Bābur was responsible for the subsequent rise of poets writing in Čaghatāy both among his descendants and among their courtiers. Certainly the literary historian must assign Bābur a leading position among the Čaghatāy poets after Nawāʾī.

Bibliography: (1) *Bābur-nāme*. First printed by N. Ilminski: *Baber-Nameh* (*Diagataice ad fidem codicis petropolitani*), Kazan 1857. A facsimile of the Ḥaydarābād MS. forms the basis of A. S. Beveridge's *The Bábar-náma*, GMS 1905. A Persian translation was made at the end of the 16th century by Khān Khānān ʿAbd al-Raḥīm Mīrzā, son-in-law of Bayram Khān [*q.v.*], and this was translated into English by J. Leyden and W. Erskine, *Memoirs of Zehir-ed-Din Muhammed Baber*, London 1826; and into French by Pavet de Courteille, *Mémoires de Baber*, Paris 1871. A. S. Beveridge, *The Memoirs of Bābur; a new translation . . . incorporating Leyden and Erskine's of A. D.* 1826, London 1912. Idem, *The Bābur-nāma in English*, London 1922, a splendid 2-volume translation of the original, with introduction, notes, etc. A second Persian translation was made by Ḥasan Pāyanda. Badāʾūnī states that Shaykh Zayn translated the *Bābur-nāme* into Persian, but his *Wāḳiʿāt-i Bāburī* is not in fact a translation.

(2) *ʿArūḍ risālesi*. Text not yet published. For the information it affords on Turkish verse-forms, see M. Fuad Köprülü, *Türk dili ve edebiyatı hakkında araştırmalar*, Istanbul 1934, 40-44.

(3) *Mubayyan*. A long extract based on a defective MS is contained in I. N. Berezin *Turetskaya chrestomatia*, Kazan 1867. See Köprülü, *op. cit.*, 244-6, for details of a full and accurate MS. of 937/1530-1, in his private collection.

(4) Translation of the *Risāla-i Wālidiyya*. Text, extracted from the Istanbul copy of the *Dīwān*, published by Köprülü in *MTM*, i, 113-24.

(5) E. Denison Ross, *Dīvān-i Bābur Pādishāh*, in *JASB* 1910, contains a facsimile of a meagre Rampur MS, at that time the only one known. A fuller copy discovered some years later (Paris,

Bibl. Nat. Supp. turc. 1230) formed the basis for A. Samoylovich, *Madjmūʿa-i Ashʿār-i Bāber Pādishāh*, Petrograd 1917. A number of additional poems were published by Köprülü in *MTM* for 1331/1913 (nos. 2, 3, 4) from a MS. now in Istanbul University Library (no. 3743). Although the end is missing, this MS. has almost twice the content of Samoylovich's edition, including, *inter alia*, 118 *ghazals* and 104 *rubāʿīs* in Turkish, and 3 *ghazals* and 18 *rubāʿīs* in Persian.

(M. Fuad Köprülü)

BABYLON, Egypt [see BĀBALYŪN].

BABYLON, Mesopotamia [see BĀBIL].

BĀD-I HAWĀ, literally 'wind of the air'; in Ottoman fiscal usage a general term for irregular and occasional revenues from fines, fees, registration charges, and other casual sources of income. The term does not a appear in the *Ḳānūns* of the 9th/15th century, but is found in a *Ḳānūnnāme* of Gelibolu of 925/1519, where mention is made of penalties and fines, bride-tax, fees for the recapture of runaway slaves, 'and other *bād-i hawā*' (Barkan 236). It also appears, in similar terms, in *Ḳānūnnāmes* of Ankara (929/1522-Barkan 34), Ḥamīd (935/1528-Barkan 33), Aydīn (935/1528-Barkan 14), Malatya (937/1530-Barkan 110), and of the Gypsies of Rumeli (937/1530-Barkan 248). In the two last-named it is included among the *Rusūm-i ʿurfiyye*. During the 16th, 17th and 18th centuries it is found in *Ḳānūns* and registers from all over the Empire. In free tīmārs (*Serbest tīmār*) the *bād-i hawā* belonged to the tīmār-holder. In other tīmārs it was either shared by the tīmār-holder with the *Khāṣṣ* [*q.v.*] or, more frequently, reserved entirely to the *Khāṣṣ*, in which case it might be either retained as Imperial *Khāṣṣ* or granted as *Khāṣṣ* to the governor (see BAYT AL-MĀL). The name, which seems to convey the same meaning as the English word windfall, may be connected, as Inalcık suggests, with the much disputed Byzantine *aerikon*.

Bibliography: *Kānūnnāme-i Āl-i ʿUthmān*, *TOEM*, Suppl., Istanbul 1329, 38-9; Ömer Lutfi Barkan, *Osmanlı Imparatorluğunda Zirai Ekonominin Hukuki Ve Mali Esasları, I. Kanunlar*, Istanbul 1943; Halil Inalcık, *Sûret i Defter i Sancak-i Arvanid*, Ankara 1954, xxvii-xxviii, xxxii-xxxiii; (Inalcık mentions a detailed *ḳānūn* on *bād-i hawā* in a manuscript in the library of the Turkish Historical Society, No. 34, p. 117).

(B. Lewis)

BADĀʾ (Ar.), appearance, emergence; in theology: the emergence of new circumstances which cause a change in an earlier divine ruling. (Dozy, *Essai sur l'Histoire de l'Islamisme*, 223, gives the term too wide a meaning, as "*mutabilité de Dieu*"). There are three sorts of *badāʾ* as it refers to the knowledge, the will or the command of God (Shahrastānī, 110). The possibility of *badāʾ* is, in opposition to the divergent Sunnī doctrine, always treated in the chapter on the divine knowledge in the textbooks of Shīʿite theology, but without reaching a definitive formula. In its extreme form which assumes the mutability of God's will it is taught in the ultra-Shīʿite sects (Badāʾiyya); the moderate Imāmiyya school is careful to use words which exclude or at least minimise the possibility of change in God's knowledge (see below). The former could employ the doctrine of the Shīʿite theologian Hishām b. al-Ḥakam [*q.v.*] that God's knowledge does not exist till the object of it exists; what does not yet exist (*maʿdūm*) cannot be known and therefore His knowing follows His not-knowing as soon as things exist (ʿAbd al-Ḳāhir al-Baghdādī, *Kitāb al-Farḳ bayn al-Firaḳ*, Cairo 1328/1910, 49), subtleties which appear in modern times in the Shīʿite Shaykhī sect (*RMM*, xi, 435 ff.). This idea allows for a knowledge in God corresponding to fresh phenomena and a change of mind determined by them. Muslim historians of the sects agree that the idea of *badāʾ* was first suggested by Mukhtār [*q.v.*] and then became part of the creed of the Shīʿite Kaysāniyya (*al-Farḳ bayn al-Firaḳ*, 36; cf. Aḥmad b. Yaḥyā b. al-Murtaḍā in M. Horten, *Die philos. Probleme der spek. Philosophie in Islam*, Bonn 1910, 124). The origin of this idea is also ascribed to ʿAbd Allāh b. Nawf (Ṭabarī, ii, 732). When Mukhtār had to fight the decisive battle of his career against the superior force of Muṣʿab b. al-Zubayr, he (or ʿAbd Allāh b. Nawf) announced that God had revealed to him that victory was certain. When the alleged oracle was proved false by his defeat, one of the two said, referring to *Sūra* xiii, 39, that something had intervened (*badā lahu*) which had made God change His mind.

During the calamities which befell the Shīʿite community this idea was accepted as a convenient explanation of the failure of the hopes and prophecies of the defeated imāms. It had been God's purpose that the deliverance (*faradj*) and victory of the lawful imāmate should take place at a certain moment; He had however changed His plan on grounds of expediency. His promises were an encouragement; had the Shīʿa known that victory would come only after one or two thousand years, they would have lost heart. This principle also serves to explain the change in the legitimate succession of the imāms when, in place of the predestined Ismāʿīl, his brother Mūsā al-Kāẓim succeeded Djaʿfar as the seventh imām. They ascribe to Djaʿfar the words, "God has never been led by a new consideration (to change His mind) as in the case of my son Ismāʿīl" (*mā badā li'llāhi kamā badā fī Ismāʿīl ibnī*). To many Shīʿite theologians this crass application of *badāʾ* might have seemed discreditable; so the speech of Djaʿfar has been made more tolerable by changing *ibnī* to *abī*; God's change of mind is hereby transferred from the son to the ancestor of the imām, to Ismāʿīl the son of Abraham, the expected *dhabīḥ*; God released Abraham from offering the sacrifice which He had originally ordered.

The most important arguments adduced by the Shīʿa in support of *badāʾ* are: A) passages in the Ḳurʾān: xiii, 39; xiv, 11/10b (these are the strongest proofs); lv, 29b; the frequent assertion that God will change His resolve to punish sinners when they repent vii, 152/153; stories like the sparing of the people of Yūnus x, 98; the sacrifice of Ismāʿīl xxxvii, 101/102-107; Moses' talk with God prolonged from 30 to 40 nights, vii, 138/142; B) traditions telling that by the practice of certain virtues (*e.g.*, honouring one's parents) the allotted span of life might be lengthened and the appointed destiny (*al-ḳaḍāʾ al-mubram*) might be changed; the prayer of ʿUmar that "God might strike his name out of the book of the damned and write it in that of the blessed" Ibn Ḳutayba, *Taʾwīl mukhtalif al-Ḥadīth*, Cairo 1326, 7); C) pious legends from which it is plain that misfortunes threatening individuals may be averted by acts pleasing to God; D) the doctrine of the abrogation of divine laws (*naskh*) which is a tenet of Sunnī doctrine; *badāʾ* is creative cancellation and cancellation is legislative *badāʾ*.

As Shīʿite theology in general is influenced by Muʿtazilite speculation, so the Muʿtazilite argument

based on *al-aṣlaḥ* (the most expedient) is connected with *badāʾ*, that God in His dealings with men is guided by expediency and the common good. Accordingly it considers *badāʾ* from the point of view that divine decrees may change with changes in the demands of the general good (*taḳdīrāt al-umūr tatabaddal bi-tabaddul al-maṣāliḥ*). Moderate Shīʿites had to exercise much ingenuity in evading the theological antinomies which this conception implies in order to reconcile the assumption of the appearance of new determining moments in God's knowledge, as expressed by *badāʾ*, with a belief in His absolute omniscience, in the eternity of His knowledge which is identical with His being, as most Muʿtazilites believed; and to meet the objection of the orthodox to the assumption that God might be ignorant of the end of things (*ʿawāḳib al-umūr*) which the admission of *badāʾ* implies (cf. Djurdjānī on Īdjī, *Mawāḳif*, Leipzig 1848, 346). The effort to meet the objections raised from this angle led them, in spite of their protests against the Jews and Sunnites who denied *badāʾ*, to devise formulae which would meet these objections and to accuse their Sunnite opponents of crediting them with a false idea of *badāʾ* which was invented by the Sunnites. Their contention is that the term *badāʾ* is not be understood in its literal meaning but metaphorically (*madjāzᵃⁿ*); they reject the view that *badāʾ* implies a change in the divine knowledge or regret for what has happened. God does not will absolutely what He has announced but only so far as it is determined by the common good. In fact, the difference between the Shīʿite and Sunnite theologians is only an idle war of words for the former explain that a future *badāʾ* is decreed in the eternal foreknowledge of God which includes all particulars (*ʿalā wadjh al tafṣīl*). A remarkable way of reconciling *badāʾ* with the doctrine of the Preserved Tablet (*al-lawḥ al-maḥfūẓ*, *Sūra* lxxxv, 22) is the assumption of two tables of fate, one on which the unalterable decrees of fate are set out and a *lawḥ al-maḥw wa 'l-ithbāt* (cf. *Sūra* xiii, 39) which contains those decrees which may be altered by the emergence of new causes (Dildār ʿAlī, i, 114 foot), a view which has also penetrated into Sunnī circles and given rise to esoteric mystic subtleties (*kalimāt ʿadjība wa asrār ghāmiḍa*, Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-Ghayb*, 5, 310). Therefore two kinds of divine knowledge must be distinguished; *ʿilm maḥtūm*, the unalterable knowledge the details of which God makes known to prophets and angels, and *ʿilm makhzūn*, the knowledge entrusted by God to no one, which concerns matters in suspense (*umūr mawḳūfa ʿind allāh*) (Kulīnī 85). Thus God knew that He would not punish the people of Yūnus but did not tell him so that he might worship God wholeheartedly while in the fish. A contrary view is that "angels write on *lawḥ al-maḥw wa 'l-ithbāt*".

The Shīʿa lays great stress on the concept of *badāʾ*; ʿAbd al-Muṭṭalib was the first to teach it; an imām is made to say, "none can serve God better than by acknowledging *badāʾ*" for repentance, prayer and humbling oneself before God to get forgiveness of sins or change of destiny have no meaning if *badāʾ* it not real. Yet this doctrine is always the object of attack by opponents. Even Sulaymān b. Djarīr, one of the Shīʿite Zaydī sect, reproached the Imāmites with embracing two errors, *taḳiyya* [*q.v.*] and *badāʾ* (Shahrastānī, 119 foot). The bitterest opponents of *badāʾ* were the Jews who based their rejection of the abrogation of divine law (*naskh al sharīʿa*) on the fact that this proposition implies the recognition of *badāʾ* as was shown by the Jewish theologian Yaḥyā b. Zakariyya al-Kātib al-Ṭabarānī in his controversy with al-Masʿūdī (*al-Tanbīh*, 113, l. 15; for اعبلا read البداء). In the 3rd/9th century *badāʾ* seems to have been one of the problems for testing sagacity and shrewdness because of the difficulties it raised which could only be resolved by hair-splitting. This can be inferred from Djāḥiẓ, *Tarbīʿ* (ed. Pellat, §§ 74, 189; however see *ibid.*, index, s.v. RFḌ).

Bibliography: Al-Ashʿarī, *Maḳālāt al-Islāmiyyīn*, Istanbul 1929, 39; Abū Djaʿfar Muḥammad al-Kulīnī, *al-Uṣūl min al-Djāmiʿ al-Kāfī*, Bombay 1302 A.H., 84-6; Dildār ʿAlī, *Mirʾāt al-ʿUḳūl fī ʿIlm al-Uṣūl*, Lucknow 1318-19 A.H., i, 110-121 (the utterances and definitions of the most moderate Shīʿite authorities on *badāʾ* are quoted in full; I. Friedländer, *The Heterodoxies of the Shiites according to Ibn Ḥazm*, Newhaven 1909 = JAOS xxix, 2, 72.

(I. Goldziher-[A. S. Tritton])

BADAJOZ [see BATALYAWS].

BADAKHSHĀN, also frequently written Badhakhshān and sometimes in the literary language (with the Arabic plural inflection) Badakhshānāt, a mountainous region situated on the left bank of the upper reaches of the Āmū-Daryā or more accurately of the Pandj, the source of this great river; the adjective derived from this noun is *Badakhshānī* or *Badakhshī*. J. Marquart (*Ērānshahr*, 279) gives this name the meaning of "region of Badhakhsh or Balakhsh, a type of ruby, which, it is said, is only found in Badhakhshān, on the Kokča". It is more probable, however, that the word Balakhsh (whence the French Balais, the English Balas) is a dialectal form which originally denoted the region and which only later came to be used to denote the type of ruby in question. Yāḳūt (i, 528) gives the form Badakhshān as the one most popularly used for the name of the region. Marco Polo also gives the same form. The mines from which the rubies were extracted were situated, as is already asserted by Marco Polo, outside Badakhshān proper—in Shughnān on the right bank of the Āmū-Daryā; during the historical period, however, the country was usually subject to the same power as Badakhshān. The rubies (Ar. *laʿl*, Pers. *lāl*) of Badakhshān were famous in the Middle Ages throughout the Muslim world. In Persian poetry, the expression "*lāl-i badakhshī*" or "*lāl-i badakhshānī*" often denotes in a figurative sense wine or the lips of the Beloved. In Central Asia, this expression is today in universal popular use. The region which contains the mines in question is at present a dependency of the territory of Bukhārā, which is subject to Soviet rule. Nevertheless the mines are worked with the same primitive methods as before, and still have not acquired any importance for the European precious-stone market.

The Kokča or Kökče, called Khirnāb in the *Ḥudūd al ʿĀlam* (written in 372/982-3), a tributary of the Āmū-Daryā, waters Badakhshān. From the economic point of view, the valley of the Kokča and its tributaries alone have always played an important part for the region. In this area were situated the towns of Badakhshān—doubtless near the present capital of Faydhābād—Djirm and Kishm. The last two, which are mentioned in the earliest Arab documents, have preserved their names to this day. The lapis lazuli of Badakhshān, equally famous in the Middle Ages, came from mines situated on the upper reaches of the Kokča. The trade in these gems is at present a monopoly of the Afghān government,

and they are only exported to India. In addition, Badakhshān possesses iron and copper mines.

The first mention of the name of Badakhshān occurs in the Chinese documents of the 7th and 8th centuries A.D., in Hüan čuang in the form Po-tʿot-čoangna, the ancient pronunciation of which, according to Schlegel, was Pat tok-tsʿong-na, in Tʿang-shu in the form Paàtʿo-shān, in the Encyclopaedia *Če-fu-yeun-koci* in the form Pu-tʿo-shan. The Chinese described the country as forming part of Tuho-lo (Tukhāristān). The Arabs also gave two meanings to the word Tukhāristān; in the strict sense, Tukhāristān was only the region situated between Balkh and Badakhshān, in the wide sense, it comprised all the regions east of Balkh and on both banks of the Āmū-Daryā. The name clearly derives from the Tokharians who made their appearance in the 2nd century A.D. and conquered the Graeco-Bactrian empire. In the 5th century A.D., these same territories were occupied by the Hayṭal (the Hephthalites of the Byzantines); in ʿAwfī's Anthology, compiled in the 7th/13th century, we find a story which describes how a king of the Hayṭal conferred on his son the domain "of Djirm and Badakhshān" (Barthold, *Turkestan*, i, 91). In the 6th century A.D., the Turks put an end to the empire of the Hayṭal; at the time of the first Arab incursions the ruler of Tukhāristān (in the wide sense) bore, according to Arabic and Chinese documents, the Turkish title of Yabghu [*q.v.*] (in Arabic Djabghūya); the princes of every country, including also the prince of Badakhshān, were his vassals. We have no precise information on the date of the conquest of Badakhshān by the Arabs and the manner in which Islam was introduced there. Al-Ṭabarī only mentions the name of the country once. Among the events of the year 118/736, he describes a campaign against "Kishm in the country of Djabghūya" and against more distant places. According to al-Yaʿḳūbī (*Buldān*, 288), Djirm in Badakhshān was the city which marked the frontier of Islam on the trade route to Tibet via Wakhān. In the same passage, a Turkish prince, otherwise unknown, called Khumār Beg (this is the correct form of the name), is described as "king of Shiḳinān and Badakhshān". Al-Iṣṭakhrī (278) describes Badakhshān as the "territory of Abu 'l-Fatḥ"; this is doubtless a reference to the prince Abu 'l-Fatḥ al-Yəftalī, whose son Abū Naṣr, according to Samʿānī (W. Barthold, *Turkestan*, i, 69) and Yāḳūt (iv, 1023), fought against Ḳara-Tegīn, the lieutenant of the Sāmānids (d. 340/951-2, cf. Ibn al-Athīr, viii, 157, 370). Apart from these facts, we know nothing of the political situation of Badakhshān during this period. In the 5th/11th century, the poet Nāṣir-i Khusraw brought Ismāʿīlī doctrine to Badakhshān and preached it there with success. His tomb on the upper reaches of the Kokča is still shown today. His teachings have been preserved to this day in Badakhshān and the frontier regions. In the second half of the 6th/12th century, Tukhāristān in the wide sense (with Badakhshān) came under the rule of a side branch of the house of Ghūr, which resided at Bāmiyān and which, like the other branches of this dynasty, was dispossessed at the beginning of the 7th/13th century by the Khwārizm-shāh Muḥammad.

Badakhshān escaped the fury of the Mongol invasion and remained up to the 9th/15th century in the hands of its national dynasty. The legend which traces the descent of this royal family from Alexander the Great was first quoted by Marco Polo, and is subsequently frequently mentioned by the Muslim historians. Muḥammad Ḥaydar (*Taʾrīkh-i Rashīdī*, trans. E.D. Ross, 203) attributes to the daughter of the last ruler the statement that her ancestors had been kings of Badakhshān for 3,000 years. Tīmūr himself and his successors only succeeded after hard battles in obtaining recognition of their suzerainty, and the country was only annexed to the Tīmūrid empire by Tīmūr's great-grandson, Abū Saʿīd. The last prince, Shāh Sulṭān Muḥammad Badakhshī, had previously renounced obedience to the ordinances (*Dastūr al-ʿAmal*) left by Alexander the Great, in order to compose, under the pseudonym of Lālī, a Persian *dīwān* (*Taʾrīkh-i Rashīdī*, 147). He submitted without resistance to the army sent by Abū Saʿīd, and went to Harāt; his son fled to Kāshghar; Mīrzā Abū Bakr, son of Abū Saʿīd, was named prince of Badakhshān. Shortly afterwards, the prince returned from Kāshghar; Abū Bakr was driven out, and Badakhshān had to be conquered afresh. With this object, Abū Saʿīd had Shāh Sulṭān Muḥammad executed in 871/1466-7 (Dawlatshāh, 453). It follows that, on the inscription discovered in 1885 by the British, according to which this Muḥammad constructed a stone bridge in 884/1479-80 (*Taʾrīkh-i Rashīdī*, 221), the date has doubtless been misread. Abū Bakr was later driven out of Badakhshān by his brother Sulṭān Maḥmūd, prince of Ḥiṣār. Up to the conquest of Ḥiṣār by the Özbegs (beginning of the 16th century), Badakhshān continued to form part of its territory. A national movement arose in Badakhshān against the Özbeg conquerors. At the head of this movement were Mubārak Shāh and Zubayr Rāghī. It is said that they took as their base a fortress situated on the left bank of the Kokča, which still today bears the name of Ḳalʿa-i Ẓafar ("Victory Fort") given to it by Mubārak Shāh. The Özbegs were driven back; the Tīmūrid Nāṣir Mīrzā (brother of Bābur), whose aid had been invoked by the insurgents, was proclaimed ruler of Badakhshān (end 910/February 1505), but, unable to come to terms with the leaders of the rebellion, was driven out two years later. In 913/1507-8, Sulṭān Ways Mīrzā, son of Sulṭān Maḥmūd Mīrzā, went to Badakhshān with the consent of Bābur and was received at Ḳalʿa-i Ẓafar. Shortly before, Mubārak Shāh had been killed by his comrade Zubayr. The latter, who tried to keep power in his own hands even after the arrival of the new sovereign, was removed by assassination. Shortly afterwards, Shāh Raḍī al-Dīn, leader of the Ismāʿīlīs of Kuhistān, made his appearance in Badakhshān, gathered round him the followers of this sect, and subjugated part of the country. However, he was put to death in the spring of 1509, and his head taken to Ḳalʿa-i Ẓafar and presented to Mīrzā-Khān. The latter died in 926/1520 on the throne of Badakhshān. Bābur summoned Sulaymān the son of Mīrzā-Khān, who was still a minor, and replaced him in Badakhshān by his own son Humāyūn. In 935/1528-9, Humāyūn was recalled by his father and sent to India. After an unsuccessful attempt by Saʿīd Khān, ruler of Kāshghār, to seize possession of the country, Sulaymān was recognised as prince of Badakhshān both by Bābur and by Saʿīd Khān (1530). Sulaymān reigned until 983/1575; driven out in the first half of that year by his grandson Shāhrukh, he retired to India and thence to Mecca, but later returned to his own country. In 1584, Badakhshān was conquered by the Özbegs under ʿAbd Allāh Khān. Sulaymān and Shāhrukh were forced to flee to India, but

returned later and made several attempts to repel the conquerors. At the beginning of the 17th century there occurred another insurrection, provoked by Badīʿ al-Zamān, son of Shahrukh. In 1665, the Tīmūrids occupied both Balkh and Badakhshān, but in the autumn of 1669 the two countries were finally ceded to the Özbegs.

The Özbeg empire in the 17th century was still divided into several independent states. In Badakhshān, a dynasty was set up founded by Yār Beg, who built the town of Faydhābād. The representatives of this dynasty also, claimed descent from Alexander the Great, a claim which they still maintained in the 19th century. Like the other Özbeg princes in present-day Afghānistān, these princes bore the title of Mīr, an abbreviation of Amīr. In 1822, Mīr Muḥammad Shāh was dethroned by Murād Beg, ruler of Ḳunduz. Mīrzā Kalān, a dependant of Murād Beg, was despatched as prince of Badakhshān. After the death of his sovereign, he declared himself independent and even became for a time master of Ḳunduz. His son and successor, Mīr Shāh Nizām al-Dīn, died in 1862. The latter's son Djahāndār Shāh, from 1867 onwards had to contend for his throne with another prince of the same dynasty, Maḥmūd Shāh. In 1869, Djahāndār was decisively repulsed and, after one last effort, he withdrew in 1872 to Russian territory, andUčkurgan in Farghāna was allotted to him as his place of residence. An annual pension of 1500 roubles was assigned to him. In 1878, however, he was assassinated at Učkurgan by unknown assailants. In 1873, the Afghān government deposed Maḥmūd Shāh; he was sent to Kābul, where he remained until his death. His territory was annexed to Afghānistān, and formed part of the province of Turkistān.

From 1725 onwards, there are reports in Russia of the rubies and lapis lazuli of Badakhshān and also of its alleged gold and silver mines. In 1735, "the conquest of the rich country of Badakhshān" is mentioned as one of the aims of Russian policy in Central Asia, but Russian penetration only really began after 1876. In 1885, Post Pāmīrskii was founded on the Murghāb, and in 1891-2, after an armed encounter at Yeshil-Kul, the Russians occupied the whole of eastern Pāmīr, which became the "district of Pamir" of the region (*oblast'*) of Farghāna, administered by the leader of the Russian military detachment in Pāmīr.

On 11 March 1895, an exchange of notes between the British and the Russians in London delimited the frontiers of Pāmīr between Afghānistān and the principality of Bukhārā under Russian protectorate; Badakhshān proper was left in the hands of the rulers of Afghānistān, while the territories of western Pāmīr lying north and est of the Pandj returned to Bukhārā.

The revolution of 1918 abolished the principality of Bukhārā, but Soviet power did not become firmly established in Pāmīr until 1925, after four years of fighting between the "White" elements and the *basmačis* [*q.v.*].

Autonomous region of Soviet Gorno-Badakhshān.

On 2 January 1925, the two parts of Pāmīr (east and west) were reunited in a "Special Region of Pāmīr", attached administratively to the Central Executive Committee of the Soviet Socialist Republic of Turkistān (founded on 14 October 1924), in December of the same year its name was changed to the Autonomous Region of Gorno-Badakhshān, forming part of the Autonomous Soviet Socialist Republic of Tādjikistān (which on 5/12/1929 became the Soviet Socialist Republic of Tādjikistān). Its capital is Khārogh (Khorog).

Gorno-Badakhshān comprises all the territory of Soviet Pāmīr; it is bounded in the north by the Trans-Alaï chain, in the east by Chinese Sinkiang, in the south by the Afghān possessions and in the west by the Pandj and by the Darwāz and Academy chains. Its area is 61,800 sq. km.—In 1951, the Autonomous Region was divided into 7 districts (*tuman* = "zone"):

1. Shughnān (administrative centre Khārogh), comprising the Ghund valley.

2. Ishkāshim (administrative centre Ishkāshim), comprising the upper vallay of the Pandj and the former territories of Wakhān, Ishkāshim and Ghārān, up-stream from the confluence of the Pandj and the Shākh-dara.

3. Rosht-Ḳalʿa (administrative centre Rosht-Ḳalʿa) in the Shākh-dara basin.

4. Rōshān (administrative centre Rōshan) in the Pandj valley downstream from Khārogh.

5. Bartang, comprising the basin of the Bartang river and its tributary the Kudara, as far as Lake Sarez.

6. Murghāb (administrative centre Murghāb, the former Post Pamirskii) comprising the whole of eastern Pāmīr.

7. Wanč (administrative centre Wanč), comprising the Wanč and Yāghulām valleys.

In 1954, the Bartang district was abolished, and its territory incorporated in the Roshān and Wanč districts.

At the beginning of the 20th century, the total population of Pāmīr (Russian and Bukhāran) did not exceed 20,000: since 1925, as the result of improved communications and the introduction of new agricultural techniques, it has increased appreciably. At the 1926 census, there were 28,924 inhabitants, and at the 1939 census, 41,769. In 1956 the total population was in the region of 62,000.

Ethnically, Gorno-Badakhshān comprises two quite distinct regions: 1) the high plains of eastern Pāmīr are inhabited by a small number of Kirghiz nomads. In 1926, there were 2,660 belonging to the Ičkilik tribes, made up of the following clans: Kesek, 1,400: Teit, 800: Ḳipčaḳ, 300: Naiman, 100. In 1939, their number did not exceed 5,000, or about 11% of the total population of the region. These Kirghiz are nominally Sunnīs of the Ḥanafī rite. 2) In the valleys of western Pāmīr live Iranian peoples whom their Tadjīk neighbours call "Ghalča", and the Russians "Gornyje tādjiki" (an inaccurate term, which causes confusion with the Tādjīk of the mountainous regions of Darwāz, Ḳarategin and Zarafshān), or "Pāmīrsku Narody" ("Peoples of the Pāmīr"). The inhabitants themselves call themselves "tādjīk", a term which also leads to confusion, and call their neighbours in Darwāz who speak Tādjīk, people who speak Persian" (*pārsī-gūy*). Their total number is estimated at more than 50,000 or 85% of the total population of the Autonomous Region. They are for the most part Nizārī Ismāʿīlīs [*q.v.*], apart from a small number of the Bartang, the majority of the Yāzghulāmī, and all the Wančī, who are Ḥanafī Sunnīs.

The people of the Pāmīr constitute several groups:

1. *The Shughnāno-Rōshān group*, numerically the most important (35-40,000 people), comprising: a) the Shughnī (Hugnī), numbering 20-30,000, in the districts of Shughnān [*q.v.*] and Rosht Ḳalʿa (valleys

of the Ghunid, Pandj and Shākh-dara); b) the Rōshānī: about 8,000 in the Rōshān district north of the Shughnī (Pandj valley); c) the Bartang: about 2,000 in the Bartang district (valley of the river Bartang), and d) the Oroshor (300 in 1925). These four peoples speak closely-related dialects.

2. *The Wakhī* (Wukh, Wakhagd) [*q.v.*], numbering 6-7,000, living in the district of Ishkāshim situated in the southern part of Soviet Pāmīr, the high valleys of the Pandj and the Wakhān-Daryā (a similar number of Wakhī live in Afghānistān).

3. *The Yāzghulāmī* (Yuzdom, Zgamik), whose number does not exceed 2,000, distributed among 13 villages situated in the valley of the river Yāzghulām (Wanč district).

4. The Ishkāshimī (Ishkāshumī), numbering 400 in Soviet Badakhshān (1,500-2,000 of their brothers, who speak the Zēbākī and Sangličī dialects, live in Afghānistān), living in one village only, Rym, on the upper Pandj (Ishkāshim district).

Finally, in the extreme north of the Autonomous Region, in the valley of the river Wanč, live the *Wanči*, who are completely tādjīkised and whose language has not been in use for more than a century.

The peoples of the Pāmīr belong to the eastern Iranian linguistic group; none of the languages is fixed by writing, despite an abortive attempt by the Soviet authorities in 1931 to give the Shughnī a Latin alphabet and make it a literary language (in 1931 a Shughnī primer for children was published in Stalinabad (A. Djakov: *Xugnoni alifba Kudaken čat*, and in 1936 Tādjīkistān State Publications published the first works in Shughnī: cf. *Revolutsia i Natsional'nosti*, No. 4/1936, 92).

Tādjīkī is the language of civilisation (administration, courts, schools, the Press), and bilingualism (local dialect + Tādjīkī) is general. Some languages, such as Ishkāshimī, are fast disappearing and only survive as "domestic languages", others (Bartangī, Rōshānī ....) are strongly tādjīkised; on the other hand Yāzghulāmī, which is extremely isolated, and Wakhī are putting up a more effective resistance.

In 1954, Gorno-Badakhshān possessed seven newspapers; two of these were regional organs appearing at Khārōgh: *Krasnyj Badakhshān* (in Russian) and *Badakhshān-i Surkh* (in Tādjīkī); four were local papers in Tādjīkī, namely the *Rōshān-i Surkh* (at Rōshān); *Ḥaḳīḳat-i Wanč* (at Wanč) and the *Bayraḳ-i Surkh* and a Kirghiz paper at Murghāb.

Tādjīk influence was also exerted through teaching. In 1954, there were in the region some 200 schools, of which 11 were secondary (decennial schools, and a teaching institute at Khārogh with a total of 12,000 pupils.

Formerly extremely isolated, Gorno-Badakhshān has since 1934 been connected with the Farghāna valley by a motor road (the Osh-Murghāb-Khārōgh road, 740 km. in length), completed in 1940 by the Khārōgh-Stalinabad road which follows the Pandj valley. The economy of the region nevertheless is still of a traditional type: nomadic stock-breeding (ovines, caprines), terrace horticulture, and silk production in the western part of the region. The country is rich in deposits, some of which have been exploited for a very long time: lapis lazuli and malachite in the Shākhdara valley, precious stones, gold and copper (near Porshniv).

The capital of the region, Khārōgh (927 inhabitants in 1926, 2-3,000 in 1954) has a few small industrial undertakings.

Bibliography: Cf. especially *Ta'rīkh-i Rashīdī*, trans. E. D. Ross, ed. N. Elias, London 1895, and *Bābur-nāma*, ed. Beveridge, in *Gibb Memorial Series* I, London and Leiden 1905; the passages dealing with Badakhshān are indicated in the index. Of the MS. works, the *Maṭla' al-Sa'dayn* of 'Abd al-Razzāḳ al-Samarḳandī [*q.v.*], is especially useful. On the Ghūrid empire, cf. *The Tabaḳāti Nāṣiri of Aboo-Omar ... al-Jawzjānī*, Calcutta 1864; Raverty, *The Tabaḳāt-i Nāṣirī*, London 1881. Information concerning the regions situated on the upper reaches of the Oxus in the 19th century has been collected with the greatest care, based on the accounts of English travellers, by J. Minajew, *Swjedjenija o stranach po verchovjam Amu Darji*, St. Petersburg 1879. Barthold was in addition able to consult the narratives of two Russian travellers of the year 1878, which are not generally available. On the state of these regions, on the eve of the Revolution, cf. especially Count A. Bobrinskoj, *Gortzy verchovjev Pjandza*, Moscow 1908, partly based on R. Leitner, *Dardistan in 1866, (1889 and 1893)*, and idem, *Dardistan in 1895*. In 1957 the Academy of the sciences of the Tadjik SSR published an excellent work by A. M. Mandel'štam; *Materyalī k Istoriko-geografičeskomi obzaru Pamira i pripamirskich oblastec*, Stalinabad 1957 (vol. liii of the proceedings of the Inst. of hist., arch. and ethnology of the Acad. Sci. Tadjik SSR), containing the descriptions of the Pamir by Greek, Chinese and Arab historians and geographers to the 10th century.

(W. Barthold-[A. Bennigsen and H. Carrère-d'Encausse])

BADAL (Turk. Bedel: plural *bedelāt*), a term used under the Ottoman régime to denote a contribution made by a tax-payer *in lieu* of his performing some service for the government or furnishing it with some commodity. Certain categories of the sultans' subjects were excused payment of dues and taxes on condition of their discharging such duties. If they failed to fulfil their obligations, however, or if the government forwent its rights in this regard, instead of again becoming liable to ordinary taxation, they were required to make special "substitute" contributions; and it may have been in description of these that the term *bedel* first came into use.

From the end of the 16th century, when the Ottoman central treasury was frequently short of funds and generally pursued short-sighted policies, harassed *Defterdārs* were often tempted to forgo services or supplies from those bound to render or furnish them—even though these might later have to be bought at equal cost—in order to exact such cash contributions *in lieu*. By the middle of the 17th century quite half the cash revenues accruing to the *Mīrī* were obtained from *bedelāt* of many different kinds (see the "budget" of Ṭarkhundju Aḥmed Pasha in the *Tekālīf Ḳawāʿidi* of ʿAbd al-Raḥmān Wefīḳ, i, 327 ff., and the *ʿOsmanlı Taʾrīkhi* of Aḥmed Rāsim, ii, 214 ff., notes). Of these one of the best known, from its being of wide-spread application, was the *bedel-i nüzūl*, apparently exacted *in lieu* of the supplies and accommodation with which, according to an original arrangement, inhabitants of places through which travelling officers and officials passed were obliged to furnish them free. This became so general a contribution that it is linked in some accounts with the *ʿawāriḍ* [*q.v.*].

Two or three other "old-régime" *bedels* may be mentioned as of particular interest. One is the *bedel-i djizye* paid by the Hospodars of the Danubian principalities and the republic of Ragusa. This was a contribution received *in lieu*, not of any service, but of the payment of *djizya* [*q.v.*] by the individual Dhimmīs [*q.v.*] of those territories. A second was called *bedel-i tīmar*. It was first exacted in 1069/1659 —apparently from *tīmar*-holders who were no longer performing the military duties in return for which they held their fiefs, to the extent of as much as half their revenues, and even if it did not become a permanent impost was still in force five years later. Another levy on fief-holders was first imposed somewhat later and long continued, viz. the *bedel-i djebeli*, which, as its name indicates, was paid by those of them whose revenues exceeded a certain sum, originally 40,000 *akčes* a year, in lieu of their maintaining and appearing in the field accompanied by one or more armed and mounted retainers.

Although many ancient usages were abandoned under the new régime of Maḥmūd II and his successors, recourse was still had to *bedels* in several connexions during the second half of the 19th century. Thus in 1272/1856 what was later usually referred to as the *bedel-i ʿaskerī* was instituted under the name of *iʿāne-i ʿaskeriyye*. By the famous *Khaṭṭ-i Humāyūn* of that year [see art. ʿAbd al-Madjīd] the Ottoman reformers sought to abolish all legal distinctions between the sultan's Muslim and his Dhimmī subjects, and to this end both abrogated the collection of *djizya* from the Dhimmīs and declared them now for the first time liable for military service. In practice, however, the Porte did not wish to employ Dhimmīs as soldiers, any more than the Dhimmīs wished so to be employed themselves; and it was decided that the Dhimmīs should instead pay this *bedel*, which thus became to all intents a substitute for the *djizya*. At first collected by government agents from individuals, its collection was later delegated, until its abolition in 1907, to the leaders of each religious community concerned.

Two other late contributions of this kind were alike called *bedel-i naḳdī*, "cash payment *in lieu*". The first was instituted by a decree of 1302/1886, from which date it might be paid by men conscribed by lot for military service by way of exemption either from serving altogether or else from serving more than a shortened term. The sum payable for total exemption was then fixed at 50 Ottoman gold pieces. By another decree of 1332/1914 those paying this *bedel* (still of the same amount) were obliged to perform six months' service and were then relegated to the reserve. The practice of selling exemption was even continued under the republican regime, a decree of 1346/1927 fixing the payment for a shortened term of service at 600 *liras*.

The second *bedel-i naḳdī* was a payment accepted from persons in the provinces who were obliged by law to maintain roads in their area in lieu of this service.

BADAL [see abdāl and naḥw].

BADAN [see djism].

BĀDARĀYA [see badrā].

BADĀʾŪN (Budāʾūn or Badāyūn), an ancient town, about a mile east of the river Sot and headquarters of the district of the same name in India, situated in 28° 2′ N. and 79° 7′ E.; it is variously spelt by native historians as Bēdāmaʾūn, Bhadāʾūn and Badāwan. Population (1951) was 53,521.

Little authentic is known about the town before the advent of the Muslims towards the end of the 6th/12th century when Ḳuṭb al-Dīn Aybak [*q.v.*], the *walī ʿahd* of Muʿizz al-Dīn b. Sām in India, invaded and captured it in 594/1197-8 (Fakhr-i Mudabbir, ed. Ross, 24). Tradition, however, ascribes its fall in 421/1030 to the pseudo-historical figure, Ghāzī Masʿūd Sālār [*q.v.*], said to be a nephew of Maḥmūd of Ghazna. Tādj al-Dīn Yildūz, after his defeat by Iltutmish near Lahore in 612/1215, was sent to Badāʾūn as a captive where he died in 628/1230. It served as a military station during the Khaldjī period. In 690/1291 Djalāl al-Dīn Khaldjī came to Badāʾūn with a large army in order to quell the revolt of Malik Čadjdjū. Muḥammad b. Tughluḳ, however, did not favour the idea of retaining it as an army base. Consequently the refractory tribes all round rose in revolt. Fīrūz Tughluḳ marched down to Badāʾūn in 787/1385, crushed the revolt, appointed Ḳabūl Khān Shirwānī as the military governor and retired. ʿAlāʾ al-Dīn, the

last king of the Sayyid dynasty, abdicated from the throne of Delhi in 855/1451 (Aḥmad Yādgār, *Taʾrīkh-i Shāhī*, Bibl. I nd. 257, 10) and passed the rest of his life in Badāʾūn where he died in 883/1478.

Under Akbar the town was formed into a *sarkār* of the *sūba* of Delhi in 964/1556; and a mint was established where only copper-coins were struck. In 979/1571 a great fire broke out, consuming the entire town, in which a large number of the residents perished.

The town lost its importance during the reign of Shāhdjahān when the *sarkārs* of Badāʾūn and Sambhal were amalgamated under the new name of Katehr with head-quarters at Bareilly. With the decline of the Mughal power the town lapsed to the Rohillas. After the rout of the Rohillas under ʿAlī Muḥammad Khān, it was possessed by the Nawābs of Awadh in 1192/1778 from whom it was wrested by the British in 1216/1801. During the Mutiny of 1857 the town was seriously disturbed; the central prison was raided and the European quarter burnt.

Badāʾūn is the birth-place of the historian ʿAbd al-Ḳādir Badāʾūnī [*q.v.*] and the famous Indian divine Niẓām al-Dīn Awliyāʾ [*q.v.*]. Raḍī al-Dīn Ḥasan al-Ṣaghānī [*q.v.*] is also said to have been born here but this statement is debatable. The old town contains several buildings of archaeological interest: the old fort, now in ruins, Masdjid Ḳuṭbī, the Djāmiʿ Masdjid Shamsī, built by Iltutmish in 620/1223 and, numerous other mosques and tombs, including the mausoleum of ʿAlāʾ al-Dīn, the run-away Sayyid king of Delhi.

(A. S. Bazmee Ansari)

BADĀʾŪNĪ, ʿAbd al-Ḳādir, scholar and historian at the court of Akbar the Mughal. Born at Tōda (in the old princely state of Djaypūr) in 947/1540, Badāʾūnī spent his early life at Basāwar about 18 miles to the north east of Tōda, being taken to Sambhal in 960/1553 to pursue his studies under Shaykh Ḥātim Sanbhalī and Shaykh Abu ʾl-Fatḥ. In 966/1558-9, Badāʾūnī went with his father Mulūk Shāh to Āgra and continued his education there under Shaykh Mubārak Nāgawrī, father of Abu ʾl-Faḍl and Fayḍī. He also read Ḥanafī jurisprudence under Ḳāḍī Abu ʾl-Maʿālī. After the death of his father in 969/1562, Badāʾūnī moved to Badāʾūn and thence, in 973/1565-6 to Patiyāla where he entered the service of Ḥusayn Khān as the latter's *ṣadr*. He remained with Ḥusayn Khān for 9 years, moving with him to Lucknow and Gānt u Gōla. In 981/1574 they quarrelled and parted. During the intervening years Badāʾūnī continued his religious education by visiting such saints as Shaykh Niẓām al-Dīn of Ambethī, Shaykh Aban of Amroha, Shaykh Allah Bakhsh of Garmaktesar and Shaykh Muḥammad Ḥusayn of Sikandra.

In 981/1574 Badāʾūnī was presented to Akbar through the good offices of Djalāl al-Dīn Ḳūrchī a *manṣabdār* of 500 and Ḥakīm ʿAyn al-Mulk a court physician. Impressed by Badāʾūnī's ability as a controversialist, in 982/1574-5 Akbar appointed him an imām and ordered him to bring horses to the brand as a *manṣabdār* of 20. Badāʾūnī's failure to match Abu ʾl-Faḍl's efforts in this sphere (the latter had come to court about the same time as Badāʾūnī) embittered him and led him to accept a *madad-i maʿāsh* of 1,000 *bīghās* (originally at Basāwar but transferred in 997/1588-9 to Badāʾūn). Badāʾūnī's failure after this error of judgment to gain the preferment he considered he deserved, undoubtedly influenced his view of events at Akbar's court and of the religious activities in which Abu ʾl-Faḍl was prominent. For absenting himself from attendance on Akbar, Badāʾūnī nearly forfeited his grant, being saved largely by the good offices of Khwādja Niẓām al-Dīn Aḥmad, author of the *Ṭabaḳāt-i Akbarī*, whom he had met at Āgra in 967/1559. Akbar continued however to employ Badāʾūnī on literary work from 982/1574 onwards. His date of death is variously given, (see Storey, i/1 437) but as Storey points out (i/2, 1309) "1024/1615 must be nearest to the truth, if the reference to the death of "Ẓuhūrī" and "Malik" Ḳummī is not a later insertion in the notice of "Ẓuhūrī" in the *Muntakhab al-Tawārīkh*, iii, 269".

Badāʾūnī's literary work comprised: (1) *Kitāb al-Ḥadīth*, now lost, a collection of 40 traditions on the merit of waging holy war, presented to Akbar in 986/1574; (2) *Nāma-yi Khirad-afzā*, a translation of the *Singʾ hāsan battīsī*, a collection of 32 tales about Rādja Bikramādjīt of Mālwa, ordered by Akbar in 982/1574; (3) *Razm-nāma*, a translation of the *Mahābhārata*, undertaken at Akbar's request in 990/1582; (4) A translation of the *Rāmāyana* begun at Akbar's command in 992/1584 and submitted to him in 997/1589; (5) Part of *Taʾrīkh-i Alfī*, a general history of Islam down to the thousandth year, commissioned by Akbar in 993/1585 the first two volumes of which were revised by Badāʾūnī in 1000/1591-2; (6) *Nadjāt al-Rashīd*, a work on Ṣūfism, ethics and the Mahdawī movement of Badāʾūnī's day; (7) A rewriting and abridgement of a translation by Mullā Shāh Muḥammad Shāhābādī of a history of Kashmīr (probably the *Rādja-taranginī*); (8) A part of a translation into Persian of Yāḳūt's *Muʿdjam al-Buldān*; (9) A translation in epitome of Rashīd al-Dīn's *Djāmiʿ al-Tawārīkh*, requested by Akbar in 1000/1591-2; (10) The completion of *Baḥr al-Asmār*, a translation into Persian of a Sanskrit tale, apparently the *Kathāsarit-sāgara*, made earlier for Sulṭān Zayn al-ʿĀbidīn of Kashmīr. Akbar ordered this task in 1003/1595; (11) *Muntakhab al-Tawārīkh*, a general history of the Muslims in Hindūstān from

Subuktigīn to 1004/1595-6, commenced in 999/1590, followed by biographies of shaykhs, scholars, physicians and poets. Until 1002/1593, the *Muntakhab al-Tawārīkh* is based largely on Khwādja Niẓām al-Dīn Aḥmad's *Ṭabaḳāt-i Akbarī*, with characteristic asides by Badāʾūnī. The work is noted for its hostile comments on Akbar's religious activities. Its existence was apparently kept secret until at least the tenth year of Djahāngīr's reign, (Mullā ʿAbd al-Bāḳī Nahāwandī, author of *Maʿāthir-i Raḥīmī*, did not know of it when he completed his work in 1025-1616). According to the *Mirʾāt al-ʿĀlam*, by Shaykh Muḥammad Baḳā Sahāranpūrī, composed in 1087/1667, Badāʾūnī's children asserted to Djahangīr that they did not know of the existence of the work (*British Museum Add. MS.* 7657, folio 452 a-b). Badāʾūnī himself hints at an intention to conceal the work (*M. al-T.*, iii, 398).

BADAWĪ [see AḤMĀD AL-BADAWĪ and BADW]

AL-**BADAWIYYA** [see AḤMAD AL-BADAWĪ[

BADAWLAT, a title of the chief Yaʿḳūb-Beg of Kāshghar [*q.v.*].

BĀDGHĪS or **BĀDHGHĪS**, a district in the north-western part of modern Afghānistan, in the province of Harāt; the name is explained as being derived from the Persian *bādkhīz* ("a place where the wind rises") on account of the strong winds prevailing there. By the geographers of the 4th/10th century only the district to the north-west of Harāt, between this town and Sarakhs, is called Bādghīs. The author of the *Ḥudūd al-ʿĀlam*, probably writing from personal knowledge, describes it as a prosperous and pleasant place of three hundred villages. Later the name was extended to the whole country between the Harīrūd and the Murghāb; at any rate it is used in this sense as early as the 4th/13th century by Yāḳūt. There have never been any cities in Bādghīs and its small towns and fortresses have never been of great importance. At the time of the Arab conquests Bādghīs became known as a Hephthalite stronghold and it is said that Nīzak Tarkhān the Hayṭal [*q.v.*] retreated there after the loss of Harāt. Yāḳūt writes of it as *dār mamlakat al-Hayāṭila*, but this can only refer to the very end of the period of Hephthalite power. Even under the Ṭāhirids and the Sāmānids Bādghīs remained a hotbed of sedition.

At the present day Ḳalʿa-i Naw is regarded as the chief town. The rivers, including the tributaries of the Murghāb, still contain, as a thousand years ago, only small streams of brackish water; for the irrigation of the cultivated fields the people are dependent on wells and rainfall. The soil is noted for its fertility and the pistachio woods mentioned by the Arabs have survived to a certain extent to the present day. Besides these the excellent pastures of the country are famous; Ferrier (1845-6) describes the pastures of Ḳalʿa-i Naw as the best in all Asia. The wars between the Persians and the Mongols of Central Asia in 678/1270 arose out of a dispute for the possession of the pasture grounds of Bādghīs. The modern population consists mainly of Tādjīks, Djamshīds and Hazāras, and of nomadic tribes from the surrounding country who bring their flocks for seasonal grazing.

(W. BARTHOLD-[F. R. ALLCHIN])

BADĪʿ is an Arabic adjectival noun which denotes the idea of originality. In the active sense it means Creator or Originator, hence its use as an Attribute of God. In the passive sense it means 'discovered' or 'invented', and from this, it became a name for the innovations of the ʿAbbāsid poets in literary figures, and later for trope in general; *ʿilm al-badīʿ* was that branch of rhetorical science which dealt with the beautification of literary style. Some ʿAbbāsid poets of the 2nd/8th century, like Bashshār, Muslim b. al-Walīd, and al-ʿAttābī, tended to depart in certain respects from the established ways of the classics and especially in the use of poetical artifices, such as metaphors and similes, on a scale unprecedented in pre-Islamic poetry. Hence, there arose among some ʿAbbāsid circles of critics, the idea that this art was a *badīʿ*, an innovation or a new creation. The word began to be used in that wide undefined sense in the critical writings of the 3rd/9th century. It occurs in more than one place in the writings of al-Djāḥiẓ; in one of them the author quotes a line of poetry containing a figurative expression and says: "and this is what *rāwīs* call *badīʿ*" (*Al-Bayān waʾl-Tabyīn*, Cairo 1948, i, 51, iv, 55). The first author to attempt a treatment of *badīʿ* as a literary art and to define what he took to be its principal categories, was the caliph-poet Ibn al-Muʿtazz (247-296 : 861-908). In a book entitled *Kitāb-al-Badīʿ*, Ibn al-Muʿtazz tried to show—by quoting copious examples from the Ḳurʾān, the Traditions, speeches of Bedouins, and early classical poetry, that what the moderns called *badīʿ* was not a creation of Bashshār and his contemporaries. These merely extended the already known art of literary figures in their poetry until it became widely used, and was given the name *badīʿ*. Then came the poet Abī Tammām (d. 231/850) who was very fond of this art and used it extravagantly with varying results. The author treats of *badīʿ* in five principal categories: metaphor, alliteration, antithesis, conformity of ends with beginnings, and order of discourse. Having explained them and quoted illustrative examples of good and bad in each, Ibn al-Muʿtazz points out that *badīʿ* as a term for poetical artifices, is known to poets and critics, but that philologists and scholars of ancient poetry do not use the term. He then asserts that nobody before him had treated the art of *badīʿ*, nor anticipated him in his work, which he completed in the year 247/861. He was, however, aware that the artifices of *badīʿ* could be reduced to less, or extended to more than the above five categories. For this reason, and to increase the instructive value of his book, he went on to add twelve more artifices of the embellishment of speech. Ḳudāma b. Djaʿfar (275-337/888-968, a contemporary of Ibn al-Muʿtazz and the author of probably the first Arabic book bearing the title of *Naḳd al-Shiʿr*, i.e. "The Criticism of Poetry", dealt with twenty qualities of poetical art, including some of Ibn al-Muʿtazz's categories, without mentioning the technical term *badīʿ*. But a century later another critical writer, Abū Hilāl al-ʿAskarī (d. 395/1004) carried the development of *badīʿ* a step further by augmenting the number of its categories to thirty-six, making use of the seventeen of Ibn al-Muʿtazz. In his book *K. al-Ṣināʿatayn*, i.e. "The Two Arts (of Prose and Poetry)", perhaps the first systematic

book on the whole field of Arabic rhetoric, al-ʿAskarī devoted a long section to the explanation of *badīʿ* and the enumeration of its kinds and categories. Al-Rummānī (296-386/908-996), a Muʿtazilī rhetorician, considers *balāgha* [*q.v.*] or eloquence as one of seven directions in which ḳurʾānic *iʿdjāz* can be seen, and without mentioning *badīʿ*, he includes some of the figures of speech as categorie· of *balāgha*. But the Sunnite al-Bāḳillānī (d. 403/1013) in his *Iʿdjāz al-Ḳurʾān*, devotes a long chapter to the *badīʿ* of speech, maintaining that *badīʿ* could help to appreciate, but could not sufficiently explain *iʿdjāz*. Ibn Rashīḳ, the author of *al-ʿUmda*, "On the Excellencies and Requirements of Poetry", illustrates in his book more than sixty categories under the heading 'The Invented and the *badīʿ*'. Ibn Khaldūn points out that Ibn Rashīḳ's *ʿUmda* had a great influence in the Muslim West, in North Africa and Spain, where the use of *badīʿ* was highly appreciated and practised. The turning point however in the history of Arabic rhetoric in general, and of *badīʿ* in particular, as a separate science of stylistics came at the hands of al-Sakkākī (555-626/1160-1228), who in his book *Miftāḥ al-ʿUlūm* built a logical system for the classification of the instrumental sciences of literature, making use in the section on rhetoric of the solid philosophical foundations laid down earlier by ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078). From al-Sakkākī's time down to the present, books on Arabic rhetoric have revolved round the compact text of his book, its abbreviations and the long and detailed commentaries on those texts. Notable among the epitomisers and the commentators of the *Miftāḥ* were al-Khaṭīb al-Ḳazwīnī (666-739/1267-1338) and al-Taftāzānī (722-793/1322-1390). This period was characterised in literature by ingenuity in using ornaments of style and by love for the art of *badīʿ*. Some poets of the period delighted in using all kinds of figures of speech in one and the same poem. Such poems, called *badīʿiyya*, were composed by Ṣafī al-Dīn al-Ḥillī and others. In that period, the sciences of rhetoric were clearly and rigidly delineated. Thus, aspects of literary structure became the domain of the science of *maʿānī* or "Concepts", while figures such as metaphor and simile, having to do with ways of literary expression, were relegated to the science of *bayān* or "Exposition". The artifices of the ornamentation and embellishment of speech remained the instruments and categories of *badīʿ*.

AL-BADĪʿ AL-ASṬURLĀBĪ, Hibat Allāh b. al-Ḥusayn b. Aḥmad (also Yūsuf), Abu 'l-Ḳāsim, illustrious Arab scholar, physician, philosopher, astronomer and poet, who distinguished himself particularly for his knowledge and construction of the astrolabe and other astronomical instruments. The date of his birth is not known. In 510/1116-17, we find him at Iṣfahān in intimate contact with the Christian physician Amīn al-Dawla Ibn al-Tilmīdh. Later he lived in Baghdād, where the exercise of his art, so it is said, brought him a considerable fortune under the Caliph al-Mustarshid. According to Abu 'l-Fidāʾ, astronomical observations were made under his direction in 524/1130 in the palace of the Saldjūḳid sultans at Baghdād. It is probable that the tables of Maḥmūd composed by him and dedicated to the Sulṭān Abu 'l-Ḳāsim Maḥmūd b. Muḥammad (1118-31) are the result of these observations. He died at Baghdād in 534/1139-40 and it is said (Abu 'l-Faradj is the sole source of this tradition) that he was buried in a state of coma. As regards his poetical works, Ibn al-Ḳifṭī maintains that they were "beautiful and excellent", Ibn Khallikān that they reached the limits of lechery and obscenity. Ibn Khallikān and Ibn Abī Uṣaybiʿa give examples of his best pieces. In addition to a *Dīwān* of his own poems, al-Badīʿ al-Asṭurlābī published a selection of the poems of Ibn Ḥadjdjādj in one volume, divided into 141 chapters and entitled *Durrat al-Tādj min shiʿr Ibn Ḥadjdjādj* (Brockelmann, S I, 130). The praise which the Arab biographers liberally bestow on al-Badīʿ al Asṭurlābī, should not lead us to place his merits too high. The historians and biographers of the 7th/13th century possessed too little mathematical and astronomical knowledge to enable them properly to appreciate the really eminent services which the scholars of the 3rd-5th/9th-11th centuries rendered these sciences. They thus frequently fell into the error of extolling to excess the work of scholars closer to them in time, to the detriment of the works which mark the zenith of Arab science. Nowhere are the praises of al-Battānī, Abu 'l-Wafāʾ and al-Bīrūnī sung so eloquently as those of al-Badīʿ al-Asṭurlābī, though the former are scholars of much greater distinction than the latter.

BADĪʿ AL-DĪN, surnamed Ḳutb al-Madār (axis of the Universe) and popularly known as Shāh Madār, is the Methuselah of Indian hagiological literature and one of the most celebrated saints of India. He is said to have been born at Aleppo in 250/864, and to have been descended from Abū Hurayra [*q.v.*], one of the companions of the Prophet. The statement in the *Mirʾāt-i Madārī* that he was a Jew and embraced Islam at al-Madīna is not supported by other authorities. Like his descent, his date of birth is also controversial, the *Tadhkirat al-Muttaḳīn* gives it as 1 Shawwāl 442/16 Feb. 1051; the *Mirʾāt-i Madārī* has 715/1315, which is most probable. According to the *Kitāb-i Aʿrās* and *Mihr-i*

Djahāntāb his father Sayyid ʿAlī was a descendant of Muḥammad al-Bāḳir [*q.v.*].

Among his numerous spiritual mentors was Ṭayfūr al-Dīn, a Syrian mystic. He received a good education but was specially well-versed in various occult sciences such as alchemy and natural magic.

A widely-travelled person, Shāh Madār performed the pilgrimage to Mecca several times, once in the company of Ashraf Djahāngīr al-Simnānī [*q.v.*]. During his travels he visited al-Madīna, Baghdād, Nadjaf and Kāẓimayn before sailing for India when he met with a shipwreck. In India he travelled from place to place and ultimately settled at Makanpūr, a village 40 miles from Cawnpore, where he died on 10 Djumādā I, 844/7 October, 1440.

In spite of the bitter controversy that *ḳāḍī* Shihāb al-Dīn Dawlatābādī [*q.v.*] carried on with him, Shāh Madār was held in great esteem by Ibrāhīm Shāh Sharḳī (804/1401-848/1444), the sultan of Djawnpūr, patron of the *ḳāḍī*.

He was a person of great beauty and kept his face veiled for fear that people, dazzled by his appearance, would prostrate themselves before him. To this day his imposing mausoleum built by Ibrāhīm Sharḳī, attracts a very large number of people who, from all parts of India, march to Makanpūr, on the occasion of his *ʿurs*, carrying tall bamboos draped with colourful bunting and rags called "*Shāh Madār kī čariyān*".

Strange and supernatural feats, are ascribed both to the saint and his followers, known as Madārīs, who are generally seen performing in the streets and lanes of every city and village in the Indo-Pakistan sub-continent. A Madārī now, in common parlance, has come to mean a street-performer.

BADĪʿ AL ZAMĀN [see AL-HAMADHĀNĪ].

BADĪHA [see IRTIDJĀL].

BADĪL [see ABDĀL].

BĀDĪNĀN [see BAHDĪNĀN].

BĀDIS, a town (now in ruins) and anchorage on the Mediterranean coast of Morocco. It is 68¼ m. (110 km.) south-east of Tetuan, between the territory of the Ghumāra [*q.v.*] and the Rīf [*q.v.*] properly so-called. It is situated on the territory of the Banū Yaṭṭūfat (*vulgo*: Bni Yiṭṭōft) near the mouth of a torrent named Tālā-n-Bādis (*vulgo*: Tālembādes). An attempt has been made to identify it with the *Parietina* of the Itinerary of Antoninus; but this ancient place-name could equally well refer to the more sheltered cove of Yallīsh (= Iris on our maps) which is only 7 km. to the south-west.

The town of Bādis and its port formed part of the kingdom of Nukūr, and later of the Idrīsid principality of the Banū ʿUmar. The Almoravids, the Almohads and the Marīnids used it as a naval base and devoted their energies to fortifying it.

The author of the *Maḳṣad* (end of the 7th/13th century) and especially Leo Africanus (beginning of the 10th/16th century), describe Bādis as a township of 600 households. Under the Marīnid Abū Saʿīd (709-31/1310-31), it paid 1000 *dīnārs* in taxes, as did Melilla and Larache. The port possessed an arsenal where foists and other kinds of galleys were built of cedar-wood from the neighbouring mountains; it was frequented by Venetian merchantmen, and was the terminus of the shortest route from Fez to the Mediterranean, via the mountain of the Banū Khālid. The population devoted themselves to trade, fishing (sardines) and also to piracy on the coasts of Spain. The governor of the Rīf had his residence there; his authority extended over the coastal towns from Yallīsh to Wādī Nukūr, and also over certain tribes of the interior: Buḳḳūya, Banū Manṣūr, Banū Khālid, Banū Yadīr.

Less than 100 metres out to sea there were two small rocky islands, the larger of which was called Ḥadjar Bādis, the Peñon de Velez of the Spanish. In 1508 the latter, in order to put an end to the activities of the pirates, occupied it and fortified it. In 1520, however, they lost it as the result of treachery. In 1526, the Waṭṭāsid sultan Abū Ḥassūn, deposed by his brother, received as an appanage the Rīf, with his seat at Bādis, whence he acquired his surname of al-Bādisī [*q.v.*, No. 3]. In 1554, he ceded the town and the Peñon to his Turkish allies from Algiers: the latter made it a lair for corsairs operating in the region of the Straits of Gibraltar. The Saʿdid sultan ʿAbd Allāh al-Ghālib bi'llāh was alarmed by this activity, and feared that the Turks might use Bādis as a base from which to undertake the conquest of Morocco. In 1564, he forced the Moroccans to evacuate the town and the Peñon, which he handed over to the Spanish. The Moroccan population retired into the interior, to the *ḳaṣba* of Snāda.

The old town of Bādis is now in ruins. After the Rīf war (1927), the Spanish attempted, without much success, to establish nearby a small settlement called Villa Jordana. The Peñon still belongs to Spain and constitutes a sovereign territory: Peñon de Velez de la Gomera. The Spanish corruption of the name of the town, Velez, perhaps has its origin in the existence, opposite, on the European coast, of a town called Vélez (de) Malaga (Ar. Bālish).

Bādis in Morocco must not be confused with Bādis in Algeria, no longer extant, which lay to the south of Awrās [*q.v.*].

(G. S. Colin)

BĀDĪS b. **ḤABŪS** [see zīrids of spain].

BĀDĪS b. al-Manṣūr b. Bulukkīn b. Zīrī, alias Abū Manād Bādīs Naṣīr al-Dawla, third Zīrid of Ifrīkiya, enthroned on 16 Rabīʿ I 386/8 April 996. Entrusting eastern Ifrīkiya to a devoted Arab vice-amīr, he set about containing a powerful Zanātan offensive which, from 386/996 onwards, pushed forward from Tiaret to Tripoli. In 389/999, he faced the amīr of the Maghrāwa, Zīrī b. ʿAṭiyya, who had as allies Fulful b. Saʿīd, chief of the Zanāta, and his own great-uncles. He finally defeated them (391/1001), his triumph being mainly due to his great-uncle Ḥammād b. Bulukkīn. From 395/1004-5 onwards, the latter repelled a new Zanātan offensive. From 390 to 406/999-1016, the Zīrid also fought in Tripolitania against Fāṭimid intervention and against Yānis, Fulful b. Saʿīd and Warrū b. Saʿīd. While the Zanātan menace gradually abated in the south-east, in the west he had to suppress the revolt of Ḥammād, founder of Kalʿa in 398/1007-8. In the course of this campaign, which commenced at the end of 405/May 1015, after having won a decisive victory at Chélif (1 Djumādā 406/17 October 1015), but failed to take Kalʿa which had been beseiged for six months, Bādīs died on 30 Dhu 'l-Kaʿda 406/10 May 1016. The creation of the Ḥammādid state had begun, and the anti-Shīʿite disturbances at Tunis (406/1015-6) portended the break with the Fāṭimids which occurred under his son and successor al-Muʿizz b. Bādīs.

(H. R. Idris)

al-**BĀDISĪ**, ethnic adjective referring to the town of Bādis [*q.v.*], and borne by three notable Moroccan personalities:

1. Abū Yaʿkūb Yūsuf al-Zuhaylī al-Bādisī, saint and savant of the 8th/14th century, who is buried outside the town. The author of the *Makṣad* (cf. *infra*, 2) devoted a notice to him (cf. trans,, 146 and 218). Ibn Khaldūn regarded him as the last of the great Moroccan saints (cf. *Prolegomena*, trans., ii, 199; *Histoire des Berbères*, i, 230). Leo Africanus (ed. Schefer, ii, 273; ed. Épaulard, Paris 1956, 274) speaks of his shrine which is still venerated: Sīdi Bū Yaʿkūb.

2. ʿAbd al-Ḥakk al-Bādisī, still living in 722/1322. He is the author of a collection of the lives of the saints of the Rīf entitled *Al-Makṣad al-Sharīf fi Dhikr Ṣulaḥāʾ al-Rīf*, which has come down to us in two editions which differ appreciably from the point of view of vocabulary; annotated trans. by G. S. Colin in *Archives marocaines*, vol. 26 (1926).

3. ʿAlī, son of Muḥammad al-Shaykh al-Waṭṭāsī. His normal *kunya* was Abu 'l-Ḥasan, but he is known by the hypocoristic name of Abū Ḥassūn. His father, while still young, was entrusted with the government of the Rīf, with his residence at Bādis, and, when he was deposed, he received the same province as an appanage. He lived there from 1526 to 1549; hence his surname al-Bādisī, and title "king of Velez" given to him by European chroniclers.

Bibliography: See the article Waṭṭāsids.

(G. S. Colin)

BĀDIYA [see Supplement].

BĀDJ, the Arabicised form given to the Persian *bāzh* in the Islamic period (al-Sayyid Addī Shīr, *Kitāb al-Alfāẓ al-Fārisiyya al-Muʿarraba*, Beirut 1908). From the 10th to the 14th century *bāzh* is more common; thus it is the usual form in the *Shāh-nāma* (though *bādj* occurs too), and the phrase *bazh u sāw* is not infrequent, while the expression *bāzh-i rūm* is used there with reference to the tribute and indemnity paid to the victorious Persians by the rulers of the Eastern Roman empire (Fritz Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935). The Ghaznawid poet Bahrāmī uses *bazh*, whereas the 15th-century poet Bābā Fighānī uses *bādj* (see Amīn Aḥmad Rāzī, *Haft Iklīm*, *Bibl. Indica*, Calcutta 1939, i, 267), and it was in the latter form that the word entered Turkish. After the Ottoman occupation of the Balkans the word was borrowed by the Bulgars and Serbs (Karl Lokotsch, *Etymolog. Wörterbuch*, Heidelberg 1927), and it is used in Armenian with the same form and meaning (Horn, *Grundriss der Neupersischen Etymologie*, Strassburg 1893, 34).

Asadī, in his dictionary (*Lughat-i Furs*, ed. P. Horn, Berlin 1894), defines the word simply as *kharādj*. ʿAbd al-Kādir Baghdādī (*Abdulqādiri Bagdādensis lexicon Šahnāmianum*, ed. Salemann, St. Petersburg 1895) explains it as meaning 'customs-dues, tithe, and tax': the words *bāzhbān*, *bāzhkhʷāh* and *bāzhdār* he explains as 'desiring toll, customs-officer', and *bāzhgāh* as 'place where customs-dues are levied' (all four words occur in the *Shāh-nāma*). In the Turkish translation of the *Burhān-i Kāṭiʿ*, in addition to the meanings 'tithe, tax, customs-dues', it is stated that the word was also applied to money and gifts received by suzerains from vassal rulers. In Turkish texts generally, as in Persian, the meaning is 'tax'. The word became current as a fiscal technical term among the Turks, because a number of Turkish states were founded in the Persian area, beginning with the Ghaznawids and Saldjūks, and because the Saldjūk administration preserved Sāmānid and Ghaznawid traditions. It will also be recalled that Persian was the official language of Asia Minor under both Saldjūks and Īlkhānids. A study of the available documents shows that as well as being used for 'tax' in general, the word was applied to various forms of tax. The poet Nāṣir-i Khusraw, describing Aleppo in his *Safar-nāma* (ed. Ch. Schefer, Paris 1881, 10), says that it was a *bādjgāh* (*i.e.*, customs-post) between the cities of Syria, Rūm, Diyārbakr, Egypt, and ʿIrāk. Naṣīr al-Dīn Ṭūsī, in a *risāla* containing his views on politics and finance, presented to the Ilkhānid Abāḳā (Şerefeddin Yaltkaya, *Ilhanîler devri idârî teşkilâtîna dâir Nasîreddin Tûsî'nin bir eseri*, in *Türk hukuk ve iktisat tarihi mecm.*, ii, 13; M. Mīnovī and V. Minorsky, *Naṣīr al-Dīn Ṭūsī on Finance*, in *BSOS* x, 3, 1941, 763), uses it in the general sense; Yaltkaya translates it as 'customs-dues' in this somewhat ambiguous passage, but as customs-dues had been levied from ancient times it is certain that there would be nothing shameful in a ruler's

exacting them. As the context indicates, and as Minorsky rightly shows, the *bādj* here referred to must be the *rāhdārī* ('traveller's protection tax') levied in the Ilkhānid dominions in return for maintaining peace and security on caravan-routes and lakes. The historian of the Ilkhānid period, Rashīd al-Dīn (*Ta'rīkh-i Mubārak-i Ghāzānī*, ed. Karl Jahn, *GMS*, London 1940, 280 ff.), when describing measures taken to safeguard the great caravan-routes in Ghāzān's time, speaks of *bādj* taken from travellers at certain specified places, according to a fixed scale. He also uses the word of a tax of one-third, when discussing Ghāzān's agricultural reforms. A century later, the historian Sharaf al-Dīn Yazdī uses *bādj* together with *sāw*, *kharādj*, and *djizya*, *i.e.*, loosely in the sense of 'tax, impost' (*Ẓafar-nāma*, *Bibl. Indica*, Calcutta 1888, ii, 378). At the end of that century the historian Khwāndamīr (*Dastūr al-Wuzarā'*, ed. Sa'īd Nafīsī, Tehran 1317/1938-9, 463) mentions *bādj* along with the *tamgha* taken from merchants, *zakāt*, and *kharādj*, but apparently as a general term only, for he gives no information about its nature. The early Ṣafawid historian Ḥasan Rūmlū states that some neighbouring tribes had long paid *bādj* to the rulers of Harāt (*Aḥsan al-Tawārīkh*, ed. C. N. Seddon, Baroda 1931, i, 337.

To establish the sense of such a word, legislative texts are clearly of more use than historical texts, but the oldest relevant ones, those of the Aḳ Ḳoyūnlū, have not come down to us in their original forms. Thanks however to the tenacity of tradition, common in medieval Turkish and Muslim bureaucracies, we find Aḳ Ḳoyūnlū laws surviving, at most slightly altered, in Ottoman *ḳānūns* (as is expressly stated in the Ottoman fiscal *ḳānūns* for the eastern Anatolian *wilāyets*, formerly subject to the Aḳ Ḳoyūnlū), and in them the word *bādj* occurs frequently (cf. W. Hinz, *Das Steuerwesen Ostanatoliens* im 15. *und* 16. *Jahrhundert*, in *ZDMG*, 1950, 177-201). These laws were first discussed by I. H. Uzunçarşılı (*Osmanlı devleti teşkilâtına medhâl*, Istanbul 1941, 213, 276, 302),) who sets out to explain such expressions as *bādj-i tamgha* and *bādj-i buzurg*. He states, on the basis of the *Farhang-i Shu'ūrī* and the *Sharaf-nāma*, that the *tamgha* was branded on animals and that *bādj* was a tax peculiar to land customs, and he notes that *bādj-i buzurg* was the name of two taxes, one levied on subject rulers and princes, the other on commercial goods in transit and articles brought from village to city. He explains *bādjdār* as 'a guardian of roads, taking money from caravans in return for maintaining the security of the roads, in the Ilkhānid period'. But in this he is incorrect: the *bādjdār* was a tax collector, in the Ilkhānid and Djalā'irid periods, who collected tolls at certain places, according to a tariff fixed by the central government (this tariff is mentioned in Italian sources for oriental trade in the Ilkhānid period: see G. I. Bratianu, *Recherches sur le commerce génois dans la Mer Noire au XIIIe siècle*, Paris 1929, 184, 189). The 'guardian of roads' was quite distinct; he was the *tutḳavul* (Persian *rāhdār*), paid by the central government and under the orders of a senior military commander. At times when the central government was weak, however, lawless men assumed this title and took protection-money arbitrarily from caravans, thus combining the functions of *rāhdār* and *bādjdār*. The vagueness of I. H. Uzunçarsılı's explanation of the terms *bādj-i tamgha* and *bādj-i buzurg* is due to his reliance on dictionaries rather than on *ḳānūnnāmes*. It is possible to get a clearer and more accurate picture from a set of *ḳānūns* of the Aḳ Ḳoyūnlū period, published by Ömer Lûtfi Barkan (*Osmanlı devrinde Akkoyunlu hükümdari Uzun Hasan Beye ait kanunlar*, in *Tarih vesikalari* i, no. 2, 91-106; no. 3, 184-97). These *ḳānūns*, termed *yasa* under the influence of the Ilkhānid administrative tradition, relate to the regions of Diyārbakr, Mārdīn, Erghanī, al-Ruhā' (Urfa), Erzindjān, Kharpurt (Harput), Čermīk, and 'Arabkīr, and are mainly of the time of Uzun Ḥasan. From a study of them the following facts emerge: *bādj* is generally used for 'tax', as in the expression *bādj-i tamgha*. The meaning of *tamgha* is quite plain; it is the tax levied on all kinds of goods bought and sold in cities, on woven stuffs and slaughtered animals, and is normally referred to as 'black tamgha' (*tamgha-i siyāh*). *Bādj-i buzurg* was the customs-duty levied on goods in transit through or imported into the country; such goods, when sold in the market, were also liable to 'stamp duty' (*bādj-i tamgha*). It is expressly stated in the *ḳānūn* of Erghanī that *tamgha* was levied on the buying and selling of immovable property; *i.e.*, the word is here used in the general sense of 'tax'. It is apparent that *bādj* in these *ḳānūnnāmes* is not a technical term.

This observation is confirmed by the use of the word in Ottoman literary texts. Sa'd al-Dīn uses it in the general sense when he says that the *bādj* and *kharādj* in 14th-century Rūm were not onerous as they were in Persia (*Tādj al-Tawārīkh*, i, 214). So too a number of Ottoman poets use it as synonymous with *kharādj* in the phrase *bādj u kharādj*. On the other hand, the word is used as a technical term in some historical texts and above all in the early *ḳānūn-nāmes*. 'Āshiḳpashazāde (*Ta'rīkh* 19; ed. F. Giese, 21), remarking that in the time of 'Othmān Ghāzī *bādj* to the amount of 2 *aḳčas* was levied on every load of goods sold in the market of Ḳaradja-ḥiṣār, explains that this was in the nature of a municipal tax peculiar to large towns; it was in fact identical with the *tamgha* which, as we have seen, was levied under the Īlkhānids and in the various states which carried on their fiscal tradition. In the *ḳānūnnāme* of the Conqueror, apart from the non-technical use, we find *bādj* applied to a sales-tax confined to large towns. This *ḳānūnnāme* lays down that *bādj* is not levied on immovable property such as land, houses, shops, and mills, but on goods sold in markets; not however on anything sold in villages. It specifies the amount of *bādj* to be levied on the sale of all sorts of goods, including slaves (who in the eyes of Islamic law are movable property), and makes it clear that sometimes only one party is liable to pay, sometimes both. It also prescribes the amount of *bādj*—generally 20%—to be levied on goods from abroad (*e.g.*, from 'Frenk' and 'Dobrovenedik' = Dubrovnik = Ragusa), but there is a clause which states that this will depend on the terms of contracts made with these countries. The text however is a little doubtful and corrupt, so no positive conclusions can be drawn (F. Kraelitz, *Kanunname Sultan Mehmeds des Eroberers*, in *MOG*, Vienna 1921, i, 26, 30 ff.). But it is safe to say that the reference here is not to customs-duty levied on goods coming across the frontier, for the term *gümrük* occurs in numerous official documents of the period, and customs-duties seem not to be described as *bādj* (idem, *Osmanische Urkunden in türkischer Sprache*, Vienna 1922, no. 2, 4). It may therefore be conjectured that when goods entered the Ottoman dominions they paid customs-duty (*gümrük*), and when they were brought to a city and sold, they paid a separate *bādj*.

The word is used in the *ḳānūnnāme* of Suleymān just as it was during the 15th century; indeed, some paragraphs concerning *bādj* are taken unaltered from the *ḳānūnnāme* of the Conqueror (cf. *Ḳānūnnāme-i Āl-i ʿOthmān*, Supplement to TOEM, Istanbul 1329, 21 ff., with the *ḳānūnnāme* of the Conqueror, 30 ff.), though there are some additional ordinances too. It is clear from these two *ḳānūnnāmes* that *bādj* meant both a specific municipal tax (*iḥtisāb resmi*) and 'tax' in general: the latter meaning being seen in such expressions as *bādj-i bāzār*, *bādj-i aghnām*, *bādj i tamgha*.

It is still in use among the Turkish people of eastern Turkistān in the general sense (cf. F. Grenard, *Le Turkestan et le Tibet*, Paris 1898, 263, 265. In the dialects of Kāshghar and Yarḳand the meaning is 'customs-duty' (G. Raquette, *English-Turki Dictionary*, Lund-Leipzig 1927, 24, 119).

Bibliography: Sources have been shown in the text, in default of a full study of the word. Osman Nuri, when dealing with the *iḥtisāb* taxes (*Medjelle-i Umūr-i Belediyye*, Istanbul 1922, i, 364-70) confines himself to quoting relevant passages from ʿĀshiḳpashazāde, Neshrī, the *ḳānūn-nāme* of Suleymān, and another *ḳānūn-nāme* of unspecified date. (M. Fuad Köprülü)

BĀDJ, the birthplace of Firdawsī, a small village in the vicinity of Ṭūs. The name is not found in any of the Arab geographers, and is mentioned only by ʿArūḍī-i Samarḳandī (*Čahār Maḳāla*, ed. Mīrzā Muḥammad Ḳazwīnī, *GMS* i, 47, 190).

(M. Fuad Köprülü)

BĀDJA, a town and district of Muslim Spain, modern Beja in S. Portugal, the classical Pax Julia. The Roman origin of Bādja is referred to by the geographer al-Rāzī [*q.v.*], who speaks of its fine wide streets. Abundant honey was obtained there, and its water was specially suitable for tanning (E. Lévi-Provençal, 'La „Description de l'Espagne" d'Aḥmad al-Rāzī", in *Al-Andalus*, XVIII, 1953, 87). Bādja is frequently mentioned from the time of the Arab conquest. When Seville fell, its defenders withdrew to Bādja, whence they later returned and gained a temporary advantage (*Akhbār Madjmūʿa*, 16, 18). Bādja became one of the militarised zones (*kuwar mudjannada*) of Muslim Spain. In 146/763 at Bādja the commander of the Egyptian *djund*, al-ʿAlāʾ b. al-Mughīth revolted, donning the black dress of the ʿAbbāsids and displaying a black banner sent from the East by al-Manṣūr (*Akhbār Madjmūʿa*, 101-102; Ibn al-Ḳūṭiyya, 32-33). In 230/844 Bādja is said to have been attacked by Norse Vikings (Maḳḳarī, *Analectes*, i, 223). At Bādja later, local chiefs disputed the authority of the central government (cf. Lévi-Provençal, *Histoire de l'Espagne musulmane*, ed. Cairo 1944, I, 271, 298), and eventually the Ṭayfūrids, a local family of notables, enjoyed independence for a time (Ibn Saʿīd, *Mughrib*, ed. Cairo 1953, I, 403). At another time Bādja was ruled from Silves, till about 432/1040, when it passed to the ʿAbbādids of Seville (Ibn Idhārī, *Bayān*, iii, 192-193). The town was probably more important in early times than afterwards. It is not described by al-Idrīsī (548/1154). Its most famous son was the theologian Abu 'l-Walīd al-Bādjī [*q.v.*]. Bādja in Spain is sometimes called Bādjat al-Zayt (see below).

Bibliography: E. Lévi-Provençal, *La péninsule ibérique au Moyen-Age d'après le Kitāb ar-Rawḍ al-Miʿṭār*, Leiden 1938, 45-46; Arabic text, 36-37. (D. M. Dunlop)

BĀDJA (ancient Vaga; modern orthography: Béja), important town in Ifrīḳiya, situated about 100 km. west of Tunis. Its population at the present time is nearly 23,000. Resting against the fertile slopes of the valley of the Médjerda, it constitutes "the most considerable town of the region, which existed in ancient times and has continued to exist down to our time ..... its strategic position, of supreme importance, on the road from Tunis to Algeria, was constantly emphasised throughout the Muslim period" (R. Brunschvig, *Ḥafṣides*, i, 300).

Capital of the province richest in cereal crops, it was for this reason called the "granary (*hūrī*) of Ifrīḳiya", just as it was called, throughout the Middle Ages, Bādjat al-Ḳamḥ ("Bādja of the corn") to distinguish it from the other towns, in Africa and Spain, which bore the same name (see below).

The celebrated geographer al-Bakrī gives an exact and detailed description of the town which is still valid today, apart from certain changes in place names which took place at a later date. "Bādja", he says, "is three days" journey from al-Ḳayrawān. A large town, encircled by several streams, and built on a high cowl-shaped hill named ʿAyn Shams ("the spring of the sun")". This spring still feeds the town and bears the same name. The other important monuments which he mentions are: the ramparts, which were later augmented by a second, exterior wall enclosing new quarters of the town; the citadel (still to-day *al-Ḳaṣaba*) "an ancient building, solidly built of great blocks of stone" (a Byzantine fortress, built by Count Paulus at the time of Justinian, as is indicated by a Latin inscription of that period. It was frequently repaired during the Ḥafṣid, Turkish and Ḥusaynid periods); and the Great Mosque which, "solidly built, has the city walls for the *ḳibla*". The town also possessed "five baths (*ḥammām*), a large number of caravanserais (*funduḳ*), and three open spaces (*riḥāb*) where food markets were held". The environs of the city were, he says, "full of magnificent gardens watered by streams".

At the time of the siege of Carthage by Ḥassān b. al-Nuʿmān, about 76/695 part of the Byzantine garrison took refuge at Bādja and entrenched itself there. After its capture by the above-mentioned Umayyad general, Bādja subsequently became an important strategic centre for the Arab *djund*. Al-Harawī states that Maʿbad b. al-ʿAbbās b. ʿAbd al-Muṭṭalib, the cousin of the Prophet, died there, and that his tomb is to be found in the meadow (*mardj*) of the town.

Al-Yaʿḳūbī, who visited Ifrīḳiya in the 3rd/9th century, tells us that "the population of Bādja is descended from the soldiers of the old ʿAbbāsid army and from non-Arab autochthonous elements".

Al-Ḳalḳashandī, quoting an ancient source, notes that the tribe of the Banū Saʿd, among whom the Prophet was brought up, had been scattered across many lands, and that in his own time there only remained a small group of them, who lived at Bādja in Ifrīḳiya alongside the ʿAbbāsid troops.

Under Aghlabid dominion, the city became the important capital of the whole North-Western district of Tunisia. Powerful officials, belonging to the family of the *wazīrs*, the Banū Ḥumayd, relations and allies of the amīrs, succeeded one another as heads of its government, and strove to preserve it as a rich and lucrative fief; ḳāḍīs, chosen from among the most famous jurists of the capital, were nominated to this high office; experienced generals assumed command of the militia and the Aghlabid allies. And there is reason to think that the veterans of this

militia, who continued to dwell in this region, gave the name of their tribe, Ḳuḍāʿa, to an important commune (*shaykha*) of Bādja, which retains this name to the present day.

During the Fāṭimid period, the town was sacked, pillaged and partly burnt by the Berber troops of Abū Yazīd [*q.v.*], "the man with the ass", in 335/946. But it quickly recovered its prosperity, by virtue of its agricultural products. At the time of the Hilālī invasion (5th/11th century), it received groups of the Riyāḥī tribe, which settled in the surrounding countryside, and the town passed successively from the hands of nomad chiefs to the Zīrid princes of Bougie (al-Bidjāya). With the advent of the Ḥafṣids, the town recovered a measure of its former prosperity and frequently served as a refuge for rebels against government.

During the Turkish period (10th-11th/16th-17th centuries), Bādja had a garrison of janissaries who left their posterity there. A Ḥanafī mosque was built inside the town. From the time of the Ḥusaynids, Bādja became once more a large semi-Bedouin agricultural market town, where a governor (*ʿāmil*) represented the authority of the Beys. Certain monuments were built, notably a citadel 1 km. west of the town, called "*Bārdo*" after the name of the famous palace of the Beys on the outskirts of Tunis.

Bādja was the birthplace of a number of scholars, jurisconsults, poets, and local historians. Reference will only be made here to the al-Ḳalshānī family, which supplied 9th/15th century Tunisia with seven or eight eminent ḳāḍīs and jurists, and to Muḥammad al-Ṣaghīr b. Yūsuf, who wrote an eye-witness account of the history of the first four Ḥusaynid Beys (from 1705 to 1768 A.D.).

Bibliography: Yaʿḳūbī, *Buldān*, ed. Nadjaf 1918, 107 (French trans. G. Wiet, Cairo 1937, 211); Bakrī, Ar. text 59, French trans. 119; Yāḳūt, Cairo ed, ii, 25; Idrīsī, Ar. text 115, French trans. 134; Harawī, *Guide des lieux de pèlerinage*, ed. J. Serres and Lasram, Tunis 1897.

Two other Tunisian centres were also named Bādja: BĀDJAT AL-ZAYT ("Bādja of the oil"), so called in order to distinguish it from its homonym in the north. It a was town in the district of Ruṣfa (the ancient Ruspae of the Romans and Byzantines), situated, in the heart of the olive-tree forests of the Tunisian Sahel, on the road from Mahdiyya to al-Djān, 13 km. east of the latter centre. The commune (*shaykha*) in which it was located still bears the name of Wādī Bādja (governorate of Mahdiyya) It seems that it prospered up to the time of the Hilālī invasion, and then declined and completely disappeared during the Ḥafṣid period. Its site, however, with its numerous ruins, notably of a vast hydraulic installation (*fasḳiyya*), still exists. It is mentioned several times by al-Mālikī and Yāḳūt, who quote passages from Ibn Rashīḳ in his anthology of the poets of al-Ḳayrawān.

Bibliography: Mālikī, *Riyāḍ al-Nufūs*, ii, 79-81 (MS. coll. Abdul-Wahab); Yāḳūt, Cairo 1323/1906, ii, 25; Ṣafadī, *al-Wāfī bi 'l-Wafayāt*, iii, (Zaytūna MS.).

BĀDJA AL-ḲADĪMA ("the ancient"), a hamlet no longer in existence today, but whose ruins are still visible. It was situated near the present-day town of Mannūba north-west of Tunis. It possessed a mosque, a school (*kuttāb*), a market and a certain number of dwellings. Its chief claim to fame was that it was the birth-place of a great Tunisian mystic (*walī*), Abū Saʿīd Khalafa b. Yaḥyā al-Tamīmī al-Badjī, born in 551/1156, died 6 Shaʿbān 629/8 June 1231, the pupil of Abū Madyan Shuʿayb of Tlemcen; he was buried in the village of Djabal al-Manār, and has since become known from Marsa to Carthage as Sayyidī Abū Saʿīd (Sidi Bou Said).

Bibliography: Abu 'l-Ḥasan al-Ḥawwārī, *Manāḳib Abī Saʿīd al-Bādjī* (MS. coll. Abdul-Wahab). (H. H. ABDUL-WAHAB)

BĀDJADDĀ, in the Arab middle ages, a small strongly fortified town in Mesopotamia, south of Ḥarrān, a short distance east of Balīkh, situated on the road to Raʾs al-ʿAyn, with famous gardens. It is no longer mentioned by the geographers of the 3rd-4th/9th 10th centuries. The Aramaic name (בֵּי גַדָּא) denotes "house of fortune"; cf. perhaps, an ʿAyn-gaddā = "source of fortune" in the Damascene and the Gadda of the Tabula Peutingeriana in Syria. See thereon Nöldeke in the *ZDMG*, xxix, 441.

Bibliography: Yāḳūt, i, 453; Balādhurī, *Futūḥ*, 174, 72, where Bādjaddā, not Bādjuddā is to be read; Le Strange, 105. (M. STRECK)

BĀDJALĀN. Both surviving branches of this formerly larger tribe are now settled in ʿIrāḳ. The main branch occupies the area of Bin Ḳudra and Ḳuratū, north of Khānaḳīn. An offshoot, known variously as Badjlān, Bādjwān or Bēdjwān, is to be found in the Shabak [*q.v.*] area on the left bank of the river Tigris opposite Mawṣil. Although the tribe has always been known as a Kurdish one this is only so in the wide sense that all nomads of the Zagros area, including the Gūrān [*q.v.*] and the Lurs, are considered by their neighbours to be Kurds. In fact, all Bādjalānīs appear to speak a dialect of the (Iranian, but not Kurdish) Gūrānī language—a pointer, failing evidence to the contrary, to their Gūrānī origins.

A great number of Bādjalān nomads paid homage to the Ottoman Grand Vizier at Mawṣil in 1039/1630 (Naʿīmā, *Taʾrīkh*, s.a.). For a time the tribe gave its name to a *sandjāḳ*, Bādjwānlī, between the two rivers Zāb (Ḥādjdjī Khalīfa, *Djihān-numā*, 435). The present Bēdjwān community may stem from this section. According to their own traditions (Rawlinson, in *Journal of the Royal Geographical Society*, 1839, ix, 107; Minorsky, in *EI*¹, s.v. *Lak*) part of the tribe retired from the Mawṣil area in the 12th/18th century to Luristān (Pīsh-i Kūh), where it became assimilated to the Lakkī Kurds. Another group had settled in the plain between Gīlān and Ḳaṣr-i Shīrīn, the chieftains residing first in Zuhāb and, after its decline, in Khānaḳīn. Early in this 14th/20th century the two main sections of the Bādjalān were astride the Turco-Persian frontier, the Djumūr in the Zuhāb area and the Ḳāzānlū near Bin Ḳudra. The Persian sections seem since to have concentrated on the Ḳuratū area.

(D. N. MACKENZIE)

AL-**BADJALĪ**, AL-ḤASAN B. ʿALĪ B. WARSAND, founder of a sect among the Berbers of Morocco, whose adherents are called Badjaliyya. Al-Bakrī states that he appeared there before Abū ʿAbd Allāh al-Shīʿī [*q.v.*] came to Ifrīḳiya (before 280/893). Al-Badjalī came from Nafṭa (Nefta) and found many adherents among the Banū La-

mās. His teaching agreed with that of the Rawāfiḍ, but he asserted that the Imāmate belonged only to the descendants of al-Ḥasan. So al-Bakrī and Ibn Ḥazm state, in opposition to Ibn Ḥawḳal (ed. de Goeje, 65), who says that he was a Mūsawī i.e. he recognised the Imāmate of Mūsā b. Dja'far, a descendant of Ḥusayn. The Badjaliyya were afterwards conquered and exterminated by 'Abd Allāh b. Yāsīn.

Bibliography: Ibn Ḥazm, *Milal wa Niḥal*, iv, 183; Bakrī, *Description de l'Afrique Septentrionale* (ed. de Slane), 161; Friedländer, in *JAOS*, xxix, 75. (ED.)

BĀDJARMĀ, or BĀDJARMAḲ, under the 'Abbāsid Caliphate was the name of a district east of the Tigris between the Lesser Zāb in the North and the Djabal Ḥamrīn in the South. The chief town in the middle ages was Kirkūk (Syr. Karkhā de Bēth Slōkh). It formed a district of the province of Mosul (cf. Ibn Khurradādhbih, 97, 7). Bādjarmā is an Arabic rendering of the Aramaic Bēth (Be) Garma while Bādjarmaḳ goes back to some Middle Persian form of the name of the district, like Garmakan. The latter word comes from the Gurumu, a nomadic people mentioned in cuneiform inscriptions, the Γαραμαῖοι of Ptolemy.

Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, Leipzig 1880, 44, 45, 253; M. Streck, Art. *Garamaioi* in Pauly-Wissowa, *s.v.* (where further references are given). (M. STRECK*)

BĀDJARWĀN, (1) A town and fortress in Mūḳān (Ādharbāydjān) lying S. of the river Aras (Araxes), between Ardabīl and Bardha'a in Arrān. Bādjarwān is mentioned several times in the accounts of the Muslim conquest. Its capture by al-Ash'ath b. Ḳays al-Kindī seems to have been the signal for the final collapse of resistance throughout the province (Balādhurī, *Futūḥ*, 326). It was occupied by Sa'īd b. 'Amr al-Ḥarashī during his campaign against the Khazars in 112/730 (D. M. Dunlop, *History of the Jewish Khazars*, Princeton 1954, 72-74). After the Umayyad period Bādjarwān is seldom mentioned. It is still named by Ḥamd Allāh Mustawfī in the 8th/14th century as a stage in the road to the N.W. frontier, though it was then in ruins. (2) A town of Diyār Muḍar in al-Djazīra, near the R. Balīkh, between Ḥiṣn Maslama and al-Raḳḳa.

Bibliography: Le Strange, 105, 175-176, 230-231. (D. M. DUNLOP)

BĀDJAWR, tract of mountainous country in the Dīr, Swāt, and Čitrāl agency of the Peshāwar division, West Pākistān. It is bounded on the north by Dīr; on the east by Dīr and Swāt; on the south-east and south by the Utmān Khēl and Mamund territories; and on the west by Afghānistān. It has an area of about 5,000 square miles and is intersected by five valleys—the Čahārmung, Bābūkara, Watalai, Rūd, and Sūr Kamar. In the absence of any census the population has been estimated at 100,000. Bādjawr is the home of the Tarkanrī Pathāns who claim to be akin to the Yūsufzais. They are divided into four sections: the Ismā'īlzai, 'Īsāzai, Salarzai, and Mamunds. The Salarzai and Mamunds are also found across the Durand boundary in Afghānistān. Like the tribes of Dīr, they are Sunnī Muslims but are unusually susceptible to the influence of their mullahs. The Khān of Nawagai claims to be the hereditary chief of all the Bādjawri tribes. The history of this area is almost inextricably interwowen with that of Dīr and Swāt. The fort of Bādjawr was taken by Bābur in 1519 (*vide* A. S. Beveridge, *Bābur-nāma*, 367-73). Akbar's forces were cut to pieces by the Yūsufzais in 1585. In the reign of Awrangzīb they constantly attacked the Mughal frontier outposts. They fought against the British in the Ambeyla campaign of 1280/1863 and during the frontier conflagration of 1314-15/1897. (C. COLLIN-DAVIES)

BADJDJĀNA, (Sp. Pechina), ancient Spanish town which is to-day no more than a small country town. The Rio Andara (Wādī Badjdjāna), which descends from the southern watershed of the Sierra Nevada, flows through Badjdjāna and discharges itself into the sea 6$^{1}/_{4}$ m. (10 km.) lower down, near the watch-tower (*Māriyyat Badjdjāna*), the site of the town which, under the sole name of al-Māriyya (Sp. Almería), became the most active and flourishing Mediterranean port in al-Andalus. The groups of sailors settled between Alicante and Aguilas were in the habit of proceeding in the autumn towards the African coast, where they passed the winter, and of returning in the spring to the Peninsula, with huge cargoes; a number of them settled in the North African ports and founded, *inter alia*, the new Ténès, in 262/875. The canton of Pechina was then occupied by the Arabs of the Yemen, who had been charged by 'Abd al-Raḥmān II with the task of maintaining a *ribāṭ* to protect the coast against possible attack by the Madjūs [*q.v.*]; in return, he had granted them possession of the fertile valley of the Andarax. Andalusian sailors returning from Ténès came to terms with these Arabs in order to found a sort of maritime republic, and made Badjdjāna the capital of a small state. A large mosque built by the Arabs, and the ramparts erected by the sailors, made it a town which, as a result of the trade of its fleet, which anchored at Almería, rapidly increased in size and prosperity. But after thirty-seven years of semi-independent existence, during which it was threatened by the Arab league at Elvira, it was incorporated in 310/922 in the Umayyad community; it maintained its prosperity during the first half of the 4th/10th century, until 'Abd al-Raḥmān III, in 344/955, made Almería the capital of the region and put in hand important town-planning schemes there. During the reign of al-Ḥakam II, the importance of Badjdjāna declined still further, and in the 5th/11th century it was no more than a humble village, while Almería became the capital of one of the kingdoms of the *taifas*.

AL-**BĀDJĪ**, Abu 'l-Walīd Sulaymān b. Khalaf, a distinguished theologian and literary figure in 11th-century Spain. Born in 403/1012 of a family from Baṭalyaws (Badajoz) which had emigrated to Bādja, modern Beja in S. Portugal (Ibn Bassām, cited Maḳḳarī, *Analectes*, i, 511), he frequented the schools at Cordova, gained some success as a poet and in 426/1035 travelled to the East. He was absent from Spain for 13 years, three of which he spent at Mecca, in the service of the *ḥāfiẓ* Abū Dharr al-Harawī, who had been educated at Harāt, Balkh and other places in Khurāsān, and with whom al-Bādjī now studied

Mālikī *fiḳh* and *ḥadīth*, accompanying him regularly to his home in al-Sarawāt, *i.e.*, the mountainous country between al-Tihāma, Nadjd and al-Yaman. Later al-Bādjī passed to Baghdād, where for another three years he continued his studies, though so poor that he is said to have been obliged to earn his living as a night-watchman. We hear of him also at Mawṣil, where according to one account (Maḳḳarī, i, 507, cf. Ibn Bashkuwāl, i, 200, no. 449) for a year he applied himself to the recently-invented *kalām* (scholastic theology), at Aleppo and Damascus, and in Egypt. He returned to Spain in or about 439/1047 as poor as when he left it, but with greatly extended views. About this time, at the instance of the Spanish *faḳīhs*, he disputed in the island of Majorca with the celebrated Ibn Ḥazm, who in the sequel withdrew into private life and according to Ibn Saʿīd (*Mughrib*, ed. Cairo 1953, i, 405) had to suffer the burning of his books. Even after his return al-Bādjī worked at a trade (gold-beating). At other times he acted as notary, or as *ḳāḍī* in provincial towns. But gradually his reputation established itself, and he died a rich man. His relations with the then holders of power, i.e., since the fall of the Umayyad Caliphate the *Mulūk al-Ṭawāʾif* ('Party Kings'), attracted comment at the time and appear to have been principally due to al-Bādjī's desire to induce them to unite and live at peace among themselves (Maḳḳarī, i, 511). His proposals to this end, made in person, were on the whole badly received, except at Saraḳusṭa (Saragossa) on the N.E. frontier, where the strength of the Christian kingdoms was fully appreciated. Al-Muḳtadir b. Hūd of Saragossa (reigned 1046-1081) sent for al Bādjī, and evidently he remained with al-Muḳtadir for a considerable time, since it was at Saragossa that his works appeared (Ibn Khāḳān, *Ḳalāʾid*, ed. S. al-Ḥarāʾirī, 215). Al-Bādjī died at Almería in 474/1081, *i.e.*, in the same year as his patron.

If the main political purpose of his life remained unrealised, al-Bādjī was a prolific author of books, including a Commentary (*sharḥ*) on the *Muwaṭṭaʾ* of Mālik, which especially in its short form, entitled *al-Muntaḳā*, enjoyed high estimation. Of his other works there have been printed (1) a *Reply* (*Djawāb*) to the so-called *Letter of the Monk of France* (*Risālat al-Rāhib min Ifransa*), for which see D. M. Dunlop, *A Christian Mission to Muslim Spain in the 11th Century*, in *Al-Andalus*, xvii, 1952, 259-310. The *Reply* shows much dialectical ability, and repeatedly refers to *kalām*. (2) *The Epistle on Definitions* (*Risāla fi 'l-Ḥudūd*), principally in *fiḳh* and *ḥadīth*, edited by Djawda Hilāl in *Revista del Instituto Egipcio de Estudios Islamicos en Madrid*, (*Ṣaḥīfat al-Maʿhad al-Miṣrī*), Vol. ii, Madrid 1954, Arabic section, 1-37.

Bibliography: Brockelmann, I, 419, and S I, 743-744; M. Asín Palacios, *Abenházam de Córdoba*, i, Madrid 1927, 200-208. (D. M. DUNLOP)

BADJĪLA, an Arab tribe, reckoned along with Khathʿam as a subdivision of Anmār; the *nisba* is Badjalī. Badjīla is sometimes said to be a woman, but her place in the genealogy is vague (cf. F. Wüstenfeld, *Register zu den genealogischen Tabellen*, 101-3; also *Die Chroniken der Stadt Mekka*, Leipzig 1858, ii, 134). Some genealogists held that Badjīla was a Yemenite tribe; others made Anmār the son of Nizār b. Maʿadd b. ʿAdnān (Ibn Ḥadjar, *Usd al-Ghāba*, i, 279, art. 'Djarīr b. ʿAbd Allāh'; Ibn Durayd, ed. Wüstenfeld, 101 f.). The tribe was sometimes taunted with this uncertainty about their ancestry (al-Masʿūdī, *Murūdj*, vi, 143). Along with Khathʿam, Tamīm, Bakr and ʿAbd al-Ḳays they raided ʿIrāḳ under Shāhpūr II (c. 310-379), but suffered severely when he counter-attacked. In Muḥammad's time they were found in a part of the mountain chain of the Sarāt some distance south of Mecca. As a result of feuds with neighbouring tribes and between the clans of Badjīla (such as Aḥmas, Ḳasr, Zayd b. al-Ghawth, ʿUrayna), the tribe became scattered, and many parts of it had to seek protection (*djiwār*) from stronger tribes (cf. *Mufaḍḍaliyāt*, ed. C. J. Lyall, i, 115 f.). Towards the end of Muḥammad's life Djarīr b. ʿAbd Allāh al-Badjalī came to him with 150 men professing Islam, and was sent to destroy the idol Dhu 'l-Khalaṣa at Tabāla, which was worshipped by Badjīla and Khathʿam. Djarīr performed various other commissions efficiently, and under Abū Bakr and ʿUmar was an important military leader. He and the men of Badjīla who followed him seem to have been independent allies of the caliph for a time, and by treaty with ʿUmar were to receive a quarter of what was captured, that is, presumably of the lands in the Sawād (al-Balādhurī, *Futūḥ*, 253, 267), but three years later they were persuaded to give up their lands and to receive instead a stipend. ʿUmar ordered sections of Badjīla which were under the protection (*djiwār*) of other tribes to attach themselves to Djarīr (*Mufaḍḍaliyāt*, l.c.; also *Usd al-Ghāba*, l.c.). It is stated that at this time ʿArfadja b. Harthama of Bāriḳ, a part of the Azd, though only a *ḥalīf* of Badjīla, was its *sayyid*. Khālid b. ʿAbd Allāh al-Ḳasrī, who was prominent in the later Umayyad period, belonged to Badjīla, though his adversaries questioned this (cf. I. Goldziher, *Muhammedanische Studien*, i, 205).

(W. MONTGOMERY WATT)

BADJIMZĀ or Bagimzā, in the time of the ʿAbbāsid Caliphate, was a village north-east of Baghdād, some 8 miles from Baʿḳūbā, where the caliph al-Muḳtafī bi-Amr Allāh put to flight the troops of the Saldjūḳ Sulṭān Muḥammad II under Alp Ḳush Kūn-i Khar in 549/1154.

(ED.)

BĀDJISRĀ. This was a small town in ʿIrāḳ, situated some 10 *farsakhs* to the north-east of Baghdād and a short distance due south of Bāʿḳūbā on the left bank of the Nahrawān river, which attained the name of Tāmarrā on its arrival at Bādjisrā. The town is described by the Arab geographers as being a prosperous and pleasant recreational centre with many date groves and a considerable population, but it was laid waste in the time of Ibn ʿAbd al-Ḥaḳḳ, author of the *Marāṣid*, who died in 739/1338. The name Bādjisrā, which is derived from Syriac, means "house of the bridge" i.e. the location of the bridge.

The modern village named "Abū Djisrā", however, is not the same town. Apparently, the name of this village is inferred from the ancient nomenclature of Bādjisrā. Modern Abū-Djisrā is one of the larger villages in the Miḳdādiyya (Shahrābān) *ḳaḍāʾ* in the Diyālā *liwāʾ* of ʿIrāḳ. According to the 1947 census, its inhabitants totalled 768 in number.

There are various references to Bādjisrā in the histories. It is mentioned by Ibn al-Athīr in the

annals of the years 68/688, 334/945-6, 439/1047, 488/1095 and 496/1102-3. During the last three of these, the town was subjected to plundering. In the annals of the year 597/1201, Ibn al-Sāʿī mentions the death of Mithḳāl, an attendant of the daughter of the ʿAbbāsid caliph Al-Mustandjid, al-Fīrūzādjiyya, who was the administrator of the prefecture of Bādjisrā. Bādjisrā is the birth place of a number of poets and men of letters, and some of them are mentioned by Yāḳūt.

Bibliography: Yāḳūt, i, 454; Ibn ʿAbd al-Haḳḳ, *Marāṣid*, Cairo 1954, i 147; Ibn Serapion (ed. (G. Awad)

BADJKAM (Abu 'l-Ḥusayn), properly Bäčkäm (an Iranian word which passed into Turkish, meaning the tail of a horse or yak, see Benveniste in *JA*, 1948, 183), name of a Turkish amīr who was initially a *ghulām* in the service of Mākān and subsequently in that of another Daylamite, Mardāwīdj, master of Gīlān, Ṭabaristān and the Djibāl. When Mardāwīdj's Turkish *ghulām*s, provoked by his bullying, killed their master in 323/935, Badjkam placed himself at their head and fled with them. After offering his services to Ḥasan b. Hārūn, the ephemeral governor of the Djibāl appointed by the *wazīr* Ibn Muḳla, he directed his steps towards Baghdād, in the expectation of being taken into the Caliph's army. He was rejected, however, owing to the jealousy of the Ḥudjarī guards. Ibn Rāʾiḳ, who was then governor of Wāsiṭ and Baṣra, took him into his service with his Turks, and he was henceforth called Badjkam Rāʾiḳī. He became the leader of a large band consisting of his *ghulām*s and other Turks and Daylamīs who came from the Djibāl at his summons.

When, at the end of 324/beginning of November 936, Ibn Rāʾiḳ was appointed by the Caliph al-Rāḍī to the office of *amīr al-umarāʾ*, Badjkam became his chief lieutenant both in his struggle against the undisciplined guards of the Caliph, Sādjīs and Ḥudjarīs, and against the ambitious governor of al-Ahwāz (Khūzistān), Abū ʿAbd Allāh al-Barīdī. Upon his arrival in Baghdād, Ibn Rāʾiḳ at once proceeded to take rigorous measures against the Sādjīs; then at the beginning of 325/end of November 936, having gone down to Wāsiṭ with the Caliph, with the effective help of Badjkam he rid himself of the Ḥudjarīs who had accompanied the Caliph. Badjkam and Ibn Rāʾiḳ then returned to Baghdād where Badjkam was appointed Prefect of Police and governor of the Eastern provinces (February 937). Ibn Rāʾiḳ had been unable to come to terms with al-Barīdī, whose aim was to seize Lower ʿIrāḳ and then to take the place of the *amīr al-umarāʾ*, and it was therefore decided to institute military operations against him. Though Ibn Rāʾiḳ suffered defeat and was unable to prevent al-Barīdī's entering Baṣra, Badjkam enjoyed greater success; after two brillant victories over al-Barīdī's troops, who considerably outnumbered his own, he took the whole of Khūzistān and al-Barīdī was obliged to flee to Baṣra. Then, recalled by Ibn Rāʾiḳ, he rejoined the latter on the Baṣran front where they were both nearly taken prisoner. Al-Barīdī, however, had gone to Fārs to ask the help of the Būyid ʿAlī (ʿImād al-Dawla), who sent his brother Aḥmad (Muʿizz al-Dawla) to recover Khūzistān. At the request of Ibn Rāʾiḳ, Badjkam agreed to return thither, provided he might enjoy full sovereignty there. However fortune changed and he had to retreat before the Būyid and return to Wāsiṭ, whilst Ibn Rāʾiḳ left for Baghdād to find the money requested by Badjkam to pay his troops (326/beginning 938). Badjkam remained at Wāsiṭ, without attempting to recover Khūzistān from the Būyid, as was Ibn Rāʾiḳ's wish.
